THE NEW DEAL (ROOSEVELT) VERSUS THE OLD DEAL (HOOVER)

An interesting and most enlightening comparison has recently been made of economic conditions in the United States for the first part of 1939 and the first part of 1932. The figures compiled show clearly the vast improvement, according to every business barometer and index, which has taken place during the administration of our Government under President Roosevelt, and which is even greater now than it was a few months ago when these figures were compiled.

The figures are as follows:

Commodity	Under Hoover, 1932	Under Roosevelt, 1939
Stock prices (average)	$81.20	$100.61
Bond prices (average)	$74.29	$85.78
Monetary gold stock	$4,345,000,000	$15,801,000,000
Federal Reserve credit	$1,859,000,000	$2,572,000,000
Currency circulation	$5,548,000,000	$6,915,000,000
Brokers' loans	$379,016,662	$547,443,175
New York rediscount rate (percent)	3%	1%
Bank clearings (22 cities)	$90,859,453,000	$96,268,786,000
United States Steel (tons shipped)	1,124,851	2,235,209
Steel ingot output	4,329,830	9,505,594
Pig iron output	3,757,196	8,315,927
Automobile production	376,665	1,055,576
Building permits	$74,677,796	$293,703,797
Petroleum output (barrels)	36,936,900	57,175,850
Bituminous coal (tons)	102,455,000	111,650,000
Electric current (kilowatt-hours)	26,094,970,000	37,893,658,000
United States raw cotton consumed (bales)	1,374,010	1,803,521
United States wool consumption (pounds)	57,600,000	97,400,000
Rayon yarn consumption (pounds)	39,800,000	102,400,000
United States exports	$461,000,000	$699,821,000
United States imports	$398,000,000	$526,652,000
Gold imports	$89,728,000	$745,159,000
Car loadings	9,574,837	9,822,512
Railroad earnings (51 roads)	$66,045,525	$84,998,333
Sears, Roebuck sales	$59,793,251	$125,428,094
Moody's commodity index	86.5	141.8
Wheat (bushel)	0.68	0.95
Corn (bushel)	0.45	0.66
Oats (bushel)	0.34	0.46
Cotton (pound)	5.77	9.26
Wool (pound)	0.44½	0.62½
Crude oil (barrel)	2.02	2.00
Coal, furnace (ton)	11.62	10.08
Copper (pound)	5.75	10.37
Lead (pound)	3.00	4.75
Zinc (pound)	2.51	4.50
Steel scrap (ton)	9.80	14.75
Iron pigs (ton)	15.00	22.84
Steel billets (ton)	27.00	34.00
Lumber (west coast) (thousand bd. ft.)	11.50	19.08
Shingles (red cedar) (square)	1.05	2.75
Industrial production	67	98
Manufactures	65	96
Minerals	84	110
Construction	26	58
Factory employment	68	91
Factory pay rolls	53	87
Carloadings	61	66
Department store sales	70	88

The Verdict of the Press

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

EDITORIAL COMMENT UPON THE GEARHART-ELLIOTT CONTROVERSY

Mr. GEARHART. Mr. Speaker, on the 2d day of May of this year it became my unpleasant duty to call the attention of the membership to what I then considered a flagrant violation of my legislative prerogative by another Member of this body.

That which then occurred upon the floor of the House attracted considerable attention and aroused widespread interest. The comment of the editors of our magazines and newspapers was extensive. Some of these have reached my hands.

The unanimous consent of the membership of this body having been granted, I hand the following clippings to the Public Printer and ask that they be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks. The periodicals from which each was taken is indicated in connection with each clipping I offer.

From Time magazine of May 15, 1939, a news magazine of national circulation:

THE BLAME REBOUNDED

The House's week was enlivened by a fight in the California delegation. Democrat ALFRED J. ELLIOTT received by mistake a check for $100 made out to Republican BERTRAND W. ("BUD") GEARHART by a Mrs. Gertrude Achilles, of Morgan Hill, Calif., urging passage of a bill to create John Muir-Kings Canyon National Park. Mr. ELLIOTT had the check photostated, sent it back to California for remailing, set the F. B. I. to watch for its cashing, and told people to watch him catch "BUD" GEARHART taking a bribe. When he got the check, "BUD" GEARHART returned it to Mrs. Achilles, honestly and promptly. Then he learned of ELLIOTT's trap for him. Last week he defended himself before a full House; flayed ELLIOTT for a damnable dastard. One by one, Democratic colleagues of ALFRED ELLIOTT left their seats near him. Had he pressed for a vote, "BUD" GEARHART could doubtless have caused Democrat ELLIOTT to be the first Representative formally censured (called to the Well for a wigging by the Speaker) since Tom Blanton, of Texas, in 1921, who wangled into the RECORD, in an extension of remarks, a string of obscenities so vile that they had to be expunged from the permanent RECORD—torn out of the Congressional Library's temporary copy.

From the Fresno (Calif.) Bee and Republican, of May 4, 1939. This editorial was printed concurrently in the Sacramento Bee and Modesto Bee.

ELLIOTT'S "SMEAR GEARHART" ATTEMPT PROVES BOOMERANG

Congressman B. W. GEARHART, of Fresno, has been making a gallant fight in Congress for the passage of his bill authorizing the establishment of the John Muir-Kings Canyon National Park, which would include some of the finest mountain scenery in the Kings River country of Fresno County.

The bill has met with the stubborn opposition of certain selfish interests; and their principal mouthpiece in Congress has been Congressman A. J. ELLIOTT, representing the congressional district which includes Tulare and Kern Counties.

And the methods to which the opposition has been willing to stoop in order to torpedo the park project received apt illustration in facts presented to the House of Representatives on Tuesday by Congressman GEARHART.

Briefly, these attested facts were as follows:

A Morgan Hill, Santa Clara County, woman who is a Nature lover, mailed a check for $100 to the campaign to create the John Muir park. Through some mistake the letter containing the check was received by Congressman ELLIOTT.

What did he do? Did he send the check over to Congressman GEARHART's office? Hardly.

He had a photostatic copy made, and then turned it over to Charles Dunwoody, Washington lobbyist, of the California State Chamber of Commerce, and another opponent of the park bill, who in turn mailed it to a correspondent in San Jose with instructions to remail it to Washington with the intent that Congressman GEARHART be led to believe he was receiving it in the original envelope.

Then, if he cashed it, the photostatic copy would be flashed in the newspapers, and Congresman GEARHART would be made to appear to be a "crooked politician."

The F. B. I. was called in to make the "catch," but there was none, because GEARHART returned the check to the donor.

Significant of the intent of this plot was the affidavit of R. B. Williams, a farmer of Kingsburg, Fresno County, who attended one of the several meetings where Congressman ELLIOTT exhibited the photostatic copy of the check.

Williams quoted ELLIOTT as saying that while be believed GEARHART to be honest, "in substance and effect, that those present could use their own judgment."

In other words, ELLIOTT was careful not to make any charge of misconduct in so many words, but he left an implication that those who heard him and saw the check could not miss.

The whole business has proved a boomerang.

It is Congressman ELLIOTT who gets the smear, not Congressman GEARHART.

And instead of injuring the cause of the John Muir-Kings Canyon National Park project, the opponents have enormously strengthened it, because when the opposition uses methods so contemptible, its members shout the weakness of the cause they represent.

From the pen of Harlan Miller, nationally know commentator, this comment appeared in numerous dailies throughout the Nation, including the Washington Post and the Los Angeles Daily News, on June 3, 1939:

A hundred years ago a duel might have been fought in the Capital's suburbs as a result of the GEARHART-ELLIOTT incident in the House. The crafty ELLIOTT received by mistake a communication intended for the innocent GEARHART and tried to make something of it. An anonymous phone call tipped GEARHART off to what was up, and the two Congressmen from adjacent California districts fought it out oratorically on the floor of the House.

GEARHART was distinctly the winner, and didn't even demand a reprimand for his Democratic colleague. ELLIOTT's oratory was the shakiest heard on the floor in many a day, and his attempts to convince the Republican GEARHART of his friendly intentions were pathetic.

From the Livingston (Calif.) Chronicle of May 4, 1939. This editorial also appeared in the Hilmar (Calif.) Enterprise of May 5, 1939:

CHARACTER ASSASSINATION

There is no more despicable nor degraded trick than attempted character assassination, and those who try it deserve the lasting contempt of all decent people.

Congressman B. W. GEARHART, of this district, took the floor in the House of Representatives Tuesday and, under the seldom used personal privilege, exposed what he plainly branded as an attempt by Congressman A. J. ELLIOTT, of the district immediately to the south of GEARHART'S, to make it appear to Members of Congress and others that GEARHART had accepted a check for $100 from a California woman in dishonest connection with his Kings River Canyon National Park bill.

If ELLIOTT really tried to smear "BUD" GEARHART, and this paper believes he did solely because GEARHART alleges that he did, his effort will be wasted. "BUD" GEARHART will come out of the Kings River Park fight with the respect even of his political enemies, of which he has but few. The Ninth District, regardless of party lines, will continue to honor its Representative whom its voters have returned to Washington repeatedly with increased majorities.

And again. Character assassination. What lower?

From the Waso (Calif.) News of May 19, 1939. This editorial also appeared in the Kern Herald, a newspaper published in Bakersfield, Calif., issue of May 21, 1939.

FLAYING RICHLY DESERVED

The climax of the chicanery that has attended the opposition to the proposal for the creation of the John Muir-Kings Canyon National Park was the recent exposé of the sharp practices indulged in by Congressman A. J. ELLIOTT. ELLIOTT has seen fit to oppose bills introduced by his colleague B. W. ("BUD") GEARHART, of Fresno, providing for the construction of Pine Flat Reservoir as an aid to irrigation and flood control and the creation of the Kings River Canyon National Park. GEARHART has sincerely been trying to secure legislation that would protect the water situation along with the creation of the national park.

In his zeal to get "something on" GEARHART, according to reports from Washington, ELLIOTT resorted to a trapping game, when he received, through a mistake, a check for $100 issued in the name of GEARHART by a woman enthusiast urging the passage of the national park bill. The woman wished to contribute to the program in behalf of the measure and sought to donate her check to the cause.

Apparently ELLIOTT saw an opportunity to make himself a hero in nipping GEARHART in the acceptance of what he (ELLIOTT) chose to regard as a bribe. The magazine Time refers to the case as follows:

"Mr. ELLIOTT had the check photostated, sent back to California for remailing, set the F. B. I. to watch for its cashing, and told people to watch him catch "BUD" GEARHART taking a bribe. When he got the check GEARHART returned it to Mrs. Achilles (the sender), honestly and promptly. Then he learned of Mr. ELLIOTT's trap for him. Last week he defended himself before a full House, flayed ELLIOTT for a damnable dastard. One by one Democratic colleagues of ALFRED ELLIOTT left their seats near him. Had he pressed a vote, BUD GEARHART could doubtless have caused ELLIOTT to be the first Representative formally censured since 1921."

The duplicity above described is hardly in keeping with what should be the conduct of a sincere representative of the people of the Tenth District. ELLIOTT knew the purpose of the check and that the sender could have had no thought of an ulterior motive, and knowing GEARHART as he does, he knew him incapable of any pettifogging practices. The flaying delivered by GEARHART against ELLIOTT was thoroughly deserved. It looks very much as if the Tenth District was decidedly misrepresented in Congress.

From the Union Labor Journal of Bakersfield, Calif., of Friday, May 19, 1939:

THINGS AND OTHER THINGS

(By the editor)

When Congressman GEARHART grilled Congressman ELLIOTT the other day as a "damnable dastard," the democratic colleagues of ELLIOTT, desked near him, left their seats and let ELLIOTT sit all by his miserable lonely to take the tongue lashing he so richly deserved for his moronic scheme to trap GEARHART into a bribe-taking situation in which GEARHART was absolutely innocent.

"You can't make a monkey out of me," yelled ELLIOTT. (He had done the job so well himself that the House snickered.)

It seems fitting that the non-union-printed magazine Time should publish the picture of ELLIOTT the union hater.

From the Ventura (Calif.) Star-Free Press of May 24, 1939. This editorial was widely copied.

LAUGHTER IN CONGRESS

For the sake of us constituents back here in his five-county bailiwick, we wish Mr. ELLIOTT, Congressman from the Tenth California District, would elaborate a little upon a statement of his which we find in a current issue of the CONGRESSIONAL RECORD.

A debate was in progress in the lower house over the John Muir National Park controversy which has been raging between Representative ELLIOTT and Representative GEARHART. Mr. ELLIOTT had been interrupted; the RECORD then reports, as follows:

"Mr. ELLIOTT. Now, if I may be permitted to proceed, some of you might think you are making a monkey out of me, but that cannot be done. [Laughter.]"

What intrigues our curiosity, and we can't shake off the itch to learn more, is why the laughter by the other Congressmen?

From Bruce Catton's nationally read column of July 21, 1939, which appeared in numerous newspapers, among them being the Merced (Calif.) Sun-Star:

UNWRITTEN RULE IS LAW

The member who violates the unwritten rule of good fellowship gets sat on. The House made its displeasure unmistakably manifest, a month or so ago, when Congressman GEARHART, of California, rose to a point of personal privilege and explained how his colleague, Congressman ELLIOTT, had sought to prove that he, GEARHART, was taking bribes. The air of disapproval of ELLIOTT's action was so thick you could have cut it with a knife.

From the Los Angeles (Calif.) Westwood Hills News-Press of May 5, 1939:

ROW

Recalling for a stunned House of Representatives halcyon days of another generation when admixture of personal with public morality was less uncommon, California's GEARHART (R.), Fresno, and California's ELLIOTT (D.), Tulare, mixed hot indignation with resentful dignity, brewed a minor Capitol sensation.

Opposed over creation of a John Muir-Kings Canyon National Park, ELLIOTT received accidentally a $100 check made out to GEARHART. Photostated, the check then was allegedly sent to an "undisclosed confederate" of ELLIOTT'S. At last returned first to its original sender and then to GEARHART, the check was again but more promptly returned to its sender, GEARHART stated, displaying an affidavit and copies of his correspondence as evidence he had accepted no pay for his stand on the park issue.

After an hour-long harangue, GEARHART concluded with a desire for no punitive action, sat down to thunderous applause.

From the Long Beach (Calif.) Press-Telegram of May 10, 1939:

HIT AND MISS

(By Harold Williams)

Representative GEARHART needn't worry about any insinuations that he favors the John Muir-Kings Canyon National Park bill for ulterior, selfish, or dishonorable reasons. The public understands that a Member of Congress looking for personal profit will serve private interests and not the public.

The public rewards a faithful servant with nothing more substantial than gratitude and not always with that.

No moneyed interest will be benefited by the Kings Canyon Park. The beneficiaries will be the millions of Americans who delight in scenic beauty and derive pleasure and health from vacations in national parks.

From the California State Grange News, published in Sacramento, Calif., of May 20, 1939:

THE PUBLIC INTEREST IS AT STAKE

An issue that is clear cut between the public interest and the Power Trust and its friends is the Kings Canyon-Pine Flat proposal which would reserve some of California's most beautiful scenery for the public and establish a very worth-while flood-control and irrigation project, all in the vicinity of the Kings River. On record favoring the three Gearhart bills which would make this reclamation development possible are such organizations as the Sierra Club and the Grange, and their stand is vigorously backed up by such notables as President Roosevelt, Secretary of the Interior Harold L. Ickes, and Governor Olson.

Opposing such development of the Kings area is primarily the large power interests, which include so-called farmer and mountaineer organizations that have sprung up like mythical mushrooms to cry, "We're farmers, we're nature lovers, and we don't want these bills passed by Congress." That is the language they use, but their intent might be expressed in such words as: "This is the Power Trust speaking. We want control of the valuable water and power resources of the Kings River. We want to develop this and sell, at our own price, power and water to the people. The public is getting too precocious when it attempts to help itself to its own natural resources and should be slapped for every public-ownership move it makes."

The same misleading propaganda that defeated the worthy Garrison Revenue Bond Act at the last election is operating against the Kings River development bills. Thank goodness there are men in Congress like Representative GEARHART who can see through the fog of such misrepresentation. And thank goodness people are becoming enlightened as to the motives behind those who would defeat worthy public projects. It is to be hoped Representative GEARHART will continue to receive the support of the people in his battle to protect and promote the public interest.

From the Morgan Hill (Calif.) Times of May 12, 1939:

DESIRED TO AID

The facts, apparently, are these: Mrs. Achilles, favoring the park project, sought to aid the campaign by making a contribution of $100 to the volunteer organization furthering the park. The check was made out to Representative GEARHART, it being intended to be handed by him to the group working in behalf of the park. At the same time this correspondence was being prepared, Mrs. Achilles directed a letter to Representative ELLIOTT, and by mistake the check made in GEARHART's favor went into ELLIOTT's letter.

ELLIOTT, seeing an opportunity to smear GEARHART, sent the check to a San Jose friend and had him mail the check to GEARHART, though not until he had called the F. B. I. into the scheme and had a photostatic copy of the check made. If GEARHART cashed the check, then ELLIOTT would have been in a position of shouting his charges of accepting a bribe.

But GEARHART, unaware of what was going on, returned the check to the donor.

MADE DIRTY ATTACK

But ELLIOTT, apparently unable to understand how an honorable man handles such matters, couldn't accept the developments and lashed out with a dirty attack on GEARHART. He displayed the photostatic copy of the check at public meetings in California, leaving the implication that GEARHART was dishonest.

Airing of the whole situation not only cleared beyond any suggestion of suspicion the names of Mrs. Achilles and Representative GEARHART but it showed Representative ELLIOTT in what is apparently his true light. It indicated the type of efforts being used by opponents of the national-park project to kill it.

A little decency in handling this matter would have cleared Representative GEARHART, avoiding unpleasant notoriety for a public-spirited local woman, and would have shown a sportsmanship in the treatment of a public issue which has been entirely lacking.

From the capable pen of Arthur Caylor, who writes for the San Francisco News and other papers under the heading "Behind the News":

DUELS, POLECATS, TROUBLE FOR G-MEN, "ART" SEES GEARHART BATTLE

Funny thing. We get to Washington. We are rushed right out to the House to attend a historic and almost unprecedented main event in which one California Congressman is about to smite a fellow California Congressman with evidence that he's an unpleasant character. The House is nearly full to hear Representative GEARHART rise to a point of personal privilege. And what does he mention right there in Congress? Why, he mentions the very story we had about Representative Elliott trying to trap him in bribe charges with a check for $100.

The occasion is already a celebrated affair. If times were quieter it would be more of a national sensation than if Clark Gable bit a dog. If two more prominent Congressmen had been involved—say the two party floor leaders—it would have caused more stir than a polecat under the Capitol. If it had happened in the befo'dewah days of the Calhouns and the Clays, suh, it certainly would have brought on a duel—pistols for two and coffee for one.

To some of the old-timers, the intensely interesting item in the story told by "BUD" GEARHART, of California, was that he had been under investigation by the gallant G-men of the Federal Bureau of Investigation. The question was whether the House would rise as one man to say, "We resent that."

There was a time, they remembered, when the Secret Service was up there where J. Edgar Hoover has put the Federal Bureau of Investigation. President Theodore Roosevelt had it investigate Senator Mitchell, of Oregon. There was a little matter of some land frauds, or something. But the Senate said, "What; investigate one of us!" Since then the Secret Service has been allowed to do nothing save guard the President and the currency. Other outfits have been the Government's glamor-bulls. If the House took that attitude when one of its Members was investigated by the Federal Bureau of Investigation, it would be too bad for J. Edgar Hoover and his men.

However, it didn't—largely because it was so much interested in what Secretary Ickes might say. When Mr. Ickes says something it is usually interesting, and Members felt he was almost certain to let go a mouthful at the Representative, Mr. ELLIOTT, who has headed the fight against the creation of the John Muir-Kings River Canyon National Park. He did.

In his column of May 10, 1939, Mr. Arthur Caylor made this further comment in the San Francisco (Calif.) News:

BOOK

Congress, which is supposed to have been thinking deeply for years on the subject of California's migrant problem, is beginning to learn there is such a thing. No congressional investigation is at the bottom of this phenomenon. It's John Steinbeck's Grapes of Wrath. Congressmen read books sometimes, and there's so much comment that they're reading this one.

Yet the pardon may have come too late. The farm-security appropriation already has been cut one-third—and that's where most of the Federal money for migrant aid in California has come from. The Elliott-Gearhart battle may hurt, too, for most Congressmen are at the moment moved by an intensive lack of enthusiasm about doing anything for Representative ELLIOTT. And he's the man charged with the business of putting any migrant legislation through committee.

Monopoly Control Act

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. VOORHIS of California. Mr. Speaker, the first session of the Seventy-sixth Congress is drawing to a close. Two or three features of the session stand out. One is the many, many pages in the CONGRESSIONAL RECORD which have been covered with speeches by various Members deploring the increasing public debt, but offering absolutely no solution to the present problem of unemployment and human need.

The second feature of the session is the fact that no progress whatsoever has been made in the direction of bringing the consuming power of the Nation into line with its power to produce. There are a number of ways in which this could be accomplished without increase in the public debt. None of them has even been seriously considered. In the third place, the New Deal has suffered several major defeats and must now, as I see it, develop a more fundamental program to meet America's economic need than any it has advanced so far.

WHAT EVERYBODY IS FOR

Everyone wants a balanced Budget and an end to increases in public debt.

Everybody wants an increase in production.

Everybody wants the unemployed to go back to work in private industry.

Everybody wants a better home market for our agricultural and industrial products.

Everybody wants to save our constitutional democracy and understands—down deep in his heart, at least—that this can only be done if within the framework of that democracy we can solve the problems of unemployment, nonproduction, and poverty in the midst of possible plenty.

And everybody wants the other fellow to make the first move toward accomplishing any of these things.

I have introduced a bill that would restore to Congress its constitutional power to issue the Nation's money and would give the Nation a dollar of stable and dependable value; I have supported every move for a national old-age pension; I have worked for legislation to refinance at a lower interest rate farm indebtedness and for bills to provide adequate credit for the small-business man. None of these measures has received the attention of the present Congress. They remain as necessary unfinished business. But I realize that even though these measures were all enacted into law at least one great problem would still remain to be dealt with—the problem of monopoly. To that problem we must turn if we are to restore abundant production and full employment in private industry, if we are to balance our Budget, and if we are to do anything like justice to the small-business man or the farmer or the 130,000,000 consumers in the Nation.

INCREASED NATIONAL INCOME EQUALS BALANCED BUDGET AND PROSPERITY

It is obvious that the troubles we face are in the nature of a vicious circle—or cycle. Producer A would like to hire more men and produce and sell more of his goods. But he will not, and probably does not dare, do this because, at present, he has no assurance that producers B, C, D, E, F, and so forth, will do likewise. And unless they do likewise producer A will have no market for his increased production unless the Government hires more people on public works.

The only answer, therefore, to the problem of producer A, and all other producers, is either for the Government to furnish him a market or for some method to be found so that all other producers will increase their production at the same time. A general expansion of production all along the line must, therefore, be the alternative to increasing public expenditures.

DILEMMA OF AGRICULTURE AND COMPETITIVE INDUSTRY

But the thing is more complicated than that. For there are some producers in the Nation, like farmers and small competitive manufacturers who cannot decide how much they are going to produce. Economic necessity drives them to produce as much as possible because, unless they do so, someone else in their same line of work will do so and take even what curtailed market there is. As long as monopolistic industry refuses to increase production, agriculture is doomed because the farmer's crops will be sold in a glutted market, while most of the things he has to buy are produced under conditions where the volume of production as well as the price charged can be largely if not entirely controlled by the deliberate decisions of a comparatively few individuals or corporations. The small industrial producer finds himself in the same fix as the farmer.

MONOPOLY HOLDS THE KEY

And so we can understand that it is monopolistic industry that in large measure holds the key to national prosperity. For by curtailing production—for whatever reasons—not only is employment reduced in one industry but the market for goods of all other industries is made smaller. And, furthermore, since monopoly can, generally speaking, exact such prices as it chooses, there is a constant tendency for all competitive producers to be robbed of a portion of their share of current purchasing power and for surpluses to accumulate not only of goods on the shelves of merchants but of idle funds in the coffers of monopolistic industries. As soon as this latter tendency makes itself felt, then a larger proportion of current national income is withdrawn from the general market for goods, and depression deepens.

OLD-FASHIONED BOOM NOT A LASTING SOLUTION

Many people are arguing today that "if only Government would get out of the way, business would move ahead." Perhaps for a brief time that might happen. But it could not last, for a number of reasons. Chief among them is that however "free" business may become, its advance will not be steady or well balanced unless united effort is put forth to bring this about. We need a continuous, effective distribution of the purchasing power represented by goods and services produced. And we need to see to it that a few very powerful highly organized industries do not crowd out all the rest when it comes to obtaining the profits from increased business activity. The "confidence" that a few people may be able to profit greatly because a much larger number are about to lose their shirts is hardly a sound basis for national prosperity. And, finally, no "boom" can possibly last unless, while it is on, provision is made for stepping up general consuming power as fast as production increases.

THE MONOPOLY CONTROL ACT

The confidence that must be given to the producers of America, if we are to have lasting prosperity, is the confidence that production is going to increase steadily and evenly all along the line. We have got to enable people to be sure that other pay rolls beside their own are going to increase, for it is in those other pay rolls that they will find their principal market.

It is evident that business unaided cannot bring about this condition of general steady balanced increase of employment and production. It may not even be to selfish interest of all monopolistic industries to see an abundance produced.

Therefore I have today introduced a bill, the product of the work of many people besides myself—churchmen, businessmen, labor leaders, and economists. It is called the Monopoly Control Act. The basis of the bill is twofold: First, that all America will benefit from a general increase of production and restoration of private employment, and that it is entirely possible to accomplish both these things; second, that the one thing a nation has an unquestioned right to demand of a monopolistically controlled industry is that it use its productive machinery to turn out at least as much of its product as the nation really needs. It is a bill to get people back to work in private industry by assuring each private industry that all other private industries will have large enough pay rolls to consume their goods.

The bill does not affect any industry or business unless it is a major producing industry and also is found to be engaging in monopolistic practices. Other industries may come in under the bill if 70 percent of both employers and employees vote to do so. Otherwise they do not have to. In effect, what the bill does is provide machinery through industry councils and a monopoly control commission to bring about a coordinated expansion of production in all lines at once. In return for this a production-insurance corporation is set up to guarantee all participating businesses against loss due to increasing their production.

An abstract of the main provisions of the bill follows:

ABSTRACT OF BILL

The Monopoly Control Act proposes a new attack on the problem of the monopolistic control of certain industries. Since the purpose of monopoly is the obtaining of excessive profits through the limitation of production and the maintenance of high prices, the bill proposes a direct attack on the reduction of interstate commerce by expanding the production and controlling the prices of monopolistic industries. A general expansion is planned of all of the monopolistic industries of the country, as well as of competitive industries which may voluntarily participate in the program, under provisions for raising wages and lowering prices through the economies resulting from increased production, the expanded production being distributed and consumed through the increased employment provided by the program.

Section 1 lays down the policy of Congress to remove the hindrances on interstate commerce by expanding production, expanding markets for farm and industrial products, and controlling monopolistic practices.

Section 2 consists of definitions. The act applies only to the major industries of the country operating in interstate commerce. Professional, domestic and personal service, and trade occupations are excluded, as well as the printing and publishing industries. Interstate major industries in which monopolistic practices are found to prevail come under the act compulsorily,

while competitive major industries may adhere voluntarily, to secure the benefits of the act. Monopolistic practices are defined to include the following prevailing practices or situations: Selling prices which do not fall after unit costs of labor and material fall; control of the majority of the production of an industry by a very small number of companies; long continued profits far in excess of those earned by competitive industries; control of vital patent rights in the hands of a small number of companies using them exclusively; failure of prices or wages to reflect technological improvements; and prices set in accordance with a basing point system. Provision is made for public hearings, with due notice to all interested parties, before decisions are reached under the act.

Section 3 creates a Monopoly Control Commission of seven members, representing consumers, labor, agriculture, and large and small business. The Commission will administer the provisions of the act, being guided by the principle that the economic resources of the Nation are to be utilized as fully as practicable in the promotion of the national general welfare. It shall cooperate with other agencies of the Government and of labor and industry, especially through the industry councils to be described below.

Section 4 provides for the preparation each year of a national monopoly control and expansion program. The objects of this program are the balanced expansion of production simultaneously in the interstate industries of the country, providing for increased employment within the limits of the available manpower. It is also to provide for the gradual expansion in the productive capacity of the country, and the sharing of the benefits between management, workers, farmers, and consumers. Provision is made for the conservation of natural resources; the improvement or elimination of hazardous or undesirable conditions of work; the replacement of workers displaced from employment; the increasing of wages generally, and most rapidly in the lowest wage brackets; vacations with pay, reduced hours of work, and elimination of child labor and home work; the prevention of unwarranted increases of prices, and the passing on of economies to consumers in the form of lowered prices; the reduction of waste in production and distribution; and a gradually rising assured annual minimum income to the unskilled and semiskilled worker in industry.

Section 5 provides for the setting up of an industry council in each participating industry, giving equal representation to management, labor, and consumers, in addition to representatives chosen by Congress and one representative of the Commission. The industry councils are to formulate and propose tentative expansion programs for their respective industries, to be submitted to the Commission for review and final approval. Under guidance from the Commission concerning the general program for national expansion, the councils will work out the practical possibilities of increasing production, and allocate the resulting economies between higher wages, lower prices, and increased profits.

Section 6 provides for putting into effect the national expansion program when industry programs have been prepared for a sufficient number of interstate industries to insure a general expansion of the industry of the country. Maximum prices are to be set at such levels as will yield to participating industries a rate of profit on their used and useful assets equal to the higher of the following two standards: (1) The average earnings of businesses in competitive industries over the past 20 years, or (2) such earnings as will be necessary to assure efficient businesses in the industry the availability of private capital for their future expansion in capital equipment. Provision is made for the exclusion of particular industries, if the Commission finds their exclusion will further the purposes of the act. Other major industries engaged in interstate commerce may participate voluntarily on an affirmative vote of the managements representing at least 70 percent of the products of an industry, and of the representatives of at least 70 percent of the employees of an industry. On such affirmative vote a competitive industry becomes a "participating industry" to obtain the benefits of the act, on the same footing as a monopolistic industry.

Section 7 provides for the setting up by the industry councils of quotas for each individual business in participating industries, to assure the balanced and comprehensive expansion in the production of all the units in an industry. Maximum and minimum quotas within a given range are provided for, based on the average production of individual businesses over a past term of years. Provision is made for new businesses and for annual revisions in view of current production. Quantities within their minimum quotas which businesses are unable to sell are to be purchased as provided in the next section. The purpose is to assure the increase in activity all along the line.

Section 8 establishes a Production Insurance Corporation as an agency of the Commission whose duties are to underwrite the expanded production. The Corporation will offer to each business in a participating industry a contract promising to take over, at stated intervals, at a price of not to exceed 90 percent of the maximum prices allowed under a program, any quantities within its minimum quota it is unable to sell. The Corporation may hold or dispose of such quantities in a variety of ways; through subsequent resale to the businesses from which acquired, resale in the open market, distribution to those on relief, or holding over to a future period. In the last case such amounts are to be deducted from the quotas for the industry for the following year, to prevent the piling up of unused surpluses of any commodity. Where a participating business is unable to obtain necessary bank credit for its requirements, the Corporation may approve and guarantee such bank loans, under appropriate safeguards.

Section 10 provides for the licensing of businesses in participating industries. Where violations have been established, licenses may be refused, suspended, or revoked by the Commission after due notice and public hearing. Appeals are provided to the courts.

Section 12 provides for the readjustment of farm programs of the Department of Agriculture in line with expanding industrial activity, in order to assure adequate supplies of raw materials, bring about concurrent expansion in farm income, and increase the efficiency of marketing.

Section 15 provides that actions properly taken pursuant to this act will not be deemed violations of the antitrust laws.

Section 16 provides for the nonpartisan administration of the act.

Section 23 sets up an advisory Workers' Rehabilitation Board to coordinate the action of various governmental bodies in the replacement of displaced workers, and provides for payments to displaced workers while undergoing retraining.

Section 24: In order to encourage adequate standards of housing and insure that the housing industry will take its part in the expansion program planned for the Nation, this section makes special provision for the expansion of building operations in the low- and medium-cost housing fields not covered by existing agencies. The construction of low-cost rental houses is to be encouraged by a guaranty for a 30-year period of the net income from properties constructed under standards set up by the Commission. The building of houses for sale is likewise to be encouraged through contracts with the Production Insurance Corporation providing that houses constructed under standards set by the Commission and which remain unsold after 1 year will be taken over by the Corporation at a price which safeguards the actual costs of the builder, but not his profit.

Section 25: The separability clause contains the provision that if section 5 of the act is declared invalid, the whole act shall fall. This is to assure the democratic control provided through the industry councils.

Other sections cover various legal and administrative details.

It is clear from this abstract that this bill proposes to deal with unemployment in an entirely different manner than has our previous public action. It does not attempt to break up big corporations into little ones or to hamper them in carrying on their regular business operations. On the contrary, it proposes to see that the productive capacity of our big-business units is turned loose to produce and employ men. It sets up means by which expansion in production can be made safe for business through Federal underwriting of increased production. At the same time it insures that the increased production will be moved into consumption by providing for higher wages and reduced prices. Yet the manufacturers are reasonably assured of increased profits, because with increased output and sales their costs will come down even faster than prices will be reduced. At the same time it assures farmers of increased markets for farm products and increased farm incomes—a much more satisfactory solution for the farm problem than the present program of subsidizing farmers in the place of providing adequate markets.

It is becoming increasingly apparent that the problem of unemployment is too big to deal with by any of the stop-gap methods we have used thus far. A recent article (L. H. Bean, "Industrial Unemployment and the Farmer," The Agricultural Situation, U. S. D. A., January 1939) in an official Government publication showed that there are about 10,000,000 unemployed today in cities, in addition to those on farms who are waiting for a chance at a city job. But, what is more ominous, the article shows that even if industrial production should move up from its present level of around 100 on the Federal Reserve Board index to a level of 130, there would still be more than 6,000,000 nonfarm unemployed. And who is optimistic enough to think we are going to get industrial production up 30 percent in the next year or two? Even the big new lending program suggested by the President would at best have put less than 1,000,000 men back at work, and many Congressmen and Senators seemed to think that that much additional public investment was too big a commitment for the Federal Government to undertake. If we cannot afford to insure a program of investment to put 1,000,000 out of the 10,000,000 workers back at work, what are we going to do for the other 9,000,000?

The program here proposed, on the contrary, would provide for putting the entire 10,000,000 back at work over the next 2 to 4 years—putting them back at work in private industry, and would not be any direct cost to the Government. The Government would be taking a certain amount

of contingent liability in underwriting the increased production, but any losses it might incur would be much less than what it would gain in increased revenues and reduced relief costs from increased employment.

GENERAL RECOGNITION OF NEED FOR SOME SUCH PROGRAM

During the past year a number of different groups have begun to realize more and more clearly that much more positive action than has yet been undertaken was needed to start definite moves toward reemployment and full production. One of the first steps was taken by the American Farm Bureau Federation at its last annual meeting in New Orleans on December 15, 1938. The first resolution they adopted read in part, as follows:

Believing as we do that recognition of these principles by all groups, and translation of such recognition into action, is the only way out of our economic difficulties, we respectfully urge the President of the United States to call together representatives of industry, labor, and agriculture selected from a list of those recommended by the duly selected leaders of the three major economic groups, to discuss a program of action designed to promote economic balance between these groups on a basis that will permit full utilization of our great productive resources and we further urge that in view of the serious effect of the present maladjustment, these representative leaders be kept in session until they have agreed upon such a program.

This important farm group recommended that the leaders of industry, labor, and agriculture be called upon by the President to prepare a program of increased production and employment. This resolution recommended two essential elements of the program which my bill provides, (a) that leaders of business, labor, and agriculture should participate in the development of a program, and (b) that it should be set up on a democratic basis.

The American Federation of Labor in its Monthly Survey of Business has repeatedly called attention to this same problem. Thus, for example, in its February issue the statement was made:

What are the next steps to expand production? First, Government, business, farmers, and labor must work together. We need regular channels through which business thinking and labor thinking can reach the Government and take part in policy making. Business has its advisory council to the Department of Commerce who are being called in for consultation, but Labor has no open door for making its views known to the Executive. It is for the Federal Government to take the initiative in bringing representatives of labor, as well as business, farmers, and others into its councils to develop practical measures for immediate industrial expansion. * * *

Any plan for industrial expansion must include labor. Democratic procedure requires that labor as well as business be represented and consulted by the Federal Executive. Labor's interest must be protected and wage gains must keep pace with rising production and profits. Any practical plan for expansion requires team work of all groups under Government supervision.

Similarly the June issue of the A. F. of L. monthly publication reemphasizes the same point as follows:

Sound recovery in an age of mass production can only come through planning to advance all economic groups and timing undertakings so as to provide consuming power to buy output. Such planning, as advocated in our last issue, has two important features: The National Planning Board is (1) representative, and (2) continuous. Representatives of businessmen, labor, consumers, farmers, industrial engineers, should have a voice in formation of policies.

Steady progress in production and living standards cannot be achieved unless all groups cooperate to carry out a workable plan for these ends. Businessmen, in the May United States Chamber of Commerce meeting, brought out a number of points bearing on recovery; their counsel and cooperation is needed. Labor counsel is necessary to aid in directing national social and economic policy toward provision for human needs, higher living standards, and better work conditions. The advice of engineers, heretofore not utilized on the plane of national affairs, is essential in the difficult problems of national planning, organization, and coordination which lie ahead. Counsel and cooperation from consumers, farmers, and other economic groups is equally important.

Not only the A. F. of L. but leaders of the C. I. O. recognize the need for concerted action to increase production. John L. Lewis, in his report to the first constitutional convention of the C. I. O. held in Pittsburgh, November 14, 1938, made the following statement:

It is becoming obvious that full production in a stable economy can be created only by intelligent direction which has the power and the will to coordinate all economic controls toward that single end. Such central direction must necessarily come from government. Intelligent direction also of necessity means planning toward the future. One of the serious defects of the economic measures of the present administration has been the failure to coordinate and plan its economic program over an adequate period.

The goal of full production and full employment is one to which it would be difficult to find open opposition. It is clear, however, that there are many who oppose that goal through seeking special interests. Only labor, representing the majority of the people can guarantee a continuous movement toward full production. Labor must have a strong voice in the Government and in the agencies of the Government which administer a sound economic program to guarantee that such a program shall not stagnate or be perverted. Heretofore labor has too often been ignored. If the future is to be one of hope, labor must take its rightful place.

Religious leaders, too, are becoming aware of the need for positive action to deal with this great problem. Recently at an interfaith conference on democracy and economic planning, leaders of every faith stressed the need for action along the lines here proposed. The character of their beliefs is indicated by the following extract from their statement:

The depression had held America in its grip for 9 years. Millions are still jobless. There is no sign of putting any considerable proportion of them back to work or of assuring either them or many of those now at work income sufficient to enable them to live as human beings and Americans should live. * * *

In our country desperation has fortunately not yet reached the stage of a widespread demand for such dictatorship. However, until economic life is stabilized on high levels of production and just distribution, and until unemployment is abolished, there will remain constant danger of trends toward the totalitarianism of a communistic or Nazi-Fascist state with all their cruel violation of basic rights and liberties. * * *

We need to direct economic life, but the direction should be undertaken first of all, and to the very limits of the possibilities by the people, democratically organized around their own work and ownership. The greatest burden and control should rest on the people, freely organized as now, in employers' associations and labor unions, in farmers' marketing cooperatives, and in associations of the professions, and upon them so federated by industry councils that they can see their own occupation squarely in the whole picture of economic life. * * *

Governmental leadership can go far to lead them when they are thus organized and federated, to set and attain goals of widening output and larger employment, and distribute the income, and balance the prices so as to let the people use the increasing goods and services which we produce and can produce. We can do this under democracy. * * *

A wisely conceived guidance of economic life need not mean a dictatorial state. Neglect to guide and direct the economic system will mean totalitarianism by default. * * *

We furthermore urge a constant recognition of the fact that the direction of industry must provide that labor as such, and consumers as such, as well as employers, be organized as constituent, self-conscious elements of any and all plans. In other words, we suggest democratic action from the bottom up as well as from the top down.

PROGRAM FOR THE FUTURE

I should make clear in introducing this proposal that I do not expect that it will be adopted immediately nor probably in the form of my bill. The fundamental technique used in maintaining production in the Roosevelt administration thus far has been that of public expenditure. At the same time it is clearly apparent that spending or investment alone, unless done in far more tremendous volume than we have yet been able to do, cannot deal with the problem of 10,000,000 unemployed. The theory of lack of "business confidence" and that with "confidence" restored business will invest enough to increase activity is purely a red herring. The testimony of Owen D. Young and Alfred P. Sloan, Jr., and other industrial leaders before the National Temporary Economic Committee here showed clearly that their industries do not need capital and are now investing as much as they see markets for their products. Regardless of what party is in power 2 years from now, it will be faced with the same economic problems we are now faced with. Regardless of what party is in power, it will have to develop a program to provide increased employment through a broad program including the correction of monopolistic practices.

It may be that we will not adopt such a positive national program until another great depression reduces industry and finance to desperation and leaves everyone willing to use strong and positive measures where weak and partial measures have failed. I hope we will not have to wait that long. But whether we adopt a positive program such as this coolly

and with foresight, or whether we adopt it hurriedly and frantically in the midst of another great depression, certainly it is important for it to be well considered ahead of time. This proposed bill is introduced in the hope that it will encourage the study and consideration of such proposals ahead of time so that if and when we finally do come to adopt them they will be as rational and sound as possible.

MAINTENANCE OF DEMOCRACY ESSENTIAL

The program that I propose is complicated throughout by provisions for public hearings and participation on the central authority and in the industry councils of labor, consumers, and of business, and also by representatives of the Congress selected by that body; by provisions for votes and other procedures; and also by provisions of public hearings not only in each industry but eventually in each factory participating in the program. I well recognize that it will take longer to work out a program with all of this elaborate machinery, and that the administrators will have many headaches in trying to compose the interests of the various groups who have to fight things out in various hearings and industry discussions. That is, however, part of the price we pay for democracy. Democracy is a relatively disorderly and somewhat lumbering process. Dictatorship with a small group of men telling everyone exactly what to do and when to do it is easier to run—for the dictator—and probably operates faster and smoother.

What I am aiming at is not merely providing for economic security for the people but also maintaining freedom and liberty at the same time. The democratic process with its lumbering discussion groups and public hearings does provide means through which concerted action can be taken with the understanding and support of the whole people affected by the actions. Whatever one's views on its economic soundness, the A. A. A. program, with its township and county committees, and planning groups, and State and regional conferences, has shown that economic programs can be developed through democratic processes and that it is possible to plan from the grass roots up as well as from the top down. The industry program outlined in my bill similarly provides for planning from the bottom up rather than from the top down. The democratic features in the bill do insure that such planning will give full voice and full opportunity to be heard to each participating interest.

Democracy cannot endure without jobs. In presenting a program for conscious action to increase production and provide jobs for all our people I believe that I am offering a program vital to the preservation of democracy. Young folks who are unable to get jobs for years after they leave school may lose their faith in society. America has got to offer them opportunity to help build their Nation. There are those who will call them to tear it down. Older men who see their children die of malnutrition or outright starvation become embittered and ready to follow anyone who promises them work. Yet today we are cutting 1,000,000 people off the relief rolls in the face of the fact that the number of jobs during this next year is hardly likely to increase any more than the number of workers added to the population looking for work. How can we say that we are providing for our people when in cold blood we throw 1,000,000 more people out of relief with no jobs for them?

Liberty and freedom are sweet and precious things. But when men feel they must choose between food and freedom they are likely to choose food for their children. If they feel their only choice is between liberty and a job, they will say a job is more important than liberty. This has happened in other nations. It is the supreme task of this generation to work out ways and means by which we can assure men jobs and yet retain their liberty at the same time. A program such as that provided in my bill will assure opportunity to work and economic security to all while preserving democracy. If we will adopt such a program and put it into effect, we need have no fears that free Americans will subscribe to the false hopes held out by demagogues and would-be dictators.

The bill is so framed that unless the features of it which provide for democratic control stand the whole act becomes invalid. This is accomplished by a reverse separability clause. And furthermore there is no reason why a free democratic people should not be able by their own voluntary action to guard against the ravages of unemployment and the stagnation of nonproduction. My own belief is that had a bill of this character been ready in 1932 and 1933 the people of the Nation—including the business leaders—would have welcomed it and that it would speedily have brought us out of the depression.

I would be the last to be willing to see a bill of this character passed unless there were an overwhelming demand for it. Indeed, I will go further and say that I still have very real hope that by a scientific control of our monetary system and the flow of buying power to and from all groups of our people such a bill may yet be rendered unnecessary. But I do not want America to be unprepared nor to have anyone able to say that her parliamentary, democratic processes have broken down and cannot cope with her problems. The bill is offered primarily as a basis for study, discussion, and consideration of the problem of private monopoly in what is supposed to be a free economy. For private monopoly deprives the Nation generally and other producers particularly of freedom quite as much as does governmental regulation. And private monopoly—though it undoubtedly has contributed much to technological efficiency—contains within it the germs of destruction for democracy unless that democracy can guide the activities of monopoly into nationally useful paths.

The cure for every form of subversive activity in this country—the cure for fascism, nazi-ism, communism—is jobs for our workers and the saving of the business and property of our other people. This, then, is the task of Congress. In a way it is its only task. And it is, therefore, the duty of every Member to work diligently at that task until at last we succeed. It is in this spirit that this bill is offered

Gene I. Van Antwerp, Veteran of Foreign Wars Chief

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

ARTICLE FROM THE FOREIGN SERVICE MAGAZINE

Mr. PETERSON of Florida. Mr. Speaker, the Honorable Eugene I. Van Antwerp, soldier, engineer, father extraordinary, president pro tempore of the Detroit Council and commander in chief of the Veterans of Foreign Wars, was in Washington this week on the day of the fiftieth anniversary of his birth and Gene Van Antwerp, half a century young in spirit and energy and enthusiasm and half a century old in experience and responsibility, was saying "howdy" to his friends here, among whom I have the privilege of being, and I rise to congratulate him on the anniversary of his birth and to congratulate the great organization which he heads. The Foreign Service Magazine, published monthly by the Veterans of Foreign Wars of the United States, in its November 1938 number, had a very fine article about Gene Antwerp and his family and I quote, in part, as follows therefrom:

Born July 26, 1889, third child in a family of eight, "Gene," as he is affectionately known to thousands of loyal friends from coast to coast, has lived in Detroit all of his life, like his father and grandfather before him, aside from one or two brief periods of absence in search of fortune and adventure. He grew with Detroit, and his career has recognized no obstacles.

He is a self-made man in every sense of the word, he learned life in the hard way, and is, in the vernacular, a "regular guy."

John C. Lodge, 76-year-old dean of Detroit's Council, has known Gene all his life, and knew his father and grandfather. He pays tribute to our commander thus:

"No finer family man ever lived. He is a gentleman, kind and considerate, with a fine sense of humor and an infectious laugh; he is strong mentally and physically and has a tremendous store of energy. He can take orders and knows how to give them; he has an unusual understanding of public affairs, and has the God-given faculty of being able to get down to brass tacks."

At 12 he got his first job, running cash in a department store on Saturdays and at vacation time, but left this 2 years later to become water boy for a track-laying gang of the street-railway company because it paid more money.

After graduation from grade school he entered Detroit College, now the University of Detroit.

The ambition to become a soldier still persisted and, unknown to his father, he wrote Congressmen and Senators and even to President Theodore Roosevelt, seeking an appointment to West Point.

He pulled every string he could think of and his ambitious efforts were rewarded with not one, but two, appointments to the Military Academy.

Gene didn't know of his good fortune, however, until the appointment had been sent back—refused by his father.

He was heartbroken and his father packed him off for a year at boarding school in Montreal, but upon his return in 1907 he finally realized his ambition to become a soldier by joining Troop B, Michigan National Guard Cavalry, under Lt. Heirnrich Pickert, who now is Detroit's police commissioner and brigadier general commanding the Michigan National Guard.

But being a saddler in the guard was too tame, so he resigned and enlisted in a balloon unit being formed at Fort Omaha, only to be sent back as physically unfit. Resigned to leading what he considered a prosaic life in Detroit, he reentered Detroit College and again joined the cavalry troop.

It was at this time he met the girl who later became his wife, Frances McDevitt.

He happened to meet Justin McDevitt, Frances' brother, who sadly told him he was up against a tough problem and asked his aid. Gene had played football with Justin while at college and agreed to help.

It seemed that Justin had promised to take his sister to a dance that night and later found his best girl wanted to go also. He asked Gene to take his sister. Gene did and thus began a friendship that ripened into love and resulted in marriage and the happy parenthood of 11 children.

He left school and Detroit, going to Spokane, Wash., where he joined the faculty at Gonzaga College, becoming an instructor in mathematics and English.

He continued to correspond with Frances McDevitt and, filing for a homestead in the Coeur d'Alene Reservation, wrote her, popping the question.

She agreed and they were married on June 21, 1911, at the home of her cousin Sara, wife of the mayor of Odessa, Wash.

A newspaper story told of vacancies in the police department. Although 2 years under the minimum age limit of 23, Gene talked fast and was soon traveling a beat. He served a year in various capacities, earned front-page newspaper publicity when he saved the life of a woman trapped in her burning home, then resigned to take up the work he had studied for, becoming a civil engineer for the Michigan Central Railroad.

In December 1916, when it began to look as if nothing could keep the United States out of the World War, Gene applied for a commission in the engineers. He was ordered for examination April 13, 1917; on May 26 he was commissioned a first lieutenant in the Sixth Reserve Engineers, which later became the Sixteenth; on June 7 he was ordered to active duty.

He trained at the State fairgrounds in Detroit and on the first Sunday in July boarded the transport *Tuscania* for "somewhere in France."

He was one of the first 30,000 to arrive in France.

Later the Sixteenth was sent to the Aubigny-Arras-Bethune front to build a narrow-gage road. It took 4 months to complete and the Sixteenth suffered many casualties, being almost constantly shelled while they worked and bombed at night when they tried to sleep.

After service on the Meuse-Argonne front Gene was assigned to the Engineer Officers' Combat School, where, in August 1918, he received his captaincy.

But instead of rejoining his regiment he was sent back to the States and assigned as an instructor to D Company, Third Engineers Training Regiment, Camp Humphries, Va.

On November 6, five days before the armistice, he was ordered to Washington to the staff of the Chief of Engineers, and on November 30, discharged, he returned to Detroit and resumed his work with the Grand Trunk.

He left the railroad in 1926 to become chief engineer for the National Survey Service, and 2 years later opened an office for himself as consulting engineer.

Finally persuaded by his friends that Detroit needed an engineer on the council, Gene gave in—telling them he could not afford expenses of the campaign with a flock of children at home and in school.

Gene was elected and at the last election, in 1937, he polled the second highest number of votes for the office, thus becoming president pro tempore of the nine-man council.

His connection with the V. F. W. began early in 1919 when he joined the Corporal J. W. Johnson Post, No. 78, later becoming post chaplain.

During the 1921 reunion of Company A, Sixteenth Engineers, Gene suggested the founding of a V. F. W. post, and the Sixteenth Engineers Post, No. 582, was born.

He refused office at first, but in 1924 succumbed to the wishes of his comrades and became senior vice commander. From then on it has been just one step upward after the other; commander of Post 582 in 1925; senior vice commander of the Wayne County, Mich., council in 1926; commander in 1927; commander of the Department of Michigan in 1928; member of the national council of administration in 1931–32; and unanimously elected senior vice commander in chief of the Veterans of Foreign Wars of the United States at Buffalo, September 3, 1937.

He is also a member of the Disabled Veterans of the World War; Bearle V. Pittenger Post, American Veterans Français du Michigan; honorary vice president, Detroit Branch, Canadian Corps Association; Sixteenth Engineers Association; Sons of the American Revolution; the National Geographic Society; American Society of Civil Engineers; Engineer Society of Detroit; Holland Society of New York; Detroit Yacht Club; past commander, Michigan Tent, the Maccabees; and honorary life member of the International Association of Operating Engineers, Local 522.

The many friends of Gene congratulate him and wish for him much success in his fine work and continued health and happiness.

Development of the Cattle Industry in Florida

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. PETERSON of Florida. Mr. Speaker, under date of July 1, 1939, in the Tampa Times, and under date of July 2, 1939, in the Tampa Tribune, two large daily newspapers published in my district, there appeared a full-page advertisement by the First National Bank of Tampa carrying the data which I have given in these remarks, and showing a picture of a "drive" of 1,600 head of cattle snapped at the Carey Carlton ranch, in Highlands County, and a photograph showing Hereford sires shoulder deep in para grass on Roscoe Bass ranch, near Avon Park, Fla.

Another photo showed T. J. Durrance, Jr., of Bowling Green, Fla., who ranches with his father on 25 sections of land east of Brighton, Fla. It also shows a stand of giant Bermuda grass coming up to the hub caps of an automobile, a picture of a tractor transforming palmetto scrubland into land suitable for planting carpet, para, or giant Bermuda grasses—tractor being used by Nichols and Rudasil of Sebring, Fla.—all of these aforementioned groups being in the district which I have the honor to represent, but being typical of what is happening in the other cattle-raising sections of our State. With no extremes of cold, with year-round water and the practical elimination of the tick, Florida is making great strides in the cattle industry.

Ten years have seen gigantic strides in Florida's beef cattle industry, according to reports of the Florida State Marketing Bureau. Here are some interesting comparisons: Value of beef cattle—now estimated at $20,000,000—and number of animals—now about 1,200,000—doubled since 1929; more cattle under fence—estimated 60 percent in 1939 as against 5 percent 10 years ago; marked improvement in quality of beef produced.

South Florida is the leader in development of the cattle industry along modern lines—which calls for better animals to start with, and better pastures. During the past 3 years, material aid in pasture improvement as a soil conservation measure under the Government's A. A. A. program in Florida, has enabled cattlemen to meet in a large measure the initial cost of converting prairie and cut-over lands from palmetto thickets to planted pastures.

Not all the cost of such improvement is taken care of through the A. A. A. program, but cattlemen are finding it profitable to supplement Government aid with enough of

their own funds to purchase fertilizer—mostly lime and phosphate—after land is prepared for planting of grasses.

The story of pasture improvement in just a few south Florida counties during the past 2 years indicates the trend of the day. In Highlands, Hardee, DeSoto, Charlotte, Glades, and Hendry Counties more than 35,000 acres of planted pastures are supporting more and better beef cattle than 10 times that acreage could sustain a few years ago.

Whereas it took from 15 to 20 acres of wood pasture to support 1 head of cattle in the not-so-long-ago, improved pastures planted to carpet, para—pronounced pa-rah—and giant Bermuda grasses now support 3 or more head per acre when pastures are lush. On such pastures, beef animals gain more than a pound a day in good, salable flesh.

They talk in big figures down in south Florida's "cattle country"—ranches of 50,000 acres and more, not just woods lands, but thousands of acres improved, and the work going on unceasingly to convert more land for more cattle. Ranches may be measured by miles—4 along this boundary, 6 the other way. Herds are counted in the thousands, too—4,000 head on this ranch, 3,000 across the boundaries on the next one. The Florida cattleman has none of the contempt of the westerner for "sod busters," and his busy day is a mixture of life in the saddle one day or riding a tractor the next. Florida cowboys, too, may lack the "moving picture" atmosphere, but they are hard-working, hard-riding men—as adept with rope or branding iron as any to be found.

Highlands County is a good example of what is going on in the cattle industry. Under the leadership of County Agent Louis Alsmeyer, almost feverish activity in pasture improvement is under way on dozens of ranches. But neighboring counties likewise are busy. You have to get off the hard road to find out about it, but when you do and listen to successful cattlemen, you get the idea that Florida's beef-cattle industry is destined to be a big factor in the State's progress. And make no mistake about it, when this better beef goes to market, you get meat of outstanding quality—and grade for grade, Florida beef from better pastures measures up with that produced in other States. Florida packers so testify.

P. E. Williams at Davenport has shown what can be done with feeders and with improved stock on improved lands. Bill Abbott, staff writer for the Tampa Tribune, in a recent article appearing in the Tampa Tribune states, in part, the following:

WILD LAND TRANSFORMED

The touring party who rode over more than 100 miles of south Florida prairie saw poor, raw palmetto land of which Florida has millions of acres transformed overnight into grazing country knee deep in grass that makes cattle fatten almost before your eyes.

It was the culmination of a quarter of a century of research and work by the extension division of the University of Florida, the courage of a few pioneer cattlemen and the generous pocketbook of Uncle Sam.

Not only will it give the State a new major industry but it also will provide a new utilization of miles on miles of waste land along with soil conservation.

Incidentally, it will take cattle off Florida highways and put thousands of dollars worth of land back on the tax books.

—

UNIVERSITY FOUND GRASSES

The university got busy to reduce the necessary acreage, and after thousands of experiments found three types of foreign grasses—Para, Bahia, and carpet—that would grow on the sparse sand flats that heretofore produced only palmettos and rattlesnakes.

Then Uncle Sam came along with his New Deal for agriculture. He wanted to conserve the soil in Florida as well as in the Dust Bowl States. He set up complicated administrative machinery that would pay land owners $3 an acre for all property up to one-twelfth of their holdings that they transformed from wild acreage to grassy range land under fence.

At about the same time the university's scientists found that while they could produce abundant grass, it didn't have the required minerals for good beefsteak. So they prescribed a mixture of salt, red oxide of iron, copper sulphate, and cobalt chloride to give the otherwise contented cows their proper vitamins.

TAMPANS TELL OF SUPPORT

Howell T. Lykes and R. J. Binnicker, Tampa businessmen, told how business interests were giving their support, and B. F. Welles, president of the DeSoto National Bank at Arcadia added that Florida bankers were interested, too.

W. F. Ward, superintendent of the Chinsegut Hill experiment station at Brooksville, called it "a dream come true."

"Florida started in the cattle business too early," he explained. "Tick eradication took longer than was expected. But now the tick has been eradicated in most areas, the mineral deficiency has been solved, ranges have been fenced, cattle have been improved, markets have been provided, and we are just beginning.

"Perhaps the sun is rising for the first time on the big landowners. It will put land back on the tax rolls, and everybody will benefit. Nothing offers a greater opportunity in Florida—but it can't be done on an open range."

—

FLORIDA BEEF IMPROVED

Alsmeyer said the improvement in Florida beef had been remarkable, and declared it was now more desirable than so-called "western" meat.

"What we need and what we're working for is a 'Florida' grade," he said, "to bring a premium price just like Florida eggs bring a premium over eggs from other States."

J. Lee Smith, extension agronomist of the university, explained detailed methods of grass planting, and W. E. Stokes, agronomist of the university experiment station, told how they had tried hundreds of grasses before finding the kind adaptable to Florida's wild lands.

Smith said grass planting was becoming general throughout the State, but Highlands County was chosen as a demonstration center because with Alsmeyer's enthusiasm the program had gone farther here.

"But the same thing is taking place in adjoining counties and all over Florida," Smith added.

Stokes explained an acre of "native" wild land would produce about 10 pounds of beef a year whereas planted grass on the same area would add 400 pounds.

"And we haven't stopped yet," he observed. "The university is working all the time to improve and increase beef production."

—

GOVERNMENT HELPS PROGRAM

H. G. Clayton, State administrator of the A. A. A., said the Government had helped to plant more than 150,000 acres in Florida, and in comparison to its area and population Florida had done more than any other State in pasture improvement.

One reason Highlands is leading, said Mrs. Ruth Bass Hylton, county tax collector, is the cooperation the cattlemen are getting from their officials. Taxes on pasture land have been held down to 5 cents an acre, regardless of the improvement.

"And that's all they can afford to pay," said Mrs. Hylton, herself a cattle owner. "It ought to be 3 cents."

She recalled that a delegation of land and cattle owners appeared before the Hillsborough County commission at Tampa recently and asked for a lower assessment so they could go ahead with a similar program.

—

PRODUCTION INCREASED

Albert DeVane who has planted his land in carpet and para grass showed how it had increased beef production.

"It used to be that a 2-year-old yearling would dress about 200 pounds," he said, "and now it is not unusual to see them weigh 450."

He pointed proudly to a stand of para grass that reached to a horse's belly, and informed the crowd that it was only 5 weeks old.

"That shows you what Florida sand will raise," he enthused.

The crowd visited the ranch of J. C. and T. Jesse Durrance, and heard the story of how they bought 100 range cattle off palmetto land for $24 apiece and sold them for $34 each after they were put on grass land for 90 days—$1,000 clear profit in 3 months.

The pasture tourists then went on to the Lykes brothers ranch at Brighton where they saw hundreds of Brahma and Hereford cattle in high grass.

—

LYKES BROTHERS PIONEERS

The Lykes brothers also are pioneers in livestock improvement, and hold that the best breed for Florida is the Braford—a cross of Herefords and Brahmas, the latter with humps on their shoulders, the sacred cattle of India.

But the first thing to do is to build a fence, and then plant grass, which everybody is doing down here.

With the cattle boom coming on they don't talk about acres any more. They talk in sections, and a section is 640 acres, a mile square, but there's plenty of it left yet for better roast beef and good thick, juicy steaks.

Agricultural journals recently have also pointed out the opportunities of the South generally for dairy and that same opportunity holds good for Florida.

Provisions of Legislation Similar to that Embodied in Hatch Bill Should be Extended to State Positions

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. RANDOLPH. Mr. Speaker, I have today introduced in the House a companion measure to the Senate bill 282, by Senator NEELY, of West Virginia, which would provide that State employees employed in connection with programs carried on and with the assistance of the Federal Government, be selected in accordance with a nonpolitical civil-service plan.

During my congressional service I have been an active member of the House Civil Service Committee, and on every occasion have worked and voted to extend the merit system. I am authorized by Chairman RAMSPECK, of the Civil Service Committee, to state that he will have that group consider shortly after the first of next year, the bill which I believe will stamp out pernicious political activity in State positions in elections, and will be in line with the recommendation of President Roosevelt on this extension of clean politics, as outlined in his message when he signed the Hatch bill.

The gentleman from Georgia, Congressman RAMSPECK, has introduced legislation on this subject, and he has assured me he will work consistently for the objectives as set forth in his bill and the measure that I have just introduced.

There is, to my mind, no reason why congressional action cannot be taken early next session to expand the fine provisions of the Hatch legislation. The country approves in large measure the favorable vote of a few days ago, and will welcome the inclusion of State positions under safeguards placed in the recent bill.

President Roosevelt and a Third Term

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

STATEMENTS OF HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD two statements by the distinguished Senator from Pennsylvania [Mr. GUFFEY] in regard to a third term for President Roosevelt, one released on September 16, 1938, and the other on December 5, 1938.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JOSEPH F. GUFFEY FOR PUBLICATION IN MORNING NEWPAPERS OF SEPTEMBER 16, 1938

Is Roosevelt going to be a candidate for a third term?

I have been asked that question all over Europe and on the boat going and coming.

I imagine that it will be the people rather than the President who will determine whether there shall be a third term for Roosevelt. These people—and I mean all of the people; not just some of the people—gave him an overwhelming mandate in 1932 to salvage the wreckage of the Coolidge-Hoover regime, to so readjust our social and economic system that it shall meet the requirements of humanity, and to save American democracy by making it function.

In 1936 the people gave Roosevelt a mandate of unprecedented magnitude to carry the work so splendidly begun during his first term to a conclusion.

But all the most powerful instrumentalities of reaction have been brought to bear to obstruct him in carrying out the people's mandate; never has any American President been so insanely hated by the overprivileged few, and the people love him all the more because of these enemies he has made. Their hatred makes the issue clear.

Now the people are in dead earnest about the mandate they have given to President Roosevelt. They propose that it shall be carried out, and if as the result of obstruction from reactionary forces this program has not been fully realized before the expiration of the President's term, the people will insist that Roosevelt continue in command until their mandate is carried out.

It is not a question of what the President may want so much as a question of what the people may determine.

The reactionaries, the economic tories, the privileged few, are working day and night to force the renomination of Roosevelt, but without suspecting it.

It is not the mud being thrown at the President that the people are finding interesting, but the character and motives of the mud throwers are making very significant the nature of the anti-Roosevelt crusade.

We are going to preserve democracy by making it function through any adjustments in the machinery that changed conditions may necessitate, and if the people conclude that Roosevelt is better equipped for the task than any other, they and not the politicians will force his renomination.

Much may depend upon the fate of his constructive program during the next 2 years.

On Monday, December 5, 1938, Senator GUFFEY made the following statement:

"Following a campaign of misrepresentation and false promises, the Republican Party on November 8, obtained a new but temporary lease on life from the voters in some States including my own State of Pennsylvania.

"Intoxicated by their unexpected success they now have visions of victory in the Nation in 1940.

"The campaign to again make Wall Street the seat of the Government was launched at the meeting of the Republican National Committee here last week.

"The drive to saddle the cost of relief for the Nation's unemployed wage earners on the backs of the Nation's employed wage earners is also under way.

"The movement to reestablish industrial serfdom and destroy the partnership between labor and capital made possible by liberal Democrats under the leadership of Franklin Roosevelt is gathering momentum.

"Realizing the real objectives of the Republican overlordship that proved it still controls that party by the seating of the Du Pont candidate, ex-Senator Hastings, of Delaware, on the Republican National Executive Committee, the Democratic leadership would be derelict in its duty if it did not take effective steps to make impossible the accomplishment of these Republican aims.

"The 1940 campaign will be the most momentous in the history of the Nation. The issue will be the liberal democracy of Franklin D. Roosevelt versus the camouflaged fascism of powerful financial and industrial interests masquerading under the colors of the Republican Party.

"The one man to justify the Roosevelt record is Roosevelt. Pennsylvania wants him as standard bearer in 1940. Pennsylvania does not want and will have nothing to do with any so-called middle-of-the-road candidates.

"Pennsylvania was, is, and will be for Roosevelt, and Pennsylvania's 72 votes at the next Democratic convention will be cast to make him our standard bearer in 1940."

Senator McKellar's Work for Tennessee

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ARTICLE IN THE NASHVILLE (TENN.) BANNER, AUGUST 2, 1939

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in

the Nashville (Tenn.) Banner on August 2, 1939, regarding the benefits brought to the State of Tennessee through the work of my colleague, the senior Senator from Tennessee [Mr. McKELLAR].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nashville (Tenn.) Banner of August 2, 1939]

SENATOR McKELLAR'S WORK BRINGS MANIFOLD BENEFITS TO TENNESSEE

WASHINGTON, August 2.—As the first session of the Seventy-sixth Congress nears its close, Senator KENNETH McKELLAR, of Tennessee, regards it as perhaps one of the most important in years and productive of beneficial and generally desired legislation.

The session has been of vital interest to Tennessee, owing to the enactment of laws that place on a definite going basis two great projects close to the Senator's heart—the Great Smoky Mountains National Park, to be formally dedicated in September by President Roosevelt; and the Tennessee Valley Authority establishment, which is now taking over the properties of the Tennessee Electric Power Co. to supply Nashville and 35 other communities power at the cheapest rate in this country.

As author of the original act under which the Great Smoky Mountains National Park was created, with its 437,602 acres of hardwood forests growing amid the most enchanting scenery in the world, the Tennessee Senator has battled in season and out for the realization of his dream of a great national park on each side of the Tennessee-North Carolina boundary. When formally taken over by the Government in September, it will have cost more than $12,000,000.

The final sum provided by Congress to acquire 37,000 acres to complete the park area was enacted only during the last Congress. Senator McKELLAR sponsored and secured passage of this bill to appropriate the requisite $734,000 three times before it was finally accepted by the House. That body at one time adjourned the session with little effort having been made to secure enactment of the measure, even though Senator McKELLAR piloted it through the Senate in ample time for House acceptance and Presidential approval.

While Senator GEORGE W. NORRIS, of Nebraska, coauthor with Representative JOHN E. RANKIN, of Mississippi, of the T. V. A. Act, is often referred to as the "Father of the T. V. A.," Senator McKELLAR is "Father of the Idea," upon which the great T. V. A. project has been built and for which Congress has thus far appropriated $266,069,270, including the 1940 appropriation of $35,003,000.

INTRODUCED SHOALS BILL

It was in the spring of 1916 when Europe was locked in the death grapple of the World War, that Senator McKELLAR, then a Member of the House of Congress, foreseeing possible entrance of this country into the sanguinary struggle and conscious of our utter unpreparedness, introduced the original bill to construct at Muscle Shoals the Wilson Dam for the manufacture of nitrate by the affixation process so that by the cooperative use of the rich phosphate deposits in middle Tennessee, the powder supply of this country might be inexhaustible for defense, and the fertilizer supply for farmers might be increased.

A similar measure was sponsored in the Senate by Senator ELLISON D. SMITH, of South Carolina, and it was upon the concept of this legislation that the T. V. A. project was founded—whose directors are now to take over the properties of the Tennessee Electric Power Co. (C. and S. auxiliary) in the $78,600,000 deal, to afford a low-rate yardstick by which the cheapest power in the Americas will flow over thousands of miles of transmission lines in the Tennessee Valley.

Thus, Senator McKELLAR is in reality the originator of the T. V. A.; and during all the years that this original project to improve navigation, flood control, conservation, manufacture of fertilizer and cheap power was delayed, Senator McKELLAR jealously guarded the Wilson Dam until the day when his hopes would be realized.

Having thus protected these properties for a fifth of a century, Senator McKELLAR now sees the world's greatest economic undertaking under way in his and adjoining States; an undertaking that will cost approximately $300,000,000 when completed.

But despite its progress, the T. V. A. has hit breakers in Congress, and three times Senator McKELLAR has saved from the legislative scrap heap the Gilbertsville Dam that is to cost $95,000,000, by amending bills that had reached the upper branch with Gilbertsville eliminated.

With eight of the system of dams already authorized by Congress, except Coulter Shoals, to cost $25,000,000, Senator McKELLAR will redouble his efforts for T. V. A. at the next session in an effort for its inclusion.

When Senator McKELLAR leaves for home next week he will have rounded out approximately 29 years as a Member of the United States Congress; years in which he has dedicated his life to the service of his State and country. Nearly 6 years of this tenure was in the House and the remainder has been in the Senate. The ranking Senator in seniority is WILLIAM E. BORAH, of Idaho, whose services began March 4, 1907; with ELLISON D. SMITH, of South Carolina, second, his service beginning March 4, 1909. Entering the Senate on March 4, 1917, when Woodrow Wilson, a former Tennessean, was President, Senator McKELLAR is thus outranked in point of congressional service only by Senators SHEPPARD, of Texas, and NORRIS, of Nebraska, who also had served in the House. Senator McKELLAR ranks sixth in Senate seniority.

Having served almost 2 years longer than any Senator from Tennessee, Senator McKELLAR has played a leading part in shaping the policy and history of the Nation under five Presidents of various political views and concepts.

When he presented the credentials of TOM STEWART, of Winchester, last January, he had then presented his fifth colleague from the Volunteer State to the great law-making body.

During his almost three decades in Congress, Senator McKELLAR's record has been notable for industry, devotion to duty, and adherence to his high ideals of public service. Leaving the most lucrative law practice in Memphis of any young Tennessee lawyer of his day, Senator McKELLAR's distinguished career is outstanding for advocacy of legislation for the benefit of the great masses of people. Friendly to labor and fair to business and industry, Senator McKELLAR's course in Congress has followed the concept that laws are enacted to contribute to the contentment, happiness, and progress of all the people.

A constant believer in party administration of Government affairs, Senator McKELLAR, during the score of years that he served under Republican Presidents, cooperated with the majority side of the Senate to advance the public interests when measures to that end were proposed; but during all these hectic days of the Democratic Party, he remained a Democrat, not once wavering in his adherence to party platforms and tenets.

INFLUENCE INCREASES

With the advent of the Roosevelt administration Senator McKELLAR's influence increased, and he at once became one of the administration's most trustworthy exponents and leaders in the Senate. Believing that proposed legislation should be bettered before it is condemned, Senator McKELLAR has stood consistently behind Mr. Roosevelt's program, even though he was in some instances criticized in Tennessee for so doing, and he has thus been able to secure untold benefits for Tennessee.

During all his time, not once has Senator McKELLAR lost sight of the interests of his State, and especially his friends. A foe of dishonesty in public service and disloyalty in politics, Senator McKELLAR's course has drawn him into the vortex of Tennessee's internecine politics; but not once has he wavered in his loyalty to and support of his friends and has never failed to show his absolute contempt for disloyalty.

"If loyalty to my friends and showing appreciation of their friendship, if seeing that my State receives its portion of public favors so our people may progress and advance with other sections is 'McKellarism,' as has been charged, I gladly meet the issue," Senator McKELLAR declared today.

"Let the newspaper critics in Tennessee who have contributed nothing to the State's development continue their charge of 'McKellarism,'" continued the distinguished Tennesseean, "I shall meet the issue squarely. If what I have done is 'McKellarism,' I stand for 'McKellarism.'"

As chairman of the powerful Senate Committee on Post Offices and Post Roads, vice chairman of the more powerful Appropriations Committee, and member of the Committees on Civil Service, Library, Rules, Territories and Insular Affairs, Senator McKELLAR is noted for his attendance at their sessions. He is one of the Senate's most active Members.

An able parliamentarian, grounded in every precept of legislative strategy and evolvement, Senator McKELLAR's views—or "McKellarism" as Tennessee critics would have you believe—are included in many measures for the benefit of the public weal.

A review of the CONGRESSIONAL RECORD reveals that Senator McKELLAR has participated in the discussion of more public affairs than any other Senator, with possible exception of Senator WILLIAM H. KING, of Utah, and the late Senator Joe T. Robinson, of Arkansas, who was majority leader.

With a passion for and memory of details as uncanny as it is lasting, Senator McKELLAR's genius for success lies in combining his ability with industry and constant application to his work. No Senator is the author of more bills and resolutions, nor amendments to legislation, than the Tennessee Senator, and none is more successful in achievement. Withal, Tennessee has benefitted bountifully through the efforts of Senator McKELLAR.

He has enthusiastically supported the administration's low-cost housing program under which $15,716,000 has been earmarked for Tennessee, including $2,516,000 for two Nashville projects. By adding amounts already under loan contract, a total of $18,128,000 is arrived at that has been secured through the efforts of Senator McKELLAR to finance construction of 3,934 dwelling units under Tennessee's United States Housing Authority aid program.

ROADS AND FORESTS AIDED

Since the beginning of the present administration, Senator McKELLAR has sponsored in the Senate, legislation under which, from March 1, 1933, to January 1, 1939, Tennessee highways have received $41,878,328 in Federal aid (including $11,900,717 available January 1, 1939); national forests, $4,401,844; national parks, $2,844,320; a total of $49,124,302.

Senator McKELLAR earnestly supported the Home Owners' Loan Act under which 13,763 Tennessee homes were saved from foreclosure by loans made in the sum of $31,662,195. Before the beginning of the lending June 12, 1933, Senator McKELLAR found these Tennessee borrowers, like all H. O. L. C. borrowers, without private credit and the average was 2 and 3 years delinquent in both principal and interest.

As of February 28, 1939, Tennessee borrowers had repaid $6,517,072 or 20.6 percent of the loans. Collections last month were 104.6

percent of billings. In fact 750 Tennessee borrowers have paid in $1,413,318 in full settlement of their accounts, 9,168 are less than 3 months delinquent, meaning that they are not only meeting all current bills but are paying off arrearages. The H. O. L. C. owns about 1,000 homes in Tennessee; has sold 751 others with 90 percent rented. Moreover, $1,076,000 was loaned in Tennessee for reconditioning and repairs; $2,204,678 for payment of tax delinquencies; an epic of home-owners "comeback" and justification of Senator McKELLAR's conviction that the law would be efficacious.

VETERANS GET NEARLY FOUR MILLION

A friend of the war veteran, Senator McKELLAR supported legislation under which the Veterans' Administration distributed $3,738,325.69 for the fiscal years, 1933 through 1938. This includes payments under adjusted service certificates, life insurance accounts, the Adjusted Compensation Act of 1936 and all pensions, but not expenditures on the Johnson City, and other veterans' facilities, nor the new Murfreesboro $1,650,000 hospital secured for the State and now under construction.

In Tennessee there are 13,023 veterans, and last year, veterans, widows, and dependents of veterans were paid $12,967,606 under laws Senator McKELLAR had actively advocated.

As chairman of the Senate Committee on Post Offices and Post Roads and vice chairman of the Appropriations Committee, Senator McKELLAR has obtained Senate approval of 44 new post offices, annexes, and other Federal buildings since March 4, 1933, costing a total of $4,369,892, including $349,660 to remodel and expand the Nashville Federal building.

A stanch advocate of Federal relief for needy and unemployed, Senator McKELLAR has advocated in committee and on the floor of the Senate, since the beginning of the W. P. A. in August 1935, bills under which Tennessee's average of 40,000 unemployed have had work and sustenance. Consequently, to June 1, 1939, $62,131,052 had been spent in the State on employment; the total outlay on actual projects being $58,265,000, including highways, roads, and streets, $25,099,261; public buildings, $3,237,336; recreational facilities, $1,885,258; health and sanitation, $6,568,868, and so on.

SECURES $6,999,219 FOR TENNESSEE

Regarding the Rural Electrification Administration, the handmaid of the T. V. A., Senator McKELLAR voted for and has secured approval of $6,999,219 in allotments for 14 R. E. A. projects that will furnish 37,486 farm families in 16 counties T. V. A. power over 6,250 miles of transmission lines.

Championing the Public Works Administration as one of the most valuable agencies of the administration in making lasting Federal and non-Federal projects, such as schoolhouses, university, and other public buildings possible, Senator McKELLAR has ardently supported all such legislation, under which Federal grants of $64,294.30 were made for Tennessee projects that will cost $142,880.93.

One of the most enthusiastic supporters of the National Youth Administration, headed by Aubrey Williams, a former Tennessean, in the Senate, Senator McKELLAR is gratified that an expenditure of $3,932,424 has been made in Tennessee since the establishment of the N. Y. A. in June 1935. Of this amount, $1,806,754 has been for the student-aid program, $2,125,670 on the N. Y. A. work projects, for out-of-school unemployed youth.

Allotment for the present fiscal year is $1,573,946. Currently a total of 14,652 youth are included in the student-aid program in the State, in or out of school. In June, there were 10,057 out-of-school unemployed Tennessee youth between 18 and 24, certified for N. Y. A. employment by local welfare agencies, awaiting N. Y. A. work, Senator McKELLAR stated today.

An especial interest has always been taken by the Senator in the Federal appropriations to supplement local sums for vocational education, under which program $1,962,361.64 was spent in Tennessee last year, over $100,000 going for trade training.

FARMERS PAID $46,303,515.18

A stanch supporter of the administration's farm program, Senator McKELLAR voted for measures under which $46,303,515.18 has been paid Tennessee farmers under the A. A. A. program in the 1934–39 period, of which $24,091,230.92 was for cotton farmers, $486,810.05 for wheat growers, $6,749,149.54 for corn-hog producers, $6,749,149.54 for tobacco growers, and $4,077,000 for participation in the soil-building program.

The Tennessee farm-security program, which since its inception in 1935 has expended $7,324,573 in the State, has had the support of the senior Senator at all times. The money has been spent—rural rehabilitation loans, $3,569,660; rehabilitation grants, $203,476; resettlement projects, $2,652,744; Cumberland Homesteads, Cumberland County, $2,652,744; farm tenancy loans, $418,228; and the Tennessee farm tenant security project in Carroll, Crockett, Gibson, Haywood, and Madison Counties, $480,465.

Senator McKELLAR has supported to the utmost the soil conservation program in Tennessee, conducted at Knoxville, under which $1,031,669.05 has been spent over the State between 1934 to 1939, inclusive; the cooperative extension work in agriculture and home economics carried on in the State also has caused an expenditure of $4,838 since March 1933.

Aside from this, Senator McKELLAR has supported C. C. C. appropriations, those for the regular and independent establishments, under which Tennessee has secured her full mete of Federal allotments, all of which, of course, the senior Senator is willing for his critics to view as "McKellarism" should they desire.

W. P. A.

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

ARTICLE FROM NEW YORK POST, AUGUST 1, 1939

Mr. FAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the New York Post of Tuesday, August 1, 1939, entitled "Why Not Keep the Rules?"

[From New York Post, Tuesday, Aug. 1, 1939]

WHY NOT KEEP THE RULES?

It was only humane for Col. F. C. Harrington, W. P. A. Administrator, to suspend the firing of employees from the rolls under the 18 months' purse clause of the new W. P. A. Act; nevertheless, he deserves credit for being alert to the opportunity.

He put through his order stopping the dismissals as soon as the Senate adopted an amendment to the Barkley lending bill, which, if passed in the House, would modify the present arbitrary rule.

Colonel Harrington can go a step further. If the unions are correct in their reading of section 15B of the present W. P. A. Act, he can put an end to the turmoil caused by the abolition of the union scale for building-trades workers. He can restore the scale on existing projects "to protect work already done." The issue is not likely to arise on future projects, limited as they are to investments of not more than $52,000 each.

Everyone in the present situation of turmoil is losing and no one is gaining.

The public is losing because progress on important projects, like North Beach Airport, has been slowed down unnecessarily; the skilled workers are losing because they are sacrificing their daily wages; other W. P. A. workers are losing because the effectiveness of their labor is being diminished.

All this loss came from the sudden reversal of policy in Washington. From the beginning of W. P. A. the prevailing union scale of wages was paid to skilled building-trades workers. The Woodrum Act suddenly took away the scale. Its provisions were applied not only to new projects, but to projects long under construction. If the change was to have been made at all, it should have been applied to future work, not to unfinished jobs. There should, at least, have been some notice. But the rules were changed in the middle of the game.

Union carpenters, bricklayers, lathers, and other skilled workmen who went to work for W. P. A., many on a nonrelief basis, were thunderstruck when they discovered the Government no longer would pay the scale. They quit. Their automatic reaction has been called a strike. Officials of the Central Trades and Labor Council now call it a "stoppage" or "noncooperation." They insist they have no desire to close W. P. A. projects; they haven't called walk-outs on other Government enterprises; they have caused no disorder here.

The whole unnecessary tangle can be straightened out by an order such as stopped the wholesale discharges. Colonel Harrington some weeks ago asked Attorney General Murphy for an interpretation of section 15B. We hope that the Attorney General's opinion will permit Colonel Harrington to act.

The Power of the Purse

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. LEWIS of Ohio. Mr. Speaker, this has been a historic week in the Congress of the United States and especially in the House of Representatives. Day after day during the session I have seen bills introduced which would, if enacted into law, have changed the constitutional power to control public expenditures from the House of Representatives, where it has been vested during all our life as a Nation under the Constitution, to the executive branch of

the Government, and I, with many others, have wondered how long this process of taking from the representatives of the people the control of the public purse could continue and liberty and a democratic form of government still survive.

As these measures have come up for consideration in the House of Representatives, my mind has gone back to other days when the embattled representatives of the people in our motherland across the sea were fighting, first to wrest from a tyrannical king and later to hold the power over the public purse the right to determine for what purpose, in what manner, and to what amount public funds shall be expended, and as I have thought of those great fights made by our ancestors in the Parliament of old England hundreds of years ago, I have wondered whether the hard-bought liberties which we enjoy as a result of their fights with the King were to be lost in our generation here in the Congress of the United States, and I must confess on many days I have left this Hall with a heavy heart, because I have seen this Congress apparently willingly yielding its judgment to the judgment of the Executive in the matter of appropriations authorizing expenditures far beyond the income of the Federal Treasury, following a pattern of governmental action that could be described no more fittingly than by the term "socialistic." I have wondered when, if ever, the day would come when the representatives of the people in the House of Representatives would use their own judgments in the control of the public purse and restore to the House of Representatives its constitutional function of determining for what purposes, in what manner, and to what amount appropriations should be made.

Last Monday and again on yesterday the House of Representatives found itself for the first time in many sessions and it assumed again its constitutional right and duty to control the public purse in its defeat of the so-called spending-lending bill and of the so-called housing bill—measures that in my judgment were unsound, in that they required vast increases in the public debt, already dangerously high, and unsound because so framed as to evade the law previousy enacted by Congress fixing the public-debt limitation at $45,000,000,000, and unsound because they were not, as claimed for them, self-liquidating, unsound because they would not have restored prosperity nor lifted us out of the depression, as our experience on three separate attempts by this method has demonstrated, unsound, in the case of the housing bill, because the persons whom it professed to help would not have been helped thereby.

Mr. Speaker, the action of this House in rejecting the President's lending-spending bill and his housing bill in my judgment meets with the approval of the people of this country, and a reflection of that approval is accurately portrayed in an editorial in this morning's Washington Post which goes to the heart of the issue involved in the bills I have just mentioned and which I quote as follows:

UNDERNEATH THE REVOLT

While the shattering of the spending program is the most spectacular part of this week's congressional revolt, the real significance of the administration's defeat goes far deeper. More important than the belated turn toward economy, which another Congress might all too easily reverse, is the assertion by the Legislature of its constitutional and fundamental "power of the purse." The moral of that action should and will be understood.

Complete legislative control over appropriations has always been the basic safeguard of democracy against dictatorial executive encroachment. It was the effort of Charles I to make Parliament yield on this issue which led to his overthrow and execution. It was a full appreciation of what the issue involved which made the members of the Constitutional Convention emphasize it so strongly in writing the organic law of the United States.

Article I of the Constitution specifies that "all bills for raising revenue shall originate in the House of Representatives," as the Chamber more subject to popular control. And it further lays down categorically that "no money shall be drawn from the Treasury but (except) in consequence of appropriations made by law." The authors of the Constitution were well aware of the danger that an over-ambitious Executive might in one way or another seek to gain control of the public purse. And they were wisely anxious to raise every possible safeguard against such tendencies.

In very large part the smashing set-back experienced by the administration this week must be attributed to its casual attitude toward this cardinal principle of the American Government.

Time and again Congress has been asked to rubber stamp enormous appropriations, presented so casually as to give the impression that the function of the House in this matter is merely that of a Nazi Reichstag. Time and again Congress has all too willingly complied with—and even exceeded—the appropriations demanded. But soon or late the sense of congressional responsibility and the realization of congressional authority in the matter of the public purse were bound to revive, assuming that the principles of democracy are still alive in this country. And that they are still very much alive was demonstrated this week.

It was, of course, the underlying character of the latest pump-priming scheme which led to the congressional revolt. "There seems no reason," said President Roosevelt in launching this scheme, "why there should not be adopted as a permanent policy of the Government the development and maintenance of a revolving fund fed from the earnings of these Government investments and used to finance new projects at times when there is need of extra stimulus to employment."

What this scheme meant, in plain language, was socialization of credit. It meant that the administration, as a permanent policy, would collect the savings of the country and "invest" them in such undertakings as seemed to it desirable, all this taking place outside the regular Budget and without routing through the Treasury the funds borrowed and lent. It meant, in other words, not merely a further undermining of the normal processes of investment. It meant also a subtle but none the less revolutionary encroachment upon the congressional power of the purse.

The Senate sharply trimmed this so-called spending-lending bill, but left its dangerous underlying idea intact. It was the House, where more than a few Members saw the magnitude of the issue involved, which had the courage to kill the measure outright. Thereby it reestablished its inalienable prerogative. Thereby it has richly earned the national gratitude.

Inevitably the smashing of the administration's scheme of socialized credit has brought down other projects in the ruins. Individually some of these results, such as yesterday's refusal to extend the borrowing power of the U. S. H. A., seem very unfortunate. But in extenuation it must be remembered that in extinguishing a dangerous conflagration firemen frequently cause some regrettable damage.

Congress, and the House in particular, has put a stop, for the present at any rate, to a thoroughgoing socialistic policy which can most easily be forwarded under the insidious mask of deficit-financing. And Congress further has brought the administration up with a sharp bump by such actions as its refusal to restore the "capital impairment" of the Commodity Credit Corporation. Incidentally, that seems a nice example of an undertaking which can speciously be called self-liquidating in advance, while in the upshot it suffers capital impairment of $119,599,918, which Congress is expected automatically to restore by a deficiency bill.

Such reminders of where the power of the purse resides are viewed by Secretary Wallace as "unthinking" and "probably iniquitous." The adjectives are misapplied. Congress never worked more thoughtfully; it never acted with deeper consideration of the Nation's long-range interest, than in the good riddance to bad rubbish accomplished this week.

A Suggestion for District of Columbia Revenue

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. RANDOLPH. Mr. Speaker, in recent weeks we have all had ample opportunity to become acquainted with the complex fiscal structure of the District of Columbia. The arguments for the simplification of that structure have produced two schools of thought diametrically opposed to each other. On the one hand, are the advocates of an increased Federal contribution. They are opposed by that group which advocates increased taxation for the residents of the District. Apparently, there is no middle course.

Emerging from the heated arguments are the concrete facts that local government must continue and that such government must be financed. The Congress has committed itself to a policy of definite limitation on the size of the Federal contribution. The alternative, therefore, which is available as a source of revenue to meet the governmental needs of a continually expanding community is taxation.

No one likes taxes. From time immemorial the layers and gatherers of taxes have been unpopular in their communities. But since taxes are necessary and must be raised to carry the benefits of government, the imposition of a specific type of

tax should be considered only when it becomes absolutely essential. I believe that there is no other recourse available for the proper solution of the District's financial problem than to find some source for increased revenue by taxation.

The objects of taxation are numerous, but I believe that the source of revenue must be confined to some object which, by equitable and just means, is shown to be adequate to the objective sought and yet at the same time the users of which are financially able to bear the burden.

After due consideration of these principles, I believe that the fairest means available is the levying of an additional 1-cent sales tax per gallon on gasoline.

I am advised there were 133,842,959 gallons of gasoline sold in the District of Columbia at retail in 1938, which, if a retail sales tax of 1 cent per gallon were levied, would produce $1,338,429.59, and which could be collected with very little administrative expense. The neighboring States of Maryland and Virginia raise a substantial portion of their revenue through such a tax, as do a great many others. including my home State of West Virginia.

I am today introducing legislation which will provide this additional 1-cent gasoline tax in the District of Columbia, and I trust it may be given careful and proper consideration during the next session of Congress.

The Antialien Bill

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

EDITORIAL FROM PHILADELPHIA RECORD, AUGUST 3, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD an editorial from the Philadelphia Record for August 3, 1939:

THE ANTIALIEN BILL STRIKES AT US ALL

The only good thing to be said about the Smith antialien bill, passed by the House of Representatives last week, is that it hasn't much chance of becoming law. The Senate is unlikely to consider it before adjournment.

Even if the House action was only a gesture, a particularly nasty one, the situation is no less serious. What we are concerned about is the challenge to basic American principles and civil liberties.

This bill would be a loaded gun pointed toward aliens, a gun that could easily be turned toward any other group in this country.

On its face, the bill seems unobjectionable. It is wrapped in the flag, in fine patriotic phrases. But we are glad to see our conservative contemporaries discovering as much harm lurking in this omnibus antialien bill as we do. Says the New York Times:

"It is not easy in a measure like the Smith antialien bill * * * to separate those provisions which may be justified as a defense against real dangers from those which may themselves endanger our traditional liberties. But neither the language of some sections of the measure nor the debate on it gives assurance that the bill was dispassionately drawn and considered."

The more conservative New York Herald Tribune goes even further in its condemnation, saying:

"By channeling popular disturbance over Communist and Nazi-Fascist activities into a flag-waving campaign against the alien, a measure like the Smith bill simply reduces the whole movement to the base and stupid level of a Nazi campaign against the Jews."

Certainly we're against the aliens committing the crimes mentioned in the bill, crimes such as carrying weapons unlawfully, violating the State narcotic laws and inciting to mutiny in the Army and Navy.

We're against anybody else committing the same crimes.

We're not in favor of punishing a thief because he's an alien, but because he's a thief.

Right there is the sinister implication of this bill: That aliens are more likely to become criminals than the native born.

We don't believe it. The Wickersham commission report in 1930 and a more recent study in New York show that the crime rate of aliens is about half that expected on the basis of their numbers.

We must not forget that about 1,000,000 aliens living here can't become citizens because of technical flaws in their passports. We musn't forget either that the 5,000,000 aliens in this country have about 6,000,000 children, native-born Americans, who would see their fathers and mothers lumped together as undesirable citizens if this bill should become law.

Worst of all are the symptoms of hysteria on the part of our Congressmen revealed by the antialien bill; the same symptoms of unreasoning hate that caused the stoning of German bakeries during the World War.

We don't want to start off on a Nation-wide alien hunt. Once the hunt for aliens is in full cry, with the hunters wearing cloaks of patriotism, it would be easy to shift the hate toward naturalized citizens, toward racial minorities, toward religious minorities.

We have enemies in this country, but not many of them are aliens. The enemies we have to fear are the native American products of unemployment, sweatshops, slums, and starvation in the midst of plenty.

Let us not waste our time baiting aliens. There is real work to do.

Fighting for the New Deal at Sacramento

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

ARTICLE BY RALPH C. DILLS, ASSEMBLYMAN, CALIFORNIA SIXTY-NINTH ASSEMBLY DISTRICT FROM THE CALIFORNIA DEMOCRAT

Mr. GEYER of California. Mr. Speaker, I have been watching with interest the procedure in the California State Legislature during the session just passed. I have been struck with the deadly parallel between that body's activities and that of the National Congress.

Assemblyman Ralph C. Dills, who represents the California Sixty-ninth Assembly District, has written a very splendid account of the activities of the California Legislature.

Assemblyman Dills is a young man trained in the field of government. No member of the California State Assembly has made a better record of service to his constituents and the State as a whole than Mr. Dills.

I predict he will before long be called to this House of Representatives to serve his people.

His account follows:

Since my return from the legislature, I have had many occasions to address groups interested in hearing the story of the recent session. I have spoken to service groups, women's clubs, labor unions, political clubs, organizations of the unemployed, farmers, and pension groups. This has given me an opportunity to bring back to those removed from the scene of legislative activity a brief picture of my experiences and of the methods used there in defeating good legislation.

From the start it was obvious that in order to pass any legislation of major importance the fight would be long and difficult while the result would be only a compromise. Inasmuch as the Democrats were in a majority, in name at least, in the assembly, there was a general feeling that the assembly would pass a considerable number of bills designed to carry out the Democratic platform. But it was evident as soon as we began the fight on the budget bill that there was a wide variety of representatives basking in the Democratic limelight. A friend recently classified such representatives into four groups: Liberals, reactionaries, screw balls, and reptiles.

At any rate, judging from the voting record, we find too many so-called Democrats who unfortunately forget that they were elected on the Democratic platform, pledged to a New Deal in California.

Results in the senate were no different from what we had expected. California's Senate traditionally represents a group which in the past has seen fit to support and reflect consistently the interests of well-organized and well-financed special groups.

Everywhere I have spoken I have offered to answer questions and have been pleased at the alertness of California citizens. They have tried diligently to follow the maze of legislative maneuvers, and have invariably asked me why it is that so little was accomplished at the recent session of the legislature. In answering that question, I have attempted to be fair to those who do not agree with me in political thought or who may represent districts which reflect economic and social interests unlike my own. I have genuine respect for those legislators who are honestly conservative in thought and consistent in voting for such principles. Our democracy permits a wide range of thought and opinion. But the most disconcerting and most shameful action of representatives is that of masquerading as liberals at the time of

election and then later making deals and swapping votes with those forces which they promised to oppose.

We find in the assembly men who are both truly liberal and vote that way, as well as those who conscientiously represent conservative districts and vote conservatively. In between these honest differences of opinion is a group of straddling, tightrope walking politicians who can never be depended upon for a vote until after they have received their orders from those interests which have contributed generously to their campaign coffers. In other words, the old adage: "He who pays the fiddler names the tune," applies in legislative halls as well as elsewhere.

Our first real test of liberal Democratic strength came when we began to consider the budget bill. Every honest observer who desired access to information, knew that for the first time in decades we had a Governor who presented to the legislature an honest attempt to include all the money necessary to carry on governmental functions for the biennium. Previous administrations had submitted an 18-month budget instead of a biennial, 24-month, budget. Then these same administrations would come running to the legislature requesting deficiency appropriations to bail them out until the close of the budget period.

This Democratic administration, for instance, had to vote two separate appropriations for the relief of human destitution simply because the Merriam administration was unmindful of its duty and was desirous of hoodwinking the public on the size of its budget. Despite the fact that the Olson budget as originally submitted was but 4 percent greater than the total expenditures of the previous biennium, a well-planned and well-timed attack by the anti-administration press created the false impression that this administration has no regard for the plight of the taxpayer.

The tools of the special interests in the legislature took up this cry and proceeded to weep and wail for the poor farmer or the poor home owner. No one knows better than I the serious difficulties confronted by the average small farmer and property owner. Realizing this problem, I sponsored bills which would have made the life of the aged, the underprivileged, the farmer, the workingman, the independent businessman, and the owner of property a little less difficult. Some of them were passed. Others were defeated by special interests. Hypocritical concern for hard-pressed farmers and home-owners is nothing but a subterfuge used by tax-evading corporations, banks, racing and gambling interests, and exploiters of our natural resources.

It was soon obvious that the move to cut down on the essential functions of our Government, for which money was allocated in the budget was a move on the part of these very interests to thwart passage of tax revenue bills based upon the just ability to pay. This administration did not and would not place any additional burdens upon the farmers, small property owners, or consumers. Such facts, however, were cleverly concealed by the opposition under the guise of economy. Peculiarly enough, those who had in recent months been shouting about balancing the budget were not now anxious to assist in doing this when they realized the Governor and his supporters intended to do it by taxing those who could afford to pay the bill.

Four weeks were consumed in the assembly on the budget bill alone. And yet there were more than 4,800 other measures to be considered.

The control over certain members of the legislature held by the lobbyists of the loan sharks, the gamblers, the Power Trust, the Southern Pacific, the Standard Oil, and other great industrial pressure groups was evidence not only in the budget fight but more clearly in the fight for the Central Valley project. I am told by old-timers at the legislature that for the first time in many sessions these lobbyists had to earn their money, for it was clear to them that Governor Olson and his supporters meant to do a good job of house cleaning. These lobbyists banded together on practically every major piece of legislation, and through their Charlie McCarthys on the floor threw up the most formidable opposition against which a people's government has had to contend.

Working together, they permitted the Central Valley project bill to pass the Senate, much to the surprise of everyone. We soon learned their strategy. For, after passing the legalized bookie bill and the so-called loan-shark bill written by the companies themselves, the lobbyists tried a "squeeze-play" on the Governor. The Governor was offered five votes for his Central Valley bill if he would sign the legalized bookie and the loan company bills.

The fact that the administration lost the Central Valley bill by two votes, and the fact that the Governor vetoed the legalized bookie bill and loan-shark company bill are evidence of his courage and desire to protect the people's interests.

As we enumerate the accomplishments of the past session we must not forget that many times accomplishments can be measured in terms of the prevention of bad legislation, as well as by the passage of good legislation. Thus in the many fields of labor, civil liberties, protection of minority groups, public health, etc., we prevented vicious legislation from being enacted. Even though we did not accomplish any considerable progressive reforms, we at least were able to prevent backward steps.

Everywhere I go I find the people talking in terms of streamlining our State government. I am asked repeatedly what reforms I feel would be both practicable and possible of immediate achievement. I find a healthy response to the suggestion of reapportioning the senatorial districts on the basis of representation according to population. They feel this is a step in the right direction toward more democratic government. Such representation in the State senate existed up to the very recent date of 1926. There is a definite resentment, and rightly so, for the failure of the legislature to call a constitutional convention for the purpose of bringing the government closer to the people. A great number of the people are in thorough accord with Governor Olson's proposal of a one-house legislature, based upon representation according to population.

Certain physical difficulties confronting a legislator can, in my opinion, be remedied. It seems to me that it would be very desirable to limit the number of bills which any one member of the legislature could introduce. Furthermore, I believe there should be a limit on the number of bills introduced to accomplish the same changes. Why should there be 10 or 12 separate fights, as in past sessions, on bills designed to remedy the same problem? There are also too many committees upon which a member must serve. One can see the practical difficulties confronted by those of us who were asked to serve as chairman of one committee and as a member of 7 or 8 others. I believe, for instance, that the committee on education can be given the responsibility of considering measures affecting public schools, libraries, universities, and State colleges, rather than having a committee for each of these 4 fields of public service.

Another reform widely suggested is that of having an annual session of the legislature with adequate time and compensation for the consideration of the problems in a modern, complex society. Businessmen and executives have expressed amazement at the fact that we in the legislature are asked to deal with more than 4,800 bills in 100 legislative days in conjunction with the difficult task of planning a reasonable budget and providing adequate revenue measures to pay the cost of government for a 2-year period. What corporation board of directors would be called upon to consider half-a-billion-dollar expenditure and revenue program for only a few weeks in a 2-year operating period?

Yet, given these physical reforms, there remains ever the problem of the electorate in choosing representatives who possess the independence and courage truly to represent the great majority of California's citizens and to withstand the inhuman pressures exerted upon them by the selfish and special-interest groups. That must be our goal.

How to reach that goal?

The question is more practical than academic.

The great majority of the people in our State, who believe they have been voting for the principles of the New Deal when they vote for Democrats, must be apprised of the true facts. They must be advised against those who simply wear the mask to gather votes and who discard it when their masters call. To accomplish this seeming, simple task will mean even closer cooperation in the Democratic Party. We must name names.

There is no other solution. Pussyfooting and straddling can only serve to perpetuate the present unsavory condition—a condition under which special interests thrive—a condition which postpones, yes, almost precludes, true democracy for our State.

Agriculture and the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. CURTIS. Mr. Speaker, I have often wondered what might be the reason for the obvious desire of the New Deal to shift our Nation from its traditional policy of protective tariff to a policy of free trade. I think I now have the answer to that question and an explanation of the feverish negotiation of reciprocal-trade agreements with and among most-favored foreign nations.

The reciprocal trade agreements program has been advertised as an aid to agriculture, which doubtless is in dire need of rehabilitation. It has long been generally recognized that our American farmers sell farm products, both at home and abroad, at low world prices, unprotected from cheap foreign competition, and that they buy industrial goods at high, protected American prices. Such a situation obviously results in bankrupting our farmers.

What to do about it? Raise the price of farm products in the domestic market to a like level of protected American prices of industrial goods? The answer has been negative. The alternative has been surreptitiously to seek to remove gradually the protection from industrial prices and eventually to lower them to the present level of low world prices of products of the farm.

No one could reasonably object to reciprocal-trade agreements entered into with particular foreign countries to permit importation into this country of particular commodities

which we do not produce or of which we produce an insufficient quantity for domestic use, on condition that we might export in exchange to such countries those commodities which they need.

That, however, has not been the sort of reciprocal-trade agreements that have been made. Even if there were no question of price level involved, even if foreign production costs were the same as our own, and even if we should export as much as we import, it seems to have been thought that there is some special virtue in swapping dollars and identical commodities in stimulation of foreign trade. I fail to see the point. If I were in the shipping business, I might view the matter differently.

How has this reciprocal trade agreement policy actually worked out in practice? Has it benefited agriculture? Are our farmers better off than they were in 1934, before this fantastic scheme was launched?

Such is not the case. Our agricultural prices are lower than they were at low tide in 1934. Not only have importations of low-cost commodities pulled down prices in our domestic market, but also imports have increased more rapidly than exports.

Our exports of raw foodstuffs during May of this year were 68 percent less than they were in May of last year, while imports of raw foodstuffs, during the same period, increased 32 percent. In May 1938 our exports of grain, including flour and meal, were 43,000,000 bushels, and in May 1939 were only 16,000,000 bushels. Of corn, we exported in May 1938, 25,000,000 bushels, while in May 1939 we exported only 1,200,000 bushels.

The Anglo-American trade agreement, which went into effect the first of this year, has proven particularly bad for the United States. We made 444 concessions from our import tariff duties, while the United Kingdom made only 156 concessions. During the first 5 months of this year, under that trade agreement, we exported to Britain less than we did in the corresponding period the year before; but Britain, in the same period, increased her exports to the United States $17,000,000 above the former figure. In May 1939, Britain exported to us $15,200,000 of goods and commodities as against $3,600,000 for May 1938.

The sad feature of the matter is that we are importing from Britain, in ever-increasing quantities, both agricultural and industrial low-cost commodities which we also produce, process, and manufacture here. The net result is that we are withdrawing protection from industry and further depressing agriculture at the same time.

It would seem to be the part of wisdom, before we begin to tear down our protection to industry, that we first lift up agricultural prices to the level of American production costs. Then if we feel that our American price structure, as a whole, is too high to enable us to do business with foreign nations we may consider the matter of permitting our prices, both agricultural and industrial alike, to be lowered by means of foreign competition. But agricultural prices must first be raised to a par with industrial prices before we embark on a policy of bringing our American prices down to a level with low world prices.

It is my guess that the American people will never consent to see our American standard of living and our American wage scale permanently pulled down to foreign levels. Free trade may be a beautiful theory, but our people are not going to permit the hands of our economic clock to be turned back or to permit a return to the "horse and buggy" age.

It is said on good authority that 93 percent of our income is derived from sales of our own goods and commodities to our own people. Is it necessary in order to make a friendly gesture of good will to foreign nations that we destroy our entire domestic economy? No foreign nation can justly expect such a sacrifice of our own economic interests. I am sure that no foreign nation would make such a sacrifice to show its good will toward us, nor would we expect any such thing.

This fetish of foreign trade has placed American agriculture under the yoke of foreign bondage. We have freed industry, in a measure, from foreign domination; but we still take our prices of farm products on dictation from Liverpool through the instrumentality of the futures-market ticker tape.

This reciprocal trade agreements program is but an added means of economic bondage. When our farmers come fully to realize that the practice of futures trading automatically fixes a low ceiling over agricultural prices they will arise in their wrath and exterminate the market racketeers who gamble on the fluctuations of low world prices of the products of their farms.

I wish, Mr. Speaker, in conclusion, to say that agricultural tariffs do not protect agricultural prices, for the obvious reason that there is no American price to protect—nothing but world price. Industry has American prices and the American tariff protects those prices so far as reciprocal-trade agreements will permit. In industry there is no futures market ticker tape to fix low world prices for American-made industrial goods. It is urgent that we soon give to agriculture the same kind of a deal that we have long handed out to industry. Otherwise our entire economy will soon collapse.

Farm Security—Arthurdale, W. Va.

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. JOHNSON of Illinois. Mr. Speaker, my opposition to the spending-lending program was influenced from first-hand knowledge of some of the fallacies of the spending program. In view of the fact farm security had been before the House Agricultural Committee, it impelled me to make an extended study of the hoped-for benefits to be derived under such a huge spending-and-lending program as was before the House this week. I am sure that the spotlight should be thrown upon some of these so-called projects, that the public could see for themselves where the taxpayers' money is going.

Particularly the farm-security program draws my attention to Arthurdale, W. Va., which was started as one of the first projects of the Division of Subsistence Homesteads, and now under the operation of Secretary Wallace, Department of Agriculture.

A visit to Arthurdale or to the Elkins, W. Va., homesteads would reveal a most amazing story of misguided objectives. Arthurdale, W. Va., project was planned to give a group of miners, left without work when the nearby coal mines closed down, a chance to obtain adequate income and greater degree of security. Arthurdale contains 1,100 acres about 15 miles south of Morgantown, W. Va., at an elevation of about 2,000 feet and is slightly rolling and very fine farming ground. The idea was to locate each relief family upon about 3 acres of land with a house, combination barn and poultry house, and vegetable cellar. The idea in view was that these people could produce practically all their own food. This project is now under the Farm Security Administration, which has asked another $400,000,000 of the taxpayer.

On a personal visit there, one hears three prominent terms, "homesteaders," "cooperative," and "project." On inquiry from one of the residents you learn from him that each resident is a homesteader, and each homesteader is provided with a modern house of from four to six rooms, each one with his own individual deep well varying from 125 feet to 300 feet, whereas they could have been served with a central water system. These houses all front on paved roadways through the colony. The houses are made of wood and concrete, and there are several beautiful stone houses. The homesteader will inform you that the cooperative is the owner of the whole project. Further information on inquiry reveals that each homesteader has one share in the cooperative, which is governed by a board of

directors. You ask the homesteader how much money he paid into the cooperative, and he tells you "nothing" and that the whole thing is borrowed from the United States Government. The homesteaders, to secure a living, are mostly employed in so-called projects in the community, and a few have gone back to nearby coal mines.

On July 31, 1938, there was already invested in this Arthurdale project a sum of $2,027,000, which includes the homes, barns, land, and community buildings. Since that time there has been added a modern tractor factory of concrete, steel, and glass construction. The "co-op" also owns a farm consisting of 442 acres of land. On investigation one finds that these homesteaders pay from $8.60 a month for the four-room houses up to $14 per month for the six-room houses. Bear in mind that the total cost a year ago was over $2,000,000 and with 165 homesteaders this makes about an average investment of $13,000 per family which comes from the pockets of the taxpayers of the United States.

The farm project is equipped with modern dairy barns containing Louden dairy equipment, steel stanchions, large silos, and modern milk house with steam boiler, 33 head of pure-bred Jersey cattle, tractors, and implements of all kinds. The farm was operated under the direction of a board of directors elected by the co-operatives. Upon investigation I found that this large farm of 442 acres (about half under cultivation) had been a financial loss since its inception about 5 years ago. Although in the literature put out by the Farm Security Administration to the effect that all of the men have had some agricultural experience, the fact remains that the farm suffered a severe loss and was a failure as a co-operative venture.

Information was given me that the past year, up to April of this year, the pay roll on the farm amounted to $870 per month, 12 months in the year, and this did not include the expense of milking the cows. On April 1 of this year the farm was leased to two of the homesteaders for 5 years with all equipment, cattle, and livestock for the sum of $400, not per month, but per year, which is not far from 1 percent per annum on the investment—with no taxes or necessary upkeep expense. The milk is marketed at Morgantown, 16 miles away, at a price of $2.55 per hundredweight for 4 percent milk. There are also so-called projects, such as pewterware and wrought-iron products. Making these are referred to as projects employing homesteaders. These are very small and employment is almost nil when one thinks of it as an industry. The "co-op" owns—on Government-loaned money—an electric vacuum-cleaner factory which had been leased to a private concern and they, in turn, have abandoned the project and this modern steel, brick, and concrete building is now idle. Just this year another modern plant constructed of brick, steel, and concrete, 100 by 300 feet, was constructed on further loans from the Government to the co-op. This has been under operation about 3 months. Parts for tractors are purchased from regular tractor manufacturers and are assembled as a sort of a cross-breed tractor with the trade name of "co-op tractor." Upon inquiry, information was given me that most of these tractors were sold to Canada—which probably goes as a credit on the vast importation of Canadian cattle.

A month ago there were 22 homesteaders employed in this tractor plant. It is inconceivable that any such hybrid tractor could ever compete with the established well-known tractor manufacturers of the United States. It is further inconceivable that any American farmer would care to use or invest his money in an orphan tractor without a reputation behind it. The success of such an industry is apparently doomed to failure.

There is another project which has been operated by the cooperative up until April of this year and that is, a poultry and broiler plant. This was also intended to provide a source of cheap poultry and eggs for the homesteaders, as well as a source of profit in mass production of broilers and eggs, but this too failed as a venture to be operated by the cooperative and it, in turn, was leased about April 1 of this year to two former managers of the poultry project. About a month ago there were on hand about 7,000 broilers near marketable size, and anyone who has ever raised poultry could readily see from the general condition of this project that it too is doomed to absolute failure under present operation.

They also have their own health center in which they have operating rooms for minor and major operations; also nursery schools, and on through high school. They have their own large gymnasium, recreation grounds as well as a cooperative filling station and grocery store.

These homesteaders are apparently contented, because it certainly is a paradise for anyone who has had to struggle on his own initiative, as in this place everything is handed to one. It is interesting to note the constant repetition of the word "homesteader," which causes an older person to think back to the days when the word "homesteader" had a far different meaning, 30 years ago or more, when the homesteader was one who plods alongside of the old covered wagon with a team of oxen or mules, through the western prairies, under all kinds of hardships, and dug his sod-house or made an adobe house from the clay, and suffered the rigors of hard winters. What a change to a homesteader of today who lives in a house such as they do at Arthurdale with every modern convenience, with furnace, hot-water or steam-heated houses.

Another one of the projects is down at a town named Daly, which is near Elkins, W. Va.—the grand success of cooperative socialistic State communities, which is another of the dreams of Tugwell and Mrs. Roosevelt's wonderful idealistic theory, but it, too, has proved after 6 years that it is still dependent upon Government finances. Their large cooperative-operated farms there have also been a failure and the Department of Agriculture has had to send an expert agriculturist to boss these farms. Daly calls it cooperative "association," and on account of internal troubles has undergone the second reorganization in their endeavor to exist.

A large mill was erected there to saw timber and cut into wood pieces for furniture construction. This plant likewise has been leased out to private ownership to operate. Inquiry revealed that one of the big projects ahead of them is to reconstruct and repair these houses (only 6 years old) in this idealistic socialistic community.

At Arthurdale, on questioning some of the homesteaders as to whether their $8.60 to $14 per month, whichever the case may be, is rent or whether it is payments on their homes, they themselves are not clear. One homesteader informed me that they were given to understand 3 years ago that they were to have title to their little miniature farm. He informed me that they promised them they would be given the title, or a contract for a deed, on April 1 this year but nothing has been done, so he guessed they were just paying rent. I have seen comparable houses to some of these stone houses, that would rent for at least $40 per month. Therefore, it is little wonder that the House of Representatives has revolted on the continued spending of money on such projects that never return a cent of principal or interest, and are still an expense to the Government and the taxpayers of the United States.

Will Rogers

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. FERGUSON. Mr. Speaker, I hesitate to add my voice to the chorus that have already heaped deserving praise on the memory of Will Rogers. I never had the pleasure of meeting Will Rogers until the day the statue in his memory was unveiled in the rotunda of the Capitol.

I met him that day, not because of the vivid, living bronze that was unveiled, not because of the glowing tributes, so

well deserved, paid him by Governors and Senators, not because of tributes paid by lifetime cronies and friends, but because I had the pleasure and honor of meeting a wonderful family that survived him.

His wife, his two sons, his daughter, and his sister, charming, capable, friendly people. Through meeting this family I met the real Will Rogers that will live forever in the hearts of every Oklahoman and the hearts of the world.

The Professions and Free Enterprise—Why Physicians; Dentists; Lawyers; Clergymen; Insurance Agents; Architects; Labor Leaders; Business, Small and Large, Should Join Together to Uphold Free Enterprise and Constitutional Democracy and to Fight Collectivism

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

ADDRESS BY FRANK GANNETT, JULY 18, 1939

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered before the annual convention of American Dental Association at Milwaukee, Wis., July 18, 1939, by Frank Gannett, of Rochester, N. Y.:

To you dentists I come to sound a note of warning and to bring a call for action. It is a call to repel assault upon liberty of enterprise, individual initiative and personal dignity—upon qualities which are the foundation of all that we call the American way. It is a call to preserve the principles of freedom of action and thought that made American dentistry what it is today.

Of all professions none has advanced further, by its own efforts, than yours. American dentistry is a generation or more ahead of Europe. It is a magnificent example of what can be done by self-reliance, by private initiative, by voluntary cooperative action outside of Government by those engaged in the same field. Dentists in the United States owe nothing in the development of their profession to governmental paternalism. No tax-supported research, no subsidies, no guidance by leading strings from Washington, improved your science. All that you have, all that you are today, you owe to the pioneers of your great profession, to yourselves, and your associates alone.

Soon you will observe the centennial of the founding of the first dental school in America. A century ago dentistry was a trade or side line, and not a profession. It was a trade beset by ignorance which few men of attainments would enter. Let none of you be ashamed that this was so then.

For it is not so now. What your calling was a century ago makes pronounced the contrast between its condition then and today. It makes your achivement the greater. By the pioneering and struggle of its own leadership, what was once a trade has raised itself to an honored scientific profession. One cannot read the history of dentistry during the last 100 years without being thrilled by the progress that it has made and the demonstration that it gives of what can be achieved under our system of free enterprise.

This is one more example of the American way. Your achievement has been possible because you had the inspired leadership of men such as Chapin Harris and Horace Hayden. Through their work and the cooperation of hundreds of others, dentistry has made its great advances. Each new development, each new improvement in method by one leader was soon made available to help others. The foundation of your progress has rested securely upon a tripod—the dental school, the dental journal, and the dental society—a tripod of education, information, cooperation.

Through these channels new effort was stimulated, new standards set, new information disseminated. It cannot be too often emphasized that dentistry achieved its present professional standards by its own internal efforts. If your profession had been under the fumbling hand of government, controlled locally and nationally by leading strings of politics, would Europe today look to the United States for the latest in dentistry?

Your record makes clear the reason. Progress comes not from centralization and political control, but from opportunity for free initiative. We who have lived under the protection of our Constitution, have taken for granted all these things, much as we do the air we breathe. We are not fully conscious of the meaning of our system of constitutional democracy and free enterprise, until there is the threat that it might be taken from us. When we say, "It can't happen here," we sing ourselves to sleep. But when we say, "It must not happen here," we are awake, alert. Then it won't happen here.

Today freedom of the professions is in jeopardy in America. The medical profession was the first to be placed under check. American medicine has been fighting for its life.

The Wagner national-health-bill hearings are pending in a subcommittee of the Senate. This bill puts the Federal Government into the field of medical care from which it will never retreat. It would use Federal and State funds to set up hospitals, to compete with church and voluntary institutions. It would lay the foundation for a vast system of tax-supported medical care that in the end would drive out of existence private hospitals and throttle the private practice of medicine.

The Wagner bill is not dead. It is reported in Washington that hearings will be continued as a means of propaganda.

The public is being indoctrinated with the thought that not the individual, not the family, but the State is responsible for providing medical service and medical care of all kinds. As a result of this propaganda, sent out by the Federal Government with taxpayers' money, the conviction has been fostered throughout the Nation that the individual should no longer pay for his medical care. Never in the history of medicine has it been so difficult for the doctor to collect what is due him.

You are having a similar experience in the field of dentistry. Many of you no doubt are familiar with the survey among California dentists. Ten years ago 85 percent of them earned $2,000 a year or more; 5 years later more than 50 percent were earning less than $2,000 a year.

You are rightly concerned because millions of Americans receive no dental care. You know the consequences. You also know that the cause of the present difficulty lies in the general economic conditions that prevail throughout the country. When people are prosperous and feel that they can pay, they have their dental work done for themselves and families. When their earnings are low and they are uncertain of the future, dentistry is one of the first things to be put off. You dentists know also that large numbers of people fail to get treatment because of inertia and the tendency of human nature to neglect what appears to be not immediately necessary.

What is the ultimate goal of Government health insurance? What concealed purpose spurs those who advocate it? The frankest answer may be found in Health Insurance, a standard work published by Harper's and written by Dr. Louis Reed. In one sentence Dr. Reed prescribes. I quote, "A system of state medicine, with more available to the entire population, organized along the lines of the public-education system, supported from general governmental revenues, and with the service given by full-time salaried physicians, dentists, and nurses in the employ of Government-controlled hospitals and clinics."

In Russia, in Germany, where such a system of state medicine as the Wagner bill proposes for the United States, was first established, with the physician and the dentist under a politically controlled set-up, all other professions—the clergyman, the lawyer, the engineer, the architect, as well as business itself—have passed under state control.

Why this modern idolatry of the state? Why this readiness to turn all things over to Caesar—hospitals, the care of the sick, and through public taxation? Why continue destruction of local self-government, bribery of States, and pressure for the control of radio and the press? Why divert more huge public funds for propaganda purposes? What justification is there for abolishing personal responsibility for the care of one's aged parents, one's children, one's community, its charities and philanthropies?

With the destruction of the system of free competitive enterprise we shall inevitably lose those precious rights that we now enjoy, freedom of the press, freedom of speech, the right of assembly and trial by jury. That is not only the record of the past—that is the record of our own time. Wherever Government manages the economic life of a people, the liberties and rights of the individual citizen disappear.

How strange that all this has been so successfully sold to the unthinking public by propaganda that some look upon it as a progressive liberal movement. Why do we think that we can solve our problems by turning them over to the kind of men who hang around the courthouse? We need only to see what politics has done with race tracks, dance halls, red-light districts, prize fighting, wrestling, slot machines, road building, municipal supplies.

Why, in the face of what we see in these fields, should we now be willing to turn over to the politician control of medicine and dentistry? If we look at Germany and the totalitarian countries and at England under the panel system where such a program has been carried through, we find medicine and dental services are on a level far below ours. We find also for every doctor at work there is one bureaucrat or record keeper to whom the patient must first go to get permission to have treatment charged against the insurance funds. Over there doctors and dentists spend every week precious hours that should be productive filling out reports and certificates that patients were duly authorized and properly classified to be treated.

But deeper even than these considerations are the personal relationships and confidence that must exist between the dentist, the doctor, and the patient. Basic factors of human nature and human psychology are ignored when third parties are in control of the patient's purse. Witness the unsatisfactory attitude that often develops in the Federal bureau, in industrial and other

organizations where medical care is dispensed free. Even in municipal hospitals and clinics many people are prone to abuse the privilege of treatment from a doctor or a dentist without payment. Doctors and dentists are human. They would react to such abuses and if they became overworked, they might become superficial, careless, casual.

Let us look at the facts. The American people spend for medical care, hospitals, nurses, drugs, and for dental care, approximately $4,000,000,000 a year. Yet they spend for automobile, gasoline, and accessories expenses eight and one-half billion dollars annually; for cigarettes and tobacco, two and one-half billion dollars; for movies, baseball, football, and other amusements, $4,000,000,000; for cosmetics, beauty shops, $1,000,000,000; for liquor, $2,000,000,000. Can a people that has four and one-half dollars to spend for these indispensable luxuries to each $1 required for medical and dental care be in such dire distress as proponents of the Wagner bill proclaim? When we look at health statistics and find the Nation's health better than ever in its history, when we find that we have lower sickness rate and lower death rate than any society has ever enjoyed, we are forced to the conclusion that much of the problem for which they are attempting to legislate is simply the result of a deluge of crocodile-tear propaganda.

Whenever politicians seize power, that seizure has been preceded by the same type of emotional appeal, of smear campaigns, as we have seen in this health propaganda. Let us have a look now at what was accomplished during the 140 years before 1929 under our system of free enterprise and constitutional democracy. Let us look, then, at what this system would accomplish if the depression derangement from which we have suffered were removed.

The American way of life marked the beginning of a new epoch of human history. From less than 2 percent we have grown to 7 percent of the world's population and accumulated 45 percent of the world's wealth. Our system stimulated more new enterprise and invention, gave us a higher standard of living, better housing, more food, greater freedom in our civil, religious, and personal lives than any people in history ever enjoyed.

Look at a few more facts. With 7 percent of the world's population, we have 32 percent of the world's railway mileage, 58 percent of its telephones, 36 percent of its developed water power, and three-quarters of the world's automobiles—enough so that every man, woman, and child under the American flag could step into these cars and ride at the same time, a whole nation on wheels.

In this wonderful development, much of which has taken place under our eyes during the present generation, no Government official or bureaucrat played any part except as tax gatherer to reap a portion of the fruits of private enterprise.

In 1929 this productive machine was stalled, as was the case in every other nation that used gold as its money. The prices and, therefore, the income and buying power of farmers and producers of basic commodities all over the world began to drop. In the United States 55,000,000 of our people, dependent directly or indirectly on farm and other basic commodities—almost one-half of our population—lost their ability to buy and trade. The worst depression that this Nation ever experienced set in with unemployment and other cruel consequences.

Instead of correctly diagnosing the cause of this economic malady, since midsummer of 1933 we have been treating the patient under a false diagnosis which substituted for our system of democracy, concentrated one-man rule; and for our system of free enterprise, managed economy. "Managed economy" is a propaganda phrase that means politician control over the economic and social life of a nation.

While we floundered in the byways, 21 other nations, with 600,000,000 of population, regained the road to prosperity. They have found that the best way out of depression was to preserve and revive free enterprise by establishing conditions under which it could function. These nations recognized the derangement that had occurred in the mechanism by which goods and services are exchanged and they corrected this. Their government policy was not to compete with or curb or control, but to encourage private enterprise.

During the past 4 years these 21 nations had a total cumulative deficit of only three hundred and five millions, while the United States, with but one-quarter as many people, had a $12,000,000,000 deficit—40 times as much. These nations which did not return to managed economy and government spending have had more prosperous agriculture, 2 to 4 times as much building per capita, higher employment, more profitable business. While they prospered and made their economic machine function to full capacity, we have had stifling taxes, mounting debt, and continuing heavy unemployment.

Yet we should be far better off than are they. Our natural resources are enormously greater. We have the most efficient factories, mines, farms, railroads in the world. Nowhere is management so competent and so successful in the use of science to increase productive power. Nowhere in the world is there a body of ambitious workers equal to those in this country. As recent economic studies have proved, our system of productive plants is working at only about 65 percent of its real capacity.

On the century-old curve of increasing production our total annual income today should be $105,000,000,000 instead of its shrunken level of $65,000,000,000—$40,000,000,000 of missing annual income which our private-enterprise system would yield if it were encouraged and permitted to function.

The way to get better dentistry, to get better medicine, to get the more abundant life in every form, is to recover these missing $40,000,000,000 of yearly national income. Think what that would mean. Every farm owner would have $800 a year more to spend. Every nonagricultural gainfully employed worker could enjoy an increase of wages or salary of $1 a day, including Sundays, or $365 a year. Eleven billion dollars more could be distributed to meet increased taxes, rents, to pay normal interest, and to restore dividends. And there would still remain $1,000 a year, without one dollar of burden on the Federal Treasury, to give employment to 10,000,000 now jobless.

The way out for America is to preserve our constitutional democracy and restore our system of free enterprise. Instead of theorists who simply do not understand how to make our system work, we must place control of national policy in the hands of men who understand the heritage of free enterprise and who can make it work to the advantage of our whole people.

We can bring about recovery and prosperity. We had nothing in the prosperous days of the twenties that we haven't today. Our plight is not due to any famine, drought, catastrophe, or any act of God. Our distress is man-made and is due absolutely to our ignorant bungling in handling our affairs.

For 6 years we have been trying to spend ourselves rich, something just as impossible as it is for a drunkard to drink himself sober. We have been trying to create more wealth by producing less on field and in factory. We have been trying to improve our condition by piling up a tax burden which threatens to crush us.

Instead of following this program which has proved a great failure, we should go back to sound economic principles which have made America so great.

Here is a simple program that I would suggest which would immediately benefit everyone, put the millions of unemployed back to work, give purchasing power to all so that they could have the things they want and need. Yes, have health and the best dental treatment.

First of all, confidence must be restored by having a national policy worthy of confidence. Capital and business must have faith in the future. These absurd, silly ideas of unlimited spending and controlling every farm and business from Washington must be chucked into the ashcan.

Second, the farmers' income must be restored to something like the average of the 1920's. Since 1929 there has been a total loss of our farmers' and other raw material producers' normal income of more than $50,000,000,000. That alone accounts for much of our depression. The farmers' income can be raised without restricting production, fixing prices artificially, or by giving money out of the Treasury to the farmers.

We must have a really sound monetary system, an honest dollar of constant purchasing and debt-paying power. This should be done by establishing a monetary authority under mandate of Congress to regulate the value of the dollar so that it will no longer cheat debtor or creditor; so that great depressions and big booms can be controlled by stabilizing the price level of basic commodities.

Third, the people, rich and poor, must have restored to them that great force which has developed our wonderful country—I mean incentive. Every individual, firm and corporation should have a fair chance to make a profit from producing wealth and employing labor. Instead of penalizing those who engage in productive enterprise, we must consider methods of definitely encouraging them.

We must adopt an economy of abundance in place of a program of scarcity. We can have more finished goods at lower prices, in the reach of all, more to eat, to wear, and enjoy, when we take off restrictions, burdens, and artificial regulation.

Fourth, we should promote and establish friendly relations between capital and labor, and adopt means for ending costly strife and strikes. Other countries have found ways to do this. The New Deal, however, has promoted friction, class hatred, and ill-feeling between employer and employee.

To promote better labor relations, more cooperation, more production, we should have more sharing of profits with labor.

Fifth. The expenses of Government—that is, the cost of operating bureaus and departments—must be cut down. Money now spent for relief is only a fraction of the cost of our Government. We must continue to provide relief for the unfortunate. This burden, however, can be rapidly cut down when we have an administration that will give the "go" sign to free enterprise.

Sixth. We should have a long-range plan of useful public works, free from politics, which, efficiently administered, would take up any slack in industrial employment.

Seventh. We should formulate a long-term policy for our international relations, so that the Nation may be kept out of war. The greatest contribution America can make to world peace is to manage our own affairs so well, to make our people so happy and prosperous without getting entangled into the affairs of other nations, that the rest of the world will want to follow our example and adopt our method of government.

If we put in effect a program such as I have outlined, glorious days will return to America. But if we continue along the lines we are now following we are certain ultimately to have a totalitarian state—that is, a state that manages everything and everybody, assumes total control of our lives.

Do we want to organize this Nation for permanent depression? Or do we want a recovery program that will give jobs for all willing workers, that will restore initiative and enterprise, that will

give opportunity for youth, and that will give us back a surging, dynamic America which made this country the hope of the world for a century and a half?

Is it not time for the self-supporting men and women who have built America to unite to protect their rich heritage? These citizens pay their own way. They want with their own efforts to provide for themselves in the evening time of life. They want only a fair field and an equal chance to work. They give value received and also pay for all the bills of government.

They and their forefathers are the creators and builders of our great America. Now, all that they have wrought is threatened. Is it not time for them to rise up and to protect themselves from the pressure groups who would consume the fruit of their toil, corrode their ideals, and finally undermine the value of their savings, their insurance policies, their bank deposits, and leave this country in a chaos that will destroy our constitutional Republic?

Professional men have much to lose. The assault upon the various professions is only part of a general program. Last week Solicitor General Jackson announced to the lawyers that if they did not organize, the Government would step in and take care of the constantly increasing proportion of our people unable to secure legal services. Note his phrase, "an increasing proportion of our people."

The greatest asset of professional men is the opportunity to use their training and their established position under our system of free enterprise. Is it not time for them to make common cause with the leaders of private business which also must function under the free enterprise system? Why not discuss the possibility of such a common front with the physicians, the lawyers, the architects, the clergymen, and the thoughtful workers whose skill is their asset as your skill and professional training is yours; also, with the leaders of business, large and small, in your community? Is it not for these groups to think and work together to restore this country to prosperity?

It is in this cause that I appeal to you that when you go back to your home town you go as crusaders. Our democracy is the greatest heritage that any nation ever possessed. But it will work only if citizens inform themselves and make their voting influence count. Today we face a crisis greater than any in our history, not excepting Lincoln's time. This crisis threatens the fundamental principles of our form of government.

The issues with which we must deal transcend party lines. If we are to regain conditions that will give us hope and satisfaction in the future, that will restore enthusiasm, that will engender anew the initiative and fires of ambition, we must see to it that the country is brought back to the right road of recovery.

Our weapon is the ballot. You dentists occupy positions of leadership in your home communities, in your churches, in your service and fraternal clubs. Others look up to you and are guided by your thinking. You have a great influence if you will but exert it.

Discuss these issues with your family, with your friends, with your business, professional, and social associates. There is nothing more important than the vote that you cast in 1940. It may determine the kind of government that will rule you and your children. It may determine whether we shall have free enterprise and constitutional government or a collectivist toboggan. When you get back home, go yourself and have others go to the precinct captain of your political party, to the county chairman. Write to the State leaders. Tell them that you are concerned over the preservation of free enterprise and democracy, and that in 1940 you will vote only for candidates pledged to restore and uphold these.

We have less than 12 months to educate the country. Do your part. Begin at once, for a great decision lies ahead. Prepare for battle. Fight to save yourselves, your profession, your business, your children; fight to save America.

Training of Civilian Air Pilots

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from this morning's edition of the New York Times:

[From the New York Times]

A PROMISING BEGINNING

The pet project of Chairman Hinckley and other members of the Civil Aeronautics Authority—the training, through specially set-up courses at university schools, of a large body of civilian pilots—has made an auspicious start. The latest compilation of the training log at the 13 universities first selected shows that 325 out of 330 students already have "scloed" and that 254 already have passed their tests and received their licenses. The rest will be licensed as soon as they have completed their required time. This excellent record is clear indication of the efficiency with which the Authority has laid the groundwork of the program. It was accomplished at a cost of $300 a student.

To carry out the full plan of training, in similar fashion, 15,000 students in some 300 schools throughout the United States, the Authority had requested, with administration approval, a comparatively modest sum. The House Appropriations Committee pruned this on Wednesday by more than half, recommending an appropriation of $3,000,000, which, it said, would be sufficient to train 7,500 pilots, or 50 percent of what the Civil Aeronautics Authority program called for. This amount was voted by the House in the third deficiency bill, which may go before the Senate today. The case against unbridled Government spending cannot be overemphasized. The pilot-training program, however, like expansion of aeronautical research, should not be allowed to suffer through false economy. Not only will it provide an invaluable pool of pilot material for national defense—a vital factor which totalitarian governments, well-equipped mechanically in the air, credibly are reported to lack—but it will provide a fine opportunity for American youth, in both college and high school, to acquire the technique of a modern art and the new liberty of action that comes with wings.

Federal Spending

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. BENDER. Mr. Speaker, of every dollar spent by the Federal Government, 39 cents is borrowed money.

Recent Developments in Federal Jurisprudence

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

ARTICLE BY ALEXANDER HOLTZOFF, SPECIAL ASSISTANT TO THE ATTORNEY GENERAL

Mr. CELLER. Mr. Speaker, I am happy to comment upon the fine work being done by Alexander Holtzoff, of the Attorney General's staff, and to insert a speech which he recently delivered on New Tendencies in Federal Jurisprudence. It is instructive and enlightening:

RECENT DEVELOPMENTS IN FEDERAL JURISPRUDENCE—1934–39

One of the principal attributes of the law, is that it must of necessity change, grow, and adjust itself to the varying needs of passing generations. The law, is therefore, always in a state of flux. There are periods during which the changes are slow and almost imperceptible. At other times, the modifications and adjustments come at a pace sufficiently fast to render the development visible to the reflecting observer. The past 5 years have constituted a period of very rapid growth and change in the law. It is, therefore, fitting for the lawyer who is interested in the history of jurisprudence to pause and survey the progress that has been made during the past 5-year period. It is my plan to discuss this subject briefly in respect to the growth of Federal jurisprudence.

It is perhaps the very nature of law to lag behind social and economic developments. The law adjusts itself to changes in our society only after such changes become crystallized. It is indispensable, however, that the lag should not be too great. When there is too long a delay between the advance of our social and economic life and the needed adjustment in our legal system, the law becomes a retarding influence. When such a situation arises, as it

has at times in the past, it becomes indispensable that appropriate changes be effected without undue delay.

For a great many years there had been but few marked and important changes in Federal jurisprudence. The machinery gradually became inadequate. It revolved too slowly and creaked for want of sufficient lubricating oil. It became impotent to respond to the many demands made upon it.

During the past 5 years vast strides were taken and improvements of outstanding importance were made in the Federal judicial system. This is true both of the substantive law, by which the Federal courts are governed, as well as of the procedural aspects of their activities. If the lawyer accustomed to practicing in the Federal courts fell into a Rip Van Winkle sleep 6 years ago, he would find himself today, upon awakening from his slumbers, a stranger in the haunts which he had previously been accustomed to frequent.

On the substantive side of the law the changes are striking. This is true both of criminal and civil law. Conditions have radically changed since the day when Benjamin Franklin undertook the perilous journey from New York to Philadelphia that consumed almost a week's time, and during which he was subjected to numerous inconveniences and discomforts, and even hazards. The high-powered automobile, coupled with our modern systems of communications, has made it possible for dangerous desperadoes who live in one State, to betake themselves to a distant commonwealth for the commission of serious crimes, and then rapidly return to their homes. Such conditions have led to the radical revision of the Federal criminal law that took place in the spring of 1934, when the Congress enacted a series of measures which brought under Federal jurisdiction numerous crimes of which theretofore State courts alone had cognizance. The Federal kidnaping statute, the National Stolen Property Act, the antiracketeering statute, the Federal bank robbery statute, the Federal fugitive felon statute, the National Firearms Act—were all enacted at that time, thereby bringing under the authority of the Federal Government many serious offenses which State and local authorities had found themselves powerless to handle effectively.

The modifications in the substantive law governing the activities of the Federal courts on the civil side during the past 5 years have been equally as important, though less dramatic, than the extensions in the Federal criminal law. For almost a century the Federal courts had been following and applying the principle that on matters of commercial law and general jurisprudence, they may develop doctrines of substantive law independent of those accepted by the State tribunals (*Swift* v. *Tyson*, 16 Pet. 1). The provision of the Judiciary Act of 1789 which enjoined the Federal courts to regard the laws of the several States as rules of decision in trials at common law was construed as being restricted solely to State statutes. The result has been that in many instances a rule of law governing a Federal court in a particular case was entirely different from that followed in the State court, held possibly across the street. Litigants were frequently in a position to choose that tribunal whose law was the more suitable of the two to their interests. The revolutionary decision in Erie Railroad Co. against Tompkins, entirely abrogated this time-honored doctrine which was one of the keystones of the edifice of Federal jurisprudence.

Today the Federal courts decide civil cases other than those involving Federal questions, in accordance with the law of the State by which the case is governed, whether such law is expressed in a statute, or is evolved from the decisions of the courts, and whether the subject matter of the litigation is within the realm of general jurisprudence or commercial law, or within the confines of local matters. A Federal judge remarked several months after this decision of the Supreme Court was rendered, that the decision in Erie Railroad Co. against Tompkins, has, legally speaking, "turned the world upside down." (*Francis* v. *Humphrey*, 25 F. Supp. 1.) This reversal of a century-old doctrine has many important and far-reaching implications. No matter what forum the parties select for the determination of their rights, the rules of law by which such rights are adjudicated are the same.

The changes in the adjective side of Federal jurisprudence during the past 5 years are equally as basic as those in substantive law. This is true only, however, of the civil side of the courts. Since 1789 the Supreme Court has been endowed with the power to regulate equity and admiralty procedure in the district courts. This authority was wisely exercised. The result was the development of a reasonably simple and uniform system of equity and admiralty pleading and practice throughout the Federal judicial system. The Federal courts were, however, trammeled and restricted by the Conformity Act in respect to practice in actions at law. They found themselves required in that field to conform to the pleading, practice, and procedure prevailing in the local tribunals of the States in which they were sitting. In a number of jurisdictions the Federal courts were required to follow common-law pleading in its pristine vigor, and pure and unadorned form. In the code States the Federal courts adopted code pleading. In a still third or intermediate group various forms of modified common-law pleadings were in vogue. Chaos and confusion reigned. It was not until after many years of agitation that the Congress enacted the act of June 19, 1934, which conferred upon the Supreme Court the same rule-making power in respect to actions at law that it had always possessed in regard to suits in equity and admiralty. The sequel of this statute was the promulgation of the Federal Rules of Civil Procedure, which became effective on September 16, 1938, and which introduced a simple and uniform procedure, binding on all Federal courts, in all those civil actions which had theretofore been comprised in the groups known as actions at law or suits in equity. A single form of action, such as is contemplated by the codes, was for the first time introduced into Federal jurisprudence. The distinction between law and equity was abolished, and the differentiations between different types of actions at law were abrogated. Simplicity reigned. Liberality in the manner of joinder of parties and claims and the interposition of counterclaims prevailed. Potent weapons for discovery were introduced with a view to eliminating as far as possible what has aptly been called "the sporting theory of justice." Much laborious and abstruse learning was thrown in the discard.

Contrasted with the revolutionary reform in Federal civil procedure is the archaic criminal procedure by which the Federal courts are still bound. Improvements in this field cannot be made without legislation. Proposals are now pending before both Houses of the Congress to confer on the Supreme Court the same authority to regulate criminal procedure generally that has been conferred upon it in respect to civil procedure, and in respect to criminal appeals. Some progress with this legislation has been attained, and it is hoped that it may be passed during the next session of the Congress.

One important phase of Federal criminal procedure has, however, undergone a vast improvement. I have reference to the treatment of juvenile delinquents. Beginning with the turn of the century, the various States in rapid succession adopted special statutes providing an informal, simple, procedure in dealing with juvenile offenders, with a view to saving them from the brand of the criminal, and making possible the rehabilitation of a youth who had stumbled along his path while still in his formative years. Although 47 States had acted, the Federal Government remained quiescent and continued to try juvenile delinquents in the same manner as adult criminals. In June 1938, however, the Federal Juvenile Delinquency Act was placed upon the statute books. It introduced for the first time the humane innovation of according an informal hearing to juvenile offenders against a Federal statute with a possibility of probation, or commitment to a training school or foster home if probation was not suitable. The pomp and circumstance and the publicity that surrounds a formal criminal trial in open court is no longer required in the case of a juvenile delinquent if both the prosecuting attorney and the juvenile agree to proceed by the informal method. Thus was achieved an important humanitarian reform.

A useful element of flexibility was introduced into the field of civil remedies in 1934 by the Declaratory Judge Act, which conferred jurisdiction on the Federal courts to render declaratory judgment. In this instance also the Federal judicial system had lagged behind many of the States.

Vital innovations were introduced, not only in the field of procedure but also in the structure of the judicial system. Little thought had been given to the fact that although the Constitution created the judiciary as one of the three coordinate branches of the Government, the courts were not implemented with administrative machinery that would assist them in functioning effectively and expeditiously. Each district court, frequently each district judge, was regarded as an independent unit and permitted to function within its own orbit in its own way. Since the courts were not supplied with administrative machinery, the budgetary and fiscal matters relating to the judiciary as a result of unintended development devolved on the Department of Justice. Last week, however, the Congress passed a bill to create an Administrative Office for the United States Courts, which, it is contemplated, will perform a twofold function. First, the Director of the Administrative Office will be charged with the duty of studying the conditions of the dockets and devising ways and means for organizing them and speeding the disposition of litigation. This measure will, therefore, have an important bearing on the ever-present evil of law's delays. Secondly, he will have charge of the budgetary and fiscal matters relating to the courts. Although this law is not a picturesque bit of legislation and has but little dramatic value, it is an important milestone in the growth and development of the Federal judiciary.

Vast changes have been made in dealing with the estates of insolvent persons and corporations. The ingenious contrivance of equity receiverships, which had its fullest growth and development, if not its origin, in the Federal courts, and which was used by them for the purpose of administering the assets of railroads, public utilities, and large industrial and commercial corporations is now out of date. If not entirely obsolete, it is at least obsolescent. With the salutary extension of the Bankruptcy Act to railroad companies and to the reorganization of other classes of corporations, the need for equity receiverships no longer exists.

The extension of the Bankruptcy Act to farmers was regarded by many as a marked innovation and was accompanied by many heart burnings. And yet is there any difference in principle between, according to a railroad corporation what amounts to a moratorium for a number of years through the device of an equity receivership or a proceeding under section 77 of the Bankruptcy Act, and extending similar relief by a statutory provision to a farmer struggling under the heavy burden of a mortgage which the fall in agricultural prices makes it impossible for him to liquidate? Municipal corporations and other local governmental units who, because of radical changes in financial conditions, find themselves confronted with inability to meet their bonded indebtedness are likewise permitted

to enter the portals of the Federal courts to revise and rearrange their debt structure. Many desirable improvements and much commendable simplicity were introduced by the Chandler Act into the bankruptcy system.

We have been troubled in the past by the cumbersome, slow, and expensive procedure of the courts of bankruptcy. Creditors frequently lamented the fact—with a considerable degree of justification—that the cost of administration consumed too great a percentage of the assets and that too long a time elapsed between the date of institution of a bankruptcy proceeding to the date on which final dividends were received. The entire subject is now receiving thorough study by a committee appointed by Attorney General Murphy.

The administration of the bankruptcy law has been accompanied by an exceedingly anomalous feature. A large part of the work of first instance is conducted by judicial officers who are not paid any stated compensation by the Government, but receive their remuneration on a fee basis out of the assets of the estates which they administer.

The fee system of compensating judicial officers is an anachronism and should be thrown into the discard in this field as it has been in many others. This, however, is not the time nor place to discuss the many disadvantages of the prevailing system. They can easily be envisaged by every member of this audience. It was with a view to bringing the administration of the bankruptcy law in line with modern concepts in this regard that Attorney General Murphy has urged the enactment of legislation that would place referees in bankruptcy on a salary basis, thereby increasing the dignity and prestige of the important office which they occupy and eliminating some wide discrepancies in the remuneration of these officials.

The 5-year period has been significant not only for the outstanding improvements in private law, but also for its developments in public law. This is true both of administrative and constitutional law. The administrative process is not a novelty. So far as the Federal Government is concerned, it dates at least as far back as 1886, when the Interstate Commerce Commission was established. During the past few years it has been extended to new agencies. Naturally, the legal profession by the very virtue of its training tends to be conservative, and many of its members have not as yet become accustomed to a frank realization of the proposition that the administrative process must in many respects differ fundamentally from the judicial process. The fact that the judicial process is very much older than modern administrative process by no means necessitates the conclusion that judicial process is more efficient or that it is more likely to attain justice. With the growth of complexities and intricacies of governmental activities, due to the development of modern industrial society, the administrative process must of necessity play a more important role than it has fulfilled heretofore.

I have left until the last the most far-reaching modifications in Federal jurisprudence. I have in mind recent constitutional developments. In dealing with the Constitution, we must ever bear in mind the admonition of Chief Justice Marshall, that "It is a constitution that we are expounding." In other words, the general terms in which the Constitution was intentionally couched may not be properly construed with the precision applied in interpreting and applying a detailed code of laws.

In a speech that I delivered in the fall of 1937 I had occasion to advert to the fact that during the first 60 years of the existence of the Republic, which was a period of great national expansion, not a single act of Congress was declared unconstitutional by the Supreme Court. It was an era of broad construction of Federal powers, permeated by the inspiration of Chief Justice Marshall, who was a farsighted statesman, as well as a profound jurist. During that period a wide scope was accorded to the implied powers of the Congress, and a liberal interpretation was given to its authority over interstate commerce.

There is an ebb and flow in constitutional interpretation, as there is in other affairs of men. The period of broad construction was ended in 1857 with the rendition of the decision in the *Dred Scott* case, which marked a turning point in the development of constitutional law. The succeeding 70 years were characterized by a narrowing of the scope of the commerce clause, and by an extension of constitutional limitations on legislative action. This was especially true of the due-process clause. The result was the thwarting of much social-welfare legislation. The tendency was the opposite to that which prevailed while the influence of John Marshall was still vital. Instead of according a broad scope to governmental powers, the trend of Supreme Court decisions was in the opposite direction.

In the remarks that I made in the fall of 1937, I suggested that another turn in the tide came in the spring of 1937. At that time there seemed to be in the decision of the Supreme Court a reversal of the narrow conception of governmental powers and a welcome reversion to the vital doctrines that prevailed in the early years of the Republic. Over 2 years have elapsed since the tide turned, and that time has perhaps been sufficiently long to justify a suggestion that the constitutional historian of the future may perhaps look upon the year 1937 as marking an epoch-making landmark in the development of constitutional law. The limitations on the commerce clause, which seemed to be somewhat artificial under modern conditions, have been adjusted so that they correspond to realities. This was accomplished largely by a series of decisions dealing with the application of the National Labor Relations Act. Broad construction has been given to the spending power by the decisions upholding the validity of the Social Security Act. The due-process clause was construed so as not to hamper or impede the enactment of social-welfare legislation.

The reciprocal immunity of Federal and State employees against income taxes levied by the other Government on their official salaries was brought to an end. The basis for the immunity had been found in the principle that the Federal and State Governments may not impede or burden the activities of each other. It seems clear that a nondiscriminatory tax levied on all incomes is not an interference with the functions of government, merely because it incidentally reaches Government officers together with all of their fellow citizens. By the same token, a general nondiscriminatory income tax was held not to constitute such a diminution or reduction of salaries of Federal judges as is forbidden by the Constitution, since it is not directed solely or principally against judges.

On the other hand, turning aside from the economic field, we find that the Supreme Court has been meticulous in preserving the civil liberties of the individual in a number of decisions in which it vigorously upheld the basic right of freedom of speech, which is fundamental in a democracy.

Some have bemoaned the decisions of the Supreme Court during the past 2 years as indicating a bewildering lack of consistency. This criticism, however, overlooks the fact that one of the elements of strength in the Constitution is the fact that it speaks in general terms, which must be construed by the Supreme Court to accord with the conditions and the requirements of the times. The law cannot stand still. It cannot become petrified. It must be molded to fit the needs of passing generations. Therein lies one of the glories of the Constitution of the United States and the strength of our democracy.

Civil Liberties

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. HOFFMAN. Mr. Speaker, the press of the week has carried notices of strikes throughout the country. At Green Mountain Dam, Colo., pickets attempted to keep men who desired to work from their jobs, but for once the tables were turned; those wanting to work organized, called to their aid farmers and ranchers from the surrounding country, who were deputized, and the picket lines were broken; those who would have deprived American citizens of the right to earn their daily bread were once, at least, met by men equally determined to insist upon their right to work. Violence broke out; six men were shot, one was cut; State troops were called, order restored. Those who wanted to strike and picket were permitted to do so; those who wanted to work were told they might follow their inclinations.

Violence flared at Detroit, Mich., in the motor industry, but a new order existed in that State, and while the right of unions to picket is stoutly maintained and adequately protected, the State administration sees to it that those who desire to work have that privilege.

Again at Harlan, Ky., mines were dynamited, the State guards were recalled, and once more peace on the surface, at least, exists. There is no question as to the right of men to join unions, strike, and picket. There should be no question but that granting all these rights other men who desire to work should be permitted to do so. Until that truth is realized and acted upon, there will be no peace in industry.

The American people just will not submit to any organization exercising the absolute right of determining who shall and who shall not work.

It would be well for this country if the Senate Civil Liberties Committee, which in reality is LA FOLLETTE, of Wisconsin, THOMAS of Utah, the former repudiated by his own State, awakens to the situation and ceases its witch hunting and persecution. People the country over are becoming fully aware of what that committee is doing.

An editorial from the Somerset Daily American of August 3, 1939, expresses the opinion of a vast majority of the

editors of the smaller papers throughout the land, of that committee. That editorial is as follows:

CIVIL LIBERTIES

President Roosevelt has asked Congress for an appropriation of $100,000 for financing the nefarious practices of Senator LA FOLLETTE'S hell-dingers, commonly known as the Civil Liberties Committee.

The La Follette crowd has diligently pursued honest men engaged in providing employment for persons incapable of, or unwilling to, employ themselves, so that persons of capacity and capital have refrained from engaging in industrial enterprises that would probably have promoted the general welfare.

The "liberties" in which the La Follette crowd is interested is what in ante New Deal days was known as licenses. Senator LA FOLLETTE desires for labor racketeers the "liberty" of pilfering the pay envelopes of workers, and the practice of such coercion, intimidation, and violence as may contribute to that result.

A mob of 3,000 hoodlums surrounded an important industry in Cleveland a few days ago, assailed honest workers en route to their places of employment, so that nearly half a hundred were taken to hospitals; and then, when police had employed such measures as they found necessary to restore order, complaint was made to the United States attorney in Cleveland that the police had been unduly violent in the methods they employed.

It is an old axiom that persons who come into court must come with clean hands.

One can hardly account a mob of rowdies, intent upon denying to their fellow citizens the right to work, cleanliness of hands, whatever the measures of the police to restrain their rowdyism may have been.

Yet it is to finance the operations of a committee that has done more to incite such violations of civil liberties of American citizens than any other group President Roosevelt asks Congress to appropriate $100,000 of the people's money.

Financing the propagation of hoodlumism is not a proper governmental expenditure.

Hon. Charles J. Colden

MEMORIAL ADDRESS
OF
HON. JOHN M. COSTELLO
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. COSTELLO. Mr. Speaker, it is with a deep feeling of regret that the House has today received word of the passing of our beloved colleague, Hon. CHARLES J. COLDEN, late a Representative from the Seventeenth Congressional District of California. Having served for 6 years in the House, Mr. COLDEN had won the respect and esteem of each of his colleagues, and we therefore sincerely grieve over his loss.

Mr. COLDEN was a native of the State of Illinois, where he was born on August 24, 1870. When but a child of 10, his father removed with the family to Nodaway County in Missouri, where he had purchased a farm. Being an eager student, CHARLES COLDEN worked his own way through college, and upon graduation at the age of 19 entered the teaching profession. After 2 years he was elected the principal of the school in Manilla, Iowa, where he remained for 3 years.

In 1896 Mr. COLDEN located at Parnell, Mo., where he purchased a newspaper and entered this new field of endeavor. Upon the sale of this paper 4 years later, he established the Nodaway Forum, which he edited during the next 7 years. It was at this time that Governor Folk, of Missouri, honored him by naming him a regent of the newly established State Teachers College at Maryville, Mo. Mr. COLDEN liked to look back upon his work as regent as one of the happiest periods of his life, devoted to the training and education of the future teachers of the State of Missouri.

The ensuing 4 years were spent in Kansas City, Mo., where Mr. COLDEN entered the real-estate business, a career which he later followed in California when he removed there in 1912. Locating in San Pedro, Calif., Mr. COLDEN engaged in many civic activities and aided materially in the development and upbuilding of this community, the harbor area for metropolitan Los Angeles. It was because of his sincere interest in community welfare and his eagerness to actively participate in every civic advancement that he readily won the esteem and affection of his fellow townsmen, who will long happily cherish his memory.

Being a direct descendant of Cadwallader Colden, a Lieutenant Governor of colonial New York in the days previous to the Revolution, it is not surprising that Mr. COLDEN naturally turned toward the political field of activity. His father frequently recounted to him his trying experiences as a lad of 17 while serving with the Union Army during the Civil War. The patriotic service of his father was always an inspiration to Mr. COLDEN, and he sought to emulate it by his own public service.

While engaged in the newspaper work, he entered politics by serving for two terms in the State Legislature of Missouri from 1901 to 1904. Again in California, being urged by his friends, he served two terms in the Los Angeles City Council. With an opportunity for greater service, he became a candidate for Congress and was elected in 1932, having served continuously since that time. As an evidence of his attention to his work and his devotion to the strenuous duties of his office, Congressman COLDEN did not miss a single roll call during his service in the House, a truly singular record.

Always a kind husband and indulgent father, Mr. COLDEN leaves his widow and four children to mourn his passing. We join with them in sharing their grief today, for few men have been more highly esteemed or more affectionately respected than he has been in this House. We extend to them our deepest sympathy, knowing that as he never feared to answer roll call we can be assured that he was not afraid to answer to his name when the final roll call was announced for him. He had served faithfully throughout his lifetime, being ever mindful of the family motto, "Fais bien, crains rien"—do right, fear nothing. He had done right and hence had nothing to fear from the roll call. Today we pray that he may enjoy the fruits of his lifelong endeavors and that he may have rest eternal for his immortal soul.

Hon. Charles J. Colden

MEMORIAL ADDRESS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. VOORHIS of California. Mr. Speaker, in the passing of Hon. CHARLES J. COLDEN the House of Representatives has lost one of its most worthy, earnest, and faithful Members, and the people of the Seventeenth District of California have lost one of the most conscientious Representatives any district ever had.

Until his recent illness overtook him Mr. COLDEN had never been absent on a single roll call in all his long career as a Member of the House. Coming here, as I did, as a new Member at the beginning of the Seventy-fifth Congress, I went to Mr. COLDEN a great deal for advice and guidance, and I have never once had reason to believe that he was not right in what he told me.

He was not the kind of man who makes the headlines in the newspapers each day; he never thrust himself forward into the limelight, but when a good cause needed his support he could always be depended on to give it.

He was a Progressive in the best sense of that word, and his devotion to the cause of a suffering humanity ran deep and true.

Many of us will miss him sorely. His place will be hard, indeed, to fill. If the rest of us can leave as good a name and record behind us as CHARLES J. COLDEN did, we need never be ashamed.

Allard H. Gasque

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD H. GASQUE, late a Representative from the State of South Carolina

Mr. SABATH. Mr. Speaker—

When sorrows come, they come not single spies,
But in battalions!

Shakespeare's melancholy and noble lines have come to my mind only too frequently in the last months as death has descended again and again upon the Congress, and especially the House, which has lost about 12 Members since the election of November 1936, while the Senate has lost about 5 Members during the same time.

Only a few days ago I prepared remarks on the life, character, and public service of our late colleague Mr. Peyser; and now, only a few hours after adjournment of the Congress, we have lost Mr. GASQUE.

In the passing of Mr. GASQUE death has removed a very useful, a prominent, and a public-spirited Member of this Chamber and the State of South Carolina has lost a very distinguished and well-beloved son.

Mr. GASQUE entered the Congress at the beginning of the Sixty-eighth Congress, on March 4, 1923, after a good and promising preparation. He was early in life subjected to that refining environment that develops good and able men. He was not accorded opportunity to attend school in youth with freedom of mind from inexorable necessity. He attended the country schools 3 or 4 months each year and worked on a farm during the remainder of the year until 18 years of age. Thereafter he worked on a farm and taught school until he attained the age of 23, when he entered the University of South Carolina, from which he was graduated 4 years later.

It is easily understood why one of his placid mind and manner should become a teacher and educator. He had no relish for the bizarre, the spectacular, the histrionic. Seldom did he speak in the House, but he was active and influential in committee. He was sound in doctrine, able in its application and interpretation—a balanced man in an unbalanced age.

Mr. GASQUE's reasoning and conclusions showed the benefit of his scholastic training and experience. His mind, well disciplined by the sciences, was accurate in dealing with the intricate governmental problems of his mercurial era.

It was always a pleasure to talk with Mr. GASQUE, for he was unfailingly suggestive and ranged widely in his thoughts. The grave courtesy of his manner, which never wavered, had to me a peculiar charm. While he had his firm convictions concerning public questions and policies, yet he was not intolerant. Although he was a churchman, he was not a "wowser." He saw through the eye of reason and not merely through the rose-colored lenses of inflamed emotions. In other words, he was realistic, and never failed to see the forest on account of the trees or the city on account of the houses. To converse with him was a spiritual prophylactic; and he never tried to escape leadership and managerial responsibility. Our departed friend was ever in complete step with the persisting moral standards of his time.

The life of Mr. GASQUE was as upright and blameless in conduct as it was rich in achievement. What could be a richer achievement than to have importantly influenced the lives of thousands of our youths in their formative period, as Mr. GASQUE did during the more than a quarter of a century he engaged in school work? Moreover, he left a favorable impress upon the national legislation of the era in which he served here.

For about 40 years our departed friend stood in the full glare that shines about a man in exalted public office, and through all these years not a gleam fell upon him that was not reflected in undimmed purity from his untarnished soul.

He waged many political battles; he took part in many professional conflicts of first importance; he has filled at least three offices of public and private trust; and yet he bore himself amidst the many temptations that must have surrounded him, as they do every man, so that when he reached the end of this life no man could point to one dishonest deed or a single act of his life born of an unworthy motive.

It is pleasing to record that Mr. GASQUE's life was filled with honors graciously bestowed; that he measured up in fullest stature to their every demand upon him; and yet he bore them, as I have suggested, with that unassuming modesty that was an essential part of his noble nature.

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. SMITH of Washington. Mr. Speaker, in the passing of CHARLES J. COLDEN the Congress of the United States has lost an able, useful, and industrious Member, and I have lost "for a while" a personal and beloved friend. Our late colleague and many of us were among that rather large number who were called by our people to serve our Nation with President Roosevelt in the national election of 1932. Like myself, Mr. COLDEN represented a district in Congress deeply interested in the development and improvement of rivers and harbors, and we both sought and won membership on the important Committee on Rivers and Harbors and our seats adjoined each other on the committee dais. He had served as member and president of the Los Angeles Harbor Commission and had visited and inspected the leading harbors and waterways of the United States and Europe and was one of the best informed members of our committee. As he was somewhat my senior in years, I often turned to him for counsel and advice and learned to rely upon his sound and mature judgment. He was a native of the State of Illinois, as am I, and we had both migrated to the Golden West, he to the State of California and I to the State of Washington, and we had many interests in common.

CHARLES J. COLDEN led a full, eventful, varied, and colorful life, and had been in turn a student in school and university, teacher and principal, newspaper reporter, editor and publisher, college regent, realtor, public official, city councilman in Los Angeles, and for three terms a Member of the Congress of the United States. He took very seriously the duties and responsibilities of his position as a Member of this body in these trying times and labored incessantly day and night without surcease in the interests of his constituents and the American people as a whole. He often worked in his office until the late hours of the night and made a regular practice of coming to his office on Sundays and holidays. CHARLES J. COLDEN sacrificed his health and his life in the service of his district and his country.

Our departed colleague was a liberal Democrat in the truest meaning of that term and sincerely believed in the social and economic principles of the New Deal. He had faith in the leadership and patriotism of President Roosevelt and was loyal and steadfast in his devotion to the chosen leader of his party and his country. He would have been the last Member to desert and betray his leader, his party, and his country, and he would never have joined their enemies. He was also a God-fearing man and always endeavored to be on the floor promptly at noon when the House convened and prayer was offered by the Chaplain.

Mr. Speaker, when we contemplate the active, busy career of such a man as our departed colleague and others like him in public and private life whom it has been our privilege to know, we are comforted by the words of one of America's greatest thinkers, William James:

I confess that I do not see why the very existence of an invisible world may not in part depend on the personal response which any of us may make to the religious appeal. God himself, in short, may draw vital strength and increase of very being from our fidelity. For my own part, I do not know what the sweat and blood and tragedy of this life may mean, if they mean anything short of this. If this life is not a real fight, in which something is eternally gained for the universe by success, it is no better than a game of private theatricals from which one may withdraw at will. But it feels like a real fight—as if there were something really wild in the universe which we, with all our idealities and faithlessness, are needed to redeem; and first of all to redeem our own hearts from atheisms and fears.

Mr. Speaker, we who remain shall continue to carry on the battle for social justice and righteousness in government in which our colleague fell stricken until we, too, shall be summoned away to join him and that numerous uncounted throng of the servers and lovers of mankind.

Jesus said unto her, "I am the resurrection and the life; he that believeth on Me, though he die, yet shall he live; and whosoever liveth and believeth on Me shall never die."

The Late Charles J. Colden

MEMORIAL ADDRESS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. BUCK. Mr. Speaker, the soul of Hon. CHARLES J. COLDEN, late Representative in Congress from the Seventeenth Congressional District of the State of California, has passed to its final reward.

The House of Representatives has lost one of its hardest-working and most conscientious Members, a man who was respected by every Member of the House, who was known for his never-failing good humor and his ability to cooperate with all of those with whom he served. His place will not be easy to fill.

CHARLES J. COLDEN was elected to the House of Representatives in November 1932 and has been returned to Congress at each election since that time. His actual services in the House began in March 1933, but, with his usual application to any work that he undertook, he came on to Washington during the closing month of the Seventy-second Congress in order to familiarize himself with the procedure of the House. It was then that I first met him. In fact, he was the first new Member of the Seventy-third Congress that I formed an acquaintance with and this acquaintance ripened into an association and a friendship which continued steadfast and unbroken until the day of his death.

He was intensely interested in the work that was of special interest to his district, to the State of California, and to the West generally, but his interest extended also to matters of national importance. The care with which he always worked was recognized by his appointment to the chairmanship of the Committee on the Disposition of Executive Papers, a committee which performs a trying task and one often not sufficiently appreciated by the Members of the House. In addition to these duties he served with distinction on the very important Committees on Merchant Marine and Fisheries and Rivers and Harbors. To these two committees he brought his own experience as a former member and president of the Los Angeles Harbor Commission, and that acquired through a study of the harbors of the world which he had made in a 9 months' trip abroad during 1930. His training in the special subjects covered by these committees was of the greatest value to his associates on the committees and to the Members generally on the floor of the House.

The State of California has lost an able citizen. His constituents, who always had his ear no matter how humble their request, have lost a wise counselor and a friend. His associates in the House will miss not only the good cheer which he radiated but his sage advice.

As one of his friends and associates, I mourn his passing with those who have likewise been associated with him. To his sorrowing family let us extend the sympathy which their hour of grief and sorrow entitles them, but let us bring to them also the consolation that a faithful servant and a devoted husband and father has gone to his just reward.

The American Flag

EXTENSION OF REMARKS

OF

HON. JOSEPH L. PFEIFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

ADDRESS BY HON. JOSEPH L. PFEIFER, OF NEW YORK, MAY 30, 1939

Mr. PFEIFER. Mr. Speaker, I ask leave to have printed in the RECORD an address by myself at the flag-raising ceremonies at St. Catherine's Hospital Training School for Nurses, Brooklyn, N. Y., on May 30, 1939:

Sister Ildephonse, members of the training school, and friends, today is the official raising of the American flag on the newly dedicated flagpole outside of this great building which is your home while you are in training. Today is also Memorial Day, therefore let us pause for a moment and in silent prayer pay tribute to those who have paid the supreme sacrifice that we the living might still enjoy all those privileges for which our forefathers fought. It is quite fitting that in raising the flag today, we perform a twofold duty.

On June 14, 1777, the Congress of the United States passed a resolution creating an independent flag, one of national union, representing a new constellation among the nations. It falls on us then as the living nation to support that emblem and everything for which it stands.

Nearing the anniversary of that momentous date in our history of the world, it is fitting, therefore, that the people living under the protective shadow of that flag and partaking of the benefits of our Government should be fully informed as to the history of the flag, the significance of the flag, and the proper respect that the flag deserves.

After the Battles of Lexington and Bunker Hill, where a white flag was used, bearing a pine tree with the words "An appeal to heaven" inscribed, a congressional committee headed by Benjamin Franklin visited General Washington near Boston, Mass., to create a colonial flag, national in its tendency, yet not showing complete separation from England. This group decided upon a flag with 13 horizontal stripes, alternate red and white, 7 red and 6 white, making the top and lower stripes red. In the upper left corner of the flag in a blue rectangular field there was a neat combination of crosses of St. George and St. Andrew, a small Union Jack. This expressed the idea of home rule for the Colonies, preserving final allegiance to Great Britain.

St. George's crimson cross of courage at right angles was established as an English flag by King George I, since he so devoutly admired the wonderful exploits of this patron saint, about whom he learned while on a crusade to the Holy Land.

The flag of Scotland was St. Andrew's diagonal cross of pure white representing the purest Christian virtues. These two flags were blended into one when the kingdoms of England and Scotland were united under King James I. Thus these colors commended themselves to the American flag seekers as symbols of valor and virtue to represent the Thirteen Original Colonies.

This American flag (with the blended crosses of St. George and St. Andrew where our white starry-blue union now is) was first hoisted as the great Union flag over the fort at Prospect Hill, Somerville, Mass., on January 1, 1776. General Washington, then in command there, said: "We hoisted the Union flag in compliment to the united colonies and saluted it with 13 guns."

As the Revolutionary struggle developed more desperate and bloody fighting with its consequent bitterness, the idea of complete national independence was born. A flag committee was

formed and met at the home of Betsy Ross, and there our glorious National Star-Spangled Banner was designed.

On June 14, 1777, the Continental Congress resolved that the flag of the 13 united States should be 13 stripes, alternate red and white, and that the union be 13 stars, white in a blue field, representing a new constellation among the nations.

Thus you see that the stripes remained the same, but in place of the blended British crosses, 13 white 5-pointed stars, representing the 13 independent States, were arranged in a circle in the center of the dark blue rectangular field.

The red symbolizes bravery to do and to dare. The moral courage and strength to combat mightily all social, political, and economic evils in peace or war. White signifies purity and innocence. While blue being the background of the American uniform and this color signifies vigilance, perseverance, and justice.

As each new State was admitted to the Union, a new stripe and a new star was added. At one time there were 15 stripes and 15 stars. But with further admission into the Union, Congress added a star for every State but changed the stripes back to the original 13. So today there are the 13 stripes but in the blue union there are now 48 stars for our 48 States. Arranged in 6 horizontal and 8 vertical rows. This makes the cannon salute to the Union given now on July 4, our national birthday, 48 guns, fired at intervals of 10 seconds.

Our flag is the most beautiful patriotic trinity of symbolism in color. The most radiant banner in the world. It speaks to its citizens of American ideals of equality of opportunity and the enjoyment of a happy life with liberty without license, as proclaimed by our Declaration of Independence.

It proclaims under our Federal Constitution the principles of freedom of equality under law, an "indestructible union of indestructible States," honest justice, national tranquillity, intelligent and scientific national defense, and the general welfare as ordained by the American people.

Our flag is the most valiant and virtuous in war, and the most beneficent in peace. It is the most honest banner in the world, and the most humane in a pinnacle of integrity all its own.

May no group, insatiably ambitious, destroy the intrinsic integrity of this fundamental instrument of government framed by conscientious patriots inspired by the most enlightened and liberal constitutional principles ever conceived and the righteous wisdom of the Holy Scriptures.

All loyal Americans should unceasingly combat all unfriendly influences in our midst which seek our ruin. Beware of foreign intrigue and treason masquerading as a false religion. Let not unpatriotic teaching in academic places nor intelligent anarchists, evaders of eternal truth, deceive you. Let us be neither fools nor cowards. Let us by valor and virtue forever stand firm and loyal to God and country.

I ask you all to show respect to our beloved national flag wherever it is flown. Teach all children you come in contact with to love and salute it.

A salute to our national flag should not only express gratitude for its protective privileges, but also loyalty to our beautiful symbol of proper popular liberty under law. If you enjoy blessings under our flag and yet refuse to honor it, you become an undesirable citizen by disloyalty to American laws. Being thus an outlaw you should have no place in these United States of America.

A respectful salute to their flag by the citizens of any country is only a reasonable part of that loyal patriotism which has been commanded by the best civilized nations of all history. This is the only true guide to enlightened mental, spiritual, and political faith and practice.

Let us fondly renew the creed and vital article of the faith and practice of stanch Americanism as we declare: "I believe that it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

Let us memorize in heart and mind the following pledge of allegiance and be ready to repeat it as occasion requires:

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands. One Nation, indivisible, with liberty and justice for all."

RULES AND REGULATIONS GOVERNING THE USE OF THE FLAG

While it is within the province of the War Department to prescribe the rules and regulations governing the use of the flag for observance within the Army, yet it is beyond its province to prescribe any such rules or regulations for the guidance of civilians or to undertake to decide questions concerning this project that are presented by civilians. Representatives of over 63 patriotic organizations, therefore, met in Washington on Flag Day, June 14, 1923, for a conference under the auspices of the National Americanism Commission of the American Legion to draft an authentic code of flag etiquette. The rules adopted by this conference represent the opinion of the patriotic organizations represented at the conference. The flag circular of the War Department was incorporated almost in toto in the conference flag code, which provides:

(1) The flag should be displayed only from sunrise to sunset, or between such hours as may be designated by proper authority. It should be displayed on National and State holidays and on historic and special occasions. The flag should always be hoisted and lowered slowly and ceremoniously.

(2) When carried in a procession with another flag or flags, the flag of the United States should be either on the marching right—that is, the flag's own right—or, when there is a line of other flags, the flag of the United States may be in front of the center of that line.

(3) When displayed with another flag against a wall from crossed staffs, the flag of the United States should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.

(4) When a number of flags are grouped and displayed from staffs, the flag of the United States should be in the center or at the highest point of the group.

(5) When flags of States or cities or pennants of societies are flown on the same halyard with the flag of the United States, the national flag should always be at the peak. When flown from adjacent staffs the flag of the United States should be hoisted first. No flag or pennant should be placed above or to the right of the flag of the United States.

(6) When flags of two or more nations are displayed they should be flown from separate staffs of the same height and the flags should be of approximately equal size. (International usage forbids the display of the flag of one nation above that of another nation in time of peace.)

(7) When the flag is displayed from a staff projecting horizontally or at an angle from the window sill, balcony, or front of building, the union of the flag should go clear to the head of the staff unless the flag is at half mast.

(8) When the flag of the United States is displayed in a manner other than by being flown from a staff it should be displayed flat, whether indoors or out. When displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right, i. e., to the observer's left. When displayed in a window it should be displayed in the same way, that is, with the union or blue field to the left of the observer in the street. When festoons, rosettes, or drapings of blue, white, and red are desired, bunting should be used, but never the flag.

(9) When displayed over the middle of the street, as between buildings, the flag of the United States should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.

(10) When used on a speaker's plaform, the flag should be displayed above and behind the speaker. It should never be used to cover the speakers' desk nor to drape over the front of the platform. If flown from a staff it should be on the speaker's right.

(11) When used in unveiling a statue or monument, the flag should not be allowed to fall to the ground but should be carried aloft to wave out, forming a distinctive feature during the remainder of the ceremony.

(12) When flown at half staff, the flag is first hoisted to the peak and then lowered to the half-staff position, but before lowering the flag for the day it is raised again to the peak. On Memorial Day, May 30, the flag is displayed at half staff from sunrise until noon and at full staff from noon until sunset, for the Nation lives and the flag is the symbol of the living Nation.

(13) When used to cover a casket the flag should be placed so that the union is at the head and over the left shoulder. The flag should not be lowered into the grave nor allowed to touch the ground. The casket should be carried foot first.

(14) When the flag is displayed in church, it should be from a staff placed on the congregation's right as they face the clergyman. The service flag, the State flag, or other flag should be at the left of the congregation. If in the chancel, the flag of the United States should be placed on the clergyman's right as he faces the congregation and other flags on his left.

(15) When the flag is in such a condition that it is no longer a fitting emblem for display, it should not be cast aside or used in any way that might be viewed as disrespectful to the national colors, but should be destroyed as a whole, privately, preferably by burning or by some other method in harmony with the reverence and respect we owe to the emblem representing our country.

What cautions should one observe with respect to the flag?

(1) Do not permit disrespect to be shown to the flag of the United States.

(2) Do not dip the flag of the United States to any person or any thing. The regimental color, State flag, organization or institutional flag will render this honor.

(2) Do not display the flag of the United States with the Union down except as a signal of distress.

(4) Do not place any other flag or pennant above or to the right of the flag of the United States.

(5) Do not let the flag of the United States touch the ground or trail in the water.

(6) Do not place any object or emblem of any kind on or above the flag of the United States.

(7) Do not use the flag as drapery in any form whatever. Use bunting of blue, white, and red.

(8) Do not fasten the flag in such manner as will permit it to be easily torn.

(9) Do not drape the flag over the hood, top, sides, or back of a vehicle or of a railroad train or boat. When the flag is displayed on a motor car the staff should be affixed firmly to the chassis or clamped to the radiator cap.

(10) Do not display the flag on a float in a parade except from a staff.

(11) Do not use the flag as a covering for a ceiling.

(12) Do not use the flag as a portion of a costume or of an athletic uniform. Do not embroider it upon cushions or handkerchiefs or print it upon paper napkins or boxes.

(13) Do not put lettering of any kind upon the flag.

(14) Do not use the flag in any form of advertising nor fasten an advertising sign to a pole from which the flag of the United States is flying.

(15) Do not display, use, or store the flag in such a manner as will permit it to be easily soiled or damaged.

What is the proper use of bunting?

Bunting of the national colors should be used for covering a speaker's desk, draping over the front of a platform, and for decoration in general. Bunting should be arranged with the blue above, the white in the middle, and the red below.

What is the proper salute to the flag?

During the ceremony of hoisting or lowering the flag or when the flag is passing in a parade or in a review, all persons present should face the flag, stand at attention, and salute. Those present in uniform should render the right-hand salute. When not in uniform men should remove the headdress with the right hand and hold it at the left shoulder. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column is rendered at the moment the flag passes.

When the national anthem is played those present in uniform should salute at the first note of the anthem, retaining this position until the last note of the anthem. When not in uniform men should remove the headdress and hold it as in the salute to the flag. Women should render the salute as to the flag. When there is no flag displayed all should face toward the music.

What is the proper salute when giving the pledge to the flag? Standing with the right hand over the heart, all present repeat together the pledge: "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all." At the words "to the flag" the right hand is extended, palm upward, toward the flag, and this position is held until the end, when the hand, after the words "justice for all," is dropped to the side. This pledge to the flag is commonly given in schools and full respect should be given by adults by merely standing at attention when the pledge is being given, men removing the headdress. Persons in uniform should give the right-hand salute.

THE NATIONAL ANTHEM

(By Francis Scott Key)

Oh! say, can you see by the dawn's early light
What so proudly we hail'd at the twilight's last gleaming?
Whose broad stripes and bright stars, thro' the perilous fight
O'er the ramparts we watch'd, were so gallantly streaming?
And the rockets' red glare, the bombs bursting in air,
Gave proof thro' the night that our flag was still there.
Oh! say, does that Star-Spangled Banner yet wave
O'er the land of the free and the home of the brave?

On the shore, dimly seen thro' the mist of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses,
Now it catches the gleam of the morning's first beam,
In full glory reflected, now shines on the stream—
'Tis the Star-Spangled Banner; oh! long may it wave
O'er the land of the free and the home of the brave.

Oh! thus be it ever when free men shall stand
Between their loved homes and the war's desolation;
Blest with vict'ry and peace, may the Heav'n-rescued land
Praise the Pow'r that hath made and preserve us a Nation.
Then conquer we must, when our cause it is just,
And this be our motto, "In God is our trust."
And the Star-Spangled Banner in triumph shall wave
O'er the land of the free and the home of the brave.

Labor Relations Board

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, one of my colleagues from my own State of Missouri, Mr. WOOD, has taken it upon himself to circulate throughout my district reprints of certain testimony that I gave recently before the House Labor Committee, in an attempt to prejudice the voters of my district against me. I, therefore, feel that I owe it to the people of my district and to the people of the Nation generally to invite an even closer scrutiny of my testimony, and, especially, to the words of my colleague.

Let me give you the background. Last January I introduced a bill calling for amendments to the Wagner Act and in the course of time I was asked to testify in support of my bill before the Labor Committee, of which the gentleman from Missouri [Mr. WOOD] is a member. During my testimony the gentleman from Missouri [Mr. WOOD] interrogated me at some length regarding my charge that the Labor Relations Board ordered the Douglas Aircraft Co. to rehire a German alien with back pay in spite of the fact that the Air Corps Act specifically prohibits the employment of aliens upon military aircraft.

The following testimony on pages 219 to 222 of the official transcript of the House Labor Committee should be interesting to every American. It should be especially interesting to the members of the American Legion and the Veterans of Foreign Wars—men who have fought and bled for their country. As a past commander in the American Legion and an active member of the Veterans of Foreign Wars, I wish to call this to the attention of my buddies. What possible motive can a Member of Congress have to not only condone but openly approve the action of the Labor Board in ordering a German alien to be employed in making airplanes for our Army? I think the voters will decide that question.

Mr. ANDERSON. According to your contention, then, you uphold the Labor Board in sending this alien back and these convicted men back to work on these bombers?

Mr. WOOD. To that extent I uphold the action of any board who has to do with the administration of this law, or any other board that may be selected to administer this law. They would have no right to investigate as to the criminal character of any employees in a plant. And with that as an excuse, to give the employer the right to discriminate against them, or to use those employees to hamper the organization of unions and hamper the normal progress of an organization.

I wonder what you think about the Douglas Aircraft Co. Do you think it is proper for them to have employed these aliens prior to this difficulty?

Mr. ANDERSON. I just said "no"; they were wrong.

Mr. WOOD. Do you not think that the Wagner Labor Relations Board has performed quite an important function in revealing the fact that the Douglas Aircraft Co., that is charged with the responsibility of constructing airplanes for our Army, that has a contract with the Government to build bombers for our Air Corps, were employing enemy aliens in the construction of those bombers? You are blaming the Board instead of the Douglas Aircraft Co.

Mr. ANDERSON. May I answer that question now?

Mr. WOOD. Yes.

Mr. ANDERSON. I say this, that as an American body, this Board, as American citizens, should not have ordered the rehiring of these aliens, these men who were convicted of felonies, to go back and work on those planes. And I also tell you, for your information, that the Labor Board did not bring out that information. It was the attorneys for the Douglas Aircraft Co. that brought it out. And despite the fact that it was brought out, the Labor Board ordered them rehired to work on bombing planes.

Mr. WOOD. Do you not think that the Military Affairs Committee would be performing quite an important service if they drafted and introduced a bill providing that no person, firm, or corporation, engaged in the manufacture of munitions of war for this Government, shall employ either hardened criminals or aliens?

Mr. ANDERSON. I think the Defense Act sets that out.

Mr. WOOD. That is the remedy, is it not?

Mr. ANDERSON. They cannot hire any of them. And despite the fact that the law was violated, the Board ordered them to be rehired.

Mr. WOOD. You say further on in your statement here:

"The Douglas Co. attempted to follow out the Air Corps' instructions and were cited by the Labor Board because they insisted on a bond to insure the good faith of each individual worker."

Mr. ANDERSON. Yes.

Mr. WOOD. Do you not think that is a reflection on a man's citizenship, when he accepts employment with an employer and has to give a bond?

Mr. ANDERSON. I think anybody working on a Government plane should give a bond.

Mr. WOOD. To insure the good faith of his performance?

Mr. ANDERSON. I do not think that is any reflection on his citizenship. I think any man working in a plant manufacturing bombers, or a munitions plant, should give a bond. I think it is imperative in the interest of the defense of this country.

Mr. WOOD. You think they should give a bond?

Mr. ANDERSON. Yes.

Mr. WOOD. You do not think we ought to do anything about the Douglas Aircraft Co. employing aliens?

Mr. ANDERSON. I have said that the Defense Act sets that out; and when they ordered them discharged under the Defense Act, the Board ordered them rehired. What are a few bombers to the Board?

Restoring County Taxes

EXTENSION OF REMARKS
OF
HON. HERRON PEARSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 3, 1939

Mr. PEARSON. Mr. Speaker, one of the most important and puzzling problems to be solved by this or future Congresses is that of the replacement or restoration of tax losses brought about through the purchase by the Federal Government of real and personal properties located in every State of the Union. These properties have always been assessed for local tax purposes and upon title being transferred to the United States they immediately become tax-exempt. The loss of this revenue has resulted in throwing out of balance the budget of hundreds of counties, cities, and school districts and even States have felt the effect of the losses.

There is hardly a State in the Union in which the Federal Government does not own parks, homestead projects, resettlement areas, camps, forts, Army posts, reservoirs, dam sites, or recreational areas, not to mention post offices and lands acquired by the lending agencies of the Government. The proportion of Government ownership of such properties is increasing at an alarming rate, and every succeeding purchase is reflected in the increase of tax rates in counties where the reduction in tax aggregates and revenues must be provided for.

My State and specifically several counties in my district are keenly interested in this problem, because experience is teaching them that it is a serious one. In two of these counties the Government has purchased over 40,000 acres of land for park and recreational purposes, and while the intrinsic value of the lands was not great, the tax revenue which they afforded was appreciable and is hard to replace.

Possibly the most serious loss has come about through the overflow of fine bottom lands in connection with the program of the Tennessee Valley Authority. These lands constitute the reservoirs created by the erection of dams on the Tennessee River. They were high-priced productive areas, bought at an average cost of over $50 per acre, and represented a considerable part of the tax revenues in the counties where they were located. They now belong to the Authority and are not subject to taxation. These revenues must be restored either by increasing the tax rate, reducing county expenditures, or by requiring the Tennessee Valley Authority to pay to the counties the lost revenue.

I have a plan by which most of this revenue can be restored without loss or cost to the Federal Government, and if adopted will go a long way toward relieving all of these counties of their tax problem so far as lands are concerned. It will not take care of loss of revenue brought about through the purchase of utility plants and equipment by Tennessee Valley Authority.

On January 18, 1939, I introduced a bill (H. R. 2741) which seeks to take care of all counties affected by this program, and I hope it will be considered by the Congress.

I want to make a brief explanation of the provisions of this act.

When T. V. A. was created in 1933, section 13 of the basic act provided that 5 percent of the gross proceeds of power generated at certain dams should be paid to the State of Tennessee. During the year 1938 T. V. A. received from sale of power in Tennessee nearly two and one-half million dollars, and during the year 1939, after the properties of Tennessee Electric Power Co. are acquired, this income from power sales, on which the 5 percent is to be paid, will be vastly increased.

The bill which I have introduced provides that instead of paying the State of Tennessee the entire 5 percent, one-half, or 2½ percent, shall be paid to and distributed among the counties in which lands have been acquired by Tennessee Valley Authority until said 2½ percent equals the amount of taxes which the counties would have received on the lands. Should this amount be insufficient to pay all of said tax losses, the total amount is to be prorated among the counties in proportion to the loss of each in tax revenues. The remaining 2½ percent is to be paid to the State. This plan will give to the State only one-half of what it now receives, but will help the counties which are not able to restore their lost revenues. The loss to the State will be comparatively small, but the aid to the counties will be very material.

Under this proposed plan the Federal Government pays no more than it is now obligated to pay. It is simply a reallocation of the funds which under existing law is now paid exclusively to the State.

There has recently been introduced by Senator NORRIS a bill which authorizes the Tennessee Valley Authority to pay a more liberal percentage of gross sales of power to the State and it in turn shall redistribute a part of said funds to the counties affected. This method would likewise go a long way toward assisting the counties, and I have no particular preference for one method or another so long as we busy ourselves in solving this vexing problem.

Senator NORRIS' bill states that "it is the intention of Congress that each State shall redistribute said payments to counties affected," and this language I do not approve. I think the act should state that unless the States by suitable legislation provide for a division of this money among the counties affected, no part of it shall be paid to the State. This will protect the counties and they are the ones we are seeking to aid. If the Norris bill is considered I shall offer an amendment along this line.

In connection with these questions we might also begin to think about making provision for those whose property values and businesses have been detrimentally affected by Government ownership of property. There are thousands of citizens who are affected in this manner.

I am calling the attention of the Congress to the matter at this time in the hope that all Members who are interested will give the question some thought and study between now and the reconvening of the next Congress in January, and will cooperate with those of us who are looking for a fair and satisfactory solution.

H. R. 7389, Providing for the Presentation of a Medal to Rev. Francis X. Quinn in Recognition of His Valor

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

ARTICLE FROM THE NEW YORK SUN OF AUGUST 1, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, ladies and gentlemen of the House, it is with great pleasure that I express to the entire membership my appreciation for its consideration and passage of my bill (H. R. 7389) awarding to Rev. Francis X. Quinn a gold medal for the valor and heroism displayed on the morning of April 2, 1939, in saving the lives of two persons threatened by a desperate, hardened criminal. It is fitting that this heroic act by this good priest should be appropriately recognized by the Congress, and I am indeed very happy to not only express my own appreciation to the membership, but also the appreciation of the Reverend Father Francis X. Quinn, the recipient of the

medal, as expressed in the New York Sun of August 1, 1939, which is as follows:

HONOR PLEASES FATHER QUINN—HEROIC CURATE HEARS OF VOTE TO GRANT HIM MEDAL

The Reverend Francis Xavier Quinn, curate at the Church of the Guardian Angel, better known as the Sailors Church, Tenth Avenue and Twenty-first Street, expressed his surprise and delight today that the House of Representatives had passed and sent to the Senate for action a bill awarding him a gold medal for saving two lives last April. The bill was introduced by Representative MICHAEL J. KENNEDY, of New York.

Father Quinn, solidly built, dark-haired, and 39 years old, was in the church on April 2, when word came to him that a gunman pursued by the police after a robbery had broken into an apartment and was holding the elderly man and woman who occupied it as hostages against the police following him. The police got the gunman, whose name was John Naumo, to agree to talk to a priest, then sent for Father Quinn.

After some discussion, he entered the apartment of Merton A. Nicholas, assistant treasurer of the Missionary Education Movement of the Methodist Book Concern, at 301 West Twenty-second Street. Naumo was using Nicholas as a shield and had placed Mrs. Nicholas behind him, where he could shoot her if things broke badly.

Father Quinn talked to him for three-quarters of an hour, found that Naumo was afraid that the police would beat him up, talked him out of this, persuaded him to hand over his gun, then gave the police the sign to capture him, which they did. Naumo is in Sing Sing, serving a 20- to 40-year term.

He told a reporter for the Sun today that he hoped that he never would have to do another job like that, though he would if the occasion arose. Any priest would, he said. When he entered the apartment he fully expected to be shot. Dealing constantly with seamen, Father Quinn falls unconsciously into the waterfront vernacular at times and he turned to it now.

"I thought at first I was going to be plugged," he said frankly. "But, after 15 minutes of talking, I began to think I had him. I knew it when he asked for a smoke and I tossed over my cigarettes and matches. I talked about his home and his parents and, after 45 minutes, he held out his gun, butt end first, and I took it. He'd been scared to death the cops would 'give him his lumps.' I told him not to be foolish, that the cops would treat him all right. And they did. I saw him when he was in the Tombs and he said they'd treated him swell. I was mighty glad when he handed me that gun and when the cops, who had been sneaking onto the fire escape, came in.

"I was thankful to get out alive, and the grace of God was instrumental in making it possible."

Father Quinn said that he had been informed by Mr. KENNEDY of his bill, but that he never had expected it to pass. He thought it would be buried in committee and considers it a very high honor that it received a favorable vote.

The Cut-Over Nation

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

EDITORIAL FROM THE BATTLE CREEK (MICH.) ENQUIRER AND NEWS

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend by remarks, I wish to include an editorial from the Battle Creek (Mich.) Enquirer and News:

THE CUT-OVER NATION

The National Resources Committee has been surveying the situation in the cut-over timberlands of northern Michigan, Wisconsin, and Minnesota. It is a sorry sight and the facts are even sorrier, but one wonders if the National Resources Committee has confined itself to the broad view of the country's problems or simply looked in the one place and found the one thing.

Mr. Roosevelt comments in connection with the survey that Government expenditures "have enabled these people to survive, but could not provide a satisfactory, permanent solution to their problem." It is self-evident that this is so, but it is so no less in the North than in the South, East, and West.

The suggestion of the committee is that long-term loans should be provided these destitute residents of the barrens left by timber removal, the loans to go to those who are living where successful farming could be carried on. The others, the committee feels, should be relocated.

Mr. Roosevelt says, and many will agree, that relief payments "do not provide a permanent solution." If that is true of the timber country, it is true elsewhere in the Nation. Relief is only a stopgap.

Certainly the same problem and the same question arises in every city, town, and hamlet in the Nation. Relief is no solution for the out-of-work workman; nor can he be moved and relocated, as Tugwell sought to move the drought victims before the rains came again to the West.

If the problem of what comes after relief is to be met by Government loaning and relocating, then it is too staggering a problem for the imagination to calculate.

There could be a resettlement, however, and a simple one at that. It would follow the call of industry for help in the wake of an authentic, well-founded business recovery. The young men of the North, the South, the East, and the West would resettle themselves and their families and the old folks.

It might be true then that a sympathetic nation could find for the stranded minority some better solution of their problems than relief.

The United States Housing Act

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. HOUSTON. Mr. Speaker, the United States Housing Authority was set up to clear slums and to provide decent housing for low-income families, and with that objective in mind I supported the United States Housing Act of 1937 and the amendments thereto, but I am not in sympathy with the provisions of S. 591 to further amend the act of 1937 and am voting against this resolution to consider it.

The proponents of this bill say that the proposed gross subsidy of $73,000,000 will actually make possible low rents not on $1,600,000,000 but on $2,220,000,000 worth of housing; that it will enable rents in the 51 P. W. A. housing projects costing $123,000,000 to be brought down to the means of low-income families; that this gross annual subsidy will at present interest rates be reduced to a net subsidy of about $50,000,000 by an annual profit on the Government's total loans; that the bill adds nothing to the 1940 Budget or the national debt; that the funds previously made available are all committed and earmarking requests from all over the country far exceed $800,000,000; and that a rural housing program would be initiated for ill-housed farm and other rural families.

Those who can see no good whatsoever in the bill say it will cost the Government $4,380,000,000 over a period of 60 years; that no part of the rent collected in these projects will ever find its way to the Federal Treasury; that municipalities pay no part of the cost of the projects; that it is not a low-cost housing proposition as the average has been $4,893 per family unit and when all interest charges are paid the units will have cost an average of $10,000; that no record is available that the people heretofore housed in the slums have been placed in the new buildings; that the rural section of the bill would be more costly than the providing of homes for farmers under the Farm Security Administration; and that the Housing Authority would build a house on a small tract of land and rent it to the farmer for 60 years after the farmer deeded the land to the Authority although he would never own the home.

It is my opinion that both proponents and opponents have in turn exaggerated the benefits and the disadvantages, but it is my belief it will be far better that study be made of the possibility of inducing idle private capital, which has been estimated at $7,000,000,000, to enter into this housing problem and provide the funds for construction of projects in both city and rural districts so as to bring about the needed stimulation in the building industry and provide employment.

The United States Housing Act requires enabling legislation by the various States and, up to this time, the legisla-

ture of the State of Kansas has not adopted the required legislation, and no one can say that it ever will. Consequently, no direct benefits to the people of my State can be derived at this time, with the possible exception of those in rural areas through the Department of Agriculture. The Farm Security Administration should now provide that relief.

If the Congress erred in passing the act of 1937 and subsequent amendments, we should admit the error and refrain from making another of the same kind. The title of the act, "To provide financial assistance to the State and political subdivisions thereof for the elimination of unsafe and insanitary housing conditions, for the eradication of slums, for the provision of decent, safe, and sanitary dwellings for families of low income, and for the reduction of unemployment and the stimulation of business activity * * *" constitutes laudable objectives, but it is my belief that the actual operations under the act have fallen far short of our anticipation; and we should not launch this new and ambitious plan until we have had an opportunity to survey that which has been accomplished and perfect our future building plans so that those things which we want done will actually be fulfilled and at a minimum of expense to the taxpayer.

Proper housing and environment for city and rural residents is a problem of greatest importance, and so are the problems of payment for the program, the use of private capital to accomplish the desired result, and the assurance that the people whom we are trying to aid will receive the values which we want them to have and to which they are justly entitled.

Mr. Speaker, I am with reluctance voting against the resolution. But it is my honest and sincere belief that the bill should not be rushed through the House during the few remaining days of this session and that we will be in much better position during the next session to formulate a housing program that will more nearly bring about our objectives and be subject to less criticism.

New Products Developed Seen As Recovery Basis

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

BUSINESS RECOVERY BUILT ON NEW PRODUCTS FROM INDUSTRIAL RESEARCH LABORATORIES—THE SCIENCE OF SYNTHETICS, THROUGH WHICH NEW SUBSTANCES ARE BROUGHT INTO BEING FROM COAL, MILK, COTTON, WOOD, FROM WATER AND THE ELEMENTS OF THE AIR, SEEMS TO BROADEN WITH EACH FORWARD STEP

Mr. FENTON. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Appendix of the RECORD an article that appeared in the Oregon Daily Journal.

[From the Oregon Daily Journal]

NEW YORK.—Alfred P. Sloan, Jr., chairman of the General Motors Corporation, today pictured business recovery built on new products from industrial research laboratories.

The essential elements exist, he said, for "a broad and sound upturn in economic activity, with an accompanying promotion of new job opportunities."

Released in advance from a forthcoming quarterly report to stockholders, Sloan's comments included:

"In air transport it is apparent that we are just now entering upon an era of vast opportunity and growth.

Transoceanic mail and passenger flying has already achieved the status of routine schedules, carrying new social and commercial benefits to peoples everywhere.

"To the youth of today 'wings over the earth' spell opportunity unparalleled.

"Railroad transportation, too, is moving rapidly into new ground. From research have come new Diesel-powered locomotives to speed up service and reduce costs. Improved types of roadbed, the increased use of air conditioning in passenger trains, high-speed, light-weight equipment, traffic control systems, permitting faster freight schedules, studies in fuel economy, and many other developments indicate a bright future for the railroad—the backbone of our transportation system.

"In no field of industrial research has greater progress been made during the depression years than in chemistry. The science of synthetics, through which new substances are brought into being from coal, milk, cotton, wood, from water and the elements of the air, seems to broaden with each forward step.

"Plastics, a growing family of chemically created materials, are finding hundreds of new uses in industry and the home, promoting job opportunities all along the line from the raw material to the sale of the finished product."

Comment on District of Columbia Legislation

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

Mr. RANDOLPH. Mr. Speaker, in the closing hours of every session of Congress the activities of both the House of Representatives and the Senate are attended by the inevitable confusion of legislative effort. A great many measures are passed by both Houses; but since the spotlight of publicity is focused largely on the major pieces of legislation, the so-called minor measures escape notice, and the ultimate fate of such measures becomes obscured in the rush of business incident to adjournment.

BILLS HAVE MERIT

Because of this fact and because some of these measures are deserving of better legislative memorials, I wish at this time to note with sincere regret the Presidential veto of three bills concerning the District of Columbia which originated in this body. I refer to H. R. 3314, entitled "A bill to provide shorter hours of duty for members of the Fire Department of the District of Columbia"; H. R. 5137, entitled "A bill to prohibit the purchase of beer on credit by retailers of the District of Columbia"; and H. R. 6834, entitled "A bill authorizing the Commissioners of the District of Columbia to settle claims and suits of the District of Columbia."

The Commissioners for the District of Columbia generally gave their approval. Each of these bills received a full, fair, and impartial consideration in your Committee for the District of Columbia, and in the conviction that they were of a beneficial nature for local government, all three were favorably reported with the recommendation that they pass. The Senate Committee on the District of Columbia likewise gave its O. K. before bringing the measures to the attention of that body. The House and the Senate concurred in the recommendation, and but for the veto of the President, each of these bills would have become a part of the body of local law. Worth while purposes were sought in passing these bills, and an extended consideration of each of them resulted in the belief that much good would flow from their enactment.

OTHER CITIES ARE LISTED

In view of an almost universal sentiment for a 40-hour week expressed by enactment of the national wage and hour law, and in view of the general use of 39 hours as the standard for the workweek in the executive departments of the Government, your committee was of the opinion that a 60-hour week for firemen in the District of Columbia was eminently reasonable. I might state that such a workweek for firemen, or even shorter, is in effect in New York, Chicago, Philadelphia, and practically every large city in the United States. It would seem only right and proper that such legislation be enacted for the Nation's Capital.

With regard to H. R. 6834, the committee was of the opinion that power to settle claims of the District of Columbia should logically be vested in the most responsible officers of

the local government. We assumed that, by virtue of their office, such officers would at all times have the interest of the District at heart, and that this additional authority would expedite the settlement of claims which would otherwise prove too litigious or too expensive. Moreover, the plan of reorganization for the government of the District of Columbia specifically provides for such an item, and in this light the veto of the bill is difficult to understand.

The purpose of H. R. 5137 was not that the Government should act as a collection agency for wholesalers of beer, but rather that the conduct of this business, affected as it is with a public interest, should be adequately safeguarded to the extent that only financially responsible retailers should serve the public with a commodity, the distribution of which might possibly be open to abuse through extension of excessive credit. Approximately 17 States have legislation of this type, including Virginia, West Virginia, Pennsylvania, and Ohio, and most recently Arkansas.

PURPOSE TO AID DISTRICT

I think it peculiarly appropriate that this explanation of the purposes of these bills be publicly stated again at this time. The path of legislation for the District of Columbia is, at best, never smooth. Throughout the entire session the Committee for the District of Columbia has devoted its utmost in time and energy to the formulation and advocacy of reasonable laws for the District whose legislative welfare is committed to its care. It is disappointing, therefore, that its efforts should be negatived by Presidential vetoes at the end of a session, particularly marked by an unusual struggle for the enactment of District of Columbia legislation.

Status and Prospects of War Referendum Bill

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. LUDLOW. Mr. Speaker, at the present time in my home city, Indianapolis, there is intense agitation over the question as to whether the city shall purchase the water plant that supplies water to our citizens. One of our great Indianapolis newspapers is suggesting that the way to decide the question honestly, and with due regard to the rights of all, is by a referendum, when the citizens will have an opportunity to express themselves.

I believe in the referendum principle but I would like to see it applied to the higher and more important things of life. It seems to me a ridiculous travesty that while our people can vote on the election of a constable or the purchase of a water plant, they have nothing to say as to the most important and tragic of all decisions—the decision that means the breaking up of family ties, the sundering of heartstrings, and the hurling of our fine young men into the bloody chasm of foreign wars. How can we ever explain such inconsistency? What reason is there in right and justice that our democracy should stop at the water's edge? If our democracy means anything at all, it should apply not only in our domestic concerns but in our foreign relations; in the question of sending our youth into mass killings in foreign countries; in the vital decisions which are to determine whether we are to remain a free and independent Nation or whether we are to become a satellite of certain great powers that would use us for their own ends.

Surely if our democracy has any vitality and meaning whatsoever, it should apply in such cases of transcendent importance, as well as in such relatively minor and insignificant things as the purchase of a water plant.

Those of us who are engaged in the struggle to extend the frontiers of democracy by giving the common people a broader control over our foreign affairs are not faint of heart. With no lack of modesty, but with a confidence born of the faith that is within us, we declare that the fight to give the people a right to vote on participation in foreign wars has only begun.

On account of my activity in behalf of a constitutional amendment that would give the American people a right to vote on proposals to participate in foreign wars, and because my name has become to a considerable extent associated with that proposal throughout the country, I believe it is a privilege I can rightfully claim, if indeed it is not a duty enjoined upon me, to make a report on the status and prospects of the proposed war referendum amendment at the close of the first session of the Seventy-sixth Congress.

On January 10, 1939, I reintroduced my war referendum resolution containing the principle of the original resolution first introduced by me in Congress in 1935. In the process of time the resolution has been revised to conform to sound, constructive criticism and in the form in which it is now pending, as introduced by me in January last, the resolution reads as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as a part of the Constitution when ratified by conventions in three-fourths of the States as provided in the Constitution:

"ARTICLE —

"SECTION 1. Except in case of invasion by armed forces, actual or immediately threatened by an approaching military expedition, or attack upon the United States or its Territorial possessions, or by any non-American nation against any country in the Western Hemisphere, the people shall have the sole power by a national referendum to declare war or to engage in warfare overseas. Congress, when it deems a national crisis to exist in conformance with this article, shall by concurrent resolution refer the question to the people.

"SEC. 2. Congress shall by law provide for the enforcement of this section.

"SEC. 3. This article shall become operative when ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution."

It will be observed that the constitutional amendment proposed in this resolution would not in any way, shape, or degree interfere with our national defense. In case of attack on the United States or any other country in the Western Hemisphere, the referendum would not apply. Our responsibility under the Monroe Doctrine is fully recognized by the resolution. A referendum would not be possible under this resolution except to decide whether or not we shall order our boys overseas to fight in foreign wars. It is my contention and the contention of others who think as I do that when it comes to determining whether or not it is the best policy to send our young men—the flower of our manhood—to be slaughtered in foreign lands those who have to suffer and if need be to die and to bear the awful burdens and costs and griefs of war should have something to say about it. That the American people as a whole think so, too, is shown by the fact that four carefully conducted Gallup polls have indicated an enormous majority to be in favor of my proposal. It seems to be such a fair proposal, so much in harmony with the principles of equality and justice on which this great Nation was founded, that I sometimes wonder how anyone can oppose it.

On its introduction this resolution was sent to the Committee on the Judiciary, that being the committee to which all questions relating to constitutional amendments are referred.

The committee has taken no action of any kind on the proposition. During the four and a half years my war referendum proposal in its various forms has been before the Committee on the Judiciary that committee has bottled it up very successfully. The committee has decided that it deserves asphyxiation without benefit of clergy. The able chairman of the committee, my good friend Judge HATTON SUMNERS, usually so kind and jovial and benevolent, has not had the faintest semblance of a smile for this favorite child of my dreams.

On the fifteenth day of March last, availing myself of my rights under the parliamentary rules of the House, I filed at the Clerk's desk a discharge petition to bring this resolution out of the Committee on the Judiciary and before the House for debate and a vote. Mrs. Roosevelt, in her very interesting

article on my proposal, published earlier this year in the Liberty magazine, said that she would be willing to have the resolution debated, and that, I am sure, is the general attitude of fair-minded women and men throughout the country.

A proposal that holds the heart interest of so many millions of people certainly is entitled to a better fate than strangulation in committee. It should be brought out under a rule granting the fullest latitude of debate and amendment, and should then be voted up or down on its merits. No other method of disposing of this great, vital question will ever satisfy the American people.

Forty-seven members of the House, representing about 12,000,000 Americans, have signed the discharge petition to secure consideration and a vote on this measure. Under the rules of the House the discharge petition will not become effective unless or until it is signed by 218 Members, a majority of the House.

It is interesting to trace the progress that has been made in promoting this legislation in the upper branch of Congress.

On Sunday, January 9, 1938, the steering committee for the war referendum met in my office in the House Office Building and agreed on a revision of the then pending Ludlow war-referendum resolution, which was read in the House of Representatives the next day by the gentleman from New York, Representative HAMILTON FISH, the ranking minority member of the Committee on Foreign Affairs. That revision represented the composite judgment of members of the steering committee as to how the text of the resolution might be improved.

Personally, I gave my approval to this revision, as did every member of the steering committee. In principle, it did not change the proposal, but it did go further than the original in respect to placing adequate safeguards around the Monroe Doctrine by providing that if any country in the Western Hemisphere is attacked by any non-American nation the referendum will not be invoked. The text of the resolution presented to the House on January 10, 1938, by the supporters of this peace amendment was as follows:

SECTION 1. Except in case of attack by armed forces, actual or immediately threatened, upon the United States or its territorial possessions or by any non-American nation against any country in the Western Hemisphere, the people shall have the sole power by, a national referendum, to declare war or to engage in warfare overseas. Congress, when it deems a national crisis to exist in conformance with this article, shall, by concurrent resolution, refer the question to the people.

SEC. 2. Congress shall by law provide for the enforcement of this section.

SEC. 3. This article shall become operative when ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution.

Later in the year 1938, 12 United States Senators adopted the exact text of the resolution, as quoted above, and without changing a word, syllable, or punctuation mark, introduced it in the upper branch of Congress under their joint sponsorship.

The Seventy-fifth Congress expired without the approval of my resolution by either branch of Congress. The so-called Ludlow amendment was still languishing in the House Committee on the Judiciary when the gavels pounded out adjournment, giving it the coup de grace. In the Senate there had been no committee action on the jointly sponsored duplicate of the Ludlow House joint resolution.

The Seventy-sixth Congress opened last January with dark prospects for the war referendum, due to the uncompromising opposition of the national administration and the terrific beating the proposal had received from powerful newspapers.

The administration wants no strings tied to its authority in emergencies that may lead to war.

For this point of view I have no criticism, although I do not for one moment agree that the people have no right to say whether or not their sons shall be sent into bloody wars overseas arising as a result of boundary disputes and blood feuds among nations that have been warring for a thousand years and that will be warring a thousand years after all of us are dead and gone. This, I think, presents a case where the principal and not the agent should decide. The agent is a little group in Washington. The principal is the 130,000,000 people who comprise the American Nation—the people who have to do the suffering and pay the costs of war.

I repeat that I have no criticism of the administration's viewpoint, because I believe its position is honest, though wholly untenable and violative of fundamental American rights. But I cannot find it in my heart to be quite so charitable toward the great newspapers that have poured their vitriol on my proposal. Their motivation is not so altruistic.

Every newspaper that is controlled by the international financiers, every newspaper that is allied with the munitions traffic and with the ungodly profiteers who would not hesitate to make merchandise out of human blood, is hell-bent against allowing the people to have anything to say about sending our boys into the slaughter pens of foreign countries.

Notwithstanding the handicaps and the forbidding prospect, the other body of Congress has made definite headway in the Seventy-sixth Congress in promoting the war referendum. On February 28 last 12 United States Senators joined in reintroducing the identical Ludlow war referendum resolution that was read to the House on January 10, 1938. The 12 Senators who joined in the sponsorship of the measure were LA FOLLETTE, of Wisconsin; BONE, of Washington; CAPPER, of Kansas; CLARK of Idaho; CLARK of Missouri; DONAHEY, of Ohio; FRAZIER, of North Dakota; LUNDEEN, of Minnesota; MURRAY, of Montana; NYE, of North Dakota; SHIPSTEAD, of Minnesota; and WHEELER, of Montana.

Hearings on this measure were conducted for 21 days, beginning on May 10 and ending on May 31 last, before a subcommittee of the Senate Committee on the Judiciary composed of Senator HATCH, of New Mexico, chairman; Senator MILLER, of Arkansas; Senator BORAH, of Idaho, and Senator WILEY, of Wisconsin. Proponents and opponents of the resolution presented their arguments ably and exhaustively. The printed hearings are now available to all who desire to read them.

The subcommittee put the decision up to the full committee, which divided on the proposition, six standing for a favorable report on the resolution and eight for an unfavorable report. To relieve the impasse it was agreed to report the resolution to the Senate "without recommendation" and it is now on the Senate calendar awaiting the action of the other branch.

The difference in viewpoints of great minds on this proposition is reflected in the opposite attitudes of Chairman SUMNERS, of the House Judiciary Committee and Chairman ASHURST, of the Senate Judiciary Committee, both of whom are scholars and students of constitutional affairs. Mr. SUMNERS has bitterly contested the idea of a popular referendum on foreign wars. Senator ASHURST, who heads the Senate Judiciary group, voted to report the resolution favorably, and his office advises me that he will vote for its enactment if it reaches a show-down in the Senate.

Senator BORAH, of Idaho, former chairman of the Foreign Relations Committee of the Senate, also voted to report the resolution favorably—a rather vivid contrast with the attitude of his successor as chairman of the Foreign Relations Committee, Senator PITTMAN, who has always been opposed to it. Other Senators of the Judiciary Committee who voted to report the measure favorably were VAN NUYS, of Indiana; LOGAN, of Kentucky; O'MAHONEY, of Wyoming; and MILLER, of Arkansas. All of these are able men and profound students of public affairs.

The next regular session of the Seventy-sixth Congress will open on January 3 next, with a good deal of the war-referendum ground already plowed and harrowed. I shall hope at the next session to complete my war-referendum-discharge petition, which is officially known as discharge petition No. 4 of the Seventy-sixth Congress. I hope that as many Members as possible will sign that petition at the present session, for the more signatures we obtain now the more formidable will be our appeal when Congress reconvenes.

When January comes the Senate war-referendum resolution will be awaiting action on the Senate Calendar. There are prospects of very interesting and important developments in respect to this resolution at the next session of the Congress.

T. V. A.

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

Mr. HARNESS. Mr. Speaker, I owe all of you, but most specifically my esteemed colleague the gentleman from Mississippi [Mr. RANKIN], an apology. On July 14 in speaking for restrictions upon the New Deal's Soviet Frankenstein T. V. A., I referred to the gentleman from Mississippi [Mr. RANKIN] as a self-deluded gold-brick salesman; but that seems to be my no means his major attainment. He is, among other things, a clever comedian.

To those of you who think Jack Benny or Fred Allen is funny, I commend the efforts of my colleague appearing on pages 3752–3753 of the Appendix of the CONGRESSIONAL RECORD. Note there the flashing wit by which he devastates my appeal of July 14 for the serious consideration of the social, political, and economic problems created by T. V. A.

I then asked what is to happen to the coal industry in and around the T. V. A. area, as Mr. RANKIN'S pet monstrosity of State socialism usurps the market for five and three-fourths million tons of coal. I asked what the loss of revenue will mean to the railroads formerly transporting that coal, and what is in the future for the thousands of coal miners and railroad men whose jobs will be destroyed.

I wanted to know how the State of Tennessee and its political subdivisions are to make up the three and one-half million dollars in tax revenues which were lost upon the sale of those Tennessee utility properties, and who will repay the annual loss at the Treasury for the one and one-fourth million dollars which those companies annually paid in Federal taxes.

I particularly would like to know whether the seriously affected counties in Tennessee, Georgia, and Alabama are actually to be destroyed as political units, or whether Congress will be expected to underwrite their defaulted bond issues and adopt them as public wards at the taxpayers' expense. Previously I said that as much as 40 percent of the taxable valuation in some counties is being destroyed by T. V. A. Since that time I am informed that the losses in some instances actually run as high as 60 or 70 percent.

Since the answer is footless levity, we may presume that the solution of these grave problems will follow the customary addled New Deal pattern. We will be expected to buy our way out of each succeeding jam as it develops, just as we have finished paying out sixty-five and one-half million dollars more of the taxpayers' money to reimburse the owners of the Tennessee utility companies whose properties T. V. A. has destroyed and confiscated. If we destroy the coal industry or the railroads, just send the taxpayers the bill. If that puts a few hundred thousand more citizens on relief, just hike the relief appropriations. If we destroy several counties in the Tennessee Valley, let the rest of the country assume their obligations and pay their way in the future.

The gentleman from Mississippi [Mr. RANKIN] is, as usual, confused when he speaks of T. V. A. distributing its blessings in the rural sections of the Tennessee Valley. T. V. A. is merely the device. We in Congress are the disbursing agents, and the people of Indiana and other parts of the country are on the paying end of another gigantic New Deal charity enterprise.

The gentleman from Mississippi [Mr. RANKIN] is even confused as to the principal recipients. The little fellows and the underprivileged are getting a few crumbs, it is true; but the real gravy is going to the biggest kind of big business, the Aluminum Corporation of America, Monsanto Chemical Co., and Victor Chemical Corporation, who are buying T. V. A. power much cheaper than they can generate it right in their own plants.

The gentleman from Mississippi [Mr. RANKIN] also completely sidesteps the question of honesty in T. V. A. accounting methods. In fact no new dealer yet has had a word of defense to offer for the fact that the General Accounting Office has challenged some 18,000 different items on the record.

The gentleman from Mississippi [Mr. RANKIN] praises these so-called benevolences, and infers that only under T. V. A. are such things possible. But we have managed to do away with a few wash boards, kerosene lamps, and other forms of drudgery and inconvenience in Indiana. In fact, we have built more miles of rural power lines in Indiana alone than has been built in the entire T. V. A. area, which is easily three times the size of our State. There is this significant difference: My people and the people of other regions outside the Tennessee Valley are paying the freight for every development in that area. But I am proud and happy to say that in Indiana we are paying for our improvements with our own money. We have not found it necessary, and I hope we never will find it necessary to ask any one else to contribute to our well-being.

I am moved to confess an increasing interest in, and respect for my esteemed colleague, despite the fact that he has the New Deal faults of not being able to get his feet on the ground and recognize a hard fact when he meets it face to face. He is doing his best to show me that if you can just be funny enough, you can avoid the laws of arithmetic and economics. He has also taught me, a brash newcomer to these Halls, some amazing things about the acoustic properties of our Capitol Buildings. I simply did not realize, until the gentleman from Mississippi [Mr. RANKIN] demonstrated it to me, that laughter and applause flowing from an imaginative pen in his office in suite 358 of the old House Office Building could be so amazingly amplified without the benefit of our microphones here on the floor that they could be made to resound through this Chamber and record themselves in the CONGRESSIONAL RECORD, as they did in this instance.

That is, I admit, a neat trick. It is almost as good, in fact, as some of the New Deal hocus-pocus that goes on in the operation of the T. V. A.

Philippine Planters Should Get Their Fair Share of Profits Reaped by Foreign Sugar Interests

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

ARTICLE BY PORFIRIO U. SEVILLA, PUBLISHER

Mr. ALEXANDER. Mr. Speaker, in view of our own interest in the matter as an important part of our daily food, and also in view of the fact that the welfare of the Philippine Commonwealth is largely dependent upon the sugar industry, I deem it only right that we should give some consideration to that factor of the Philippine economy.

In the following article Mr. Porfirio U. Sevilla, publisher of the Philippine-American Advocate, fighting for the Filipino planters, comprising 25,000 planters with a million laborers and their families behind them, has pointed out that it is only just and proper that the Congress of the United States give to these people the rights enjoyed by and protected for the citizens of the United States. Since the sugar industry of the

islands is so closely integrated with that of the mainland, it is only proper that the administration should look into these facts, and that it should draw up from the plan in the article below some plan that will be of benefit to the Filipino planters and laborers of the medium and the small independent sugar centrals.

Under leave to extend my remarks, I submit for your consideration a statement made by Porfirio U. Sevilla, prominent publisher, which is based on his close contact with his own people and his studies of their problems:

REVOLUTION OR SQUARE DEAL FOR THE PHILIPPINE SUGAR PLANTERS

(By Porfirio U. Sevilla, Publisher)

Unless the Congress and the President of the United States move speedily to investigate the clouds hanging over the sugar industry of the Philippines, as over the sugar industry of the United States, and protect the planters against monopolists, the great sugar industry of the Philippines may end in a revolt or else starvation for thousands of families.

The present dictatorship, in which monopoly married to a political machine threatens the economic and even the political rights of one of the greatest industries in the Pacific, must be placed under the flag and Constitution and the administration of the United States without delay, if the Philippines are to be saved from widespread popular revolt.

It is the old story of Spanish domination, today as 40 years ago.

It is the old history of Spanish domination which the world has witnessed in Mexico.

Think of this, you who descended from the patriots of the American Revolution of 1776:

Ninety percent of our soil fitted for agriculture is owned and controlled by the same Spanish landlords or their corporate heirs, who dominated our soil through the nineteenth century until the shot fired by Admiral Dewey in 1898.

More than 90 percent of our sugar industry is a monopoly in Spanish or other foreign lands who grind the labor of the Filipino down to the pittance of 15 to 30 cents for the long day's toil.

The Philippine government, controlled by Spanish landlords and industrial monopoly, exercising executive, legislative, and judiciary powers, dominates the people and maintains a system of feudalism worthy of the Dark Ages.

And such conditions as these perpetuated under the American flag and Constitution, conditions said to be less humane than under fascism in Italy, nazi-ism in Germany, or even communism in Russia. Indeed, you have to go back to the history of Spanish dictatorship in Mexico, two generations ago, in order to find a true picture of the Spanish landlord regime which today is crushing the sugar-growing industry of the Philippines.

What is the remedy?—you ask.

It is very simple—so plain and simple that any American citizen (except a sugar monopolist or landlord agent) can see the remedy by opening his eyes long enough to read this brief text.

1. Let Congress amend existing acts so as to give the sugar industry of the Philippines the same protection of wholesome laws that are enjoyed by the farmers and small industries of the United States.

2. Let the United States see that there is installed in the Philippines a sugar administration that recognizes the rights of Filipinos on a basis of equality with other citizens under the American flag.

3. Let the President of the United States and the Congress of the United States take control of our lives and liberty, our industries and our homes, from the ruthless grasp of a Spanish dictatorship and a Spanish monopoly, and give the 16,000,000 Filipino men, women, and children the same enlightened and humane government that elsewhere prevails under American administration.

4. Save the people of the Philippines from a ruthless grasp far less humane and far less just, than that from which American patriots rebelled 150 years ago. Take the heel of the Spanish conqueror and his political agents from off our necks. Save us from the Quezon Spanish monopoly. Save us from the serfdom of Spanish landlords. Save us from the political machine which grinds our industry.

SUGAR INDUSTRY

The sugar industry in the Philippine Islands is operated between the mills and the planters. There are three classifications of centrals—the big ones, the medium, and the small.

The biggest centrals are controlled by Spaniards and foreigners, namely, the Elizaldes, Tabacalera, Ossorrio, and Soriano interests. The medium and the small ones are owned by a few small independent native Filipinos with the support of the Philippine planters.

SPANISH CONTROL

There are at least 20 sugar centrals in the islands, 13 of these being controlled by Spanish foreign interests.

The sugar administrator of the Philippine Islands, under the Jones-Costigan Act as embodied under the constitution of the Philippine Islands, should exercise a proportional allocation of interest between the sugar centrals and the planters according to the classification of the centrals. We propose a schedule of 65 percent for the planter and 35 percent for the centrals in those classified as "big" centrals; the planters share in the medium class should be 60 percent and the centrals 40 percent, and of the small class—a 50–50 basis. This schedule would greatly enhance the security of the native Philippine planter and also insure a greater share of the profits being kept in the islands.

Today the United States Treasury reports that it holds $82,573,000 to the credit of the Philippines. Today the excise taxes on coconut oil and the sugar excise taxes together yield something like $25,000,000 to the credit of the Filipino people. Listen to our plea—do not deliver these millions (nearly $100,000,000) to the dictatorship and its monopolists! Held to the credit of the Filipino people, let these millions go to the Filipino planters by such measures as may be deemed by the President of the United States and the Congress most just to all.

These millions should never be delivered over to a Spanish monopoly and its political agents to further strengthen their strangle-hold on the sons of the soil. Planned by a beneficent United States Government for the future welfare of an independent and hard-working people, let these funds go where they justly should go—for the salvation of the people and their industry.

According to the Honorable FRED L. CRAWFORD in a speech before the House regarding bill H. R. 7096, Representative CRAWFORD charged Manuel L. Quezon, President of the Commonwealth of the Philippines, of misusing these funds in such a manner as not provided by act of Congress, which is aimed to benefit the Philippine economy until Philippine independence is granted, particularly for the Philippine industry—the Filipino planters. Representative CRAWFORD said:

"Under the Philippine Independence Act and other acts since approved we had up to June 30 1939, made available some $82,573,000 for the Philippine treasury. We are providing for the Philippine treasury on the coconut-oil excise tax and the sugar excise tax, in round figures, from twenty-two to twenty-seven million dollars annually. If you will read the bill carefully you will find language to the effect that when this money is made available over there they shall use it for the purpose of entrenching Philippine economy to meet world conditions after they have received their independence. When Dr. Sayre was before the committee—and he was the only witness we heard and, of course, he supported the bill—I asked him for certain figures, and a statement covering certain acts taken by the Philippine Legislature looking to the disposition of these funds. If you want an eye opener, read the extension of remarks where I shall include this statement I hold, furnished me by the State Department, and which I received directly from Mr. Jacobs. Read what is being done with this excise-tax fund. Then make up your mind as to whether or not the funds are being used for the purpose of constructively recasting Philippine economy to meet conditions after independence is granted.

"Mr. Speaker, I ask unanimous consent to insert the statement in the RECORD at this point.

"The SPEAKER. Without objection, it is so ordered.

"There was no objection.

Disposition of the coconut-oil excise tax funds by the Philippine authorities

1. To replenish "the current surplus of the general fund proper by transferring thereto from the coconut-oil excise tax the sum of ₱26,840,000, which is the total of the extraordinary appropriations that have been authorized from the general fund proper," from President Quezon's budget message, dated Oct. 30, 1937, page 5, Philippine budget for 1938	₱26,840,000.00
2. Subscriptions to the stock of the Manila Railroad (owned by the Philippine Government) and restoration and replacement of sinking-fund investment in the Manila Railroad Co. and in Philippine Railway Co. bonds, as indicated in the seventh endorsement, dated Dec. 3, 1937, by the President of the Philippines on Philippine Act No. 3116, in the fifth and sixth endorsements, dated Dec. 16, 1937, on Philippine Act No. 3227, and in the monthly report of the auditor general of the Philippines for January 1938	3,369,522.50
3. For the construction, reconstruction, improvement, alteration, repair, extension, and/or completion of elementary-school buildings in the Philippines, Commonwealth Act No. 240, approved Dec. 8, 1937, pp. 377–407 of Official Gazette, dated Feb. 19, 1938	5,050,000.00
4. Annual grant to the city of Manila for the construction of public improvements, Commonwealth Act No. 242, shown as "payable from the coconut-oil excise-tax fund" in the monthly report of the Philippine auditor general for January 1938	1,000,000.00
5. Various items relating to reforestation, division of public lands, research activities, and public health, General Appropriation Act for 1938, No. 245, approved Dec. 17, 1937, sec. 6, p. 631, Official Gazette, dated Mar. 3, 1938	1,037,748.00
6. Appropriation for acquisition of home sites in large landed estates, Commonwealth Act No. 260, approved Apr. 18, 1938, p. 1267, Official Gazette, dated May 21, 1938	2,000,000.00

Disposition of the coconut-oil excise tax funds by the Philippine authorities—Continued

7. Various items relating to reforestation, survey of public lands, research activities, and public health, General Appropriation Act for 1939, No. 300, sec. 5, approved June 9, 1938, pp. 3319–3442, Official Gazette, dated Dec. 17, 1938	₱1,035,925.00
8. Reforestation and afforestation, Commonwealth Act No. 304, approved June 9, 1938, pp. 2426–2427, Official Gazette, dated Sept. 20 1938	1,000,000.00
9. Certain public works, consisting chiefly of the construction of public buildings, drainage, and sanitation for the city of Manila, national and city roads, flood control, sea-protection works, bridges, etc., Commonwealth Act No. 330, approved June 18, 1938, pp. 2533–2585, Official Gazette, dated Sept. 29, 1938	88,688,100.00
10. For reimbursement of amount appropriated under Act No. 3932, passed Nov. 29, 1932, from irrigation bond funds under Act No. 2940, approved Aug. 23, 1938, by Commonwealth Act No. 369, p. 2909, Official Gazette, dated Nov. 1, 1938	4,800,000.00
11. For leasing landed estates, Commonwealth Act No. 378, approved Aug. 23, 1938, p. 2982, Official Gazette, dated Nov. 8, 1938	1,500,000.00
12. Revolving fund for loans to provinces, municipalities, and cities, for building markets and waterworks, Commonwealth Act No. 403, approved Sept. 13, 1938, p. 2163, Official Gazette, dated Nov. 26, 1938	10,000,000.00
13. For an agronomical survey of the Philippines, Commonwealth Act No. 418, approved May 22, 1939[1]	250,00.00
14. To provide for reforestation and afforestation, Commonwealth Act No. 436, approved May 31, 1939[1]	1,000,000.00
15. To provide for the transfer of the University of the Philippines to a site outside the city of Manila, Commonwealth Act No. 442, approved June 3, 1939	17,500,000.00
Total	[2] 165,071,295.50

[1] In all cases where there are no citations to the Official Gazette, the source of information has been some report of the United States High Commissioner to the Philippine Islands. Printed copies of the Official Gazette have only been received up to June 13, 1939.

[2] Copies of the acts passed by the National Assembly in 1939 have not been received so that it is impossible to prepare an accurate list of all those appropriations the payment of which might be authorized out of the excise-tax proceeds.

Although the total amount of the excise-tax proceeds known to have been appropriated is approximately ₱165,000,000, or $82,500,000, the actual amount which the Philippine authorities have had set up in demand deposits in the United States to cover these appropriations is only ₱76,000,000, or $38,000,000, out of total collections from August 1934 through June 30, 1939, available for remittance to the commonwealth government, amounting to ₱165,147,931.40, or $82,573,965.70. The actual amount spent, therefore, does not exceed $38,000,000 and must be less than this, as some of these demand deposits and all of the time deposits are still in the United States.

"Mr. CRAWFORD. Mr. Speaker, I am further advised by Mr. Jacobs, of the State Department, that, roughly, $3,000,000 have been loaned to the National Development Co. of Manila for the purchase of the steamship *Mayon* from the Dollar Steamship Co. representatives and two sugar refineries located in the city of Manila. If this be true, it is certainly in order to assume that these Government-owned refineries will in the future compete with the fields and mills owned by the people here in the United States. These are additional reasons for a thorough inquiry into the use of all of these funds."

NOTE.—A peso (₱) is equal to about 50 cents of American money.

Mr. Sevilla continues:

Let me ask you—you who sit in the Congress of the United States—was it not your distinct aim, both in the Jones-Costigan Act and in the Tydings-McDuffie Act, to give us an administration in the interests of the entire sugar industry, the planter as well as the industrial monopoly? Did you not aim to protect our people? Was it ever your will to deliver us, bound hand and foot, to a monopoly entrenched in dictatorial political power?

Has it not been always your aim, first and last, to do for the Philippines and the Filipino workmen and small industries absolute justice and final liberty?

And that is all we ask today—namely, to carry out the humane policy that has characterized your 40 years of American administration, and pursue that policy to the end; not to preach justice and liberty and then desert us to our oppressors, but to practice justice and insure liberty, and at the same time preserve one of our greatest industries from demolition.

It is your right, it is your duty up to July 4, 1946, to carry your principles of humane government into practice. Do it in your own way, of course. Do it in the way you are now doing in the United States is all we have to suggest. If you have better plans than are here suggested, a simpler way of securing justice and fair administration, we shall be only too happy to cooperate.

It seems such a plain and simple thing—to perhaps authorize your great Department of Agriculture to extend its protective arm for our salvation—that we are suggesting that. One word granting such authority to the Department of Agriculture—and the rest is a plain road to a just end.

This is our prayer: Continue to the end of the chapter the high aims that have marked your career in the Philippines for the past 40 years. Adapt your policy, outlined in your congressional acts of many years, to meet present conditions and future development. And, finally, save a great industry and a patriotic people from conditions paralleled only in the feudal regime of the Mexican-Spanish dictatorship of generations past.

We look to you—our sugar industry looks to you—our workers look to you—our landless people look to you for true independence from our oppressors, as your fathers looked to the flag of independence for salvation in the days now long gone by. And—act immediately!

Investigate the Jefferson National Expansion Memorial in St. Louis and Save $30,000,000

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. LAMBERTSON. Mr. Speaker, this Congress, before it adjourns, should authorize an investigation to be made into the unlawful spending of $6,750,000 appropriated for relief, work relief, and the building of useful projects, which was diverted by Executive order for a huge real-estate unloading scheme in St. Louis, known as the Jefferson National Expansion Memorial.

Congress has never directly or indirectly appropriated one cent toward this project. As the Members all know, St. Louis now has a beautiful memorial to Thomas Jefferson. A second memorial will be an ambiguity, and, make no mistake, its building will be interpreted as a political maneuver to hold together the tottering forces of Democracy in St. Louis.

Mr. Speaker, I again repeat, after 4 years of careful study and after consulting with those who are most familiar with this promotional scheme, in my opinion, the use of $6,750,000 of Federal relief funds for this memorial monstrosity is illegal because:

(1) Congress has never appropriated that particular money for that particular memorial.

(2) The President was without power to allocate relief funds from the act of 1935, as he expressly tried to do, namely for the objects and purposes of the Historic Sites Act, and could use it only for relief and work relief on useful public projects not provided for by any specific act.

(3) Congress has not only not made any appropriation for the objects and purposes of the Historic Sites Act, but expressly provided in the act itself that no indebtedness should be incurred to bind the United States, and, still later, in April of this year, refused to reappropriate the $6,750,000 to the purposes of that act, so even assuming that the money was lawfully allocated to such purpose in the first instance, this action by Congress evidences the purpose and intent that the funds, should, and they did, therefore lapse on June 30, 1939, as an unused appropriation.

(4) The payment of the bulk of the money into the registry of the court in St. Louis will not avail, because, so long as it remains in the custody and under control of any Federal agency, it has not been expended.

(5) There has been no executed contract for the purchase of the land because, as expressly recited in the condemnation statute under which the National Park Service is proceeding, there has been no money "specifically appropriated" for the purpose of building a memorial in St. Louis—the money was appropriated for relief and work relief on useful public projects—projects not contemplated by the Historic Sites Act, to which the President has, in the face of the Attorney General's adverse opinion, attempted to apply the fund.

Mr. Speaker, dozens of St. Louis businessmen are now being literally driven out of business by the progressive efforts of the National Park Service to build this memorial solely on the flimsy legal authority of a questionable Executive order.

I have previously mentioned the fact that if this memorial is allowed to go unchallenged, then we may some day expect an Executive order designating the eastern bank of the Hudson River, an historic site, and may some day be called on to wreck and destroy all the buildings on lower Manhattan Island for the purpose of relieving the bankers and real-estate promoters of New York City, who after hundreds of years of peaceful occupancy, may want to unload their holdings onto the Federal Government.

Mr. Speaker, in my judgment, we should investigate this memorial now. The job could be delegated to the committee now investigating the Works Progress Administration. In connection with this investigation we ought to also investigate other matters in St. Louis and Missouri to discover why after spending millions of dollars in this State, the people are in need of more relief today than they were several years ago. The building of this memorial will drive many employers out of business and further complicate the relief situation, in St. Louis particularly.

Let us not be blinded to facts—those in St. Louis who clamor for meat and bread are being tossed a stone instead.

You Pay the Bill

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. HORTON. Mr. Speaker, latest figures reveal that there are more than 25,000,000 people on relief of one kind or other. This means that out of every five people, four of them are not only paying their own way but the way of an additional person as well.

There are more than 10,000,000 willing workers out of jobs.

The national debt will at the end of the present fiscal year approach $45,000,000,000—forty-five thousand million dollars, if you prefer. A special group of brilliant New Deal spenders has been appointed to devise new methods of taxation so as to get more money for the spenders.

It is high time we ask ourselves who is going to pay the taxes that must be collected in order to not only retire the national debt but provide the more than a billion dollars per year interest on the national debt, to say nothing of the ten billion or more required for Government running expenses each year.

President Roosevelt says "taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production." Someone has figured out that if a patch was put on a pair of overalls for every tax that the overall had to pay there would be more than 100 patches. The workers wear the overalls so the workers pay the taxes. If that is so, then every Wyoming citizen can well afford to study, and study carefully, the following table because it shows what part of the national debt each property owner owes. The table is broken down into counties and also a few cities. If any individual wants to know exactly what he owes just look up the old tax receipt and do a little figuring and you will find yourself plenty discouraged.

	Population	Assessed valuation for 1938	National debt on per capita basis	Percent of assessed value	Share of New Deal debt on per capita basis	Percent of assessed valuation
Wyoming	225,565	$328,257,340	$81,654,530	25	$43,308,480	13.2

The Pine Flat Project and the Kings Canyon National Park—the Charges of the Oppositionists Are Answered, Their Motives Explored—Secretary Ickes Answers Representative Elliott

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

RADIO ADDRESS BY HON. HAROLD L. ICKES

Mr. GEARHART. Mr. Speaker, the unanimous consent of the membership having been given, I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD a copy of an address which was delivered by the Honorable Harold L. Ickes, Secretary of the Interior, by electrical transcription

over the facilities of the Fresno (Calif.) Bee Radio Station KMJ last May.

Mr. Ickes' address follows:

My purpose in this brief talk is to tell the people of California, and especially of the San Joaquin Valley, just what has developed in the past few weeks regarding two subjects in which they are greatly interested—the bills in Congress for the John Muir-Kings Canyon National Park and for the Pine Flat Dam. It is a complex story, but an interesting one, and I shall tell it as simply and clearly as possible.

As most of you know, Congressman GEARHART, of Fresno, introduced two bills on these subjects. One authorizes an irrigation, flood control, and power dam at Pine Flat, in the Kings River foothills, with supplementary power dams farther up the river The other bill is to establish a national park in the Kings Canyon wilderness, above the irrigation and power project, and it also provides for the preservation in the proposed park of the Redwood Mountain Sequoia Grove.

As Secretary of the Interior, I have appeared before the Committee on the Public Lands, to urge the passage of the bill for the John Muir-Kings Canyon National Park, and I have also appeared before the Committee on Irrigation and Reclamation to urge the passage of the Pine Flat bill.

The Public Lands Committee is expected to act within a few days on the national park bill. The Committee on Irrigation and Reclamation is also ready, I believe, to act on the Pine Flat bill, but it has been asked not to do so by the officers of the Kings River Water Association. As Pine Flat is their project, no action is likely to be taken without their approval, so the bill is being held up until they ask the committee to go ahead.

It is chiefly on this account that I am speaking to the people of the San Joaquin Valley, because I believe that the supporters of the Pine Flat bill have been misled by a skillful propaganda organization, whose object is to defeat the whole Pine Flat project. There is danger that they will succeed. The propaganda campaign apparently comes from private power interests, which want to block the public power development recommended by the Bureau of Reclamation at Pine Flat and on the North Fork of the Kings River. Congressman GEARHART'S Pine Flat bill authorizes this project. It is easy to see why the private power interests are against it. The Bureau of Reclamation estimates that if the Pine Flat project goes through, it will be possible to sell electric power to the farmers at the San Joaquin Valley for about one-half the rate now charged by private utilities. Naturally the private power interests do not relish this prospect, because they are now getting a dollar for every 50 cents' worth of electricity.

The private power lobbyists working against Pine Flat are operating along two lines. They recognize that the two Gearhart bills are closely interrelated, and they believe that if they can defeat the national park bill, this will result in the defeat of the Pine Flat bill by driving a wedge between the supporters of the two bills. So the open attack of the power lobby has been against the national park.

In the second place, those private power propagandists have spread a report in the San Joaquin Valley that if the farmers would drop the Pine Flat bill, they would be able to get an irrigation dam for nothing from the Army engineers, by calling it a flood-control dam. The truth is, as the Chief of the Army Engineers has made clear in a letter, no matter who builds the dam at Pine Flat, the costs will be distributed in the same manner. The value of the dam for flood control will be paid by the Federal Government, and the value for irrigation will be charged to those who benefit from that irrigation. The Federal Government will also assume all of the cost of the power project that can be paid for through the sale of electric power. For this expense the Federal Government will reimburse itself by the sale of power.

The only effect of circulating a report that the Army engineers will build the whole dam at Federal cost is to cause confusion and delay, and jeopardize the entire project. I believe that this is the purpose of those who are circulating the reports.

It is apparent that the private power lobby has succeeded, temporarily at least, in causing confusion among supporters of the Pine Flat Dam, and the bill is being held up in a committee of Congress on that account. The other part of the propaganda campaign—to use the John Muir-Kings Canyon National Park bill as a weapon against the Pine Flat bill—appears to have failed completely. The principal effect of the propaganda campaign against the park has been to show up the propagandists.

A most important point to keep in mind about these two bills is that, although they are closely interrelated, they are not interdependent. They are interrelated because, taken together, they provide a plan for the use and protection of the entire Kings River watershed. Also, they reconcile the views of two groups of fine California citizens who approach the question from different angles, one chiefly interested in irrigation and power, the other chiefly interested in preserving the wilderness.

When I testified in support of these two bills before committees of Congress, I said that I favored both of them, but that I supported each one on its own merits. I hoped that both of them would pass, but I was for either of them no matter what happened to the other. It may be recalled that, in response to a question, I said at a conference in Fresno on February 14 that, regardless of the park bill, I would support the Pine Flat bill on its merits. I deny absolutely the false report, circulated by opponents of these two bills, that I have agreed to support the Pine Flat bill in exchange for support of the park bill.

It was the circulation of this false report that first convinced me that the campaign against the park bill was also a move against Pine Flat. The actual effect of such a story, if the Congress believed it, would be to destroy the chance of a dam at Pine Flat, because the implication is—and it is a false implication—that I was recommending a $25,000,000 dam on some other basis than the merits of the proposition. The man most active in circulating this report of a trade has been Congressman ELLIOTT, of California.

Now I want to tell you about the nature of the opposition to these two bills. When the national-park bill came before the Public Lands Committee it became apparent that one member of the committee—1 out of 21—was intensely hostile to it. I refer again to Congressman ELLIOTT. It also became apparent that the park bill was being opposed by a very powerful, well-organized, well-financed lobbying and propaganda organization. At its head was the professional lobbyist Charles G. Dunwoody, whose connection with any lobbying campaign is prima facie evidence that some big commercial interests are in the background. The interesting information came to me today that Lobbyist Dunwoody, the exposure of whose activities and sinister connections has made his position in Washington untenable, has been recalled to California, where he is trying to operate on the Board of Supervisors of the City and County of San Francisco.

It was a mystery—it mystified the Public Lands Committee—that a mere proposal to transfer a high mountain wilderness from the national forest to the national-park system should have such a powerful lobby working against it, especially as the transfer was endorsed both by the Department of Agriculture, which now administers the land, and by the Department of the Interior.

What, then, was the purpose of the propaganda machine? Why was Dunwoody heading the hostile organization? What commercial interest was he representing?

The mystery was solved when it became evident that private power interests were fighting the national park in order to defeat Pine Flat. Everything that had been perplexing before now became clear.

For instance, one of the most puzzling features of the hearing on the park bill had been a sudden shift of position by the opponents of the park. They started out by arguing that the Kings Canyon country ought to remain in the national forest in order to preserve wilderness conditions. That argument was a weak one, because the Gearhart bills contained provisions which made it a wilderness national park, and the argument became weaker still when the Chief of the Forest Service, Mr. Silcox, took the stand and advocated the creation of a park.

Then, without any warning, the park opponents completely abandoned the wilderness idea. Lobbyist Dunwoody took the stand and argued for a water-power development throughout the park area, with power dams on the Middle and South Forks of the Kings River clear to the top of the Sierras. He said that these two forks of the Kings River had the power potentialities of a Boulder Dam, and that this power should not be bottled up in a national park.

Such an argument, coming from Mr. Dunwoody, was "phony" right on the face of it. Private power companies had made entries on the Middle and South Forks of Kings River years earlier, but had abandoned them because they found the cost of development to be excessive. The city of Los Angeles also had made entries and abandoned them for the same reason. Since the private power companies and municipalities had abandoned this field, any argument for power development in it must be an argument for development by the Federal Government. So here was Lobbyist Dunwoody, whose affiliations and predilections made him an enemy of public power, trying to promote a public power program in the park area that was to rival Boulder Dam. It just didn't make sense. If Lobbyist Dunwoody was interested in cheap power for the farmers, why didn't he say something about Pine Flat and the North Fork, where it was possible to get cheap power?

The next witness was John C. Beebe, an engineer of the Federal Power Commission, who also talked about power development on the South and Middle Forks of the Kings River, basing his argument on what is known as the Randell report. As the Randell report is recognized by hydraulic engineers to be a joke, that didn't make sense either, until it was found that Mr. Beebe had only been with the Power Commission 1 month, and before that time had been active in a group in San Francisco that was engaged in propaganda against the John Muir-Kings Canyon Park. Mr. Beebe also was strangely silent about Pine Flat and the North Fork.

In order that you may understand the nature of this strategy more clearly, I want to say a few words about the so-called Randell report. In 1929 the Federal Power Commission sent an engineer named Randell to make a report on water storage in the Kings River, in relation to the national-park proposal. Mr. Randell made a 7-day pack-horse trip in the lower part of Kings Canyon, where the city of Los Angeles had studied a power development and found it infeasible. He then made a 1-day airplane flight over the high mountain wilderness, where there are hundreds of little lakes at an elevation of about 11,000 feet. Looking down from the airplane, he decided that these lakes could be dammed for storage, the water in the creeks and rivers could be diverted into tunnels, and the result would be a power project rivaling Boulder Dam. He may have been airsick, but he further decided that this was to be done in a high, rugged, inaccessible mountain wilderness, 50 miles from the nearest roads.

How was the work to be done? Mr. Randell had flown high over country in an airplane and he had the answer. The construction materials would be carried in by pack horse.

I am telling you the literal truth. The Randell report proposed to build a $132,000,000 power project—other engineers say that it would cost $250,000,000—by pack horse, carrying materials over mountain passes 12,000 feet high, in a region where the snowfall is 30 feet, and the entire field study for this program in a mountain wilderness of 600 square miles consisted of a 1-day flight in an airplane.

The Randell report lacks only one thing to make it complete. It technically should recommend that the construction job be turned over to Walter Disney's new team of Goofy and Wilbur.

There is not a hydraulic engineer in the United States who takes the Randell report seriously, yet it was seriously presented as an argument against the creation of a national park. Why?

Dunwoody, Beebe, and Elliott said nothing of the fact that Randell's figures on the cost of power, even with the costs grossly understated, showed that pack-horse power developed in this wilderness would cost from 40 to 60 percent more than on the North Fork and at Pine Flat. Why were they silent about this?

In fact, they did not mention Pine Flat and the North Fork at all. If they wanted to secure cheap power for San Joaquin Valley farmers, why did they brush the cobwebs off of this hoary pipe dream of a pack-horse power project that was based on a 1-day airplane flight over the wilderness? Why didn't they say something for the feasible power project that we are trying to get under way on the easily accessible North Fork, where it is actually possible to get cheap power and plenty of it?

I won't say why they did it, but what they did perfectly suited the purposes of the private power propagandists who are trying to defeat the park bill in order to kill off Pine Flat. They even claimed that this could be done without injuring the wilderness, although in fact the plan called for diverting all running water into tunnels. The creeks and rivers would be dry.

That was the situation up to 10 days ago, and Lobbyist Dunwoody was riding pretty high, because, even if the park bill seemed to be going ahead, the Kings River Water Association had been misled into stopping the progress of the Pine Flat bill. But Mr. Dunwoody isn't feeling so chipper today. So far as he is concerned, this is now a dark and gloomy world, and he helped to make it so. After his disastrous major offensive in Washington, he is reduced to mere bushwhacking in California.

I don't know how much you have heard about the part Dunwoody played in Congressman ELLIOTT'S now famous attempt to entrap Congressman GEARHART in the deal involving the now famous $100 check.

Let me summarize that affair. A public-spirited California woman, Mrs. Achilles, of Morgan Hill, after reading a pamphlet issued by the Sierra Club, decided to send Congressman GEARHART a check for $100 to help pay the expenses in connection with the John Muir-Kings Canyon National Park bill. By accident, she placed this check, and a letter to Mr. GEARHART, in an envelope addressed to Congressman ELLIOTT, to whom she was also writing. Mr. ELLIOTT photostated the check, asked the Federal Bureau of Investigation to watch for the cashing of it, and then had it remailed to Mr. GEARHART from San Jose, California. When Mr. GEARHART received the check, he did not cash it, but returned it at once to Mrs. Achilles, suggesting that she send it to some public organization supporting the park.

A few days later, Members of Congress came to Mr. GEARHART and said that Mr. ELLIOTT was exhibiting this photostat and boasting that he had set the Federal Bureau of Investigation on Mr. GEARHART'S trail. At Mr. GEARHART'S request, former Congressman Free, of California, visited Mrs. Achilles, taking with him the envelope in which Mr. GEARHART had received the check. Mrs. Achilles said firmly that she had never seen the envelope before. It was a typewritten envelope, and she had no typewriter. She said that the check had been returned to her by Mr. GEARHART without it having been cashed.

Mr. GEARHART decided to let the matter drop, because only a few Members of Congress knew of it, and he assumed it would go no further. Two weeks later he learned that Congressman ELLIOTT had gone to California where he had exhibited the photostat of the check at meetings attended by residents of both his own and Congressman GEARHART'S congressional districts, and that rumors of corruption had spread all over the San Joaquin district.

Thus forced to act, Congressman GEARHART obtained affidavits, letters, and telegrams showing what had taken place. Then he rose to a question of personal privilege on the floor of the House of Representatives and exposed the entire plot.

Congressman ELLIOTT was given 40 minutes to defend himself. He admitted everything except one charge. He denied that he had sent the check back to California to be remailed. Other Members of Congress then began to hammer at him with questions. If he didn't send the check back to California, how did it get there? At last the truth came out. He had given the check to Lobbyist Charles G. Dunwoody, in accordance with a plan to send it to San Jose, Calif., to be remailed to GEARHART.

I have read in the California newspapers that Lobbyist Dunwoody was greatly disturbed and shocked at this disclosure. He didn't see why Mr. ELLIOTT had brought his name into it. To be sure, Mr. ELLIOTT had handed him a letter, addressed to Mr. GEARHART, with the request that he send it to San Jose, Calif., to be mailed. But Mr. Dunwoody didn't know what was in the letter. He just sent it as an accommodation. This innocent professional lobbyist pretended that he did not know what it was all about. He often did such things for California Congressmen, and in this instance his complacence had been imposed upon. To which the answer is, Oh yeah?

It is my opinion that Dunwoody helped concoct this plot against GEARHART from the beginning. I think that he was more responsible for it than Congressman ELLIOTT. I'll tell you why I think so. When I appeared as a witness before the Public Lands Committee, on the John Muir-King's Canyon Park bill, Dunwoody was sitting at ELLIOTT'S right elbow, just back of his chair. When ELLIOTT started to cross-examine me, Dunwoody began handing him slips of paper. ELLIOTT would read questions to me from these slips of paper. The same thing happened when other witnesses were on the stand. For 2 weeks Lobbyist Dunwoody sat close to Congressman ELLIOTT, handing him questions to be asked in the cross-examination of witnesses.

When Messrs. Boone and Kaupke, of the Kings River Water Association, came to Washington, Dunwoody practically took charge of them. As nearly as I have been able to find out, the present unhappy state of the Pine Flat bill is due chiefly to three men—Dunwoody and Elliott in Washington and a man named Schmeiser in California. Between them, they have deluded and misled Messrs. Boone and Kaupke, of the Kings River Water Association, for whose honesty of purpose I have the highest respect.

I read a story in the Fresno Bee, quoting one of Mr. Schmeiser's associates as saying that "Congressman ELLIOTT has the Pine Flat bill pretty well boxed up." I do not think that it was Mr. ELLIOTT who boxed up the Pine Flat bill, because, so far as I can see, he has merely done what Dunwoody told him to do.

It is on this account that I welcome the downfall of Dunwoody. His part in the entrapment plot against Congressman GEARHART has ended his usefulness—if a lobbyist of his type can be said to have any usefulness—in Washington, and I suspect that his record of stupidities and failures in Washington will not make him very useful as an under-cover worker in California.

My hope is that the revelation of what these enemies of the Gearhart bills have done, and realization of the tricks to which they have resorted, will open the eyes of the people of the San Joaquin Valley to the danger in the kind of propaganda that the enemies of Pine Flat are trying to put over. I am not worrying about the national-park bill, because the friends of the park are working for it and the opposition is discredited. So too, the opposition to Pine Flat is discredited, but the friends of Pine Flat in California are not working for it.

I am told that the Kings River Water Association wants the Pine Flat bill delayed until the Army engineers make their report on flood control. They hope that this report, which they expect in June, will make flood control so important that the Pine Flat bill can be revised or a new bill introduced.

My opinion is that the principal effect of waiting for that report will be to prevent action on Pine Flat at the present session of Congress. The Army engineers' report will simply determine how much of the cost of the dam will be paid by the War Department for flood-control purposes. The Pine Flat bill is already worded to authorize such a payment, leaving the amount to be determined by the Army engineers. No matter how large an amount the Army engineers may recommend, the wording of the bill will remain the same, because the flood-control provision is an elastic one to cover any amount that the War Department may suggest.

The people who are interested in the Pine Flat project should realize that a bill which is held in committee until June without having passed either House is in a very bad position for enactment into law at that particular session. And if committee action depends on an outside report whose date is uncertain, it is in a still worse position. The last information I have is that the Army engineers will report in July. If the Pine Flat bill is held back that long, there wont be a chance to get it through at this session.

Since there is no necessity for such delay, and since the delay results from the advice of a private power lobby seeking to kill the bill, I wonder if it is not time for the supporters of Pine Flat to do some hard thinking. I am anxious to see the Pine Flat bill passed at this session so that it will be possible to ask for an appropriation next winter.

Perhaps it is not generally understood that to put through a project of this kind, it is necessary to do it in two separate acts of legislation—first, a bill authorizing the project, then a bill appropriating the money. It is practically impossible to get both authorization and money at the same session of Congress, because this is contrary to the policies of the Director of the Budget. If you let the Pine Flat authorization go over until 1940, the appropriation will then go over until 1941, and who knows what the policies of the Government will be in 1941? If you are lucky you may have a public-works program in operation into which Pine Flat will fit perfectly. If you are not lucky, you may have a rigid curtailment of public works and an administration hostile to public-power projects.

I urge the people of the San Joaquin Valley not to delay on Pine Flat, but to go forward with this legislation in step with the bill for the John Muir-King's Canyon National Park. Do not listen to the advice of enemies who have no purpose other than to wreck both of the Gearhart bills, and whose particular desire is to wreck the one dealing with Pine Flat.

A Sixty-two-Billion-Dollar Debt

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. PLUMLEY. Mr. Speaker, those of us who voted against the spending-lending and the housing bills, did so deliberately, and for a compelling reason.

Aware of the fact that the reckless fiscal policies of the New Deal have not only failed, but fallen far short of providing promised economic recovery, and seriously withal, impaired and prejudiced our financial standing; refusing further to wink at, approve, or sanction any further pump-priming operations by the Executive, however honeyed the pill presented or what the label; rejecting the fallacious theory that a depressed Nation can spend itself ino a state of prosperity with borrowed money; satisfied that the grave problems of unemployment and destitution can be solved only by a return to sound fiscal policies and the freeing of private business from oppression and governmental competition and restrictive regulation; convinced by our experience of the last 6 years that the time has come to stop chasing the New Deal will-o'-the-wisp of nonperformance and broken promises and failure to accomplish; those of us so minded, dedicating ourselves again and anew, undertook to save what is left of, and to maintain, sustain, and re-establish financial solvency, free enterprise, and individual liberty here and now, or there and then, voted as we did.

Do not be misled or misinformed. We who voted against the consideration of the housing bill, on both sides of the aisle, did so convinced that we were confronted by a greater emergency than any question of loaning the taxpayers' money for housing per se. We were sure that we were confronted by the question as to whether or not the financial integrity of this country should be maintained. We were cognizant of the fact that the spending-lending program had reached the dead line, with a possible $60,000,000,000 debt, or more, as of next June, staring us in the face. We came to our senses—none too soon—and realized that on us rested a tremendous responsibility, if we were to avert the catastrophe of a completely ravished and emptied Federal Treasury, with consequent bankruptcy, repudiation, or ruination by inflation. We voted to save our country and our self-respect, by putting an end to the spending-lending and loaning program, which has been followed fatuously for 6 years.

THE HATCH BILL

The people should know by this time that all statements emanating from the White House must be taken with two grains of salt. Not satisfied with damning by faint praise the Hatch bill, previous to signing it—which we are authoritatively advised he had no intention of doing until practically forced so to do by public sentiment—the President breaks all precedents, and—since he could no longer control the legislative branch—undertakes to act as a judge. He usurps the functions of the judiciary, and he writes a long, but in no sense learned, would-be judicial disquisition on the Hatch bill, as a statement; not a veto message, but indirectly and obviously as such, since he tells everybody the bill is not worth the paper on which it is written; but he is for it, he says, and it was begotten of him, he says, and he is the proud parent of a child he calls a moron.

The fact is, the President to the contrary notwithstanding, the bill will do what it was intended to do. It is constitutional, and it is susceptible of enforcement. It has teeth in it, as those who may try to defy its provisions will learn to their sorrow.

THE SPENDING-LENDING BILL

With respect to the spending and lending bill, he says he will "tell the people what Congress has done." We hope he will. The people are "fed up" with the New Deal bologna. They need a new type of vitamin, and it has been furnished them, as the President will discover, despite his fanatical advisers to the contrary notwithstanding.

BUSINESS REGAINS CONFIDENCE

Business is beginning to do more than have a "breathing spell." It is reviving and coming to think about eating three square meals. His Under Secretary of the Treasury yesterday said so. He was optimistic now that Congress has once more commenced to function and to assert itself.

THE HOUSING BILL PROGRAM

If the program scheduled in the housing bill had become a law, it would have cost the taxpayers of the country an amount so staggering as to be almost beyond comprehension. The cost would have been met by 60 annual payments of $73,000,000 a year, or $4,380,000,000. Can you count in billions?

We are already committed to an annual payment of $28,000,000 a year for 60 years, and to this would have been added by the proposed law a payment of an additional $45,000,000 a year, for the same period. Just think of it.

NOT SELF-LIQUIDATING

Not a single cent from any project would ever be returned to the Government. The program was absolutely in no sense self-liquidating. Seventy-three million dollars a year for 60 years. It was called a slum-clearance program, but the evidence disclosed it to be a fact that not a single family from any abolished slum area has been re-housed in any project. So one may go on to analyze the bill, and to point out the fallacies, but this is unnecessary. No such emergency existed as could possibly require the passage of this bill at this session in its present form; on the other hand, there did exist an emergency which involved the continuance and perpetuity of this Government and its financial security. As with the lending-spending bill, so with this bill, we had reached the dead line.

A $62,000,000,000 DEBT

If the lending-spending bill had been enacted, this country would have reached as of June 30th next an indebtedness of $62,000,000,000 in round numbers, or $17,000,000,000 more than and over the debt limit.

The housing bill would have cost the Federal Government at the very minimum $2,700,000,000. We add the $28,000,000 authorized by the existing law, and the $45,000,000 authorized in this bill, a total of $73,000,000, and this you must multiply by 60, if this bill had been enacted; and you will have a cost of $4,380,000,000 without taking into consideration the interest which will accrue.

That is the money side of the picture. That is the taxpayer's burden.

THE TAXPAYER PAYS THE BILL

It should be noticed by every taxpayer that the Government pays the entire bill and the municipalities get the buildings and the local units get the rent. He is the Government!

NOT A LOW-COST HOUSING PROJECT

It is not a low-cost housing program. Each $4,893 family unit will cost the Government an average of over $10,000. The evidence shows one project cost $6,710 per family unit—a project which never pays one penny to the Government, and it will cost in that project before we pay ourselves back the sum of $14,000 per family unit. And this sort of financing was projected as a program for 60 years at a cost to the taxpayers so tremendous as to practically empty the United States Treasury.

SOCIALISM RUN WILD

Mr. LUCE, of Massachusetts, called attention to the fact that to indulge in this program was to plunge us into the midst of an activity than which there is nothing more socialistic, namely, to tax the people of the country in order that one-third of them may live in homes that they would not otherwise occupy. "This may or may not be the wise thing for us to do," he said, "but it is important for us to stop, look, and listen and no great harm will come from postponing this measure until the opening of the next Congress."

"A BAREFACED FRAUD"

The public should understand that the rule was called up with no expectation that it would be adopted, or, if adopted, with no idea at all that the bill could possibly pass. As was stated by Mr. Cox, of Georgia, the rule was called up for the purpose of being defeated in order that some gentlemen might have a talking point.

To press for the adoption of the rule in face of certain defeat is a vain and foolish thing to do—

He said—

In my opinion, the bill is infinitely less meritorious than the lending bill that the House refused to consider several days ago. Gentlemen who were heard by the Rules Committee took the position that the whole bill is nothing less than a barefaced fraud and the statements made in support of this allegation were most persuasive.

It is a fact that the rule was called up against the advice of the leaders, but on the insistence of the President that a record should be made, and one was made, and one which will stand. The statement made by Mr. GORE, who charged the United States Housing Authority with disseminating reprehensible, deceptive, misleading propaganda, is unanswerable in view of the evidence he produced in support thereof.

AN INSIDIOUS MASK FOR SOCIALIZED CREDIT

The truth is that both the spending-lending and the housing bill as drawn, under the insidious mask of deficit financing, were the forerunners of the establishment of a thoroughgoing socialistic policy in furtherance of the administration's scheme of socialized credit. This was the issue, the magnitude of which was comprehended by those who had the courage to vote their convictions to reestablish the inalienable prerogatives of the House and to give notice to the world that the principles of democracy are still alive in this country.

Members of the House who voted "no" intended to serve notice upon the Executive that they proposed to retain control over appropriations and to safeguard democracy against the dictatorial executive encroachment involved in both the spending-lending and the housing bill.

It was a return, of course, to economy, which is essential and necessary, and emergent, but back of that and beyond it and more important is the fact that it was the assertion of Congress of its constitutional and fundamental rights and prerogatives.

A SUBTLE ATTEMPT AT ASSASSINATION

It called the attention of the taxpayers, as well as that of the Executive, to the fact that the Constitution provides that all bills for raising revenue shall originate in the House of Representatives, and that no money shall be drawn from the Treasury but in consequence of appropriations made by law. For some time the Congress has recognized the inclination of the administration to regard this cardinal principle as unimportant, if not surplusage. Congress realized when the President said, "There seems no reason why there should not be adopted as a permanent policy of the Government the development and maintenance of a revolving fund, fed from the earnings of these Government investments and used to finance new projects at times when there is need of extra stimulus to employment," he meant that the administration would collect the savings of the country and invest them in such undertakings as seemed to it desirable, outside the regular Budget, outside congressional appropriation, and without routing through the Treasury the funds borrowed and lent. Congress recognized in this a subtle, but nonetheless revolutionary and dictatorial encroachment upon its power of the purse, specifically provided for in the Constitution. The only thing to do was to kill the measure outright.

An editorial writer in the Post takes occasion to say in substance that Congress never worked more thoughtfully, it never acted with deeper consideration of the Nation's long-range interest, than in the "good riddance to bad rubbish" accomplished this week.

THE FUNDAMENTAL POWER OF THE PURSE

More important than the belated return toward economy which another Congress might all too easily reverse is the assertion by the Legislature of its constitutional and fundamental power of the purse. The moral of that action should and will be understood.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

LETTER FROM THE HONORABLE RICHARD P. BROWN, SECRETARY OF COMMERCE IN THE STATE OF PENNSYLVANIA

Mr. RUTHERFORD. Mr. Speaker, the following letter, which I received from the Honorable Richard P. Brown, secretary of commerce in the State of Pennsylvania, should furnish the proponents of the reciprocal-trade agreements some food for thought. Of course, the throwing out of employment of some 5,000 persons in Pennsylvania may not mean much to those who favor these trade agreements but it means a lot to workers and stockholders of the companies affected. This is just one instance but there are thousands of similar instances all over this country and when they are added all together they amount to considerable. As I have said time and time again, these reciprocal-trade agreements simply give employment to the people living in foreign countries and deprive our own workers of a job. How long are we going to keep this nonsensical system going? It is time that every trade agreement was rescinded so that the American worker and farmer can have the advantage of the American markets. You who believe in trade agreements read the following letter and then tell me how the Canadian trade agreement benefits the people of Pennsylvania:

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF COMMERCE,
Harrisburg, August 3, 1939.

Hon. ALBERT G. RUTHERFORD,
House Office Building, Washington, D. C.

DEAR MR. RUTHERFORD: Pennsylvania has a number of zinc smelting and refining plants, including those in Bucks, Carbon, Northampton, Philadelphia, and Washington Counties. They provide direct employment to approximately 5,000 persons.

Continued operation of certain of these plants is jeopardized by the 20-percent reduction in the import duty on zinc resulting from the Canadian trade agreement of last November. Prompt action by the Federal Government in restoring the tariff to its former level can avert impending closings.

Vigorous protests, in which the Commonwealth of Pennsylvania joined, have been made to the State Department because of the reduction. As a result, I understand a hearing has been scheduled for September 18.

For reasons cited in this letter, it is urgent that the hearing be held before August 25 and be followed by prompt action to restore the previous tariff rates. Your immediate and energetic cooperation to induce the Federal administration to advance the hearing and revise the zinc duties upward will aid in conserving Pennsylvania industry and employment.

The smelter of the American Zinc & Chemical Co., after 25 years of operation at Langeloth, Washington County, is scheduled to close August 25, when its present stock of ore is exhausted. Unfavorable competitive conditions and depressed prices caused by sharply rising imports of slab zinc are reasons cited for closing. The smelter employs 543 persons. Its coal mine, which closed 2 weeks ago, employed 262 persons.

There is a possibility, I am informed, that this plant may continue in operation if it has reasonable cause to believe before August 25 that the zinc duties will be restored to the rates in effect before last November. Because of the great cost in rebuilding furnaces, a plant is more likely to continue operation, if it can, than to reopen if it has been closed. For that reason, if this plant is to be saved, it appears any indication of changed Federal policy on zinc tariffs must come before August 25; and that is unlikely if the hearing is not held until September 18.

The adverse effect of the trade agreement upon the Langeloth plant is not an isolated instance. Another Pennsylvania plant has been operating at only 50 percent capacity for several months. Some plants west of the Mississippi River, I am informed, also have curtailed their output sharply. Plants in West Virginia and Illinois have closed or indicated their intention to do so.

The trade agreement signed last November 17 cut the import duty $7 a ton on zinc slabs and $6 a ton on ore.

The price of zinc, which had been 5.05 cents a pound the day before the agreement was signed, dropped to 4.70 cents the day after it was signed, and recently has averaged about 4.5 cents. The drop in price of slabs has been about $11 a ton since the tariff reduction was imposed.

Imports of smelted zinc have been three to five times as high since the tariff was reduced. In the first 5 months of this year imports totaled 10,815 tons, or almost 50 percent more than for the 12 months of 1938. If imports continue at the same rate, the 1939 total will be about 25,000 tons of slabs, compared to 7,486 tons in 1938.

Closing of a smelting plant affects more employes than those on the plant's immediate pay roll. For instance, each month the Langeloth plant uses 7,000 tons of bituminous coal, 1,600 tons of coke and anthracite, and 600 tons of fireclay. Transportation industries move thousands of tons of ore, fuel, and supplies to the smelter, and many tons of zinc slabs away. A closed plant has no need for any of these supplies or services, and many men outside the smelting industry itself feel the pinch of unemployment whenever a smelter closes.

For reasons such as these any act by you which helps keep our industries producing aids your home community, your State, and the Nation as a whole. Let me urge you to join in asking Secretary of State Hull to speed hearings and reveal intention to restore the previous zinc duties before the Langeloth smelter or any other operating plant is forced to close because of the advantage the reduced tariff gives to foreign competitors.

Sincerely yours,

RICHARD P. BROWN, *Secretary.*

William F. Kopp

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. MARTIN of Iowa. Mr. Speaker, as this session of Congress draws to a close, I wish to call the attention of the House to the passing on August 24, 1938, of Hon. William F. Kopp, who represented the First Iowa District in the Sixty-seventh to Seventy-second Congresses. Mr. Kopp enjoyed a long and distinguished public career and served long and well and with great distinction on many different, important committees, notably Flood Control, Labor, and Pensions.

His parents came down to Iowa out of Wisconsin after the Civil War days, his father a veteran of the Civil War serving in a Wisconsin regiment. Mr. Kopp graduated from Iowa Wesleyan University and from the College of Law of the State University of Iowa.

He was early marked for distinguished service for his State and Nation. He was a distinguished follower of the famous Lincoln; and not only did he have a large picture of Lincoln on the wall of his study, on which picture was an affectionate greeting from Mary Lincoln to Mrs. Kopp's father, but also phrases of the immortal Lincoln were framed and placed in his study throughout the years. The writings and political philosophies of the martyred Lincoln were in the possession of Mr. Kopp's mind.

It is a well-known principle of education that one tends toward the likeness of the person or the philosophies of his contemplation. A careful study of the life of William F. Kopp would reveal the deep influence of Abraham Lincoln, who was his ideal statesman.

After serving in the House of Representatives of the State of Iowa, the major honor of Mr. Kopp's life was his election to the United States House of Representatives in 1920, where for 12 rich, productive years he served well the constituency of the First District of Iowa. The story of his 12 years of service in the Nation's Capital is not only written in the CONGRESSIONAL RECORD but is stamped upon the lives of the countless thousands whose needs he served to the limit of his ability and for whose welfare he gave himself in constant devotion. During his service in the House of Representatives he became one of the most trusted of this august body.

The most severe test which can be applied to a man in high position is whether the people in humble walks of life have access to his ear and heart and trust him with their deepest troubles. It was inevitable that Mr. Kopp's counsel and service should be outstanding in every year of his active life to the people of every station. Whenever a cause which seemed just and true to him needed a champion, he never counted the cost, and gave himself freely to what seemed to him to be the highest and the best.

There is no one in this presence today who will deny his exceeding patriotism to his country and his honorable and faithful service to his constituency throughout his long public life of service.

The Hatch Bill

EXTENSION OF REMARKS
OF
HON. J. WILL TAYLOR
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

LETTER FROM HON. JOHN J. O'CONNOR, OF NEW YORK, TO ARTHUR KROCK, OF THE NEW YORK TIMES

Mr. TAYLOR of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by former Representative John J. O'Connor, of New York, to Mr. Arthur Krock, of the New York Times:

WASHINGTON, D. C., *August 3, 1939.*

Mr. ARTHUR KROCK,
New York Times, Times Building, New York City.

DEAR MR. KROCK: Your column in today's New York Times, headed "The President's Hatch Bill Reservations," is most interesting to a lawyer.

You characterize as "carping" the criticism of the President "for publicly interpreting the Hatch bill," designed to take politics out of relief, etc.

You come to this conclusion "in view of fixed judicial procedure in reviewing acts of Congress," and you go on to cite "fixed judicial procedure," saying, "when a court reviews an act of Congress it looks into the intent of Congress as well as into the text of the law." So far you are correct, if the language of the act is ambiguous or equivocal, if not, the court is bound by the four corners of the act.

You then go on to say "It—the court—examines the debates."

In *Duplex Printing Press Co.* v. *Deering* (254 U. S. 443), Mr. Justice Pitney said, at page 474:

"By repeated decisions of this court it has come to be well established that the debates in Congress expressive of the views and motives of individual Members are not a safe guide, and hence may not be resorted to, in ascertaining the meaning and purpose of the law-making body," citing a number of cases.

You continue that the court will examine the "committee reports to determine what Congress meant by a disputed phrase or sentence." In this statement you are correct, provided only that the meaning of the statute is doubtful or obscure. This was held in *Duplex Printing Press Co.* v. *Deering,* supra, and approved in *Railroad Commission* v. *Chicago, B. & Q. R. Co.* (257 U. S. 563), where at page 589, Mr. Chief Justice Taft said, "Committee reports and explanatory statements of members in charge made in presenting a bill for passage have been held to be a legitimate aid to the interpretation of a statute where the language is doubtful or obscure"—citing cases—"But when, taking the act as a whole, the effect of the language used is clear to the Court, extraneous aid like this cannot control the interpretation." Citing cases—"Such aids are only admissible to solve doubt, and not to create it."

A most extraordinary statement made by you is that if a dispute arose as to the real meaning of the Hatch bill, "the President's record (meaning his message accompanying the approval of the bill with the deliberate attempt to interpret it, seriatim) would be evidence that the author meant no such limitations, that it was signed in the contrary belief, and passed by the Attorney General in the same belief. That evidence would be competent."

It will surely come as a distinct surprise to all lawyers experienced in such matters that the belief of the President or the Attorney General or the author, Senator HATCH, as to what the law meant will have any influence whatever on any court.

The law "speaks for itself." No court would go outside the precise language of the law to interpret it unless the language was ambiguous, and then the only resort would be to committee reports and "explanatory statements of Members in charge" of the bill. Of course, these backgrounds are never binding on the court if the language of the act is not obscure. This is so well settled it is elementary.

No court would pay any attention whatever to the "President's public interpretation of the act."

No court would pay any heed to what the Attorney General thought the bill "meant" when he "passed" on it orally to the President after Congress had passed the bill.

No court would inquire of the author of the bill as to his "belief" or his "intent" as to what the act "meant," except his explanatory statements in the Senate if he was in charge of the bill.

Please be assured that while I comment on your juridical conclusions I have the highest respect for your outstanding editorial and reportorial ability.

Sincerely yours,

JOHN O'CONNOR,
Former Member of Congress.

Resolutions of the Washington State Grange

EXTENSION OF REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

RESOLUTIONS PASSED BY THE WASHINGTON STATE GRANGE AT THEIR GOLDEN JUBILEE CONVENTION

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I wish to present here for the consideration of the House resolutions which were adopted at the golden jubilee convention of the Washington State Grange held at Vancouver, Wash., June 13 to 16, and which I was privileged to attend.

Past lecturer of the Virginia State Grange wrote a letter recently to State Master Ervin E. King, of the Washington State Grange, from which I quote:

No other State Grange has the program that you have, and no other is as determined and as informed and as active in behalf of its membership and American agriculture as the Washington State Grange. If every other State Grange had the sound leadership and desire to serve agriculture and the order as you folks have, agriculture would be in a much better position today, and the future would be bright indeed. I congratulate you and your people on the greatest State-wide farm organization in the world.

Fraternally yours,

JAMES H. ROGERS,
Past Lecturer, Virginia State Grange.

As past State lecturer of the Washington State Grange, I heartily concur in this estimate of my home State Grange, and a study of the following resolutions will convince all readers of the truth of his statements.

ASKING EXTENSION OF TIME, AMORTIZING LAND BANK COMMISSIONER LOANS

Whereas the Land Bank Commissioner loans were set up on a 10-year repayment basis and due to the low returns of farm crops a large percent of these loans are becoming delinquent; and

Whereas there is at the present time a bill before both the Senate and the House of Representatives (S. 1675; H. R. 173) amortizing these loans over a period of not less than 20 years: Therefore be it

Resolved by the Washington State Grange, That we urge our Representatives in Congress to work for such legislation to the end that all should have relief from these heavy repayment charges.

FEDERAL USE OF BUTTER IN FEDERAL INSTITUTIONS

Whereas there is a large surplus of butter in Washington; and

Whereas the sale of this butter would greatly assist the dairymen in solving their financial difficulties; and

Whereas there is no substitute for the vital food elements contained in butter: Therefore be it further

Resolved, That the Washington State Grange go on record as petitioning the Federal Government to purchase butter for use in all Federal institutions in our State.

F. S. A. FINANCING APPLE GROWERS

Whereas we are highly appreciative of the work done by the local Farm Security Administration in their efforts toward financing the fruit district; and

Whereas we are in complete sympathy with their policy of insisting on debt adjustment down to a reasonable indebtedness per acre before considering the issuance of any production-finance money; and

Whereas we believe that this type of production finance is the most feasible and satisfactory type yet introduced into the district: Therefore be it

Resolved, That the Washington State Grange ask our congressional delegation and the Farm Security Administration to make available sufficient funds to expand to a point where all growers whose past record as orchardists show them to be honest and able to take good care of orchards, and are located on orchards having good soil, plenty of water, good varieties, free from frost, and other unusual financial hazards, be financed; provided, those growers so financed agree among themselves and with the financing agency on a sensible, cooperative marketing program.

SPRAY RESIDUE—CALLING A HEARING

Whereas the Federal Food, Drug and Cosmetic Act, passed June 25, 1938, does not become effective with regard to spray residue until the Secretary of Agriculture calls a hearing; and

Whereas this law is more favorable to apple growers than the law now in effect: Therefore be it

Resolved by the Washington State Grange, That we request the Secretary of Agriculture to call a hearing at the earliest possible date to be held in this State of Washington to determine proper regulations governing the use of lead arsenate and fluorine sprays on apples and pears; be it further

Resolved, That the State Grange use its influence to help the apple growers of the State to secure such a hearing.

OPPOSING LIBERALIZATION OF IMMIGRATION LAWS

Whereas millions of American citizens are out of work, compelled to accept aid from some form of Government relief because there are not enough jobs to go around;

Whereas we understand that many foreign people are entering the United States under the guise of being refugees from other countries by the simple means of having some American citizen or group of American citizens vouch for the refugee's support while in the United States, thereby causing the sponsor of such refugees to discharge American employees and fill the jobs with refugees, placing the American workers on the relief rolls:

Resolved, That we are opposed to any liberalization of the immigration laws—

1. Allowing an increase in the quota of immigrants from any country;

2. Extending the time limit of visiting permits indefinitely:

Resolved, That no refugee from any country be allowed to enter the United States in any way other than through the regular immigration offices and under the regular immigration laws, whether any American citizens or group of American citizens vouch for the support of the refugee or not.

FALSE ADVERTISING OF LIQUOR AND CIGARETTES

Whereas the youth of our Nation is being subjected to an enormous amount of false and misleading advertising through the press and the radio relative to the merits of alcoholic beverages and cigarettes; and

Whereas it is a well-known fact that infinitely more harm than good are the results of the use of these narcotics and the States cannot adequately regulate or prohibit the advertising of liquor or cigarettes as long as Congress permits such advertising through the medium of interstate commerce: Therefore be it

Resolved, By the Washington State Grange, that we most earnestly urge Congress to pass such laws as will effectively prohibit false and misleading advertising of liquor and cigarettes through the press and the radio.

GOVERNMENT HOSPITAL SYSTEM

Whereas the present hospital systems in the United States are run primarily for the purpose of profit, and the majority of the people cannot pay for proper hospital treatment, care, and medical consultation; and

Whereas because of this, thousands of people suffer sickness, lack of care, and proper advice, and thousands die every year on account of this system of profit first and the people last; and

Whereas as long as the public must depend upon private hospitals and upon medical schools and medical associations running our public hospitals, this cruel and inhuman system will continue to take needless toll of human lives; and

Whereas, under a system of cooperative hospitals owned and controlled by the people of a district, medical attention and hospitalization would be made available to all at a minimum cost.

Whereas the American Medical Association has continuously and vigorously used every method in opposing the establishment of cooperative medical and hospital facilities: Therefore be it

Resolved, That the Washington State Grange urgently request and petition Congress to do everything in their power financially and otherwise to engender and establish cooperative medical hospital facilities; and be it further

Resolved, That the Congress of the United States investigate the alleged violation of the antitrust laws by the American Medical Association of the United States of America.

TO GIVE ADDITIONAL POWER TO THE FEDERAL POWER COMMISSION

Whereas in the recent power campaign in this State last summer and fall, the private utilities made it a practice to cover part of their expenditures by the setting up of "phony" organizations;

Whereas the private power companies sometimes used threats of intimidation and boycott to influence certain persons;

Whereas State officials are without adequate power to act as oftentimes the records necessary may be in another State, and the organization directing the campaign may be outside the State;

Whereas the F. T. C. has in the past had such authority to interfere under such circumstances, but which authority expired in 1936;

Whereas the F. T. C. found many of the allegations above cited to be true in the past; and

Whereas public interest and public morals require that there be some Federal agency with sufficient power to cope with these situations: Therefore, be it

Resolved, By the Washington State Grange that the Congress of the United States be asked to pass an act giving the F. T. C. authority to interfere where great amounts of money are being spent in campaigns against public ownership, especially in excess of what is a reasonable amount, and where threats of any kind are used to intimidate voters.

REFERENDUM ON WAR

Be it resolved, That the Washington State Grange go on record as favoring a law that would compel a majority vote of all the eligible voters of the United States before this country could enter into an armed conflict on foreign soil. This law would not affect a conflict in protection of our own Nation.

TAKE PROFITS OUT OF WAR

Whereas Senator BONE, of Washington, has introduced a bill to take the profits out of war: Therefore be it

Resolved, That we go on record as favoring such a bill.

OPPOSE LOWER DUTY ON JAPANESE EGGS

Whereas the new trade treaty allows Japanese eggs to enter this country, especially at Hawaiian ports, at 5 cents per dozen instead of at 10 cents per dozen as heretofore; and

Whereas this is an injury to the poultry industry, one of the largest industries of our State and country: Be it

Resolved, That the Washington State Grange go on record as opposed to this part of the treaty.

J. D. ROSS MEMORIAL

Whereas the late J. D. Ross has long been a leader in the fight for public ownership of power facilities in the Northwest; and

Whereas it is proper and fitting that his memory be perpetuated as a shining example for others to follow; and

Whereas this can best be done by permanently affixing his name to some of the projects he advanced: Therefore be it

Resolved, That the Washington State Grange request our congressional delegation, the Secretary of the Interior, and the Bonneville administrator to designate the park at the Ampere substation as the J. D. Ross Memorial Park.

ADMINISTRATOR OF BONNEVILLE PROJECT

Whereas Mr. Frank A. Banks, chief engineer in charge of the construction of the Grand Coulee Dam, has been appointed acting administrator of the Bonneville project, and has administered its affairs in the best interests of the people of the Northwest; and

Whereas such appointment was made, and the same was accepted by Mr. Banks only for a short time pending the appointment of a permanent administrator, and the magnitude of the Grand Coulee Dam development requires that Mr. Banks, after a permanent administrator has been selected, return to the discharge of his supervisory duties at the Grand Coulee Dam; and

Whereas it has been reported in the public press that the selection of a permanent administrator of the Bonneville project shortly will be made; and

Whereas the selection of such an administrator is of vital concern to all public-utility districts; and

Whereas Mr. Llewellyn Evans, who for many years was superintendent of Tacoma City Light, and now is electrical engineer for the Tennessee Valley Authority, is familiar with the problems of the Northwest and by reason of his ability and many years' experience is thoroughly qualified to perform the duties of permanent administrator of the Bonneville project: Now, therefore, it is

Resolved, That the Washington State Grange recommends Llewellyn Evans and requests that the Honorable Harold L. Ickes duly consider Mr. Evans for the position of administrator of the Bonneville project; it is further

Resolved, That copies of this resolution be forwarded to all Senators and Congressmen of the States of Washington, Oregon, Idaho, and Montana.

FEDERAL FINANCING OF PUBLIC-UTILITY DISTRICTS

Whereas the Federal Government is constructing large electrical generating facilities such as the Coulee and Bonneville Dams, and is building transmission lines for the purpose of bringing this electrical energy to the different sections of the State; and

Whereas the State of Washington has provided by law that districts may be formed for the purpose of distributing electrical power to the people; and

Whereas the Federal Government has loaned money to these districts for the purpose of constructing R. E. A. lines and engaging in the electric business; and

Whereas it will be necessary that the public-utility districts purchase private utilities in order to facilitate an economic distribution of this electricity; and

Whereas the purchase of these private facilities by public-utilities districts will be of mutual interest and benefit to the Federal program of electrical generation; and

Whereas the Federal Government could finance the purchase of these private utilities by the public-utility districts on a long-term basis at a low rate of interest: Now, therefore, be it

Resolved, That the Washington State Grange goes on record as favoring Federal loans to public-utility districts for the purchase and acquisition of privately owned facilities; and be it further

Resolved, That a copy of this resolution be sent to the Senators and Representatives in Congress of the State of Washington, and that we urge them to aid us in securing such loans.

EXTENDING TIME FOR P. U. D. POWER

Whereas the act of Congress that established Bonneville Dam power development provided that 50 percent of such power should be reserved for rural communities until January 1, 1941; and

Whereas certain power organizations that have refused to serve the rural people except at exorbitant price rates and prohibitive construction costs, are now seeking to gain control of the entire output of Bonneville; and

Whereas such control would be detrimental to the best interests of the general public, as power districts of R. E. A. projects would be at the mercy of mercenary corporations for their supply of power. As for example, the lowest rate for contract to R. E. A. by Washington water power is $52.50 per kilowatt-year while the Bonneville rate is $14.50 per kilowatt-year or a difference of $38 per kilowatt-year; and

Whereas the power companies have sorely neglected the rural districts and forced many a farmer to strain his eyes by an old coal-oil lamp. Then after searching a dimly lighted page for an upward trend in the wheat market discovers an advertisement telling of the wonderful investment he can make in Pacific Power & Light bonds: Therefore be it

Resolved by the Washington State Grange, That we urge our Congressmen and also Frank A. Banks, asking that the 50 percent of power be reserved at least until January 1, 1943.

Shall America Purge Garner or Lewis?

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

EDITORIAL FROM THE BERGEN (N. J.) EVENING RECORD, JULY 31, 1939

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bergen Evening Record of July 31, 1939:

SHALL AMERICA PURGE GARNER OR LEWIS?

John L. Lewis, president of America's not too American C. I. O., has probably kicked Vice President JOHN N. GARNER right into the 1940 Democratic Presidential nomination if not the Presidency of the world's only remaining democracy. Lewis asserted that GARNER is an evil old man who plays poker and drinks whisky. Maybe he does, but if so, he has lots of company in the land of the free and the home of the brave. There are about 30,000,000 Americans who do likewise and who will not be entirely unsympathetic to evil old JACK GARNER in the defense of his and their private enjoyment.

As to the mortal sin of whisky drinking, Lincoln perhaps provided the best answer when he told the reformer who complained about General Grant's whisky drinking to ascertain the brand so he could send a barrel to each of his other generals, who unlike Grant were conspicuous by their failures instead of their successes. But the poker-playing charge needs Mr. Lewis' elaboration. If "CACTUS JACK" GARNER habitually draws two cards to a flush or a straight he certainly merits Lewis' condemnation, and the writer will gladly furnish him transportation from Washington to Hackensack to contest with him in a quarter-limit game. But if Mr. GARNER is a normal in-and-outer like the other 30,000,000 American poker fans, the answer to Mr. Lewis must be, "Oh, piffle!"

But the highlight of Lewis' personal attack on GARNER is as follows: "GARNER'S knife is searching, searching for the quivering, pulsating heart of labor." The American electorate has been treated to many tear-jerking, rabble-rousing effusions of political demagogues since Bryan's Cross of Gold, Crown of Thorns masterpiece 40 years ago, but it hasn't heard anything since to even tie that Lewis maudlinism. So, as Al Smith would say, let's look at the record to see who and what is this John L. Lewis and also this evil old man GARNER.

JOHN NANCE GARNER, now Vice President of the United States, has spent practically all of his adult life in public office. As a result he has been exposed during that time to the pitiless glare of publicity. If there were anything crooked about him publicly or privately, it would long since have been disclosed. He is a southern Democrat who has consistently preached and practiced a sound Americanism which relies on the retention of this Nation's time-tested elective, legislative, and juridical processes; the preservation of its Constitution and its orderly amendment procedure to meet the changing needs of a progressive people; and freedom of thought, speech, and the press, which are vital concomitants of the self-government of our revered Lincoln.

He disagreed in 1937 with his party's titular head when President Roosevelt, in the full flush of a record-breaking popular victory, planned to short circuit the Constitution by packing the United States Supreme Court with political stooges. That bitter contest was the turning point in Roosevelt's brilliant career, and the radicals who wanted to take a short cut to reach an ephemeral goal lost the first of a long series of battles. GARNER, the conservatives, and national sanity won, and they have been winning battle after battle ever since. The Vice President and his personal party followers in the Congress have been a courageous check against the extreme radicalism of the President's followers. Even his Republican opponents in Congress admit this, and that is commendation indeed in American politics. But in his battle to preserve not the Roosevelt American way but the real American way GARNER interfered with the political and economic joyride of John L. Lewis and his C. I. O., which had contributed $500,000 to the 1936 Roosevelt campaign fund. The President paid that political debt to Lewis and his communistic C. I. O. in a not too American way, but GARNER determined that the permanent American way is delineated and bordered by a hardy perennial called the Constitution. So much for this evil old man GARNER.

John L. Lewis, now president of a powerful rump labor movement that is honeycombed with communism and doctrines that are subversive of time-tested American ideals and institutions, was until 4 years ago the head of a coal miners' union affiliated with the A. F. of L. Greedy for power, and not finding it attainable in the powerful international founded on the sound labor principles of the great Samuel Gompers, Lewis broke away and founded his radical C. I. O. His master stroke for power and pelf came in 1936 when he contributed $500,000 of his miners' union blood money—it is just that, for many of his miners are dependent on public charity while he sits in his impressive Washington office building and lives very comfortably on part of the weekly take of C. I. O. labor dues—to support the reelection of President Roosevelt. He won that $500,000 union-funds bet in November 1936 and started collecting on it in the following spring.

The record of the C. I. O. outrages of 1937 seems too recent to require detailed repetition here. Suffice to say that President Roosevelt, who was the beneficiary of Lewis' political support, made no official attempt to stop them, nor did Lewis. Both of them sat passively in their powerful positions while their followers defied most of the laws on the statute books. Roosevelt can disclaim responsibility for permitting those outrages on the basis of States' rights and responsibilities; but Lewis cannot, because he was in absolute control of C. I. O. and its communistic agents. On the doorstep of the arrogant John L. Lewis must therefore be laid the responsibility for C. I. O.'s record of the murder of helpless citizens who wanted to exercise their constitutional right to work for a living when and for whom they pleased, its bombing of industrial plants to coerce employers, its interstate transportation of armed mobs to defy local law-enforcement authorities, and last but not least its stoppage of the delivery of the United States mails with the sequential condonement of that precedent-shattering outlawry by a subordinate of the Roosevelt administration. There stands the necessarily abbreviated record of Mr. Lewis and his communistic C. I. O.

And so if John L. Lewis and his communistic cohorts "will be against GARNER when he seeks the Presidency in 1940" the American people will cheerfully accept the challenge. Nothing will please the electorate more than an opportunity to purge Mr. Lewis and his Communists, not in the secret Russian way with bullets, but in the public American way with ballots. After that, Lewis and his agitators can retire to their cells, form a circle, and purge themselves—all in the good old Russian way.

JOHN BORG, *Publisher.*

W. P. A. Employment

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

Mr. GILLIE. Mr. Speaker, since the enactment of the W. P. A. appropriation bill the latter part of June, I have taken occasion to inquire into the circumstances of a number of cases in my district where faithful and capable workers in the W. P. A. have been laid off for a 30-day period. I find that great hardship has resulted, not only to the workers themselves but also to their dependents. Under the present law, they cannot be restored to duty until 30 days after their removal, and/or until they have received recertification as to their eligibility.

I have found that the officials of the W. P. A., in their honest endeavor to hold to the intent of the lawmakers, have not had it in their thought to let these lay-offs be certified again, because, as they think, to recertify them would frustrate the purpose to establish rotation among the workers.

The more I investigate these cases, the more firmly I am convinced that this provision of the law should be changed. I find that a measure to take care of this injustice is sponsored in the Senate, and when it comes up for a vote in this body, I am going to support it. I believe that a majority of my colleagues will vote for it also. In this new measure, there will be a provision to restore the "prevailing clause" for projects under the W. P. A. I am glad to join my colleagues to change the law so that further injustices will not be perpetrated.

Reciprocal-Trade Treaties

EXTENSION OF REMARKS
OF
HON. FRANK CROWTHER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

ARTICLE BY MILLARD D. BROWN

Mr. CROWTHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Millard D. Brown:

[From the August issue of Sphere]

HULL AND CHAOS

(By Millard D. Brown, president, Continental Mills, Inc.)

Despite the enforced limitation of our productive operations to a subnormal schedule, we are importing more and more farm produce and manufactured products. A steady whittling down of our tariff barriers is widening the gates to an influx of imports from low labor paying countries—needless imports which are contributing to American unemployment, impoverishing American consumer buying power, and imperiling the American standard of living.

If we are to cope with the flood of foreign competition that is being swelled inordinately by the reciprocal-trade treaties, we will be obliged to lower wages, and the American standard of living may be reduced to the foreign standard of subsistence.

THE TRADE PARADOX

In other words, actual operation of the so-called reciprocity pacts establishes the fact that while American products are purchased abroad not because they are cheaper but because they are better, imported products are exploited here not because they are better but because they are cheaper.

Does anyone really believe that we can be prosperous, or even continue as a government of free people, if our living standards are reduced to the levels of Italy, Japan, or other so-called favored nations under the reciprocal-trade pacts?

While we are jeopardizing the chances of employment for our workers, the Congress has enacted the wage and hour law, which puts a floor under wages and a ceiling on hours. As a consequence, the action of this law tends to make it impossible for employers to meet low-wage foreign competition in an endeavor to keep their workers employed.

Is it any wonder many Americans believe that the once conservative Democratic Party has fallen into the hands of men who are purposely sabotaging our American system? Events of the last 6 years certainly point that way.

The 1934 amendment to the (Smoot-Hawley) Tariff Act of 1930 authorized the President to enter into foreign-trade agreements "as a means of assisting in the present emergency in restoring the American standard of living, in overcoming domestic unemployment, and the present economic depression," etc.

The consummation of this legislation has not accomplished the purposes for which it was intended. Like many other recent acts of Congress, it has even defeated these purposes.

Under this amendment there are three ways to proceed, only one of which will, however, accomplish the results enumerated above:

First, the Hull agreement plan, with its "most favored nation" treatment.

Second, the Hull plan, but with quotas on various competitive imports.

Third, agreements using our needed imports as a basis of trade.

The first method is the easiest to pursue, and one that would naturally appeal to a lifelong free-trader and to those theorists who have had no practical experience and therefore cannot think the scheme through to its final results.

How or why the State Department selects certain farm and industrial products to be favored for export trade and certain others to be penalized, that the favored ones might prosper more, remains a mystery. The Department maintains that its object is to make the farmer more prosperous.

If this is so, why all the cuts in duty on farm products? Why should we favor the export of citrus fruits, or California prunes, over Maine potatoes, Texas onions, or Wisconsin dairy products? If the State Department is endeavoring to reduce our surplus of wheat and cotton, why is Mr. Wallace (Agriculture) arranging barter agreements on these two products?

FAILURE OF RECIPROCITY

Is it because the trade-agreement program is not successful? If it were successful in relieving the farmer, why the necessity of increased appropriations to farmers each year? The fact is that the workers on the farm and in industry are losing out by the Hull treaties.

The history of lumber, dairy products, certain meat products, table glass and pottery, paper, zinc, chemicals, certain electrical apparatus, lace manufacturing, and wool textiles all bear witness to the result.

The Department of Commerce recently reported figures of our foreign trade for April 1939, compared with April 1938. Analysis of these figures shows that exports to trade-agreement countries declined in 1939 about 12 percent, including war materials exported. At the same time, our imports from trade-agreement countries increased nearly 20 percent. Our exports to non-trade-agreement countries declined nearly 20 percent, while our imports increased more than 14 percent.

It takes some little time to get the real effects of trade treaties, such as those negotiated by Mr. Hull. The record proves that in spite of the large increases in exports of war materials such as aircraft, motortrucks, scrap iron, pig iron, etc., our imports are gradually increasing and our exports are gradually decreasing.

Under the favored-nation treatment of Mr. Hull's program, all concessions in duties to trade-agreement countries are also extended to all other countries with the exception of Germany.

CHEAP-LABOR COMPETITION

In Italy, wages are less than one-fifth, and in Japan less than one-tenth of those in the United States, yet their products carry the same duty as imports from the United Kingdom, where wages are one-third of those here. How can any duties, set to equalize the difference in cost of production between England and America, protect American workmen from competition with Japanese and Chinese labor?

The stock argument in favor of the Hull brand of reciprocal treaties is that the increased purchasing power of those who benefit by these agreements will create an increased demand for the products on which duties have been cut, and therefore all will be prosperous. Absurd as the idea may be, it is, nevertheless, believed by many people. No practical person would ever make such a statement.

Does any sane person expect the employees of the favored industries to spend any of their increased earnings (assuming that they have any) in paying a higher price for American hams when they can buy Polish ham cheaper? Will they pay for an American-made overcoat $5 more than they would for one made in England, with an "imported" label in it? Will their wives prefer American lace at double the cost of French lace? Will they buy American dairy products when Canadian dairy products are cheaper? The answer is shown in the decline of exports and increase of imports in 1939 over 1938.

Some years ago an economist named List said, "Free-trade is an idealism not to be engaged in until the people with whom you trade have the same living standards as your own, otherwise they will tear you down to their level."

Mr. Hull's treaties are near the free-trade level. They are not "reciprocal" treaties in any sense. "Reciprocity" in international trade means "that relation or policy as to trade between two countries, under which special advantages are granted by each to the other." Because of Mr. Hull's "favored nation" treatment, his treaties are multilateral, and not reciprocal at all.

The second course the State Department could have pursued in carrying out the objectives of Congress would have been to use the method they have already adopted, but with quota restrictions attached to various competing products on which concessions have been granted. Such agreements would have been more difficult, and would have taken more time to consummate. They would, however, have had the advantage of at least saving some domestic business for the employment of our own people.

QUOTA PROTECTION

A quota on lace from France and other countries would have saved the lace industry of the United States, which is now practically extinct. It would also have provided some occupation for the 20,000 hand-embroidery workers of Puerto Rico who are now idle. The quota would also have the advantage of limiting the imports of all competing products from low-wage-standard Asiatic countries.

While this second method has much more to recommend it than the first, if it were adopted our American living standards would not be retained, nor would our domestic unemployment problem be solved.

The third method would be the hardest one to pursue, but it has the advantage of preserving our living standards and providing a better chance to decrease unemployment. In this method we would base our foreign trade and tariff policies on what we need to acquire, rather than on what we wish to sell.

We would approach the subject of what is desirable and necessary to import as the first and most important consideration. Our second consideration, then, is how can we obtain these imports through agreements and gain exports by supplying other countries with the things they need and desire?

Those things that are not produced in America which we need and can use fall into four general classes:

First, those mineral, forest, and agricultural products that are necessary for industry.

Second, agricultural products that are used for food.

Third, a multitude of special products and manufactured articles, such as patented and copyrighted articles, special machines, Oriental rugs, works of art, and other luxury items.

Fourth, a long list of products of various kinds on which our production is inadequate to our domestic demand. The importation of these should be limited by quotas.

EXPANSION OF EXPORTS

In a recent address, Mr. Howard, of the National Foreign Trade Council, said, "Expansion of our exports must wait upon and can only be a byproduct of a great increase in production of goods and services for domestic purposes." A truer statement of our situation has never been made.

Reciprocal-trade treaties based on the needs of our domestic economy would not reduce the employment of our workers nor the demand for domestic products.

Our foreign trade has never been greater than about 7 percent of our total production of movable goods. In 1935 this total amounted to about $33,000,000,000. Exports that year amounted to nearly $2,500,000,000.

If reciprocal treaties bring us imports of competitive goods so as to cut our domestic production 2 percent or $660,000,000, it would require an increase in exports of 30 percent to make up for our loss.

To put it another way, for every 2-percent reduction in domestic production, we must increase our foreign trade 30 percent to keep our present depressed economy where it now is.

It should be evident to everyone that the 93 percent, which is our domestic trade, should be preserved above all else.

CONCESSIONS

Will Rogers once said that we have never lost a war nor won a conference. This is equally true of our trade agreement conferences. A few instances will perhaps illustrate the point. Compare the concessions given by the United Kingdom to us and the concessions which we in turn gave them:

	United Kingdom gave us—	We gave United Kingdom—
Rates reduced	156	444
Rates bound	127	63
Rates bound free	25	60
Rates Empire preference	4	0

Equally interesting is a comparison of reductions of duties given by each:

	Rates	
	United Kingdom reduced to us	We gave United Kingdom
100 percent	6	0
50 percent	9	121
40 to 49 percent	6	68
30 to 39 percent	15	92
20 to 29 percent	98	74
10 to 19 percent	7	45
Below 10 percent	0	10
Indeterminate	15	34
	156	444

Sir John Simon, British Chancelor of the Exchequer, before negotiations of their treaty with us, said: "The British Government will not set its hand to a trade agreement with the United States that is detrimental to our trade." He certainly knew what he was talking about.

Our State Department is open to severe criticism because of its methods in negotiating these treaties. Formal negotiations on the British agreement began 3 weeks before the public hearings opened.

The trade advisers and economists of the United Kingdom were in Washington when these hearings began. What they had to say and the arguments advanced by them were not made available to the American interests concerned. Our interested parties were not invited to attend the preliminary mapping out of the concessions to be discussed.

PERFUNCTORY HEARINGS

The British advisers attended the public hearings and, of course, were well prepared to combat in private the contentions that our American interests made in public. The hearings given our farm, industrial, and labor leaders were so perfunctory, and apparently so boring to our officials in charge, that everyone in attendance felt the stage was already set and their efforts were futile. The announcement of the final agreement only confirmed our worst fears.

That the State Department does not protect our interests after agreements are in effect also is very evident.

Among the items in the Belgian agreement, on which they gave us a reduction in duties, was California prunes. Shortly after the treaty was in effect, the Belgians decided that California prunes were not prunes at all, but confection. So they changed their classification accordingly, and American prunes imported into Belgium now take a much higher duty, and cannot be sold there profitably. The State Department has done nothing about it.

Just before the French agreement was negotiated, the French Government raised duties on most imports. Mr. Hull came forth with a public denunciation of countries that raised duties in preparation for giving concessions, and stated he would not deal with them. Nevertheless, he did.

One provision of the agreement gave our State Department the right to take further action on the agreement if the rates of exchange suffered a serious decline.

At the signing of the French agreement the franc was worth about 6.65 cents. Today the franc is worth 2.65 cents. As a consequence the American lace industry is running less than 10 percent of capacity. Imports have increased in many instances 2,000 and 3,000 percent. Appeals have been made to the Committee for Reciprocity Information, without result.

It is indeed a very serious matter for America when one or even a few bureaucrats can decree the death of any established industry and the unemployment of its workers without the right of appeal.

We should buy in America the things that America produces and is capable of producing. If we do not buy in America we cannot sell in America; if we do not sell in America, where can we find a market for our products? Surely not in countries with low-living standards.

Import what we must, by all means, but let us not bring here a single thing that keeps a foreign workman busy and an American workman idle.

An Invisible Mortgage on Your Farm

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. JOHNS. Mr. Speaker, for the 10-year period from 1927 to 1937 there was a yearly average of 342,524,000 acres of land that was cultivated in the United States. During the past 6 years the public debt has increased approximately $20,000,000,000.

The rural people of the country represent about 25 percent of the population. As the rural population also represents about 40 percent of the buying power there is not any doubt in the minds of most farmers that they must pay either directly or indirectly their share of the taxes to pay this increased debt which will represent in round figures about $5,000,000,000.

If anything should happen to the country and the stocks and bonds, which represent the investment in industry, should be wiped out by inflation, real estate would have to stand a large burden of the taxes to take care of these obligations. It is the history of taxation that when you cannot reach enough money to pay taxes on incomes and personal property, then real estate always suffers. This represents an "invisible mortgage" of approximately $15 per acre on every crop acre of our land which will have to be repaid if the credit of the Government is to be maintained. Every time the Government increases the public debt another billion dollars this means that approximately $2.90 per acre is added to the burden of the farmer if his real estate should ever have to carry the whole load. It is something that every farmer should think about seriously if our public debt is further increased.

Housing Conditions in the Baltimore Area

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. D'ALESANDRO. Mr. Speaker, 2 years ago the Congress of the United States enacted legislation which was designed to assist in a program of slum eradication and to provide better housing for a number of our citizens. Today we are considering an amendment of that legislation whereby its benefits may be enlarged and extended to numerous other persons in this country.

Those of us who represent congressional districts that lie either entirely or partially within the confines of large cities would like to speak of the beauties of our districts, of modern, well-kept, well-appointed homes, of the blessing of health and happiness visited upon our constituents, of their healthy children, and of the numerous playgrounds and recreational centers for their enjoyment. But, unfortunately, that privilege is denied us. It is my duty to paint a different picture, and the statements that I shall make with reference to conditions in my home city of Baltimore will undoubtedly reflect identical conditions in other large cities of this Nation.

Baltimore is one of the oldest cities in this country, and many of its houses, especially those in the areas occupied by persons of low income, have suffered the extreme ravages of time. In 1934 a survey was made of the housing conditions in Baltimore, and the result of that study proved astounding even to us who had, we thought, knowledge of conditions in the city. In the investigation of substandard areas of the city it was found that there were 23,059 houses which, unheated, rent for 82 cents per room per week, or approximately $3.55 per room per month, occupied by 25,549 families, or approximately 100,183 persons. Thirty and forty-three one-hundredths percent of these houses were two-story units; 18.25 percent were two-and-one-half-story units; 49.79 percent were three-story units; and the balance composed of houses which contained upward of seven stories. Seventeen and five one-hundredths percent of these houses were designated as good; 40 percent as indifferent; and 41.5 percent as bad. When these houses were studied with reference to cellar conditions, it was found that 10.85 percent of the cellars were wet; 13.25 percent were without cellars; and 75.90 percent were dry. With reference to plumbing, 29.38 percent were designated as good; 36.22 percent as indifferent; and 34.17 percent as bad, with 0.23 percent without plumbing facilities of any kind. The study also showed that there were 15,205 baths in these houses, or one bath to 11.09 rooms, or 6.58 persons. There were 30,045 toilets, or one toilet to 5.61 rooms, or every 3.33 persons. It was concluded in that survey that 65 percent of the houses in these substandard areas, or houses occupied by approximately 60,000 persons, were substandard.

Without a program such as that instituted by the United States Housing Authority in the city of Baltimore, 60,000 citizens of Baltimore would have been permanently doomed to spend their lives in blighted areas. While during the last 10 years the reports of the city engineers of Baltimore show

that 6,957 houses were built over and above those demolished, it has been calculated that only 8.9 percent of that number were available for rental by low-income groups and then at monthly rental of $10 per room per month without heat. If the residents of the substandard areas were able to pay such rent, which I know is contrary to fact, we see that the construction by private interests is not easing the situation. The reason, if I may follow the thought further, for the unavailability of newly constructed homes to persons of low-income status is that most of the newly constructed dwelling units are erected for immediate sale rather than for rent. Although there are no statistics available to show the average earnings of the residents in these substandard areas, it is logical to assume that a substantial majority are small-wage earners with their sole livelihood contained in a weekly envelope, and therefore financially unable to enter into any arrangement for the purchase of homes. Again, there is a slight possibility that the owners of these substandard homes, who are operators and interested solely in the yield, will repair and modernize them other than on a level barely fit for human habitation.

Today seven sites have been selected in Baltimore city for slum clearance and erection of housing. Today, 3,762 families, or approximately 15,000 persons, will be afforded modern, comfortable, clean places of habitation. What, may I ask, is the future of approximately 45,000 other citizens in Baltimore who will be denied these benefits?

Mr. Speaker, while I would not, for one moment, besmirch or question the loyalty and Americanism of those persons in Baltimore or in other cities who are denied what we consider the ordinary privileges of a decent life, I would suggest, nevertheless, that we are permitting fertile fields to exist for the development of ideas and ideals which are antagonistic to our system of government and our democratic institutions. America was not founded, I want to believe, with the idea that those on one side of the railroad track shall possess the decencies of life and those on the other side be denied them.

The program, as it is now being carried on in Baltimore, has a particular feature which appeals to me and, undoubtedly will appeal to many of you. In the years that I served in the legislative councils of my city and State I fought constantly to secure playgrounds and recreational centers for those underprivileged children who reside in areas such as we are now attempting to abolish. The plans for the construction of seven sites in Baltimore include playgrounds which will be available not only to the children who reside in these areas but also to those children who reside in adjoining areas and neighborhoods.

The destiny of our country lies with the future generations. In recognizing that fact, it is our duty, and one that we cannot shirk, to see that our children receive an education, a proper home training, and opportunities for healthy, normal development. The children in these seven areas in Baltimore will not come home to overcrowded, dark, gloomy, unsanitary homes, but to homes in which light and air—unfortunately strangers to many of them—will ever be present. Instead of being driven to the streets and to unwholesome companions, these children will be afforded both a pleasant home life and ample playgrounds and recreational opportunities. I would not contend that this legislation will remedy all of the difficulties for any community, but at least it is a step in the right direction.

By your failure to support this amendment you denied to many people of this country privileges which are rightfully theirs. Although the housing resolution (S. 591) was defeated yesterday, it is my sincere hope that this legislation will come before the House as soon as we reconvene in January 1940 and that the Members will right the wrong that was committed yesterday by a vote of 191 to 170. I am proud that I supported this legislation to help the underprivileged people of America.

Martial and Habeas Corpus Proceedings

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ARTICLE BY HON. JOHN H. HATCHER, ASSOCIATE JUSTICE OF THE WEST VIRGINIA COURT OF APPEALS

Mr. DAVIS. Mr. President, I have conferred with the Joint Committee on Printing, and I desire now to ask unanimous consent to have printed in the RECORD an article by Hon. John H. Hatcher, associate justice of the West Virginia Court of Appeals, published in the May issue of the American Bar Association Journal, the article being entitled "Martial Law and Habeas Corpus Proceedings; Extent of War Power in Emergency."

There being no objection the article was ordered to be printed in the RECORD, as follows:

[From the May issue of the American Bar Association Journal]

MARTIAL LAW AND HABEAS CORPUS: EXTENT OF WAR POWER IN EMERGENCY

Confusion on the subject and some of the reasons therefor—Not removed by ex parte Merryman and ex parte Milligan—Unfounded assumptions in opinion in first case—Contemporary opinion that article I, section 9, is not an exclusive grant of all power over habeas corpus to Congress but a specific restriction on the power of that body to have courts suspend the writ—Criticisms of opinion in Milligan case—All-embracing character of war power wherever an emergency of war arises, etc.

(By Hon. John H. Hatcher, associate justice of West Virginia Court of Appeals)

An investigator is astonished at the confusion enveloping this subject. The literature thereon abounds with divergent statements and is not even free from inaccurate quotations. Much of the confusion of English precedents on martial law is due to their failure to distinguish between its use in time of peace and time of war. Some of the confusion is due to the several definitions of the term. For example, Sir Thomas Smith, an early writer on the Government of England, said martial law was the arbitrary will of the King in war; while a century later, Sir Matthew Hale, the legal commentator, said martial law was the law imposed by the King's marshal for "the government, order, and discipline in an army." Some of the modern confusion has arisen from failure to distinguish between the terms "military law," "military government," and "martial law." Military law, technically, is a legislative code of rules and articles of war. Military government, technically, is the control imposed by the military command over conquered or disorganized territory. Infractions of military law and of military government may be tried by military commissions, sometimes called courts martial; but neither military law nor military government is martial law, as technically defined. The latter has no code of laws, but is simply the exercise of military discretion in time of war.

The essence of martial law is said to be suspension of the writ of habeas corpus. The confusion on the latter is but little less than that on martial law. This writ did not issue from the mists of primitive common law fully panoplied as many writers have assumed. On the contrary, the writ passed through a long transition period just as did other legal writs. The learned Edward Jenks has a clear conviction that the original use of this writ was "not to get people out of prison, but to put them in it." Jenks, Story of Habeas Corpus (18 Law Q. Rev., 65). Even after the writ was molded to test only the legality of a commitment, several centuries passed before the writ was granted to persons committed by the royal order. And this was finally accomplished, not by expansion of the common law (as some controversialists have asserted), but by specific acts of Parliament in the seventeenth century. In this country further confusion regarding the writ has arisen from the provision of the National Constitution, article I, section 9, that "the privilege of the writ of habeas corpus shall not be suspended unless when in cases of rebellion or invasion the public safety may require it." Some writers of national prominence have construed this provision to be a delegation of power to Congress (see Pomeroy's Constitutional Law, sec. 707). Other writers equally prominent have construed the provison to be a limitation of congressional power (see Halleck's International Law, p. 503). The division of comment on martial law and habeas corpus caused Attor-

ney General Cushing, in 1857, to complain that the commentators were all at sea. The interim decisions have left commentation still at sea, particularly the leading Federal decisions of ex parte Merryman and ex parte Milligan.

EX PARTE MERRYMAN, TANEY'S CIRCUIT COURT DECISIONS, 246

Merryman, a resident of Maryland, was arrested May 25, 1861, under a military order and taken to Fort McHenry. Upon his petition, Chief Justice Taney issued a writ of habeas corpus on May 26, directed to General Cadwalader, the commander of the fort, and returnable at 11 o'clock the next day. At that hour, the general's return was filed, stating, in effect, that Merryman had been arrested under order of Major General Keim, of the United States Army, and brought to Fort McHenry, charged with "various acts of treason, and with being publicly associated with and holding a commission as lieutenant in a company having in their possession arms belonging to the United States and avowing his purpose of armed hostility against the Government." The return further stated that General Cadwalader was informed the charges could be "clearly established"; that he was authorized by the President in such cases to suspend the writ of habeas corpus for the public safety; that he realized this power was "a high and delicate trust" which he had been enjoined to exercise "with judgment and discretion," and suggested that he be not embarrassed by any "unnecessary want of confidence." The return then requested that further action be postponed until the general could receive instructions from the President, when a further return would be made.

This request was disregarded by the Chief Justice, who forthwith issued an attachment for contempt against General Cadwalader because he had not produced Merryman. The marshal was unable to execute the attachment. Whereupon the Chief Justice filed an opinion which was promptly pronounced "unanswerable" by the Supreme Court of Wisconsin (*In re Kemp*, 16 Wis. 382, 391), and which has been approved by a number of other courts.

An initial impression of Justice Taney's course in the Merryman case is that he was precipitate. There is a presumption, honored in all courts, that official conduct is in line of official duty (*Martin* v. *Mott*, 12 Wheat. (U. S.) 33). It would seem that this presumption should have been accorded the military officers responsible for Merryman's detention until General Cadwalader could have communicated with the President, and made the further return promised.

One's attention is next arrested by the variance of the facts stated in the opinion from the facts in the record. And one is surprised that, despite General Cadwalader's declared realization that his authority was "a high and delicate trust" to be executed with "judgment and discretion," the opinion treats the case as one in which the military power proposed to usurp judicial authority at will "upon any pretext or under any circumstances." That unwarranted approach to the case forecasts the extreme legal propositions advanced by the opinion. Its chief pronouncement is that under article I, section 9 of the Constitution, no suspension (or disregard) whatever of habeas corpus is lawful unless authorized by Congress. This holding is based on the theory that the right of suspension is an exclusive grant of congressional power. The opinion quotes two American authorities, Story and Marshall. The quotation from Story postulates merely that Congress is the sole judge of the exigency warranting the suspension referred to in the Constitution, but makes no attempt to define the suspension. The quotation from Marshall (*Ex parte Bollman*, 4 Cranch. 101) relates specifically to the Congressional Judiciary Act of 1789, and not to article I, section 9, of the Constitution. The opinion does not discuss the colonial background of the section, does not regard the plain language of the section, and does not consider the comments thereon of the Constitution makers. These omissions are due perhaps to the stated assumption that the construction adopted in the opinion had been theretofore given by everyone, particularly (as the opinion states), by "every jurist and statesman" in the Congress which considered suspending the writ in connection with the Burr conspiracy. My research does not find substance for the assumption.

The colonists demanded the privilege of habeas corpus as Enlishmen, and it was usually accorded them, though in some instances the colonial governors were recalcitrant. "Now and then," upon complaint by a governor that the Americans were becoming "a factious and turbulent people, with heads turned by queer political crotchets," the King's Privy Council would instruct the governors to suspend the writ. (Fiske, The American Revolution, vol. 1, p. 2.) That was done in times of peace, was solely for purposes of discipline, and was without legal justification. Wherefore those suspensions were resented by the colonists. But the annals show that they acquiesced in violations of the writ in times of war. During the Revolutionary War the American officers disregarded the writ at will, and the records of the Continental Congress, to which several personal protests were made, disclose no congressional action against the practice. On the contrary, in 1778 that body specifically approved the refusal of General Smallwood to honor a writ issued by the chief justice of Delaware.

Madison's notes on the Constitutional Convention contain only two comments on this section, one by Judge John Rutledge, of South Carolina, and one by James Wilson, of Pennsylvania, both outstanding delegates. Rutledge was for declaring the writ inviolate on the ground that a suspension would never be necessary "at the same time through all the States." This remark is not comprehensible except upon the one hypothesis, that Rutledge understood the proposed suspension to be Nation-wide. Wilson merely "doubted whether in any case a suspension could be necessary, as the discretion now exists with judges, in most important cases, to keep in gaol or admit to bail." Prisoners gaoled and subject to bail at judicial discretion were civil, not military, prisoners. The latter were ordinarily detained in prison camps, not subject to bail at all, and held or released at the discretion of the commanding officer. So it is apparent that Wilson understood the section to apply to civil arrests. This understanding was in no wise strained, because, on occasion, civil officials had been given legislative authority to disregard the writ.

For example, in May 1781 the Virginia Assembly empowered the Governor to have arrested and confined, without benefit of habeas corpus, any person he had good cause to suspect of disloyalty. Thus the only recorded construction of this section within the convention itself is that it related to a Nation-wide suspension of the writ as to civil arrests. Governor Randolph, of Virginia, himself a framer of the Constitution, in a speech to the Virginia convention which ratified the Constitution, associated the section with civil arrests, saying, "I contend that by virtue of the power given to Congress to regulate courts, they could suspend the writ of habeas corpus. This is therefore an exception to that power." (3 Elliot's Debates 464.)[1] Before the same convention, Mr. Nicholas, Mr. Grayson, and Mr. Henry, and before a like convention in Massachusetts, Judge Sumner also construed the section to be a retraint on congressional power, and that construction was questioned by none. (3 Elliot's Debates, pp. 102, 449, 461; and 2 Elliot's Debates, pp. 108–109.) The Merryman opinion does not name the jurists and statesmen in Congress who discussed the Burr conspiracy, but in the Annals of the Congress, 1807, wherein it was discussed.

I find only two constructions of the provision, to wit, those by Representatives Broom and Campbell, both of whom said that the provision was a restriction of congressional power. (Annals 9th Cong., 2d sess., pp. 503 and 540.)[2] The phrasing of the Constitution was done by masters of the English language. It is not consistent with their skill that an exclusive grant of power should have been expressed in negative words alone. If the sententious language of the section be given its ordinary meaning, then the construction of Randolph and his contemporaries is patently correct. The "shall not" of the section can mean naught but prohibition, and standing alone would be absolute; but to the "shall not" the public emergency is an exception. That the section was thought necessary at all implies the conception of the framers, that Congress, through another provision of the Constitution, had been given a power over habeas corpus. I see no reason to controvert Governor Randolph's position that such power was an incident of the congressional power to regulate the Federal courts. The framers knew that in wartime Congress could not foresee the necessity of most military arrests, and that the imperative need of quick and sometimes secret military action in such cases could not await congressional investigation.

Unless it be taken that the framers were unmindful of this knowledge; unless it can be demonstrated that Rutledge, Wilson, and Randolph did not speak the understanding of their fellows, then the section was designed to be not an exclusive grant of all power over habeas corpus to Congress, as the Merryman opinion holds, but a specific restriction on congressional power to have the courts suspend the writ; and the section has no bearing on the occasional or local disregard of the writ by a military commander. I submit with deference, that no opinion on this subject is "unanswerable" which does not answer Rutledge, Wilson, and Randolph.

The Merryman opinion attempts to correlate the status of the writ under the Federal Government with that of the writ under the common and the statutory laws of England. This attempt overlooks the fact that such laws were not adopted by the Constitution and could not bind the Federal Government in any manner. The opinion deduces from commentaries on the English Government that only Parliament could suspend the writ of habeas corpus in England, and reasons accordingly that only Congress could suspend it in the United States.

The opinion overlooks the repeated declarations of the Constitution makers that our situation was entirely different from that in England and that "the British Government cannot be our model" (5 Elliot's Debates, pp. 137, 141, 153, 165, 168, 188, 234). A power may not be accredited to Congress because Parliament has it, but only if the Constitution delegates it. Neither

[1] Senator Wall, of New Jersey, quoted Governor Randolph as saying to the convention, June 10, 1788, that the writ could be suspended here only by "the legislature * * * never by the Executive." Congressional Globe, 1862–63, 1462. That quotation is not sustained by the official record of the Governor's remarks. See 3 Elliot's Debates, 203.

[2] Representative Campbell said: "This provision evidently relates to Congress, and was intended to prevent that body from suspending by law the writ of habeas corpus except in cases stated, and has no relation whatever to the act of an individual in refusing to obey the writ. Such refusal or disobedience would not certainly suspend the privilege of the writ, and must be considered in the same point of view as the violation of any other public law made to protect the liberty of the citizen."

is congressional power expanded by the common law, for "* * * the United States, as a Federal Government, has no common law * * *" (*U. S.* v. *Worrall*, 2 Dallas, 384, 394. Accord: *Ex parte Bollman*, 4 Cranch, 93–4). Pursuing the unwarranted analogy to the English Government, the Merryman opinion charges that if the President may suspend the writ, then the Constitution has conferred on him more regal and absolute powers than England had entrusted to its Crown. That charge also fails, because at the time our Constitution was formed and prior thereto even to the days of the conqueror, the right of the Crown, as the supreme military commander, to administer martial law in time of national danger, if necessary, had been consistently recognized. In 1565, Sir Thomas Smith, in his Commonwealth of England, wrote: "In wartime and in the field the prince hath also absolute power, so that his word is a law." This same power was recognized in the celebrated Ship Money case in 1637 by judges and lawyers alike, the able St. John, though opposing the Crown, saying: "* * * it must needs be granted that in this business of defense, the suprema potestas is inherent in his Majesty, as part of his crown and kingly dignity."

Furthermore, Parliament, which alone speaks with finality for England, in three separate acts near the date of the Constitution, to wit, 39 George III, chapter 11; 43 George III, chapter 117; and 3 and 4 William IV, chapter 4, referred to this power as the "acknowledged prerogative" and as the "undoubted prerogative" of the Crown.

The Merryman opinion brushes aside any possible argument in favor of the Government's right to suspend the writ even "for self-defense in time of tumult and danger," on the ground that the Government is one of delegated powers only, and such a power is not granted. The opinion treats the President as Commander in Chief of our military forces merely "from necessity and the nature of his duties," and concedes no military right to arrest a civilian "except in aid of the judicial authority and subject to its control." And the opinion would exalt constitutional guaranties of personal rights and property, including trial by jury, above the necessities of war. The opinion thus ignores the express constitutional provisions which authorize the Government to wage war and which make the President the Commander in Chief of the Army and the Navy of the United States.

The opinion takes no account of the common thought among all nations from the dawn of history that in times of peril the conservation of the nation may demand "the sacrifice of the legal rights of a few," and may not only justify but compel the temporary abandonment of civil procedure (Hallam, Const. Hist. of England, 240). This thought is based on the first law of nature, the right of self-preservation. Whatever is necessary to preserve that right is lawful. A conflict between hostile nations is a struggle for self-preservation, wherein civil rights may lawfully be disregarded. "Inter arma, silent leges," said Cicero. Whatever else their disagreement, those two great antagonists, Jefferson and Hamilton, concurred in this: That the impulse of self-preservation, whether individual or national, surmounted all civil laws, and that the duty to save the country when in danger was a greater duty than that to respect property or personal rights (Jefferson's Comp. Works, vol. 5, p. 542; The Federalist, No. XXIII). Unnoticed by the Merryman opinion is "an unbroken sequence" of English decisions from the earliest Year Books down to the formation of our Constitution, upholding the right of the Crown in time of war forthwith to occupy fields, raze houses, impress civilians, make precautionary arrests, sequester noncombatants, and even execute hostile subjects if the exigency admitted no delay (H. Erle Richards, Martial Law, 18 Law Q. Rev., on p. 136). "Flagrante bello," said the court of the King's Bench in 1776, "the common law has never interfered with the Army" (*Barwis* v. *Keppel*, 2 K. B. 314, 318).[3]

The framers of our Constitution were familiar with ancient history, and with the English decisions. Most of the framers, including their presiding officer, General Washington, had taken an active part in the recent war with England. In that war they had seen their armies, following the English custom, occupy, use, or destroy private property as the apparent necessity demanded; they had seen loyal civilian population subjected to military control; some had seen their officers disregard civil process, including writs of habeas corpus; and some had been with General Washington at Tarrytown where he asserted authority to hang the civilian, Joshua Hett Smith, immediately, as a traitor, and stated that nothing could save him but a candid confession of his connection with the André affair. The lawfulness of those means was not questioned, and since the framers placed no specific limitation on the war power, they must have expected it to employ those same means in defending the Government of the United States. If those means override the other constitutional provisions, the framers must have so intended; and those means themselves become the law of the land, and are due process under the Constitution. This doctrine is neither original nor novel. It was stated without controversion in 1628 by Serjeant Ashley in the great English parliamentary debates which preceded the preparation of the Petition of Right, as follows:

"The martial law, though not to be used in times of peace * * * yet in times of invasion, or other times of hostility when an army-royal is in the field, and offenses are committed, which require speedy reformation, and cannot expect the solemnity of legal trials; then such imprisonment, execution, or other justice done by the law-martial is warrantable, for it is then the law of the land, and is "jus gentium" (the law of the nations) * * *" 3 State Trials, page 149. This doctrine was specifically applied to our Constitution in *McCulloch* v. *Maryland* (4 Wheat. (U. S.) 316, 409, 419) wherein the Court said, "the Government, which has a right to do an act, and has imposed on it the duty of performing that act, must according to the dictates of reason, be allowed to select the means; * * * That any means adapted to the end, any means which tended directly to the execution of the constitutional powers of the Government, were in themselves constitutional."

The bane of inaccuracy did not escape several commentators on the Merryman case. Mr. Tucker, in his work on the Constitution, section 318, says: "The President never acted in the matter so as to release Merryman." Mr. Bailey, in his work on Habeas Corpus, section 110, follows Tucker. According to these authors, Merryman, unreleased, still is waiting, still is waiting. War of the Rebellion, Official Records, series 2, volume 2, page 226, shows that Merryman was "transferred to civil authority" sometime (date not given) prior to February 17, 1862. The usually reliable Warren, in his work on The Supreme Court, volume 3, page 96, after referring to the storm of public criticism which met the Merryman opinion, says that 4 years later it was "strongly upheld" in the majority opinion of the Milligan case. "Never," says Mr. Warren, "did a fearless judge receive a more swift or more complete vindication." The unvarnished truth is, the facts in the two cases are dissimilar; the principles necessarily involved in the two cases are not the same; the Milligan opinion does not mention the Merryman case at all, and is so inconsistent and inaccurate that what vindication, if any, the opinion affords Chief Justice Taney is tenuous indeed.

EX PARTE MILLIGAN (1866, 4 WALL. U. S. 2)

Milligan, a citizen of Indiana, charged with conspiracy and insurrection against the Government of the United States, was tried and sentenced in 1864 by a military commission appointed by the President under express congressional authority. The Supreme Court, upon habeas corpus, held unanimously that the commission had no jurisdiction over Milligan. The holding itself is not here questioned, but the opinion of the Court, written by Associate Justice Davis, made some majority pronouncements on martial law which (only) are seriously questioned.[4] The Davis opinion says:

"No doctrine, involving more pernicious consequences was ever invented by the wit of man than that any of its (the Constitution's) provisions can be suspended during any of the great exigencies of government." Standing alone, that declaration would support Taney, but later the Davis opinion, after referring to the fact that in every war, certain measures deemed necessary by the Government, would be opposed by some citizens, makes this entirely inconsistent admission: "In the emergency of the times, an immediate public investigation according to law may not be possible; and yet the peril to the country may be too imminent to suffer such persons to go at large. Unquestionably, there is then an exigency which demands that the Government, if it should see fit in the exercise of a proper discretion to make arrests, should not be required to produce the persons arrested in answer to a writ of habeas corpus."

The Davis opinion, calmly ignoring this admission, then says: "Martial rule can never exist where the courts are open and in the proper and unobstructed exercise of their jurisdiction." This test of martial law is patently incomplete, since it does not provide further that the courts should be competent "to avert threatened danger" and "to punish with adequate promptitude and certainty the guilty conspirators" (opinion of Chief Justice Chase). Indubitably, the acid test must be, Can the courts handle the emergency? The Davis opinion continues: "Martial law cannot arise from a threatened invasion. * * * It is also confined to the locality of actual war." These prescriptions are myopic. A hostile army on our border "might necessitate extraordinary measures * * * although no hostile force had crossed the line" (Hare, Am. Const. Law, p. 965; accord, Willoughby, Const. of U. S., sec. 1051). Excepting military defeat, few acts impair military morale more than persistent civilian attempts to prevent enlistments, procure desertions, weaken confidence, and inform the enemy. These treasonous acts may be in places far from and unaffected outwardly by actual warfare. But since civil procedure is not suited to deal effectively with such acts, the military commander must have and must exercise the power to suppress them, no matter where occurring. "There may be a state of war at any place where aid and comfort can be effectually given to the enemy,

[3] Accordant pronouncements were later made by English Lord Chancellors in *Ex parte Marais* (1901 A. C. 109, 115); *Tilonko* v. *Atty. Gen'l* (1907 A. C. 93, 95).

[4] Mr. Warren wrote in 1919, American Law Review, vol. 53, "It is evident that some of the expressions of Davis, J., in *Ex parte Milligan* (Mr. Warren's 'complete vindication' of Taney, Ch. J.) were loosely and probably inaccurately used." And how!

The celebrated phrase of the Davis opinion, "The Constitution of the United States is a law for rulers and people, equally in war and in peace," was preceded by that of Senator Saulsbury before the Senate, January 8, 1863, "* * * that Constitution which was made for all times—for peace as well as war."

having regard to the modern conditions of warfare and means of communication." (Frederick Pollock, What Is Martial Law? 18 Law Q. Rev., p. 157.)

The Constitution should be construed as a whole, and all provisions harmonized if possible. But where a general power is plainly conferred for a vital purpose, such as the power to wage war, any provision which would limit the power must be equally vital. The occasional preservation of personal or property rights is not comparable to the preservation of the Nation. This statement bears not the faintest implication that the military power may act wantonly. Martial rule is justified as well as limited by the emergency. Justification may be absolute today and wanting tomorrow, if the exigency has terminated. Every military act in violation of civil rights may later be judged civilly by the apparent necessity for it, and the actor held accountable by the civil law for any unwarranted invasion of personal or property rights. Even after 20 years, the English Colonial Governor Wall was not only brought to judgment, but was hanged for his ruthless administration of martial law following an insurrection.[5]

During the War of 1812, General Jackson placed New Orleans under martial law, and banished Dominick A. Hall, a Federal judge who issued a writ of habeas corpus for a military prisoner. When civil authority was restored, Hall imposed a fine on Jackson of $1,000 for alleged contempt, which the latter paid. (Money to reimburse Jackson for the fine was immediately raised in New Orleans by popular subscription; but he, with princely gesture, had the money given to the families of soldiers who had fallen in defense of the city. In 1844 Congress repaid him the fine with interest.)

The Davis opinion is surprisingly inadvertent in its precedential quotations. The opinion states that in reversing the attainder of Thomas, Earl of Lancaster, 1327, the English Parliament adjudged that in time of peace no man should be tried for any offense except by the King's courts, and "that regularly when the King's courts are open it is a time of peace in judgment of law." Neither the Latin copy of that judgment in Hale's Pleas of the Crown, chapter 26, nor its English translation in One Howell's State Trials, page 39, et seq., contains the quotation, in form or substance. It is true that in later years a legal saying arose in England that a place where the courts were open should be regarded as a place of peace. But in medieval times the military disturbances were usually limited to the localities occupied by armed forces, and elsewhere orderly civil procedure was not interrupted. The yardstick of peace in those times is too short for measurement now, since increased facilities of communication and locomotion now extend the disturbances of war to places remote from armed camps (Cyril Dodd, The Case of Marias, 18 Law Q. Rev., on p. 147).

The Davis opinion is equally inattentive in stating that during the celebrated parliamentary debate concerning the trial of the missionary, John Smith, by a military tribunal in British Guiana, Lord Brougham and Sir James MacKintosh said: "When the laws can act, every other mode of punishing supposed crimes is itself an enormous crime." This quotation is attempted from a speech of Sir James, but is not correct. He unequivocally defended martial rule in case of necessity, and, following that defense, said, not "When the laws can act," but "As soon as the laws can act," etc. Lord Brougham also conceded that in case of invasion or rebellion, "when there is no time for the slow and cumbrous proceedings of the civil law," martial law was justifiable. And while both of those statesmen did denounce the trial, they did not speak for England, as the House of Commons, which did so speak, confirmed the trial. (See briefs of counsel, 4 Wall., 53–55 and 99.)

The Davis opinion continues remiss in declaring that our Revolutionary fathers characterized the proclamation of martial law at Boston by General Gage as an "attempt to supersede the course of the common law, and instead thereof to publish and order the use of martial law." The quotation was evidently attempted from a declaration of the Continental Congress. Here is what the records show. On June 12, 1775, General Gage, claiming authority from the Royal Charter of Massachusetts, and stating that "justice cannot be administered by the common law of the land, the course whereof has for a long time past been violently impeded and wholly interrupted," proclaimed martial law "for so long as the present unhappy occasion shall necessarily require."[6] A committee was at once appointed by the Massachusetts Provincial Congress to consider "the late extraordinary proclamation" of General Gage. The report of the committee was filed June 16, 1775, and denied neither his claim of authority nor his statement that the common law was not being administered. The matter was taken up then by the Continental Congress, which, on July 6, 1775, issued a declaration, reciting merely that General Gage, by proclamation, "proceeds (not 'attempts') to supersede the course of the common law," etc., but not controverting his statement that the course of the common law had been impeded and interrupted. Assuming that his statement was correct, because not challenged by those representative bodies, there should be no serious doubt of his lawful right to impose martial law. (See fourth series American Archives, vol. 2, pp. 970, 1416, 1868.)

The Davis opinion is finally inexact in saying: "The Virginia Assembly also denounced a similar measure on the part of Governor Dunmore 'as an assumed power, which the King himself cannot exercise; because it annuls the law of the land and introduces the most execrable of all systems, martial law.'" Henning's Statutes at Large of the Virginia Assembly contain no such denouncement. What the opinion evidently referred to is a "declaration" by a convention of Virginia delegates on December 13, 1775, since the declaration does contain the phrases quoted, though widely separated and in no sense connected by the word "because" or any other word. The declaration did execrate martial law, but did so hypothetically. In a different connection entirely, the declaration did reprobate Lord Dunmore's attempt, as the declaration charged, to employ martial law in violation of the "constitution" (charter) of Virginia, and against loyal subjects of the King of England, in order "to intimidate the good people of this colony into a compliance with his (Dunmore's) arbitrary will." And this it was—the use of martial law arbitrarily—that the declaration said the King himself could not do. (See fourth series, American Archives, vol. 4, p. 82.) Upon the allegations of the declaration, the Dunmore proclamation was clearly unjustified, but the sentiments of the declaration do not warrant the realinement of its phrases as was done in the Davis quotation.

In conclusion, I submit diferentially: In this world of arms, constitutional civil rights will endure only if protected by arms. The constitutional authority of the United States Government to wage war, being unrestricted, implies the full use of the war power. That power is the power of necessity, than which none is greater. What necessity requires, it justifies. Wherefore, not only upon the actual theater of war, but wherever an emergency of war arises, the violation of every civil constitutional right impeding the war power is justified if necessary. At peace, civil law should be absolute; at war, martial rule, wherever necessary, must be absolute.

[5] The Attorney General (later, Lord Ellenborough) said to the jury concerning Wall, that if the circumstances disclosed a reasonable degree of necessity for his conduct, "God forbid that a hair of his head should be touched."

[6] General Gage was the regularly appointed Governor of Massachusetts, and he referred to this provision in the charter: "And wee doe by these presents * * * Ordaine that the Governor shall have full power * * * to use and exercise the law martial in time of actual * * * Rebellion as occasion shall necessarily require. * * *"

Home Owners' Loan Corporation and Home Loan Banks

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

STATEMENT BY HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by myself relative to the Home Owners' Loan Corporation and home-loan banks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Discussing the so-called spending bill on the floor of the Senate last week, I made certain statements relative to the Home Owners' Loan Corporation and home-loan banks, component parts of the Home Loan Bank Board, which appeared on page 10011 of the CONGRESSIONAL RECORD of July 26, 1939. To those statements Mr. T. D. Webb, vice chairman of the Board has taken exception through means of a letter addressed to the Honorable ALBEN W. BARKLEY which was printed in the CONGRESSIONAL RECORD of yesterday, August 3, 1939.

I wish merely to say that the facts and figures given in my remarks are accurate, according to the Government's own records, and that I had no intention of voicing statements that might be misleading as Mr. Webb interpreted them. I made no complaint against the operations of the institutions for which he speaks, but simply used the Home Owners' Loan Corporation as an example to show losses that might easily and justifiably be expected to result from the type of loans contemplated under the bill then pending.

Since Mr. Webb, as an official of the Home Loan Bank Board has taken exception to my statement, it should be noted that he does not deny that the capital stock of the home-loan banks and the Home Owners' Loan Corporation represents $325,000,000. That was my statement, and in order to make the record doubly

clear I wish here to submit to the Senate and have printed as a part of my present remarks the following official Government statements of the matter:

Home Owners' Loan Corporation (as of Mar. 31, 1938), created by 48 Stat. 129, as amended by Public, No. 178, 73d Cong., and Public, No. 76, 74th Cong.

Obligations (including capital)	Authorized	Issued and outstanding	Owned by	Guaranteed by United States
Stock	$200,000,000	$200,000,000	Secretary of Treasury for United States.	
Debentures, Bonds, Notes	Not to exceed $4,750,000,000 outstanding at one time.	2,938,078,050	Various	(1).

1 3 percent series A 1944–52, 2¾ percent series B 1939–49, 2¼ percent series G 1942–44 guaranteed as to principal and interest by the United States.
4 percent bonds of the corporation due June 1, 1951 (called June 1, 1935), were guaranteed by the United States as to interest.

The Federal home-loan banks (12) (as of Apr. 30, 1938) created by the act of July 22, 1932 (47 Stat. 726)

Obligations (including capital)	Authorized	Issued and outstanding	Owned by	Guaranteed by United States
Stock	Not less than $5,000,000 for each bank.	$160,580,150	1 $124,741,000 2 35,839,150	
Debentures, Bonds, Notes	Indefinite	76,500,000		No.

1 U. S. Government.
2 Members of Federal Home Loan Bank System.

The Secretary of the Treasury is authorized to purchase stock of the Federal home-loan banks in an amount not to exceed $125,000,000. Any institution admitted to membership is required to subscribe for stock in the bank of which it intends to become a member in an amount equal to 1 percent of the total unpaid principal of its home-mortgage loans, but not less than $500. Each Federal home-loan bank shall have power subject to the approval of the Board to borrow money, to give security therefor, and to pay interest thereon, and to issue bonds and debentures having such maturities as may be determined by the Board, secured by the transfer of eligible obligations of borrowing institutions on advances made by the bank to borrowing institutions and by the deposit of home mortgages. The Federal home-loan banks shall be jointly and severally liable for the payment when due of all bonds and debentures and all notes and other obligations issued by any Federal home-loan bank. All obligations of Federal home-loan banks shall plainly state that such obligations are not obligations of the United States and are not guaranteed by the United States.

Taking the Sixth Annual Report of the Federal Home Loan Bank Board as the source of my information, I cited that as of June 30, 1938, more than a year ago, the Home Owners' Loan Corporation had authorized 152,262 foreclosures on properties on which it had made loans—an average of more than 3,000 in every State in the Union. As of that date the Corporation had actually repossessed 75,127 properties, or an average of upward of 1,600 properties in each State. In other words about half of the properties upon which foreclosures have been authorized have actually been repossessed, and of those repossessed more than 50 percent were not at that time rented.

Upon the record I based the prediction that the ultimate loss of the Home Owners' Loan Corporation would certainly equal or may exceed the combined capital stock of both the Home Owners' Loan Corporation and the home-loan banks.

All of Mr. Webb's persuasive argument to the contrary, such is my prediction today, as it was last week. Like so many other lending agencies of the Government, the Home Owners' Loan Corporation has no official appraisal of its assets upon which to forecast its ultimate financial success or failure. Virtually all of them claim they are making money for the Government in one way or another. They may be. On the other hand so far as is actually known, and, moreover, so far as can be learned, they may be in that unhealthy category of the Commodity Credit Corporation, about which we have so discouragingly learned.

In an effort to learn something of these lending agencies—comprising, as they do, a sort of fourth branch of the Government, about which the Government itself and the public generally knows and is able to learn so little—the Senate at this session has provided for an appraisal of assets of these agencies, and, for the first time, we are promised a complete, accurate statement of their financial status. I hope the information will be forthcoming.

I repeat for emphasis, I was not complaining about the operations of Mr. Webb's agencies or any other agency of the Government. I fully understand their purposes and difficulties. I may say that the Home Owners' Loan organization has met with much ability many difficult situations, and losses on such operations are to be expected. I merely cited the conditions and facts in an effort to show what was to be expected as a result of the lending proposals then under consideration.

Dissolution of Borden's and National Dairies

EXTENSION OF REMARKS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

PETITION TO ATTORNEY GENERAL TO DISSOLVE BORDEN'S AND NATIONAL DAIRIES INTO THEIR CONSTITUENT PARTS

Mr. CULKIN. Mr. Speaker, on Friday, August 4, 1939, in company with my colleagues—CLYDE H. SMITH, of Maine; B. J. GEHRMANN, of Wisconsin; STEPHEN BOLLES, of Wisconsin; JAMES C. OLIVER, of Maine; WILLIAM LEMKE, of North Dakota; MERLIN HULL, of Wisconsin; FRANK B. KEEFE, of Wisconsin; and R. B. BUCKLER, of Minnesota—I went to the Attorney General's office and presented a petition requesting appropriate legal action be taken for the dissolution of Borden's and National Dairies into their constituent parts. All of the gentlemen above named believe that the present lowly condition of the dairyman is due to a Nation-wide monopoly which exists in the dairy-marketing field. They further believe that no solution of this situation is possible until such time as these monopolies are removed by legal action.

Attorney General Murphy and Mr. Thurman Arnold, in charge of antitrust prosecution, received us very courteously, and we had a full and fair discussion of the issues. The Attorney General assured us that he was in sympathy with us and that the matter would have the attention of his office.

We have made an appointment with Mr. Arnold for Monday, August 7, and will go over that matter in detail with him at that time. We invite the attention of the House to the grievous situation nationally of the 3,000,000 dairymen and their 9,000,000 dependents, and we will keep the Members fully advised of the developments in the situation.

Pursuant to the permission of the House, I append hereto the petition hereinabove described:

REQUEST TO THE PRESIDENT AND TO THE ATTORNEY GENERAL OF THE UNITED STATES TO CAUSE LEGAL PROCEEDINGS TO BE INSTITUTED AGAINST THE NATIONAL DAIRY PRODUCTS CORPORATION AND THE BORDEN CO., OF NEW YORK, TO END ABUSES AND MONOPOLISTIC PRACTICES INCIDENT TO THEIR MONOPOLISTIC POWERS

We, the undersigned, Members of the Congress of the United States from congressional districts vitally affected by the depressed condition of the dairy industry, respectfully petition the President and the Attorney General of the United States to cause to be instituted legal proceedings directed against the National Dairy Products Corporation and the Borden Co., of New York, with specific prayers directed to relief from specific wrongs and monopolistic abuses as follows, to wit:

(1) A decree for the dissolution of said corporations into their original local constituent parts and subsidiaries, with provision for the administration of said parts and subsidiaries by local directors and officials not related to or connected with any holding, directing, or any other company;

(2) That during the pendency of such proceedings and thereafter all individuals, officers, or employers of any master or controlling corporation, or any individual or officer now connected with the administration of said corporations, be enjoined from issuing directions or instructions to any of said subsidiary or local corporations or associations, or from instructing or directing the same as to practices to be followed, as to prices to be paid or charged, as to policies to be pursued, or as to any other procedure which looks to a unified administration of said subsidiaries from a central office, or an administration that is repugnant to the freest possible operation of said subsidiaries by their local members or duly elected officers;

(3) That pending such proceedings and following upon said decree, each and every plant, corporation, or agency possessed by said defendant corporations or operated by them for the purpose of purifying or pasteurizing milk shall be divorced from and operated independently of any plants, corporations, or associations engaged in the manufacture of dairy products, in the distribution of fluid milk or cream or other products, or in any form of processing, mar-

keting, or selling products which issue through said pasteurization plant or health agency, it being the purpose of this section to confine the operations of said pasteurization plant to the purification of milk and milk products, for which said pasteurization plants were designed and intended, and to divorce them from that power of controlling prices and distribution which inheres in the control of the access of milk to market;

(4) That pending said order of dissolution and thereafter, every plant owned, operated, or controlled by said defendant corporation shall be required to receive, pasteurize, and deliver milk at a fixed and reasonable cost for said testing, pasteurization, and bottling, to any and all persons or corporations who may present raw milk to said pasteurization plants for such purification, said charges to be in the nature of "custom" or "tolling" charges at cost plus a reasonable profit for the rendering of this service to the public, it being the purpose of this provision to limit the operation of said purification agencies to the sanitary purposes for which they were created, to provide for the free flow of milk from producer to consumer and to disassociate said health agencies from any power to control the price paid the farmer, the price charged the consumer, or other monopolistic control over said commodity;

(5) That, pending the outcome of this suit, said corporations be required to file a monthly statement with the Clerk of the Court in which said proceeding is pending and with the Clerk of every town and city in which its subsidiaries operate, a monthly statement verified under oath by the chief accountant and the treasurer thereof, which statement shall exhibit the amount of milk received by each of said pasteurization plants or other plants of said corporations, the States from which said milk has been received, the uses to which said milk has been put, the prices paid the farmer for said milk according to said classification, the actual cost of hauling, cooling, and other services, and the charges made producing farmers therefor, and such other information as will disclose the methods of classification and use of milk.

Said defendant corporations shall be further required to provide any organization of producing farmers or any association through which milk is delivered or which represents producing farmers, copies of said monthly reports showing the receipt of milk, its disposition, and the payments to the farmers therefor.

(6) During the pendency of said proceedings said corporations shall be enjoined—

(a) From exercising any influence over or conspiring with any bottle changes, truckmen's union, or other organizations or agencies for the prevention of competition or the exclusion of competitive dealers of milk and dairy products from the areas served by subsidiaries of said corporations;

(b) From entering into any agreement of any nature or description, or from using any powers of coercion to establish and maintain a uniform price for fluid milk or cream or other dairy products within the areas served by them; and

(c) From participating in any associations, institutes, or other agencies for establishing, fixing, and maintaining prices, for determining uses, for coercing farmers as to the use or disposal of their milk, or for any other acts designed to establish and maintain a price-fixing power over any other persons or corporations within the industry;

(d) It is the purpose of said proceedings to end by orders of the court, including preliminary injunctions, the abuses, monopoly powers, and destructive influences now exercised by said corporations over 12,000,000 people on the farm dependent upon the dairy industry and 70,000,000 urban consumers who rely upon milk as a necessary item of food.

Dated: Washington, D. C., August 3, 1939.

Signature and congressional district: Francis D. Culkin, Thirty-second District, New York; Clyde H. Smith, Second District, Maine; B. J. Gehrmann, Tenth District, Wisconsin; Stephen Bolles, First District, Wisconsin; James C. Oliver, First District, Maine; William Lemke, North Dakota, at large; Merlin Hull, Ninth District, Wisconsin; Frank B. Keefe, Sixth District, Wisconsin; Walter M. Pierce, Second District, Oregon; R. T. Buckler, Ninth District, Minnesota.

Hon. Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. WIGGLESWORTH. Mr. Speaker, the untimely death of Hon. ROBERT LOW BACON has brought to a close an outstanding life-long record of service to both State and Nation, a life true to the high traditions of the family to which he belonged.

The son of a distinguished father who had served both as Ambassador to France and as Secretary of State, he was himself destined to serve his country with distinction both in time of war and in time of peace. His military record included service as a first lieutenant of Field Artillery on the Mexican border in 1916, service as a major of Field Artillery during the World War, and service thereafter as a lieutenant colonel and colonel of Field Artillery in the Officers' Reserve Corps. For his contribution during the World War, he was awarded a Distinguished Service Medal. His record in time of peace included service in the Treasury Department, service as a member of the Republican State Committee, service as a delegate to Republican State and National Conventions, and service for 16 years in the National House of Representatives, with membership on the Committee on Appropriations, the Committee on Education, and other important committees of the House.

I knew BOB BACON in college days. I knew him as a warm friend throughout the remainder of his life. I shared in many of the experiences which life brought to him. I served with him for 8 years on the Appropriations Committee of the House.

Mr. Speaker, BOB BACON gave of himself unsparingly to the service of America. By his character, his ability, and his generosity of spirit, he commanded the respect of all and the affection of a host of friends in all walks of life. Death has deprived America of a devoted and distinguished public servant. It has deprived those close to him of a friend who cannot be replaced.

Cigar Makers' International Union

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

LETTER FROM MANUEL GARCIA, JR., CIGAR MAKERS' INTERNATIONAL UNION

Mr. PETERSON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JOINT ADVISORY BOARD, CIGAR MAKERS' INTERNATIONAL UNION OF AMERICA,
Tampa, Fla., February 25, 1939.

Hon. J. HARDIN PETERSON,
House Office Building, Washington, D. C.

HONORABLE SIR: Please be good enough to extend to all of Florida's Representatives in the House the felicitations of the 7,000 organized cigar workers of the American Federation of Labor, represented by this board, for their patriotic action in voting for the Guam item in the naval appropriations bill in the House.

We consider that a vote against was surrender to interests hostile to America, a retreat unworthy of the Representatives of a democratic and peace-loving people.

We are proud of your vote and that of the other Representatives from Florida in support of the President's foreign policy, which is a policy of peace precisely because it does not capitulate to blackmailers, treaty breakers, and aggressors.

Very sincerely,
MANUEL GARCIA, JR.,
President of the Board.

The Preservation of American Democracy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. KING
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, August 1, 1939

ADDRESS BY COL. O. R. McGUIRE

Mr. KING. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of

the preservation of American democracy, delivered by Col. O. R. McGuire, chairman of the committee of administrative law, American Bar Association, on July 1, 1939, at Saranac Lake, N. Y., before the New York State Bar Association, dealing with Senate bill 915 and House bill 6234.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen of the bench and bar of New York State, when we posit an inquiry as to whether democracy shall be preserved, there arises the further inquiry as to what precisely do we mean when we use the word "democracy"? Certain it is that we do not mean the condition of governmental affairs which prevailed in the present territory of New York, some three centuries ago, when doughty old Governor Stuyvesant, in denying an appeal, advised the sentenced defendants that: "If I were persuaded that you would divulge your sentences, I would have hanged you at once on the highest tree in New Netherlands"; or when he openly declared on another occasion that: "If anyone during my administration shall appeal, I will make him a foot shorter and send the pieces to Holland and let him appeal that way"; or again when he said that, "It were treason to petition against one's magistrates, whether there was cause or not." Doubtless it would have been much more satisfactory to Peter Stuyvesant if the Dutch statutes had been such that no appeal could have been taken from his decisions! He was far ahead of his times!

It is equally certain that by "democracy" we do not mean that condition of affairs prevailing in this same territory a century later when Peter Zenger was tried before the Lord Chief Justice of New York for criminal libel because he printed a statement that the liberties of the people were precarious and were likely to be brought into slavery if some past proceedings of the Governor of New York were not amended. The "day star of the American Revolution," Andrew Hamilton, in pleading in his eightieth year before His Majesty's Lord Chief Justice on behalf of Zenger, stated that no man in the least "acquainted with history or with law can be ignorant of the specious pretence which have often been made by men in power to introduce arbitrary rule and destroy the liberties of a free people." But what is meant by "democracy" was known to the Lion of the Rocky Mountains, Senator WILLIAM E. BORAH, when he stated that: "All lovers of liberty and all believers in a constitutional democracy must revere the name of Andrew Hamilton," and placed in the CONGRESSIONAL RECORD the inscription on a tablet erected in the Law Building of the New York County Lawyers' Association in commemoration of the voluntary services rendered by Hamilton in his defense of Zenger and at the same time placed in the RECORD the eloquent address delivered by Harry Weinberger at the unveiling wherein it was stated:

"Like threads of gold and silver running through the history of the human race are the stories of the struggles for liberty—liberty which has lifted the human race from its knees to its feet, from its feet to its wings, and made the people at times as nature intended them to be—free men and free women."

As the mother and son could not exist without God, so freedom and liberty could not exist without justice—and justice exists only in lands of far horizons, where the spirits of men are free. Moses searched for justice atop Mount Sinai; justice is the greatest earthly concern of men; and justice is their hope in life eternal. The Maker of the universe, worshiped alike by the Christian, Jew, and Moslem, is conceived to be the epitome of justice, ruling by love; and it is significant that the philosophies of ancient Greece—which were molded by the ancient Romans into an administrative absolutism—were the philosophies of pagans, molded by pagans into a legal system. They knew not a merciful God of justice, and their philosophy, which is to say their law, was a law of force—the law of the sword and the burning fagot—and we dare not overlook the fact that the existence and worship of Lord God eternal are today denied by some modern despots. There was no freedom or liberty for the individual under such a system of ancient law and none today in these European countries whose basic law is that of the ancient civil law—the countries which, too, have their Neros.

Democracy is of the spirit. It is based on the worth and dignity of the individual. In a democratic government the chief aim is the maximum of individual self-direction and the minimum of compulsion by officialdom. Means and ends are conjoined in the concept of freedom—freedom of thought, so that truth may prevail; freedom of occupation, so that careers may be open to talent; freedom of self-government, so that no one may be compelled against his will unless the outward manifestations of that will are such that they injure others. The democratic ways of life are based upon the conviction that in the long run the common interests can be better served by relying upon persuasion rather than upon appeals to force. When governments cease to rely upon persuasion and education and make their appeal to force to secure obedience to the laws, such governments cease to be democratic and become despotisms and tyrannies, or, to use a modern phrase, "totalitarian states."

Therefore when I posited the question at the outset whether democracy shall be preserved, I am really putting to you the issue whether we in America shall preserve the most advanced form of government known to man—a form of government in which the spirits of men are free—or whether we shall permit ourselves to slip back into the most primitive form of government, such as that which prevailed in this State 300 years ago when Peter Stuyvesant's will was law or which prevailed 200 years ago when Hamilton defended Zenger for criticizing a corrupt and tyrannical government—and such as that which prevails today in practically all of the world except that part which is ruled under common-law traditions. I have no doubt that each of you—no matter what may be the racial stock from which you came—would answer in reply to the abstract question that we must by all means preserve democracy, but an answer to the abstract question is not sufficient. The important question is, Where do you stand today and what are you going to do in the fight which is raging from Maine to California against the attempt of a very small minority of our people to fasten upon us that same system of administrative absolutism which was sired by the ancient Greeks and which was nursed into life by the ancient Romans—and upon the arguments that even though the courts are competent to determine issues between individuals, they are not competent to determine issues between the governors and the governed; that the administration of the laws of organized society, that is, of governments, requires the services of "experts"—when there is daily evidence before our eyes that these "experts" are politicians in office for comparatively short periods of time and some of whom do not cease to be politicians while they are in office; that instead of trying to maintain our traditional system of checks and balances in the administration of the law, we should strive for a system under which all administrators are philosophers and all philosophers are administrators—a sort of Chinese form of government where the administrative officers must pass examinations in the classics of the Chinese; and that the tempo of modern government is such that we had better undergo the mistakes and tyrannies of the administrators than to establish machinery of government under which "the regulators may be regulated"—to use the fine phrase of that great New Yorker and member of this bar, the late Elihu Root.

I think it fair to assume that if many men among us today had lived in the days of Peter Stuyvesant they would have advised their clients to pay the fines and suffer imprisonment rather than incur the anger of that old despot; that if they had been called upon to advise Zenger, they would have told him to pay his fine and go to jail rather than fight an arbitrary Governor; that they would have advised Thomas Jefferson that he was indulging in moonshine dreams when he penned the greatest indictment against arbitrary administrative power ever filed in the recorded history of mankind; that they would have advised George Washington to remain at home and cultivate his acres instead of spending 7 long and arduous years as leader of the Continental armies; that they would have advised Aaron Burr and Blennerhasset to plead guilty and go to the penitentiary when arraigned on a charge of constructive treason; and that they would have joined with the copperheads in traducing Abraham Lincoln for attempting to preserve the Union. They certainly would not have been found under the banner of Ethan Allen when he and his followers dared the land speculators of New York—holding grants from the administrative officers of the colonial government of this State issued in defiance of the rules and orders of their superior administrative officers in England—to come and take their homes.

I shall not take your time today to demonstrate that the complexities of modern life are such that vast powers of regulation and control must be vested in government to the end that the greedy and avaricious may not ride booted and spurred over the masses of mankind. I have done that elsewhere, though I may observe that throughout our history ruthlessness and humane dealing have run side by side; in almost equal degree we have exhibited the temper of conformity and of revolt—whether in clearing forests or exterminating the Indians, whether in building railroads or in rigging the market in order to wreck these railroads; whether in establishing free schools or imposing restraints on the freedom of teaching; whether applauding the value of temperance or encouraging the bootlegger. The fact is that the ruthlessness of the buccaneers in charge of the railroads begat the Interstate Commerce Commission; the avariciousness and falsehoods of the manufacturers and distributors of goods begat the Federal Trade Commission; the disdainful and robber-baron attitude of some financial houses on Wall Street begat the Securities and Exchange Commission; the greed and unfair practices combined with the stupidity of broadcasters begat the Radio Commission, now the Federal Communications Commission; and that the misbranding of food, drugs, and cosmetics begat the Pure Food and Drug Administration. There are many other boards, agencies, and officials resulting from similar causes, and in each instance the men who fostered the laws bringing the buccaneers under legal control were more concerned in seeing that the governed were controlled than in seeing that the governors were controlled. We thus have a vast bureaucracy, numbering more than 1,200,000 individuals and reaching into the factories and industries of a continent. One of the single agencies of government—and there are nearly 100 of them—decided more cases in a year than all of the Federal courts combined during the same period, and another such agency, one of the smallest, had more

appeals from its intradepartmental field boards than all of the Federal courts combined during the same period.

It is obviously impossible today for the existing courts to try these cases de novo on the law and the facts, the courts ignoring the work done in the administrative agencies and proceeding anew as in trials between private parties. This was substantially the procedure for the first hundred years of our national history when the courts worked out, on the basis of their general jurisdiction, as stated in the Judiciary Act of 1789, and as amended from time to time, common-law procedure for reviewing on both the law and the facts the acts of collectors of internal revenue and of customs in collecting the taxes necessary to support the comparatively simple governments of these days; when the courts worked out on the basis of the same common-law traditions jurisdiction to review administrative action in seizing vessels on the high seas; in seizing property on the claim that the United States was entitled to priority in the proceeds of such property; in holding private property under color of right, even upon orders of the highest authority; in refusing to carry out the ministerial duties under statutes; in refusing to deliver commissions to public officers; and in various other and sundry governmental activities of the Federal Government during the first century of our national existence. In three instances there were statutes conferring such jurisdiction—one a general statute authorizing the courts to hear and determine de novo claims under foreign patents to lands in the Louisiana and Florida Territories; a second a statute authorized the court to review on the administrative record claims arising under Spanish and Mexican grants in the California Territory; and a third authorized suits for trial de novo against the United States in the Court of Claims in limited classes of actions.

In all of these various classes of cases arising during the first 100 years of our national history, with the exception of the mandamus cases in the District of Columbia courts, the courts claimed and exercised the jurisdiction to review the administrative decisions on both the law and the facts in evidence, though as early as the Swartwout case in 1836 the Supreme Court had to answer the contention made on behalf of the administrative agency that it had no jurisdiction to maintain a suit against a Federal officer acting pursuant to orders of his superior officer. The Court said that—

"The construction of the law is open to both parties, and each is presumed to know it. Any instructions from the Treasury could not change the law or affect the rights of the parties."

In the Lee case, involving the right of the heirs of General Lee to regain possession of the Arlington estate, then in the hands of Federal officers, the Supreme Court held that ejectment would lie against such officers and in answer to the contention on their behalf that for the Court to interfere would result in undue interference with the administration of the laws—some administrators now call it "hamstringing" the administration—Mr. Justice Miller pointed out that tyranny would otherwise result and that—

"The evils supposed to grow out of the possible interference of the judiciary with the exercise of the powers of government essential to some of its most important operations will be seen to be small indeed compared to this evil, and much diminished, if they do not wholly disappear, upon a recurrence of a few considerations.

"One of these, of no little significance, is that during the existence of the Government for nearly a century over the present Constitution, with this principle and practice under it well established, no injury from it has come to that Government. During this time at least two wars, so serious as to call into exercise all the powers and all of the resources of the Government, have been conducted to a successful issue. One of these was a great civil war such as the world has seldom known, which strained the powers of the National Government to their utmost tension * * * yet no improper interference with the exercise of that authority was permitted or attempted by the courts. * * * The slightest consideration of the nature, the character, the organization, and the power of these courts will dispel any fear of serious injury to the Government at their hands."

There should be read in connection with this opinion by Mr. Justice Miller the equally famous and important opinion by Mr. Justice Davis for the Court in the Milligan case, where there was struck down, I hope for all time, just such administrative military boards to try and sentence to death civilians outside of military operations as have been successfully used in our day in some European countries for the same purpose; where, indeed, "the dangers to human liberty are frightful to contemplate," to use a phrase of the Court in the Milligan case.

The point I desire to impress upon you at this time is that for approximately a century the courts exercised jurisdiction to develop practices and procedures whereby they judicially reviewed—either upon the administrative record as in the California Land Commission cases, or in trials de novo—both the law and the facts of the principal classes of administrative decisions affecting the rights of persons and property. But with the end of the nineteenth and the commencement of the twentieth century, within the past 50 years and more particularly since 1912, the courts have been denied jurisdiction to so review administrative decisions arising under many regulatory statutes enacted since 1912. This has been accomplished by prescribing that the review shall be limited to questions of law or approximately that, by requiring the courts to accept the administrative findings of fact if supported by evidence and by failing to require the administrative agencies to digest and analyze the evidence in written findings of facts and written decisions thereon so that the courts could readily determine whether a full and fair hearing had been granted and whether the findings of facts were supported by substantial evidence. You will remember that the Supreme Court a short time ago had to return the Morgan case to the trial court for evidence as to the character of the administrative hearing which had been accorded. Notwithstanding the Morgan case has been four times before the Supreme Court, the Court has been unable to date to secure enough facts to enable it to determine whether the rates fixed by the administrative agency are fair and reasonable and you may be sure that both the taxpayers and the ultimate consumers of packing-house products will have to pay the expenses of this extended litigation.

An outstanding student of administrative law, who is not without distinguished service as an administrator has recently stated that while progressive American thought had long recognized the need for dealing with many complex problems of modern society through administrative agencies:

"* * * it was not supposed that the purpose of the development was in any sense to subject individuals to arbitrary governmental power, or to deprive them of their constitutional and statutory rights. On the contrary, when those who opposed administrative regulation urged as an argument against it that it would inevitably lead to arbitrary power, the reply was made by those who favored the development that it was not intended to have such a result, but that it would be surrounded with adequate safeguards to insure the protection of legal and constitutional rights."

The American Bar Association's administrative law bill is designed to provide adequate safeguards so as to insure the protection of the statutory and constitutional rights of the individual; to provide for more effective supervision over subordinate administrative officials; and to prescribe the procedure which must be followed by administrative agencies if they are unable to administer the law through informal negotiations with the affected individuals and concerns. That is to say, the bill does not attempt to change or modify in any manner the substantive law of any administrative agency of the Federal Government. The bill is solely concerned with the adjective or procedural aspects of administering the statutes and seeks to remove those statutory restrictions against judicial review of administrative decisions of the regulatory agencies which have been placed in the statutes from time to time as the respective agencies were created, since the beginning of the present century. At the same time, the bill seeks to make uniform the scope of judicial reviews of all decisions of administrative agencies covered thereby—to the end that the time and energies of the courts may be released from much drudgery in connection with the older activities of the Federal Government—as to which the law is well settled—so that such saved time and energy of the courts may be used in extending a broader discretionary review to the controversies arising in the administration of the regulatory and control statutes. The uniform review formula for all classes of administrative decisions is found in section 5 of the respective Senate and House bills, as follows:

"Any decision of any agency or independent agency shall be set aside if it is made to appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous; or (2) that the findings of fact are not supported by substantial evidence; or (3) that the decision is not supported by the findings of fact; or (4) that the decision was issued without due notice and a reasonable opportunity having been afforded the aggrieved party for a full and fair hearing; or (5) that the decision is beyond the jurisdiction of the agency or independent agency, as the case may be; or (6) that the decision infringes the Constitution or statutes of the United States; or (7) that the decision is otherwise contrary to law."

Further this bill contemplates that the boasted expertness of administrative agencies shall be brought to the assistance of the reviewing courts and shall be used to speed up the administration of the laws in the following manner: (1) These agencies are to be required to issue rules interpreting and filling in the details of the statutes which they are required to administer. Such interpretation will be a guide to, but not controlling on the courts in arriving at the proper interpretation of the statutes. The rules must be issued after public notice and public hearing, if requested; thus giving the individuals who may be affected by the rules the same opportunity they now have in being heard by committees of the Congress when considering statutes implementing any provision of the Constitution. The individual is to be protected if he acts in accordance with such rules until the end of a 30-day period after publication of notice of the recision or invalidity of the rule. The citizen required to take action under a statute will thus be able to know what the head of the administrative agency may think

the statute means, the service of the rule in this connection being in the nature of an advisory opinion or a declaratory judgment. As a further protection to labor and business organizations, the bill provides that within 30 days after the rule has been issued and published in the Federal Register any person may petition the United States Court of Appeals for the District of Columbia to review the rule and determine whether it is in accordance with the Constitution and the statute. The reasonableness of the rule is not to be subject to judicial review as is now the situation with respect to certain administrative rules and orders issued by some of the New York regulatory agencies. In addition to all this, there is preserved the existing right to have a rule tested out in the merits of any case as it comes before the courts in the regular manner.

As a further aid to the reviewing courts and as a guaranty that quasi-judicial matters will be handled carefully and thoroughly in the administrative agencies, the bill provides that in the single-headed agencies an appeal from an administrative officer must be referred to a three-man intra-agency board for a hearing with all of the traditional safeguards as to the summoning of witnesses, cross-examination, representation by counsel, etc., as obtains in the Federal courts. Where the agency is a multiple-headed one and the board or commission does not itself hear the case in accordance with the procedure I have stated, the case must be heard by an examiner in accordance with such procedure and if counsel for both parties cannot agree as to the order to be entered or decision made, the examiner is required to formulate his findings of facts and written decisions or order which are to be placed before the board or commission for oral arguments. The board or commission is then required to make its findings of facts and decision or order.

Thus, in either event—whether the case is in a single-headed agency or in a multiple-headed one—and cannot be adjusted to the satisfaction of all concerned, a formal administrative hearing is provided in the single-headed agencies where there is now no procedure for same and the formal hearings now available in most multiple-headed agencies are made uniform insofar as the practice and procedure are concerned. In each instance the agencies are required to write out formal findings of facts and a formal decision or order and it will be the fault of the courts if these agencies are not required to write such findings of facts and opinions as will fully digest and analyze the facts in evidence and the law applicable thereto. Thus the courts will have what they do not now have in most instances, an administrative interpretation in the form of rules of the statutes being administered and records uniformly made of all transactions in the hearing of concrete controversies, together with the administrative written analysis of the evidence in the form of findings of facts as well as statements of the law believed to be applicable thereto.

All this is contemplated instead of the existing procedure of dumping upon the courts a written record of thousands of pages of testimony and documents, much of which is irrelevant and immaterial to the issue involved, accompanied by a statement prepared by the agency concerned which does not digest and analyze the evidence. It has been openly charged that in some instances counsel for the agencies deliberately encumber the record with irrelevant material so as to make the cost of printing such that the individual cannot appeal. The Fifth Circuit Court of Appeals has counteracted that action by requiring the printing by each side of that part of the record, one upon which counsel for that side relies.

A number of beneficial results will follow from this procedure. First, the courts will be able to adjudge and determine whether there is substantial evidence to support the findings, whether the decision is supported by the findings and is not otherwise clearly erroneous, and whether the various other tests which I have just read to you from the bill have been met; second, the court can and should have the benefit of all research, investigations, and studies made by the administrative agency of the problem involved, together with such countervailing studies, etc., as the aggrieved individual may make; and, third, the character and fairness of the administrative officials handling the case in and before the administrative agencies necessarily must be improved so as to avoid frequent court reversals.

Such, in brief outline, is the American Bar Association's administrative law bill. You will appreciate that I have not the time today to discuss it in detail. However, the report of my committee, the bill itself, and the Senate Judiciary Committee report are available for your study and I would suggest that, if you have not done so, you should obtain and study these documents—not only because of the importance of the Federal bill to you as lawyers and citizens but because of the assistance you may obtain therefrom in reaching some solution of your own acute administrative law problem. While I cannot take the time to contrast your proposed solution of last year in the judiciary article submitted by your constitutional convention to the voters of the State, and the terms of the American Bar bill, I would suggest that we are proposing to meet the situation by statute rather than by a constitutional amendment; that we are attemping to improve the administration of the laws by requiring the implementation of the statutes and prescribing the procedure to be followed in the exercise of the quasi-judicial power; and that we return to the discretion of the courts the issue in each case whether they shall review the facts in evidence.

It will interest you to know that to date the Senate Judiciary Committee, composed of Democrats and Republicans, has unanimously reported the bill with recommendation that it be enacted into law. It has been approved to date by the board of governors and by the house of delegates of the American Bar Association; by the State bar associations of California, Colorado, Illinois, Iowa, Kansas, Nebraska, Ohio, and Oregon; the city bar associations of Boston, Chicago (in principle), Cleveland, Dallas, Philadelphia, Phoenix, Erie County or Buffalo, New York, and St. Louis; by various large and powerful business and labor groups; and by the committee on administrative law of the National Association of Women Lawyers.

It will also interest you to know that to date the bill has been disapproved by the National Lawyers' Guild; by the Federal Bar Association, composed of Government attorneys in the employment of these agencies; and by the committee on administrative law of the City Bar Association of New York, conjointly with another committee of the same association on Federal legislation. For sake of brevity, I shall refer to the latter report as the Dulles report, Mr. John Foster Dulles, of the Wall Street firm of Sullivan & Cromwell, being the chairman of that committee on administrative law, and having offices, as well as several members of his committee, within a few doors of the offices of Mr. Garey, of my committee. For some reason, as to which I am not advised, this report of May 2, 1939, shares, with a report of the same committee disagreeing with the New York Constitutional Convention's judiciary article, the honor of not having been submitted to the searching debate of and to the vote of the members of the New York City Bar Association.

In general, the report follows the views which Mr. Dulles had earlier stated in an address delivered on January 14, 1939, under the joint auspices of the Harvard Law School and the Bar Association of the City of Boston. I have heretofore called your attention to the fact that this Boston City Bar Association had approved the bill, the approval taking place during the interim between the date of Mr. Dulles' address to that association and the date his report was released and publicized by the National Lawyers' Guild. It may be for that reason that his report has not been permitted to undergo the hazards of an open debate in the New York City Bar Association and a vote of its membership. I may mention in this connection that the Boston City Bar Association had before it a series of lectures delivered by Dean Landis, of the Harvard Law School, which had been printed in book form shortly before Mr. Dulles delivered his address expressing similar views, but the Boston Bar evidently preferred to be guided by the contrary views of former Dean Roscoe Pound, of the Harvard Law School, who both wrote a monumental report in 1938 for my committee and appeared before the Senate Judiciary Committee and testified in support of the administrative law bill. Incidentally, this address was delivered and distributed after the administrative law bill had been before the American Bar Association since the autumn of 1936, had been debated in September 1937 in Kansas City, and again in 1938 at Cleveland, and had been approved on January 7 to 10, 1939, in Chicago by the board of Governors and by the house of delegates. During the meanwhile published appeals were made in the Journal of the American Bar Association and in the Journal of the American Judicature Society for the suggestions, comments, and criticisms of the legal profession—appeals which did not elicit any response whatsoever from either Mr. Dulles or any member of his committee, and this notwithstanding, as I have stated, that the offices of these men are but a few doors removed from those of a very valued member of my committee, who is not here today because he has been engaged on the Pacific coast for more than a month in the trial of a controversy before one of these administrative agencies. However, do not misunderstand me. I concede that these men are perfectly within their rights in failing to even attempt to make any contributions to the formulation of any proposal to stem the existing drift into administrative absolutism—to use a phrase of the Senate Judiciary Committee in reporting the bill—and in leveling what is evidently intended to be destructive criticism at the work of others who have laid aside their personal affairs in attempting to render a service toward the regainment and continuation of our constitutional form of government.

Answering a similar criticism before the Georgia Bar Association a few weeks ago, when I had the honor to be present, United States Circuit Judge Joseph C. Hutcheson, Jr., of the Fifth Circuit Court of Appeals said:

"What I want to reply to is the statement that Professor Sellers made which I think tends to obscure this whole question of administrative action and administrative review, because either it is not understood by those who put it forward or it is not understood by me. I do not know which. I refer to his statement that he cannot agree to any sort of review of administrative orders, which would in any way hamper or limit the regulatory acts of these bodies. Professor Sellers is correct in saying that their purpose is regulatory, and he is correct in saying that in the interest of public policy the regulatory body ought to have free sway—but always within constitutional limits and constitutional provisions.

"My objection to Professor Sellers' statement is that he seems to think that there is a necessary conflict between regulatory power and the rights of man. I say there is no such necessary conflict because as soon as such a conflict arises regulation has ceased and tyranny has begun. I think you have chosen the wrong word, if that is your point. I stand no less for regulation than you do.

"We have to have regulatory bodies, but why do we have to have regulatory bodies which are not constrained by some rule of procedure, under which the man sought to be regulated, who, under the system of government which we have in this country, has the same rights as the Government and to my mind bigger rights, can have the right to be heard in accordance with definite procedure. I say, if a board or commission cannot regulate him without depriving him of his rights, then the board is an illegal board, because the Constitution does not permit such a board to function.

"The Government has rights; individuals have rights; regulatory bodies have rights; and regulatory bodies have to be formed to enable the Government to control the governed, but something has to be done in the interest of the governed to force the Government to control itself, and I do not believe that any regulatory body, whose regulation is interfered with by legitimate rules can be said to be hampered under our Constitution.

"I am for any bill of the State or Federal Government which gives the men who are to be regulated the right to some say so before the boards as to the regulation."

But taking up some of the specific objections in the Dulles report within the limited time at my disposal, I may mention that it commences in the best Schopenhauer manner by stating the extreme reluctance of the members of the committee to disagree with the bill (and I quote) "particularly as we are in complete sympathy with many of the objectives of the framers of the bill." I am sure that you will appreciate that, in this respect at least, these are: "Yet; but" statements—to borrow a characterization in another connection which not so long ago came thundering to us across the invisible air lanes. The "yes, but" part of this report is that:

"* * * detailed legislation, if it would be sound, should not attempt to apply an identical technique to the innumerable agencies and departments which are made subject to the bill. Rather, it should deal with the particular problems arising in each agency or department."

Can you not almost hear Lord Coke and the black-letter lawyers of his day in these two sentences? Did not Lord Coke and his legal contemporaries believe that without a writ there was no right and that they had to frame a particular form of writ for each and every different class of actions which might be brought and was it not precisely this attitude of mind in the England of that day which gave rise to the separate equity and admiralty courts in that country? Was it not that same state of mind which led to separate rules of procedure in the Federal courts for approximately a century and a half in law and equity cases—a distinction which New York abolished in 1848—and even to separate law and equity courts in some of the States? However we in America never went so far as to take the position of the Norman conquerors of England that without a writ there was no right. We now know that we may, and that we have established uniform rules of trial and appellate procedure for both law and equity actions—uniform rules which must be applied in courts of equal jurisdiction over the entire field of judicial action conferred upon such courts in a territory of 3,000,000 square miles and handling more and varied causes of action than were even dreamed of by the black-letter lawyers of two, three, and four centuries ago!

Mr. Justice Frankfurter well stated that rules of procedure are basic and fundamental and are requisite for the preservation of some of the most precious values of civilization. Separate Federal administrative agencies administer but one or two or other small number of related statutes dealing with a single or closely related subject matter. If you will read the administrative law bill you will see that it deals with such fundamental questions of procedure as the right to summon witnesses, the right of cross-examination, the subpenaing of documents, the right of the individual to be confronted with the evidence or confidential reports gathered after ex parte investigations, the right to have all of the transactions in the hearings go into the record for the purpose of showing the bias, ineptness, and ignorance—if you please—of some of the men who conduct such hearings, the right to have an opportunity to argue the case on briefs or orally, and the right to have written findings of fact and written decisions or orders. As it is now, there are no such rights which can be enforced in or before many of the Government departments and agencies, with the result that lobbying activities constitute a profession in Washington, and a few lawyers think that they must wine and dine Government representatives in order to have open a back door to what they believe are the inner sanctums. They refer to this under the more euphonious term of "conferences." I hold that public business is and should be public, so that our people may know at all times exactly how the wheels go round. Those agencies of government where that should not happen because of international or other reasons have been exempted in toto from the bill. I do not say that all the exemptions were granted for that reason, but I do say that the agencies where secrecy should prevail have been exempted. There is a very general suspicion abroad in the United States that there are small groups here and there who do not want the people to know how the wheels go round; that these groups would much rather operate in "conferences" and seek to control the agencies of government, in the last analysis, by political or group pressure.

No honest and informed Government official could possibly object to such a regularized and standardized procedure for the exercise of quasi-judicial functions, as subject thereto he has all possible freedom under the Constitution and constitutional limitations. No dishonest official—or one bearing a sword instead of scales, to use a phrase of Raymond Moley—should have more freedom of action than would be allowed under this bill. In the exercise of the quasi-legislative power the officials are merely required to give public notice in the Federal Register and hold a public hearing, if requested before the time expires for the hearing. They may ignore all of the testimony and issue the rule, subject always to a judicial review to see that they have complied with the terms of the Constitution and statutes. Some of the Federal agencies are now required to give public notice and hold public hearings before rules may be issued, and the rules when issued are subject to judicial review. What is more, a number of agencies in various States, including your own State of New York, are required to follow such procedure.

I think it is obvious that if the Congress may hold public hearings before the enactment of statutes implementing the Constitution, with such statutes subject to judicial test on the grounds that they are unconstitutional, and if some Federal and many State agencies may issue rules implementing the statutes and subject to judicial test, there can be no reasonable basis for any conclusion that all Federal agencies may not do so—and that there is any more reason for establishing separate and often conflicting procedures for each separate agency than there existed reason for refusing a right without a writ and for having separate and distinct rules for law and equity actions.

I am aware that the Dulles committee have stated minutiae of substantive authority of various agencies, principally the Securities and Exchange Commission in support of the position that each agency should be dealt with separately, but we might likewise state minutiae of trials at law and at equity—involving the whole gamut of human activities—as to why there should be a separate writ for each class of rights and why there could be no uniformity of rules of practice in law and equity cases; but no one today would take such a statement seriously. I predict that in 10 years' time no one will take the similar arguments of the Dulles report on this point any more seriously.

Further, the Dulles report states that—

"We consider that three basic principles embodied in the present bill are inconsistent with the proper functioning of many of the agencies subject to it. They are:

"1. The provision that all rules and regulations of the administrative agencies shall be issued only after public hearings.

"2. The provisions for an immediate judicial review of all rules and regulations by proceedings in the nature of a suit for a declaratory judgment.

"3. The provision for intra-agency and judicial review of any decision, act, or failure to act on the part of any officer or employee of an administrative agency by any person aggrieved thereby."

Much of the objections stated in these three points have been answered in what I have just stated, and as my time is drawing short, I must necessarily summarize the answers to these objections. Basically, the exercise of the rule-making power implementing the terms of statutes is the exercise of legislative power. The Congress requires bills which are introduced to be printed. These bills are available to proponents and opponents of the proposed legislation. Publicity is given thereto by newspapers and on the floor of the particular House of Congress. The bills are referred to committees, public announcements are made as to the time and place of hearing; witnesses may testify and produce documents, and they are subject to questioning by the committee members or by counsel for the committees. Finally, the bill is reported to the calendar of the respective Chambers, and there it may be subjected to searching debate. This is so much a part of our legislative procedure that it might well be considered as protected by the Constitution itself. Now, in the language I have quoted to you from Judge Hutcheson's remarks before the Georgia State Bar Association, can you think of one sound reason to deny the man who is to be regulated by a board or other Federal agency the right to have some say-so as to that regulation?

If the individual is entitled to, or permitted by a practice of a century and a half to be heard by a congressional committee when the whole of the legislative power is being exercised, is there a valid reason why he may not be heard by an administrative agency in the exercise of a mere fraction of the legislative power? And what is more, have a look at a great majority of these Federal officials and employees as described by the Attorney General of the United States in his recent address at Asbury Park when he said (and I quote him) that, "The ancient practice of passing out Government jobs in payment of political debts and cease * * *." A large percentage of public jobs has been and is today controlled by machine politics and special interest groups * * * we must

abandon the idea that Government pay roll is a legitimate field for charity and benevolences toward special groups and persons who lack qualifications for public service"; and that—

"The opposition of these groups—special-interest groups—together with public ignorance of much of the inefficiency, graft, and waste resulting from the spoils system, has been enough to undermine virtually every effort to establish and enforce sound personnel management in government."

Now, this is the Attorney General of the United States, not the Dulles report; and the best possible way to eliminate these evils is to establish such a procedure as is provided in the administrative law bill, which will show up inefficiency. However, I pass over without discussion the fact that these men, however capable, are not all-wise, and that they could profit by a formal exchange of views with those who are to be regulated or controlled in their labor or economic activities. I likewise pass over the fact that by such interpretation of the statutes the citizen may know beforehand what his governors may think the statute does mean, and the further fact that with such required interpretation the courts will have before them when they come to decide concrete issues the administrative view as to the meaning of the statutes, which the court may refuse to accept, as they now do, if unsound.

Then, again, this Dulles report objects to the provisions in the bill for an immediate judicial review of all rules and regulations—if deemed necessary or desirable by an interested party—by proceedings in the nature of a suit for a declaratory judgment. The report calmly ignores the provisions in many State statutes, including statutes of the State of New York, for such judicial reviews of rules or orders implementing labor-standard statutes, for instance; and while the report speaks pontifically of reviews in vacuo, it fails to mention that since the 1937 report of my committee the Congress has provided for just that procedure in the Copeland Pure Food, Drugs, and Cosmetic Act and in the Civil Aviation Authority Act—the two principal regulatory statutes enacted since that date. The administration of one is vested in the Department of Agriculture, and the other is vested in a newly created independent agency, and both have had no difficulty in complying therewith, and, so far as I know, not a single petition has been filed requesting a court review of any of these regulations. Dean Pound, in his testimony before the Senate Judiciary Committee, referred to this provision of the bill as being in the nature of preventive litigation. He warmly commended it as being somewhat in accord with the theory of preventive medicine. By some organization representing a large number of members, or by some individual testing such a regulation in the courts before it is placed in operation, much litigation may be prevented. Time and time again cases have been fought to the Supreme Court of the United States based on regulations which were ultimately determined to be contrary to law, and a host of other individuals similarly affected had to take their cases to the courts to prevent the running of the statute of limitations. President Roosevelt rightly complained, and so did business interests, that it took more than 2 years to find out whether the regulations of the Secretary of Agriculture were invalid in their attempt to lay a processing tax. The regulations were not held invalid until after literally millions of dollars had been collected from the people and expended—through no fault whatever of the courts but through defects in procedure. Obviously, a short-cut remedy should be provided for such cases, and any suggestion that the courts would be flooded with such petitions is not correct. In the first place, the average individual would not be interested in testing such a regulation unless it should become involved in the merits of some case for or against the Government to which such individual is a party.

It costs money to pay for the printing of petitions and briefs. The remedy will generally be availed of by large organizations representing labor and business groups, and the jurisdiction for such immediate review has been limited to the Court of Appeals for the District of Columbia, a court which has a bifurcated jurisdiction by virtue of the fact that it is both a common-law court and a constitutional court. The principal business and labor groups are today represented at the seat of government, and they are on constant watch to protect the interests of their members.

Such a proceeding is not unlike that to which lawyers long have been accustomed in the filing of a bill to enjoin the enforcement of some statute, State or Federal, believed to be unconstitutional, but generally today the courts refuse to grant such relief if there is a plain and adequate remedy at law. Similar procedure was long used to test out the rules and regulations of labor unions, and the kaleidoscope of affairs has so turned that today labor unions have their grievances against Federal administrative agencies. They may use such procedure as we have provided to test the rules issued by various labor regulatory agencies of government. The individual laborer cannot test such rules, and American organized labor is determined that it will not be enslaved to the extent it is enslaved under administrative absolutisms in foreign lands. I am in thorough sympathy with labor in this determination.

I have heretofore mentioned the matter of the objection in the Dulles report to the procedure for the hearing and determination of administrative appeals and for judicial reviews thereof. I shall simply add that with the Treasury Department, for instance, 1 of nearly 100 agencies of government, determining better than 603,000 controversies, while all of the courts, both constitutional and legislative, determined but one-hundred-and-forty-one-thousand-odd during a corresponding period, it is obviously impossible to have these cases tried de novo in the Federal courts. One comparatively small agency of government, the Department of Labor, had more intra-agency appeals than all of the United States circuit courts of appeals during a corresponding period. Some method must be provided in the administrative agencies themselves to screen and sift out the more serious controversies. As a matter of fact, in an attempt to do so, many of these agencies now have what are in effect three-man boards for that purpose, and there are a few statutory intra-agency boards. The statutory intra-agency boards, such as the Board of Processing Tax Appeals in the Treasury Department, has jurisdiction to subpena witnesses and documents, hear examination and cross-examination of witnesses, and in general to build a record as in a trial court. However, the intra-agency boards created by rule or order of the head of department or agency have no such authority.

It is physically impossible for the head of any agency to become acquainted with but a fraction of the employees of such agency and he cannot have more than the faintest idea of the great bulk of work pending from time to time in his department or agency. Your famous fellow New Yorker, until he established a residence in Iowa, testified before a Senate committee that he did not know his subordinates in the field were "playing politics with human misery." Some were inclined to disbelieve him. However, if you will give but a moment's consideration to the vast organization he had under him, I think you will be more inclined to believe that he spoke the unvarnished truth. Three employees are generally assigned to approve and pass upon controversies before a Government department or other agency, because with three acting it is much harder for mistakes to be made and much more difficult for pressure groups and lobbyists to bring about a scandal in the agency. Such "check and double check," in the language of Amos and Andy, constitutes protection to the head of the agency and to the public.

Employees in the field—and by that I mean away from the seat of government—are not generally given authority to make final decisions against an individual and their decisions against the Government are usually checked and counterchecked by their superior administrative officers, and if they involve the expenditure of money, a further check is given by the Comptroller General of the United States as to debits against appropriated moneys and by the Commissioner of Internal Revenue as to debits for the refund of taxes. Where the citizen is aggrieved by the field officer or other subordinate's decision, act, or failure to act the general procedure now is for the individual to appeal to the head of the department or agency concerned. In the single-headed agencies the proceeding is wholly ex parte and is usually determined by subordinates in the single-headed agencies, but in the case of multiple-headed agencies the individual may usually obtain a hearing before the board or commission on appeal from the action of the trial examiner or other subordinate.

Obviously the head of the agency or those acting for him ought to have a complete record of the facts—a record prepared with all the care of a proceeding de novo in the courts and the individual ought to be heard. The record being necessary for a proper disposition of the administrative appeal, time and expense are saved by having the judicial review on that record, with sufficient jurisdiction in the courts to see that the findings of fact are supported by the evidence; that the findings support the conclusions; that the conclusions are in accord with the law; and that a full and fair administrative hearing has been accorded to the aggrieved individual. Finally, if the administrative officers do not agree with their own boards as to the interpretation of the law, they should apply to the Congress for a change in the statutes rather than to force the individual to undergo the time and expense of judicial proceedings until some court has interpreted the statutes as the administrative officers think they ought to be interpreted.

Gentlemen, I must close—not because the subject has been exhausted or that I have fully answered the objections stated in the Dulles report but because I dare not trespass further upon your time and patience. In closing, I revert as I commenced to that period of your State history when you undoubtedly had a tyrannical government and I commend to your consideration the ringing words of Andrew Hamilton across more than 200 years of history as he stated to the jury in the Zenger case that:

"Power may justly be compared to a great river; while kept within its bounds, it is both beautiful and useful, but when it overflows its banks, it is then too impetuous to be stemmed; it bears down all before it, and brings desolation and destruction wherever it comes. If then, this be the nature of power, let us at least do our duty, and, like wise men who value freedom, use our utmost care to support liberty, the only bulwark against lawless power, which, in all ages, has sacrificed to its wild lust and boundless ambition the blood of the best men that ever lived."

Also to remind you that Gov. William Kieft, of New York, fined a merchant of this State for giving a written notice of his intention to appeal from a decree of confiscation and condemned that merchant to imprisonment until the fine was paid, the conduct of the merchant being of "dangerous consequences to the supreme authority of this land's magistracy." Who said that it can't again happen here and entirely within the letter of the Constitution through continuing to limit and restrict the jurisdiction of the courts to review administrative action, whether quasi-legislative or quasi-judicial in character?

The South—Economic Problem No. 1

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESSES BY THE PRESIDENT OF THE UNIVERSITY OF NORTH CAROLINA AND HON. JOSIAH W. BAILEY, OF NORTH CAROLINA, AND ADDITIONAL STATEMENTS

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a discussion of the South as economic problem No. 1, contained in two brief addresses, one by President Graham, of the University of North Carolina, and the other by myself, and also some additional data by way of supporting statements.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE SOUTH IN THE NATION

(Ten-minute talk for the Town Hall of the Air, Chapel Hill, N. C., March 30, 1939)

(By Dr. Frank P. Graham, president, University of North Carolina)

In a discussion of the economic handicaps of the southern people in their struggles toward a fairer society it is needful at the outset to remind ourselves of a great southern heritage as a spiritual resource for transforming "the Nation's economic problem No. 1" into a basic hope for the whole Nation. In the South we find the first English child born in the New World, the first English settlement overseas, the first representative assembly in the Western Hemisphere, the first legally established haven of religious tolerance, the first colonial resolution for American independence, the first three State universities founded in the United States, the first of which to open its doors provides the platform for this Town Hall forum of freedom tonight.

In the South was born George Washington, Father of our Country; Patrick Henry, eloquent voice of liberty and revolution; Thomas Jefferson, author of the Declaration of Independence; James Madison, chief framer of the Constitution; John Marshall, its basic interpreter; James Monroe, promulgator of the American doctrine of the two hemispheres; Jefferson, Jackson, and Lincoln, chief founders of democracy in America; Lee, preeminent soldier and stainless example of American reunion; Booker T. Washington, "American Moses of a modern Israel"; and Woodrow Wilson, the world's major prophet of international cooperation.

The southern people, despite all their faults and failures, have heroically risen from the ruins of war and reconstruction and, despite a great tradition, find themselves under severe economic handicaps which constitute in 1939 a national economic problem. The economic analysis of the South, based on University Institute studies, the reports of the President's Committee on Education, and the National Emergency Council, reveals major groups of assets and liabilities. In the South is one-half of the land with 6 months between the killing frosts, two-thirds of the area with more than a 40-inch annual rainfall, abundant resources of oil, natural gas, coal, iron, limestone, and water power, 40 percent of the Nation's forests, more than a third of the Nation's good farming land, one-half of its marble output, 97 percent of the phosphorus, and 99 percent of the sulfur. The South leads the world in the production of cotton, tobacco, and naval stores.

Yet the Southern States, with these abundant resources and a population more than 97 percent native-born, have the most eroded soils, the poorest housing and health record, the least organization of labor, the most tenants and sharecroppers, the lowest wages and purchasing power, the highest interest rates, the highest illiteracy, the least per capita book circulation, and the lowest proportion of students in high school and college. This section, with 28 percent of the population, receives only 9 percent of the Nation's income, pays 60 percent of the country's fertilizer bill, educates 33 percent of the Nation's children, pays only 12 percent of the national income tax, has less than 11 percent of the bank deposits and has less than $1,000,000,000 of the Nation's more than twenty-eight billions of insurance assets. All these facts indicate a large absentee ownership of the resources and capital which control the economic destiny of the southern people. The total endowment of all the colleges and universities in 13 Southern States does not equal the endowment of two great New England universities. This fact with other factors make for a too large southern export of brains and leadership and contributes to that stream of wealth constantly flowing away from the South.

The southern people are a strong, wealth-producing people but are a weak, wealth-retaining people. The rich topsoil stored up to the value of billions of dollars during millions of years is annually washed wastefully away to the sea. The hundreds of millions of agricultural and industrial wealth whose origin and production are in the South are siphoned away to the great financial centers. The tariff structure, by which the southern and other agricultural people have to buy their manufactured products in a highly protected national market and sell their agricultural products in the comparatively open markets of the world, lifts wealth out of the South. The freight-rate structure, with its high differential against southern farmers, manufacturers, and merchants, draws wealth away from the South. The industrial-financial structure pyramids capital whose great peaks of wealth and power rise far beyond the southern region. The population structure, with its very large proportion of southern school children, constitutes an economic overload for the South, and yet, if justly accounted for, can become one of the chief hopes of the Nation.

We wish to emphasize one basic answer to the southern national problem which is essentially both a rural and an educational problem. We would meet this problem in the interests of rural America in general and of the South and West in particular. Over half of the American States are rural States. Any step which advances the interests of both rural America and public education, advances the well-being of all interests, all sections, and all people. Let us look at the case for the South, for rural America, and for more equal educational opportunity of all the children in all the States.

In 1930 the farm people in the United States obtained 9 percent of the Nation's income and yet supported 31 percent of the Nation's children. Southeastern farm people with approximately 4,250,000 children received 2 percent of the national income while Northeastern nonfarm people with approximately 8,500,000 children received 42 percent of the national income. A higher tax rate is required to provide less than $30 per child invested in the public schools in three States than is required to provide more than the $120 per child in the three other States. In the States with the least economic ability the people pay the highest tax rate for the education of their children on the lowest plane in the Nation.

An economic, social, and cultural lag in any part of the country is an economic, social, and cultural damage to all parts of the country. Forty percent of the young people, 10 to 20 years old on farms in 1920 were in urban areas at the end of the decade. Sixty percent of this net migration was from southern rural areas. The region with less than a third of the population has more than 50 percent of the excess of births over deaths in the Nation. A large proportion of the children who in their nonproductive years are supported and educated by rural people become in their economically creative years the producers in the vital industries and the citizens of the urban communities. The quality of the education in these rural areas is a matter of vital concern to the industries, the cities, and the people of the whole country. Economic inability and educational overload coincide in the same rural and sectional areas to fix educational inequality and to impair the foundations of our national democracy. Just as within the States children in rural localities can have a fairer educational opportunity only through State aid to the localities, so children in the rural States can have a more equal educational opportunity only through Federal aid to the States.

The Federal Government is the only agency which can redress this economic and educational imbalance between the metropolitan areas of the greatest concentration of wealth in proportion to children and the rural areas of the greatest concentration of children and the least proportion of wealth. Three-fourths of the cost of public education is carried by taxation of property chiefly local. For the most part taxation of agricultural property is taxation of the people on the farms where the tax is imposed. It cannot readily be shifted. Taxation of financial and industrial wealth, to an increasing extent in our integrated national industrial society, is shifted to the consumers of the whole Nation. Since all sections, all resources, and all the people combine to produce the wealth concentrated in the great centers and since all the people as consumers help pay the taxes on this wealth, it is just that a little bit of the income from this wealth as Federal aid to public education should go back to the States whence it came and where are now the largest proportion of children whose equality and quality of education determine the future of democracy in America.

With democracy in retreat in many parts of the world, may America give a lift to the democratic hopes of the forgotten millions with a new declaration for equitable and democratic Federal supplements to public education under State control in the American way for the fairer chance and more equal opportunity of all the children in the Southern States and of all the children in the United States. With more equal opportunity for their children, the Southern people will have a fairer chance in the house of their fathers to play a larger creative part in the great adventure of making a more prosperous, freer, and nobler America.

NOTE

It is suggested that the discussion might be aided by a definition of "the South." If, for example, we exclude from consideration the Southeastern States of Maryland, Virginia, and North Carolina, the border States of Kentucky and Tennessee, and the Southwestern State of Texas, quite a case may be made as to economic conditions in the cotton States in which the population of Negroes is

comparatively excessive. But the problem would be more local than national.

In this connection it is interesting to consider that on March 30, 1939, the President, speaking at Auburn, Ala., stressed conditions in "the lower South," and said of the South as a whole that it was entirely able to finance its industrial progress.

IS THE SOUTH THE NATION'S ECONOMIC PROBLEM NO. 1?

(An address to Carolina Political Union, University of North Carolina, March 30, 1939, by JOSIAH W. BAILEY, United States Senator)

I. What is alleged as the basis of the statement that the South is the Nation's No. 1 economic problem?

The President says it is the problem of low industrial wages and low family consumer income in the South as compared with other regions.

What are the facts?

First. In the report relied on by the President, the National Emergency Council declares: "During the year 1933 the percentage of wages to the value added by manufacture was 60.8 in five States in New England as against 55.5 in five Southern States." So what? And why go back to 1933?

The standard of ratio of wages to value added by manufacture is correct; but the comparison is manifestly unsound and misleading. It proves nothing. We must compare all the Southern States with all the others as of most recent dates—not five unnamed Southern States with five unnamed New England States as of 1933. The fact is, the southern textiles pay in wages 64.4 percent of the value added by manufacture. The national average is 62.2.

All industrial workers in the South are paid within 1 percentage point of the national average paid in wages of the value added by manufacture. The South's ratio is 37.9; the national ratio is 38.7. Compare North Carolina with New York City. We pay 40.2, New York pays 30.5. One might say that New York City is the Nation's economic problem No. 1, if current logic is to be accepted.

Second. But it is contended that consumer family income in the South is so far below the national standard that it constitutes the South the Nation's economic problem No. 1. What are the facts?

Here is the 1938 statement of the President's National Resources Committee on consumer incomes on average income per family: National average, $1,612 per year; southern average, $1,326; difference, $286.

Does that difference (17 percent) constitute the South the Nation's economic problem No. 1? We fall below the group of Mountain States by only $37, below the national average by only $286. And we offset the small deficiency by lower taxes, short winters, abundant gardens, smaller fuel bills, lower rents. There is a further significant factor, in that the W. P. A. pays workers $600 per year in the North compared with $360 per year in the South, and the income data is for all families. And remember, $16,000,000,000 have been distributed on this basis since June 1933. Southern real income is obviously not less than the national average and probably above it. And it is nearly twice the income received by one-third of the Nation.

And this notwithstanding we have a population of 2,500,000 Negro workers, unskilled, notably low-wealth producers, competing with all other unskilled workers.

It is granted that wages in certain trades peculiar to certain localities in the North are higher, in the manufacture of automobiles, steel products, finished goods, for example, and that this plus Federal aid has lifted the general money wage level in the North above the southern level. But is it proposed that the South go into those types of production? By no means; the contention is that we must pay in textile industries wages equal to wages paid in the manufacture of automobiles, machines, machine tools, finished goods. Wages are in direct ratio to wealth produced, and a worker in fibers is never paid as is a worker in steel or automobiles. There is need of more of such industries in the South, and as they come they will pay wages commensurate with the value added by manufacture as the textiles do.

The whole theory is blown up not only by the data as to wages and income, but by simple facts of current record. Federal relief expenditure is more than twice per capita in the North and West than in the South. Pennsylvania, with 9,000,000 population, gets more relief money than 11 Southern States with 29,000,000 population. New York State gets more than 13 Southern States. Expenditures per family per State in 8 States exceed $200 per year; but in no Southern State do relief expenditures amount to $100 per family. No Southern State received the equal per family of the national average in W. P. A., P. W. A., and C. C. C. payments. Only 3 Southern States received the equal per family of the national average in A. A. A. payments. The South has withstood the long depression better than any other section, as shown by every chart of trade and industry from 1929 until now, and it has received less of Federal aid in every activity. It could not have done so without relatively superior economic conditions.

The South has not only the highest birth rate, but its death rate is lower than the national average. The 1937 figures are: Death rate in the South, 10.8 per thousand; for the United States, 11.2. And death rates are related to poverty.

Such are the facts exploding the theory of the South as the Nation's economic problem No. 1 as founded upon comparisons of wages and income. (All figures are derived from official sources and may be verified.)

II. There is no Nation's problem here except the problem of a just national policy. All else—and that, too, I think, is for southern men and women. What is that problem?

The national policy for 80 years has favored other regions and been adverse to the South. Freight rates have long been higher in and into southern territory than in and into northern—an internal tariff for the North and against the South. The Federal Government subsidized great railroad systems from the West to the North—and not a mile in the South or to the South. There were billions in pensions to Union soldiers, none to the South. Immense sums have been spent developing canals, rivers and harbors, and ports serving the North—comparatively small sums in the South. The Congress has maintained an external tariff policy frankly contrived to aid northern industry at the expense of the South. Only two American farm products are taxed by the Federal Government; both are southern crops: One, tobacco, from which as converted into cigarettes the Federal Government takes $1 per pound; the other, cotton, the oil produced by the seed of which is taxed at rates intended to be prohibitive when converted into food—not to mention so-called cotton and tobacco control taxes—the only crop-production taxes in the Republic. Mr. Secretary Wallace says that Federal curtailment of the cotton crop was equivalent to providing a market for 150,000,000 bushels of western corn; that is, $90,000,000 contributed in the midst of the depression by southern cotton farmers to western corn producers. Consider the section of the Farm Control Act intended to deprive southern farmers of Federal benefits if they increase production in grain, livestock, dairy products, or poultry and eggs for market. Consider the American trade agreement in which concessions are made to Canada at the expense of southern pine. Consider the trade agreement with the United Kingdom, in which concessions were obtained for western wheat, but none for southern cotton or southern tobacco—upon which latter England continues to impose $2.50 per pound. Concessions for the North and West, burdens for the South. And recent public policy has accelerated the loss of the foreign market for our cotton. We may be pardoned for being impatient of advices from Federal authorities until they give us justice.

III. There is a southern task, and it is largely the task of getting, after 80 years, a square deal in the national policy. That is to be had only by political ultimatum plus the will to exact it.

With a determined national policy against us since 1870, southern men and women have increased southern property values from $5,000,000,000 to $70,000,000,000—1,400 percent—20 percent a year net gain in wealth for 70 consecutive years, after paying all living expenses and a great share of the Federal taxes. Amongst other things southerners are paying annually $500,000,000 in life-insurance premiums. With the national policy against us, our population has multiplied by 3, our wealth by 14. And now they tell us we are the Nation's problem child. Bankrupted by war, razed to the earth by reconstruction, and throttled ever since by an adverse national policy, the progress of the South under the circumstances proclaims its advantages and the capacity of the southern people.

IV. It must be considered that the South is agricultural, and therefore improvement of the status must be directed to farmer prosperity. The essence here is that the farmer's purchasing power cannot be improved so long as there is gross disparity between prices he receives and prices he pays. Here I present the adverse consequences to a great agricultural region of ever-increasing costs of government reflected in taxes and a national policy of elevating industrial wage levels by law, by taxation, and by coercion under administrative favor. Each factor increases prices paid by farmers and tends to reduce their real income. It amounts to price fixing, without protection to the farmers either when buying or when selling.

It is agreed that 2,000,000 cotton farmers are receiving inadequate rewards for their cotton. National policy has required them to sell in a free world market and buy in a protected home market, and at long last under national policy they see their foreign market vanishing, and they are turning to the production of foods for the domestic market. It is a shift of great import not only to the South but to food producers in the North and Middle West. It portends good rather than evil for the South, tending to establish the family-sized farm and reduce tenancy. As to the capacity of southern farmers, consider that under adverse national policy they increased the annual value of their crops from $600,000,000 in 1870 to $3,300,000,000 in 1937.

It is not contended that the South has no problems. It is agreed that there are great and desirable advances to be made. But it denied that upon the facts southern problems and needs constitute in any aspect the Nation's No. 1 economic problem. And it is contended that southern people have proved under most adverse conditions their capacity to attend to their affairs. Federal interference once destroyed us. Federal handicaps have held us back for 80 years. Remove them and the South under southern leadership will show the way to all the country.

V. Finally, agreeing that there is an economic problem peculiar to the South, can it be regarded as the Nation's No. 1 economic problem?

How about the problem of inducing return to the investment by private persons of $12,000,000,000 annually in private enterprise?

How about the problem of returning 11,000,000 persons to normal employment—by far the most of them in the North in ratio to population?

How about the problem of lifting the national real income to $90,000,000,000?

How about the problem of adjusting the relations of employer and employee?

How about the problem of restoring equilibrium in our international trade?

How about the problem of 40,000,000 Americans drawing money from public treasuries—by far the most of them in the North in ratio to population?

Is it contended that solution of the problem of the South will solve those great problems—or is primary to their solution? If so, the people of the United States are far better off than anyone has thought them to be these 9 years.

DATA FILED BY HON. JOSEPH W. BAILEY, OF NORTH CAROLINA, WITH FOREGOING ADDRESS

Year 1935 (figures in millions)

All manufacturers in—	
A. United States (p. 11, 1938 Blue Book of Southern Progress):	
Value of products	$45,760
Cost of materials	26,263
Value added by manufacturing (100 percent)	19,497
Wages were (38.7 percent)	7,545
B. South (p. 11, 1938 Blue Book of Southern Progress):	
Value of products	8,632
Cost of materials	5,411
Value added by manufacturing (100 percent)	3,221
Wages were (37.9 percent)	1,222
C. North Carolina (p. 11, 1938 Blue Book of Southern Progress):	
Value of products	1,112
Cost of materials	734
Value added by manufacturing (100 percent)	378
Wages were (40.2 percent)	152
D. New York City (World Almanac, 1938, p. 511):	
Value of products	3,666
Cost of materials	1,756
Value added by manufacturing (100 percent)	1,910
Wages were (30.5 percent)	582
Cotton-goods manufacturers in—	
A. United States (p. 16, 1938 Blue Book of Southern Progress):	
Value of products	1,031
Cost of materials	627
Value added by manufacturing (100 percent)	404
Wages were (61.4 percent)	248
B. South (p. 16, 1938 Blue Book of Southern Progress):	
Value of products	721
Cost of materials	460
Value added by manufacturing (100 percent)	261
Wages were (64.4 percent)	168
C. North Carolina (p. 16, 1938 Blue Book of Southern Progress):	
Value of products	234
Cost of materials	144
Value added by manufacturing (100 percent)	90
Wages were (62.2 percent)	56

[1] Statistics for States included in the death registration area. The number of States in the death registration area included 15 States in 1907, and 48 States since 1933. The Southern States included in the death registration area in 1907 were Maryland, Delaware, and the District of Columbia. By 1916 Virginia, Kentucky, North Carolina, and South Carolina were added. All Southern States are included since 1933.

Department of Commerce, Bureau of the Census, Washington.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, March 14, 1939.

Hon. JOSIAH W. BAILEY,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In response to your telephone request of March 11 for additional comparative statistics for the South in 1870 and the present, I am enclosing tables giving figures for industrial pay rolls, number of industrial workers, insurance premiums, total taxable wealth, and investment in industry. Not all of the data are available for the dates requested, but in each case the nearest dates to 1870 and the present for which data can be obtained are included.

Table 1 shows the number of wage earners and the amount of wages paid in manufacturing industries in 1870 and in 1937. The figures for 1870 include hand and neighborhood trades, while those for 1937 exclude hand and neighborhood trades as well as other manufacturing establishments with a value of products of less than $5,000. This exclusion is of relatively small importance in its effect on the total figure, perhaps amounting to 10 percent of the total number of wage earners and of the total wages paid.

Table 2 shows the amount paid in life-insurance premiums, by States, for 1895 and for 1937. The figures are not available by States for years earlier than 1895.

Table 3 shows the estimated total taxable wealth in the South in 1870 and in 1922. In my last letter I supplied you with statistics on assessed valuations for 1870 and for 1932, but without

showing the estimated true values of these properties since such estimates are not available for 1932. However, you may be interested in the figures for 1922 which are available, and included in table 3. The estimates are rough. The figures for 1870 are shown on both a currency and a gold basis.

Table 4 shows the investment in manufacturing industries in 1889 and in 1919. These are the earliest and latest dates for which reasonably comparable statistics on investments in industry are available. Satisfactory statistics on capital invested have never been collected, and these statistics are of doubtful value. It will be better to place greater emphasis on the growth in the number of wage earners and wages paid than on these statistics of investments in industry. More recent data on investments in industry are available from the Bureau of Internal Revenue reports, but these are incomparable with the Census statistics.

The tabulation below shows the total horsepower of prime movers and electric motors (driven by purchased energy) in the South and in the entire United States for 1870 and for 1929. These figures, together with those for wage earners and wages paid, provide a better picture of the growth of industry than do the available statistics on investments in manufacturing industry.

Total horsepower of prime movers and of electric motors (driven by purchased energy)

	Southern States	United States
1870	364,342	2,346,142
1929	8,066,924	42,931,061

I shall be glad to have the opportunity to serve you further.

Very truly yours,

W. L. AUSTIN, *Director.*

TABLE 1.—*Wage earners and wages paid in manufacturing in Southern States, and in the United States, 1870 and 1937*

State	1870		1937	
	Number of hands employed	Wages	Wage earners (average for year)	Wages
Maryland	44,860	$12,682,817	145,932	$156,995,227
Virginia	26,974	5,343,099	132,643	112,773,796
West Virginia	11,672	4,322,164	83,464	102,511,473
North Carolina	13,622	2,195,711	258,771	189,265,474
South Carolina	8,141	1,543,715	129,749	91,791,692
Georgia	17,871	4,844,508	159,496	110,501,344
Florida	2,749	989,592	52,005	36,501,359
Kentucky	30,636	9,444,524	68,998	66,248,664
Tennessee	19,412	5,290,630	135,073	109,247,514
Alabama	8,248	2,227,968	120,301	96,058,401
Mississippi	5,941	1,547,428	46,040	26,383,931
Arkansas	3,206	673,963	37,280	24,734,112
Louisiana	30,071	4,593,470	76,057	60,203,023
Oklahoma			29,551	34,390,477
Texas	7,927	1,787,835	129,501	132,505,115
Total for South	231,330	57,587,424	1,604,861	1,350,111,602
United States total	2,053,996	775,584,343	8,569,578	10,112,808,089

1870 data includes data for all establishments, including neighborhood and hand trades reporting a value of products over $500.

1937 data is for establishments reporting a value of products over $5,000 and does not include neighborhood or hand trades.

TABLE 2.—*Life-insurance premiums in Southern States, 1895 and 1937*

State	Premiums received during 1895	Premiums received during 1937
Maryland	$3,182,722	$53,958,166
Virginia	2,228,686	44,601,577
West Virginia	651,341	27,348,982
North Carolina	1,233,548	41,384,428
South Carolina	864,215	20,565,882
Georgia	2,502,418	41,023,114
Florida	535,682	27,527,681
Kentucky	3,788,502	34,866,801
Tennessee	1,564,780	48,264,957
Alabama	1,037,508	25,728,636
Mississippi	670,535	14,359,202
Arkansas	762,407	14,272,536
Louisiana	1,998,668	29,375,413
Oklahoma	24,507	29,367,732
Texas	3,307,089	79,632,571
Total for the South	24,352,608	532,277,678

"White farm operators" includes Mexicans and Hindus.
"Colored farm operators" includes Negroes, Indians, Chinese, Japanese, and all other nonwhite races.

Special manufacturing industries

[National Industrial Conference Board]

Industry	December 1938	
	Average weekly earnings	Average hourly earnings
		Cents
Industries manufacturing luxury articles:		
Structural and ornamental metal work	$27.18	72.7
Radios and phonographs	22.62	58.2
Automobiles	33.15	92.4
Jewelry	24.11	59.2
Silverware and plated ware	28.07	65.0
Pottery	23.56	63.1
Industries manufacturing necessities:		
Cotton goods	14.13	38.4
Cotton small wares	18.46	47.7
Woolen and worsted goods	19.80	52.4
Clothing, men's	18.39	58.7
Clothing, women's	18.88	51.8
Shirts and collars	14.00	39.6
Boots and shoes	17.11	50.0
Canning and preserving	16.55	48.1
Flour	24.42	59.7
Slaughtering and meat packing	27.68	68.2
Cottonseed—oil, cake, and meal	12.76	29.0
Soap	28.80	74.5
Rubber boots and shoes	23.17	59.7

In this connection consider the following from the University of Virginia news letter:

"INDUSTRIAL WAGES

"In 1935 Southern industries employed 14.5 percent of the total number of industrial wage earners of the United States but paid them only 9.7 percent of the total wages. In the same year the average Southern industrial worker received an income of $687 while the national average for industrial employment was $1,022, a difference of $335.

"In the opinion of the writers, this difference between the income of the average Southern industrial worker and the national average is due largely to the nature of the labor supply and the kinds of industries that have developed in the South for the purpose of availing themselves of this supply of cheap labor. Unfortunately for the South, the leading industries in the region are those which are always and everywhere characterized by low wages. The most important single manufacturing industry now located in the South is that of manufacturing various kinds of textiles. In 1938 this industry gave employment to 320,000 Southern workers. The textile industry is closely followed by the cigarette, lumber, and furniture industries, employing an aggregate of about 250,000 workers. In 1935 the average weekly industrial wage for all industries in the United States was $21, while the average weekly wage in the cotton textile industry for the country was $13, lumbering $16, furniture $17, and cigarette manufacturing $13.97. It should also be pointed out that these industries employ a large percentage of women workers."

DEPARTMENT OF AGRICULTURE,
Washington, D. C., March 21, 1939.

Hon. JOSIAH W. BAILEY,
United States Senate.

DEAR SENATOR BAILEY: We have your letter of March 13 requesting data as to the number of persons engaged in agriculture in the South and their income, and the number of persons engaged in agriculture in the entire country and their income.

We are enclosing a table showing the number of persons employed on farms, gross farm income, and gross farm income per employed person in the South and in the United States as a whole for the year 1937. Data are also shown for the three southern geographical regions commonly used by the Bureau of the Census. The data on employment include family and hired labor. Gross farm income includes cash income from farm marketings, farm value of products retained for consumption, and Government payments to farmers.

Sincerely yours,

H. A. WALLACE, *Secretary.*

Annual average of number of persons employed on farms on first of each month,[1] gross farm income, and gross farm income per employed person, South and United States, 1937

Region	Number of persons employed on farms [2]	Gross farm income [3]	Gross farm income per person employed on farms
South Atlantic [4]	$2,135,000	$1,237,712,000	580
East South Central [5]	1,794,000	853,798,000	476
West South Central [6]	1,867,000	1,258,341,000	674
Total South	5,796,000	3,349,851,000	578
United States	10,830,000	10,003,166,000	924

[1] Observe that per employee farm income is based on number of persons employed on farms "on first of each month." This gives a false impression when comparison is made with other regions since a very large number of persons are employed on Southern farms for only a short time—picking cotton or chopping cotton—employment extending in each instance over a few weeks. The number of regularly employed farm workers in the South is fully 1,000,000 less than 5,796,000 as reported.

[2] Includes family and hired labor.

[3] Includes Government payments.

[4] South Atlantic region includes Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida.

[5] East South Central region includes Kentucky, Tennessee, Alabama, and Mississippi.

[6] West South Central region includes Arkansas, Louisiana, Oklahoma, and Texas.

Bureau of Agricultural Economics.

FEDERAL BENEFITS

No Southern State has received the equal of the national average in dollars per family of Federal expenditures for W. P. A., C. C. C., and P. W. A. (See National Industrial Conference Board report, Road Map of Industry No. 165, chart 2. Address 247 Park Avenue, New York.)

Only two Southern States, Texas and Oklahoma, have received the equal of the national average in dollars per farm operator from the A. A. A. program and Farm Security Administration. (See National Industrial Conference Board report, Road Map of Industry No. 165, chart 3. Address 247 Park Avenue, New York.)

[From the Atlanta Constitution of April 8, 1938]

WAGES AND EARNING CAPACITY

Peter Molyneaux, editor of the Texas Weekly, points out that, although the average wage of industrial workers in the South is lower than that of similar workers in the North, the southern manufacturer pays out in wages a larger proportion of his manufacturing income than does the manufacturer of the North.

For the purpose of this comparison, records of 11 Southern States are compared with a group of 4 States in the North. The Southern States are Georgia, Virginia, North Carolina, South Carolina, Florida, Alabama, Tennessee, Kentucky, Mississippi, Arkansas, and Louisiana. The four Northern States are New York, Pennsylvania, Ohio, and Michigan.

In the Southern States, out of net income—that is, proceeds of sales of products after deducting the cost of raw material—the manufacturer pays $39.45 of every $100 in wages. In the Northern States only $32.17 of each $100 goes for wages. Yet the wages of the southern worker are lower than those of his northern brother. Why?

The answer is simple. It is because of the predominance in the South of industries which add much less to the value of the raw material, by processing, than is added in the North. Added to this is the fact that there is a larger investment of capital per worker in the North, thus increasing the worker's productive power.

Mr. Molyneaux points out that in the four Northern States the total value of manufactured products, annually, is $6,674 per worker. Of this, $3,095 represents cost of raw materials, leaving $3,579 for all other costs, including wages.

In the 11 Southern States the value of manufactured products, annually, is $4,568 per worker, of which $2,827 represents costs of raw materials, leaving only $1,741 for all other costs, including wages.

With an income per worker less than half that of the northern manufacturers, it is beyond reason to expect the South's industry to pay wages equalling those of the North.

Yet the South, as stated, pays a much larger proportion of its industrial earnings to its workers, despite the fact that the scales of pay are lower. If it were not for the savings made in other ways, due to climate, lower overhead, and other costs, it would be impossible for southern industry to continue to operate.

That any mandatory increase of wages, drawing southern pay nearer to the level of the North, is the way to cure the situation is self-evidently mistaken.

The only certain road to higher wages in the South is by increase in capital investment, thus making possible a larger creation of wealth by every worker. If the income is increased, the past record assures that the southern workers will get their full share of that increase.

Mandatory increase of pay scales, without increase of income, can only result in reduction of operations and the laying off of a large proportion of the workers now employed. Which is the road to further business depression, to increased burdens of relief, and to a mounting total of unemployed, despairing people.

[From The Nation's No. 1 Economic Opportunity, by Mr. George C. Biggers, of the Atlanta Journal]

GROWTH OF THE SOUTH

"To cite a few examples of the growth the South is making," says the 1938 edition of the Blue Book of Southern Progress, the following will be of interest:

"Southern banking during 1937 showed an increase in growth on a percentage basis, double that of the country as a whole. Aggregate resources of southern banks increased nearly $400,000,000, 5 percent more than the year preceding, while the resources of the banks of the entire country increased only 2½ percent. Bank clearings increased 14 percent in the South, while the United States increase was but 8 percent.

"In manufacturing, the value of output last year in the South reached the enormous total of approximately $10,500,000,000. More than $223,000,000 was invested in new industrial plants. The value of manufactured products in the year 1935, which is the latest year for which comparable figures are available, was $8,632,000,000. The increase was nearly $2,000,000,000 or almost 25 percent.

"These reports, on which the 1935 census was based, came from 34,143 manufacturing establishments which paid out one and one-fourth billion dollars in wages to one and one-half million employees, and also paid out $5,411,000,000 for the materials, fuel, and purchased power used in their manufacturing process.

"The output of iron ore mined in the South grew from 4,217,859 tons in 1936 to 6,414,000 tons in 1937. The value of the ore shipped increased from $6,945,731 in 1936 to $10,802,000 in 1937.

"Cash farm income increased over $300,000,000 in the Southern States in 1937 beyond the amount received in 1936, while for the United States as a whole cash farm income declined nearly $800,000,000.

"Eighty-seven percent of the cotton used in all American mills is consumed in the South by textile establishments. Since 1922 this territory has shown an increase of 2,500,000 spindles, which now have reached the total of 18,913,455. The rest of the country's reported installed spindles total 8,069,000.

"The South has more than 70 percent of the rayon-manufacturing capacity of the country.

"The assessed value of taxable property in the Southern States has risen from $13,033,000,000 in 1910 to $29,203,000,000 in 1937.

"Since 1900, when the value of the South's mineral production was only slightly more than 10 percent of the country's total, it has risen to almost 50 percent. The value in 1936, for which preliminary figures are now available, was $1,739,431,000.

"The South produced 47 percent of the country's output of coal, excluding Pennsylvania's anthracite. It produced the entire output of the country's bauxite; and 66 percent of the petroleum output of the United States comes from the South, while practically all the carbon black from natural gas and phosphate rock produced in the country in 1937 came from the Southern States.

"Regarded as an agricultural area, the value of the South's manufactured products is two and one-half times of its agricultural products.

"While cotton is the leading crop, the South is no longer giving virtually all of its attention agriculturally to cotton. The cash farm income from 17,709,000 bales received last year was $645,325,000, while the total cash farm income of the South during the same period was $2,851,052,000, so that cotton, while the principal crop, represents less than 25 percent of the income the South derives from agriculture."

The Southern States Industrial Council, with headquarters in Nashville, addressed a communication to Mr. Lowell Mellett, director of the National Emergency Council taking that body to task on some of the statements in the report. Some of them might be worth repeating here.

For instance, Mr. Fitzgerald Hall, president of the Southern States Industrial Council, asks: "Why were not the facts brought out which were made available in recent studies of Consumer Purchases by the United States Department of Agriculture, giving a comparison of family income by occupation in 140 villages in the United States? In these studies it was found that the median annual income of nonrelief white families was more in the Southeast than in most of the other sections of the country. In 15 Georgia and South Carolina villages the annual income was $1,309; in 18 North Carolina and Mississippi villages it was $1,764, as compared with $1,447 for 14 Vermont and Massachusetts villages; $1,075 for 19 Illinois and Iowa villages; $1,167 for 13 villages in Pennsylvania and Ohio, and $1,208 for 14 villages in Michigan and Wisconsin."

The report made public by the National Emergency Council refers briefly to the manufacture of cottonseed products, which it says reached a value in 1928 of $265,247,000, but confined its references to tobacco, iron, and coal in two comments, viz: "The manufacture of cigarettes has become important in Virginia and North Carolina" and "the iron and steel industries are important in Alabama." The Blue Book says that the value of cigarettes and other manufactured tobaccos sold in 1937 was $697,623,415, that iron ore mined aggregated 4,217,859 tons in 1936 and 6,414,000 tons in 1937, and that 47 percent of the bituminous coal mined in this country in 1937 came from the South.

There is one more phase of the South's resources and its latest industrial development that we want to bring out. That is our forests and the rapid influx of paper mills. The National Emergency Council report says of the forest-products industries:

"The use of the southern forests for many purposes has constantly grown. In January 1938 the South had 38 pulp mills either built or being built, with a total investment estimated at some $200,000,000. Many new uses have been found for this pulp, such as the manufacture of building boards, rayon staple fiber, wrapping paper, and quite recently newsprint paper. As the United States is the largest consumer of wood pulp in the world, the development of this industry in the South is significant."

The Blue Book backs this up as follows:

"The rapid development that has come about in the manufacture of pulp and paper from southern pine has created a source of income of great value to the farmer. Pine of a size necessary for the purpose can be grown (from seedlings) in 10 years or less, and the mills located in various States, while owning large timber acreage, afford a ready market for pine timber at paying prices to farmers over a wide area.

"More than $100,000,000 has been invested in the last 2 years in mills to use pine wood for the manufacture of paper and pulp."

[From the Greensboro (N. C.) Daily News]

HOME BUILDING IN THE SOUTH

WASHINGTON.—The South is building houses at a greater rate than any other section of the United States, according to the Federal Home Loan Bank Review, which, in its April issue, discusses construction trends.

"We are now experiencing a revival in home building," says the Review, "but the rate of this recovery varies greatly in different parts of the country. In the South, for example, home building is moving much faster relatively than in the Northeast.

"The North Central States occupy a place intermediate between the Northeast and the South, but the South is building new houses at a greater rate than any other part of the United States."

BABSON SAYS SOUTH HOLDS BRIGHT FUTURE IN NATION

(By Roger W. Babson)

SAVANNAH, GA., 1939.—The South is making huge progress each year. The fastest-growing States in the Union are nearly all in the South. Texas, Florida, Louisiana, the Carolinas are boosting their populations about three times as fast as the North. Literally hundreds of communities that were unheard of 10 years ago are thriving towns today. Every one of the chief cities in the United States whose populations have doubled since 1920 is below the Mason and Dixon's line.

The story of the South's industrial growth is even more sensational. More than half the new factory development of the entire country in recent years has been down here. Today, Dixie has over 25 percent of the manufacturing establishments of the United States. And they keep mushrooming up everywhere. Northern concerns continue to flow toward the Gulf, while entirely new industries are springing up all across the South. Reasonable labor costs, savings in fuel, nearness to raw materials, cheap power, low taxes, and water transportation are among the big sales points in the South's spectacular growth.

Latest new industry is newsprint. The first mill is under construction in Texas. It may be the forerunner of a southward trek of northern and Canadian newsprint mills. Slash pine is the raw material. It grows three times as fast as northern spruces. Other branches of the paper industry—particularly kraft—are going strong in Dixie. The southern chemical business is growing by leaps and bounds. Textile mills continue to multiply. Seventy percent of our rayon output comes from the South. The center of the booming petroleum business is in the Southwest.

The end of the so-called basing-point price system for steel should help all southern industry. Once it was just as cheap to buy a ton of Pittsburgh-made steel delivered at Birmingham as it was to buy a ton of Birmingham-made steel. Now the ton of southern steel is cheaper. Hence foundries, forges, stamping mills, and other metal fabricators that have concentrated around northern steel towns will find it advantageous to have branch factories near the southern steel industry. All winter, Birmingham steel mills were much busier than those in the North.

Present freight rates are unfair to the South. Smash up these rates and the products of southern factories and farms can be laid down at northern doors at a real saving to consumers. If we believe in a gradual lowering of world trade barriers, we ought to eliminate such barriers within our own borders. Present freight-rate differentials amount to a tariff on southern products. The biggest boon to the South now would be the changing of these rates.

The problem which has plagued Dixie for years—dependence on one crop—is on its way to solution. Diversification of farms is speeding up. Low feed costs are stimulating livestock raising and dairy farming. Meanwhile, the chemists are finding industrial uses for new crops such as soybeans, tung trees, and sweet potatoes, and for older crops such as cotton, tobacco, and peanuts. Hence, while King Cotton is a mighty sick man, the southern agricultural outlook is very bright.

Among the South's greatest assets are her water-power resources. The T. V. A. development is a great thing. If it is administered wisely and fairly, the huge power surplus should be completely utilized. Air-conditioning has played a big part in recent southern growth and, stimulated by cheap power, will continue to do so. We hear much about low wages in Dixie. People overlook the fact, however, that living costs in the South are very cheap. A house costing $5,000 to build in New England can be put up in the South for about $3,500 and can be heated for about $50 per year less. Food, particularly farm produce, sells for a song. After lower living costs are considered, southern wages are not too far out of line.

Certainly, if I were a young man I would come down here in the South to "seek my fortune." We need more trained men here. Why stay in New York, Philadelphia, or Boston and starve when you can come down here where you can live comfortably and where you are really needed? Today, for instance, 9 of the 18 States which are rated as excellent business territories on my sales map are in the South. Get in on the ground floor of this southern growth just as your forefathers got in on the ground floor of the industrial growth of the West. Recentralization of industry through the industrial use of farm products is on the way. What better spot in the world for it than here in the sunny South?

[From the Charlotte (N. C.) Observer]

AN OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

North Carolina is one of those nine States thus charged as being within an area which constitutes "the Nation's No. 1 economic problem."

Whatever may be the conditions prevailing in the other eight of these nine States, which, in the judgment of the members of your National Emergency Council, may have justified the opprobrious term, the Observer insists that North Carolina does not belong in that category; that its social and economic status does not justify the unenviable title which it has been forced to share from your administration; and that, therefore, this State should be officially exempted from this general charge.

The Observer further feels, Mr. President, that a fair and honest detailed study of the actual facts relating to social and economic conditions prevailing in North Carolina would clearly be convincing that this Commonwealth is justified in noting an exception to your ruling that it belongs among the notoriously backward and unsocial States of the American Union.

It would be to present to the point of tedium the full bill of particulars upon which North Carolina asks to be exonerated at your hands of this charge made by your National Emergency Council, but there are a few basic and convincing points which stand out as being sufficient to mention by way of defense.

Consider, Mr. President, if you will, the value of a single crop in North Carolina, that of tobacco.

In 40 of the 100 counties of our State there has been produced this season 600,000,000 pounds of this commodity.

Those 600,000,000 pounds have been sold at an average of 25 cents the pound.

The value of this one crop this year is, therefore, $150,000,000.

That equals, Mr. President, in value to the farmer-producers of tobacco in North Carolina a sum equivalent to the value of the entire cotton crop sold this year in the empire of Texas.

More than that, the value of this one crop of tobacco in 1938 in North Carolina is equivalent to one-third of the total value of the total wheat crop of America, and wheat, as you know, is a national crop.

The 900,000,000 bushels of wheat which the whole of America made this year sold for 50 cents the bushel, or a total of $450,000,000, whereas the 600,000,000 pounds of tobacco which the one State of North Carolina produced this year yielded a value of $150,000,000—a third of the value of the national wheat crop.

More than that, North Carolina industries took this North Carolina tobacco from the farmers of North Carolina and manufactured from it finished products valued at between $600,000,000 and $700,000,000.

And, as you, of course, know, Mr. President, the Federal Government over which you preside, received in tax revenues almost half of this total value of the State's tobacco manufactures for Federal spending.

In addition, North Carolina manufactures one-fourth of all the silk hosiery made in the entire United States and silk hosiery, Mr. President, is, like cigarettes, another luxury not to be classified as pauper goods sold by a pauper people.

Then, furthermore, Mr. President, let us consider another important yardstick by which to measure North Carolina with other States, if you please—namely, that of the proportion of the industrial income from the capital invested which goes back into the pockets of the laborer.

Taking millions as the base, the value of all manufactures in the United States, which the last census of 1935 showed, was $45,760, the cost of materials was $26,263, and the wages paid was $7,545, or 38.7 percent.

In North Carolina, on the same base, the value of all manufactures was $1,112, the cost of materials was $734, and wages paid was $152, or a percentage of manufacturing income going into wages of 40.2—above the national average.

This average of manufacturing income devoted to wages for labor in New York, the State of the President, is, incidentally, only 30.5 percent.

North Carolina is approximately 8 percent higher than the State of New York in this respect, and it is a vital and basic respect.

And then, when we take textiles as a basis of comparison, this being the outstanding industry of North Carolina, it is again apparent that our State does not belong in the catalog of poverty in which it has been placed.

The value of cotton goods manufactured in the United States as a whole, again with millions as a base, amounted to $1,031, with cost of materials showing $627 and wages paid $248, or 61.4 percent.

But in the South the value of such products was $721, with materials costing $460 and with wages paid out of this manufacturing income amounting to $168, or a percentage of 64.4—3 percent above the national average.

The North Carolina figures are:

For manufacturing income, $234; cost of materials, $144; and wages paid, $56, or a percentage of income paid into wages of 62.2.

On this basis of comparison, North Carolina's average is above that of the Nation as a whole.

In the light of these facts, Mr. President, do you still consider that North Carolina belongs in any category of any number of States which constitute "the Nation's No. 1 economic problem"?

And if they are in the least revelatory to you of the actual economic conditions which prevail in North Carolina, would you not be so kind and gracious and officially magnanimous as to remark in the course of your address Monday at Chapel Hill, the seat of our university, that you do then exonerate North Carolina from the charge laid against it by your National Emergency Council?

The Observer thinks this would be the fair and faithful course for you to pursue, and the Observer believes you are the sort of President who will always do what you are convinced is right and strictly loyal to the truth.

[From Editorial in Manufacturers Record of November 9, 1938]

MORE FACTS ABOUT THE SOUTH

An Alabama newspaper says: "A total of 100,000 copies of the National Emergency Council's recent report on economic conditions in the South is being made available for the use of high schools in Arkansas, Louisiana, and Mississippi."

While investigation at Washington does not show that copies to this extent have been sent to schools, smaller quantities have been furnished to various localities at the request of southern school teachers. If they are to be placed in the hands of school children as a study of facts about the South, it will be unfortunate, because the report is biased. It generalizes about conditions which facts disprove, although these facts were available from Government surveys from which the report was made up. It refers continually to the South as a section of waste and neglect. It fails to show by available figures wherein the South is better off than other parts of the country.

Notwithstanding that the President made the statement, based on this report, that "the South presents right now the Nation's No. 1 economic problem, * * * for we have an economic unbalance in the Nation as a whole, due to this very condition of the South," facts prove otherwise.

A lot of causes might be cited for "unbalance in the Nation" as a whole instead of neglect or failure on the part of the South.

The National Resources Committee says about another section of the country: "The prevailing system of land utilization, hazardous at best, has failed. Tax delinquency, heavy real-estate and chattel mortgages, and dependence on public relief are widespread. For example, more than 70 percent of all farms are listed as tax delinquent; more than 75 percent of the farms in representative counties are mortgaged; and approximately 35 percent of all people are on relief. Many families—perhaps 20,000 in all—have given up the fight during the recent years of distress and have left the region. Most of the farmers hang on tenaciously with Federal aid, hoping that conditions will improve. Many have moved to the villages and few cities where, with Federal assistance, they await opportunities in other regions." This is the area classified as the Northern Great Plains region.

Under the title "Why Not Give All the Facts," we said in the October number of the Manufacturers Record that a great deal in the report left unsaid is more vital and more important than the erroneous conclusions given.

It will not do to arraign the South, where life is more abundant in a very real sense than in other sections, as the sore spot of the country, and southerners who know the facts will object to putting one-sided reports in the hands of school children who should have every opportunity to know the truth in its completeness. If the South's economic picture is examined, there is produced a sense of exhilaration and uplift and outlook in place of dejection and apology, if not despair.

Space will not permit a listing of all the dire things that, according to the report, are wrong in the South. Various paragraphs are headed: "Southern people need clothes"; "Southern people need food"; "South's people want and need houses, radios, butter, beef, eggs, milk, dresses, shirts, shoes." The last named being one of the things Secretary Perkins was concerned about sometime ago.

When the report gets down to details and one is able to compare what is said about income and expenditures by white families in the South with similar families in other sections, which are not given in the report, the South appears in a different light. Let us examine some of the facts.

The Bureau of Labor Statistics shows that in the large cities surveyed in 1935–36 the median family income of six representative cities was $1,545, exclusive of Negroes, compared with $1,691 for the one southern city, the highest median for any city in this group.

The same is true of middle-size cities, where the median of 14 cities was $1,336, exclusive of Negroes, compared with $1,630 for the two cities of South Carolina and Alabama. Again, one of these southern cities ranked highest among the entire group.

Among the 10 representative small cities the situation is again the same, the median income for all cities, exclusive of Negroes, being $1,338, compared with $1,362 for the 2 southern cities.

In all three classifications it is noteworthy that the highest median family income of southern cities of $1,691, $1,859, and $1,653 compares remarkably well with the median family incomes of the two metropolises of New York and Chicago, where the amounts are $1,814 and $1,684, respectively. Negroes are excluded in both groups.

Furthermore, while the income group of the country claiming the largest percentage of families is that of $1,000 to $1,499, the largest percentage in the southern cities are in the group of $1,500 to $1,999. From the same report it is found that the percentage of families in the very low income groups in different cities of the country, compared with the South, differs seldom more than about two-tenths of 1 percent.

The National Emergency Council's report says: "Southern people need clothes. * * * In villages, husband-and-wife families not on relief, with incomes of less than $500 a year, spent $14 for the husband's and $15 for the wife's clothing. Of these amounts, they spent $3 for shoes and shoe repairs, $1 for coats and other wraps, $1 for hats and caps. Farm families having similar incomes spent $15 for the husband's wardrobe, $12 for the wife's."

It does not say, however, although the matter was available at the same source from which the foregoing was obtained, "For villages, husband-and-wife families not on relief in California, Oregon, and Washington, with incomes of less than $500 a year, spent $11 for the husband's and $13 for the wife's clothing. Of these amounts they spent $3 for shoes and shoe repairs, 50 cents or less for coats and other wraps, $1 for hats and caps. * * * Husband-and-wife families not on relief in Illinois, Iowa, Michigan, Ohio, Pennsylvania, and Wisconsin, with incomes of less than $500 a year, spent $12 for the husband's and $11 for the wife's clothing." This notwithstanding the additions to the wardrobe necessitated by colder weather in the northern States.

As a matter of fact, the above figures used in the National Emergency Council's report were derived from a published survey by the Department of Agriculture, and that particular survey now made by the National Emergency Council to appear adverse to the South, was headed: "White Villagers in Southeast Spend More for Clothes Than Do Their Northern Neighbors," showing "in 33 villages in Georgia, Mississippi, North and South Carolina, 2,083 husbands averaged spending $56 apiece for clothes during the year, and the same number of wives averaged spending $57 apiece. In 46 villages in Illinois, Iowa, Michigan, Ohio, Pennsylvania, and Wisconsin, 2,877 husbands averaged spending but $38 apiece, 2,871 wives averaged spending $42."

The report claims the streams of the South are polluted, its land is ploughed the wrong way, it needs industry but when it gets the capital from outside the fact is deplored because the ownership is in the wrong place. It produces 99 percent of the sulfur, but the ownership of the producing source is in another section. The fact is overlooked that one of the principal producing companies is headed by a man born and reared in the South. His office at present is in New York, which is the financial center of the country, and yet he and his family for generations in the South and of the South have been among the outstanding families in everything that has helped to promote southern progress.

Is the South to be stigmatized because it has not raised its own capital to develop its resources? If other parts of the country had wanted to raise their own capital would the West be what it is today? Were not New England and other sections developed by foreign capital?

It seems that Mr. Roosevelt, in using the report as the basis for his comment, did not know that this region made average gains in each decade between 1880 and 1920 of 81 percent in the value of farm products compared with only 67 percent for the rest of the country.

That the value of manufactured products in the South made an average increase of 92 percent in each decade between 1880 and 1930 compared with only 76 percent for the rest of the country.

That the value of manufactured products in the South declined less than 17 percent between 1927 and 1935 compared with a decline of over 29 percent for the rest of the country.

That the capital invested in industry in the South made an average increase of 123 percent in each decade between 1880 and 1920 compared with only 102 percent for the rest of the country.

That the value of mineral products in the South increased approximately 400 percent between 1910 and 1936 compared with only 14 percent for the rest of the country.

That bank deposits in the South made an average increase of 115 percent in each decade between 1890 and 1930 compared with only 91 percent for the rest of the country.

That the aggregate resources of southern banks in 1937 increased over 5 percent compared with only 2 percent for the rest of the country.

That the amount spent for wages in the South made an average increase of 90 percent in each decade between 1880 and 1930 compared with only 79 percent for the rest of the country.

That the rated horsepower capacity of power equipment in the South made an average increase of 74 percent in each decade between 1890 and 1930 compared with only 65 percent for the rest of the country.

That southern cash farm income in 1937 increased over $300,000,000 from 1936 compared with a decline of over $1,000,000,000 for the rest of the country.

That with only 28.3 percent of the Nation's mortgaged farms, the South has only 25 percent of the entire country's farm-mortgage indebtedness.

That the amount spent for public schools in the South made an average increase of 104 percent in each decade between 1880 and 1930 compared with only 93 percent for the rest of the country.

That the number of pupils in southern public schools made an average increase of 25 percent in each decade between 1880 and 1930 compared with only 17 percent for the rest of the country.

That the amount spent for colleges and universities in the South made an average increase of 280 percent in the two decades between 1910 and 1930 compared with only 174 percent for the rest of the country.

That illiteracy among whites declined 45 percent in the South between 1920 and 1930 compared with only 25 percent for the rest of the country.

That according to a recent Federal survey conducted in 50 cities in the United States—20 of which were in the South—the percentage of all families with no income was 4.8 percent for the country as a whole compared with 3.3 percent in the South. From $1 to $499 the South had 27.7 percent compared with 21.7 percent for the entire country. From $500 to $999 the South had 22.9 percent against 23.3 percent for the entire country. From $1,000 to $1,499 the South had 16.8 percent against 19.2 percent for the entire country. From $1,500 to $1,999 the South had 12 percent and the entire country 13.4 percent. From $2,000 to $2,999 the South had 10.2 percent and the entire country 10.8 percent. From $3,000 to $4,999 the South had 5.1 percent against 4.9 percent for the entire country, and in the group of $5,000 or over the South had 2 percent against 1.9 percent for the entire country.

These are facts about a region now termed the No. 1 economic problem, a region of wasted land and natural resources.

[Editorial in the Charlotte (N. C.) Observer]

THE SOUTH'S RETORT TO THE PRESIDENT'S REPORT

The Manufacturers Record, a major defender of the South's business and industrial culture and progress, keeps hammering on what it considers the false impression given of the region by the report last summer of the President's National Emergency Council which collected and broadcasted the uglier side of the situation in the South.

The Record deplores the circumstance that 100,000 copies of this adverse report have recently been distributed in the high schools of three Southern States, in addition to the national circulation so widely given previously to the council's findings.

It is pointed out in a recent issue of the Record that the purchasing power of the southerner is equal to that of the man with equivalent wages in Iowa, Michigan, and Ohio, three States selected as typically representative of the upper stratum of American industrial progress and development.

The fact is also recited in this renewed defense which the Record makes of the South against the calumnies of the council:

That this region made average gains in each decade between 1880 and 1920 or 81 percent in the value of farm products compared with only 67 percent for the rest of the country.

That the value of manufactured products in the South made an average increase of 92 percent in each decade between 1880 and 1930 compared with only 76 percent for the rest of the country.

That the value of manufactured products in the South declined less than 17 percent between 1927 and 1935 compared with a decline of over 29 percent for the rest of the country.

That the capital invested in industry in the South made an average increase of 123 percent in each decade between 1880 and 1920 compared with only 102 percent for the rest of the country.

That the value of mineral products in the South increased approximately 400 percent between 1910 and 1936 compared with only 14 percent for the rest of the country.

That bank deposits in the South made an average increase of 115 percent in each decade between 1890 and 1930 compared with only 91 percent for the rest of the country.

That the aggregate resources of southern banks in 1937 increased over 5 percent compared with only 2 percent for the rest of the country.

That the amount spent for wages increased 90 percent in each decade between 1880 and 1930 compared with only 79 percent for the rest of the country.

That the rated horsepower capacity of power equipment in the South made an average increase of 74 percent in each decade between 1890 and 1930 compared with only 65 percent for the rest of the country.

The southern cash farm income in 1937 increased over $300,000,000 from 1936, compared with a decline of over $1,000,000,000 for the rest of the country.

That with only 28.3 percent of the Nation's mortgaged farms the South has only 25 percent of the entire country's farm-mortgage indebtedness.

That the amount spent for public schools in the South made an average increase of 104 percent in each decade between 1880 and 1930, compared with only 93 percent for the rest of the country.

That the number of pupils in Southern public schools made an average increase of 25 percent in each decade between 1880 and 1930, compared with only 17 percent for the rest of the country.

That the amount spent for colleges and universities in the South made an average increase of 280 percent in the two decades between 1910 and 1930, compared with only 174 percent for the rest of the country.

That illiteracy among whites declined 45 percent in the South between 1920 and 1930, compared with only 25 percent for the rest of the country.

That according to a recent Federal survey conducted in 50 cities in the United States—20 of which were in the South—the percentage of all families with no income was 4.8 percent for the country as a whole, compared with 3.3 percent in the South. From $1 to $499 the South had 27.7 percent, compared with 21.7 percent for the entire country. From $500 to $999 the South had 22.9 percent against 23.3 percent for the entire country. From $1,000 to $1,499 the South had 16.8 percent against 19.2 percent for the entire country. From $1,500 to $1,999 the South had 12 percent and the entire country 13.4 percent. From $2,000 to $2,999 the South had 10.2 percent and the entire country 10.9 percent. From $3,000 to $4,999 the South had 5.1 percent against 4.9 percent for the entire country and in the group of $5,000 or over the South had 2 percent against 1.9 percent for the entire country.

SELECTED STATEMENTS OF PRESIDENT FRANKLIN D. ROOSEVELT ON CHILD LABOR

(Margaret Blachly, April 11, 1939)

1. Address at dedication of Samuel Gompers Memorial Monument, Washington, D. C., October 7, 1933:

"Through the quick and practical action of the National Recovery Act, child labor in the United States has at last come to an end." (Source: Washington Post, Oct. 8, 1933, sec. 1, p. 3.)

2. First annual message to Congress, January 3, 1934:

"We have made great strides toward the objectives of the National Industrial Recovery Act * * * child labor is abolished." (Source: H. Doc. 109 (73–2), January 3, 1934.)

3. Radio address from the White House, June 24, 1938:

"After many requests on my part the Congress [75th] passed a Fair Labor Standards Act. That act—applying to products in interstate commerce—ends child labor * * *." (Source: White House release, June 24, 1938, p. 2.)

Food-Stamp Activities of Surplus Commodities Corporation

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

EDITORIAL FROM THE SEATTLE POST-INTELLIGENCER OF JULY 31, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent that the following editorial from the Seattle Post-Intelligencer be printed in the RECORD. It outlines an unfortunate injustice which has been developed in the administration of the food-stamp activities of the Surplus Commodities Corporation. I hope the Corporation will consider the problem and correct the obvious mistake which it is now making.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Post-Intelligencer of July 31, 1939]

A FOOD-STAMP SNAG MUST BE REMOVED

A snag between three agencies of Government, all organized to serve the interests of the needy, is depriving many hundreds of persons in Seattle of relief and is restricting the operations of the highly beneficial food-stamp plan.

To keep within the appropriations provided by Congress, W. P. A. has discharged several hundred workers.

As employees of the W. P. A., these men and women were entitled to purchase orange food stamps and receive a bonus of the blue stamps good for surplus commodities.

As needy jobless they would be entitled to designated amounts of blue stamps without any purchase.

But when their connection with the W. P. A. ended, they were no longer eligible for the purchase plan. And since each discharged worker received his final pay check as his employment terminated, the Surplus Commodities Corporation ruled that he did not come under the relief classification, on the ground that the final check constitutes a "resource."

Of the three agencies involved, the W. P. A. is taking steps to prevent aggravation of the situation. Pending action by the House on a Senate amendment to enable retention of needy long-term W. P. A. employees on the rolls, Col. F. C. Harrington has ordered suspension of dismissals of persons who have had 18 months' consecutive W. P. A. employment.

But no provision has been made for those already dropped from the rolls under the retrenchment program ordered by Congress in the W. P. A. law which went into effect July 1.

The local agents of the Surplus Commodities Corporation probably are acting within the strict letter of their regulations in defining the possession of a final pay check as a "resource." Nevertheless, the ruling is a narrow one. It violates the spirit of the general relief plan by leaving a "no man's land" between the recipients of work relief and home relief. And it threatens the successful operation of the food-stamp plan in Seattle, besides creating understandable resentment among those who are denied relief.

If there is any possibility, under existing law, of liberalizing the Surplus Commodities Corporation ruling in this respect, we believe the responsible authorities of the Corporation in Washington should undertake it without delay.

The third agency which has a responsibility in this connection is the welfare administration, now under joint county and State auspices.

The men and women discharged from W. P. A. can obtain further relief only as they are recertified. Steps should be taken to handle this recertification promptly.

If the sharply reduced administrative forces are insufficient to handle the work without delay, the King County commissioners should act promptly in laying a request for additional funds before the State authorities.

Discharge of 18 Months' Service W. P. A. Employees

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

EDITORIAL FROM THE NEW YORK POST OF AUGUST 1, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial entitled "Why Not Keep the Rules," published in the New York Post of August 1, 1939. The editorial relates to the discharge from the W. P. A. rolls of workers who have had 18 months' service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Post of August 1, 1939]

WHY NOT KEEP THE RULES?

It was only humane, for Col. F. C. Harrington, W. P. A. Administrator, to suspend the firing of employees from the rolls under the 18 months' purge clause of the new W. P. A. act; nevertheless, he deserves credit for being alert to the opportunity.

He put through his order stopping the dismissals as soon as the Senate adopted an amendment to the Barkley lending bill, which, if passed in the House, would modify the present arbitrary rule.

Colonel Harrington can go a step further. If the unions are correct in their reading of section 15B of the present W. P. A. act, he can put an end to the turmoil caused by the abolition of the union scale for building-trades workers. He can restore the scale on existing projects "to protect work already done." The issue is not likely to arise on future projects, limited as they are to investments of not more than $52,000 each.

Everyone in the present situation of turmoil is losing and no one is gaining.

The public is losing because progress on important projects, like North Beach Airport, has been slowed down unnecessarily; the skilled workers are losing because they are sacrificing their daily wages; other W. P. A. workers are losing because the effectiveness of their labor is being diminished.

All this loss came from the sudden reversal of policy in Washington. From the beginning of W. P. A. the prevailing union scale of wages was paid to skilled building-trades workers. The Woodrum Act suddenly took away the scale. Its provisions were applied not only to new projects, but to projects long under construction. If the change was to have been made at all, it should have been applied to future work, not to unfinished jobs. There should, at least, have been some notice. But the rules were changed in the middle of the game.

Union carpenters, bricklayers, lathers, and other skilled workmen who went to work for W. P. A., many on a nonrelief basis, were thunderstruck when they discovered the Government no longer would pay the scale. They quit. Their automatic reaction has been called a strike. Officials of the Central Trades and Labor Council now call it a "stoppage" or "noncooperation." They insist they have no desire to close W. P. A. projects; they haven't called walk-outs on other Government enterprises; they have caused no disorder here.

The whole unnecessary tangle can be straightened out by an order such as stopped the wholesale discharges. Colonel Harrington some weeks ago asked Attorney General Murphy for an interpretation of section 15B. We hope that the Attorney General's opinion will permit Colonel Harrington to act.

The Progressive Destruction of the South's Economy

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

EDITORIAL FROM THE CHARLOTTE (N. C.) OBSERVER OF JUNE 8, 1939

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Charlotte (N. C.) Observer of Thursday, June 8, 1939, entitled "The Progressive Destruction of the South's Economy."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charlotte (N. C.) Observer of June 8, 1939]

THE PROGRESSIVE DESTRUCTION OF THE SOUTH'S ECONOMY

The Textile Industry Committee, functioning under the Fair Labor Standards Act, has recommended to Administrator Andrews that the universal minimum wage in this industry be established at 32½ cents an hour.

Southern members of that committee have submitted a minority report of protest against the adoption of such a wage level for the entire industry.

The Observer strongly supports this minority view for the simple and sole reason that, in our judgment, the adoption of the majority report will at once jeopardize the jobs of thousands of our textile workers and that, in the long run, it will seriously affect the industrial economy of the southern people as a whole.

Let us say at the outset that, for the most part, the larger mill companies of the South are not among those whose interests and destinies are more vitally involved in this equation, nor are the interests of the employees of these major plants at serious stake.

But all over the South are smaller mills with cramped capital, equipped with old machinery, producing a limited output of goods not by thousands but by handfuls of employees in their respective communities, and the very life of such as these is intimately wrapped up in this question of what they are compelled to pay their workers.

Many of this class of textile establishments will have two options if this minimum wage scale becomes effective.

First, they can modernize their mills with labor-saving devices, if they can secure the capital, in order to remain in business on a competitive basis with the larger and already modernized plants which are already fully equipped with these up-to-date labor-saving mechanisms and, in that manner, continue to operate.

Or, if this course is not taken, because of a lack of capital with which to modernize their plants with new machinery, these smaller mills will have no other alternative than to close up their plants, go out of business, and leave their employees adrift in the already crowded lanes of unemployment.

President Lewis, of the American Cotton Manufacturers' Association, publicly states that, on the basis of inquiries sent to individual mill owners in the South, it is indicated that unless this minimum wage level is reduced or made more flexible, from 25,000 to 30,000 operatives will be thrown out of jobs because of the enforced folding up of many of these smaller and less financially resourceful mills.

As bearing upon this probability, it is pertinent to note that since the present wage scale of a minimum of 25 cents an hour became effective last October, more than 900,000 spindles have become idle because of the inability of the manufacturers successfully to remain in business on the basis of the higher operating and manufacturing costs.

The imposition of this higher wage schedule upon the South by the majority members of this committee, who are, of course, representing the New England branch of the industry, and, with the consent, if not the urging, of the present administration influences in Washington, will, obviously have an adverse effect upon the entire economy of the South.

The first disastrous effects will, as above remarked, fall upon the small-mill owners and their thousands of operatives, who will immediately face the specter of unemployment.

But the economic progress of the South as a whole will be seriously crippled by any injury that is inflicted upon this major industry of this section. The entire cotton economy of the South, therefore, has a stake in this action. It becomes an issue of universal concern for our people.

Grant, if you please, that all of the cotton mills of this section will pay the higher minimum wage and stay in the field in competition with the northern and eastern interests, and grant that no operatives will, therefore, be thrown out of employment by reason of this new wage schedule, there is only one method by which the higher manufacturing cost thus imposed can be met, and that is by raising the price of the finished cotton goods.

And it is this against which the South's cotton factors of every kind, and the people of the South themselves, must unitedly and militantly fight, if either our agriculture or our major industry is to be saved.

Cotton has never faced a more critical period than this, either for those who produce in the fields or those who produce the finished goods from the raw material, and what happens to cotton happens to all our people in the South of whatever rank or occupation.

There are some of us who contend, in the face of world conditions that are developing new adversaries against the cotton South, that unless new uses for this staple can be discovered and its present uses more widely popularized and magnified, time is nearing when either substitutes for cotton or the competition of foreign-made cotton and cotton goods will have driven the South out of this field.

Manifestly, therefore, when the crisis is so acute and when the need for creating more markets for cotton and cotton goods is so imperative, this of all times and periods and conditions is the most unfavorable to make any move or to take any step that will raise the price of the finished cotton articles and thus invite increased competition either from manufacturers of cotton substitutes or from the foreign raw-cotton factors.

We submit, therefore, that the people of the South as a whole had better be opening their eyes in the presence of this ominous threat to their present and future economic well-being and destiny.

If cotton is taken out of their agricultural operations through competition from foreign producers, and if cotton goods is taken out of their industrial activities because of penalizing policies inflicted by the Federal Government, what will the South have left upon which to sustain its economic life—either the South's capital or the South's labor, either the South's money or the South's men?

And in this direction we are definitely headed. There's not a shadow of doubt about it!

The adoption of this new wage policy will give the New England cotton manufacturers all the advantage in the world market for cotton goods over their southern competitors.

They already have a distinct advantage over the southern mills by reason of the freight rate differential, for the retention of which they are organized to fight the South, and so far are successfully fighting the South's just and righteous claims against this destructive discrimination.

Given this additional benefit of a universal wage minimum, these competitors of the South in textile manufacturing will have acquired such a tremendous advantage in manufacturing and marketing costs that these interests in the southern field will face an insufferable and unsurmountable handicap.

The New England members of the wage and hour committee, which recommends this minimum rate, know of these implications and possibilities.

Wage Administrator Andrews ought easily to be able to lay the simple and unprejudiced facts of the South's case before him for fair and just analysis and appraisement.

And the Washington administration ought clearly to see that if policies of this kind are enforced, the South will in fact become the Nation's economic problem No. 1, through no fault of its own and in spite of even its superhuman efforts to prevent.

In view, therefore, of the obvious damage which will accrue to the smaller manufacturing units from this proposed wage level, would Administrator Andrews not feel himself justified by the facts, and the obvious fairness and justice of the issue, to permit a lower minimum to apply to such companies in order to guarantee their existence and to prevent further unemployment, if he is not convinced that the larger units, also, are entitled to a differential as against the northern and eastern schedule?

Address by Senator Davis in Los Angeles, Calif.

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA, AUGUST 22, 1926

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD a speech that I delivered at the First Baptist Church in Los Angeles, Calif., on August 22, 1926.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

More than a century ago some travelers discovered the remains of a memorial to a monarch who was a power on the earth many centuries before the birth of Christ. Upon this wrecked memorial were inscribed these words:

"My name is Ozymandias, king of kings;
Look on my Works, ye Mighty, and despair!"

The travelers looked but, aside from this ruined statue, there was nothing to see but miles and miles of sand. The people over whom he had ruled were dead. The cities where they had lived were gone. The works upon which he had prided himself had proved as ephemeral as a streak of morning cloud. Nothing remained but the immense desert, that had been made by nature and not by a king. Thus passes the glory of the world.

There is nothing permanent in the world unless it be impermanence. We praise and sing achievement and excellence, but there is neither achievement nor excellence that does not, sooner or later, reach the level of the dust and become a part of it.

A great Roman general once stood within the ruins of Carthage and wept. The time had been when Carthage gave promise of being the queen city of the world. She was the rival of Rome, and her great general, the mighty Hannibal, had all but destroyed the Roman power. But Scipio had retrieved the Roman fortune at Sama. Hannibal was dead and Carthage had been taken and destroyed at the time the Roman general wept amongst the ruins of the city. He did not weep because Carthage was no more. He wept because he could see in the calamity that had befallen Carthage a lesson and a warning for other nations. As he stood in the midst of the wreckage of what had once been the world's proudest and most powerful city he exclaimed through his tears, "This may later be the fate of Rome."

We know that it was. With the fall of Carthage Rome grew in power and prestige. Ultimately she conquered the then known world. Most of her people thought that she was destined to be eternal. Other nations had been all powerful in their day. Egypt had been, and Persia, and Babylonia, and Assyria, and Greece, yet all of these had fallen and crumbled into the dust. But the fall of those other nations did not disturb the average Roman citizen. He felt certain that his country would endure forever, just as the average American feels today that America—now the richest and most powerful nation in the world—is destined to be eternal. However, after a long period of decay Rome fell. The once proud city had become so poor in education and religion that all the great educators, poets, schools, and teachers had deserted it. It was a miserable city when the barbarians came down like wolves from the north, sacked the city, and plunged the entire world into an intellectual darkness that lasted for nearly a thousand years.

"While stands the Colosseum, Rome shall stand,
When falls the Colosseum, Rome shall fall,
And when Rome falls—the world."

So thought the average Roman. He felt that with the fall of Rome there was nothing more to be hoped for in the world. But man is never without hope of some kind. With the fall of Rome men began to turn more earnestly toward religion. It was then that St. Augustine wrote his remarkable book called "The City of God." Rome was gone and the world was lost, thought St. Augustine. He urged people to remember that now their only hope was to be found in a "city not made with hands, eternal in the heavens."

St. Augustine was right. We should keep in mind that with the fall of the Roman Empire all that had been known as culture and civilization in the past had also fallen into the dust. The ignorant barbarians of the north were in control. It was necessary that they be tamed, educated, and Christianized. That was the mission of the church. How well she responded to the call is seen in the culture and civilization of today. While it is not true that the church brought civilization into the world, it was the church that saved civilization for mankind. The church preserved much

of the literature that the Greeks and Romans had written, without which our intellectual life today would be much different from what it is. All our ideas on science, philosophy, and literature came from Greece, and but for the church they might have been lost to us forever.

We all hope that the world will never again experience such a misfortune as resulted from the fall of Rome. Probably we never shall experience one of exactly that kind. But there are many who feel, and perhaps not without reason, that the world today is confronted with more than one grave peril. The statement is often made that the world is beginning to lose the fruits of Christian experience and teaching. It is said we are reverting to a new kind of barbarism, in which the spiritual is being overlooked, and the material is becoming our whole existence. It would be well for us to recall the words of President Coolidge on the need of religion in our national life. He said in part: "We do not need more material development; we need more spiritual development. We do not need more intellectual power; we need more moral power. We do not need more knowledge; we need more character. We do not need more law; we need more religion. We do not need more government; we need more culture. We do not need more of the things that are seen; we need more of the things that are unseen."

It is said that the people are losing their ancient faith in God, and immortality, and are ceasing to venerate the Bible. It is claimed that people are more interested in science than in religion.

It is my opinion that, while there may be some justice in this complaint, the complaint itself is somewhat exaggerated. A great Frenchman once said that "Humanity is incurably religious," and the evidence is in favor of this point of view. I believe that statistics will show there has never been a time when church membership was larger in proportion to the population than it is today. Surely there has never been a time when it was easier to raise church funds. People talk about the godlessness of our time, in comparison with the age of the Puritans. But the hearts of these would be cheered if they would only make a study of the court records of that period. We are too apt to remember the saints and forget that there were sinners in those days as well as in our own times.

It is probable that there was never an age when more people believed in religion than believe in it today. There are unbelievers, it is true, but there always have been unbelievers, even in the so-called ages of faith. Lord Bacon once said that a little philosophy inclined men's minds to atheism, but that depth in philosophy inclined men's minds to religion. There are but very few Americans who call themselves atheists. Most Americans believe in some spiritual theory of existence, and this statement, I believe, applies to the great majority of American scientists as well as to those who profess no knowledge of scientific theories.

It is sometimes said that our scientists attack the Bible, but the truth is that their attitude toward the Bible is, as a rule, quite as reverent as the attitude of a well-educated clergy in general. There are very few of them who attack it in the sense in which Robert Ingersoll or Charles Bradlaugh might be said to have attacked it. I hold no sympathy with the man, whether he be clergyman or layman, who, because his limited vision will not permit him to believe, seeks to destroy the faith of others. There is no excuse for the schismatic who seeks to pull down a whole religious structure simply because he thinks he has found a flaw in one of the timbers. True science and true religion can march forward hand in hand, and science need not seek to destroy religion and belief in God. In general, I believe the whole tone of American science is one of reverence.

The debt of mankind to religion is incalculable. The whole history of mankind has developed no more powerful force for the advancement of civilization than religion. Struggling humanity for centuries has held fast to that fundamental belief which is the basis of all true religion, the belief in a Creator. That has been the staff and the comfort of the human race under the greatest trials and oppressions. It has endured through persecutions and martyrdom. It has triumphed with every step toward human betterment.

Men need religion like a flower needs sunshine. What incentive would there be in life if we believed that our struggles in life have all been in vain; that life on this earth is the end; and that all that man is or has aspired to be, lies buried in the grave with him? What inspiration would there be in life if we believed that man is only an animated clod, whose life is as dependent upon his body as a flame is dependent upon a candle, or oil in a lamp? The materialist says that thought is dependent upon the brain, and must cease when the brain no longer functions. But there is no proof to be had that he is right. It is highly probable that the brain is not the creator of thought, but merely the transmitter of thought, as a musical instrument transmits music whose origin is found in the mind of the composer.

But religion does not originate in science; it originates in feeling. It springs from the heart of man in answer to the greatest of all human yearnings—the yearning to be at peace with our God, with ourselves, and with humanity. While this yearning exists in the hearts of men no pedantic scholar who seeks through a misapplication of the findings of science to undermine faith in God can combat the power of true religion.

Man feels that certain things are true. His feeling about them does not prove that they are true, but the feeling persists, and there is nothing in science to disprove the deep feeling in man that goes by the name of religion. And feeling is the most fundamental thing in us.

"Thought is deeper than all speech,
Feeling is deeper than all thought;
Souls to souls can never teach
What unto themselves was taught."

Religion finds its home in the depths of man's innermost self. It is not the product of thought, but, like music and poetry, is born of human emotion. It satisfies a deepseated human need, and is one of those things that defies explanation. Our whole life from birth to death is one of continuous mystery. Whence did we come? Why are we here? Whither are we bound?

Men have sought from science an answer to these questions, but science is unable to answer them. Men have turned from science to philosophy, and philosophy is also unable to answer them. But man has a curious mind. He demands a solution for every problem. He is a bold adventurer who would explore all the wind-swept continents and stormy seas of existence in search of answers to his question. Since he has found no answers in the outward world he has looked within himself. There he has found, in religion, a response to the desires of his heart.

He has gazed for ages within the shifting sands of time to find the footprints of the eternal. He has sought within all the mazes of the transient for a sign of the permanent, and the deep heart of him has fluttered with mystic whisperings which he has translated into such words as "God," "duty," and "immortality." It is useless to go into the dictionary to find the meaning of such words as these, for these are spiritual symbols, and spiritual things are discerned only spiritually. They are not the creation of reason but of faith—yet for the faith that gave them birth millions of men have gone willingly and cheerfully to their death.

Our indebtedness to religion is made clear when we reflect for a moment upon the most stupendous thought the human mind has ever entertained—the thought of immortality. It did not come from reason, for it appears to be contradicted by all the evidence of our senses. Every earthly form that lives appears to be mortal, yet man has heard a voice which bids him believe that he shall not die. Surely this insistent urge—this constant longing for eternal life—has not been planted within us for the mere denial of it. It is a longing that will be satisfied eventually. There is something within man which bids defiance to time and the law of mortality.

The skeptic says, "Prove it." But the man of faith asks for no proof. He feels it and needs no proof. The persistence with which mankind clings to the faith, this hope, this desire for religion, is ample proof of its truth, proof of its need, and proof of its never-ending influence on the daily life of man. But the skeptic says that this is a most unreasonable attitude. The trouble with the skeptic lies in the fact that he does not realize that we live in a world where nothing can be proved that is really worth proving.

Suppose a skeptic asked a person who had just been held enraptured with one of Beethoven's immortal symphonies to prove to him that Beethoven was a great musician. What would the answer be? More than likely there would be no answer, because no proof would be required. It would be a matter of feeling entirely. A musical critic might not be able to prove the greatness of Beethoven's music any more than the humblest admirer. He might say, however, that it was useless to discuss the greatness of such music with someone who, once having heard it, needed proof of its greatness. You either feel its greatness or you don't. If you don't, you are tone-deaf.

And so it is with religion. It cannot be explained any more than the greatness of Shakespeare's poetry. If you have no feeling for music, or sculpture, or poetry, you will see no greatness in these things. If you are incapable of feeling the truth and the power of religion, the truth of religion will have no meaning for you.

Men are born into the world with a genius for things, and other men are born who have no genius for them. One has a genius for music, another has a genius for art or for poetry, or it may be for oratory or for invention. All the great things that have inspired mankind have come as a result of what some have called inspirations; they are not the products of our conscious and commonplace minds.

Now, some men have had a genius of religion. They have moved the world because what they said and wrote answered to something that most men and women found in themselves. People go to church because an inspired hymn inspires those who listen to it. An old English writer once said that he did not care who wrote the laws of the nation, just so long as he was able to write the songs. He was quite right in thinking that a nation is influenced more by its songs than its laws. Men break the laws if they don't like them; but they are moved by the songs because they sing them.

A song is the outward expression of an inner emotion; and to live, man must express himself. Music is the only universal language. Our sacred songs are the most inspiring parts of our religion. A song carries a message we can understand, even though we cannot understand the words of the song. Everything may be expressed in song, but there is no song that does not have an added appeal when it is sung by children. I wonder how many of you have ever heard children singing and felt something of the divine in it. It inspires me, and thrills me, to hear childish voices raised in songs of praise to the Creator of all. How many of you have ever heard

60,000 children singing their praises to God? I heard it recently at the Eucharistic Congress in Chicago, and it will remain with me always as one of the most thrilling and inspiring things I have ever heard. I believe the life of a child itself is a divine melody. Each year is a verse as it unfolds and brings to light new and hidden qualities that go toward the making of a new personality.

We know there is nothing greater in the world than a child. "The world is saved by the breath of school children," as the Jewish Talmud says. Our country in the future will be what our children make it, and our children will be what we make them. We must see to it that they are trained in the way they should go, and in this training the church and the Sabbath school play a large part.

At Mooseheart, that beautiful garden spot in the Fox River Valley of Illinois, where the sunshine of God's smile is reflected in the happy faces of our children there, we are teaching the greatness and goodness of a loving God. The children sing to Him as one they love, and not as one they fear. We have nearly 1,400 children at Mooseheart growing into manhood and womanhood under the sheltering wing of the great Moose fraternity. We are training them in the way they should go. We are educating their brains and their hands, and we are also educating their hearts. We are making them well-rounded men and women. If America is destined to be eternal, it will only be because we have been true to our duty to our children. A land full of neglected children is like a well without water.

When I hear the children singing in the (Mooseheart) Sabbath school, it carries me back to the days when I sang the same sacred songs as a boy in the little Welsh Baptist church in Sharon, Pa. My father and mother attended Sunday school with me, and I can hear again their voices lifted in song. Music is a characteristic of the Welsh race, and in the little Welsh Baptist Church in Sharon, the same church that my mother attended this morning, I have heard some of the most inspiring music it has ever been my good fortune to hear. It was music that came from the heart, pure and sparkling, like a spring of cool, clear water from the side of a hill. It is in the days of our youth that we lay the foundation for future success or failure. If we build well, if we build carefully, and righteously, there is no question of our success. We can't help but succeed. There is no greater influence in a man's life than the prayers he hears at his mother's knee, the songs he hears her sing at her work, and as she lulls him to sleep. These are the things that make a lasting impression. They are the memories that stay with him, and are a source of comfort and refuge in the days that are to come.

The songs I learned as a boy in church and Sunday school are with me always, with their inspiration, and faith, and hope, and courage. I don't believe that anyone can hear the old familiar hymns without feeling that he is a little closer to God as a result. Nearer My God to Thee, is a song that grips me, and actually makes me feel that I am nearer my God than before. No task appears too big, no load too heavy, when I think of the words of that beautiful song, Rock of Ages. There is something of eternity in it; something solid and substantial that is comforting. When a man is tempted to do something for immediate gain that will make him sorry later on, where can he find greater comfort and strength than in that old song we know so well, Yield Not to Temptation. I am sure that the influence of that song has kept many a man on the beaten path when his step faltered, and he was undecided.

As a boy I learned to sing How Firm a Foundation. The words have always been a source of comfort to me. I hold a deep and abiding faith in the firmness of the foundation of true religion. Every song of praise is a song of praise to God. The poet may sing a song to the beauty of a flower, yet the flower is a work of God, and the song is a hymn of praise. In these days when the world is full of strange theories and the minds of men are in a turmoil, there is always a deep satisfaction comes to me when I join a group of men and women met to worship God and sing His praises.

The influence of the Sunday school and church has been with me all my life, and I owe it much. As an immigrant boy I went to work in the steel mills at the age of 9. I had little or no chance for an academic education. Most of my education was gained in the church and Sunday school. It is my firm conviction that background makes a man's destiny, and that background is formed in the days of his youth. The boy who begins life with a good, strong, moral background, who is well founded in his belief in the Bible, starts without a handicap. He is sure of success.

America is and has always been the land of religious freedom. It is also the land of opportunity, and religious freedom and opportunity go hand in hand. This country offers a better chance to the youth of today than it ever has before, a better chance than ever the whole world offered.

It is indeed a privilege and a pleasure for me to come here and speak to those who believe in God, in the church, and in the Sunday school. Let men say or think what they will to the contrary, religion is the deepest reality in the soul of man. Down through the ages religion has, time after time, changed the whole political, economic, and social structure of the world. Its influence has brought men and women out of the depths of obscurity and raised them to the heights of fame. Art and literature have been inspired by its teachings. It has exalted great nations, and thrown down rulers swollen with pride. It has stirred peoples to over-turn despots and to establish democracy. It has lifted mankind far on the road toward ultimate peace and happiness. For no man who fails to acknowledge faith in God, faith in his fellow man, and faith in himself, can find the true road to peace and happiness.

The faith that lives today will never die. The old-fashioned religion, with its real belief in God, is stronger today than ever in its history. Those who would try to tear it down, may well beware, for, in the words of the Scriptures: "Be not deceived; God is not mocked."

The Federal Government's Encroachment Upon the States

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY MISS CONSUELO NORTHROP

Mr. AUSTIN. Mr. President, I ask unanimous consent to have inserted in the RECORD an address by a distinguished woman of Vermont, Miss Consuelo Northrop, former senator from Chittenden County to our General Assembly of Vermont, former State's attorney, and at present a member of the National Republican Committee for Vermont. The address is entitled "The Federal Government's Encroachment upon the States," and was delivered on July 20, 1939, at Hanover, N. H., at a conference held under the auspices of the Braman Fund Committee for Defense of the Constitution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasant opportunity to discuss with you for a short time this evening the question of Federal encroachments upon the States.

I am one of those Vermonters whom Dorothy Canfield Fisher affectionately and aptly refers to as "hermetically sealed Yankees." As you know, Vermont for 14 years carried on as an independent republic on the North American Continent. This important part of our history still burns today in the hearts of those who are fortunate enough to live in the Green Mountains. We always have deeply cherished our independence, and we crave the opportunity to still maintain it.

Inheriting as I have an independent spirit from my ancestors who helped clear the forests of the New Hampshire grants along Lake Champlain you may expect to hear only the States' side of this controversial subject. However, such a great question must be fought out and thought out intelligently from every angle by everyone within all parties in order that we may benefit by the deliberate will of the people.

James Bryce tells us that at an early New England church convention a proposal was made to adopt for a common prayer "O Lord, bless our Nation." Strange as it may seem to us today, this was rejected because it carried with it too great an implication of national consciousness. As a consequence, the convention instead adopted the prayer "O Lord, bless these United States." Having in mind the struggles of those who came to and lived along the Atlantic seaboard during the Revolution and the days which followed, perhaps we can understand the motivating spirit of this convention.

We recall how those who labored over the Constitution from May to September in 1787 wondered if the States would consider the Constitution went far enough in safeguarding their sovereign rights. It was the firm determination of the patriotic men who had a hand in the birth of this Nation that the legislative, judicial, and executive branches of the National Government should not usurp their individual freedom and the liberties of the separate States.

Thus, in order not to leave so important a principle to chance or construction, there was written into the Constitution the tenth amendment, which reads: "The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people." It was largely by this constitutional provision that the Nation's founders sought to fortify the people against encroachment by any President, Congress, or officer of the National Government. It has well been said that "the framers of the Constitution knew that neither legislators nor executive officials are good judges of the

extent to which their own powers should go." It has been the interpretation of this provision in the Bill of Rights which has for the most part determined the rights of the States over a period of 150 years.

If Alexander Hamilton and James Madison today were to discuss the transitions effected by the passage of years, the latter would be compelled to admit, undoubtedly as much as he would dislike to do so, that the Federal Government has not ceased its constant gain of power since the drafting of the Constitution. This is due to many causes, a few of which are here suggested.

Every means of communication, rapid transportation, telegraph, and radio have helped to obliterate State lines, with an attendant loss of State importance. Then, too, the World War brought about the centralization of power at the Nation's Capital. It is safe to say that before the States had even regained a partial balance of their sovereignty after the war that the depression followed to again concentrate in Washington vast power, the effects of which are incalculable. In addition to the war and the depression there have developed tendencies which have directly or otherwise increased the mounting power and influence of the Central Government. For instance, are not our State legislators prone to yield their prerogatives to a point where they sanction measures sponsored by the heads of State departments and executives? Hasn't power been siphoned away from the States by the multiplicity of boards and bureaus which though located largely along Pennsylvania Avenue make their presence felt in every city and township in the country? As our people have come to look to the national and not their State capital for employment, food, and clothing, is it not natural that the States thereby lose their importance in the minds of the possible beneficiaries? Is it not a fact that more and more importance has been placed upon the office of the Presidency at the same time discounting the consequences of the conduct of the administration? Is it not apparent that much national legislation of recent years has extended Federal influence into the lives of every American citizen?

President Roosevelt on July 16, 1929, in an address before the Conference of Governors at New London, Conn., stated, "But there is a tendency, and, to my mind, a dangerous tendency, on the part of our National Government to encroach, on one excuse or another, more and more upon State supremacy." And yet since March 1933 we have witnessed the passage of the N. I. R. A., A. A. A., Securities Act, Banking Act, Sugar Control Act, Securities and Exchange Act, Communications Control Act, Railroad Labor Act, Tin-Plate Export Act, Connally Oil Control Act, Guffey Coal Act, National Labor Relations Act, Social Security Act, Public Utility Holding Company Act, Munitions Control Act, Robinson-Patman Act, Commodity Exchange Act, Maritime Commission Act, Revenue Act, Federal Alcohol Control Act, Walsh-Healey Act, Wheeler-Lea Act, Fair Labor Standards Act, Civil Aeronautics Act, and many others. Regardless of any other effects of these enactments, have they not necessarily tended to increasingly absorb State powers?

Certainly one would not contend that the rights of the States have been violated in matters concerning which the States themselves are powerless to act. But in any event, Federal extension, involuntarily or otherwise, leaves its effect on the States as a result of increased national power.

May I ask your indulgence if, in attempting to point out some of the insidious dangers of Federal encroachments on the rights and liberties specifically reserved by the States under the Constitution, I use as an example a situation occurring in Vermont because of the prominence given to it in New England and elsewhere?

I refer to my own State because I am closely familiar with its political, economic, and social history, as well as with its well-known State policies. Vermont, as you doubtless know, has a recognized reputation among the States for intellectual honesty and stability coupled with a consistent attitude on matters relating to constitutional authority which is deeply planted in the very hearts of its people. A critical review covering a period of over 150 years of the history of Vermont, the first State admitted to the Federal Union, gives striking evidence of its adherence to orderly process under the law and a deep reverence to the Constitution.

It is not surprising, therefore, that its leaders, whether State or Federal, have always been found deeply appreciative and alert to the trusts imposed upon them under Federal and State constitutional law.

Vermont has never yielded to the assaults and temptations of opportunity parading under the cloak of New Dealism, or through the devious paths of private grief. Rather it has stood like a Rock of Ages, unmoved from its faith of constitutional requirements and civic duty. In this respect the policy of Vermont as a State keenly aware and jealous of its sovereignty might perhaps be expressed as a desire for sympathetic cooperation and helpfulness with its sister States within the spirit and policy of the Federal Constitution, which is, and as Vermonters see it, must always remain the very foundations for the justification and continuance of the Federal Union.

A single instance will serve to illustrate what I mean, viz, in 1936 New England was again visited with a terrific flood that ravaged the entire Connecticut River Valley, and while Vermont did not suffer nearly as much as it did in the previous flood of 1927, yet the waters that did such damage in cities like Hartford, Springfield, etc., came chiefly from Vermont watersheds. It was immediately obvious that any satisfactory plan for flood control would involve interstate and Federal action.

Accordingly, the Governors of Vermont, Connecticut, New Hampshire, and Massachusetts, representing the affected States, and the Army engineers, representing Federal authority, met and worked out a suitable plan which would avoid a repetition of these occurrences and which would require among other things the construction of a detention dam in Vermont at the headwaters of the Ompompanoosuc River in the vicinity of Union Village.

The purpose of a detention dam, as distinguished from a dam constructed for power purposes, is to hold back or detain floodwaters in times of great flood, outlets or spillways being so arranged that these floodwaters may be gradually released into the main outlet rivers in such a way as to avoid danger and thus gradually reduce the flood heights which would otherwise necessarily occur.

To function successfully the reservoir of a detention dam must ordinarily remain empty and only come into use to collect the excess waters during the flood-stage period; whereas a dam constructed for power purposes must remain practically full at all times if power is to be provided.

It will be seen, therefore, that in this respect a detention dam differs essentially from a dam constructed for power purposes because in the latter instance the reservoir behind the dam remains practically full at all times, depending upon the natural flow of the stream. Or, in other words, dams constructed as a part of a flood-control plan are rarely suitable for power purposes, and then only as an auxiliary.

Vermont was willing, as always, to cooperate with its sister States as well as the Federal Government in a plan for flood control, but it was not willing to surrender control of the State's water resources, and particularly so as it was unnecessary and contrary to State law, a fact well known to the Federal Government.

Federal authority in Washington, however, ruled that the State must surrender such water rights as in the opinion of the President and his Federal Power Commission was necessary as the price of flood control. They insisted that as a condition of Federal aid that a State give up to Federal authority as determined by them the right and title to all lands which they considered necessary for the purpose. They ruled that this must be done, notwithstanding any restrictions, limitations, or requirements of prior consent provided by any other act.

Governor Aiken, of Vermont, very properly objected. He pointed out Vermont did not recognize the right of the Federal Government to arbitrarily acquire land within the State without its consent and also that by acceding to such requirements he would be acting contrary to the expressed mandate of Vermont and its people. The State could not surrender its birthright and particularly so as the contemplated possibility which was unnecessary and uncalled for and the Governors of other States supported him in his view.

It was early in January when Governor Aiken learned that the War Department declined to approve the Union Village agreement. Immediately thereafter the Vermont General Assembly petitioned Congress to cause the contract to be signed, to repeal the Barkley amendment of June 1938, and appropriated $67,500 to carry the matter to the United States Supreme Court. However, no word has come from Washington since the first of the year and nothing has been done at Union Village. It has been said that Vermonters prefer floods to reservoirs. That is certainly true if in the acquisition of Federal reservoirs we are compelled to surrender any of our sovereign rights.

James Beck once said, "The Supreme Court is not only a court of justice but in a qualified sense a continuous constitutional convention." As it is the judicial branch which determines what constitutes violations of States Rights, we must take note that here again the States have waged a losing battle for supremacy. The records indicate that up to the beginning of the twentieth century but 26 congressional acts had met with reversal at the hands of the Supreme Court; about 40 since that time. Before 1870, approximately 20 cases were reversed but in the last 70 years, in the vicinity of 20 times that number have been disallowed. Some of the later ones wherein the rights of the States have been upheld are, *United States* v. *Constantine; Hopkins Federal Savings & Loan* v. *Cleary; United States* v. *Butler; Carter* v. *Carter Coal Co.;* and *Ashton* v. *Cameron County Water Improvement District.* (These may be found in vols. 296, 7, and 8 of the United States Supreme Court Reports.)

It is unnecessary to suggest that whenever the Supreme Court has decided against the States that no State rights have been violated in the matter litigated because the Court's decision is conclusive as to the law.

The reciprocal-trade agreements of which we have heard much have in many sections of the country tended to break the economic independence of the States. Many illustrations of this truth can readily be cited. For one instance, during the early months of 1939, when New England textile mills were being dismantled, there was imported into this country 4,368,000 yards of cloth. This production would have given work to American employees in 20 woolen mills for a period of 4 months.

Today, the Federal Government is pouring billions of dollars in various forms into the States in the name of relief. The people of the States blandly overlook the paramount fact, namely, that this money is their money collected from them in taxes by the Federal Government. Where else does it come from? The States in turn tax and tax in order to carry on their own governmental functions. They tax their industries in many cases out of business and thus reduce future sources of revenue.

Speaking of taxation of business, a study recently made by the American Federation of Investors revealed that the stockholders of 163 leading American corporations received an average dividend of $1.33, while the taxes paid equaled $2.73 on each of the common shares owned by investors. The combined earnings of the 163 corporations, before providing for taxes, amounted to $2,666,192,399—of this the tax collectors took $1,643,466,791, or 61.6 percent.

The States in some cases in their need for funds pursue the unfortunate practice of taxing, under one guise or another, businesses of other States whenever opportunities occur, and this in no sense makes for good feeling. With diminishing sources of revenue the States are weakened in their efforts to run their own affairs. In consequence, the Federal Government continues to assist them with more Federal funds extracted from the States, and so the vicious circle whirls on and on toward breaking the backbone of State independence.

Does not this condition furnish another reason, if one is needed, why Federal squandering of our funds should be halted? Which is more important—that W. P. A. music projects broadcast throughout the Nation giving the administration an opportunity to advertise its humanitarianism, or that our dual system of government be maintained? To be sure, the W. P. A. program which reached Vermont yesterday from the Pacific coast would have sounded well enough if it were not for the realization that we are helping pay for it with interest, namely in a sacrifice of security and mounting debts which must be collected somehow, sometime, from the people of the 48 States. Incidentally, along with the music, is it necessary for us to finance such a long dissertation on the benefits of the New Deal? It is still several months from 1940.

Other instances of invasion could be cited at length. By taking advantage of the misfortunes of its people in times of need, Federal authority is engaged in a whittling-down process never attempted since the formation of the American Union, and it is particularly tragic when it is being done with public funds furnished by the people from the several States. It is a form of dictatorship which, unless effectively stopped by an aroused electorate, will so weaken States' rights that it is difficult to foresee the ultimate result.

In these transitory days when there is a decided tendency toward substitution for a change in our social fabric; when private enterprise is required to give way to "some concept of the welfare of the people as a whole," we may expect changes in our laws to meet the tendencies of the times. If there ever was a time when the words of Justice Brandeis were fitting it is now, namely, "the greatest problem before the American people" is "the problem of reconciling our industrial system with the political democracy in which we live."

The whole present situation in regard to State's rights is well expressed by Senator VANDENBERG in the following few lines: "The maintenance of democracy in the United States requires the preservation of legitimate State's rights. This country is physically too big, its characteristics are too complex, its sectional problems are too diverse, its people are traditionally too autonomous, to be run in all the intimacies of life from one central control. While we must frankly concede that there is constantly increasing need for Federal jurisdiction in constantly multiplying interstate perplexities, the great fundamental fact remains that we want and must have, the maximum retention of self-government in State and local units or we shall finally face our own Frankenstein."

We know that the control of crime in the apprehension of criminals is a Nation-wide problem which presents definite interstate aspects. We know the Post Office Department can best carry on the protection of the public from mail frauds. There is no question of the many beneficial results of the work of the national food and drug law administration, control of lottery rackets, and many other problems are best handled by the National Government.

James Truslow Adams, in speaking of the necessary separation of the powers of the State and Federal Governments, said, "I do think that many functions may have to be added to the Federal Government but for that very reason, I would divest it of every function it does not have to exercise for the good of the whole."

To the National Government falls the coinage of money, conduct of foreign affairs, control of the Army and Navy, and many other national matters. Therefore, the States, insofar as it is possible, should carry their own loads and certainly in the field of education, workmen's compensation, and various other human and social relationships they should endeavor to do so without the heavy arm of Federal direction.

Chief Justice Chase once said: "The failure of the States to perform their functions would annihilate the National Government," and Chief Justice Hughes, at the one hundred and fiftieth celebration of Congress last March, said: "If we owe to the wisdom and restraint of the fathers a system of Government which has thus far stood the test, we all recognize that it is only by wisdom and restraint in our own day we can make that system last."

As a people we may at times be impatient with the plan of Government bequeathed to us by our forefathers, interpreted by our judiciary, but before we allow aggressions by arbitrary power we should count our manifold blessings and resolve that our heritage of a representative form of Government shall be passed on intact to future generations.

Meeting of Interparliamentary Union, The Hague, 1938

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. SHIPSTEAD. Mr. President, I ask to have printed in the Appendix of the RECORD an interesting address delivered by the junior Senator from Florida [Mr. PEPPER] at the meeting of the Interparliamentary Union at The Hague last year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the Interparliamentary Union, I have no assurance whatsoever that I have the capacity to add anything to the discussion already presented on this, the most important, I believe, of all the subjects we have discussed. But attached as we Americans are to democratic institutions I do not feel it would be appropriate that the discussion should end without our evidencing some of the attachment we do cherish to the parliamentary process, particularly as now all over the world there is a tendency to bring the democratic process into question, and some even scorn and disdain it.

You know, of course, that the American attitude may be expressed in the sentiment that was uttered by one of our Presidents, President Lincoln, who said that parliaments should not only be of the people and for the people but by the people; and so the essential problem presented to the people of each nation is how they may attain effective government and how at the same time they may preserve the right of self-government. The people everywhere have the right of good government, likewise do the people, we believe, have the inalienable right of self-government. The problem is, then, how self-government or democratic government may be efficient government or good government—because no people, I take it, demand more than good government, even good government that may have been chosen by direction of particular people.

The reason why representative government has most often fallen into collapse is, I believe, because it has been inefficient government. It has not been mobile enough, it has not quickly enough marshaled the national power. All of us have the disposition sometimes to go further than we do, but the danger of the authoritative view, we take it, is that you may precipitately gain something good but the momentum may take you to an unintended end. So President Lincoln said while the people were not always the wisest depository of power, they were in the long run the safest. We believe it is essential and vital that democratic processes must adapt themselves to the demands and the complexities of this day, and hence it is particularly appropriate that we should not only have meetings like those of the Interpartliamentary Union but that we should examine the efficiency of the parliamentary process and see how it may be improved.

I suppose all of you are familiar with the technique of the American system. You know, of course, we have a written Constitution. That Constitution achieves three fundamental purposes. The first is it defines the inalienable and indestructible liberties of the individual citizens, the right of free speech, freedom of the press, free assembly, and immunity against prosecution in the courts by the Government except by indictment by grand jury, and the assurance of trial in the area in which the crime may be committed; also freedom from having soldiers quartered in your home and from having your possessions searched by officials of the Government, and the like. So first you have defined the liberties and privileges of the individual citizen. The second one is the division of powers between or among the executive and the legislative and the judicial branches of the Government, and then the third is the definition of the power which may be exercised by each of those three governmental divisions. Now, the President, as you know, executes the law and may make recommendations for legislation to the Congress but has no power to initiate legislation unless Congress adopt his recommendations. The President, of course, has the duty to enforce laws made by the Congress, and appoint the officials of the Government, which appointments are to be confirmed by the Senate, and the President has the authority to conduct the international negotiations of the country.

Congress is divided into two Houses, the lower with 435 and the Senate with 96 Members, two from each State. All of the powers exercised by the House may be exercised by the Senate with one

exception. We think it an important contribution of the American system that treaties before they are ratified are brought into public scrutiny and come before the public knowledge so that the people are informed not only about their local legislation but about their international obligations and duties undertaken by their Government.

And then there is a third section of the Constitution in which each of the bodies has a definition of its powers, the legislature to make the law, and the courts to interpret the law, and the executive to enforce it. You will observe that the parliamentary definition mentioned in the report is exclusively vested in the legislative part of the Government, and that obtains as well for the individual Representative or Member of the Senate, whether a member of the Government party or the opposition party, you have the same right to introduce legislation.

The parliamentary procedure is an important point to emphasize because it is there we are likely to develop the greatest democratic efficiency. We have various committees, judicial finance, taxation, and the various other subjects within the scope of our legislative power. These are continuing committees, and Members remaining in Congress a long time remain members of the committees and are familiar with the subjects; and these committees have their own experts, the advisers and counselors of these committees, who have no power except to act as experts. In addition, each of the bodies has what we call a legislative drafting council, a committee of legal experts who are simply experts hired by the various Houses to advise about the form of a bill, so that the individual Member has expert legal knowledge available to him in drafting a bill.

Each of us Representatives and Senators has an office in his respective building. The House has three secretaries and two large rooms, and in the Senate we have three rooms and five secretaries, who aid us in drafting bills and carrying on legislative business more efficiently, and we have documents accessible to us. One thing that seems to be the subject of most criticism is the way we haggle and delay sometimes in the consideration of matters of legislation. But in our country all the primary examining of legislation is done by the committees, and when a committee has examined a bill and made a favorable report, generally speaking, unless there are differences on broad matters of policy, a bill takes a course on the floor pretty well like that outlined by the committee. So by effective use of the committee we gain in time and frequently save useless debate.

I have covered some part of our parliamentary procedure. We have no hesitation to consult outside bodies, but, of course, none has any authority.

The subject of special powers is a difficult one, because government nowadays is very complex and to rely on intricate law is sometimes impracticable, and so we have an element of discretion. The principle we try to follow may be roughly described by the "skeleton law" referred to in the report. We generally lay down the general principle to govern administrative action, allowing the executive to fill in the detail, but our courts have authority to determine whether the delegation of power is too large, whether we have abdicated our congressional and legislative duty of declaring the law in understandable terms. You may remember the so-called chicken case, wherein the N. R. A. was declared unconstitutional by our Federal Court on the ground that Congress had not been specific enough and had left too much to administrative discretion.

You may permit me to tell you a joke you may or may not deem appropriate to the case of granting too much power to the Executive. That may be somewhat like the story I heard about a colored preacher who was preaching on the subject of the Devil. He was telling his people that the Devil was tied. "The Devil," he said, "am tied. We have done got the Devil tied; but," he said, "Brother Jones, the Devil ain't tied too tight to get you, and Sister Brown, the Devil ain't tied too tight to get you, and Brother Robinson, the Devil ain't tied too tight to get you." And a little boy said, "He might as well be loose!" [Laughter.]

The last point is the control of the constitutionality of laws by the courts. We of course know you regard that with some skepticism, and in certain directions with opposition. Nevertheless, if you have a written constitution, as our Irish friends have now as well as we, you must come to a decision whether the constitutional liberty of the individual has been transgressed by the legislative power. It is an axiom of American law that none can be a judge in his own case. If an individual cannot be a judge in his own case, can a legislative body be a judge of a case in which there is a question of the use of its own power? If there is any limit on parliamentary power, then surely some disinterested party must have authority to say whether that limit has been passed, and consequently that party should be one steeped in the tradition of impartiality to pass judgment on the case of a coordinated body which may be exceeding its own power and authority. So, if you ever put upon the individual a cloak that gives him immunity against legislative power, there must be somebody to see that that cloak is not taken away.

You will observe the balance of the three powers I have referred to. It does not mean these shall be exercised so individually or unsympathetically to each other that the powers of government cannot be carried on effectively. There is a duty on the three to cooperate in harmony, but by scrutiny of the affairs of the other departments you do have a check on any tending to exceed its own department.

We have our trouble with that system. It sometimes makes us go more slowly than we wish to go. But when you think of the criticisms directed against representative assemblies remember the reverse side, remember their virtues as well. I know of nothing beside the divinity beyond the stars which has come so near perfection or worked to the greater good. Here in this building is represented the parliamentary sentiment of the world and determination has been manifested that men shall insist on the right of self-government, and not only that but shall so school themselves in the art of self-government as to be able carefully to fulfill its obligations and give good government, and effective government, to the people of their nation. [Applause.]

Production of Commercial Cotton in the World

EXTENSION OF REMARKS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

STATEMENT BY THE NEW YORK COTTON EXCHANGE SERVICE

Mr. MALONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Production of commercial cotton in the world

[Compiled by the New York Cotton Exchange Service. Figures do not include large amounts consumed in households in India, China, and some other producing countries. American cotton in running bales. Foreign in equivalent 478-pound bales]

Country	1937-38	1938-39
United States	18,412,000	11,800,000
Other North America:		
Mexico	298,000	233,000
Salvador	4,811	5,400
Nicaragua	5,230	3,000
Haiti	20,643	18,000
Puerto Rico	512	826
British West Indies	3,852	4,125
Other countries	1,699	1,688
Total other American countries	334,747	266,039
South America:		
Colombia	12,914	12,000
Venezuela	13,375	11,992
Ecuador	14,339	18,523
Peru	381,739	393,746
Paraguay	43,518	43,000
Brazil	2,075,000	1,877,000
Argentina	237,272	299,792
Other countries	75	75
Total South America	2,778,232	2,656,128
Europe:		
Spain	11,000	11,000
Italy	19,508	43,815
Greece	93,645	71,488

Transportation Facilities in the Northwest

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

EDITORIAL FROM THE SEATTLE POST-INTELLIGENCER

Mr. SCHWELLENBACH. Mr. President, a very serious discrimination exists to the detriment of the northern tier of States west of Chicago in present railroad transportation facilities. The following editorial describing it was printed in the Seattle Post-Intelligencer on August 1. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Post-Intelligencer of August 1, 1939]

STREAMLINED TRAINS

According to a New York private press service, which may or may not be speaking in the interests of the equipment manufacturers, "every lightweight, streamlined, high-speed train operating in the United States has meant additional passenger traffic and substantial earnings for the railroad placing it in service."

The records of several of these trains, some of which have been referred to previously in the Post-Intelligencer, are cited. The Zephyrs, operating between Chicago and Denver, showed the highest earnings ratio during the 1938 fiscal year, with a gross revenue of $2,088,938 and a net of $1,568,831, or 75.1 percent of the gross.

The streamlined Hiawathas, between Chicago and the Twin Cities, made almost as good a showing with net earnings 74.1 percent of the gross, at the rate of $3.22 per train-mile.

The cumulative increase in revenues is evidenced by the record of the El Capitans, which went into service between Chicago and Los Angeles in February 1938. They produced $8,000 in revenues that month, $38,000 in March, $49,000 in April, $83,000 in May, and $101,000 in June.

At present, we are informed, 20 railroads are operating approximately 80 of these trains.

At the outset we explained that this information comes from a private press service which possibly provides it in the interests of the streamline equipment manufacturers.

The Post-Intelligencer is not interested in it from this viewpoint. We are interested in seeing that this region obtains a speedy passenger train service comparable with that provided nearly every other region of equal importance in the United States.

We have pointed out to the railroads that under pooled operation, taking advantage of the shortest mileage between various points, the three transcontinental railroads have it within their power to cut passenger schedules between Chicago and Puget Sound drastically with present standard equipment. We believe better service is due this region and we intend to keep the subject alive until the faster trains are in operation.

Comparative Study of World War Veterans, by State of Residence

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VAN ZANDT. Mr. Speaker, statistics, although generally rather boresome, frequently reveal facts not otherwise apparent.

Contrary to impressions falsely insinuated by those who have selfish interests to serve, less than 10 percent of all living World War veterans receive any monthly monetary benefits from the United States Government by reason of suffering with some disability, service-connected or non-service-connected.

Reference to the chart of statistics accompanying this article will show that although the percentage of World War veterans in each State who receive compensation, pension, and retirement payments ranges from 5.7 percent in New Jersey to 26.06 percent in Arizona (as shown in the sixth column of figures), only 9.58 percent of all living World War veterans receive any regular pension benefits from the Federal Government.

The great percentage of veterans residing in Arizona who receive money benefits from the Veterans' Administration each month is, of course, primarily due to the fact that tubercular veterans have moved into that State in great numbers. This is also true of New Mexico, where 22.02 percent of all World War veterans in the State receive regular checks from the Veterans' Administration.

Other States, such as Colorado, Alabama, California, District of Columbia, Florida, Oklahoma, Oregon, Ohio, and Texas are definitely shown to have been invaded by disabled veterans. These conclusions become apparent by noting, first, the higher than average percentages of pensioned veterans residing in such States (shown in the sixth column of figures), second, by reason of the fact that the percentage of all veterans in the country who now live in any such State (shown in the fourth column of figures) is higher than the percentage of all veterans in the country who enlisted from such State (shown in the eighth column of figures), and third, because the percentage of all pensioned veterans in the country who live in any such State (shown in the second column of figures) is higher than both the other percentages.

Rather confusing? Back up, read it again slowly while you refer to the indicated columns in the chart as to some one State, and then you will become aware of the many comparisons possible.

Now, that you have figured that out, friend reader, many other comparisons will occur to you, without the necessity of my further explaining the various steps to take. Therefore, the rest of this may prove to be superfluous, although

its conclusions may save you the time of doping them out yourself.

By noting that the percentage of all the country's veterans who now live in a certain State (shown in the fourth column of figures) is greater than the percentage of all the Nation's veterans who enlisted from that State (shown in the eighth column of figures), and by further noting that the percentage of the State's population consisting of World War veterans (shown in the fifth column of figures) is greater than the percentage of the country's total population consisting of veterans, 3.29 percent (shown at the bottom of the same fifth column), we must inevitably conclude that there has been a faster migration of World War veterans than of other citizens into such States as California, Colorado, District of Columbia, Florida, Illinois, Maryland, New Jersey, New York, Oregon, Washington, and Wyoming.

Such concentrations of veterans into certain States are obviously due either to (1) their search for employment and/or (2) their search for health.

As to the States of Illinois, Maryland, New Jersey, New York, Washington, and Wyoming, we can "dope out" that their attraction for veterans must have been jobs. This conclusion is arrived at by observing that the percentage of all of the Nation's compensated veterans who live in any such State (shown in the second column of figures) is much less than the percentage of all veterans who live in such State (shown in the fourth column of figures) and somewhat less than the percentage of all the Nation's World War veterans who were enrolled from such State (shown in the eighth column of figures), thus showing an unusual invasion of able-bodied veterans.

As to the States of California, Colorado, District of Columbia, Florida, and Oregon, we must infer that both able-bodied and disabled veterans have "moved in." We arrive at this inference by reason of the fact that the percentage of all Federally aided veterans who live in any such State—shown in the second column of figures—is greater than the percentage of all veterans who live in such State—shown in the fourth column of figures—and still greater than the percentage of all veterans who came from such State into World War service.

You said it. A seventh-inning stretch is in order before proceeding.

Now, at it again, you may observe that opposite migrations of able-bodied and disabled veterans into and out of a State have occurred.

Disabled veterans have moved into and able-bodied veterans out of such States as Alabama, Arkansas, Kentucky, Massachusetts, Minnesota, Mississippi, Ohio, Tennessee.

The reverse movement, disabled veterans "out" and able-bodied veterans "in," has occurred in such States as Illinois, Michigan, New York, and Washington.

Both able-bodied and disabled veterans have moved into such States as California, Colorado, District of Columbia, Florida, Ohio, Oregon, and Texas.

On the other hand, both able-bodied and disabled veterans have been moving out of such States as Connecticut, Delaware, Idaho, Indiana, Iowa, Kansas, Louisiana, Maine, Missouri, Montana, Nebraska, New Hampshire, North Carolina, North Dakota, Pennsylvania, South Carolina, South Dakota, Utah, Virginia, and Wisconsin.

True it is, that, in spite of this outward movement, veterans have not moved out proportionately as much as have other citizens from the States of Idaho, Indiana, Iowa, Kansas, Missouri, Montana, Nebraska, and South Dakota, for they still constitute more than 3.29 percent of the population of such States. This could be accounted for also by the fact that a greater percentage of the residents of such States were accepted as physically fit for military service than was the case for many other States.

Some of these conclusions might have to be amended on the basis of accurate knowledge as to the number and percentage of those from each State who served overseas and who incurred wounds and disabilities in service.

The higher-than-average percentage of compensated veterans in certain States can be shown to have been brought about by the fact that in such States the several veteran organizations have long maintained efficient rehabilitation service set-ups. Long-sighted legislatures in some States have become aware of the fact that appropriations to veteran organizations can result in huge dividend returns to the State in the form of additional service connections and compensation for disabled veterans equitably entitled to same.

These statistics indicate that if unemployable disabled veterans and the dependents of deceased veterans, not now legally eligible for any pensons, are to be provided for by local charitable agencies, or by State public-assistance agencies, with 50-50 matched Federal social-security funds, then the load of so providing for them is now, and in the future will increasingly become, disproportionately heavy in some States as compared with others.

These migrations of veterans and their families disclose the utter impracticability, with consequent inequities and inequalities which will follow, unless the burden of caring for unemployable disabled veterans, and the dependents of deceased veterans, is shifted from local communities and States to the Federal Government.

Comparative study of World War veterans by State of residence [1]

States of residence	Receiving compensation, pension, or retirement, June 30, 1938		Estimated living, June 30, 1938			Percent of estimated living receiving benefits	Individuals in service during World War	
	Number	Percent of total	Number	Percent of total	Percent of State's population		Number	Percent of total
Alabama	8,205	2.13	59,386	1.47	2.24	13.82	84,477	1.80

Additional Facilities for the Panama Canal

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following supplemental statement relative to employment conditions in the Panama Canal Zone, with particular reference to the construction work authorized in H. R. 5129:

The employment policy of the Panama Canal was established by President Theodore Roosevelt and has been controlled by his successors as required by laws enacted by Congress. Congress has been kept fully informed as to this policy which has been evolved from long experience to meet the particular needs of the highly specialized organization which has been established for operating, maintaining, and protecting the Canal in a territory removed from the United States and set down in the midst of the Republic of Panama, in the Torrid Zone. While there is no adequate reserve of American workmen in the Canal Zone or the Republic of Panama, there is always a large reserve of native workers in the nearby cities of Panama and Colon. During the early days of the construction of the Canal, it was found particularly difficult to assemble the backbone of the organization required for the construction of the Canal, notwithstanding the special inducements which were offered in the way of liberal salaries, free quarters, and other privileges, and it was not until the latter part of the construction period that the recruitment and retention of skilled personnel ceased to be a major problem. It was never possible to secure and hold employees from the United States in the lower-grade occupations, and it became necessary to resort to the use of alien labor, including Panamanians, because the duties required of the persons in these lower-grade positions can be satisfactorily performed only by men acclimated by long residence in the Tropics.

The employment policy which was evolved from the necessities of the situation gradually developed into that of employing United States citizens in the administrative, technical, supervisory, high-grade, and skilled-craft positions, and of employing aliens, principally natives of the Caribbean area, as laborers, helpers, and in other positions requiring little manual dexterity, craft skill, or scholastic knowledge. This policy of employing native workmen in the lower paid positions is in line with the general practice of private employers in the Tropics. However, private American employers in the Tropics and elsewhere abroad do not employ as great a proportion of United States citizens as the Panama Canal and Panama Railroad Co. do.

The displacement of the native tropical workers with employees from the United States would result in two classes of United States citizen employees in the Canal Zone: One class, those persons now employed by the Canal and railroad, representing the highest standards of United States citizenship and above the average of United States standards of living; the other class, the one which would be established by replacing native tropical workers with employees from the United States, would necessarily be representative of lower standards. The latter would occupy an anomalous position in the general social organization of the Tropics where lower-grade work is done by natives. Furthermore, under the climatic conditions of the Isthmus of Panama, persons from the temperate climate of the United States generally cannot endure hard physical labor approximating that required of a common laborer. They could not successfully perform the duties of the lower-grade jobs for extended periods and would not be expected to remain useful employees for any great length of time. Their health would soon be broken, and this would be hastened by lack of vacations in the Temperate Zone rendered impossible by their economic condition. The class of common laborers who would be attracted to this work under the conditions which would necessarily exist could not be expected to successfully resist the debilitating and degenerating effect of the social, economic, and climatic conditions which would affect their lives in the Torrid Zone.

The Canal Zone is not an organized territory of the United States and the laws of the United States apply only so far as they have been extended by the Congress. It is in fact a Government reservation which was acquired and is held exclusively for the purpose of constructing, operating, maintaining, and protecting the Panama Canal. The only persons residing in the Canal Zone are those who are directly or indirectly associated with the Canal enterprise. No private business is carried on in the Canal Zone except that associated with the operation of the Canal.

Almost immediately after work was begun on the Panama Canal by Americans in 1904, it was found impossible to recruit a sufficient number of United States citizens to carry on the work of the extensive enterprise. Consequently, on December 8, 1904, an Executive order was promulgated by President Roosevelt providing that "the requirements as to United States citizenship may be waived for applicants for positions on the Isthmus of Panama under such regulations as may be provided by the United States Civil Service Commission." The exigencies of the situation made necessary further relaxations of the rule as to the employment of Americans. On February 8, 1908, an order was promulgated by Secretary of War Taft prescribing that only American citizens should be employed in the higher paid positions, except where Americans were not available for appointment. The order provided, however, that any foreigners who were then on the pay rolls would not be affected. Later, on December 23, 1908, the order of February 8, 1908, was amended by permitting the employment of Panamanians as well as Americans in higher-grade positions. In the Executive order of February 2, 1914, as amended, prescribing conditions of employment for the permanent force for the operation of the Canal, the following rule is found:

> All employees who receive compensation at the rate of more than $960 a year, or 40 cents an hour, must be citizens of the United States or the Republic of Panama, and such citizens will be given preference for employment in all grades. Aliens may not be employed in such grades unless (a) they have occupied similar positions during the construction of the Canal for 2 years or more, or (b) in case of emergency, in which latter case they must be replaced by citizens of the United States or Republic of Panama as early as practicable.

In a later Executive order dated September 14, 1927, the Governor of the Panama Canal was authorized to increase above the limit of $960 per annum the pay of not to exceed 100 alien employees who by long and efficient service had become of greater value to the Canal organization than could be adequately compensated by the limit theretofore established. The Governor was authorized on August 7, 1929, to increase above the limit of $960 per annum the pay of not to exceed 12 alien employees in the positions of steward, chef, baker, and head waiter in the employ of the Hotel Washington and the Hotel Tivoli, but a maximum limit of $1,500 per annum was placed on the pay in such excepted positions.

Aliens receiving compensation in excess of $960 per annum number 245, all of whom have been employed in conformity with the provisions of the orders referred to above. The great mass of the alien employees are receiving rates of pay ranging from $22.50 to $80 per month, with an average of $55 per month. There are about 10,000 of these alien native workmen. The number fluctuates considerably according to the labor demand, particularly in such work as stevedoring, bunkering vessels with coal, repairs to vessels, building construction, and municipal work, in which there may be variations from day to day or according to weather conditions. One of the reasons for the employment of these native workmen which form the mass of the unskilled and

semiskilled laborers in the Canal Zone is that there is a constant reserve of such labor in the adjoining cities of Panama and Colon, thoroughly acclimated to the Tropics and paid at the general level of compensation for such labor in nearby countries.

Approximately 13,000 persons are employed in the operation of the Canal and its various adjuncts. Of this number about 3,400 are citizens of the United States. The others are citizens of the neighboring Republic of Panama and British subjects who were in most cases recruited in nearby West Indian islands during the construction of the Panama Canal, or their descendants. United States citizen employees of the Canal were in greater part engaged in the United States and brought to the Canal Zone. Comparatively few of them were hired locally, since there is no reserve of such workmen on the Isthmus.

Insofar as the immigration laws of the United States and the entry of persons into the United States are concerned, the status of the Canal Zone is by act of Congress definitely made that of a foreign country. The acquisition of citizenship by naturalization is strictly regulated by statute in the United States, and there are no provisions in these statutes whereby a person can acquire citizenship by naturalization as a result of residence in the Canal Zone. A person does not become a citizen of the United States by reason of his birth in the Canal Zone unless, as provided by law in such cases, one or both of his parents are citizens of the United States; and, therefore, children born in the Canal Zone of alien parents do not acquire citizenship in the United States.

It is to be noted that there are many hundreds of these tropical workmen who have worked and resided within the Canal Zone for periods of 20 to 30 years who may not become citizens of the United States because the naturalization laws do no apply in the Canal Zone. There is no doubt that many, if not most, of these aliens would have applied for naturalization had it been possible for them to do so while residing in the Canal Zone, and those who were born there—and they constitute a large proportion of these alien employees—would be citizens of the United States if the laws relating to citizenship applied to the Canal Zone.

Many of these people were brought to the Panama Canal for the construction work on the Canal when it was impossible to get Americans. The question involved is a very broad one that we could not pass on by an amendment to bill H. R. 5129. Many of these people were brought in there when the turn-over was so great that the work would not have been completed otherwise, and many Americans could not have stood the climate and the disease in that country. It was brought out this year before our Committee on Merchant Marine and Fisheries, of which I have the honor of being chairman, that during this period of construction there were Americans who were stricken with yellow fever, typhoid, malaria, and other diseases. These were the conditions that existed there at that time, and these men were brought in and were taken from their homes in the other islands. They cannot be dismissed and made charges upon the Republic of Panama. They cannot be repatriated back home. Some of them have been born in the Canal Zone. These are broad, practical international questions that must be dealt with.

About 2,500 of these tropical employees are citizens of the Republic of Panama who, as a matter of long-established diplomatic policy, are accorded special preference for employment in the Canal service under the provisions of the Executive orders of December 23, 1908, February 2, 1914, and February 20, 1920. If these Panamanians were to be excluded from employment by the Canal enterprise, it is to be expected that diplomatic difficulties would follow:

Since the United States citizen employees of the Canal enterprise constitute the backbone of the organization—men who are selected for their special fitness and who set the tone and pace for the whole organization—their number has remained fairly constant since the Canal was opened in 1914. For instance, there were 3,542 employees from the United States in 1916, when quite a number of important construction projects were still under way, and 3,429, only 114 less, in February 1937, when only a small amount of construction work was being done. On the other hand, there were only 10,449 aliens on the pay roll in February 1937, as against 19,970 in 1916. In 1911, when construction operations were at their height, 32,549 alien workmen were employed. This number dropped rapidly each year, and in 1921, 7 years after the opening of the Canal, only 8,168 workmen of this kind were employed. With an increase of traffic the number of these workmen increased to 12,330 in 1929, and again decreased to 8,557 in 1933 at the depth of the depression. Even though it were possible to employ United States citizens in all positions in the Canal service, the great fluctuation in the number of men employed from month to month and from year to year, resulting from fluctuations in the volume of Canal traffic and other operations, would create unemployment problems of very great magnitude, as there is no chance on the Isthmus for the employment of additional United States citizens except in the service of the Panama Canal and the Panama Railroad Co.

The fundamental policy of employing a fairly constant number of United States citizens in positions requiring a reasonably high degree of skill, and native labor in the lower-grade positions, has made for greater flexibility and has permitted the Canal to meet great variations in the volume of business at the Canal with only slight changes in the personnel from the United States. When Canal operating conditions make it necessary to increase the number of workmen, the neighboring cities of Colon and Panama may be drawn upon immediately to supply the additional number of needed workmen. This would not be possible if the present policy were changed, since United States citizen workmen must ordinarily be recruited in the United States, a process which requires many months of time. To illustrate the working of the existing system—the overhaul of the locks of the Canal, which is undertaken every other year, requires some 800 additional workmen. Of this number about 150 skilled American mechanics are required. All but a few of them have to be recruited in the United States, but all the other workmen are quickly obtained locally. Frequently a considerable amount of difficulty is experienced in obtaining properly qualified mechanics from the United States, and if it were necessary to recruit workmen generally in the United States to meet increases in the volume of traffic, there is no doubt that serious difficulty would be experienced in obtaining qualified workmen in the lower-grade positions.

The problem of what is to become of the native workers and their families is a serious one. They should not be discharged and, with their families, thrown into the Republic of Panama in practically destitute circumstances. They have as a general rule served the Government of the United States faithfully and loyally over a long period of years. The compensation paid them has been too low to permit, save in exceptional cases, the accumulation of savings. Many of these employees were engaged during the construction period at rates of pay as low as 10 cents per hour, and in 1916 the average monthly rate of pay was $31.92. The average rate is now $55 per month. It is estimated that the discharge of the native workers would make destitute about 50,000 persons. Even if only 3,000 of these native workers were replaced, about 15,000 persons would be made destitute and thrown into the Republic of Panama without means of support. Those who were brought to the Isthmus by the Panama Canal cannot return to and reestablish themselves in their native countries from which they have been absent for such a long time, and those who were born in the Canal Zone have no place to which they could go. To eject them from the Canal Zone in practically destitute circumstances would be an act of cruelty. Either they or their fathers were brought in by the Panama Canal, and the Canal is responsible for their welfare.

Should the United States enact a law which displaces from the Canal and railroad large numbers of the aliens now employed, it would be seriously injurious to the Republic of Panama unless at the same time all surplus West Indians

were, by the joint action of Panama and the United States, repatriated in their original homes. Even this action would be difficult of accomplishment because West Indians who may have been born in the Republic of Panama can claim citizenship therein and, therefore, would not be subject to repatriation and might remain as unemployed in the Republic. It is not known whether the countries of origin of these aliens would consent to receive them back in large numbers, and vigorous protests would probably be received if the United States should endeavor to repatriate not only those who were born in such foreign countries but also their numerous children and children's families. There appear to be great difficulties in the way of wholesale repatriation. Without it, Panama would be saddled with a condition of well-nigh chronic unemployment, as it would be years before the growth of work around the cities would absorb a large force or before the unemployed might settle on land in the interior.

In actual practice all but a negligible number of the native employees discharged from the service of the Panama Canal and the Panama Railroad Co. have gone into the nearby cities of Colon and Panama and have become public charges of these cities of the Republic of Panama. This condition has been the cause of repeated complaints. It is contended that the Government of the United States was responsible for their presence on the Isthmus and that provision should be made by the United States to prevent them from becoming dependent upon the limited resources of the cities of Colon and Panama after they have outlived their usefulness as employees of the United States Government on the Canal Zone. There is undoubted merit in this contention. The forcing of from fifteen to fifty thousand destitute persons into the Republic of Panama would undoubtedly cause diplomatic difficulties, would violate humane principles, and transgress all efforts to bring about good will.

Even though it were otherwise expedient to depart from the existing policy of employing United States citizens in the higher-grade positions only and of employing workmen available locally in the lower-grade positions, the cost of such a change would be prohibitively high.

On the basis of replacing all aliens with a sufficient number of United States citizens and assuming that the compensation of the latter would be based on prevailing rates of pay for Government employees in the United States, with quarters and educational and other facilities at approximately present standards in the Canal Zone, the yearly additional cost would be only slightly less than $12,000,000, or $1,484 for each United States citizen added to the organization. A carefully prepared estimate of capital costs involved in replacing aliens with United States citizens indicates that the cost of erecting additional living quarters, cost of municipal work in laying out new town sites, and so forth, cost of recruiting new employees, cost of repatriating aliens to be replaced—assuming this to be practicable—cost of new school buildings, police and fire stations, and so forth, would necessitate a capital expenditure of not less than $35,000,000.

The replacement of more than 3,200 aliens by United States citizens would also be extremely costly and would seem to be uneconomical and unsound. It is estimated that it would involve an initial capital expenditure of approximately $23,500,000 to cover the cost of providing additional town-site areas, quarters, police and fire protection, school facilities, costs of recruiting, retirement, difference in wage standards, gratuity leave, and 40-hour workweek. It would involve an increased annual cost of approximately $5,350,000, exclusive of interest on the capital investment. On a per capita basis the initial capital expenditure would amount to approximately $7,200, and the additional annual cost approximately $1,650 for each native employee replaced.

A fundamental principle in the administration of the Panama Canal has been to keep it on a completely self-sustaining basis. To accomplish this the revenues from tolls and other sources must equal all costs of operation and maintenance of the Canal, including proper charges for depreciation, and, in addition, provide the funds required by the Treasury to pay the interest charge on funds expended in the construction of the Canal and now invested therein. Unless this fundamental principle is to be abandoned and the burden of the extra costs placed on the taxpayers of the United States, any change in the existing employment policy of the Canal would necessarily require an increase in the rate of tolls for ships transiting the Canal and increased charges for the auxiliary services rendered to ships. Any large increase in toll charges might result in diverting traffic from the Canal and thus reducing revenues received.

If 3,000 additional employees were brought in from the United States to fill the lower-grade jobs, it would not be possible for them to receive the high wages generally received by the other United States citizens who now hold all the responsible positions. This would result in a large increase in the turn-over, with increased costs and decreased efficiency. The rates of wages received for comparable work in the United States would necessarily be used as a basis in determining the compensation to be paid in the Canal Zone to United States citizens. Even if they were paid the maximum amount allowed by law, most of the families of these persons performing the less-responsible work would be unable to maintain a standard of living which would not, under the prevailing conditions, endanger their health. It is doubtful whether it would be possible to recruit and retain employees from the United States for the satisfactory performance of this work.

The amendment which was proposed by Mr. SCHAFER of Wisconsin to bill H. R. 5129, providing for the construction of additional facilities at the Panama Canal, and defeated upon roll call upon a motion to recommit reads as follows:

Provided, That all contracts herein authorized shall be made with American citizens or with American corporations, and employment preference shall be given to American citizens.

The provisions of this amendment undoubtedly have a strong appeal to American legislators, all of whom are familiar with the distressing situation relative to unemployment in this country. However, there are most substantial justifications for the vote of everyone who opposed this amendment. Additional lock facilities are to be constructed through a foreign country 2,000 miles from the United States under climatic conditions which unquestionably have a debilitating effect upon American citizens.

The proposal of Mr. SCHAFER of Wisconsin divides itself into two parts:

First. The first provides that all contracts shall be made with American citizens or with American corporations. There is not the slightest question but that any large contracts which are entered into will be made with American citizens or with American corporations. As has been the practice from the beginning of Canal construction, and is now required by law, with a few minor exceptions that can be supplied locally, all equipment, material, and supplies necessary for the construction of this project will be purchased in the United States and will be manufactured from articles, materials, and supplies mined or produced in the United States. Aside from the positive requirements of existing law, the extensive character of the project itself will prevent any except American citizens or American corporations from bidding on the larger contracts, and there need not be the slightest fear that—with minor exceptions—the furnishing of materials, supplies, and equipment, or any substantial construction work on the Isthmus will be by contractors who are not American citizens or American corporations.

The adoption of the amendment proposed by the gentleman from Wisconsin [Mr. SCHAFER] would have precluded contractors in Panama from bidding on native products, the purchase of which is now permitted by law. The good-neighbor policy of this Government and our moral obligations to the Republic of Panama require that opportunity be afforded the use of Panamanian products in the construction, maintenance, and operation of the Panama Canal. It is almost unthinkable that legislation providing for the carrying on of construction work of this magnitude in the middle

of a foreign country should contain such restrictive provisions as to prevent that foreign country from furnishing some of the materials and supplies which it produces or manufactures. The maximum quantity that can be furnished from the Republic of Panama is necessarily small, but refusal to permit its uses would have far-reaching effects upon the relationship between the two countries. Such an amendment would also have made it impossible for the large American citizen contractor to use these Panamanian contractors as subcontractors for supplying supplies or services. It is very important not only for the economic and defense benefits of the United States, but certainly for the purpose of cementing our relationship with Panama to make it possible for American contractors to use Panamanians as subcontractors for relatively small portions of the work.

This project is going to be directed and carried through by high-type American citizens who have the interest of the American Government and the American citizen fully at heart. There can be no other possible expectation but that they will use every means within their power to see that the project is carried through in such a manner as will benefit the United States in its broadest sense. This applies to the securing of materials, supplies, and equipment from the United States and the use of American citizens and American corporations in carrying on the work, at the same time maintaining proper international relations so as to fully conform with the good-neighbor policy of the United States.

Second. The second part of the amendment proposed by the gentleman from Wisconsin [Mr. SCHAFER] provides that:

Employment preference shall be given to American citizens.

This provision involves serious questions of administration and of policy so far reaching that I am not able to say just what the effects would be. I made the statement in the course of debate on this bill that the broad policy of labor is in the President of the United States. This is evidenced by the Executive orders which have been issued with respect to labor. First, I want to call attention to the fact that there has certainly been no effort on the part of the War Department to increase the employment of aliens. The RECORD will show that the employment of American citizens has been uniform and constant while the employment of aliens has varied. Under existing orders of the President, which have been in effect for many years, only Americans or Panamanians may be employed in positions paying more than $75 per month or 40 cents per hour. The only exception to this rule is the authority for the employment of not exceeding 245 persons at slightly higher rates, justifiable reasons for these exceptions being stated in the Executive orders.

It must be recognized that one of the greatest problems in the prosecution of this project will be that of providing an adequate supply of all classes of labor. The turn-over among American citizens has always been large, and this will undoubtedly be true during the prosecution of this project. It would be unwise to place any unnecessary statutory restrictions upon the employment policies which would hamper the recruitment or retention of the working forces. There will be employed, on an average 3,000 American citizens in the construction of this project. All new personnel in such construction work occupying skilled, technical, clerical, administrative, and supervisory positions will be citizens of the United States. They will all be high-grade American citizens whose health and general habits will enable them to withstand the conditions existing on the Isthmus, to which the positions which they will occupy will subject them. For this number of American citizens, reasonably adequate facilities can be provided without unreasonable expense.

The number of workers required will fluctuate considerably according to labor demands. One of the reasons for the employment of these native workmen which form the mass of unskilled and semiskilled laborers is that there is a constant reserve of such labor in the nearby cities of Panama and Colon. These workmen are thoroughly acclimated to the Tropics and paid at the general level of compensation for such labor in nearby countries. Today the President of the United States has authority to determine the employment of these people and to reduce the number of aliens employed. It is variable, and in dealing with an important question like the defense of America, it is highly undesirable to write rigid provisions in the law. We should rely upon the patriotism and honesty of the President to take care of the situation.

Record in 1939 Session

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. BROOKS. Mr. Speaker, as the gavel is about to fall upon the sine die adjournment of the first session of the Seventy-sixth Congress, it is my desire to present a short summary of the work which I have rendered to the Fourth Congressional District in Louisiana, the congressional district which it is my privilege to represent here today. During the current session of Congress my work has been extremely varied and active. Matters which I have worked upon have affected every section of the entire congressional district which I represent in Congress. These matters have also affected every class and every occupation of our citizens and I say today that much has been accomplished for the benefit of northwest Louisiana.

NATIONAL DEFENSE

The burden of work upon the members of the Military Affairs Committee during the current session of Congress has been very heavy. Upon this committee has fallen the task of reorganizing and revitalizing the United States Army. Upon this committee has fallen the work of expanding the air force of the United States to make it superior to that of any other air force in the entire world. As a member of this committee I have attended its sessions held almost daily, at times, and have worked with the General Staff of the Army in this most important work so as to adequately protect our shores from foreign invasion.

As a part of this program, of course, I have been interested in the further development of Barksdale Field, La., and at this time I desire to report that an allotment of approximately one-half a million dollars has been made for further expansion of facilities at Barksdale Field and work has already begun on this expansion. Under the present plans an additional 1,000 men will be stationed at this field in temporary barracks, which must be made permanent at a later date. A Signal Corps warehouse will be built at an early date and extensions in drainage and sewerage will be constructed. The additional 1,000 men will bring the barracks' strength of Barksdale Field to approximately 3,000 officers and men.

As part of this work it has been the duty of the Military Affairs Committee especially to curb the spying activities throughout the United States and to aid in suppressing the alien activities likewise. I have actively supported and fought for legislation which will make espionage of military secrets in the United States much more difficult and hazardous, and which will also have the effect of curbing, if not completely eradicating, the activities of the Communists and the German bund.

FLOOD CONTROL

As far as the Southwest is concerned, perhaps the crowning achievement of the last session of Congress was the appropriation of sufficient funds to give to the Denison Dam the "green-light signal." Over $5,000,000 has been set aside for

this purpose and already the work of clearing the ground has begun. The plans are also being finally drafted and before the snows fall upon the plains of northeast Texas actual work will have begun in earnest on this vast project. When it is completed, it is hoped that the problem of flood control on the Red River will be forever solved and in the future it is expected that no rushing waters high enough to seriously flood any large section of the Red River Valley in Louisiana will be permitted.

Of course, the work on Red River is still in its infancy and when the dam is completed the work of making the Red River suitable for navigation will commence in earnest. The building of the Denison Dam will make the Fourth Congressional District safe from floods in the Red River Valley, and the second problem, when solved, will make navigation possible on this river. The two objectives together will bring development of the Red River Valley in and around north Louisiana to such an extent as to make it a land rich in wealth and in resources yet undreamed of.

As a part of the work which I have undertaken and completed is the Bodcau Dam and Reservoir. In cooperation with Senator OVERTON, who is known as the dean of flood control in the United States Senate, I have worked and fought for the time when Bodcau Dam will become a reality. Each time a survey has been made the actual cost of the dam and reservoir has been hiked. During the closing days of this session of Congress an authorization to build this dam in accordance with the "plans and specifications in the office of the Army engineers" was adopted in both House and Senate after a fight; and while it is estimated the dam and reservoir will cost approximately $3,000,000, I believe that before the end of the year real and substantial headway will have been made in the actual construction of this tremendous project in north Louisiana. When the dam and reservoir are completed not only will the lower Bodcau Basin be fully protected from the ravages of the floods coming down into Louisiana from Arkansas, but a magnificent lake will be created from impounded waters, making boating, fishing, and recreation in this area one of the means of entertaining and making happy our people.

The Wallace Lake project has also received my attention during the current year, and, after much work and effort, a plan which was conceived a number of years ago has received an allotment of $512,000 by the Army engineers. This money is now available for the beginning of actual construction of this project. A difficulty has arisen in reference to obtaining flowage rights, however, and the obligation of doing so has been assumed by local interests. This should be a matter of mere detail which should be worked out in regular course, and I am very hopeful that actual construction on this project will begin within the near future. At any rate, it is comforting to know that the money has been allotted for this project and that the actual construction awaits only upon the obtaining of flowage and easement rights. When this project is constructed large areas in South Caddo and North De Soto Parishes will be reclaimed, increased in value, and added to the cultivable land in northwest Louisiana. In addition to this fact, the lake, too, will afford an admirable place for fishing, boating, recreation, and pleasure to the citizens of north Louisiana.

It has been during this session of Congress that a survey has been made of the east bank of Red River between Coushatta Bayou and Loggy Bayou, in Red River Parish, with a view toward building a levee at this point. While the results of the survey have not been completed, I expect to continue my work on this project with the view ultimately of obtaining a levee giving adequate flood protection to the people living in the lowlands along the Red River between the points above named. At the same time, a general survey of the entire Red River Valley is being made with a view toward correcting all our flood troubles in northwest Louisiana.

I am now engaged in working on the Black Bayou project with the hope of obtaining an allocation of funds sufficient to complete this project. The difficulty now lies largely in local agencies who have undertaken the obligation of furnishing flowage easements.

POST OFFICES

It has been during the course of this session of Congress that the bid for the Vivian, La., post office has been let and the work on the building for this enterprising town of North Caddo Parish proceeds rapidly. By the end of the year the building will be completed to the extent that it will be occupied and mail deliveries and service will be handled from the new office. I might say that the people of Vivian, La., will have cause to feel justly proud of this magnificent new asset to its business section.

In Red River Parish the Post Office Department has allotted the sum of $75,000 for the building of a post-office building at the county seat, Coushatta. A site has already been acquired and within a short time bids will be let for the new building. It is needless to say that the people of Coushatta and Red River Parish will have a right to feel justly proud of the first Federal building to be built in this splendid agricultural community of north Louisiana.

The town of Springhill, La., has been growing very rapidly within the last few years, and its post office has recently shown a marked increase in business. As a result of this fact, I have been working upon the matter of placing it in position for an allotment at a later date for a Federal building. It must be a matter of genuine pride for the citizens of Springhill, La., to know that the Post Office Department has approved a Federal building. This is the first step in the direction of finally obtaining such a structure for Springhill, and I have definitely set this as a goal toward which I shall continue to work.

RURAL ELECTRIFICATION

Because of the possibilities of improving the living conditions of our farmers, I have been especially interested in the work of the Rural Electrification Administration insofar as Louisiana is concerned. I have worked long and hard in developing projects for northwest Louisiana. The Valley Electric Membership Corporation project has been extended by several additional applications until it has reached well into Red River and De Soto Parishes.

The Panola County, Tex., project constitutes the first instance in which the Administration has authorized the crossing of State boundary lines to provide electricity for our farmers and this has been done by the building of several extensions in Louisiana to the Panola County, Tex., project.

Within the last few months the Webster-Claiborne-Bienville project and the Bossier-Webster-Bienville project have been authorized and the work is now proceeding to build the lines necessary to furnish cheap electricity to the farmers in this large area in northwest Louisiana.

As a result of all of these projects numerous towns and hundreds of farmhouses will now be able to receive the benefits of cheap electricity. Over $2,500,000 has been spent in the State of Louisiana since 1935 on rural electrification and some 16,000 farms have been afforded the benefit of cheap current and power, which makes farm life more efficient, convenient, and pleasant.

While the work thus far undertaken in northwest Louisiana is very encouraging it does not yet begin to cover all of those sections in need of rural electrification. Already local citizens are asking for further extensions of present projects and I am cooperating and working with them to obtain the service which they desire and are entitled to receive. My work in this respect must go on until every farm in the Fourth Congressional District which desires rural electrification will receive the benefits of cheap electricity.

AGRICULTURE

During the last session of Congress I sponsored a movement to obtain for the State of Louisiana one of the three agricultural laboratories being built in the United States under the Agricultural Act of 1938. As a result of this movement which I started, one of these three laboratories was authorized to be built north of the city of New Orleans, La.,

and actual construction is under way at the present time, with an expenditure of about $1,000,000. The good of this laboratory will be evidenced to the farmers of Louisiana from time to time as experiments producing new uses for our farm products proceed. Those in charge of this work are confident that all of the agricultural products of Louisiana, including cotton, corn, sugar, rice will be greatly benefited as a result of the work being done by this magnificent experiment station for agriculture.

During the current session of Congress I have obtained the allocation of the sum of $10,988 for further expansion of the pecan station located at Roberson, in south Caddo, La. This development is of peculiar interest to those with pecan orchards who from time to time will profit by the studies and results obtained.

During the recent weeks complaints have been filed at my office concerning the devastating effect of the sand wireworm in Bienville and other parishes of Louisiana. I have prevailed upon the Extension Service of the Department of Agriculture to make a thorough investigation of the development of this pest in northwest Louisiana, and as a result of this fact devastation from wireworms has been found already in Bossier, Bienville, and Lincoln Parishes. A campaign is now under way by the extension service of the State of Louisiana to rid north Louisiana of this destructive pest and to educate our farmers as to how to reclaim land which in the past has been ruined by this insect. This campaign should save to our farmers many thousands of dollars in reclaimed land and in improved crops.

It was partly as a result of my fight in the Military Affairs Committee that the barter purchase, under the terms of which 600,000 bales of Government-loan cotton has been transferred to Great Britain, was adopted by Congress, thereby taking off the market this many bales of cotton which would have competed with our farmers in future years.

I also joined actively in the fight to require the Post Office Department to use at least 50-percent-cotton twine in its postal needs, which means that an additional $325,000 will be spent on cotton staple. This fight has been going on for years, and this is the first time that we have been able to obtain any results in the requirement that cotton twine be preferred in its use over jute by the Post Office Department.

CANCER RESEARCH

During the last few weeks I have obtained the allocation of 225 milligrams of radium for the Charity Hospital located at Shreveport, La. This radium is very expensive and under special act of Congress is loaned to the different hospitals throughout the United States for use in treating cancer and tumor growths among our people, who are unable to afford treatments at the large hospitals that have heretofore had a monopoly of radium. Because of this allotment, in the future, hundreds of our poor people suffering from the effects of this devitalizing disease will receive the beneficent treatment brought about by use of radium at Charity Hospital.

HAYNESVILLE TORNADO

On Sunday afternoon, April 16, 1939, a disastrous tornado struck Haynesville, La., killing and maiming many of our citizens and destroying much property in and around this city in Claiborne Parish. As soon as I received word of this disaster, I called upon the Works Progress Administration, the Farm Security Administration, and the Disaster Loan Corporation, and obtained prompt action in an effort to alleviate the acute suffering around Haynesville. As a Congressman representing the people of this area, I have felt that it was my duty to be alert at all times and to lend every possible assistance to them in their hour of emergency and great trial.

FISH HATCHERY

I have worked with the Federal authorities to obtain funds necessary to build a fish hatchery in Cross Lake near Shreveport, La., and am glad to say that the sum of $46,983 has been allotted for this purpose. Within the near future this hatchery will be built and operated by local agencies.

CONCLUSION

This summary of the activities which I have undertaken for the Fourth Congressional District of Louisiana does not begin to cover the minute details which I have handled during the past year. My office has undertaken to handle a vast volume of correspondence which the varied activities of the Federal Government produce. I often mail out in excess of 100 letters per day replying to the inquiries made of me and to the appeals for assistance and help made by the people of northwest Louisiana. To the best of my ability I have aided in every respect and I want the people of Louisiana to know of my desire to cooperate with them in asserting their interests and their rights in the Federal bureaus under legislation which Congress has passed within recent years.

Many of the matters which I have worked upon during the current year are plans of far-reaching importance. I have not discussed these plans in the present summary because of the fact that progress has not yet been sufficient upon them to justify bringing these plans out into the full light of publicity. As time goes on, however, many of them I am sure will bear fruit and will result in manifold benefits and advantages to us, thereby making life in the Fourth Congressional District of Louisiana more comfortable, pleasanter, and more enjoyable than heretofore.

Barkley-Spence Antipollution Bill

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

EDITORIAL FROM THE CINCINNATI ENQUIRER OF JULY 30, 1939

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of July 30, 1939:

[From the Cincinnati Enquirer of July 30, 1939]

AN APPEAL TO REASON

In reporting out the Barkley-Spence antipollution bill, already passed by the Senate and approved in its present form by the President, the House Ways and Means Committee, unquestionably acted in the belief that it was forwarding a practical means of purifying streams. By placing the control in the health division of the Government, emphasis is laid on aiding health officers of the several States to act harmoniously. The aim of the legislation is to aid cities and industries to eliminate harmful discharges into our waters.

This is a continuation of the great progress made in sewage treatment in the last 5 years, by which cities, with Government aid, have removed the wastes of over half the urban population. It also makes effective the several State treaties, among them that of the Ohio Valley States, already within sight of ratification.

If the Barkley-Spence measure becomes law, water purification will become a practicality in terms of sanitary engineering for cities and chemical treatment of industrial wastes for industry.

It seems difficult to believe that what opposition there is to such a program comes from men who, as representatives of various outdoor organizations, are the most ardent antipollutionists. Some of them are insistent on coercive powers lodged in the Federal Government to punish offending communities and industries, even to the point of holding up legislation of any kind.

The long years of antipollution effort have made it clear that such legislation is not possible because it has not sufficient backing. Apart from that, it is of such doubtful constitutionality that years might elapse before its legality was established.

Cities and towns in the Ohio Valley which, like Cincinnati, are facing an emergency from the mounting tide of disease-laden filth in the Ohio—five times the volume safe for treatment—demand the aid of House of Representatives in support of the practical Barkley-Spence bill.

Some Comments on the Defeat of the Spend-Lend Legislation and the Passage of Alien-Baiting Bills

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials from the Philadelphia Record of Thursday, August 3, 1939. One editorial discusses the defeat of the administration spend-lend program, while the other editorial denounces in no uncertain terms the whole philosophy underlying the alien-baiting legislation with which the Congress has been flooded at this session.

I commend the reading of these editorials to those intellectuals, liberals, and open-minded citizens who believe in the preservation of civil liberties and of our American institutions and of the traditions of our democracy.

ALIEN BAITING

The passage of the Smith omnibus antialien bill was a direct blow at citizens of foreign extraction in these United States. It is now and will increasingly be resented by groups of citizens of foreign derivation who are organized into great national clubs and societies. I predict that those who voted for and supported orally this legislation will reap the political whirlwind as the indignation of the millions of citizens of foreign origin and their relatives, friends, and sympathizers manifests itself in adverse votes at the polls. Nor does such legislation improve the diplomatic relations of the United States with the countries of origin of the men and women against whom these antialien bills were directed.

The recrudescence of know-nothingism in 1939 is disgraceful, in my opinion. It is political demagogy in its most reprehensible form. Students of American history will recognize the malady of which this hysteria is a significant symptom. Turn back history's pages and read of the spread of intolerance which weakened America in the middle fifties. George Fort Milton, of Tennessee, in his Evening of Conflict, piquantly describes manifestations of the Know-Nothing Party which reached its zenith of power and influence in 1955. A logical sequel of the Know-Nothing Party was the Ku Klux Klan, a subversive group which operated in the dark of the night in the Deep South in the tragic era of the two decades subsequent to Appomattox. The Know-Nothings had a ritual, had signed membership, excluded from their party rolls those who were not native Americans, or who were Catholic or Jewish. It was a self-exalting group. It was followed by the Native American Party. The intolerance which it preached was bitter—it embraced abolitionism; it taught relentless hatred of the South; it condemned the polygamy of the Mormons and preached destruction of ideas and individuals with which and with whom it disagreed, by fire and sword, by violence and blood. The bitterness it engendered could only be exterminated by the Civil War. It was the principal factor in paving the way for the Civil War. Its chief mouthpiece in the Senate, Senator Sumner, was so impregnated with hatred for the South and for the institution of slavery that he viciously attacked such men as Senator Butler and the whole State of South Carolina, employing classical allusions of questionable taste and of lascivious terminology and intent. Senator Stephen A. Douglas, of Illinois, denounced the great exponent of know-nothingism on the floor of the Senate as a man unworthy of serving as a spittoon for gentlemen.

THE SPEND-LEND PROGRAM DEFEATED BY TORIES

The defeat of the spend-lend program in this Congress is a catastrophe. It will usher in the next depression. Disaster to business will be its aftermath. There are none so blind as those who cannot see. The inability of the so-called conservatives to recognize that such improvement as has taken place in the business world subsequent to 1933 is due to widespread and diversified Government spending is difficult to understand. Men who pride themselves as being students of economics and as keen observers of current developments are obtuse to the facts which shriek their flaming truth on every hand.

But I claim that it is wishful thinking which befogs their judgment and prevents them from grasping simple and elemental verities. They remind me of Admiral Nelson, who placed the telescope to his blind eye at the Battle of Copenhagen so that he could not see the signals from the admiral's flagship, which ordered surrender. They are viewing the present scene with myopic eyes.

In the fall of 1936 and continuing until late summer of 1937, America had her greatest spurt of prosperity subsequent to 1929. The reason for this was patent: The expenditure of more than $2,000,000,000 of bonus money by veterans contributed materially to this situation. Prosperity in America, it can be demonstrated beyond the peradventure of a doubt, has been contemporaneous with, and contingent upon, the expenditure of funds through Federal authorization and appropriation. When Uncle Sam curtailed his expenditures in 1937, and seriously reduced the numbers of W. P. A. and P. W. A. workers, we felt the impact of the "recession" from which we have in recent months been slowly emerging. Unless and until Congress will entertain debate and enact legislation of a fundamental nature which will insure such changes in our economic system as will provide opportunity for the humblest in our land to secure employment at reasonable wages, we must continue to force-feed into the channels of business life-blood in the form of Federal dollars of purchasing power to maintain our system of private profit and preserve our form of government. To do otherwise is to invite the worst. To permit the happening of another panic of 1929 would be inexcusable, unjustifiable, and suicidal. The American people are not fools. They will hold to strict account Representatives who precipitate another debacle. They will not again patiently tolerate privation, want, misery, hunger, in a land of abundance.

I deplore the defeat of the spend-lend program. It was self-liquidating. It would not have added to the national deficit. It was based on sound finance. It would have loaned money to municipal corporations at low rates with a long period of repayment permitted in order that necessary and delayed improvements might be accomplished. The progressives who supported this measure will be vindicated by the plain people.

The editorials are as follows:

POST MORTEM

Jubilant Tories cry that defeat of the bill to lend $3,000,000,000 to agriculture and private industry is a death blow to the New Deal.

Fearful liberals exclaim that the House action will throw the country into a new depression.

The Record doesn't agree with either view.

The country isn't going to fall apart because a lot of bitter politicians vented their spleen on the people generally when they thought they were venting it on the President. Rather, as President Roosevelt observes, this callous and careless act of the lower branch of Congress will serve chiefly to check further progress—

To keep the Nation standing still, when it ought to be moving ahead.

Let's look at the facts and figures.

The money was to be loaned:

(1) For public works, such as bridges, highways, dams, and other construction which would help the stagnant heavy industries.

(2) For railway equipment, to help revive the railroads, whose employment is 40 percent below normal, and which need 200,000 freight cars.

(3) For rural electrification—extension of electric service by privately owned utility companies to more than a million families in farm sections who do not have it today—which would have boosted not only the construction industry but also the electric appliance industry.

(4) For tenant farmers, to enable them to buy the lands on which they work and to help other farm owners rehabilitate their properties.

(5) Loans to finance shipments to Central and South America, to combat Fascist penetration.

All those benefits are now lost.

Yet those would have been only the direct benefits.

One of the most important reasons for the lending program was to further spur recovery by expanding purchasing power.

Suppose Congress had passed the bill but had cut the loan fund, let us say, $2,000,000,000 instead of three. On the experience of our past public-works expenditures—

Expenditure of the $2,000,000,000 directly would have meant spending of an additional $3,000,000,000 indirectly—or a total of $5,000,000,000.

Where would that $5,000,000,000 have gone? It would have gone into wages, raw materials, manufactured goods; into some of the biggest businesses of the country. By increasing production it would have increased employment.

As new jobs were born, as the money passed from hand to hand, new buying power would have been created for thousands of workers—and all in private industry.

That would have benefited everybody.

But how about the Government's credit? We are glad to answer that question.

Expenditures of the Federal Government today average roughly 8 percent of the national income, which is now over $60,000,000,000 (it was only $42,000,000,000 when the New Deal began).

Now, if the lending program put $5,000,000,000 into circulation, increasing the national income that much, the Government—under existing taxes—would receive about 8 percent of the gain. That means the income of the Government would increase $400,000,000 a year.

Yet because all the money would be loaned for self-liquidating enterprises, the chance of the Government losing would be very small.

During those 5 years, however, the Government would have enjoyed a gain of two billions in taxes.

In other words, the Government's credit would be stronger, because the Government's income would be greater—without imposing new taxes.

The Nation would be stronger because the Nation's income would be greater.

The security of business and employment would be greater—because more people would be buying more goods.

It remains for conservatives in our Congress to proceed on the theory that business will be better if people buy less.

Time will give them their answer.

The 47 Democrats who sold out the New Deal they were pledged to support may feel they are beyond immediate reprisal at the polls, although many are worried by the unexpected defeat of Senator BYRD's Tory clique in Virginia Tuesday.

Sooner or later, however, the people will discover their betrayal—and act accordingly.

Sooner or later, the voters who voted to carry the Nation forward in 1932, voted to carry it forward in 1936—will vote to carry it forward again.

That vote, we venture to predict, will come in 1940.

THE ANTIALIEN BILL STRIKES AT US ALL

The only good thing to be said about the Smith antialien bill passed by the House of Representatives last week is that it hasn't much chance of becoming law. The Senate is unlikely to consider it before adjournment.

Even if the House action was only a gesture, a particularly nasty one, the situation is no less serious. What we are concerned about is the challenge to basic American principles and civil liberties.

This bill would be a loaded gun pointed toward aliens, a gun that could easily be turned toward any other group in this country.

On its face the bill seems unobjectionable. It is wrappped in the flag, in fine patriotic phrases. But we are glad to see our conservative contemporaries discovering as much harm lurking in this omnibus antialien bill as we do. Says the New York Times:

"It is not easy in a measure like the Smith antialien bill * * * to separate those provisions which may be justified as a defense against real dangers from those which may themselves endanger our traditional liberties. But neither the language of some sections of the measure nor the debate on it gives assurance that the bill was dispassionately drawn and considered."

The more conservative New York Herald Tribune goes even further in its condemnation, saying:

"By channeling popular disturbance over Communist and Nazi-Fascist activities into a flag-waving campaign against the alien, a measure like the Smith bill simply reduces the whole movement to the base and stupid level of a Nazi campaign against the Jews."

Certainly we're against the aliens committing the crimes mentioned in the bill, crimes such as carrying weapons unlawfully, violating the State narcotic laws and inciting to mutiny in the Army and Navy.

We're against anybody else committing the same crimes.

We're not in favor of punishing a thief because he's an alien, but because he's a thief.

Right there is the sinister implication of this bill: That aliens are more likely to become criminals than the native-born.

We don't believe it. The Wickersham Commission report in 1930 and a more recent study in New York show that the crime rate of aliens is about half that expected on the basis of their numbers.

We must not forget that about 1,000,000 aliens living here can't become citizens because of technical flaws in their passports. We must not forget either that the 5,000,000 aliens in this country have about 6,000,000 children, native-born Americans, who would see their fathers and mothers lumped together as undesirable citizens if this bill should become law.

Worst of all are the symptoms of hysteria on the part of our Congressmen revealed by the antialien bill; the same symptoms of unreasoning hate that caused the stoning of German bakeries during the World War.

We don't want to start off on a Nation-wide alien hunt. Once the hunt for aliens is in full cry, with the hunters wearing cloaks of patriotism, it would be easy to shift the hate toward naturalized citizens, toward racial minorities, toward religious minorities.

We have enemies in this country, but not many of them are aliens. The enemies we have to fear are the native American products of unemployment, sweatshops, slums, and starvation in the midst of plenty.

Let us not waste our time bating aliens. There is real work to do.

The Right to Work

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

RADIO ADDRESS BY CLARE E. HOFFMAN, OF MICHIGAN, ON AUGUST 3, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks, the following is a radio talk delivered by me at Washington, over the Columbia Broadcasting System, on August 3, 1939:

Fellow Americans, do you know of any reason why a man should be denied the right to work?

Of late, every time a law-enforcing officer has ventured to interfere with the riot-inciting, head-cracking tactics of Bridges, Lewis, the C. I. O., or the Communists, someone complains that civil liberty is being denied to those who are closing factories, seizing private property, denying to workingmen the God-given right to earn a livelihood for themselves and their families.

With strikes sweeping the country from coast to coast, we are face to face with the all-important question, Shall John L. Lewis or any other man or organization deny to an American citizen, until he has signed on the dotted line, the right to work?

Senator LA FOLLETTE and Senator THOMAS of Utah, through the activities of the so-called Senate Civil Liberties Committee, have spent more than $100,000, have printed thousands of pages of testimony from biased and prejudiced, hand-picked witnesses, all tending to smear businessmen and to make it appear that employers are persecuting workers.

It is astounding that so biased, unfair, and untrue a picture tending to create class hatred should be permitted by the Senate to be given to the public.

Attorney General Murphy has joined in the hue and cry by sending special investigators into Harlan County, Ky., where their presence could only lend aid to Lewis' United Mine Workers.

Notwithstanding all of the activities of the Attorney General, the wholehearted assistance rendered the C. I. O. by Mme. Perkins and her Labor Department, the activities of the Labor Board, the threats of the Department of Justice to bring criminal trials, the liberty-loving mountaineers of old Kentucky, backed by the operators, defied the Communists, the C. I. O., John L. Lewis, and insisted upon and obtained an open-shop contract—perhaps the only one in the soft-coal-mining industry.

High on the roll of honor where are written the names of those who have fought the battle for liberty in this country should be inscribed the names of Gus Whitfield, A. F. Whitfield, Jr., George Whitfield, William Whitfield, Ed Whitfield, Jack Whitfield, and Bryan Whitfield, J. C. Stras, W. J. Cunningham, E. Floyd Wright, and Jack K. Dickinson—Harlan County coal operators all, members of the Harlan County Coal Operators Association, which, with them, has defied Lewis, refused to yield to the intimidation of Federal authorities acting unjustly and arbitrarily, and maintained in Harlan County at least, the principle that, in order to work, a man need not pay tribute to the United Mine Workers, the C. I. O., or any similar organization.

We all know that religious freedom means the right of one to worship God as his faith may incline him.

Civil liberty is an all-embracing term. Civil liberty means the right of the individual, limited by the equal right of his fellow men, to do all those things which will protect life, property, the sanctity of the home, freedom of action, and which will aid him in the pursuit of happiness and prosperity.

Civil liberty means freedom of action in acquiring, owning, and using property. It means the right to choose one's trade, occupation, or profession; to work or not to work; to walk the streets and the highways in daylight or in darkness, free and unhampered by unlawful restrictions, pickets, goon squads, or wrecking crews.

It includes the right of the individual to earn a livelihood for himself in any place and for any employer where he may be able to secure work at a wage satisfactory to him.

It means the right to join or not to join the Elks, the Odd Fellows, the Masons, the Sons and Daughters of I Will Arise; to join either the Protestant church, the Catholic church, or no church at all.

It includes the right to attempt, even though you be 60, to jitterbug, to do the big apple, the Lambeth walk, the rhumba, the shag, or the black bottom, or to sit at home in your easy chair and read your weekly newspaper.

In short, civil liberty means the right to enjoy all those things which a citizen of these United States has come to regard as essential to his well-being.

Who, then, is denying civil liberties to the citizens?

The Senate Civil Liberties Committee and men pretending to be labor leaders have done more to deprive workers of their civil liberties than all employers in all the days gone by since the establishment of our Republic.

A few days ago, blinded by its New Deal idolatry, a Washington weekly said Congress was becoming "increasingly antilabor." No slander more foul was ever uttered and the publisher knows that there are not 10 men in Congress (it is doubtful if there be 1) whose sympathies are not with labor.

Like many others, he failed to distinguish between the real friends of labor and those who pose as labor leaders, who are exploiting labor to serve their own political or selfish ends; who are in reality labor racketeers.

Throughout our land, in industry after industry, in village, town, and city, strikes have been called, women and men have been driven from their places of employment, because so-called labor leaders desired to establish themselves in positions of power and influence. All those who oppose these greedy, selfish racketeers are designated by them and by their friends as being antilabor.

The real friends of labor are those who provide jobs, who pay wages, who advocate reasonable, wholesome laws under which labor can organize, bargain collectively, and meet on equal terms its employer.

THE REAL ENEMIES OF LABOR UNIONS

Lewis and his C. I. O. organization, in the soft coal mining, the motor, the packing, the steel industries—in fact, in all industries—are attempting to establish the rule that no man shall work until he has joined the C. I. O.

If man would live, he must eat, and, if he would eat, someone must work. To demand that no one can work to earn the food to maintain his life, to care for and educate his family, to buy medicine in time of sickness, clothing to protect from winter's freezing cold—until that man has signed John L. Lewis' card, is to insist that workingmen surrender their freedom.

It is an attempt to impose a tyranny worse than that sought to be exercised by George III.

Lewis and those business executives who contemplate adhering to the practice of hiring only those who sign on Lewis' dotted line and deny employment to all others, may well consider the proposition of just where they will end if the rest of us, who are denied jobs unless we agree to Lewis' terms, refuse to purchase or to use the products of the shop where only Lewis' men may work.

When Lewis or the C. I. O. establish the rule that only members of his organization can work in the motor industry, in the coal mines, in the packing plants, it may be well for the rest of us to refuse to use the motor vehicle, to burn the coal, or to eat the product of that packing plant, and let Lewis and his men purchase and consume that which they alone are permitted to produce.

If neither of my sons, my grandsons, Sam, John, or David, is permitted to work in these industries, should we not serve our own interests by using oil for fuel, buying the motor vehicle made in the open shop, eating the finished product of that packing plant which, without discrimination, opens its doors to every man who desires to work?

Lewis intends to extend his rule over the field of agriculture; to force every farmer to employ on his farm only members of his union; to force the farmer's boy to join a union before he can milk his dad's cows; the daughter to pay dues before she can gather the eggs or churn the milk into butter.

If once Lewis organizes the workers in the canning, the dairy, or any other industry having to do with the handling or the preservation of a perishable product, what will be the effect of a strike?

The farmer, with his crop of perishable fruit or vegetables, would be utterly ruined by one sit-down strike. And do not forget that, within a year in the motor industry, a thousand strikes occurred, even after a contract with the union was signed.

Do farmers intend to submit to that kind of ruinous domination by anyone? If not, they will do well to awaken to the situation.

But, you say, it will not come to us. "It will not happen here." It has happened here. It has come to the farmers, not in one, but in thousands of instances.

Let me cite you the case of a farmer in California—Dan Ryan. Dan had 180 cows in his barns. He had the men who were ready and willing to milk them. They refused to join a labor organization. He was told that, unless he discharged them or forced them to join, his milk would be declared "hot."

Being an American who believed in the Declaration of Independence, thinking he was protected under the Constitution of the State and the Nation, he refused to compel his men to join. His milk was declared "hot." The truckers refused to handle it. The Borden Co. refused to use it, and for 600 days he sustained a loss of more than $30 a day.

Why? Because he refused to require free-born Americans to join a particular organization.

Because we do not believe in those things are we antilabor?

Oh, no. The man who is antilabor is the man who insists that no man who depends upon labor for his livelihood shall have the privilege of earning that livelihood until he has paid tribute for the privilege of exercising a right for which his forefathers fought and died.

The proposition maintained by Lewis and those who believe with him that no man can work in this heretofore free America of ours until he has joined a union is so absurd, is so ridiculous, is so un-American, that the only wonder is that it is given consideration.

To support his demands, Lewis has used coercion, intimidation, force, violence—yes, and men have been killed defending their right to work.

Lewis and his C. I. O. are the ones who are denying to the citizen the right to walk free and unhampered down the street; denying to the businessman the right to carry on, to give employment, to pay wages; denying to the worker his civil liberty, the right to work to feed, clothe, and shelter his wife and his children.

Lewis is not a safe man to follow. He showed his vindictiveness, his utter disregard for the truth, when he said that the Vice President was an "evil old man." Everyone knows that JACK GARNER is honest, patriotic, and lives an exemplary domestic life.

None should forget that after receipt of a telegram from Lewis on June 18, 1922, members of the United Mine Workers and their sympathizers, after unarmed union men had surrendered upon promise of safety, dragged some of them behind an automobile, shot others, and hanged still others until 25 were dead.

We should remember—none should ever forget—that the road over which Lewis has traveled has been marked by lost jobs, closed factories, and in some instances by "ghost towns," by violence, by bloodshed, by death.

Lewis should be taught by the orderly processes of the law that if he and his lieutenants go about the country inciting riots, driving workers from their jobs, intimidating their families in their homes, they should be tried to determine whether they are violating the law, and, if convicted, thrown into jail as common criminals.

Neither Lewis nor his lieutenants should be privileged to violate the law. They should be treated as is the ordinary average citizen who starts a fight, destroys property, and beats or kills his fellow men.

The time has come when we must determine here in this America of ours whether Lewis rules or whether the law is supreme.

That issue has but one answer. The law must prevail if our liberty is to be secure.

Government Aid for Dairymen—What the Government Does and How and Where To Apply for Assistance—The North Country Dairyman Should Continue the Fight

---

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. CULKIN. Mr. Speaker, the dairyman of the North and Northeastern United States has been slowly but surely driven to the wall and is now facing universal bankruptcy. Milk and other dairy products are essential to the life and health of the American people, and the dairymen, working 12 hours a day, 365 days of the year, has given the country a product unsurpassed anywhere in the world in sanitary and health-making qualities. For the past 10 years the dairyman has been obliged to sell his product below production costs, and as a result of this he is now being slowly driven off the land, and great areas are becoming untenanted. The survivors of this group who, to my mind are the best American stock, have seen the professional take their product at starvation prices and market it with high profits.

The splendid report of Attorney General Bennett, of New York, who made an investigation into this situation, shows that the monopolists, including Borden's and National Dairies, are making a profit of 24 percent on fluid milk and 108 percent on the manufacture of dairy products.

Through the years the Federal Government, States, and localities have multiplied the requirements of sanitary production. These have increased the dairyman's costs, and with each increase in the cost of production the brazen monopolists have increased the cost to the public and decreased the price to the farmer.

MARKETING MONOPOLY

Other types of farming suffer from the artificial conditions thrown around the marketing of the things they produce, but in no other type of marketing has the professional or distributor enjoyed such tremendous and traceable profits as in the marketing dairy field. The Federal Trade Commission has made repeated reports on these marketing monopolies, but effective action has not been taken by either State or Federal Governments to bring these monopolists within their control and to break up the combinations which have destroyed the dairy farmer. This situation naturally involves the 4,000,000 dairymen, who with their dependents constitute a group of 12,000,000 people. In my own district it involves the best there is in community life. There is no tragedy in America so outrageous in character as the destruction of this splendid group of citizens by this wholesale larceny.

The Attorney General's office, when Mr. Homer Cummings was in charge, made a frontal attack on this situation in the Chicago market area, procuring indictments against some 50 distributors, including Borden's and National Dairies, and related groups. Through the correct choice of lawyers and a sympathetic court, the usual procedure, a demurrer to these indictments was sustained and the indictments dismissed. Credit should be given to the Attorney General's office and the Antitrust Division for their attempt to cure the condition. The court was obviously in error in dismissing the indictments, and I am advised that the case is being appealed direct to the Supreme Court. The set-back is only temporary. The situation in the Chicago area was grievous, but in my judgment not so grievous as that of New York, where the dairyman up to 15 years ago enjoyed a prosperous livelihood.

FIGHTING LEADERSHIP IS NEEDED

The New York dairyman, be it said, has the greatest market in the United States—metropolitan New York—and should at all times have a living price for his products. It is a serious indictment of the ability, if not of the sincerity of the self-constituted leaders of the dairymen that such is not the case. Some of this leadership has participated in the destruction of the local markets for the dairyman's products by buying up and dismantling cheese factories. This inept leadership has placed a load of professionals on the dairyman's back, and while enjoying huge salaries out of the dairyman's lean purse, have steadily permitted this situation to grow more grievous. Leaders with fighting hearts are needed at this time. All others should be speedily thrown in the scrap heap.

ANTITRUST ACTION PROMISED

On Friday, August 4, 1939, in company with my colleagues, CLYDE H. SMITH, of Maine; B. J. GEHRMANN, of Wisconsin; STEPHEN BOLLES, of Wisconsin; JAMES C. OLIVER, Maine; WILLIAM LEMKE, North Dakota; MERLIN HULL, of Wisconsin; FRANK B. KEEFE, of Wisconsin; and R. T. BUCKLER, Minnesota, I went to the Attorney General's office and presented a petition requesting appropriate legal action be taken for the dissolution of Borden's and National Dairies into their constituent parts. All of the gentlemen above named believe that the present lowly condition of the dairyman is due to a Nation-wide monopoly which exists in the dairy marketing field. They further believe that no solution of this situation is possible until such time as these monopolies are removed by legal action.

Attorney General Murphy, with Mr. Thurman Arnold, in charge of antitrust prosecution, received us very courteously, and we had a full and fair discussion of the issues. The Attorney General assured us that he was in sympathy with us and that the matter would have the attention of his office.

We have made an appointment with Mr. Arnold for Monday, August 7, and will go over that matter in detail with him at that time. We invite the attention of the House to the grievous situation nationally of the 3,000,000 dairymen and their 9,000,000 dependents, and we will keep the Members and the country fully advised of the developments in the situation.

DROUGHT CONDITIONS

The dairyman's present grievous situation has been aggravated by a drought, in the northeastern area. He faces the fall and winter with an acute feeding problem. He is already mortgaged to the hilt, and is heavily in debt for taxes and the actual necessities of life. In other words, the man who is feeding the people and making high profits for the dairy monopolists, Borden's and National Dairies, is getting in a situation where he has no place to lay his head. Twenty years ago he was the finest type of individualist ever produced by any civilization. Today his condition is becoming comparable to that of the itinerant sharecropper of Oklahoma.

SHOULD STAY ON THE LAND

Despite these desperate conditions, I urge the dairymen to stay on the land and continue to fight to get living conditions. I believe there will soon be the dawn of a better day. To aid in his present situation, I am calling the attention of the farmers to the various agencies of Government which have been set up for the purpose of aiding those who are facing a foreclosure, debt, or taxes.

I will enumerate these agencies and their duties in order, and ask that the farmer who is in an existing emergency apply to the particular agency which is authorized to handle his case. These agencies are as follows:

MORTGAGE FORECLOSURE

First. The farmer who is about to lose his home by mortgage foreclosure should take advantage of the Frazier-Lemke moratorium, which has been held constitutional by the United States Supreme Court. This act amends the Bankruptcy Act and provides that a farmer who is unable to pay his debts can take advantage of section 75 by filing his petition with the clerk of the court of the United States district court in his district. I would suggest the farmers in the various counties of the Thirty-second Congressional District, who are threatened with foreclosure, take this up with the Farm Bureau agents in their respective counties who will assist them in the preparation of the necessary petition. This will give the farmer a moratorium of 3 years during which he will be permitted to retain possession of his property under suitable terms fixed by the court.

My colleague, Mr. LEMKE, of North Dakota, the author of the bill, tells me that this moratorium has been most effective in the western jurisdiction. I urge all farmers who have foreclosures threatened or pending to adopt this procedure.

EMERGENCY REHABILITATION LOANS

Second. In areas stricken by drought farmers often need small loans quickly to save their crops or provide feed for their livestock. In such cases the Farm Security Administration in the Department of Agriculture provides loans without formality. In the counties of Oswego, Jefferson, and Lewis this matter is handled by Mr. James F. Reeves, who has charge of the F. S. A. work in those counties, with headquarters in the Federal Building at Watertown, N. Y. In Madison County, Mr. Herbert Brokaw, with headquarters in the Masonic Building at Norwich, N. Y., is in charge. Both of these gentlemen are able, sympathetic administrators and will handle matters with promptness and absence from red tape.

STANDARD REHABILITATION LOANS

Third. These loans are made to farmers who need seed, tools, livestock, and other equipment necessary to carry on farming operations, and who cannot get adequate credit elsewhere. These loans are repaid over a period of from 1 to 5 years at 5-percent interest. Applications for this assistance should be made to the F. S. A. supervisors named above.

MEDICAL AID LOANS

Fourth. Frequently farmers have difficulties in making ends meet because of sickness in their families. Health group programs should be organized to provide medical care for low-income farm families at a cost which they can afford. I commend this provision to the Farm Bureau agents for their action and consideration.

FARM DEBT ADJUSTMENT

Fifth. For farmers overburdened with debt, the Farm Security Administration provides a means by which their debts can be adjusted to their capacities to pay. This is available to all farmers whether or not they take part in other phases of the F. S. A. program. Some preliminary organization is necessary on this, but the Washington set-up is effective and sympathetic and needs only local application. I commend the consideration of this to the Farm Bureau agents in each county of the district.

SERVICES FREE OF CHARGE

There are no preliminary or present dues to any organization contingent on any of the above applications. The officials hereinbefore enumerated are not the employees of any farm organization, but are paid by National, State, and county contributions.

NATION IS IN DAIRYMAN'S DEBT

The farmers of Jefferson, Oswego, Madison, and Lewis Counties should have no false pride about accepting the cooperation of these agencies. The country is in their debt because of their contribution to its health and well-being. The farmer should remember that he is a victim of a system which contrary to law has been permitted to well-nigh destroy him. If there are any complications about any of the above matters, I ask the applicant to write me either at Washington, D. C., or Oswego, N. Y.

I again urge the farmer to stay on the land and continue the fight. I have strong hopes that the great economic wrong that is being done him will be righted through operation of the law. I have strong hopes that in the near future strong leadership will arise, or the dairyman's present leadership will become more seagoing. Under such auspices I predict he will get a living price for his product with a reasonable profit. That is all he asks for his past sacrifices, toil, and suffering. The dairyman's case is based on law and justice and must go forward to victory.

Yes; the South Has Sort of Come Around

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

EDITORIAL FROM ARKANSAS GAZETTE

Mr. ELLIS. Mr. Speaker, on July 30 there appeared in the Arkansas Gazette, a paper of State-wide circulation published at Little Rock, Ark., an editorial entitled "Yes; the South Has Sort of Come Around," which I insert in full in the RECORD:

[From the Arkansas Gazette]

When he complains that Southern States are "draining off the wealth" of the rest of the country by taking more money out of the Treasury in Federal grants than they put in through the payment of Federal taxes, Congressman BATES (Republican, Massachusetts) should remember that the Federal taxes collected in a State are not always paid by the people of that State alone. Every cigarette smoker in the country helps to pay the Federal excise taxes collected in chief part in North Carolina and Virginia. National corporations, which pay their Federal taxes in Northern or Eastern States where their plants or main offices are located, get the money for them from every State where their goods or services are sold.

And this Massachusetts Republican should remember that President John Quincy Adams, whom Massachusetts gave to the Nation, made internal improvements by the Federal Government the main topic of his inaugural address. He extolled the value of such projects and declared that from their execution posterity would "derive a fervent gratitude" and deeply feel and acknowledge "the beneficent action of our Government." Nor did he say anything about limiting the internal improvements made in a State to the amount of Federal taxes collected in that State.

In the political development of the United States the Southern States were preeminently the upholders of the doctrine of State rights. In the controversy over the making of internal improvements by the Federal Government, which was a burning political issue for more than a generation from Jefferson's time to Jackson's, it was the South which challenged the right of the Central Government to undertake such works under any powers vested in it by the Constitution. But the North raised up Daniel Webster, who devoted his great career to championship of national as opposed the federated government. Then the North fought the Civil War and wrote with the bayonet what Webster had preached with his words.

Now, in the full spirit in which Robert E. Lee accepted the final arbitrament of Appomattox, the South makes its acknowledgment of the beneficent action of our Government in internal improvements. In this day the South, former Confederacy though it was, yields to no other part of the country in sincere and patriotic fealty to the Old Flag and the appropriation.

The Employer—Taxpayer Is Again Given Consideration and Justice

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, a few moments ago we heard from the leaders of the House conference on the Sccial Security bill that the measure as now agreed upon would save businessmen $65,000,000 a year, and by freezing the rate at 1 percent would save employers and workers $275,000,000 in 1940. In regard to credits and refunds to taxpayers under title 9 of the Social Security Act and the abolition of the heretofore heavy penalties for belated payment of those taxes, many businessmen and employers will be saved the sum total of $15,000,000.

This latter item is personally very gratifying to me and I wish again to express my satisfaction that the Ways and Means Committee has written it into the law, and that it has remained in the bill during this long conference session, being found in the report before us today. I suggested this amendment 2 years ago. On April 10 last when this social-security measure was before the House, I pointed out the favorable nature of this provision for the average American employer and businessman. Now that we are assured by the chairman of this committee that this will save $15,000,000 which have already been collected under the previous act, or which would have been collectible if the act had not been amended, it is again a matter of favorable comment that the bill is so amended.

My own interest in this matter rises out of the fact that I suggested this amendment of the Social Security Act as a matter of justice to some of my own constituents, and as a square deal to all taxpayers throughout the Nation who were the victims of an unduly harsh provision in the original law. In the Seventy-fifth Congress I introduced a bill, H. R. 8779, which the Ways and Means Committee incorporated in the Revenue Act of 1938 in a very generous form. Again in this Congress I introduced a bill, H. R. 898, which is now made a permanent part of the social-security law by the action of the committee drafting this bill, and by the action of the conferees in keeping the provision in the report we are now adopting. Let me say that the effect of this measure is to lessen the receipts in the Treasury Department for social-security purposes.

Now, I am distinctly a friend of the social-security policy, and naturally I want that fund to grow properly and adequately. However, I do not want money collected by the strong arm of the Government, even for so good a cause as social security, if there is an element of harshness or of injustice in the collection of funds.

Again, Mr. Speaker, let me give additional emphasis to what Chairman DOUGHTON, Congressman TREADWAY, and

Congressman MCCORMACK have stated a few minutes ago that the changes made in this Social Security Act truly were meant to relieve the burdens of the taxpayers. The sponsors of this legislation have earnestly worked to temper the tax burdens, both as to rates of taxation and as to penalties imposed for delay or failure to pay, having in mind the interest of the taxpaying employers as well as the social-security beneficiaries. How can any man say that the men who have just finished drafting this legislation are unfriendly to business?

General Legislation of Public Interest Passed by Seventy-sixth Congress, First Session

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

LIST OF GENERAL LEGISLATION OF PUBLIC INTEREST PASSED BY THE SEVENTY-SIXTH CONGRESS, FIRST SESSION

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD a list of some of the general legislation of public interest passed by the Seventy-sixth Congress, first session, under the able leadership of the Senator from Kentucky [Mr. BARKLEY].

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Some of the general legislation of public interest passed by Seventy-sixth Congress, first session

Number of bill or resolution	Short title	Number of Public Law
H. R. 4830	Accounting, to amend act relating to	59
S. 1579	Agricultural Adjustment Act, including hops as a commodity.	91
H. J. Res. 342	Agricultural Adjustment Act of 1938, to amend sec. 322 (referendum).	[1] 34
H. J. Res. 343	Agricultural Adjustment Act of 1938, to amend sec. 335 (c) (wheat).	[1] 35
S. 1569	Agricultural Adjustment Act of 1938, to amend sec. 344 (time extension).	149
S. 1363	Agricultural Adjustment Act, relating to percentage acreage allotments.	30
S. 660	Agricultural Adjustment Act of 1938, relating to cotton acreage allotments.	6
S. 518	Agricultural extension, to further develop cooperation in	41
H. R. 2179	Agricultural Marketing Act, relating to interest rates	150
S. 1096	Agricultural Marketing Agreement Act of 1937, relating to apples.	98
H. R. 5485	Army, relating to the care of animals	112
S. 1301	Army, to create Military Secretary to General	12
S. J. Res. 111	Aviation, to designate Aug. 19 of each year as National Aviation Day.	14
H. R. 5619	Aviation, to provide for the training of civil aircraft pilots	153
H. R. 3221	Aviation, relating to sale of supplies to attachés accredited to the United States.	102
H. R. 5136	Blind, to provide books for the adult	118
H. R. 3577	Canal Zone Code, to amend, relating to retirement	31
S. 1842	Coast and Geodetic Survey, to construct certain vessels for	108
H. R. 136	Coast Guard Academy, to authorize contingent expenditures.	38
H. R. 3231	Coast Guard, relating to firearms for	77
S. 1369	Coast Guard, relating to maritime police functions	104
S. 595	Coast Guard, relating to retirement of personnel under certain conditions.	87
H. R. 5966	Coast Guard Reserve, to establish	152
H. R. 899	Coast Guard, station, to establish Keweenaw Peninsula, Mich.	46
H. R. 5845	Coast Guard, to establish Wrightsville Beach, North Carolina.	329
S. 1876	Coast Guard, to readjust the commissioned personnel of	89
S. 2314	Commerce, to establish the position of Under Secretary	113
H. R. 4011	Commodity Credit Corporation, to continue functions of	3
H. R. 3230	Communications, punishment for transmitting threatening.	76
H. R. 3801	Cotton pool trust certificates, to extend time for retirement	27
S. 185	Criminal Code, sec. 224, relating to insured-mail matter	265
S. 794	District of Columbia, relating to banks and trust companies in.	20
H. R. 4745	District of Columbia, relating to benefit assessments for condemnation of streets.	139
S. 1126	District of Columbia, relating to public utilities in	23
S. 1123	District of Columbia, to amend par. 57, relating to appropriation for.	21
H. R. 5987	District of Columbia, to amend Traffic Act of 1925	145

[1] Public resolution.

Some of the general legislation of public interest passed by Seventy-sixth Congress, first session—Continued

Number of bill or resolution	Short title	Number of Public Law
S. 1125	District of Columbia, to appoint research assistants in public schools.	22
H. R. 3134	Employees, relating to detail of certain, to Philippines	63
S. 1708	Employer's Liability Act, to amend	382
H. R. 5762	Federal Drug Act, to provide postponement of certain provisions.	151
S. 2618	Federal Reserve notes, relating to collateral security	162
S. 1886	Federal Reserve System, relating to loans to officers of member banks of.	135
H. R. 4646	Filipinos, to provide for certain, to emigrate	241
S. 189	Firearms, to provide for the confiscation of certain	121
H. R. 3655	Foreign Service, relating to classification of clerks in	40
H. R. 913	4-H clubs, prohibiting the unauthorized use of insignia	114
H. R. 4425	Government, reorganization of	19
S. 2738	Hawaii, relating to revenue bonds issued under Act 174, 1935.	312
H. R. 162	Hawaii, relating to rules of procedure in the district courts of.	133
S. 2240	Housing, to provide census for	385
H. R. 5076	Indians, to authorize the use of water on certain reclamation projects.	97
H. J. Res. 322	Insect pests, appropriation for the control of outbreaks of	22
S. 1281	Insignia, to prohibit reproduction of official	82
S. 1282	Judges, to extend privilege of retirement for disability to	269
S. 2021	Labor Department, to authorize special statistical studies	35
S. J. Res. 118	Library, Franklin D. Roosevelt, to establish and maintain	[1] 30
H. R. 5756	Merchant Marine Act, to amend sec. 509 relating to the construction of vessels of.	116
H. R. 6977	Mining, to extend the time in which annual assessment work may be commenced.	163
H. R. 4087	National defense, relating to General Headquarters Air Force.	72
S. 572	National defense, relating to the purchase of strategic and critical materials.	117
H. R. 3791	National defense, to provide more effectively for	18
H. J. Res. 225	National Gallery of Art, relating to the maintenance of	9
H. R. 5324	National Housing Act, to amend certain sections of	111
H. R. 2200	Naturalization, relating to petitions for	138
S. 588	Naval Academy, to provide additional midshipmen	119
H. R. 5765	Naval and Marine Corps Reserves, to authorize aviation cadets.	129
H. R. 3234	Navy and Marine Memorial, to complete	53
S. 829	Navy, to authorize repairs of certain naval vessels	37
H. R. 2878	Navy, to authorize Secretary to construct certain public works.	106
H. R. 4278	Navy, to authorize Secretary to construct certain public works.	43
S. 828	Navy, to construct certain auxiliary vessels for	45
S. 1019	Olympic games, to authorize expense incident to	29
H. R. 3587	Ordnance material, to authorize the Secretary of War to exchange certain.	70
H. J. Res. 163	Panama Canal, to participate in twenty-fifth anniversary of opening.	5
S. 1031	Penal Code, to amend sec. 243 relating to the marking of packages.	131
H. R. 6037	Penal laws, to amend section 194	330
S. 1302	Petroleum, to regulate interstate and foreign commerce in	158
S. 1871	Political activities, an act to prevent certain	252
H. R. 4771	Postal Service, limiting working hours of employees	79
H. R. 4772	Postal Service, relating to certain time credits in (pneumatic-tube service).	73
H. R. 3812	Postal Service, relating to employees' credit for sick leave	78
H. R. 4785	Postal Service, relating to night employees (pneumatic-system).	74
S. J. Res. 76	Postal Service, relating to star-route contracts	4
H. R. 4786	Postal Service, to extend provision of 40-hour law (pneumatic-tube system).	75
H. R. 1776	Public Health Service, in the Coast and Geodetic Survey	48
H. R. 3055	Public Law 370, to amend, International Boundary Commission.	134
H. R. 5474	Railroad Unemployment Insurance Act, to amend	141
S. 1102	Reconstruction Finance Corporation, to continue functions of.	2
H. J. Res. 83	Relief, making additional appropriation for	1
H. J. Res. 246	Relief, making additional appropriation for	10
S. J. Res. 138	Reorganization, providing that plans Nos. 1 and 2 effective July 1, 1939.	20
H. R. 6851	Revenue, to provide for and equal taxation of	155
H. R. 4997	Rio Grande Compact, given consent for approval of	96
H. R. 199	Seamen, relative to the allotment of wages by	99
S. 2065	Securities, regulation of sale through the mails	253
H. R. 6635	Social Security Act, to amend	379
S. 1098	Soil Conservation and Domestic Allotment Act, relating to crop insurance.	9
H. R. 3325	Stabilization fund, relating to	165

The Conservation Movement in Wisconsin

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

LETTER FROM HON. EDWARD E. BROWNE

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. Edward E. Browne, of the Wisconsin Conservation Commission, together with the statement referred to therein:

THE STATE OF WISCONSIN CONSERVATION COMMISSION,
Waupaca, Wis., July 28, 1939.

Hon. REID MURRAY,
House Office Building, Washington, D. C.

DEAR FRIEND REID: The W. P. A. has helped the conservation movement in Wisconsin very greatly. Mr. A. M. Keister, supervisor of works program, who has been in charge of this work, has been very efficient, and the local men under him have also been exceedingly efficient.

I am enclosing a statement of his work in this State and wish you would put the same in the CONGRESSIONAL RECORD under extension of your remarks.

If you desire, you can ask leave to extend your remarks by printing a report of the W. P. A. in Wisconsin, which has been requested by Edward E. Browne, former Member of Congress, and who is now a member of the Conservation Commission of Wisconsin.

If, beforehand, you ask permission of the Democrat floor leader, who, I think, is RAYBURN, and also MARTIN of Massachusetts, Republican floor leader, both of whom I am acquainted with, I am sure there will be no objection.

There is a great deal of information in this report, and I think it advertises Wisconsin and the conservation work that we are doing here.

With personal regards, I am,
Sincerely yours,

EDWARD E. BROWNE.

BIENNIUM REPORT COVERING THE COOPERATION OF THE WORKS PROGRESS ADMINISTRATION

During the biennium from July 1, 1936, to June 30, 1938, the prosecution of the extension program of projects sponsored by the Wisconsin Conservation Commission continued to be a major activity of the Works Progress Administration. The work of every division of the department was advanced by this cooperation, and therefore any attempt to summarize all of the work accomplished by W. P. A. workers would to a large extent overlap the reports of the accomplishments of each division. Consequently, it is the purpose of this report to present only a summary of W. P. A. employment and expenditures on conservation projects, together with a sufficient outline of specific accomplishments to indicate the value and extent of the impetus which the long range program of the conservation commission has received from the cooperation of the Works Progress Administration.

With the advice and assistance of the several division superintendents, county-wide "blanket" conservation project proposals were prepared and submitted under the direction of the department's supervisor of work projects. These proposals requested the approval of the Works Progress Administration at Washington, D. C., for the prosecution of the commission's program in 56 counties of the State. Almost without exception they were approved as submitted, and under the authority so granted, 229 additional subprojects were submitted during the biennium. Each of these subprojects embodies a break-down of the work which it was planned to accomplish on an indivdual undertaking, together with details of the materials and equipment to be furnished by the W. P. A. and the conservation commission, respectively. Since the start of the W. P. A. program in July 1935, nearly 700 of these specific subprojects have been submitted for operation, and 386 were in operation at some period during the biennium just closed, which opened with 3,421 W. P. A. workers employed on 113 subprojects, and closed with 3,782 men employed on 102 subprojects. The decrease in the number of subprojects in operation together with the increase in the number of men employed is in part accounted for by the completion during the biennium of a number of work units providing for the construction of buildings on which only twenty to twenty-five men are ordinarily employed. (A list of these buildings arranged according to departmental divisions is appended to this report.) Another factor was the definite effort of the W. P. A. administrative officials to reduce the number of subprojects in operation by the consolidation of projects providing for similar or related work and the elimination of crews of less than 10 men.

During the biennium the W. P. A. expended a total of $2,651,659 on projects sponsored by the commission. Of this amount $2,359,814 was expended for labor and $292,054 was expended for material and equipment. During the same period the commission was credited with a sponsor's contribution of $449,359, of which $153,489 was credited as the value of the supervisory services supplied by the conservation department employees, and $295,870 was credited as the value of contributed materials and equipment. When added to the record of expenditures and contributions quoted in the report for the preceding biennium, these figures show that during the 3 years since the start of the W. P. A. program in July 1935 the W. P. A. has expended a total of $4,199,022 on projects sponsored by the commission and has credited the commission with contributing equipment, materials, and labor valued at $613,320.

Because of its fundamental importance, almost two-thirds of the subprojects sponsored by the conservation commission have provided for work directly or indirectly required for the protection and expansion of Wisconsin's forests. Among the most important accomplishments of the W. P. A. workers engaged on these projects during the biennium has been the construction of 103 miles of new truck trails and the reconstruction of 95 miles of old truck trails. The State-owned forest-protection telephone system was also improved by the completion of 112 miles of new lines, the reconstruction of 25 miles of existing lines, and the clearing of the right-of-way on 213 miles of lines on which communication was threatened by the encroachment of brush and trees.

One of the primary needs of the forest-protection division had long been a sufficient number of suitably planned ranger stations and garage and storage buildings. This need was almost entirely met by the completion during the biennium of 23 ranger-station and garage buildings, each of which combines in a building of concrete block or native stone construction an office and five garage stalls on the ground floor, together with storage space for tools and equipment and a modern four- or five-room apartment on the second floor.

Two headquarters buildings were also completed, one at Antigo and the other at Park Falls. These buildings provide the larger office space and living quarters needed for a district headquarters besides heated garage space for three or four cars and trucks. At the Rhinelander-area headquarters two 6-stall garage buildings, so designed that they now constitute a single 12-stall garage and storage building, were completed, and three additional garage and storage buildings were completed at Hayward, Brule, and Spooner.

When the building which now houses the forest protection headquarters at Tomahawk was acquired a few years ago it was badly in need of repair and remodeling to better suit the purposes of the department. During the biennium most of the work of reroofing, repairing, and repainting the building throughout was completed, and additional offices, storerooms, drafting rooms, and assembly rooms were constructed. Heavy machinery and equipment was moved and reinstalled in more advantageous locations. Several thousand additional square feet of space were created by the installation of a second floor in portions of the building, and a painting room completely equipped with ventilating fans and other safety measures was added in which trucks, tractors, plows, and other equipment can be quickly and safely repainted by modern spray methods. A large testing tank was also constructed which enables the department's mechanics to thoroughly test and check the scores of large and small fire-fighting pumps which are forwarded from the protection districts throughout the State to the forest-protection headquarters for repair and reconditioning during the winter months.

The construction of a two-story brick airplane hangar and landing field adjacent to the headquarters building was also completed. A large basement beneath the hangar building is connected with the headquarters building by an underground passage and provides storage space for dozens of tractors, trucks, fire plows, pumps, and other equipment.

The carpenter and machine-shop facilities at Tomahawk also made it feasible to carry on a number of other projects under which more than 7,000 conservation department roadside signs were built or repaired and improved types of fire-fighting equipment were developed and constructed. Of particular interest is the construction by W. P. A. mechanics of 11 units of a new type of trailer designed to transport a complete tractor and fire-plow assembly weighing up to 10 tons.

W. P. A. workers were also employed in reducing fire hazards on over 10,000 acres of dangerous slash areas and along over 1,000 miles of State, county, and town roads.

It will be noted that most of the department's efforts toward reforestation have been directed toward the goal of adequate forest protection rather than toward any vast W. P. A. program of planting forest-tree seedlings. Nevertheless, the capacity of the State forest nursery was greatly expanded and more than a million seedling forest trees were planted by W. P. A. crews.

During the biennium a special effort was made to promote the operation of projects providing for repairs, improvements, and increased production facilities at the State fish hatcheries, and buildings and equipment at all of the 15 regular hatcheries were completely repaired and repainted throughout. Several additions were built and some of the residence and hatchery buildings were completely remodeled. Similar work was also carried on at many of the seasonal hatchery stations. Some of the more important accomplishments were as follows:

At the Hayward hatchery a new six-room residence building and a four-stall garage were constructed, and the main hatchery building was enlarged and remodeled throughout. Several new ponds

were constructed and other ponds and raceways protected by riprap.

At the Crystal Springs hatchery a five-room residence and a garage building were completed, and the capacity of the hatchery more than doubled by the construction of additional raceways and improvements to the hatchery building and ponds.

At the northeast fisheries headquarters at Woodruff, a 2-story 10-stall garage and dormitory building of fireproof construction was completed, in addition to two net houses, each 100 feet in length and 30 feet in width. A fourth building containing a large mess hall, kitchens, and living quarters was completed in cooperation with the C. C. C. organization, and, as the biennium closed, a fifth structure of approximately the same size as the net houses, and designed for use as a repair shop and equipment-storage building, had been 95 percent completed. A second 10-stall garage of frame construction was also well under way. A large amount of pond construction and repair and general landscaping work was also completed at this hatchery.

At the Osceola hatchery a six-stall garage and warehouse building was erected, and extensive flood damage to dams and reservoirs repaired.

At the Wild Rose hatchery a four-stall garage was constructed and the residence building was enlarged and completely repaired and repainted throughout. At this hatchery also extensive work was done on the construction of new ponds and the riprapping of both the new and old ponds.

At Sheboygan and Sturgeon Bay the hatchery buildings and living quarters were remodeled and repaired and repainted throughout.

At the Delafield and Salmo Lake hatcheries new dams were constructed to insure an adequate water supply, and at the Salmo Lake hatchery in particular a large amount of pond and raceway repair and retaining wall construction was completed.

At the northwest fisheries headquarters at Spooner the extensive program of development planned by the fisheries division was well under way as the biennium closed with two net houses almost half completed in cooperation with the C. C. C. organization, and the first of the four residence buildings planned for this area headquarters 25 percent completed. Work was also progressing rapidly on several of the large ponds which will be available for use during the next season.

At the Madison hatchery a new 9-acre bass-rearing pond was completed, and a 5-acre pond was constructed near the village of Blair, in Trempealeau County, on the site of what had previously been a swamp and the village dump. During their first season of operation in the summer of 1937, both the Madison and Blair ponds each produced from 125,000 to 150,000 bass for planting in the southern counties of the State. The Madison hatchery buildings were also completely repaired and repainted. A great deal of additional pond construction and general landscaping work was done, and a two-story 12-stall garage of fireproof sandstone construction was 40-percent completed.

Near the village of Conover in Vilas County a third large rearing pond which may be used for either bass or muskellunge propagation was created by the construction of two dams on the Little Tamarack River.

At all of the hatcheries where W. P. A. crews were employed, the general work consisted of the improvement of water supply, the construction of new ponds and raceways, and the repairing, cleaning, and riprapping of older ponds and raceways, in addition to the repairing and repainting of all buildings and equipment. Had it not been for this program of almost completely overhauling the hatchery facilities of the fisheries division it would have been impossible for the conservation department to not only attain but surpass its goal of planting more than a billion fish during both the seasons of 1937 and 1938.

However, if more than a fractional percentage of these tiny fish are to live and grow to legal size, our lakes and streams must be placed in a condition to provide them with food and shelter. Under the lake and stream improvement program sponsored by the conservation commission, W. P. A. crews have placed thousands of brush refuges, sapling tangles, bass spawning boxes, and minnow spawners in over 200 Wisconsin lakes. Practically all of these lake-improvement structures were built and placed during the winter months in accordance with data obtained from previous surveys which indicated the type of structures which were necessary in any particular lake to improve the propagation and protection of young fish and the protection of natural foods necessary for their survival and growth.

During the summer months the lake and stream improvement crews concentrated on stream work and improved more than 400 miles of trout streams by the installation of several types of current deflectors designed to protect the stream banks from erosion, to provide small trout with shelter, to create deep shaded pools, or to scour underlying silt deposits from gravelled spawning beds. Also the channels of hundreds of springs were cleared, thereby allowing the cold spring water to find its way into nearby trout streams, and tens of thousands of willows and alders, as well as many thousands of commercially valuable trees, were planted along stream banks for the dual purpose of providing shade and protecting the banks against further erosion.

No attempt was made to do improvement work on the largest possible number of trout streams because it was the policy of both the conservation department and the W. P. A. to select only those streams most in need of improvement and then, insofar as available W. P. A. labor made it possible, to complete the work of improving those streams from their headwaters to their mouths.

At the State experimental game and fur farm at Poynette, Wis., a series of projects have been prosecuted since early in the W. P. A. program. Some of the outstanding units completed under these projects during the biennium are the following:

On the fur section of the State experimental game and fur farm a seven-room brick and frame residence was erected for the use of the farm manager, and a two-story assembly and lecture hall was constructed to provide facilities for the numerous meetings of game and fur breeders which are held at the farm, and also to provide living quarters for some of the employees who must be readily available during certain seasons of the year.

A large barn, 75 feet in length by 36 feet in width, was built primarily for the purpose of providing storage space for several tons of hay and grain, and adjoining it a refrigeration plant and slaughterhouse was constructed in which the meat diet required by the fur-bearing animals is prepared and kept in cold storage until ready for use. The additional refrigeration facilities provided by this building have also made it possible for the fur farm to use many tons of carp and other rough fish which the Department obtains from its rough fish removal operations.

A four-stall garage, a native stone electrical transformer vault, and a root cellar for the storage of the very considerable tonnage of vegetables consumed were also constructed, in addition to several hundred breeding pens and runs, and over 6 miles of woven wire fencing. A large amount of W. P. A. labor was also employed in general landscaping and in the construction of retaining walls, driveways, sewers, and water mains.

On the game section of the farm a carpenter and machine shop, 48 feet in length by 30 feet in breadth, which had been previously constructed by W. P. A. labor, was used during the biennium by a crew of W. P. A. carpenters for the construction of several hundred game-bird brooders, feeding hoppers, and pens. A feed and equipment building, 75 feet by 30 feet, which also houses some of the administrative offices, was completed early in the biennium, and during 1937 a two-story incubator building 100 feet by 36 feet was constructed. The completion of this building has enabled the conservation department to more than double its previous annual production of game-bird chicks for release throughout the State.

W. P. A. funds and labor also made it possible to construct nearly 200 boats for the use of the law-enforcement and fisheries divisions, and have greatly accelerated the work of rough fish removal and the improvement of State forests and parks, as well as aiding in projects for the conduct of surveys and the compilation of data relating to all phases of conservation work.

[Wisconsin Conservation Department, Madison, Wis.]

Principal buildings and other items of work completed or undertaken as Works Progress Administration projects during the biennium, June 30, 1936, to June 30, 1938

[Arranged according to departmental divisions]

FOREST PROTECTION DIVISION

Type of building	Town	County	Status of construction as of June 30, 1938
Ranger station and 5-stall garage building.	Pembine	Marinette	Completed Oct. 15, 1937.
Do	Goodman	do	98 percent completed.
Do	Pound	do	Completed Apr. 1, 1938.

Net house (second unit) (in cooperation with Civilian Conservation Corps).	do	do	Do.
Residence (7 room)	do	do	25 percent completed.
Garage (4-stall frame)	Wild Rose	Waushara	Completed July 1, 1936.
Garage (10-stall frame)	Woodruff	Oneida	20 percent completed.
10-stall garage and dormitory (concrete block).	do	do	Completed June 25, 1937.
Repair shop	do	do	95 percent completed.
Net house (first unit)	do	do	Completed Sept. 23, 1936.
Net house (second unit) (in cooperation with Civilian Conservation Corps).	do	do	95 percent completed.
Mess hall (in cooperation with Civilian Conservation Corps).	do	do	Completed Aug. 1, 1937.

GAME DIVISION

Type of building	Town	County	Status of construction as of June 30, 1938
Sheep and feed barn	Poynette	Columbia	Completed Apr. 1, 1937.
Refrigerator building	do	do	Completed July 15, 1937.
Assembly and dining hall.	do	do	Completed July 15, 1936.
Residence building	do	do	Completed Oct. 1, 1936.
Incubator building	do	do	Completed May 5, 1938.
Bunkhouse	do	do	Completed Apr. 1, 1938.
Garage (4-stall frame)	do	do	Completed Dec. 15, 1937.
Feed and equipment building.	do	do	Completed Oct. 1, 1936.

FOREST AND PARKS DIVISION

Type of building	Park	County	Status of construction as of June 30, 1938
Shelter building (completion of building started by Civilian Conservation Corps).	Wyalusing State Park.	Grant	40 percent completed.
Shelter and concession building (completion of building started by Civilian Conservation Corps).	Copper Falls	Ashland	95 percent completed.
Sewage-disposal plant (completion of work started by Civilian Conservation Corps).	do	do	75 percent completed.

LAW ENFORCEMENT DIVISION

Type of building	Town	County	Status of construction as of June 30, 1938
Law enforcement headquarters.	Oshkosh	Winnebago	Completed Sept. 29, 1936.
Law enforcement and ranger station (boathouse and garage).	Bayfield	Bayfield	Completed Oct. 15, 1937.

Amendment to Interstate Commerce or Transportation Act

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. HARE. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HARE: On page 274, at the end of line 10, in section 312, add the following: *"Provided,* That hereafter, notwithstanding any other provision of law, no certificate of public convenience or necessity shall be issued, transferred, or assigned to an existing competing carrier engaged in a different system of transportation or to any person or corporation financially interested directly or indirectly in the operation of interstate transportation other than that provided in such certificate."

Mr. HARE. Mr. Speaker, assuming that this is to be a transportation bill and not merely a railroad bill and that we are to hereafter have three systems of transportation known as the railroad system, the motor-bus lines, and water transportation, the purpose of this amendment is to prevent either one of these agencies or systems of transportation from securing a complete control or monopoly over the other. In other words, this amendment is offered for the purpose of preventing the railroad system from getting control of the bus lines and thereby putting the bus-line system out of existence. Should this develop we will have the railroads operating their own system and in addition will be operating the bus-line system over highways constructed and maintained by the States and the Federal Government.

This amendment simply provides that no certificate of public convenience or necessity shall be issued, transferred, or assigned to an existing competing carrier engaged in a different transportation system; that is, for example, if I should obtain a certificate to operate a bus line from station A to station B, which parallels a railroad line, it would then be unlawful for me to transfer or assign that certificate to that particular railroad line. On the other hand, if a person should obtain a certificate giving him the right to operate a bus line from A to B, then it would be unlawful for the Commission to issue a certificate to a competing railroad paralleling such line. It would not prevent the Commission from issuing a certificate to any other man who wanted to operate a bus line, if the conditions and circumstances warranted it, but it would prevent the Commission from issuing a certificate to an adjoining or competing railroad line.

My reason for offering this amendment is that if we are to maintain and protect these three systems of transportation, and I am not prepared to argue against either one, I can conceive that within a reasonably short time our railroad system will own and operate all the bus lines of this country. They will operate them over roadbeds constructed and maintained by the States and the Federal Government, and then the public will be deprived of that fair and just competition that arises, or is supposed to arise, from the operation of these two systems. Therefore, I think this amendment is highly important and absolutely essential if the three systems are to be maintained, and if there is to be fair, honest, and legitimate competition between these systems with any hope of securing cheaper freight rates.

So far a great number of speeches have been made on this bill and the matter has been approached from many angles. Quite a number have said it is legislation designed primarily for the benefit of the railroads. Others have said it is designed primarily to hamper or destroy the water transportation companies and some have expressed apprehension that the ultimate effect may be that both railway and water transportation will be displaced and practically all transportation service be rendered by bus or motor transportation.

My personal opinion is the committee in charge of the bill has endeavored to design legislation that will give the public more efficient transportation service by the three transportation systems named. However, I am apprehensive that, while the committee has endeavored to arrange for such service, it is not clear that the proposed transportation program will be less expensive to the public in the future. I cannot help but feel that in designing legislation for the benefit of the public the question of cost to the public should ever be kept in mind. That is, legislation should be designed in such a way as to furnish the public efficient service with the least possible cost, for we are not unmindful that the rates of transportation heretofore have been prohibitive in many instances, particularly when applied to products of agriculture. That is, it has frequently been brought to our attention where perishable farm crops have gone to decay in the field because transportation charges were considered excessive and the crops could not be moved to consuming centers because of these excessive charges.

But going back to the proposed amendment, I want to emphasize the possibility of the bus transportation being absorbed by the railroads, and competition from this system will then be entirely removed and the danger of increased transportation cost to the public will, of course, be inevitable. For this reason I have offered the amendment now up for consideration, and in support of my fears I want to call attention to an investigation inaugurated and conducted by the Interstate Commerce Commission a decade ago or more. The result of this investigation was submitted by the Commission in 1928 in Report No. 8300. The report shows that upward of 400 witnesses testified in the investigation and upward to 5,000 pages of testimony taken. One of the first things to attract attention is the finding of the Commission's report on page 697, which reads as follows:

> Steam railroads and electric railways had entered into the field of motor transportation either directly or through subsidiaries as supplementary to their rail operations; a number of railroads had filed application with us for permission to abandon portions of their lines, alleging as one of the reasons, loss of passengers or freight revenues by reason of motorbus or motortruck competition.
>
> Considering these matters, as well as the rapidly increasing importance of motor transport, we entered an investigation on our own motion into and concerning the general question of the operation of motorbuses and motortrucks, but, or in connection or competition with, common carriers subject to the Interstate Commerce Act.

On page 700 of the report the Commission advises that one of the results of the investigation is as follows:

> A classification of the bus-route mileage of these States in relation to railroad lines indicates that 41 percent of the mileage is directly competitive with rail lines; that is, parallels rail lines between the same termini; 28 percent is indirectly competitive.

That is, the Commission found that 69 percent of the bus-route mileage in the United States at that time—10 years ago—was either directly or indirectly competitive with rail lines, meaning that the bus lines are nearby and parallel railroad lines, a fact that is particularly significant when considered in connection with the proposed amendment.

Reading a little further in the report referred to the Commission reports the following:

> Transportation of livestock to terminal markets has always been a matter of concern to farmers, more especially to those who raise livestock on a relatively small scale as a part of regular farm operations. When dependent on railroad service the farmers could only ship at times when there was enough stock available to make a carload. Now, through the use of the radio, he gets market quotations daily and can load his stock into a motortruck and drive to a market, arriving there in about the same time ordinarily required to reach a railroad shipping point, were he shipping by rail, with a saving of about 18 to 36 hours in the time of transit.
>
> In 1925, as shown by the report, 3,333,000 head of hogs were motortrucked to 15 of the principal markets in the United States, being almost 11 percent of the total receipts. Six percent of the sheep, more than 12 percent of calves, and 4.5 of the cattle received at these 15 markets were hauled by motortrucks. A large volume of short hauls formerly handled by the steam railroad now moves in motortrucks.

In view of these findings it is only natural that the railroads should be interested in securing certificates of public convenience or necessity direct from the Commission or purchasing such certificates from those to whom they have been issued in order to prevent competition by motorbus lines and to operate them in their own interest and, if there is no provision of law to prevent it, it is reasonable to assume that within a reasonable number of years, as we have already indicated, the railroad companies will be operating the bus lines as well as their own. Of course, the Interstate Commerce Commission will have the right to determine who shall receive these certificates, and it will have the right to say whether they shall be assigned or transferred, but I am of the strong conviction that this amendment will assist the Commission in maintaining the two systems of transportation and prevent a monopoly in the hands of one, it being my opinion that the public would be insured more efficient service and cheaper rates by maintaining a competitive status than allowing one system to obtain absolute control of the other.

Some objection to the inclusion of water transportation in this bill has been manifested by a good many, particularly those members representing districts where harbors and ports are found. I am not absolutely certain but that they may be correct but I can see where a fair interpretation and administration of the law may prove to be of some value to my section of the country, and if proper rates are established, it may mean a decentralization of ocean carriers from some of the larger ports and an increased volume of business through harbors and ports through which heretofore there has not been a great amount of what might be called foreign tonnage. That is, I see the possibility of increased foreign tonnage passing through the harbors at Savannah, Ga.; Charleston, S. C., and other southeastern ports. Of course, this would be contingent somewhat upon the administration of the law, which always gives us some concern, especially in the light of past observation. In recent years a great deal of new legislation has been enacted, and in many cases the laws have not been as successful as contemplated by Congress for the reason that administrators of such laws have not been able to get the view point of Congress when such laws were enacted. I do not recall ever seeing a congressman who was willing to subscribe to or support legislation where he thought that in its operation it would not be of benefit to his constituents. On the other hand, he invariably believes that the operation of the law will be to the interest and the betterment of the people he represents, but not infrequently the law has been interpreted, construed, and administered in a manner entirely different or inconsistent from that originally designed. That is, my observation has been that where there is much dissatisfaction on the part of the people it has been due to the administration of the law and not on account of the provision of the law itself. Therefore, in supporting legislation which has such far-reaching possibilities as the bill now before us we can only hope that in the coordination of the systems of transportation here involved the administrators may get the viewpoint of those responsible for framing the law.

One virtue of the bill, insofar as the South is involved, is that provision which gives the Commission specific authority to remove differentials in freight rates that have heretofore operated against manufactured goods between the North and South, as well as in other sections of the country. Under the present practice there is a commodity rate, for example, on raw cotton to the North, but an entirely different and much higher rate on manufactured goods between the same points, the rates on manufactured goods coming South being much cheaper than rates on similar goods going North. It is the rates on this class of goods in which we are vitally interested, because our mills must necessarily ship a much larger portion of the cotton goods for the reason that we manufacture a much larger proportion of those manufactured for domestic consumption. I was very much interested a short time ago in a report which shows that out of the 11,086,000 bales produced last year, foreign mills will consume 4,327,000 bales, leaving 6,759,000 bales for American consumption, and out of

this amount southern mills will consume 5,777,000 bales while the northern mills consume only 982,000 bales, indicating that southern mills are consuming a little more than six times as much of our cotton crop as the northern mills. If these figures are correct, it means that the cotton-textile business of this country will sooner or later be confined almost exclusively to the South, and it is, therefore, only fair and just that the freight rates on the finished product be adjusted so that our mills can get their products to the consuming centers in order that they may fairly compete with the foreign manufacturer. This bill, as I have already said, imposes on the Commission the duty to make such freight adjustments. Whether it will do so remains to be seen.

N. Y. A. College Aid

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

N. Y. A. COLLEGE-AID STUDENTS WIN HONORS

Mr. JOHNSON of Oklahoma. Mr. Speaker, recently I asked officials of the National Youth Administration to furnish me any information available on the scholarship of students who have received N. Y. A. assistance. They have furnished me a very interesting and informative statement which I have obtained permission to place in the RECORD for the information of Members of Congress and the public. The statement follows:

N. Y. A. COLLEGE-AID STUDENTS WIN COMMENCEMENT HONORS

High scholastic and commencement honors won by students receiving college aid from the National Youth Administration, during the academic year 1938–39, offer convincing testimony that the youth who are being helped through college by the N. Y. A. are making the most of their opportunities. Their records of accomplishment dispel all doubts whatsoever as to whether or not N. Y. A. student aid is reaching the right type of young men and women. Leadership in the classroom and on the campus by N. Y. A. students is clearly revealed in the reports for the academic year, from all parts of the country, on student honors and activities.

Two Rhodes Scholarships were won this school year by N. Y. A. students. Phi Beta Kappa keys are being worn this spring by N. Y. A. youths in practically every institution in which this great honorary scholarship society is represented by a local chapter. Fellowships for graduate study have fallen to the lot of many. Others have been selected as valedictorians, editors of college publications, class leaders, etc. An analysis of reports received from school and college officials indicates that the scholastic ranking of N. Y. A. students is above the average and that they have secured more than their proportionate share of honors and distinctions.

In spite of the fact that they worked a given number of hours each month, N. Y. A. students were able to participate in extracurricular activities and were frequently leaders in these pursuits. Throughout the country during the past year, N. Y. A. students held such offices as class president, editor of yearbook, editor of college paper, president or member of student council, athletics manager, member of debate team, president of Student Christian Association, captain of athletic team or member of varsity squad, head cheer leader, officer of special interest groups such as art or music clubs, and many similar positions.

Leadership in all-round college activities, as well as in scholarship, was an honor awarded to N. Y. A. students in a higher than proportionate ratio at many educational institutions, according to reports received by the National Youth Administration.

Besides winning election to Phi Beta Kappa, N. Y. A. students were included among those elected to membership in other national honor societies, such as Phi Kappa Phi, Tau Beta Pi, Phi Eta Sigma, and many local honor organizations. Many students who were able to continue their education as a result of N. Y. A. jobs have been awarded fellowships and scholarships for further study.

—

SPLENDID RECORD IN OKLAHOMA

A splendid record by N. Y. A. students was achieved in the State of Oklahoma. Reports from 668 high schools which participated in the school aid program show that while those employed on school-aid projects made up only slightly more than 8 percent of the total enrollment, nearly 14 percent of those in the State Honor Society were N. Y. A. students. In those schools having valedictorians, 32 percent of the students awarded this honor were N. Y. A. employees, and over 31 percent of the salutatorians in Oklahoma high schools were N. Y. A. students.

The attitude of high school officials in Oklahoma toward the National Youth Administration is worthy of brief mention. Over 96 percent of high school superintendents and principals expressed the opinion there is a need for the N. Y. A. to continue. More than 95 percent of these officials stated that N. Y. A. projects are worth while; nearly 90 percent stated the N. Y. A. program helps school attendance; and 82 percent held to the view that the school-aid program helps the attitude of students.

It would require several pages to list the many honors which N. Y. A. students have been awarded at the 20 Oklahoma colleges which have submitted reports, but a few examples will show that students employed by the National Youth Administration are leaders in many fields.

At one Oklahoma college an N. Y. A. employee won the award as the most respected student; at another an N. Y. A. student was cited for having performed outstanding service to the school. Among the N. Y. A. students at these 20 institutions there were 50 women honor students, 21 men honor students, 18 on dean's honor roll, 8 scholarship awards, 4 scholarship cups, 3 cash awards, 3 special honors in every subject, 7 all "A" averages, 3 outstanding freshmen, 2 highest class average, 28 members of student council or senate, 2 poetry writing honors, 14 class officers, 6 Cardinal Key, 2 Blue Key, 8 Phi Kappa Pi, 20 Kappa Delta Pi, 16 Rho Theta Sigma, 14 Alpha Chi, 12 Alpha Pi Sigma, 4 Phi Theta Kappa, 6 Phi Beta Kappa, 11 Alpha Lambda Delta, 11 Phi Eta Sigma, and 9 Kappa Mu. Many others won honors in special subjects and in other campus activities.

The distinguished records made by N. Y. A. students are by no means confined to Oklahoma. During the past school year more than 3,000 students were employed on N. Y. A. projects in 38 Indiana colleges and universities, and their accomplishments are most impressive.

At Earlham College, fourteen N. Y. A. students won scholarships, including seven scholastic scholarships amounting to $750 each, six grants-in-aid amounting to $750 each, and one scholarship at the University of Chicago School of Social Work. Two fellowships also were granted to Earlham N. Y. A. students, one at Pennsylvania State College and one at the University of Michigan.

Sixty-five N. Y. A. students at DePauw University were awarded Rector scholarships amounting to $1,000 and one received a fellowship at the University of Illinois. Ball State Teachers College awarded county scholarships amounting to $1,144 to eighteen N. Y. A. students, while three at Anderson College and four at the Arthur Jordan Conservatory of Music received scholarships in various departments of the school.

The University of Notre Dame granted scholarships totaling $2,790 to thirty N. Y. A. students, while at Hanover College forty-four N. Y. A. students received scholarships to the amount of $3,237.50. Evansville College awarded ten $100 scholarships to N. Y. A. workers.

At Indiana University, 125 received scholarships, one a fellowship, and one a $400 award for outstanding work. Three students at Indiana University extension divisions also received scholarships. One N. Y. A. student at Butler University received an assistantship in psychology at Duke University to the amount of $500.

Four full-time and four half-time scholarships were granted N. Y. A. students at the John Herron Art School, 4 at the Fort Wayne Art School, 5 at Marian College, 10 at the N. A. G. U., and 2 at Oakland City College.

Two scholarships at the University of Chicago and two at Indiana University were granted Gary Junior College students. Rose Polytechnic Institute granted two of $150 each to N. Y. A. students, and the Northwest Territory essay scholarship at Huntington College went to an N. Y. A. student.

—

CUM LAUDE GRADUATES

Thirty-three were graduated cum laude at the University of Notre Dame, 21 magna cum laude, and 1 maxima cum laude. At Indiana University 2 received highest honors, 4 high honors, and 3 honors, while 68 were graduated with distinction in the School of Business Administration. One student was graduated magna cum laude at Evansville College. At Hanover College 1 N. Y. A. student was graduated summa cum laude and 1 cum laude, and 2 at the N. A. G. U. cum laude. Six N. Y. A. students were graduated with special honors at Earlham College, 1 at Concordia, and 1 at Ball State Teachers College.

Fourteen N. Y. A. students were elected to Phi Beta Kappa, honorary scholastic fraternity, 13 at Indiana University, and 1 at DePauw University. Elections to other honorary fraternities were as follows: Arthur Jordan, 6; Ball State Teachers College, 21; DePauw University, 6; Earlham College, 18; Evansville College, 2; Hanover College, 11; Indiana University, 68; Indianapolis College of Pharmacy, 2; N. A. G. U., 15; Oakland City College, 2; Tri-State College, 4; and Valparaiso College, 9.

Several N. Y. A. students won various contests in their schools and received medals, plaques, and cash prizes, as well as scholarship

keys. Ten were in the upper 10 percent scholastically at Indiana University, 96 were in the upper 9 percent.

The list of honors awarded to students employed on the N. Y. A. program at educational institutions in other parts of the Nation is equally impressive.

—

RHODES SCHOLARSHIPS TO N. Y. A. YOUTHS

An N. Y. A. student of the State College of Washington and another from the University of North Dakota have been awarded Rhodes Scholarships for study at Oxford University, England, for two and possibly a third year. They are always among the most highly coveted awards. Another N. Y. A. student from the State of Washington, who attended the University of Puget Sound, was awarded a scholarship at the University of Budapest, Hungary. Thirteen N. Y. A. students in that State were elected to Phi Beta Kappa. At the State College of Washington, 97 of 436 on the high scholarship roll were N. Y. A. students; 3 of 9 initiated into Tau Beti Pi, national engineering honorary, were N. Y. A. students; 3 of 4 elected to Sigma Alpha Omicron, national bacteriology honorary, were N. Y. A. students. Of the 126 students of the State College of Washington given Phi Kappa Phi awards, 27 were N. Y. A. students.

Scholarships to 29 N. Y. A. students were awarded by the Carnegie Institute of Technology at Pittsburgh, Pa. In this State an N. Y. A. student made the highest scholastic record at Shippensburg State Teachers College; an N. Y. A. student was valedictorian at the University of Scranton; an N. Y. A. student at Bryn Mawr won a scholarship for highest average in the junior class; an N. Y. A. student from Geneva College was awarded a scholarship to Harvard Medical School. Important honors were won by N. Y. A. students at other educational institutions in Pennsylvania.

—

ROTARY CLUB SENDS N. Y. A.'S TO DENMARK

A Rotary Club in Georgia granted scholarships to three students in that State for study in Denmark during the coming year, of which two were won by N. Y. A. students. Seventeen of the 48 students who were elected to Phi Kappa Phi at the University of Georgia were N. Y. A. workers. At Armstrong Junior College of Savannah, an N. Y. A. student was the first honor graduate and valedictorian of her class. Approximately 50 percent of those on the dean's honor list at the Georgia State College for Women were N. Y. A. students. At West Georgia College the percentage of N. Y. A. honor students was four times as high as that of students not working on the student-aid program and of 19 recognized organizations on the campus, 9 were headed by N. Y. A. students.

Educational institutions in Colorado report that 3 presidents of student bodies have been N. Y. A. students; 1 president of associated women students, 4 members of mortar board, 4 members of Phi Beta Kappa, 10 members of Tau Beta Pi, and 8 members of Phi Theta Kappa, the national junior-college scholastic honor society, have also been N. Y. A. workers, in addition to the many N. Y. A. students who have been elected to various other honorary positions and societies.

The scholastic average of 310 N. Y. A. students at Miami University, Ohio, was higher than that of any fraternity, sorority, or independent organization. Three of the four students chosen by Otterbein College's (Ohio) Yearbook as outstanding were N. Y. A. students. Also, in Ohio, 4 of 11 seniors receiving student-aid employment at Marietta College were elected to Phi Beta Kappa, while at Ohio State University 2 N. Y. A. students had the unique distinction of being elected to both Phi Beta Kappa and Sigma Xi.

Out of 59 high schools reporting from Connecticut, 6 listed N. Y. A. students as class valedictorian, 2 listed N. Y. A. students as highest-ranking senior boy, and 3 reported N. Y. A. students as class salutatorian. Colleges in this State reported on 426 N. Y. A. students, of whom 129 attained scholastic honors in some form. In Trinity College both the valedictorian and salutatorian of the graduating class were N. Y. A. students. At Yale an N. Y. A. art student was awarded a $400 scholarship and six other N. Y. A. students were awarded scholarships amounting to over $1,500, while in the Yale Divinity School two N. Y. A. students were awarded fellowships in the amount of $795.50 each. At the Junior College of Commerce an N. Y. A. student won the president's award as the highest-ranking senior.

From Stephens College, in Missouri, comes the report that of the 10 girls selected as the "10 ideals" 3 were N. Y. A. students, while other institutions in this State report similar outstanding accomplishments by students working on the National Youth Administration program.

Northern Montana College reports that of eight scholarships awarded on the basis of superior records two went to N. Y. A. students. This institution also reports that the winner of the 1938-39 literary award, the winner of the annual essay contest, the president of the student cabinet, and the editor of the college publication were all N. Y. A. students.

—

HIGH INDIVIDUAL HONORS

Among 43 students in the graduating class of the University of North Dakota listed as winning individual honors 20 were from the student-aid lists. Seven out of ten scholarships and fellowships awarded at this institution went to N. Y. A. students. An N. Y. A. student at North Dakota Agricultural College maintained the highest scholastic average and the honor roll was studded with the names of other N. Y. A. students. At State Teachers College, Mayville, N. Dak., an N. Y. A. student was elected editor of the college annual, while another was editor of the college paper, and 2 N. Y. A. students were on the list of "A" students. At the State School of Forestry, Bottineau, N. Dak., an N. Y. A. student had the highest average in the graduating class and others graduated with honor.

Highest scholarship for the year at Sioux Falls College (South Dakota) was attained by an N. Y. A. student, while at State University six out of nine elected to Phi Beta Kappa had received N. Y. A. student aid. At Spearfish Normal (South Dakota) the second highest-ranking student was employed on the N. Y. A. program, and at other institutions throughout the State N. Y. A. students were awarded many distinguished honors.

At Marshall College (West Virginia) an N. Y. A. student was valedictorian of her class, another was president of the student council, while four N. Y. A. students were candidates for alma mater, an award to the five highest-ranking girls in the junior class. At Concord State Teachers College, N. Y. A. students ranked first in scholarship in the freshman class, second in the sophomore and senior classes, and third in the junior class. Five out of eleven graduating N. Y. A. students at Bluefield State Teachers College were graduated with honors. Other institutions in West Virginia report a high percentage of N. Y. A. students among those receiving honors.

From the University of Wisconsin comes the report that with N. Y. A. students making up but 8 percent of the total enrollment, 24 percent of the newly elected members of Phi Beta Kappa were employed on the student-aid program. Lawrence College (Wisconsin) reports that N. Y. A. students had higher averages than the rest of the student body and that 50 percent of the newly elected members of Phi Beta Kappa are N. Y. A. students. Platteville State Teachers College (Wisconsin) reports that while N. Y. A. students number less than 10 percent of the total enrollment, they make up more than 20 percent of honor students.

A survey of honors achieved by N. Y. A. students in Louisiana colleges, normal schools, and universities, in the past school year, shows that in the schools of that State. N. Y. A. youth earned far more than their proportionate quota of honors.

—

PHI BETA KAPPA SELECTIONS

At Tulane University, which has the only chapter of Phi Beta Kappa in the State, 4 out of a total of 10 elections to that national honor fraternity were N. Y. A. students. Three N. Y. A. students there were elected to Tau Beta Pi, national honorary engineering fraternity; 1 to Beta Gamma Sigma, honorary commercial fraternity; 2 to Alpha Omega Alpha, honorary medical fraternity; 1 to the Order of the Coif, legal honor society.

Out of 42 honors awarded in Centenary College, Shreveport, La., 17 went to N. Y. A. students in the school. Three N. Y. A. students were graduated from Dillard College, New Orleans, with degrees of magna cum laude, as were three in the Louisiana Polytechnic Institute, at Ruston. Four out of the 11 students receiving N. Y. A. assistance at Dodd College in Shreveport made the school's honor roll.

At Jones College, New Orleans, five N. Y. A. youths were on the honor roll; at Leland, Baker, La., there were 17 on the honor roll, out of a total of 46 N. Y. A. students in the school. Thirteen N. Y. A. workers were elected to national honorary societies at the Louisiana State Normal School at Natchitoches, while another 13 were on the school honor roll.

At Louisiana State University 38 students on the N. Y. A. lists made the honor roll, 8 won athletic awards, 8 won military honors, and 11 others were elected to various national honor societies. Loyola in New Orleans reported 26 N. Y. A. students on the honor roll, and 8 elected to national honor organizations. At Southeastern, Hammond, La., 14 N. Y. A. students placed on the honor roll, while at Southwestern, Lafayette, 11 were so honored. Twenty-one of the 35 students who were recipients of N. Y. A. aid at Ursuline College, New Orleans, received honors, 18 of them being on the honor roll. At Xavier University, New Orleans, 3 N. Y. A. students graduated with degree magna cum laude, while 33 of the 95 N. Y. A. students there were on the honor roll. The totals for the entire State covering these and other schools show that 343 students, who could not have attended school without the aid of the National Youth Administration, received scholastic honors.

Individual N. Y. A. students in Louisiana also achieved high honors. One N. Y. A. girl received a gold medal for attaining the highest average for the 4-year medical course at Tulane Medical School. Two N. Y. A. boys distinguished themselves in engineering at Louisiana State University, one of them receiving a fellowship in electrical engineering, the other winning a fellowship in the Chrysler Institute of Engineering.

—

N. Y. A. GIRL WINS TRIP TO EUROPE

An N. Y. A. girl at Louisiana College won first place in piano excellence in a contest for the Caudell Cup, a cherished honor at the school, and also was an honor student and a member of the school debate team. Another girl at Centenary College, who had finished her 4 years of college with N. Y. A. aid, won a fellowship in mathematics in Tulane University. Ranking first and second in grades in the freshman class in the L. S. U. Medical School were two N. Y. A. boys. One 19-year-old New Orleans N. Y. A. high-school girl won a trip to Europe as second prize in a Nation-wide essay contest.

A similar report comes from Rhode Island concerning the achievements and activities of N. Y. A. students in the three largest

colleges in the State. Two seniors and one junior, who had received N. Y. A. assistance at Brown University, were elected to Phi Beta Kappa. Three Brown N. Y. A. students were awarded Francis Wayland honor scholarships. Out of 16 James Manning honorary scholarships, awarded to Brown undergraduates, 6 went to N. Y. A. students. Eighteen of the thirty-six seniors receiving N. Y. A. aid were placed on the dean's list; in the junior class 27 out of 55 were on the list.

Each year at Brown five John Hay scholarships are granted to each class, and this year one each is held in the senior, junior, and freshman classes by an N. Y. A. worker. Two graduate students in the mathematics department and one in the field of political science, who have been receiving N. Y. A. aid, were awarded university scholarships.

In addition to the scholastic honors going to N. Y. A. students at Brown a number of student offices were held by N. Y. A. men, including captain of the varsity baseball team, captain of the tennis team, president of the debating union, manager of the glee club, editorial chairman of Brown Daily Herald. All four of the Hicks debating prize awards were won by N. Y. A. workers this year.

At Pembroke College, the women's division of Brown University, five N. Y. A. students were awarded preliminary honors, and 11 made the dean's list. Three women, who had received assistance from the N. Y. A., were elected to Phi Beta Kappa. Two were named as Pembroke scholars, and four were named as Andrews scholars. The N. Y. A. women also were active in extracurricular activities, holding among them the presidencies of the German club, the freshman council, and the classical clubs, as well as the vice presidency of the student government association.

At Providence College, in Rhode Island, 18 students in the class of 1939 graduated cum laude—13 of these were N. Y. A. students. Two senior-class officers, the freshman-class president, the editor of the yearbook, the editor of the school paper, the president of the debating club, the manager of the orchestra, and the president of the Friars Club were all N. Y. A. students.

At Rhode Island State College 7 of 39 graduates cum laude were N. Y. A. workers, as were 13 of the 67 graduates making senior honors. N. Y. A. students also held positions as, president of the Girls Athletic Club, president of the Civil Engineering Society, president of the Radio Club, members (4) of the student governing group, editors of the year book (3 out of 6), and members (6) of the staff of the student weekly newspaper.

—

LEADERS IN STUDENT LIFE

In Alabama N. Y. A. students led in scholarship and in many phases of student life. Three honor graduates at Alabama College were students assisted to attend school by the National Youth Administration grants. N. Y. A. students in the college not only held the presidencies of the freshman, sophomore, and senior classes, but also headed the Art Club, the German Club, the Athletic Association, the campus Y. W. C. A., and the local chapter of Alpha Chi Alpha, honorary journalism fraternity. Three members of the college debate team were N. Y. A. students.

At Huntingdon College, Alabama, six N. Y. A. students were elected to the dean's honor roll; one was elected to Tri Sigma, a local honor society based on scholarship, spirit, and service; and another was editor of the college newspaper.

Three N. Y. A. seniors at Miles Memorial College in Alabama were graduated with honors, and one of them was honored further with the presentation of a key in recognition of 4 years' membership on the varsity debating team. Among the underclassmen at Miles receiving N. Y. A. assistance, 14 were on the honor roll for the school year 1938–39.

At Selma University, a college for colored students, an N. Y. A. girl was graduated with the highest honors in her class, while another graduate won the Tyler Medal for excellence in oratory. The State Agricultural and Mechanical Institute, another school for Negroes, reported that one N. Y. A. student had maintained an "A" average for the year, and three others were members of the varsity debate team.

One N. Y. A. girl in the Alabama State Teachers College in Florence has a perfect "A" record. In the same school N. Y. A. young people held a great many positions in student government and in extra-curricular organizations, including president-elect of the student council, president of the junior class, editor of the student newspaper, president of the sophomore class, president of the Women's Self-Governing Association, president of the glee club, and many other offices.

The State Teachers College in Livingston, Ala., reported that 15 N. Y. A. students in that institution had earned places on the honor roll while others had distinguished themselves in athletics, drama, and music.

At the State Teachers College in Troy, Ala., 22 N. Y. A. students won places on the dean's list. N. Y. A. students there held the presidency of the Y. W. C. A., and the library club, and the editorship of the student newspaper, as well as many other posts in scholastic and social organizations.

Stillman Institute (colored) had a number of outstanding students on its N. Y. A. rolls. One N. Y. A. girl had the highest scholastic average in the junior college, and another had the distinction of being on the honor roll every quarter during her 2 years in attendance. The captain of the football team, the president of the 4–H Club, and the chairman of the social-service committee of the Y. W. C. A. were all students who have been able to continue in school because of N. Y. A. assistance.

SELECTED TO STUDY IN INDIA

One young Negro girl in Talladega College who has been aided by N. Y. A. won a signal honor when she was chosen by the Juliette Derricotte Memorial Foundation as the recipient of a scholarship granted this year to two Negro women undergraduates to study in India and in other countries of the Orient.

At the University of Alabama a number of N. Y. A. students have been elected to various national honor societies. One N. Y. A. student was initiated into Phi Beta Kappa. Four were honored by being chosen as members of Tau Beta Pi national honorary engineering fraternity. Two women were elected to Mortar Board women's honor group. Ten freshmen N. Y. A. workers were elected to Phi Eta Sigma national honor group for freshmen men, while seven freshmen women from the N. Y. A. group were elected to Alpha Lambda Delta honor group for women in the freshman class.

Similar reports concerning the outstanding character of N. Y. A. students come from Texas. A brief summary shows that 25 students employed under the N. Y. A. school-aid program were valedictorians of their classes, 15 were salutatorians, 36 were top-ranking honor graduates, and 2 others were awarded special scholarships. A survey made in Texas during the 1937–38 school year showed that 13 percent of the students employed on N. Y. A. college or graduate-aid jobs and 19 percent of students employed on N. Y. A. school-aid jobs were "A," or excellent, students.

A large number of students employed on N. Y. A. projects in the educational institutions of Mississippi have won scholastic honors, while others have demonstrated the qualities of leadership through their prominence in extra-curricular activities.

This year's graduating class of Copiah-Lincoln Junior College included five N. Y. A. students who were graduated with honors; Harrison-Stone-Jackson College included three N. Y. A. students among its honor graduates; at Meridian Junior College there were two N. Y. A. honor graduates. Mississippi Woman's College, State Teachers College, and Millsaps College each had two N. Y. A. students graduate with honor, while Belhaven College, Mississippi College, Prentiss Industrial Institute, Piney Woods, University of Mississippi, and Tougaloo had one each.

—

PROMINENT IN CLASS ACTIVITIES

Leadership of N. Y. A. students in class activities is shown by the fact that at the University of Mississippi N. Y. A. students held 13 class offices. At Mississippi College, 6 N. Y. A. students were class officers, at Millsaps College 4 were class officers, at Hinds Junior College and at Piney Woods 3 were class officers, at Mississippi Woman's College 2 were class officers, while at Belhaven and at Mississippi College for Women 1 N. Y. A. student held class office. Five N. Y. A. workers were officers in student government at the University of Mississippi, at Blue Mountain College there were 5, 3 at Millsaps College, 2 at Mississippi State College for Women, and 2 at Belhaven, while 1 N. Y. A. student was engaged in student government at Harrison-Stone-Jackson.

The University of Mississippi reported 15 N. Y. A. students on the honor roll; Harrison-Stone-Jackson reported 12 N. Y. A. students were elected to Phi Theta Kappa honor society; State Teachers College reported 9 N. Y. A. students on the honor roll; 4 N. Y. A. students made the honor roll at Belhaven and 4 at Blue Mountain College; at Copiah-Lincoln Junior College 4 N. Y. A. students took first place in literary examinations; Mississippi College reported that 4 N. Y. A. students were among the winners of scholarships and fellowships; Phi Theta Kappa nominees at Hinds Junior College included 3 N. Y. A. students; all A grades were made by 3 N. Y. A. students at Mississippi State College for Women; scholarship winners at Tougaloo included 3 N. Y. A. students; Sunflower Junior College reported 3 N. Y. A. students on its honor roll; 2 N. Y. A. students were among those elected to Eta Sigma honor society at Millsaps College.

Honors and distinctions won by N. Y. A. students in Mississippi colleges and universities were not confined to scholastic achievements and class offices. At Harrison-Stone-Jackson, N. Y. A. students held the offices of president of the Y. W. C. A., president of the band; captain, girls' basketball team; captain, boys' basketball team. N. Y. A. students at Belhaven College held the positions of president, Pan-American student forum; editor, college newspaper; president, Chi Delta Literary Club; president, debate club; president, State Pan American student forum; and one won first place in the State poetry contest. The president of the band, the business manager of the college annual, and the head cheerleader were N. Y. A. students at Mississippi College. Both the editor and the managing editor of the college paper, the business manager of the annual, the president of the writers' club, president of the athletic association, and the president of Pi Gamma Mu (social science honor society) were N. Y. A. students at Mississippi State College for Women.

N. Y. A. students at the University of Mississippi included the band president, editor and business manager of the college publication and editor of the college paper and the winner of the State oratorical contest, and several members of Omicron Delta Kappa and Blue Key honor societies. N. Y. A. students at Millsaps College included the managing editor of the college newspaper, the business manager of the Annual, president of the band, and a number of nominees to Omicron Delta Kappa honor society. At Piney Woods the editor of the college paper was an N. Y. A. student as was the president of I. R. C. at Copiah-Lincoln Junior College.

—

NEW MEXICO STUDENTS WIN HONORS

Five scholarship winners at the University of New Mexico were N. Y. A. students. Presidents of four organizations at this

institution were N. Y. A. students, as were winners of numerous other scholastic and campus awards. At New Mexico Normal University seven N. Y. A. students were elected to membership in Alpha Phi Sigma, national scholastic fraternity. Positions of honor held by N. Y. A. students at New Mexico State Teachers College included president of the student body, basketball captain, president of Blue Key, president of Alpha Psi Omega, vice president of student body, president of Pep Club, and membership in various honor societies. Similar honors were won by N. Y. A. students at New Mexico State College of A. & M. and at Eastern New Mexico Junior College.

The winner of the senior public service prize, most coveted of the annual awards at the University of Nevada was an N. Y. A. student, as were 11 of those on the honor roll. Four of the eight outstanding seniors at this institution were employed on the student-aid program as were the winners of four scholarships.

In the high schools of New Hampshire which have submitted reports, 43 awards were won by N. Y. A. students including 22 honor roll, 6 valedictorian, and 2 salutatorian awards. At the colleges of this State which have submitted reports, 16 N. Y. A. students were elected to membership in national honor societies and 8 won departmental honors.

Phi Beta Kappa awards were won by 61 N. Y. A. students in New York City, while 17 made Tau Beta Pi and 13 Beta Gamma Sigma, and many more were graduated with honors, held campus offices, and were awarded scholarships.

Approximately 17 percent of all students who held N. Y. A. college jobs in Kansas during the past school year earned honorary recognition in scholastic and extracurricular activities, according to reports from 23 institutions. Several schools in this State report that as many as half their students winning honors were N. Y. A. employed. A high percentage were highest ranking members of their classes scholastically and a number graduating from junior colleges were given scholarships to continue their education.

Of the 35 highest ranking students of agriculture at Iowa State College, 16 were N. Y. A. students; of 46 highest in engineering, 14 were on N. Y. A.; of 42 highest in home economics, 11 were on N. Y. A.; of 18 highest in science, 5 were on N. Y. A.; and of 7 highest in veterinary medicine, 4 were on N. Y. A. Nineteen N. Y. A. students were scholarship winners at this institution. The achievement of N. Y. A. students at other Iowa institutions is similarly impressive.

Special honors, prizes, medals, and trophies have been awarded to N. Y. A. students in various parts of the country for demonstrated ability in such fields as engineering, science, agriculture, classical languages, literature, dramatics, composition, music, home economics, education, debating, social science, R. O. T. C., and athletics.

In some institutions N. Y. A. students have been hired to fill positions on the regular teaching staffs as a result of their demonstrated scholastic ability, while many others have already found places for themselves in private industry.

Spending-Lending Bill

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. WOLVERTON. Mr. Speaker, during the discussion of this bill the thought has been expressed by some of the Members, who favor its enactment, that a vote against the bill is a vote against the President. This does not seem to me to be a proper approach to its consideration. The bill should be considered from the standpoint of its effect upon the economic welfare of our people rather than from the political standpoint of any one individual in the Nation. Whether it will prove helpful or harmful, whether it is necessary or unnecessary, in the public interest, should be the basis of our action. I dislike to think that anyone, partisan or opponent of the President, would let a personal attitude toward the President be the controlling reason for a vote for or against this bill. In this, as in all matters that have come before the House during the present administration, I have let no other consideration than what seemed best for the country influence my vote. At times my vote has been in support of administration legislation, and at other times against it. I may not have been always right, but I am at least conscious of having been actuated by no other consideration than what I believed to be for the best interest of our people. My whole course of action has been based upon a consideration of the merits of the legislation rather than blind partisanship.

My study of this proposed legislation has led me to the conclusion that it would not produce the beneficial results claimed for it by its proponents, nor, is its enactment necessary to accomplish the results that are sought. And, on the contrary to add this enormous sum to an indebtedness that already approaches our national debt limit of $45,000,000,000 would prove distinctly harmful because of the growing concern over a fiscal policy which has piled deficit upon deficit for 9 consecutive years. If that policy had resulted in recovery, and had brought an end to unemployment, there would be much to be said in its favor. But its disappointing results in relieving unemployment and establishing normal conditions have weakened, if not shattered, our faith in the efficiency of a policy based upon spending and lending our way out of the depression.

Lack of necessity for this legislation is demonstrated by the fact that most, if not all, of the agencies of Government designated in the bill to participate in the expenditure of these additional moneys have already surpluses on hand that they have, as yet, found it impossible to efficiently dispose of, and for all of them adequate provision has already been made by the regular appropriation bills to meet their needs for the coming fiscal year. In no instance have the funds to be allotted to them under this bill been requested by the agencies designated to receive them—nor have the appropriate committees of the House, such as Appropriations, Agriculture, Interstate and Foreign Commerce, and Public Roads given favorable consideration to the provisions of the bill coming within their respective jurisdictions. Nor did the hearings before the Rules Committee show any demand upon the part of the agencies designated for additional funds to carry on their respective activities.

As an evidence of the lack of demand for this legislation and the unfavorable attitude of many of the committees of Congress which would ordinarily be called upon to consider legislative proposals such as this bill carries in its provisions, the statement of Senator WHEELER, Democrat, of Montana, and chairman of the Senate Committee on Interstate Commerce is most revealing. When the bill was under discussion in the Senate, addressing his attention to the provision providing additional funds to the Reconstruction Finance Corporation to enable it to make loans to railroads, he said:

> The Committee on Interstate Commerce has studied this problem of railroad finance for the last 2 or 3 years. There was never the slightest intimation of this proposal brought to the attention of any member of our committee. We were never consulted about it in any way, shape, or form; and I am sure that every member of the committee who knows anything about it would have been unanimous against a proposition of this kind.

Now, to direct your attention to self-liquidating roads—toll roads—as provided for in the bill. President Roosevelt's Secretary of Agriculture, Mr. Wallace, in making a report on toll roads to Congress on April 27 of this year said:

> The report in its present form defines the location of three east-west and three north-south highways conforming to the description of section 13 of the Federal Aid Highway Act of 1938, approved June 8, 1938, and indicates conclusively that financing of the full costs of such highways by direct-toll collections is not possible.

And, with regard to these six superhighways, the report the President himself submitted to Congress states that the amount of the tolls collected over the 16-year period from 1945 to 1960 would be an average of $72,140,000 per year, as contrasted with an average annual total cost over the same period of $184,054,000. Thus, more than $100,000,000 a year would have to be provided from the Treasury for this so-called self-liquidating project alone. Furthermore, the whole scheme overlooks entirely the resentment of our people to toll roads. There is scarcely a toll road left in any part of the country. The Department of Agriculture under this and previous administrations has consistently fought every attempt, direct or indirect, to establish any such toll roads anywhere in the Nation.

Another item contained in the bill authorized the sum of $350,000,000 for rural-electrification projects. I have given my hearty support to all legislation that would afford oportunity to our farmers to have the benefits of electricity on their farms, including the legislation passed a few years ago to make possible a wide use of electricity for farm purposes. I consider it one of the soundest steps ever taken by the Government to improve conditions in the farming sections. Since the basic act for rural electrification, passed in 1936, authorizes the appropriation of $40,000,000 annually over a 10-year period for loans on such projects, there is no necessity for the additional $350,000,000 provided in this bill.

And what about the $400,000,000 this bill seeks to provide for farm tenancy purposes? The strongest indictment against it was the action of the Agriculture Committee of the House when it, a few days ago, refused to report favorably to this House a bill for $350,000,000 for the same general purposes as provided for in this bill. If the Agriculture Committee of this House, which is ever alert to advance and protect the interests of the farmers of the country, cannot justify such an expenditure, then what justification can there be for it?

Nor was there any justification for the request contained in the original bill for $500,000,000 for the use of the Export-Import Bank to make loans to foreign governments, many of which are already in default in the repayment to us of loans previously made. This type of "dollar diplomacy" created such widespread condemnation that the administration quickly withdrew the suggestion, and in its place this bill seeks to raise the capital stock of the Export-Import Bank by $100,000,000 for the ostensible purpose of financing foreign exports and imports. The great danger lurking in this proposal arises from the fact that such funds might be used by the bank in an import business that could easily prove prejudicial to our farmers and laboring men throughout the Nation.

And even the provision that is made in the bill for municipal loans for building construction of various kinds would not prove helpful because it does not include any grant in connection with loans as made under previous law. It is nothing more than a loan at a rate of interest no lower than could be obtained from private sources, provided the municipality is within its borrowing capacity. Thus stripped of all grants it would not encourage municipalities to take advantage of its terms for construction purposes. Federal loans with grants is necessary to stimulate this kind of construction. The failure, therefore, to provide for grants, as in previous bills, precludes from any reasonable possibility that this bill would prove helpful to municipalities or be utilized by them.

Notwithstanding the claims that have been made by those favoring the passage of this lending-spending bill, to make it appear as a self-liquidating proposal, the fact remains that there is nothing within the provisions of the act itself that afford any sufficient guaranty or even assurance that such would be the result. Without any real requirement in the bill that loans shall be self-liquidating the opportunity for unsound loans is large. The possibility of heavy losses is corroborated by the testimony of Jesse Jones, the Federal Loan Administrator, in his testimony before the Senate Banking Committee that the Reconstruction Finance Corporation made "plenty of bad loans," and is "going to have plenty of losses," and that he is even "ashamed to tell" to how high a percentage the losses will run.

And, now, just a word with respect to the mistaken idea that this bill would provide loans to small-business men. There is no such provision in the bill; no effort has been made to provide such. With all the elaborate planning of this bill, and the enormous sums provided for under its terms, no funds have been provided for loans to small-business men. They continue to be the "forgotten men."

In considering this bill it is also important to realize the enormity of the sum of money sought to be expended by it. It represents more than twice the entire annual expenditures of the Federal Government in the fiscal year before we entered the World War. It is approximately one-third of our entire Government revenues in the last fiscal year. Furthermore, as Senator BYRD, Democrat, of Virginia, in speaking upon the bill in the Senate stated, we are deluding curselves if we believe the statements that this spending scheme will neither increase the Federal debt nor increase the Federal-tax burden. To him, as well as to others, it appears to be a spending scheme masquerading as a lending scheme.

The time is at hand when more serious consideration must be given to a fiscal policy that continues to create deficits and run the Government upon borrowed money. This measure in my judgment would add to the already heavy burden of our debt without providing any substantial recovery in return. The possibility of future loss under its provisions seems more certain than the possibility of future gain, thus, I cannot give to it my support. If further justification for my position was needed, beyond what I have already stated, it could be found in the words of President Roosevelt during his first campaign for the Presidency in 1932, when in speaking of the burden of taxes that is necessitated by heavy spending, he said, such taxes are—

Paid in the sweat of every man that labors, and, if those taxes are excessive they are reflected in idle factories and tax-sold farms and hungry people tramping the streets and seeking jobs in vain.

Potatoes—Past, Present, and Future

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ADDRESS OF CONGRESSMAN RALPH O. BREWSTER, OF MAINE, BEFORE TENTH ANNUAL FIELD DAY OF EMPIRE STATE POTATO CLUB, AT GARDNER FARMS, TULLY, N. Y., ON THURSDAY, AUGUST 3, 1939

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my address as guest speaker today at the tenth annual field day of the Empire State Potato Club, with a usual attendance of over 10,000 potato farmers.

I was introduced by President Roy Porter as the representative of the greatest potato-growing region in the world, and one who had come to be recognized as the authority on potatoes in the Congress of the United States.

Research in industrial uses for potatoes was the theme of the speech.

Potato growers everywhere have a common stake in the prosperity of one of the greatest and best of human foods. From Maine to California we are enlisted in a campaign to see to it that potatoes shall keep their place in the agricultural sun.

The Warren Act of 1935, adopted in the House by the scant margin of seven votes, determined that potatoes henceforth should be considered a basic crop. From that determination has flowed much of the protection that has come to potatoes against unfair and subsidized competition from acreage displaced in other crops.

Potatoes have not received the special consideration accorded certain favored products of the South and West. Yet, curiously enough, potatoes seem likely to fare better this year than most of these pampered darlings.

The plight of cotton, wheat, and corn affords an almost glittering contrast to the marketing position of potatoes for this current year.

Wheat in Liverpool is at the lowest price in history. Corn at Chicago is at the lowest price in 6 years, with supplies record-breaking. Cotton is in the largest supply in history, with the lowest export demand. Hogs are lower in price than at any time since 1934, and going down.

We paid foreigners last year $26,000,000 to accept 94,000,000 bushels of wheat at 25 cents a bushel less than the domestic price.

This year we are planning to pay $43,000,000 to foreigners to persuade them to accept 6,000,000 bales of our cotton. Japan alone

may receive a bonus of $6,000,000 on 800,000 bales before our trade agreement expires.

The soil-conservation controls operating to regulate most crops seem to have been far more effective in affording relief than the special subsidies for crops with a large surplus.

The diversion programs of the Federal Surplus Commodities Corporation undoubtedly helped, but they have affected a small percentage of the potato crop as contrasted with the vast special grants for cotton, wheat, and corn in the form of loans and purchases that have left the Government with an enormous carry-over.

Meanwhile prospects are promising for a fair price for potatoes, if not a parity price.

It seems obvious that the country cannot continue with increasingly vast subsidies to special crops and with a constantly increasing carry-over.

When the inevitable liquidation arrives, potatoes will suffer less than any other major crop because they have been favored less and have less to lose.

As a member of the Committee on Agriculture in the House it has been evident to me that agricultural experts are beginning to realize that there must be a radical alteration in the approach to the farm problems if our difficulties are to be solved.

Each successive program denounces the remedies of the preceding doctor, but soon goes them one better.

Stuart Chase commends the Secretary of Agriculture most strongly for his denunciation of export subsidies, only to find within 12 months subsidies inaugurated of 25 cents a bushel on wheat and a cent and a half a pound on cotton. The strange and encouraging spectacle was then presented of a southern Democrat urging a duty on cotton for the first time, to make sure that no American consumer should by any chance get any benefit from these subsidies.

Only foreigners are permitted to share our wealth.

There looms, however, a program that begins to offer hope—a program that proposes to use surplus farm products for industrial purposes. This has long been the vision of Henry Ford. Now the Government is about to enter this field on a really worth-while scale. Here is a scope for Government activity that will not be challenged by the most conservative.

Here the Government will be on entirely safe ground. This proposes neither limitation nor control nor subsidy of surplus, but rather the creation of industrial uses that will increasingly absorb the surplus from our soil.

Here is an unlimited field for research. Here is perhaps the answer to the depletion of our resources as the chemistry of Nature is put properly to work in an eternal cycle that will forever serve.

Much has been already accomplished by private enterprise but the problem invites the proper coordination of research facilities by public authority since it concerns so vitally the welfare of all alike. This interrupts in no way the delicately geared machine of our current economic life.

Criticism of a program may well be coupled with commendation of those parts that seem to promise progress. Here Americans may agree.

BACKGROUND OF THE REGIONAL RESEARCH LABORATORIES

In 1938 Congress directed the Secretary of Agriculture to establish four regional research laboratories, which should undertake by research to develop new and extended uses for surplus farm commodities. In section 202 of the Agricultural Adjustment Act, approved February 16, 1938, Congress provided, as follows:

"The Secretary of Agriculture is hereby authorized and directed to establish, equip, and maintain four regional research laboratories, one in each major farm-producing area, and at such laboratories to conduct researches into and to develop new scientific, chemical, and technical uses and new and extended markets and outlets for farm commodities and products and byproducts thereof. Such research and development shall be devoted primarily to those farm commodities in which there are regular or seasonal surpluses, and their products and byproducts."

The major purpose in establishing these laboratories was to provide an agency of the Department of Agriculture which will devote itself exclusively to further research on the products of agriculture on which new and extended industrial uses may develop. The further commercialization of the products of agriculture and the creation of new markets for surplus commodities of this sort is expected to result. This is not an entirely new activity, researches of this character having been conducted over a period of many years, but it will represent the first large-scale attack which the Department has been able to make using scientific and economic research as agents for the creation of new industrial markets.

NEED FOR LABORATORIES

The products of agriculture are used more for food than for any other single purpose. Textile uses of such commodities as cotton and other fiber crops are second in dollar importance to the farmer. To a considerable extent, however, industrial processing of farm products has led to nonfood and nonfabric applications. The principles which have in the past enabled such successful development of the latter type will largely assist in the planning of new possibilities of like nature. A few examples will aid in understanding these.

Although corn is used primarily as animal food by those farmers who grow it, there has been during recent years a constantly increasing use of corn as an industrial raw material. About 3 percent of the total crop, some 80,000,000 bushels per year, is now processed for the manufacture of starch, oil, and other products, with a large part of the starch being used industrially and not in foods.

Although this quantity is a small part of the total crop, it forms nearly a third of the corn that is sold by farmers, and therefore very, very largely increases the farmer's opportunity to obtain cash for his crop.

The products made from corn are in some ways of quite different significance from the products made from certain other agricultural materials, cottonseed, for example. Cottonseed was at one time merely a waste, if not a nuisance. Then processing for the recovery of cottonseed oil began. Now the cash value of the seed equals about 16 percent of the total cotton crop value.

Numerous other important developments have occurred in the use of agricultural raw materials. For example, synthetic fibers and other cellulose plastics are manufactured in large quantities from cotton linters. Such chemicals as acetone, butyl alcohol, and others are made by controlled fermentation of corn. The chemical furfural is made from waste oat hulls by processes which originated in the Department laboratories. The wide variety of industrial products that have been made from products which were surpluses of agriculture is illustrated by these and many other examples. This experience not only justifies more research of like nature in the new regional laboratories, but also affords an important guide for the planning of the projects to be carried out there.

Such developments as these benefit both agriculture and industry, for they afford new opportunity for factory employment, as well as new markets for the farmer.

MAJOR FARM PRODUCING AREAS

In its provisions for the regional laboratories, Congress instructed the Secretary of Agriculture to divide the country into four major farm-producing areas. One regional laboratory is to be established in each such area; and one-fourth of the funds made available for the group is to be allocated to each such laboratory.

In grouping the States for the purpose of this act the Department took into account a number of important criteria. Of first importance were the natural boundaries fixed by the habits of agriculture in growing the most important crops. But a grouping that would follow such crop areas exactly is not possible because of the overlapping of these areas and variation in agricultural conditions in different parts of the country. Other important criteria considered were, therefore, farm population, value of farm property, cash income from crops and livestock, land in farms, and total land areas.

From the standpoint of the laboratories themselves, it was important that the areas be formed so as to balance the research load of the four laboratories. In this connection it should be recalled that by law funds must be allocated equally among the four. This consideration made it desirable, for example, to put tobacco research in the eastern laboratory. To have put it in the southern laboratory, which might be equally logical, would have reduced the effectiveness of work on other important commodities of that area.

The following grouping of States has been determined as a basis for the definition of "major farm-producing areas," and one regional laboratory is being established in each area:

The southern area: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Oklahoma, South Carolina, and Texas.

The eastern area: Connecticut, Delaware, Kentucky, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, and West Virginia.

The northern area: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The western area: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

SURPLUS COMMODITIES FOR INITIAL ATTENTION

All of the important farm commodities produced in the United States are from time to time in surplus. The Department of Agriculture might, therefore, under the instructions of Congress, consider in the new regional laboratories almost any of these products of agriculture. To do so, however, would so scatter the effort as to make early and useful results improbable. The Department has planned, therefore, that it should take up initially in each of the four laboratories only a limited number of commodities.

Those which seem most urgently in need of attention, either because of the magnitude of the surpluses or because of the large number of agricultural workers or agricultural acres involved, will be studied first. The commodities that are to have first attention by research have been designated as follows:

Southern area: Cotton, sweetpotatoes, peanuts.

Eastern area: Tobacco, apples, Irish potatoes, milk products, vegetables.

Northern area: Corn, wheat, agricultural waste products.

Western area: Fruits and vegetables, Irish potatoes, wheat, alfalfa.

The fact that any particular commodity does not appear on this list is no indication that the Department does not believe it impor-

tant or does not believe that research on it would be profitable. Quite the contrary is true of many of the agricultural products, and it is expected that the regional laboratories will in due time give attention to many more classes of commodities than can be subjects of the initial research.

SURVEY

To carry out the instructions of Congress for a preliminary survey of present research as a basis for a coordinated progam of new work, the Department organized a special survey committee including representatives of several of the bureaus most concerned with this type of work. A technical staff experienced in scientific investigations was organized and a comprehensive plan laid for reviewing all the present activities of the Department, of the experiment stations and other State agencies, and of such industries and institutions as are engaged on comparable or related work.

Records were obtained by this committee from all the bureaus of the Department of Agriculture and from such other Federal agencies as are engaged on related types of work. Reports were made to the Department by every State experiment station; and personal visits were made by the survey staff for technical conference in each case. More than 10,000 present research projects of Federal and State agencies were thus reviewed.

The technical staff of the survey committee conferred also with several thousand industrial executives and research workers, in every State. Universal and cordial cooperation was encountered. As a result the Department of Agriculture has been made acquainted with a very large number of research projects which are being carried out in laboratories of endowed institutions, industrial companies, and under other private auspices. Although confidential information was not sought, it is believed that the survey staff has been able to gather material that gives a very comprehensive and complete picture of the general character of commercial work now in progress that is intended to establish new industial activity for the utilization of agricultural commodities.

The Department contemplates a continuance of its detailed study of this information during the coming year, while the new laboratory buildings are being erected. In fact, the first task of the new research staffs as they are selected will be an analysis of the many details disclosed by this survey. Thus every pertinent comment on any particular commodity will be taken into account before actual experimental work begins.

There will also be urgent need for extensive survey of the scientific and engineering literature in order that every item of present published knowledge may be taken into account as fully as possible. By this procedure the initial experimental and field studies may be advanced as rapidly as possible when the buildings and laboratory facilities are ready for use.

Congress has determined that there shall be four regional laboratories, each dealing with surplus commodities of its region. It is evident, however, that a national outlook should be maintained at all times, even with respect to regional problems. The results in each laboratory will, of course, be made available to all parts of the country; and they will be applied as promptly as possible in whatever region and to whatever crop they may be found adapted.

TYPE OF RESEARCH INVESTIGATIONS

There will be considerable variety in the investigations undertaken at the regional laboratories. In some cases it will be necessary first to make exploratory studies before detailed research can begin, especially in fields never before studied either by the Department of Agriculture or by other research institutions of the country. Because of the very far-reaching nature of the problems many radical and novel investigations will be required. Not all of these can succeed. But it is believed that all will contribute to an understanding of what American industry can do in order to use profitably agricultural goods.

In many cases exploratory work has already been done on certain commodities, certain possible products, or certain new processes which look worthy of further investigation. In these cases, serious scientific research of an intensive and fundamental nature will be required. This can be undertaken at once. Not infrequently, work of the most abstruse and difficult scientific sort seems necessary. Here again, new sums of human knowledge will be forthcoming even when the immediate and hoped for practical result may not always be reached at once.

Many of the investigations required are known to be of a sort that will take a number of years, perhaps very long periods, for complete solution. Such projects will be undertaken as a part of the regional-laboratories program because they give, in the long range, great promise. It is recognized that in many cases only the Government might be looked to to finance and carry through studies of this sort.

When fundamental work has been done, there still remain laboratory research projects of an industrial or applied nature before engineering can begin. Some research of this kind can be initiated soon on the basis of published present knowledge. Other like projects will follow as the second stage after the fundamental pure science work of the new laboratories themselves.

A third class of research will be undertaken for the development toward practical application of some of the more promising present scientific knowledge. This engineering development on a pilot-plant scale will, it is hoped, give at an early date results on which industries may initiate new large-scale use of farm products. Effort will be made to press certain of these projects very aggressively so that practical benefits coming from each laboratory may not be unduly delayed.

It may not be practicable for the new laboratories to undertake all of the investigations of an engineering or developmental character that will be desired. Frequently, it is hoped, such investigations can be carried on with present industrial facilities. Thus, the funds provided for the regional laboratories can be conserved for such work as industry is not prepared to undertake. Furthermore, the results of such engineering development must be most promptly available and most advantageously used for actual application in new processing on a commercial scale.

COOPERATIVE RELATIONSHIPS WITH STATE AND OTHER AGENCIES

It is expected that the work of the new regional laboratories will be carried out on the same frank, open basis as has governed the previous research work of the Department. Close cooperation with States' educational institutions and industry will be encouraged. Businessmen will be constantly urged to study the work being done and to utilize for public benefit the results being obtained. The Department will reserve the right of control of such developments only so far as it is necessary to insure the greatest promptness of commercialization and a fair development by all proper interests competent to serve the farm producers of raw materials and the general public who will be consumers of the products made.

The Department is making a careful analysis of the interrelationship between all new research and that already under way. Arrangement is being made to avoid duplication and to make each part of old and new research mutually helpful to all of the interested agencies.

As in the case of experimental work done under the Bankhead-Jones Act, all new projects of the regional laboratories will be organized to permit the fullest cooperation within the Department and with State and university activities. For example, the recent experience of the Bureau of Chemistry and Soils in establishing a regional soybean laboratory at Urbana, Ill., involving industrial cooperation problems, is proving very valuable in guiding these large industrial research projects. In the soybean program arrangements were made for coordination within the department and with all 12 States of the region in which related work was being done, and active and regular cooperation with the State agencies has resulted. Frequent meetings are held at which a number of specialists confer, both for the benefit of the Department staff and for exchange of information between other interested groups.

A like plan for coordination of the regional laboratory program is under consideration. In some cases it is expected that research being done by other laboratories may be taken into account in such a way that the complete program of study will really consist of the joint efforts of several active institutions. Collaborators will be named and advisory committees will serve actively. Thus the influence and constructive assistance of the regional laboratories may achieve maximum results for the benefit of all.

It is not contemplated that the new regional laboratories will themselves require an independent program for many of the agricultural research projects which are a vital part of a complete effort to secure commercialization of certain commodities. This is because the present work of the Department and of State experiment stations is often adequate with respect to genetics, agronomy, animal husbandry, and some other fields of scientific work which are essential prerequisites of chemical investigation and engineering development. The Department's facilities for coordination to this end seem adequate, and they will be utilized to the full, not only in formulating the initial program in detail, but also for its administration and amendment, as experience may make necessary.

LOCATION

The regional research laboratory for the northern region is to be located at Peoria, Ill.; for the southern region at New Orleans, La.; for the western region at Albany, Calif., in the San Francisco Bay area; and for the eastern region at Wyndmoor, Pa., which is in Springfield Township, Montgomery County, and will be concerned with studies on tobacco, potatoes, milk products, apples, and vegetables. A 32-acre tract of land, formerly known as the Winoga Stock Farm, has been selected as the site. This location is accessible to the great processing industries along the Delaware River and to the library and research activities of the University of Pennsylvania and the Franklin Institute. Its geographical location with respect to the entire eastern area is very advantageous.

LABORATORY BUILDING AND STAFF

The detailed plans and specifications for the eastern laboratory were completed about April 15, 1939. The initial contract for the construction was awarded early in June, and actual building operations began on June 15. It is anticipated that the building will be ready for occupancy about June 1940. The building, designed as a center for carrying on chemical, engineering, and related research by a staff of approximately 250 persons, will be a U-shaped structure of three stories and basement. Offices, laboratory, and conference rooms will be in the 211-foot base of the U, which will be the front of the building. One of the 306-foot wings will contain research laboratories equipped for work in chemistry, physics, or biology. The other will contain a small number of

laboratories and ample space for heavy engineering equipment. An effort is being made to incorporate into the design and equipment of the building every feature which experience has shown to be useful in furthering research work of this character.

INDUSTRIAL UTILIZATION OF WHITE POTATOES

Potatoes comprise the largest vegetable crop in the United States. During the 10-year period from 1928 to 1937 the average yearly production was 371,844,000 bushels. In 1937 the total crop was 393,000,000 bushels.

Commercial potato production is concentrated in a few well-known areas: Aroostook County, Maine; Long Island, N. Y.; Eastern Shore of Virginia; Red River Valley of Minnesota; and southern Idaho. There are also important growing areas in Michigan, Wisconsin, Colorado, Pennsylvania, the Carolinas, and elsewhere. In recent years the growing of early potatoes has become increasingly important in the South.

The chief producing States for the late or main crop are Maine, with an average output recently of around 44,000,000 bushels; New York, producing around 29,000,000 bushels; Pennsylvania, with about 25,000,000 bushels; followed by Michigan, Minnesota, Wisconsin, Idaho, and Colorado.

An idea of the crop division as between the early and late regions may be gained from the 1937 crop, which was fairly typical in point of distribution. In that year the total crop amounted to 393,000,000 bushels, and of this quantity the late States produced 318,000,000 bushels, the intermediate States 37,000,000 bushels, and the early States of the South 38,000,000 bushels.

The gross income to growers of potatoes in 1937 amounted to slightly under $239,000,000 and in 1938 to some $276,000,000.

A typical picture of utilization of the crops may be cited from the 1937 figures. The production that year amounted to 393,000,000 bushels. Of this, about 32,000,000 bushels were disposed of as unfit, waste, and feed for livestock; the quantity used as food on farms amounted to 64,000,000 bushels; saved for seed, 32,000,000 bushels; sold, 265,000,000 bushels. The quantity sold in 1937 brought farmers an actual cash income of $198,000,000, this particular year having been one of very low price. The average prices of potatoes received by farmers over the last 10 years has ranged between a high of $1.32 per bushel in 1929 down to 39 cents per bushel in 1932. In 5 of the last 7 years the average season price to growers has been below 60 cents per bushel. Last year (1937), for instance, it averaged 53 cents per bushel.

The consumption of potatoes is relatively inelastic. That is, under similar demand conditions small crops usually result in larger returns to growers than do large crops. Since there is a considerable variation in yield per acre and in the total crop resulting from this factor, it frequently happens that although the acreage remains fairly stable the crops and prices of given seasons vary greatly. An increase of only 2 to 4 percent above average production often seriously depresses prices.

To quite an extent the yield per acre is dependent upon weather conditions during the growing season, and the average has ranged during the past 10 years from 100 to 123 bushels per acre for the United States as a whole. When high yields occur the surplus of No. 1 potatoes is frequently sufficiently high to greatly depress the market price. About 10 percent of the crop is culls, and the loss from disease and frozen potatoes and shrinkage in storage may also amount to as much as 10 percent of the total crop. Because of these conditions, which necessarily prevail in the potato-growing industry, there is a definite demand for a profitable means of utilizing, for other than direct-food use, the annual supply of cull and second-grade potatoes and also of excess first-grade potatoes during years in which large surpluses occur.

The fact that somewhat over two-thirds of the potato consists of water has always made it difficult for this crop to compete as an industrial raw material owing to excessive transportation and storage costs and to the large losses resulting from spoilage in storage. Recent researches on the development of low-cost dehydration methods have indicated that it should be possible to reduce both storage and transportation costs.

Starch manufacture with adequate recovery and utilization of byproducts and the manufacture of accessory products, such as specially modified starches, oxidized starches, dextrins, plastics, etc., in demand by various industries would seem to be a practical means of utilizing surplus and cull potatoes.

Development of a profitable means for the industrial utilization of potatoes differs somewhat according to the character of the various potato-growing regions. For example, although the chemical composition of white potatoes in the far western region differs somewhat from that of white potatoes in the northeastern region, from the standpoint of industrial utilization the outstanding difference between the two regions is the occurrence of large areas of high density of potato production in the northeastern region, notably in northern Maine, whereas in the far western region such dense areas are comparatively small. In the far western region the problem of transportation of potatoes to central points for industrial utilization is the "bottle neck," so to speak. Primarily for this reason no potato-starch industry has been established there, whereas such an industry has been in existence in northern Maine for many years.

Domestic potato-starch factories are generally operated without chemical or other control. The percentage of starch recovered is quite low, an excessive amount being lost in the residual pulp and waste water. The equipment is to a great extent crude, and, because the quality of the starch manufactured is quite variable, the price is reduced below that of imported potato starch, which is preferred by many users even at a higher cost. Much improvement in domestic methods of processing is possible both in economy of operation and improvement of starch quality. Establishment of this industry on a sound competitive basis should provide an expanding and profitable market for culls and for the surplus portion of the crop.

The market for white-potato starch can very well be expanded beyond its present size. Our imports of potato starch just about equal the amount manufactured domestically. In 1936 more than 12,000,000 pounds were imported and about 10,000,000 pounds in 1937. It is claimed that one of the reasons for such importations is the poor and inconsistent quality of such domestic starches as compared to imported white-potato starch. Such a situation can be remedied and domestic production increased if proper steps are taken to adopt suitable manufacturing procedures. Research work along this line is being conducted by Dr. C. A. Brautlecht, of the University of Maine, at Orono, Maine.

The following program, which is based on careful consideration of current research activities and suggestions received during the survey, has this aim for its objective.

PROPOSED RESEARCH PROGRAM

The following studies to increase the industrial utilization of white potatoes will be undertaken:

Research on the development of low-cost dehydration methods as well as on other means of lowering transportation and storage cost will be an essential part of the industrial utilization program.

The drying of potatoes entirely by the use of heat is expensive, and in addition may cause undesirable changes in the starch. Recent studies have indicated the application of a preliminary chemical treatment in the solution of this problem. Such treatment greatly increases the premeability of the cell walls of the potato, making it possible to remove most of the water by mechanical means. There would be numerous advantages in the commercial use of dehydration methods of this sort, including the economical recovery of the expressed juices and the preparation of various products from the dried material.

Investigation of methods for the economical utilization of frozen potatoes.

Improved and economical methods for the production of alcohol from potatoes.

The production of plastic materials from starches.

Development of efficient potato starch and potato byproducts recovery plants adapted to conditions prevailing in the United States. To assist in the development of such factories the following investigations will be undertaken:

(a) Determine chemically the starch-extracting efficiency of typical small plants, and ascertain the percentage of starch lost and points in the process where losses occur; determine the causes for the present great variation in quality and develop improvements in equipment and operation which could be installed at moderate cost and which at the same time would greatly improve efficiency of operation of the small factories.

(b) Determination of the microbiological flora present in white-potato-starch factories and the establishment of better microbiological control to increase the efficiency of these plants.

The quality of domestic white-potato starch is quite variable. Studies looking to the establishment of grades coupled with substantial improvement in quality will be undertaken. When this is accomplished it will be possible to obtain the same price for domestic white-potato starch as for imported white-potato starch.

The residual pulp which remains after extraction of starch contains a certain proportion of starch which it is not profitable to recover by ordinary methods. In addition, it contains hemicelluloses and other constituents which could be recovered and utilized as byproducts. Investigations will be conducted looking to the development of economical methods for the recovery of such waste materials, as well as methods for their profitable use.

The use of micro-organisms for the production of desirable transformations in potato starch. Further studies should lead to valuable commercial developments in this field.

Among the modified starches and starch derivatives are special modified and oxidized starches and dextrins. Methods for producing these derivatives in a continuous process with starch, and hence at a lower cost, will be investigated.

Potato starch in the commercial, purified form is a relatively low-priced pure carbohydrate raw material, from which a variety of chemical products can be made. Investigations leading to the manufacture of these compounds with the object of making available new materials for the chemical industry will be conducted.

The possibilities in potato starch have only begun to be realized. The possibilities in plastics find the surface only scratched.

All agencies, private and public, may well cooperate to develop industrial uses for the potential potato production of the country, and everyone will benefit. Proper grading and marketing will naturally follow.

The consumers are likely to solve the grading problem by demanding uniform potatoes above the size of culls. Against such there is no law.

Persuasion, instead of compulsion, may well be the order of the new economic day.

The Philippines

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

HISTORY OF THE PHILIPPINES BY W. CAMERON FORBES, EX-GOVERNOR GENERAL

Mr. ALEXANDER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter and statement:

REGULAR VETERANS ASSOCIATION, SAWTELLE POST, No. 2,
Los Angeles, Calif., August 4, 1939.

HONORABLE SIR: I am submitting the enclosed for your consideration in support of your bill H. R. 6827.

No doubt many former Army officers can or have given you much the same data on the subject; however, there are also some civilians, official and otherwise quite familiar with the subject.

In regard to medical data, one cannot help wondering if mistakes can't be made in diagnosis, and if the misconduct clause isn't overworked as to incurrence of diseases.

For instance, if the parasites of different diseases are practically the same, and one transmitted by mosquito, bedbug, or tick, what about the other?

Thanking you for interest shown, I remain,

Respectfully,

JAMES J. SHATTUCK,
National Military Home, West Los Angeles, Calif.

HISTORY OF THE PHILIPPINES, BY W. CAMERON FORBES, EX-GOVERNOR GENERAL, WITH COLLABORATION OF HON. DWIGHT F. DAVIS, SECRETARY OF WAR; HON. FRANK W. CARPENTER, 25 YEARS IN THE PHILIPPINES AS PRIVATE SECRETARY TO MILITARY GOVERNOR, EXECUTIVE SECRETARY CIVIL GOVERNMENT, GOVERNOR, DEPARTMENT OF MINDANAO AND SULU; MAJ. GEN. FRANK R. MCINTYRE, CHIEF OF THE BUREAU OF INTERNAL AFFAIRS; GOV. GEN. LEONARD WOOD; EX-GOV. GEN. JAMES F. SMITH; GEN. JOHN J. PERSHING, EX-GOVERNOR OF MORO PROVINCE; GEN. JAMES G. HARBORD, DIRECTOR OF CONSTABULARY; GEN. FRANK R. MCCOY, SECRETARY, MORO PROVINCE; DR. VICTOR G. HEISER, DIRECTOR OF HEALTH; DR. RICHARD P. STRONG, CHIEF OF THE BIOLOGICAL LABORATORY OF THE BUREAU OF SCIENCE AND PROFESSOR OF TROPICAL MEDICINE, UNIVERSITY OF THE PHILIPPINES; AND MANY OTHERS

EXCERPTS

Chapter V: The declaration of peace by no means ended active operations of the Army in the islands. American troops during the years following the beginning of organized government, and until 1906, were engaged in field operations of a dangerous and exhausting character against guerilla bands in Batangas and other provinces of Luzon, and against similar outlaws and religious fanatics on Bohol, Leyte, Samar, and other islands of the Visayas. In Mindanao and the Sulu Archipelago there was more extensive and prolonged operation, first against guerilla bands and fanatics in northern Mindanao, and subsequently against recalcitrant Moros in the Cottabatto Valley, and in the course of the subjugation of the Lake Lanao region in central Mindanao and of the Sulu Moros on the Island of Jolo and adjacent islands. Much hard campaigning ensued, and many casualties occurred among American troops.

In these field operations many officers and men revealed ability of a high order which marked them for leadership in the World War, in which they won enduring renown. Most noted of these distinguished Americans is Gen. John J. Pershing, who was promoted from the grade of captain of cavalry to brigadier general on September 20, 1906, in recognition of his brilliant and successful campaign against the Lake Lanao Moros, who had never submitted to the sovereignty of Spain.

The commanding general of the military district of Mindanao was also civil governor of the Moro Province, which comprised in addition the islands to the southward, including the Sulu Archipelago. As the inhabitants of that region were more turbulent and continued armed resistance to the Government longer than in any other region, the number of troops in the Moro country was relatively greater. For several years there were 10 Army posts maintained in the island of Mindanao; three in Sulu Archipelago, and one at Puerto Princessa, on the Island of Palawan; nine on Luzon, one on Cebu, and one on Iloilo. Most of the Army posts had been discontinued by 1917, the only garrison then remaining south of Manila being one battalion of scouts at Zamboango.

From time to time, as the number of stations occupied by American troops were reduced, Filipino agitators tried to incite their people to oppose the United States by telling them that the troops had been wholly withdrawn. More than once, to counteract these false impressions, commanding generals ordered practice marches of impressive forces of American troops, infantry, cavalry, and artillery through regions where such rumors had been current.

Maj. Gen. William P. Duval, then commanding the military division of the Philippines, went so far as to assemble a large part of his command in Manila at the time of the carnival in 1911, when representative people from all over the archipelago came for the annual carnival and exposition. The troops, over 8,000 in number, were paraded, and the Filipinos visiting the carnival were able from personal observation to carry to the farthest confines of the archipelago the news that American troops were still present in force.

Extensive field maneuvers were held from time to time in the provinces near Manila and in the central plains of Luzon. Until the year 1906 the assistance of the Army was necessary in Luzon and the Visayas in the suppression of outlawry and the destruction of armed bands, most of which had existed in the mountains and swamp jungles as far back as the Spanish regime. In the Moro country the Army was more or less actively engaged until late 1913 in overcoming armed resistance to the United States Government. The sacrifice in lives and health of American Army officers and troops cannot be stated in exact terms. The total, if ascertained, would be impressive.

Since 1913, American troops have not been required except for garrison duty and as a moral force representing the sovereignty of the United States in the Orient. It is impossible to assess and hard to overestimate the stabilizing influence of that thoroughly competent trained body of Army officers and men in khaki. Who can say how much of the stability of the institutions established by Americans in the Orient is due to their presence? When the Boxer Rebellion broke out in China in 1900, the first American troops to reach the scene came from Manila, and it is not too much to say that America's part in quelling the Boxer Rebellion was largely borne by American Regular veteran troops and by immediately available supplies drawn from the Philippines.

No account of events in the Philippines would be complete without mentioning the fine service rendered by the United States Navy and Marine Corps. The former cooperated by sea with the Army, and the latter on a few occasions, notably in Samar, where Maj. L. W. T. Waller, of the United States Marine Corps, distinguished himself. The Navy also has done some fine service in patroling the Sulu seas against Malay pirates and assisted the Army in some of its storming operations against hostile Moros in the island of Jolo and other islands in the vicinity.

Report of Philippine Commission on number of American troops killed in action:

August 1898, War with Spain	27
1899–1902	752
July 5, 1902–Dec. 31, 1906	239
Dec. 31, 1906–Dec. 31, 1913	23

Data by commanding general, Philippine Division, February 26, 1927:

Strength of troops in islands:

1898–1902	193,606
1902–07	76,544
1907–13	61,420
Total	137,964

PEACETIME
(By Vic. Hurley)

EXCERPTS

Chapter 18, page 165: A second great American soldier came forward to assume the government of the Moro territory. Gen. Leonard Wood, who had served successfuly as Governor General of Cuba, now took up the reins in Mindanao and Sulu as first civil governor of the Moro province. General Wood led his troops down to Lake Seit, and a battle was fought. Sixty Moros were killed, and a rear-guard action of 50 miles followed, etc. General Scott took the field March 1904. The Moros assumed the offensive, sent charge after charge against American troops, etc. Coincident; the 28th. United States Infantry commenced operations near Teraca, Mindanao. Guerilla conditions prevailed. Troops established a fortified camp and sent out outposts, one composed of Sergeant Stevens, Privates Bowser, Burke, and Kiethley, etc. In the early morning the rush came. Twenty krismen leaped from the jungle; in the first savage attack all the men except Private Kiethley were hacked to death with the kris. Kiethley received a terrible wound. This young American soldier performed an almost impossible feat of valor; gathering up the rifles he fell back slowly, pouring a steady, accurate fire. For three quarters of a mile he fought off the rushes of the Moros, reaching the post with the four rifles to fall at last before the awful slashes of the kris.

Young Kiethley's experience was duplicated hundreds of times by American soldiers in the Moro campaigns, etc. The fighting was deadly, for it was veiled by a screen of impenetrable jungle.

The silence of night was disturbed by the scream of the juramentado and the cutting of tent ropes. The dawn showed a camp of fallen tents with the canvas stained by the slashes of the kris, etc.

It was not until 8 years after the death of Private Kiethley that the men of the Sixth United States Infantry captured the Sultan Cuayan and others of his men who led the attack on the outpost at Taraca.

March 6, 1906. Battle of Bud Dajo. Assault units, 272 men of Sixth United States Infantry, 211 men of the Fourth United States Cavalry, 110 men of the Nineteenth United States Infantry, 68 men of the Twenty-eighth Battery of Artillery, 6 sailors from U. S. gunboat *Pampango*, 57 Sulu constabulary. Total, 790 officers and men. Casualties, 21 killed and 73 wounded. Two Moros killed Sergeant Neher on Malabang, Vicar's Trail. Privates Borst and Cott attacked. General Bliss and staff fired on. Packer Burns killed at Malabang. Private Balaine seriously wounded by krismen.

American troops at Parang awoke one morning to find a guard tent a shambles, raided by Sultan Djimbara, etc., December 14, 1906. Private McLaughlin, sentry on post at Jolo, attacked, arm almost severed, etc. Cotta warfare raged all through 1906 and 1907. American troops were in the field continuously. Captain Green and 60 men stormed the cotta of Mural Hakim. Lieutenant Fort ran a band under Badudo to earth. Lt. James L. Wood, with 24 men, engaged with Moros near Bacolod. Lt. J. M. Merril and 40 men against cotta of Sultan Ulama and 100 Moros entrenched in a ravine. Americans charged 50 Moros and Sultan, killed in hand-to-hand fighting. Lieutenant Merril badly wounded.

A company street might be peaceful and quiet with a sentry on guard. Suddenly a juramentado would appear, bringing death and seeking death. Guard posts or sentries had no terrors for juramentados; rather they sought them out as the most available victims. A few minutes of wild scramble and desperate shooting and slashing, and everything would be quiet again, etc.

New Era in the Philippine Islands

(By Arthur Judson Brown, D. D., secretary, board of foreign missions. Ch. IV, p. 49)

"It is not good for the white man's health to hustle like the Malay brown.
For the white man riles and the Malay smiles, and he weareth the white man down.
And the end of the fight is a tombstone white, with the name of the late deceased.
And the epitaph drear: A fool lies here, who tried to hustle the East."

The foreigner who expects to keep his health in the Philippines will protect his head from the midday sun by a pith helmet or an umbrella, or both; will insist on having his drinking water boiled; will eschew unripe or overripe fruit; will see that vegetables uncooked are thoroughly washed in boiled water; and will be cautious about eating raw shellfish and cold meats which have been standing in exposed places. A temperate diet of freshly cooked food with comparatively little meat is the one most conducive to health in a tropical climate. In general, persons with organic weaknesses or predisposition to disease should not go to the Philippines, for the climatic conditions will soon develop their weak spots.

The distinguished physician, Don Elias Cony Tres, first surgeon of the military department of the Spanish regime, says:

"The effect of climate on diseases arising from tropical climate are scrofula tendencies, anemia, malaria, inflammation of the kidneys, disease of the digestive canal, asthma, neurasthenia, neuralgia arising from malarial troubles, chronic catarrh of the bladder and urinary channels, nostalgia, hypochondria, and general debility."

The Philippines

(By Prof. Dean C. Worcester, secretary both Philippine commissions, Secretary of Interior, Philippine Islands, 1900–13)

Volume 1, chapter XVI, page 408: Everywhere I saw people dying of curable ailments. Malaria was prevalent; smallpox was regarded as a necessary ailment.

Page 412: When I first visited the islands every member of our party fell ill within a few weeks. All of us suffered intensely with tropical ulcers. Two had malaria; one acute inflammation of the liver, possibly of amoebic origin; and so to the end of the chapter. I myself got so loaded with malaria in Mindoro that it took me 15 years to get rid of it.

Page 419: As a matter of fact, however, it later proved that cholera was endemic in certain regions near Manila, and in 1905 we found ourselves with an epidemic on our hands. At the end of the second week beginning August 23 there had been 137 cases, as compared with 125 for the same period in 1902–04.

Page 420: On February 21, 1906, the epidemic was ended with a total of 283 cases and 243 deaths.

Page 422: I shall not attempt to trace the course of subsequent epidemics, but shall give the deaths by years. In 1908 they numbered 13,811; 1909, 7,306; 1910, 6,940; 1911, 203.

Page 423: I have referred to the fact that the civil government inherited an epidemic of bubonic plague in 1903. This disease caused 147 deaths: in 1904, 48; in 1905, 43.

Page 425: Another great problem now in a fair way to find a solution is the eradication of leprosy. At the outset, church authorities told us there were 30,000 lepers in the islands. In 1905 we began to isolate them. A few hundred true lepers were being humanely cared for in Manila and elsewhere. Many others had been driven from towns into forests and waste places on the larger islands, where they were perishing miserably from fever and other diseases. Still others had been isolated on sand quays, where they were in danger of dying from thirst in the dry season. Not a few wandered at will through the towns, spreading the disease broadcast.

Page 426: Dividing the period immediately subsequent to the American occupation, amoebic dysentery wrought sad havoc among our soldiers and among civil-government employees. This disease then annually cost the lives of a large number of Americans, and a considerable number went home invalids for life as a result of the infection with the parasite. We seemed to hear almost daily of some new case.

Page 428: When we came to the islands, malaria was killing as many persons as smallpox.

Page 430: A peculiar and shockingly disfiguring disease known as yaws occurs somewhat infrequently in the Philippine lowlands, and is prevalent in the highlands. In many ways it resembles syphilis, and indeed at one time was considered syphilitic in origin. Dr. Richard P. Strong, of the Bureau of Science (now at Harvard), made the important discovery that salvarsan is an absolute specific for it.

Haemoglobinuria (Encyclopedia Britannica) Malaria Cachexia

Malaria is due to small protozoa or animal parasites, which pass an asexual stage in man, living and developing in the red blood cells.

There has been an advance in our knowledge of the cause and treatment of blackwater fever (q. v.) or haemoglobinuria, the serious nature of which has called forth many investigations. Some investigators hold that this condition may arise not only in infection with P. falciparium, but occasionally with P. vivax and exceptionally with P. malarie.

(Malaria parasites are of three species: Plasmodium falciparium, P. vivax, and P. malarie, the causal organisms of subtertian, tertian, and quartan fevers, respectively.)

The association of an unknown virus with the malaria parasite has been considered as the cause. (Haemoglobinuria.) Cases have been found after 5 months and others after 40 years; noted its occurrence only in people who had had attacks of malaria, though possibly unrecognized as such at the time. A similar observation made in cases developed on the way home, or after they had left an endemic area even for some time. The finding of other species of parasite, both of which tend more to chronicity, and are readily found in the blood stream, may, when present, be but an indication of a mixed infection.

Diagnosis (Malaria)

In the diagnosis of malaria in endemic localities, the estimate of the inhabitants infected is based on the percentage rate of an enlarged spleen or of a positive blood finding amongst a proportion of the population. For the latter, the examination of a thick and thin film of blood is made. In the absence of the parasite, an estimate of the relative number of large monoculear (endothilial) cells to other white cells in the blood may be made in certain cases, but the evidence obtained is not conclusive. An increase above the basic figure of 15 percent endothilial cells of the total white cells was taken as indication of actual or recent malaria in white men living in the Tropics.

Blood-cell counts made sometime prior and subsequent to the finding of the malarial parasite did not show the presence of a constant relative increase of endothilial, nor was this a constant factor in latent malaria, even when the clinical diagnosis was obvious and the most reliable factor, an enlarged spleen, was present. With regard to the finding of latent malaria, it must be remembered that but a small drop of blood is taken, and that parasites are not easily found except at a period of relapse.

The clinical signs of latent malaria most commonly found are, in the order of frequency, an enlarged spleen, anemia, functional disorders of the heart, and enlarged liver. The tendency to chronicity and febrile relapse in malarial infection is very marked.

Of 28,270 blood examinations at one laboratory in cases of malaria, 777 were found positive, and of these, P. vivax numbered 759, P. falciparium 14, and P. malarie 4. It was rare to find the parasite after the quarterly period of 12 to 14 months. Seven cases were found after 30 months, all with P. vivax, one in a double infection with P. malarie after 39 months, and one after 51 months. In none of these extensive series was the parasite ever found after 5 years at home. Dr. Ross, British Army Medical Corps, has always felt that, to be effective, quinine should be continued in 10-grain doses daily for 3 months after a subject has left a malaria country.

The long-continued treatment of malaria was now proved to be satisfactory and was extended to pensioners (British) also. In one London clinic alone nearly 30,000 pensioners have been treated in this way. The results have been admirable, and probably few who have taken the treatment properly have returned. But the 10 grains of quinine must be taken religiously every day, and it is well to associate this with or follow it by a course of arsenic. Even long courses of treatment will not necessarily cure people who are subject to reinfection during treatment; and it is even possible that they are not so effective during the first 6 months or the first year of infection as they are later.

HAEMOGLOBINURIA

A disease associated with malaria, marked in severe cases by fever, bilious vomiting, tympanites, jaundice, and the passing of dark-colored urine containing hemoglobin; the disease is believed to be of malarial origin, and often appears to be excited by administration of quinine, though this is questionable. After exertion or exposure to cold it is usually paroxysmal in form.

FROM STEDMAN'S MEDICAL DICTIONARY, ELEVENTH REVISED EDITION

Spirochaeta: A genus of family Spirochaetacea, the species of which (in the classification of the Committee of the Society of American Bacteriologists) are slender, nonflagellated, wavy forms, found in fresh or sea water, clean or foul, and on S. daxensis, in the hot spring at Dax. The term is often loosely used to denote any of the group of spiral organisms of the genera Borrelia, Cristispira, Leptospira, Spirocheta, and Treponema, and also some probably "protozoan" forms. S. argentensis, the Strasbourg spirochete, at one time thought to be the pathogenetic organism of disseminated sclerosis. S. balantidis, a species found in balanitis circinati. S. Bronchialis, a species found in the sputum in nontuberculosis bronchitis, or bronchopulmonary spirochetosis, attended by hemoptysis. S. buccalis, a form found in the mouth. S. carteri, Borrelia carteri. S. dentum, a supposedly nonpathogenic found in food collections between the teeth. S. duttoni, Borrelia duttoni. S. forans, a species thought to be the pathogenetic agent in spirochetosis arthritica, or Reiter's disease. Leptospira icterohaemorhagia. S. interrogans, an organism found by Stimson in 1908 in the kidney in a case of yellow fever, and so named by him provisionally; it is possibly the same as Leptospira icteroides of Noguchi. B. kochli, resembling B. duttoni, but differing from it serologically. It is the probable cause of African relapsing fever. B. novye is morphologically similar to Breccurrentis, but differs serologically. It is the cause of North American relapsing fever. B. phagadenae, a species found in the discharge from a phagadenic ulcer. B. recurrentis S. obermierri, the cause of European relapsing fever, transmitted by the bedbug Cimex lectularius. Treponema, one turn, a genus of the family Spirochaetacea, the species of which are rigid or waving forms; some of them are pathogenetic.

T. calliggyrum, a non-pathogenetic organism. T. macrodentum and T. nicrodentum, two mouth organisms, non-pathogenetic, but causing a fetid odor of the breath. T. mircosm, a spiral organism of variable length with six to eight curves, isolated from the tooth roots in pyorrhea aveloris. T. pallidum, the pathogenetic agent of syphilis. T. schaudini, Spirochaeta schaudini, a species found in the pus of tropical ulcers.

Borrelia, a genus of the bacteria of the family Spirochaetacea, the species of which include small corkscrew-like organisms with tapering filamentuous ends. These organisms were formerly and still are by many authorities included in the genus Treponema. B. beri-beri, the cause of relapsing fever occurring in the Arab country, probably transmitted by lice. B. carteri, the cause of relapsing fever in India, and probably other southern countries. It is transmitted by a bedbug. Climax rotundatus. B. duttoni, the cause of African relapsing fever, transmitted by a tick. Ornithodorus Moulata. S. lymphathica, a species asserted to be pathogenetic leucemia. S. mycrogyrata, a form marked by short, sharp turns, found in ulcerating cancer and in feces, regarded by Robertson and Wade as pathogenetic of cancer. S. morsus muris, Spirrilium minus. S. nodosa, an assumed pathogenetic organism of Weil's disease. S. novyi, Borrelia novyi. S. obermeieri, Borrelia recurrentis. S. pallida. Treponema pallidum. S. pallidudula and S. pertenuis (L. very slender). Treponema pertenue. S. plicatis, a very large species, first discovered by Ehrenberg in 1838, is nonparasitic as far as is known. S. recurrentis. S. obermierri. S. refringens, Treponema refringens. S. vincenti, Borrelia vincenti.

Spirochetosis. Any disease caused by a spirochete, such as syphilis, broncho-pulmonary. S. hemorrhagic bronchitis, a bronchitis marked by severe cough and frequent hemorrhages, caused by the presence in large numbers of Spirochaeti bronchialis. Gastritis, grass sickness. S. arthritica, Reiter's disease, a triad of urethritis, conjunctivitis, and arthritis, occurring in the sequence given, not due to the gonococcus but caused by spirochete S. forans.

FROM WEBSTER'S INTERNATIONAL DICTIONARY

Spirochaeta, bacterial. A genus of spirochetes, the type of the Spirochaetacea, having a flexible indulating body with the protoplasm wound spirally around an elastic axis filament. It comprises nonparasitic forms, as S. plicatilis, a free living species of fresh and salt water. Formerly more broadly delimited, the genus included the species now separated (as the pathogens of syphilis, yaws, relapsing fever, and Weil's disease) into the genera Treponema, Borrelia, and Leptospira. Any organism of this genus; loosely any spirochete.

Borrelia, bacterial. A genus of small flexible spirochetes, parasitic upon man and warm-blooded animals, and having three to five large wavy spirals and a terminal filament. B. galinarium causes septicemia in chickens. B. recurrentis, European relapsing fever; and B. duttoni, the relapsing fever of Africa. B. vincenti is associated with Fusiformis dentium in Vincent's angina. Any organism of this genus.

Weil's disease. An acute infectious febrile disease with more or less severe jaundice, caused by spirochete. (Septospira icterohaemorrhagic). Protoplasm exists in many different modifications; ordinarily a thick, viscous fluid, etc., rheticular and alveolar theories.

Railroad Legislation

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting and instructive address recently delivered by the Senator from Montana [Mr. WHEELER] on the subject of railroad legislation. The address discusses a number of problems of great concern to this important industry.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, much of the time of Congress has been devoted to consideration of legislation which deals with the railroads. Some of this legislation has been enacted into law, but some of the most important bills are still pending in committees or in conference.

It is, therefore, proper that, as chairman of the committee to which this railroad legislation has been referred, I call your attention to the character and importance of the railroad measures on which we must take action when next we reconvene.

The importance of legislative relief for the railroads is little understood. Not all of us realize what solving the railroad problem would mean in solving the problem of national recovery. Let me explain:

In the fiscal year 1938 the Federal Government spent approximately two billions for relief. During the same year the loss to the country in lowered railroad pay rolls, railroad purchases, railroad taxes, and distribution to railroad investors amounted to the prodigious sum of more than $3,000,000,000.

Payments for relief are grouped under these three general headings:

F. E. R. A.	$176,252,000
W. P. A.	1,414,709,000
Agricultural Adjustment	314,914,000
A total of	1,905,875,000

Now let us see which of our citizens lost the three billions because of the plight of the railroads and how this loss affected our national welfare. The comparisons I am about to give you are based upon the year 1926, which is considered the normal or average year by railroad authorities.

In that year 1,779,000 employees were employed by the railroads. They received in wages $2,946,000,000. In 1938, 840,000 employees had been dismissed, and the 939,000 who were employed received a total wage of $1,746,000,000. Here is a loss of $1,200,000,000 in annual wage payments to rail employees.

Railroad men are highly trained—engineers, firemen, conductors, trainmen, shopmen, dispatchers, agents and operators, auditors, clerks, maintenance men—all these are highly skilled, specially trained men. It is needless to point out the hardship and suffering which resulted from this stupendous unemployment among these men who have chosen railroading as a career, with its far-reaching economic effects and social consequences.

Railroad purchases declined $1,541,000,000 in the year 1938 as compared with 1926. Thus the depressed earnings of the railroads produced widespread unemployment in the factories, mines, and lumber camps of the Nation, and its effects were felt upon our farms and far-flung ranges.

Because earnings were lower, and because 10,000 miles of railroad had been abandoned and torn up since 1926, the railroads are making smaller tax contributions to government than they did then.

To State and local subdivisions of government the railroads paid $61,000,000 less taxes in 1938 than they did in 1926. To the Federal Government they paid $86,000,000 less.

But even at that, they are paying in taxes one-half of their entire net earnings. To put it another way, for every dollar which goes to railroad workers in wages, 20 cents goes to the tax collector—local, State, and National. The $147,000,000 reduction in railroad taxes left a gap of $147,000,000 in the tax income which goes to operate our governments and support our public institutions—a gap which had to be filled by home owners and other business interests in this country.

Lower railroad earnings reduced interest and dividend payments to railroad investors by more than $420,000,000 a year.

In fact, many railroads were unable to pay any interest on their bonds. Their operating expenses and taxes exceeded their revenues. Of the interest which fell due in 1938, more than $100,000,000 remained unpaid. Since 1931 the amount of interest due and unpaid has reached the alarming total of more than $600,000,000.

The railroads of our country are owned directly by 2,000,000 individuals, and indirectly by 64,000,000 holders of life-insurance policies, 44,000,000 depositors in mutual and other savings banks, and by colleges, hospitals, foundations, and industrial and financial corporations whose stock in turn is held by many other thousands of our citizens. Life-insurance companies, mutual savings banks, colleges, and similar public institutions own 56 percent of all outstanding railroad bonds.

Thus, you see the far-reaching effects of the present railroad situation and the deep public interest in legislation which will assist in their recovery.

THE LENDING-SPENDING BILL

There was submitted to this Congress a plan of recovery which contemplated the lending of Federal funds, over a period of years, in the sum of $2,860,000,000. This was the lending-spending bill. We were told that through these loans, business and employment would be stimulated, idle factories, mines, and camps would resume their normal operations, and the necessity for huge Government appropriations for relief would end.

Yet in the single year of 1938, the plight of the railroads reduced the flow of money by more than would have been added through the entire lending-spending program if it had been enacted into law.

Why should we lend to spend, if the spending can be achieved without lending? Why should we prime our economic pump and ignore a leak, through which double the amount of pump priming water escapes? Surely the condition of the National Treasury—the size of the Federal debt—the taxes which our Government imposes upon our citizens, should give us grave concern.

The time has come when every Senator, every Representative, every Federal commission and agency, every Government official, clerk, or other employee should so encourage honest private enterprise that Government spending, pump priming, Federal loans, and other expedients or panaceas may be unnecessary. I said honest business—the great majority of businessmen are honest. The chiseler—the dishonest businessman hurts the honest business—he destroys confidence in government, in business, and in democracy.

If through the encouragement of honest, sound, clean business, we can rehabilitate the normal economic processes of the Nation, there will be no depression. Unemployment will vanish—the standard of living will rise, our citizens will prosper and the huge debts which we have incurred can be liquidated.

The workers of the country want jobs, not charity, farmers want markets, not subsidies. Business wants opportunity, not loans. That is the American way—that is the way America became great. No field offers such opportunities to contribute national recovery as does sound restoration of railroad earnings.

There are many phases of the railroad problem, and many solutions have been suggested. However, there is one outstanding element, which overshadows all other considerations. That element is equality in conditions under which our various modes of transportation compete. This was well put by Dr. Balthasar Meyer, who has devoted a lifetime to study and regulation of the railroads. Beginning in 1905 as a member of the Wisconsin Railroad Commission, Dr. Meyer concluded 28 years of service on the Interstate Commerce Commission only a few months ago. In retiring from this important body, Mr. Meyer said:

"All the railroads in the country might be reorganized, consolidations might be accelerated, coordinations might be hastened, pooling might be greatly extended, bankers who are thought to exercise undesirable influence might withdraw, holding companies might be eliminated from the railroad field, financial irregularities might be suppressed, railroad executives might forego their salaries, the fourth section might be repealed, every train might be streamlined, and a host of other things done, yet all of these things put together alone will not put the railroads in a position to maintain their properties and earn a profit. They are distinctly secondary considerations, many are even minor or negligible, compared with the decisive factor of equality in competition. Equality is the keystone which holds the arch. I believe equality would enable the railroads to secure a larger proportion of the transportable freight than they are now getting. Complete economic recovery for the country as a whole would not profit the railroads unless they could get their fair share of the increased tonnage which recovery is expected to produce."

It will be well for us to search for the reason for inequalities which exist. The basic reason is the lack of a transportation policy.

This lack of a considered national transportation policy has been emphasized over and over again by Government officials and others during the past few years. The President of the United States, in a special message to Congress in 1935 dealing with the transportation problem, said:

"It is high time to deal with the Nation's transportation as a single, unified problem."

Our agencies of transport have developed independently, and without the benefit of any coordinated plan on the part of Federal or local governments, with the result that there is not today a definitely formulated national policy designed to regulate and deal with them as an integrated whole.

SENATE BILL 2009

There was presented to the Senate an omnibus railroad measure which is the result of 4½ years of intensive study by those Senators with whom I have been associated in this enterprise. I refer to Senate bill 2009. There are many phases and provisions of this measure, but its basic purpose is to secure equality in regulation, which will assure to each agency of transport its place in the transportation sun. To that end, S. 2009 carries a declaration of national transportation policy, designed to provide fair and impartial regulation of all modes of transportation, so administered as to recognize and preserve the inherent advantages of each. The goal is to develop, coordinate, and integrate such a national transportation system as will be adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense.

This measure has passed the Senate, and in different form by the House. A conference committee has been appointed, which during the recess will attempt to harmonize the two drafts, and on January 2 present to this Congress a workable measure which will be beneficial alike to the railroads, the holders of their securities, the employees, the shipping and traveling public, and will, we are sure, have an important effect upon national recovery.

REORGANIZATIONS

Any consideration of the railroad situation cannot eliminate the matter of railroad reorganizations. One-third of railroad mileage is being operated by the courts, and a substantial portion of the remaining mileage is threatened with bankruptcy. In 1933 we adopted section 77 of the Bankruptcy Act, on the assurance of its sponsors that it provided a quick and inexpensive method for reorganizing railroads. Since that date, many of the most important lines in the country have attempted to reorganize their financial affairs under its provision, but Mr. President, not a single important railroad has yet emerged from the court procedure which we were induced to provide at that time. Important amendments to this act were made in 1935 and 1936, on the assurance of the sponsors that they would expedite these proceedings, but these amendments likewise have failed to achieve that result. One of the most alarming features of the present procedure is the stupendous cost to the holders of railroad securities. These individuals and institutions have suffered so severely from low railroad earnings that they must not be subjected to further prodigious loss occasioned by the expensive, elaborate, time-consuming procedure which has been provided.

SENATE BILL 1869

For this reason, we have taken the matter in our own hands, and have passed Senate bill 1869, aimed to correct, at least in part, some of the defects in the present law. That bill is still pending before the House, and its outcome is somewhat uncertain.

THE CHANDLER BILL

Because of the pressing necessity of immediate relief the Senate and House enacted the so-called Chandler bill (H. R. 5407), which provides a short method for reorganization of those carriers which are not now in bankruptcy or receivership. It is, in a sense, a laboratory experiment, as it expires on July 31, 1940. It was with some reluctance that my associates and I recommended the passage of this bill to the Senate, but we could not refuse to join in any sincere effort to improve the present unsatisfactory method of reorganization. We insisted on certain safeguards or standards, however, whereby a road which is reorganized under the provisions of this statute will have a sound capital structure, and be able to discharge its public duties in an effective manner. The House conferees concurred in these safeguards, which are:

That such plan of adjustment, after due consideration of the probable prospective earnings of the property in the light of its earnings experience and of such changes as may reasonably be expected—

(i) is in the public interest and in the best interests of each class of creditors and stockholders;

(ii) is feasible, financially advisable, and not likely to be followed by the insolvency of said corporation, or need of financial reorganization or adjustment;

(iii) does not provide for fixed charges in an amount in excess of what will be adequately covered by the probable earnings available for the payment thereof;

(iv) leaves adequate means for such future financing as may be requisite;

(v) is consistent with adequate maintenance of the property; and

(vi) is consistent with the proper performance by such railroad corporation of service to the public as a common carrier, will not impair its ability to perform such service.

The inherent weakness of the Chandler bill is the fact that it does not shrink the debt structure of the railroad. The capitalization of the railroad remains unchanged, and probably in most cases, there will be little or no alteration in the size of its debts.

R. F. C. LOANS FOR BOND PURCHASES

There is, however, a proposal which has been recommended by the Honorable Jesse H. Jones, chairman of the Reconstruction Finance Corporation, whereby that agency will be empowered to make loans to a railroad with which to purchase its own obliga-

tions in the open market at a discount. The obligations of many railroads which are earning a substantial portion of their fixed charges are now selling on the market as low as 25 cents on the dollar. If these obligations could be purchased at anything like present market quotations, the affected railroads would so reduce their debts that fixed charges would be earned, under even present depressed conditions.

If Congress favorably considers this proposal, it must completely safeguard the loans against any possible loss to the Federal Government, and provide further that no improper speculative practices shall be permitted in the purchase of bonds from the proceeds of an R. F. C. loan. Congress must see to it that small railroad investors who are not familiar with market operations, and whose savings have already been depleted by the present condition of the railroads, are permitted to enjoy in full the benefits which will accrue from the enactment of such legislation.

IMPORTANCE OF TRANSPORTATION

The transportation industry as a whole furnishes the lifeblood to the flow of commerce in the United States. This it does because of the economic importance of transportation as one of the steps in production and distribution, and because the several agencies of transport combined—railroads, motor carriers, water carriers, and other agencies—employ several million men, furnish employment to other millions through their purchase of supplies, pay taxes, and place billions of dollars into circulation each year.

Railroads are the largest agency of transport, stand at the heart of the transportation industry, and are generally recognized as supplying the backbone of the industry and its service. Their outstanding position as carriers of freight from and to all parts of the United States, on a Nation-wide basis and at all times of the year, makes their present low financial situation a matter of concern to every citizen.

Acceptance Address by Vice President Garner at Philadelphia, June 27, 1936

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. JOHN N. GARNER

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech of acceptance of our able and distinguished Presiding Officer, delivered at Franklin Field, Philadelphia, on June 27, 1936.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, friends, my words shall be as few as they shall be fervent and sincere. I am a soldier, and my duty is to follow where the commander leads. I accept the rules of war as laid down in the platform.

I am not insensible of the high honor which has been conferred upon me. This confidence which my fellow countrymen have reposed in me I accept as a solemn trust. And I am not unmindful of the responsibility which goes with that trust.

I gladly accept the nomination for the Vice Presidency now tendered to me for the second time. The sense of personal satisfaction in this honor is enhanced and heightened by the thought that I am again to be on the ticket with Franklin Delano Roosevelt.

I shall stand with him in the months ahead as I stood with him before the voters of this country in 1932—as I have stood, in sharing with him since March 4, 1933, the obligations and duties and responsibilities which the Constitution imposes.

Franklin Delano Roosevelt is my leader, my commander in chief. In this presence, before this multitude, and with the stars of heaven to bear witness to my covenant, I renew the pledge of fealty I gave 4 years ago.

In Franklin Delano Roosevelt the hopes of a Nation have been reborn. Despair has given place to confidence. Despondency and gloom have made way for happiness. Laughter again is heard in the land.

We are now, as it were, midway in our course. Great as are the things which have been accomplished to bring order out of chaos in which we found the country in March 1933 much remains to be done.

There must be no return to old conceptions denominated as the old deal. And what do we mean by the old deal? We mean a political system which fosters an economic order giving special privilege to a few favored ones through the sacrifices of the many. By the New Deal we mean simply an adaptation of the laws of the country so that the greatest good will come to the greatest number—the protection of the rights of that vast majority of our populace, men, women, and children—to whom the old deal meant want, hardship, despair, and degradation.

Our people have not forgotten the wretchedness to which these sins of omission and commission of 12 years of old deal had plunged the country when the New Deal was ushered in on a March day in 1933. But the dawn of a new day was at hand. The time for a change had come. The country welcomed a new leader. And I cheerfully bear witness here and now to the loyal support of New Deal measures and principles accorded in Congress by certain of our friends of the opposition. With voice and vote many brethren of Republican persuasion have shown how they could, in time of national peril, rise above partisanship and heed the call for help of a stricken country.

We still ask for the support of all those who believe as we do that the function of government is to protect the many from the selfishness of the few, to guarantee to all the means of livelihood and participation in the things that make life good and noble and worth the living.

That is our platform. Upon that platform I stand and I am proud to stand with our leader—a leader who has never faltered in his course and never once lost faith that in the sovereign will of the American people rests true wisdom in government and the way to security, peace, and happiness.

In that faith I put my trust. In that faith I pledge anew my allegiance to Franklin Delano Roosevelt.

Modernization of Railroad Equipment

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ARTICLE BY GEORGE H. PEDERSEN

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain pertinent excerpts from an article by Mr. George H. Pedersen on the subject of the modernization of railroad equipment, which it seems to me should be of great interest to the Senate.

For more than 16 years Mr. Pedersen has been general chairman of the machinists' organization on one of the great railroads of the Northwest, and for the past 3 years he has served as chairman of the General Chairmen's Association, which is made up of representatives from all the standard railroad labor organizations of that railroad.

The article, although written last year, points out in a very convincing fashion the potentialities of a program to modernize railway equipment both as to better and cheaper transportation and as a stimulus to American industry.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

A LONG-TERM PROGRAM THAT WILL RESTORE THE RAILROADS OF THE UNITED STATES TO A SELF-SUPPORTING AND SOUND FINANCIAL BASIS

For several years we have heard the argument advanced that unfair competition is responsible for the financial difficulties of the railroads of today, which leads one to believe that there is no opportunity for further development and greater service by the railroads in the interest of the public welfare. After many years of personal contact with the building and maintaining of locomotives and cars, both passenger and freight, I am fully convinced that there is a bright future in store for the railroads of the United States, if they will follow the example of the automobile industry by modernizing all their equipment and facilities.

We have in the United States millions of workers who are compelled to work for $10, $12, and $15 per week. No one will deny that these workers and their families have the desire and would appreciate an opportunity to travel just as much as those who are more fortunate and who can now afford to travel. This large group cannot afford to own automobiles or travel by bus or train at the present cost of transportation. However, if modern high-class transportation is made available to this group at a very low cost, they will constitute an entirely new and enormous source of business and revenue for the railroads.

Now that we build cars and locomotives at a cost that will make it possible for the railroads to furnish passenger service

for 1½ cents per mile and possibly less, this will afford millions of additional people an opportunity to travel which in turn will stimulate business generally.

If the manufacture of this equipment can be put on an annual and national basis, there is no good reason why both locomotives and cars cannot be produced at a price that will make it possible to render this high-class service to the public for 1 cent per mile and still leave a profit for the railroads. By using certain lighter metals and materials the weight of the new cars on one railroad was reduced to 93,600 pounds per car, as compared to 140,000 pounds, which is the average weight of the old cars. It must not be overlocked that in reducing the weight of these cars in place of sacrificing any of their strength and carrying capacity, their strength as well as their carrying capacity was increased. It is also important that everyone should know that the reduction of weight of these cars has made it possible to reduce the cost of manufacturing them to such an extent that we can now build three of these new cars for what it would cost the railroad to build two of the old ones. A similar saving has been and can be realized in the building of all types of freight-car equipment.

This railroad built more than 1,000 gondola freight cars last year and by using lighter metals and materials the weight of these cars was reduced 7,400 pounds per car without sacrificing any of their strength or carrying capacity.

During the years 1934 to 1938 inclusive, this railroad has built passenger and freight-car equipment in their own shops at Milwaukee, which, if purchased, would have cost them $18,000,000. They are now building new passenger cars of the most modern streamlined type. The trucks under these cars will be equipped with hydraulic shock absorbers, the construction of which is similar to the shock absorbers used in the highest-priced automobiles. The center casting of the truck which supports the entire weight of the body of the car is lined with rubber 1½ inches thick. All parts of the truck, where there is any possibility of friction from the wheels transmitting the noise to the interior of the car, are also lined with rubber.

The cost of fuel, labor, and material in furnishing locomotive power for this equipment has been reduced to such an extent, because of the reduction in the weight of the cars, that they can now haul a 12-car passenger train, where formerly the same locomotive could only haul an 8-car train.

The railroads buy over 100,000 different commodities, therefore, any increase in railroad travel will help all lines of business, including the durable heavy-goods industries, which are sorely in need of revival. The railroads are a widely distributed industry reaching practically every county in the United States, and therefore every community will benefit when we improve our transportation system.

If an additional $2,000,000,000 a year were spent for the next 5 years on railroad equipment, roadbeds, etc., a vast amount of ore, coal, timber, and all other raw materials would be required and in order to get these materials from the mines and the forests to the saw mills, steel mills, smelters, etc., it will require a tremendous amount of transportation. Thousands of workers will be needed to make patterns and dies and to build new machinery for this new equipment, as the car-building manufacturing plants have practically been shut down since 1929 and most all of their patterns, dies, and machinery are obsolete and must be replaced before they can go into production of up-to-date equipment.

Another very important factor is the training of skilled workers required to perform this highly skilled work. It is nothing short of a national calamity to continue allowing the finest mechanics, and other types of highly skilled and trained workers as well as professional men, in the prime of their lives, to remain idle and be forced to accept the basis of actual need, through relief, when they are so badly needed in taking care of replacement requirements in all industries.

It is obvious that relief in itself will never restore prosperity and it is a certainty that it will never be the means of developing our natural resources which can and should be developed so that all of our people can enjoy a high standard of living.

The cure for unemployment is more employment, and the cure for poor business is more business. As long as we have millions of our people whose very needs are not satisfied, then there is no logic in the argument we hear that there is a shortage of work to be done. Many people overlook the fact that the real wealth of their community and our Nation is the wealth-creating ability of our common, skilled, and professional labor. To allow this great source of wealth to remain dormant is a national waste. The right of every individual to apply his labor to the natural resources for the purpose of supporting himself and family is a sacred right which no one should be deprived of.

In order to put a program of this kind into effect, it is obvious that it will require a considerable sum of new capital. This should please the insurance companies, trust companies, and the bankers who, like everyone else, are suffering because there is a shortage of expansion in business which causes their money to remain idle.

If sufficient money is not available through the banks and insurance companies, then our Federal Government should provide this capital through the Reconstruction Finance Corporation at not more than 3 percent interest. It is important that this money be loaned to the railroads at the lowest rate of interest possible so that the public can have these modern, high-class transportation facilities at a price which will make it available to all.

As a protection to our Government for the money advanced to the railroads, the Government should accept first-mortgage equipment bonds on the new equipment; the principal and interest to be refunded to the Government in installments. The first installment on the new equipment can be obtained from the scrap value of the old equipment. The remaining installments can probably be paid out of equipment depreciation fund which all railroads must accumulate in accordance with Interstate Commerce Commission regulations.

Most railroads have been unable to finance the replacement of worn-out equipment, especially since 1929, and therefore are from 20 to 25 percent short of their requirements of freight cars and other equipment to take care of their peak-load business during a normal year. (In 1929 the Milwaukee Road had 74,000 freight cars; now they only have 58,000 freight cars.) This great shortage of equipment, together with the normal annual replacement requirements, should provide annual and steady employment for approximately 500,000 additional railroad employees.

It must not be overlooked that there will be three employees given employment in the durable and heavy goods industries for each additional employee given employment by the railroads, or approximately 1,500,000 persons.

The railroads, in addition to being a great public servant and also the arteries of the Nation's business, are a very important factor in our national defense. Just imagine the colossal mistake it would be to allow our railroads to deteriorate to such an extent that we could not transport our implements of war, food, clothing, and supplies, to back up our soldiers if we are attacked on the Pacific coast with a large part of our national land defense stationed on the Atlantic coast, 3,000 miles away. We must look to our railroads for quick transportation of the heavy equipment and supplies which are indispensable to our national defense. When all patriotic citizens realize the importance of our railroads in the protection and security of their homes and loved ones, they will approve the expenditure of money necessary to put this program over.

While, of course, improving our national defenses, the expenditure of this money will also be an important factor in relieving unemployment. It has been proven that it requires three workers in industry to supply the coal, oil, steel, lumber, and all other commodities necessary to keep one railroad employee advantageously employed.

In discussing this program with some of the best informed railroad officials, they agree that the replacement requirements and the expansion in business which will result from this program will provide many years of uninterrupted prosperity.

Because of the speeding up of both passenger and freight train service, it must be clear to everyone that, in addition to the many economies and desirable features of this modern equipment, as illustrated above, we can add almost 100 percent more efficiency and saving in the cost of operation because each unit of this new equipment will render 100 percent more service than the old, obsolete equipment. This is due to the fact that the new equipment is speeded up to such an extent that it will make two complete round trips while the old equipment is only making one round trip. The saving business and the public in general will realize from the time saved in transportation of passengers and freight must not be overlooked, as it represents a tremendous amount of money in interest on capital invested in commodities which are transported daily by the railroads of this country.

For the past 32 years the writer of this article has served in the capacity of mechanic, also supervisor, and for the past 16½ years has served as general chairman of the machinists' organization, and during the past 3 years has also served as chairman of the General Chairmen's Association, comprising all the standard railroad labor organizations on the Milwaukee road.

GEO. H. PEDERSEN.

MILWAUKEE, WIS., *September 1, 1938.*

Important Shifts in Constitutional Doctrines

EXTENSION OF REMARKS
OF
HON. WARREN R. AUSTIN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. FRANK J. HOGAN

Mr. AUSTIN. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Frank J. Hogan as retiring president of the American Bar Association, at its sixty-second annual meeting in San Francisco on July 10, 1939, entitled "Important Shifts in Constitutional Doctrines."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The October 1938 term of the Supreme Court of the United States ended 1 month and 5 days ago. That term will undoubtedly rank as one of the most momentous in the history of the Court. During it, to borrow the language of Mr. Justice Frankfurter in one of his concurring opinions, important shifts in constitutional doctrines were "announced after a reconstruction in the membership of the Court."[1] It is my purpose to here discuss some of those shifts.

My subject is controversial. But it is not to be avoided for that reason. The views I am about to express are my own, and should not be attributed to the association. Believing fervently in liberty of thought and freedom of speech, demanding these as of right, and conceding—yes, insisting—that every person in our land is equally entitled to that right, I submit my views on what I consider a timely subject. But I do so in fullest recognition that many honestly differ from my opinion and I candidly admit that I may be mistaken and they may be right.

If it be, as an able commentator lately said, that "Recent decisions create an apprehension that the Supreme Court may be surrendering its functions of checking the arbitrary power of the executive and the legislative branches of the Government," then it is of vital importance to America's people to know what that surrender means. Americans venerate their judiciary. And that is as it should be. For from the beginning of our government of laws and not of men, the courts—State and Federal—have been the bulwark of liberty and our judges have been, and are, able, impartial, fearless, and honest men. The very rarity of judicial wrongdoing should emphasize the truth of that statement and repel the thought that a few, a very few, unworthies in a period measured by centuries, justify attacks on judges.

I deal today solely with principles. If it be true, as I believe it to be, that some recent far-reaching decisions compel the conclusion that the American people must look to the legislature rather than the judiciary for the preservation of those liberties which can be preserved only by the observance of limitations upon the exercise of power, then certainly the people should have knowledge of that fact. If, as I believe, in place of judicially enforceable constitutional limitations, we now have only self-imposed restraint upon plenary legislative power, that fact should be brought home to those who alone can protect themselves from the ruthless exercise of such power.

These are the considerations which led to the adoption of my subject and dictate my treatment of it.

During the last two terms of the Supreme Court of the United States there were several "important shifts in constitutional doctrines."

Again and again the Court turned aside from what had long been looked on as established principles of constitutional law which, to use the Court's own reiterated phrase, had been "settled by repeated decisions of this Court." And there was no subtlety about it. Narrow distinctions were not sought; former decisions were not merely silently ignored; cases which had "settled constitutional doctrines" were given direct treatment. Established principles which we had come to regard as part of the warp and woof of the Nation's fundamental law were liquidated so effectively that, as the Court said, they "cannot survive."[2]

As one member of the Court put it, there took place "a reversal of a long current of decisions."[3] Two others pointed out that "a century of precedents" were overruled.[4] Upon the graves of old constitutional doctrines new ones were erected—monumentlike in present appearance, but, if history repeats itself, of doubtful durability. And history may repeat itself, for Mr. Justice Frankfurter tells us that in the Supreme Court "dissents have gradually become majority opinions."[5] Granting that, and recognizing that many of the historic dissents of Holmes and Brandeis have now been transferred from the minority to the majority side of the Court, the day must come when the future chroniclers of our judicial history, in according unstinted praise to the rugged sturdiness of McReynolds and Butler, shown in their courageous efforts to preserve landmark after landmark of the law, will likewise record that their ringing dissents in this day became rules of decision in a later generation.

It is no exaggeration to say that, in several instances, what were frankly termed "important shifts in constitutional doctrines" were in fact the most devastating destruction of constitutional limitations upon Federal power, and the most unprecedented expansion of that power over the everyday affairs of individual citizens witnessed in the century and a half of the existence of the United States.

I

Alexander Hamilton, observing "that the judiciary is beyond comparison the weakest of the three departments of power," added that "The complete independence of the courts of justice is peculiarly essential in a limited constitution," by which, he explained, he meant "one which contains certain specified exceptions to the legislative authority."

For seven more than three score and ten years, it was considered "settled" that the express constitutional prohibition against diminishing the compensation of United States judges could no more be violated indirectly than it could be violated directly. Article III, section 1, of the Constitution declares:

"The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall, at stated times, receive for their services a compensation, which shall not be diminished during their continuance in office."

From Civil War days to 1939 it had been held that this provision precluded taxation of the salaries of judges. In his authoritative work on the Constitution of the United States, published in 1889, Mr. Justice Miller, speaking of the taxing power of the Federal Government, pointed out that the Constitution placed several limitations upon that power, some of them being implied. And referring to article III, section 1, the distinguished author said: "It is very clear that when Congress * * * levied an income tax, and placed it as well upon the salaries of * * * the judges of the courts as those of other people, that it was a diminution of them to just that extent."

Hamilton, in pleading for the adoption of the Constitution in the Federalist, justified the provision I have quoted, by saying:

"Next to permanency in office, nothing can contribute more to the independence of the judges than a fixed provision for their support. * * * In the general course of human nature a power over a man's subsistence amounts to a power over his will; and we can never hope to see realized in practice the complete separation of the judicial from the legislative power, in any system which leaves the former dependent for pecuniary resources on the occasional grants of the latter."[6]

The first attempt to tax the compensation of Federal judges was made in 1862. A statute imposing a tax of 3 percent on the salaries of civil officers of the Government was construed by the revenue officers to apply to the compensation of judges. Chief Justice Taney, in a letter of protest to the Secretary of the Treasury, expressed the opinion that the tax would diminish the compensation of every judge 3 percent, and that "if it can be diminished to that extent by the name of a tax, it may in the same way be reduced from time to time at the pleasure of the legislature."

Expressing the view that because all of the judges of the courts of the United States have an interest in the question, it could not be decided in a judicial proceeding without raising questions of propriety, the Chief Justice, referring to section 2 of article III, said that "language could not be more plain than that used in the Constitution," adding that moreover it is "one of its most important and essential provisions."[7]

Attorney General Ebenezer Rockwood Hoar, to whom the question was referred by the Secretary of the Treasury, agreed with the Chief Justice. In his opinion the Attorney General said that a tax upon the salary of an officer is "a diminution of the compensation" paid him.[8]

Acting upon the advice of the Attorney General, the Secretary of the Treasury, in administering the statute, thereafter exempted the salaries of Federal judges.

In the celebrated case of *Pollock* v. *Farmers Loan & Trust Co.*, Mr. Justice Field, construing one of the sections of the Income Tax Act of 1894 as including the compensation of the judges, assigned that ground, among others, for joining in the decision that the act was unconstitutional.[9] Upon the reargument of that case, Attorney General Richard Olney, disclaiming that construction, said in his brief, "There has never been a doubt since the opinion of Attorney General Hoar that the salaries of the President and judges were exempt" from taxation by Congress.

The legislature acquiesced in this construction of the Constitution in exempting the salaries of judges in the enactment of the first two Income Tax Acts following the adoption of the sixteenth amendment. But when there arose great need for revenue after this country engaged in the World War, the Revenue Act of 1918 defined gross income to include "in the case of the President * * * (and) the judges of the Supreme and inferior courts * * * the compensation received as such."[10] The reports of the congressional committees having the measure in charge indicate that the Congress was in doubt as to the constitutional validity of that provision and intended to have the question decided by the courts.[11] The question was raised and in two cases, decided in 1920 and 1925, the Supreme Court held that the taxation of the official salaries of Federal judges was unconstitutional.[12] These decisions were struck down less than 2 months ago.[13]

The student of our constitutional history will read that our highest court held that—

[13] *O'Malley* v. *Woodrough* (83 Adv. Op. 850 (May 22, 1939)).

"The power of Congress definitely to fix the compensation to be received at stated intervals by judges thereafter appointed is clear. It is equally clear, we think, that there is no power to tax a judge of a court of the United States on account of the salary prescribed for him by law." [14]

But the same student will find that the same Court at another time held that Congress clearly has the power to impose income taxes on the salaries of Federal judges, and that such taxes do not diminish those salaries "within the prohibition of article III, section 1, of the Constitution." [15]

Puzzled, that student, still studying Supreme Court decisions, will there read the solemn declaration that "as this Court repeatedly has held, the power to tax carries with it 'the power to embarrass and destroy.'" [16] But, if industrious, he will later find in another opinion the statement that "The power to tax is not the power to destroy while this Court sits." [17]

Continuing further, our student will find that the Nation's highest judicial tribunal held that it is "morally certain that the discerning statesmen who framed the Constitution and were so sedulously bent on securing the independence of the judiciary intended to protect the compensation of the judges from assault and diminution in the name or form of a tax." [18]

If he still persists, this seeker after knowledge will read, in another decision of the same Court, that "to suggest" that an income tax on their judicial salaries "makes inroads upon the independence of judges * * * is to trivialize the great historic experience on which the farmers based the safeguards of article III, section 1." [19]

Finding the Supreme Court thus arrayed against the Supreme Court, inevitably the unfortunate student will suffer intense bewilderment.

Time and time again, the independence of the judiciary has been given practical effect in holding judicial compensation immune from taxation at the hands of the legislature. Taney espoused the principle in his celebrated letter to the Secretary of the Treasury. The executive and legislative departments for more than two-thirds of a century acquiesced in the soundness of that principle. The Court expressly declared it. It had become deeply imbedded in our constitutional law. A decision of 1939 sweeps it away as trivial.

Less than 2 months before the Supreme Court decided that a tax on the compensation of judges is constitutional the Court of Appeals of Maryland expressly held that a State tax on the salaries of State judges did diminish their judicial compensation and was unconstitutional.[20] The highest court of Maryland held that the provision of the State constitution, similar to that of the Federal Constitution, would afford a judge no "adequate guarantee" of "preservation of his independent position" as part of the judiciary if the legislature "may impose an income tax upon his net income, from which his salary may not be excluded." Thus did Maryland's highest court "trivialize." "If," continued the Maryland court, "under the guise of an income tax, the salary may be taxed as income, the present rate may be increased to any percentage the legislature wills. The right of the sovereignty to tax is a power to consume and to destroy." Manifestly the great court of the Free State did not agree with Justice Frankfurter that Marshall's famous phrase, "The power to tax involves the power to destroy," was nothing more than "a flourish of rhetoric" which had been "brushed away by one stroke of Mr. Justice Holmes' pen." [21]

Likewise the Supreme Court of North Carolina has held that the provision of the North Carolina Constitution, exactly the same as that of the Federal Constitution, "should extend to indirect as well as direct legislation," and that if the legislature "has the power to impose a tax of 1 percent on the official salary of a judicial officer, upon the same principle it could lay a duty which would cripple, if not completely paralyze, the whole system of the administration of justice in State tribunals." And the court concluded that "the improbability of the nonexercise of the power does not affect the principles." [22]

No great amount of consternation can be stirred up by dwelling upon the fact that judges have been held to be subject to a general tax to which their fellow citizens not in judicial office are subject. But obviously to the question, "Why should they not be subjected to such a tax? is the answer "Because the Constitution so provides." And the Constitution so provides for a reason far more important to the people of America than is the increase in the revenue which taxes on judges' salaries will yield. The Constitution itself put judges in a separate class, declaring that at stated times they shall receive for their services compensation which shall not be diminished. And so their salaries are distinguished from income of others. This was but one of the safeguards intended to insure that independence of the judiciary which is so vitally essential to our system of government. The forbidden diminishing is not the least less effective because accomplished by an indirect rather than a direct method. The Supreme Court of the United States has now said that the Congress can do by indirection what the Constitution says shall not be done at all.

However, the political will presently reacts to this "shift," I entertain no doubt that it furnishes cause for serious concern to those of us who have been nurtured in the tradition that there is nothing so important, so essential, and so fine in our governmental system as a completely independent judicial department.

II

Chief among the implied limitations upon the general power of taxation were those on which was long foundationed the doctrine of inter-governmental immunity. After more than a century of recognition by statesmen and jurists, this doctrine was greatly impaired during the last two terms of the National Supreme Court, and, so far as State immunity is concerned, it is apparently marked for destruction.

It is trite to say, particularly to American lawyers, that State sovereignty is a constitutional limitation on the exercise of Federal power. It is a fundamental aspect of our dual form of government. When the Constitution was being considered it was manifest that the States were unwilling to surrender their sovereignty. They felt the need of a government stronger than the Confederation in certain fields of governmental action affecting the States generally, but they refused to delegate to a strong central government unrestrained control over their local affairs. They viewed with distrust and suspicion the document which was submitted to them in 1787, and refused to ratify it until assured that it did not involve abdication of their sovereignty. The tenth amendment was adopted in fulfillment of that assurance.

A new nation was created—a nation which is itself sovereign but which is, nevertheless, composed of sovereign States. A new Government was organized—a Government of enumerated powers, a Government prohibited from exercising powers other than those enumerated. The Constitution provided for this dual sovereignty. In recognition of it, early in our history it was held, first, that no State could constitutionally impose a tax upon a Government instrumentality of the United States; second, that no State could constitutionally tax the emoluments of any office of the Government of the United States; and this was—and very recently—extended to salaries of officers and employees of any and all instrumentalities utilized to perform any governmental function; third, that the Government of the United States was—and I emphasize "was"—equally powerless to tax a sovereign State, its instrumentalities for governmental activities, or the salaries of its, or their, officers or employees.

Gone is that doctrine so far, first, as it prohibited the States from taxing the official compensation of any Federal officer or employee residing within their territorial limits; or second, as it prohibits the Federal Government from taxing the official salary of any and every State officer—from Governor and members of the legislature to State House janitor; from chief justice to bailiff. In this legal field we have been a Nation of Rip Van Winkles, newly awakened to learn "that the United States has always had the power to tax salaries of State officers and employees and that similarly free have been the States to tax salaries of officers and employees of the United States." [23]

The doctrine that there is an implied limitation on the power of either a State or the National Government to tax the other, or its instrumentalities, stems from *McCulloch* v. *Maryland*.[24] And until 1938 that doctrine was construed to deprive either government power to tax the official salaries of officers and employees of the other.

In 1842 the Supreme Court held that where taxation by a State acts upon the emoluments of an office used by the United States as a means to execute their sovereign power, such taxation is beyond the constitutional power of the State. Taxation, said the Court, is a right "essential to the existence of government; an incident of sovereignty. * * * But in our system there are limitations upon that right." One of these limitations comes into operation, the Court continued, "when taxation by a State acts upon the instruments, emoluments, and persons which the United States may use and employ as necessary and proper means to execute their sovereign powers. * * *

"The compensation of an officer of the United States is fixed by a law made by Congress. * * * Does not a tax then by a State upon the office, diminishing the recompense, conflict with the law of the United States, which secures it to the officer in its entireness? It certainly has such an effect," concluded the Court, "and any law of a State imposing such a tax cannot be constitutional." That was the decision in *Dobbins* v. *The Commissioners of Erie County*,[25] and the tax involved was on the salary of a captain of a United State revenue cutter.

That there was no distinction in this respect in the taxing powers of the two sovereignties was made clear by the Supreme Court in 1871, in *Collector* v. *Day*,[26] a case which, as the Court put it, presented "the question whether or not it is competent for Congress, under the Constitution of the United States, to impose a tax upon the salary of a judicial officer of a State," and in which it held

explicitly that it was not within the constitutional power of the Congress to impose such a tax.

We find in the opinion in *Collector* v. *Day* this clear statement:

"The exemption of the [State] officer from taxation by the General Government stands upon as solid ground, and are maintained by principles and reasons as cogent as those which led to the exemption of the Federal officer in *Dobbins* v. *The Commissioners of Erie* from taxation by the State; for, in this respect, that is, in respect to the reserved powers, the State is as sovereign and independent as the General Government. And if the means and instrumentalities employed by that Government to carry into operation the power granted to it are, necessarily, and for the sake of self-preservation, exempt from taxation by the States, why are not those of the States depending upon their reserved powers, for like reasons, equally exempt from Federal taxation? Their unimpaired existence in the one case is as essential as in the other. It is admitted that there is no express provision in the Constitution that prohibits the General Government from taxing the means and instrumentalities of the States, nor is there any prohibiting the States from taxing the means and instrumentalities of that Government. In both cases the exemption rests upon necessary implication, and is upheld by the great law of self-preservation; as any government, whose means employed in conducting its operations, if subject to the control of another and distinct government, can exist only at the mercy of that government. Of what avail are these means if another power may tax them at discretion?"

Thus we see that in these historic cases, which as time went on became recognized as constitutional landmarks, the reasoning was that if the power was not limited, as the Court held it to be by necessary implication from the very nature of our federated system, the States, on the one hand, and the Government of the United States on the other, "might impose taxation to an extent that would impair, if not wholly defeat, the operations of the" respective sovereignties when acting in their appropriate spheres. And this was held to be clear because, as stated by Chief Justice Marshall in *Weston* v. *The City of Charleston*,[27] "If the right to impose the tax exists, it is a right which in its nature acknowledges no limit. It may be carried to any extent within the jurisdiction of the" sovereignty which imposes it.

As late as 1937 the doctrines of the Dobbins and the Day cases were expressly reaffirmed by the Court in which they had been announced. No one could have predicted then that they had but 2 years longer to live.

In 1937 there came to the Supreme Court from New York the case of *Rogers* v. *Graves*.[28] Rogers was employed as general counsel of the Panama Railroad Co. He resided in the State of New York. The taxing authority of that State held he was liable to pay a State income tax on his salary as such general counsel. The appellate division of the New York Supreme Court and the court of appeals of that State upheld the imposition of the tax. The Supreme Court of the United States, holding that the Panama Railroad Co. is a Government instrumentality of the United States, reversed the New York court and, citing the Dobbins and Day cases, said that "the rule is well established" that a State is "without authority to tax the instruments or compensation of persons which the United States may use and employ as necessary and proper means to execute its sovereign power." A few years earlier the Court had had occasion to restate the reasons for that "well established" rule, and so in *Rogers* v. *Graves* it was content to say that "the reasons upon which it is based and the authorities sustaining it have been so recently reviewed by this Court [in] *Indian Motocycle Co.* v. *United States*[29] * * * that further discussion is unnecessary." There was no dissent in *Rogers* v. *Graves*.

But scarcely 2 years went by before that "well established" rule was said never to have had any reason for existence.

One O'Keefe was counsel for the Home Owners' Loan Corporation, a Federal Government instrumentality. He, too, resided in New York. He, too, had been called upon to pay a State income tax on his official salary. He, too, had appealed to the New York courts. Meantime the Rogers case had been decided and O'Keefe's claim to immunity from the State income tax on the salary he received from the Federal Government was upheld by the New York courts. The case then reached the Supreme Court. The time was ripe for what one of the Justices had referred to as revision of the doctrine of implied immunities declared in earlier decisions.[30] And, so in 1939, though the Court said that the Home Owners' Loan Corporation was an instrumentality of the United States, and that no distinction was to be made between officers and employees of such an instrumentality and those directly employed by the United States Government, it held that O'Keefe's official salary was subject to State income taxes.[31] It being impossible to reconcile *Rogers* v. *Graves* with *Graves* v. *O'Keefe*, the Court repudiated its decision of but 2 years earlier. Strangely enough, two Supreme Court Justices concurred in both of these utterly irreconcilable decisions, and it is of interest to note that the 1937 decision upholding the constitutional immunity was concurred in by Justices Brandeis and Cardozo.

[27] 2 Peters, 449 (1829).
[28] 299 U. S. 401 (1937).
[29] 283 U. S. 570, 575, et seq.
[30] Stone, J., concurring opinion in *Brush* v. *Commissioner* (300 U. S. 352, 374, 1937).
[31] *Graves* v. *O'Keefe* (83 Adv. Op. 577, 1939).

Here, then, we have a constitutional doctrine, held and upheld for nearly a century of our national existence. Here, then, we have a rule which as lately as 1937 the Supreme Court deemed to be well established and based upon reasoning and authority so familiar that discussion of it was unnecessary. And in 1939 the Supreme Court said that there existed no sound reason for any such rule. In 1937 the Court said "The rule itself is not denied." In 1939 the Court said that the rule itself does not exist. *Dobbins* v. *Erie County*, in the ninety-seventh year of its age, was killed in the house of its fathers. *Rogers* v. *Graves*, the tender infant of 2 years, was strangled in the very room in which it had been born. Thus came the shift from the doctrine that a State cannot constitutionally tax the emoluments of any Federal office to the doctrine that a State can most certainly tax the emoluments of all Federal offices.

What of the companion rule that the Federal Government could not constitutionally tax salaries of State officers and employees? That was established in the case of *Collector* v. *Day*, wherein was involved the attempted imposition of a Federal income tax on the salary of a judge of a State court. It lived to a respectable age, though it slightly missed three score years and ten. *Collector* v. *Day* was decided in 1871. In 1937 the Supreme Court expressly reaffirmed it, holding, in *Brush* v. *Commissioner*,[32] that the salary of the chief engineer of New York City's Bureau of Water Supply was immune from Federal taxation because the water system was conducted in the exercise of the city's governmental function and the city was a subdivision of the State. That was in March of 1937. In May of 1938 the Brush case was overruled by *Helvering* v. *Gerhardt*.[33]

Gerhardt was an employee of the Port of New York Authority, an instrumentality of the States of New York and New Jersey, performing public functions for them. The United States Board of Tax Appeals, following the long-established doctrine applicable to such a case, ruled that the compensation received by the authority's employees was exempt from Federal income tax. The circuit court of appeals, applying what in that court was controlling authority, affirmed the Board of Tax Appeals, and did so on the authority, among others, of the recent cases of *Brush* v. *Commssioner* and *Rogers* v. *Graves*, both decided in 1937. In 1938 the Supreme Court reversed the Board and the court of appeals, and for the first time held that the Federal Government may constitutionally tax the compensation paid by States to their officers and employees.

In the same cemetery side by side you will find the graves of eight Supreme Court cases[34] which for years upheld the doctrine of intergovernmental tax immunity as a constitutional incident to our system of dual sovereignties. I had almost said you will find their remains, but naught remains of any of them. They did not expire unnoticed. They were killed deliberately, one by one, and the name of each was called at the execution.

What caused this overruling of a century of precedents?

The Court's answer to that question is "the expanding needs of State and Nation."[35]

And now for a venture into prophecy. What further may be expected as a result of the nullifying, in substantial respects, of this doctrine? On March 27 of this year, Mr. Justice Butler was of opinion that—

"* * * safely it may be said that presently marked for destruction is the doctrine of reciprocal immunity that by recent decisions here has been so much impaired."[36]

The import of this becomes clear when we recall that the Court has emphasized the "clear distinction between the extent of the power of a State to tax" instrumentalities of the National Government and the power of the latter "to tax State instrumentalities." Factors of importance, we are reminded, are present in considering the immunity of Federal instrumentalities from State taxation "which are lacking in the case of a claimed immunity of State instruments from Federal taxation." And when this emphasis is considered in the light of the reasons now given for holding that the salaries of any and all State officials are subject to the Federal income tax the conclusion is inescapable that, unless there is another shift, interest on State, county, and municipal bonds, issued to enable States and their political subdivisions to exercise their local governmental functions, are includible within income taxable by the Federal Government unless expressly excepted therefrom by the provisions of the taxing acts.

The Supreme Court has now said that the theory that a tax on income is legally or economically a tax on its source is no longer

[35] *Helvering* v. *Mountain Producers Corporation* (303 U. S. 376), decided March 7, 1938, expressly overruling *Gillespie* v. *Oklahoma* (257 U. S. 501) and *Burnet* v. *Coronado Oil & Gas Co.* (285 U. S. 393).
[36] *Graves* v. *O'Keefe*, supra (83 Adv. Op. 577), concluding words of dissenting opinion.

tenable.[37] In holding that the salary paid by a State to its officers is taxable under the Federal income tax acts, the Court said that the tax laid on their salaries and paid by them could not be said to affect or burden the State; when the tax is laid, said the Court, it is not upon the State's money but upon money which then belongs to the individual. Manifestly all of this is as applicable to interest received by owners of bonds issued by the State as it is to salaries received by their officials. In the one case the sovereign pays for the services of men; in the other, for the services of money. The Supreme Court in the *Gerhardt case* said that salaries of State officers should not be immune from income taxes even though such taxation would increase the cost of State government. This, of course, has equal applicability to one result to be expected to follow taxing interest on State bonds. It has long been recognized that such a tax would necessarily burden the borrowing power of the State.

In adverting to the distinction between the power of the Federal Government to tax State instrumentalities and of the States to tax instrumentalities of the National Government, the Court has pointed out that the States and the people of the State are represented in the Congress of the United States so that "in laying a Federal tax on State instrumentalities the people of the States, acting through their representatives" in Congress "are laying a tax on their own institutions and consequently are subject to political restraints which can be counted on to prevent abuse."

That Congress may, under the reasoning of these recent decisions, tax State, county, and municipal bonds presently outstanding, as well as those hereafter issued, if the Congress sees fit to do so, seems now indubitable, barring always the possibility of still further shifts. The constitutional inhibition against the enactment of laws impairing the obligations of contracts expressly applies only to the States. This provision aside, no one familiar with the gold-clause cases will seriously contend that, if they are neither overruled nor ignored, Federal legislation impairing or repudiating contracts will be held invalid, however shocking.

In effect the Supreme Court has said: "Let the people of the States look to those they send to represent them in the Congress." It is patent that it is for the people to say whether the impairment of the borrowing power of their States, their counties, and their cities, or the tremendous increase in the cost of money needed for local purposes, is of less importance to them than is (1) the satisfaction of subjecting those who own their bonds to taxes on the interest paid thereon, or (2) the assistance, if any, which the revenue derived from such taxes may give to "the expanding needs of State and Nation."

Some, including Patrick Henry, who in the State conventions opposed the adoption of the Constitution because of the likelihood that the taxing power therein conferred would be construed to be as extensive as the Supreme Court now says it is, were met with protests, voiced in Virginia by Madison and in New York by Hamilton, that it was unthinkable that the Congress in exercising the tax power would have, as Henry phrased it, "an unlimited, unbounded command over the soul of the" States.

If anyone now thinks that Henry was merely using a flourish of rhetoric, let him study *Gerhardt* v. *Helvering*. If Mr. Hamilton or Mr. Madison or Mr. Jay, whose pens in the Federalist papers and whose voices in conventions contributed so much to the acceptance by the States of the offered Constitution, had said to the State conventions: "If you adopt this Constitution the time will come when the general government to be organized under it will have power to take from your Governor as a tax one-half of what you pay him from your State treasury for his services as your chief executive, to take a percentage of every dollar you pay from your public treasury to the members of your legislature, to subject to a Federal tax the compensation paid by you to the judges of your State courts"—if such statements had been believed by the advocates of the Constitution and frankly made to the State conventions, no student of American history can doubt that the Constitution as we know it would never have been adopted. Yet the Supreme Court says that that Constitution gave precisely that power to the Government of the United States; that that Government's taxing power is supreme; that the only limit upon its application to the sovereign States and their instrumentalities is to be found in the will of the Congress.

III

Of far greater immediate effect than those produced by the shifts thus far discussed are the present-day results of the unprecedented expansion of Federal power under the interstate commerce clause. In this field the Court during the last term repeatedly disregarded established precedents, though in some cases its overruling of its own prior decisions followed so speedily upon their promulgation as to justify the view that they had not aged sufficiently to have acquired the dignity of precedents. Plainly, the Court has overruled its recent decision in the N. R. A.,[38] A. A. A.,[39] and the Guffey Coal Act[40] cases. Before the A. A. A. decision could become a precedent it had become a relic.

In the period of 1 year four circuit courts of appeals and six district courts handed down decisions based squarely on the authority of the *Schechter* and *Carter cases*, only to be reversed for having done what these Supreme Court decisions bound them to do.[41]

An examination of decisions of the great Court, relating to that one clause of the Constitution which in simple language granted to the Congress the power "to regulate commerce * * * among the several States," leads to the reflection that it is indeed extraordinary that one so short provision of the Constitution could be subjected to such diverse construction.

Such an examination would disclose that in 1935 the Court held that Congress has no power to regulate wages and hours of labor in a local business, although a large percentage of the commodity handled by the company involved came from without the State where its business was conducted;[42] whereas in 1939 the same Court held that Congress did have power to regulate labor relations where the employer was a local manufacturer who neither bought the raw materials nor sold the finished products in States other than that in which his factory was located, or at all.[43]

In 1936 the Court decided in the *Carter Coal case*[44] that the Guffey Coal Act was unconstitutional because it attempted to provide for the regulation of wages and hours of men mining coal, which, held the Court, concerned production and not commerce. In that case the coal mined was sold to those who did operate in interstate commerce. In 1939 the Court held that utility companies serving consumers in a local area within a single State were subject to the Wagner[45] Act because some of their customers were themselves engaged in interstate commerce, and therefore labor trouble in the entirely intrastate business of such utilities might affect interstate commerce carried on by others. Here again is revealed a far-reaching shift in constitutional doctrine.

The word "commerce" and the phrase "among the several States" were long recognized as limiting the powers granted by the clause containing them. That view seems to have joined the procession of precedents to the graveyard. That which had been repeatedly held not to be commerce has now been declared to be subject to direct control under an authority to regulate commerce. Activities often held not to affect interstate commerce to such an extent as to bring them under Federal control have now been held, even in cases of palpable insignificance, to so directly affect and impede interstate commerce as to be within the Federal power.

The lawyer today must needs rub his eyes when he reads that the Nation's highest judicial tribunal had solemnly declared that no distinction is clearer "than that between manufacturer and commerce." "Manufacture," said that Court, "is transformation—the fashioning of raw materials into a change of form for use. The functions of commerce are different. The buying and selling and the transportation incidental thereto constitute commerce; and the regulation of commerce in the constitutional sense embraces the regulation at least of such transportation. * * * If it be held that the term includes the regulation of all such manufactures as are intended to be the subject of commercial transactions in the future, it is impossible to deny that it would also include all productive industries that contemplate the same thing. The result would be that Congress would be invested, to the exclusion of the States, with the power to regulate, not only manufactures, but also agriculture, horticulture, stock raising, domestic fisheries, mining—in short, every branch of human industry."[46]

Kidd against Pearson, in which that language was used, has been cited more than a hundred times by the Supreme Court and the other Federal courts. Keeping that language in mind, let us look at the decision in the *Fainblatt case*, handed down April 17, 1939.[47] Fainblatt was engaged in Somerville, N. J., in operating what is known as a contract shop in which wearing apparel was manufactured. The goods to be manufactured were sent by their owner in New York to Fainblatt at Somerville, were there manufactured into clothing, and were there, in their completed state, delivered to their owner's representative, who sent them to New York. The circuit court of appeals had denied the application of the National Labor Relations Act to that situation because, as it held, Fainblatt was not engaged in interstate commerce and had no title or interest in the raw materials or finished products which moved to and from his workshop. All that he or his employees did was confined to a small local factory. But the majority of the Supreme Court, holding that Fainblatt was subject to the provisions of National Labor Relations Act, brushed aside the once-settled distinction and declared it to be utterly unimportant that neither employer nor employees were themselves engaged in commerce, and added that of no significance was the insignificant volume of business involved unless, indeed, it descended to the point "to which courts would apply the maxim de minimis."

This case was similar to the *Consolidated Edison*[48] *case* in that neither the employers nor the employees were engaged in interstate commerce, but differed from that case in that in the *Fainblatt case* the employers neither bought nor sold anything. Also, the case involved only a small local manufacturing establishment, the products of which, when shipped by others to other States, constituted but a small part of interstate commerce. The Supreme

Court had hitherto said that the result of such a doctrine "would be that Congress would be invested, to the exclusion of the States, with the power to regulate, not only manufactures but also agriculture * * * stock raising, mining—in short, every branch of human industry," for, said the Court, there is not "one of them that does not contemplate, more or less clearly, an interstate or foreign market." Yet now the Congress is invested with precisely that almost unlimited power, and is held to have exercised it in existing statutes.

Again and again the Court had held that the fact that the activity was one which did contemplate an interstate or foreign market did not bring it within the Federal regulatory power.[49] It now announces the exact contrary. Repeatedly the Court had said that if there was vested in Congress under the commerce clause such a power as is now held to be vested in Congress under that clause, "it would follow as an inevitable result that the duty would devolve on Congress to regulate all those delicate, multiform, and vital interests—interests which in their nature are and must be local in all the details of their management."[50] Such power in the Federal Government the Court had held was unthinkable. Such power in the Federal Government the Court now holds is undeniable.

The now expanded power is not limited to any one line of industry. For a long time it was settled that production on the farm no more constituted commerce than did manufacture in the factory. And as late as 1936 the Supreme Court held the original A. A. A. unconstitutional, because the Federal Government was without power to control farm production. The statutory plan there sought to be enforced was found repugnant to the tenth amendment. The scheme to control farm production in that act was devised and put in effect under guise of exertion of the power to tax. The Court held that tax to be but the means to an unconstitutional end. Congress in the Agricultural Adjustment Act of 1938 reenacted portions of the invalidated act and adopted the simple expedient of saying that the thing to be controlled was marketing, although the undisguised intent was patently to control production, and the effect of the act is to do exactly that. In other words, once again the pretext of the exertion of powers which are constitutionally granted was resorted to as the means to an unconstitutional end.

In *Mulford* v. *Smith* (83 Adv. Op. 628), decided April 17, 1939, the Supreme Court sustained marketing quotas for tobacco under the A. A. A. of 1938, which in view of the 1936 decision invalidating the original A. A. A. must be considered as another important shift in constitutional doctrine. This last decision established a new principle of constitutional law in that it sanctioned Federal control of production by means of marketing regulations—which regulations, the Court held, may extend to prohibition. The portion of the statute involved in the *Mulford case* provided marketing quotas for flue-cured tobacco. The majority of the Court, stressing this fact, said that the statute does not "purport" to control production. The persons affected, who brought the suit, were producers of flue-cured tobacco; in providing marketing quotas, under the act, "The quota is to be apportioned to the farms on which tobacco is grown." By the act "it is directed that the quota is to be first apportioned among the States based on the total quantity of tobacco produced in each State" during a prescribed period; the figures to be used are exclusively those of "production" related to acreage. "The act provides for the apportionment of the State allotment amongst the farms which produced tobacco." Certain adjustments in quotas are provided for, but "A limit is fixed below which the adjustment may not reduce the production of a given farm. Allotment to new tobacco farms is to be made on a slightly different basis." The act "provides that if tobacco in excess of the quota for the farm on which the tobacco is produced is marketed through a warehouseman," then heavy penalties shall be incurred which ultimately must be paid by the "producer."

I have here quoted from the act of Congress and the Court's opinion in the *Mulford case*, and wherever I have used the word "production" or "producer" or "farm" that word is a quotation and not any attempt of mine to supply terms. And the Supreme Court in terms held, in upholding such an act as a valid Federal regulation of interstate commerce, that it did "not purport to control production." It was by this legislative juggling of words, the substitution of "marketing" for "producing," without the slightest change in substance, that brought about a decision of the high Court which places production on the farms of America under the control, not only of the Federal Government, but of an officer of the executive department of the Government, with ruinous penalties laid upon the farmer who dares ignore Washington's edicts.

Certainly no one who considers the doctrine of the Fainblatt and like cases in the industrial field, and the Mulford and like cases in the agricultural field, can question the assertion that new significance has been given to the commerce clause of the Constitution as a source of the police power of the Federal Government. In those decisions we find that for the first time in our history the power to regulate interstate commerce has now been extended to regulation of production; that for the principle that the effect of local activities on interstate commerce, to justify Federal regulation, must be direct and substantial, has been substituted the rule that anyone engaged in an intrastate activity, even if it be not commerce, is subject to Federal regulation if those activities might have any possible effect on interstate commerce, however indirect, however remote, however unsubstantial, provided only the rule de minimis is not applicable.

I am not here greatly concerned with the impairment of the doctrine of State rights, the intrusion into their sovereignty, or the exclusion from their spheres of the control of the multiform activities, "which in their nature are and must be local in all the details of their successful management." To one side may be laid the question as to whether or not business (and within that term I include manufacturing, agriculture, mining, and all productive industry) would, if left to the hitherto-recognized broad regulatory powers of the State governments, be hampered by the numerous newly devised shackles upon liberty. What I stress here is the tremendous enlargement of Federal power by the mere shifting by the judiciary away from long-established constitutional doctrines to newly announced constitutional concepts. I emphasize this irrespective of the corresponding curtailment of the independence reserved to the States and the serious impairment of their respective control over local affairs. The outstanding point is that by recent judicial construction the power to regulate interstate commerce has brought within the ambit of Federal control most, if not all, activities of the Nation. Under that once limited grant of power, as now newly interpreted, Congress may, to such extent as it deems proper, regulate wages, hours, output, prices; the quantity of innumerable products; the wages that may be received for, and the hours that may be worked in, producing them; the prices which may be charged by their owners for them; provided and only provided that any part of them is intended to pass beyond State lines or that any part of them, or the materials used in producing them, once crossed State lines. Producers of potatoes in Maine, peanuts in Virginia, cotton in South Carolina, cane sugar in Louisiana, wheat in Kansas, corn in Iowa, tobacco in North Carolina and Connecticut, peaches in Georgia, oranges in California, and thousands of small local enterprises everywhere become subject to national direction, regulation, control prohibition. The principle can be applied to petroleum produced in California, Louisiana, Oklahoma, and Texas; to metals mined in Colorado and Montana. The price of privately owned milk produced in one county from a cow born and raised therein that had never strayed from her native heath, drunk by a local resident, can be fixed by the Secretary of Agriculture of the United States merely because other milk produced and sold in the county is sent to other States.

It is to this expansion of the power of a general government over practically every branch of human industry that I direct attention, in the hope that my feeble voice may contribute to its recognition by the people whose liberties are involved in the exercise of such power.

IV

Those who think lightly of shifts in constitutional doctrines must think lightly also of the importance of knowing what the law is. Is it to be a movable thing, changing and changeable after each reconstruction in the membership of courts? Is it to vary with the shifting currents of the political will? Or is it to be something certain, steadfast, and enduring upon which reliance can safely be placed?

In the last two terms of the Supreme Court there were 135 cases affirmed, 180 reversed, and 199 dissents announced. These figures indicate the extent to which the reconstructed Court has undertaken to disavow and discard old doctrines and to declare new principles and new concepts.

The New York courts were reversed in the *Rogers case*, and then were reversed in *O'Keefe's case* for having followed the Supreme Court's decision in the *Rogers case*, as they were bound to do. Circuit courts of appeals and district judges were reversed because they had not contemplated unannounced but impending shifts in constitutional doctrines; they had thought that principles which the Supreme Court had said had been settled by its repeated decisions were really settled; they had followed decisions which at any time in the preceding century and a half they would have been required to treat as binding upon them.

The plain result of all this is that no lawyer can safely advise his client what the law is; no businessman, no farmer, can know whether or not he is breaking the law, for if he follows established principles he is likely to be doing exactly that. What was a constitutional principle yesterday may be a discarded doctrine tomorrow, and this, all this, in what has so often been proudly proclaimed to be a government of laws and not of men. "Shifts in constitutional doctrines" is but a phrase which describes the abolition of stare decisis, the replacing of stability by instability, the substitution of uncertainty for certainty, and of plenary power for limitations upon power; the transfer from States and local communities to a centralized government at Washington of "most, if not all, activities of the Nation.[51] If these be consummations devoutly to be wished, then we have the fulfillment of the wish.

V

It may be said that these things are consistent with the will of the people, the will of the people as it would be registered now if put to a vote. I do not doubt that majority approval would be given to any rule subjecting State and Federal Government employees to the same obligation of a nondiscriminatory general income tax to which every other receiver of income is subjected. But is not that but a way of saying that the Constitution should be construed to mean whatever a majority would want it to mean at different times with every change of political views? If

[49] *Carter* v. *Carter Coal Co., et al.*, supra, et passim.
[50] *Kidd* v. *Pearson*, supra.
[51] McReynolds, J., dissent, *N. L. R. B.* v. *Fainblatt* (83 Adv. Op. 646).

the Constitution is to be construed to mean what the majority at any given period in history wish the Constitution to mean, why a written Constitution and deliberate processes of amendment? Why the declaration of fundamental limitations upon the power of government and the assertion of the reservation of unalienated liberties? To guarantee against usurpations of governmental power and protect against the arbitrary will of temporary majorities is the reason for setting up a written Constitution, equally vital in the limitations it imposes as in the power it grants.

The new concept seems to be that it would be useless labor to seek to amend the Constitution in the method provided in the Constitution. Why amend when by adopting new interpretations the same end can be accomplished? Such in this day seems to be the theory and the practice.

VI

For more than five generations the people of America have looked with unshaken and unshakable confidence upon American courts as temples of justice. Happily it may be said that nothing has occurred to diminish that confidence in litigation between citizen and citizen, or in those cases which involve individual liberty intended to be protected by the specific and sacred guaranties of the Bill of Rights. The administration of justice according to law in controversies between man and man goes forward as steadily today as at any time in the history of courts. Our Federal and State judiciary still vigilantly uphold freedom of speech, press, and worship; the right of peaceable assembly, the right to have one's home treated as his castle; the right to be free from unreasonable searches and seizures; the right to trial by jury when life, liberty or property is involved, to be represented by counsel, to have personal liberty guarded in those vital respects that are so dear to a society of free-born men. This indeed is reassuring.

But may there not arise fear that with a steadily growing disposition to adapt the law to changing social and economic conditions, these barriers erected by wisdom gathered from experience may next be weakened or destroyed? Can a government which may arbitrarily control the individual's economic freedom be relied on permanently to keep safe his civil and political liberties?

VII

The conclusion to be drawn from all of this may, I think, be stated simply: It is that reliance against the exercise of arbitrary power must be placed by the people henceforth in the legislative rather than in the judicial department of the National Government.

The framers of the Constitution and the people who adopted it contemplated that the legislative branch of the Government of the United States should be powerful, and anticipated that it would be wise. Even so, they carefully guarded and plainly limited its powers. The guards have been let down, many of the limits have been obliterated. The people of the United States should know this, and, so knowing, give increasing attention to the ability and stability, the courage and the independence of the men and women sent to the Halls of our National Legislature. There rest now America's hopes. Freed is the Congress, by the action of the Supreme Court, from all but a very few constitutional fetters on its exercise of power. Legislative independence and legislative wisdom are America's almost sole reliance for the continuance of that security of the blessings of liberty for which the Constitution was framed and the Government of the United States of America created.

Digests of Legislation, Seventy-sixth Congress, First Session

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

LEGISLATION OF THE SESSION AND DATA ON THE ECONOMIC SITUATION

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a digest in part of the laws enacted by the first session of the Seventy-sixth Congress.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

AGRICULTURE

ACREAGE ALLOTMENTS

(Approved April 10, 1939. Public Law No. 30, 76th Cong.)

Prior to the passage of this act, a farmer, in order to receive full benefits under the Agricultural Adjustment Act, was, in effect, required to plant at least 60 percent of the acreage allotment allocated to him under this program. To reduce the planted acreage below 80 percent involved a reduction in benefits.

By this act the above-mentioned conditions are eliminated.

COMMODITY CREDIT CORPORATION

(Approved March 4, 1939. Public Law No. 3, 76th Cong.)

The Commodity Credit Corporation is primarily a lending institution established for the purpose of financing the carrying and orderly marketing of agricultural products. The Corporation was created by order of the President, October 16, 1933, and has continued to function by authority of various acts of Congress.

This legislation authorizes the Corporation to continue its functions and duties until January 15, 1941. The limit of the obligations which the Corporation may have outstanding at any one time is increased from $500,000,000 to $900,000,000.

COTTON ACREAGE ALLOTMENTS

(Approved June 22, 1939. Public Law No. 149, 76th Cong.)

The Agricultural Adjustment Act of 1938, as amended, provided for certain minimum allotments of cotton to the counties and States, based upon past production. In addition the Secretary of Agriculture was given certain discretionary powers whereby he might correct any inequities which might develop following the acreage allotments or which might arise out of the formula used to establish such allotments. Also, minimum allotment guaranties for individual farms were provided in the 1938 law.

The foregoing provisions of the 1938 law would have expired at the end of this year except for this act, which continues them in force and effect for an indefinite period.

COTTON ACREAGE REAPPORTIONMENT

(Approved March 13, 1939. Public Law No. 6, 76th Cong.)

In May 1938 the Congress amended the Agricultural Adjustment Act of 1938 so as to permit reallocation during 1938 of cotton acreage allotments which in some cases were in excess of the acreage intended to be planted by certain farmers.

This provision, by this act, is extended to "any crop year." By this means a State is permitted the full use of its total acreage apportionment, whereas there would otherwise be a certain amount of "frozen" acreage resulting from the failure of certain farms to utilize the total acreage allotment for such farms.

COTTON POOL CERTIFICATES

(Approved April 5, 1939. Public Law No. 27, 76th Cong.)

In order to permit cotton producers and others who are the rightful owners of cotton-pool-participation trust certificates to tender them to the manager of the cotton pool and receive payment for them, this act extends the time limit during which such certificates may be accepted until September 30, 1939. The act also extends the time during which the appropriation contained in the Department of Agriculture Appropriation Act, 1939, and amounting to $1,800,000, is to remain available.

CROP INSURANCE

(Approved March 25, 1939. Public Law No. 9, 76th Cong.)

The Secretary of Agriculture is authorized to make advances to farmers so as to assist them to insure their crops with the Federal Crop Insurance Corporation. Such advances for insurance premiums shall be made direct to the Corporation on behalf of the producer, but only those producers who are cooperating under the Soil Conservation and Domestic Allotment Act shall be eligible for such advances.

EDUCATIONAL EXTENSION WORK

(Approved April 24, 1939. Public Law No. 41, 76th Cong.)

In addition to any sums heretofore appropriated for this purpose, there is hereby made available the sum of $300,000 per annum for the purpose of paying the expenses of cooperative extension work in agriculture and home economics, and the necessary printing and distribution of information in connection with this activity. This appropriation is to be allotted to the various States by the Secretary of Agriculture in such amounts as he may deem necessary.

ELECTRIC HOME AND FARM AUTHORITY

(Approved March 4, 1939. Public Law No. 2, 76th Cong.)

The existence of the Electric Home and Farm Authority is continued to the close of business June 30, 1941. This organization promotes the use of electricity on farms and in homes, and aids the financing of the use and distribution of labor-saving electric appliances.

(Amends: 50 Stat. 5, 49 Stat. 1186, 47 Stat. 9, 50 Stat. 19.)

GRAZING

(Approved July 14, 1939. Public Law No. 173, 76th Cong.)

Provision is made for the appointment of a local advisory board in each grazing district, one member of which is to be selected by the Secretary of the Interior and the remainder to be appointed from a list to be determined by local elections.

These boards are to offer advice and make recommendations with regard to issuance of grazing permits, rules and regulations for administering the Grazing Act, establishment of grazing districts and the boundaries thereof, and other related matters.

(Amends U. S. C., title 43, secs. 315–315n.)

The act of June 28, 1934, authorized the Secretary of the Interior to make rules and regulations necessary to accomplish the purposes of the act. It also provided for cooperation with local associations and for local hearings, but it did not provide for local advisory boards in each district.

INSECT PESTS

(Approved June 13, 1939. Public Resolution No. 22, 76th Cong.)

This legislation appropriates the sum of $1,750,000 as an additional fund to be available during the fiscal year 1939 for the purpose of controlling incipient or emergency outbreaks of insect pests or plant diseases, including grasshoppers, mormon crickets, and chinch bugs. This fund is to remain available until December 31, 1939.

MARKETING AGREEMENTS (APPLES)

(Approved May 31, 1939. Public, No. 98, 76th Cong.)

The Agricultural Marketing Agreement Act of 1937 is amended so as to include within its provisions apples grown in the States of Washington, Oregon, and Idaho. If the requisite number of apple producers in the area agree to do so they may enter into marketing agreements intended to bring about more orderly production and distribution of their product. Such agreements are subject to the same provisions of law as are other such agreements under the 1937 act.

(Amends U. S. C., title 7, sec. 674.)

MARKETING AGREEMENTS (HOPS)

(Approved May 26, 1939. Public Law No. 91, 76th Cong.)

The act extends for a period of 2 years (until September 1, 1942), the provisions of the Agricultural Adjustment Act of 1938 applicable to hops. Originally designed to be in effect for the years 1938 and 1939, the legislation proved so beneficial that its extension was requested by the producers and users of hops.

(Amends 52 Stat. 215.)

—

AVIATION

CIVIL AIRCRAFT PILOTS

(Approved June 27, 1939. Public Law No. 153, 76th Cong.)

The Civil Aeronautics Authority is authorized to inaugurate a program for the development of a civilian reserve of aircraft pilots by such training, study and research as the Authority deems necessary. No person may be denied the benefit of such program because of race, creed, or color, and at least 5 percent of selected students shall be from applicants other than college students.

The sum of $5,675,000 is authorized for this purpose for the fiscal years 1939 and 1940; and not to exceed $7,000,000 is authorized for each subsequent fiscal year.

It is estimated that training can be provided under this legislation for as many as 15,000 civilian pilots during the next year.

(While the Authority is authorized to carry out this program with its own facilities, it is contemplated that the entire program will be carried out through the facilities of colleges, aviation schools, and individual instructors.)

NATIONAL AVIATION DAY

(Approved May 11, 1939. Public Resolution No. 14, 76th Cong.)

In order to further and stimulate interest in aviation in the United States, the President is authorized to designate August 19 of each year as National Aviation Day. A proclamation will call for the display of the flag on all public buildings and the people of the United States will be invited to celebrate the day with appropriate exercises.

—

FEDERAL-AID HIGHWAY SYSTEM

TOLL BRIDGES

(Approved July 19, 1939. Public Law No. 195, 76th Cong.)

Provision is made for reimbursing States from Federal funds in cases where such States have constructed or acquired, prior to July 1, 1941, toll bridges on the approved Federal-aid-highway system and have freed such bridges from toll-charges. Such Federal aid is limited to 50 percent of the fair value or of the cost of construction whichever is lowest. Such bridges must have been constructed in accordance with Federal standards of construction.

Federal funds paid out under this act and paid from regular Federal-aid road funds shall be used for matching Federal allocations for use on the regular highway system. Federal funds paid out from the secondary Federal-aid road funds shall be used for matching Federal allocations available for secondary or feeder roads.

—

GOVERNMENT REORGANIZATION

REORGANIZATION OF EXECUTIVE AGENCIES

(Approved April 3, 1939. Public Law No. 19, 76th Cong.)

The President is directed to investigate the organization of the Government agencies so as to determine what is necessary to reduce expenditures, increase efficiency, group, coordinate, and consolidate agencies according to major purposes, reduce the number of agencies, and to eliminate overlapping and duplication of effort.

Whenever the President, after investigation, finds that to carry out the aforementioned purposes, it is necessary to transfer, consolidate or abolish an agency or its functions, he is to prepare a reorganization plan and submit it to the Congress. Each plan must designate, where necessary, the name of the agency involved. It must make provision for the disposition of the records, property, and personnel affected by the plan, and for the disposition of unexpended balances of appropriations. Such balances may be transferred with the agency or function but may not be used for purposes other than those for which originally appropriated. Provision must also be made for winding up the affairs of the abolished agency.

Reorganization plans will go into effect 60 calendar days after submission to Congress unless the Congress by concurrent resolution disapproves the proposal. In the event of final adjournment of Congress prior to the expiration of the 60-day period, a new 60-day period shall begin on the opening day of the next succeeding regular or special session.

No reorganization plan shall have the effect of continuing an agency or its functions beyond the time when such agency or functions would have been terminated had the plan not been made; nor shall any agency be authorized to exercise any function not vested in it by law.

No reorganization plan shall abolish or transfer an executive department or all the functions thereof; nor shall the plan establish any new executive department. The following agencies are exempted from any reorganization plan authorized by this act: Civil Service Commission, Coast Guard, Engineer Corps of the United States Army, Mississippi River Commission, Federal Communications Commission, Federal Power Commission, Federal Trade Commission, General Accounting Office, Interstate Commerce Commission, National Labor Relations Board, Securities and Exchange Commission, Board of Tax Appeals, United State Employees' Compensation Commission, United States Maritime Commission, United States Tariff Commission, Veterans' Administration, National Mediation Board, National Railroad Adjustment Board, Railroad Retirement Board, Federal Deposit Insurance Corporation, and the Board of Governors of the Federal Reserve System.

Provision is made under the rules of the Senate and of the House of Representatives for special handling of such reorganization plans so that action upon them will be expedited.

This legislation authorizes the President to appoint not more than six administrative assistants with salaries not to exceed $10,000 per annum. These positions are created for the purpose of assisting the President in carrying out the vast amount of administrative detail work incident to the office of the Chief Executive.

As a final paragraph you might add:

"It is the opinion of Congress that by reason of continued national deficits beginning in 1931 it is desirable to reduce substantially Government expenditures and that such reduction may be accomplished by proceeding immediately under the provisions of this act."

—

HOUSING

INSURANCE OF HOME MORTGAGES

(Approved June 3, 1939. Public Law No. 111, 76th Cong.)

The Administrator is authorized to continue to insure qualified financial institutions against loss which they may sustain as a result of loans and advances of credit made by them between July 1, 1939, and July 1, 1941. Such loans may be made for the purpose of financing alteration, repairs, and improvements on existing structures of all kinds and the building of new structures for residential or agricultural purposes.

Repair loans are limited to $2,500 whereas the previous limitation was $10,000. The limit of $2,500 on new construction under this section of the act is maintained. An additional premium charge of three-fourths of 1 percent of the original amount borrowed is authorized by the act. Such loans are limited to 3 years and 32 days except where new construction is involved; and the terms of the obligation must be approved by the Administrator.

Title II of the 1938 act limited the maximum amount of insurance to be underwritten by the Government to $2,000,000,000 except that the President might authorize an increase of $1,000,000,000 additional. This act places the maximum at $3,000,000,000 and authorizes the President to increase it to $4,000,000,000 if he deems it necessary. No mortgages may be insured after July 1, 1941 unless the property was previously insured or previously approved for insurance. No refinancing mortgage shall be approved unless the holder of the existing mortgage has refused to make a loan.

Provision is made in foreclosure cases for the inclusion of expenses incurred by the mortgagee in connection with foreclosure proceedings, but in no case may it exceed $75. Provision is also made for the inclusion of payments made by the mortgagee for taxes, assessments, and other prior liens.

The section of law providing for insurance of mortgages on multifamily dwellings costing not less than $16,000 and not more than $200,000 is repealed. The conditions governing insurance on rental-housing projects are restated and clarified so as to prevent

inflation of land values and to require maintenance of a safe equity by the owning corporation.

A new section requires the payment by builders of not less than the prevailing wage rate before a mortgage on such property is eligible for insurance.

(Amends U. S. C., title 12, secs. 1702–1732; 48 Stat. 1246.)

—

MONETARY AUTHORITY

CURRENCY STABILIZATION

(Approved July 6, 1939. Public Law No. 165, 76th Cong.)

Presidential powers over the dollar are continued until June 30, 1941. These powers involve the right to alter the gold content of the dollar and the right to continue in operation the stabilization fund so as to protect our currency in foreign-exchange markets. This authority makes it possible for the Government to meet instantly any efforts by foreign governments to secure trade advantages by currency manipulation.

The law further provides that each United States coinage mint shall accept domestic silver, mined subsequent to July 1, 1939, and coin such silver into standard silver dollars. Forty-five percent of such silver shall be retained by the mint as seigniorage for services performed in coining and delivering silver dollars. The effect of the law is to establish a statutory price for domestic silver; and it is expected that mining activity will be materially increased as a result of this provision.

(Amends 48 Stat. 337.)

—

MONOPOLY

INVESTIGATION OF ECONOMIC CONCENTRATION

(Approved April 26, 1939. Public Resolution No. 12, 76th Cong.)

The act of June 16, 1938, created a temporary committee which was directed to study the concentration of economic power and the financial control over production and distribution with a view to determining (1) the causes of such concentration and control and their effect upon competition; (2) the effect of the existing price system and price policies of industry upon the general level of trade, upon employment, upon long-term profits, and upon consumption; and (3) the effect of existing tax, patent, and other Government policies upon competition, price levels, unemployment, profits, and consumption.

The present Congress increased the funds of the committee from $500,000 to $1,100,000 in order that it might continue its activities.

(Amends 52 Stat. 705, 1118.)

—

NATIONAL DEFENSE

ARMY EXPANSION

(Approved April 3, 1939. Public Law No. 18, 76th Cong.)

The Secretary of War is authorized to equip and maintain the Air Corps with 6,000 airplanes, whereas the previous maximum strength was limited to 2,320 airplanes. Necessary planes and balloons for training purposes are also provided for, as well as necessary equipment and supplies for the maintenance thereof. An appropriation of not to exceed $300,000,000 is authorized for this purpose.

When facilities of the Army for instruction and training in aviation are insufficient, the Secretary of War may detail personnel of the Regular Army as students to any technical or professional institution or industrial plant or other place for the purpose of obtaining special knowledge incident to aviation.

Civilians of the instructional staffs of approved civilian flying schools may be enrolled upon their own application at the Air Corps training center for pursuit of such instruction as may be prescribed for such civilians.

The President is authorized to order, with their consent and for not more than 1 year for any 1 officer, such numbers of Reserve officers, in the grade of second lieutenant, as are necessary to maintain on active duty not more than 1,000 Reserve officers of the promotion-list branches other than the Air Corps; not more than 3,000 Reserve officers of the Air Corps, and not more than 300 Reserve officers of the non-promotion-list branches.

The act contemplates the building up of the Army to full peacetime strength over a period of 10 years. Provision is made for the appointment of officers from all sources—the Military Academy, the National Guard, the Reserve Officers Training Corps, etc. The peacetime commissioned strength of the Army is authorized at 16,719 men, an increase of 2,060.

The enlisted strength of the Air Corps is increased from 21,500 to 45,000 men. Any Air Corps Reserve officer who has served on active duty for 3 or more years and has not been commissioned in the Regular Army shall, upon release from active duty, receive a bonus of $500.

An appropriation of $23,750,000 is authorized for the defense of the Panama Canal and will be used to construct such buildings and utilities as are necessary to house antiaircraft, seacoast defense, and auxiliary units most urgently needed for defense of the Panama Canal.

In order that industry may prepare itself for the production of munitions, should this country ever be called upon to defend itself, there is contemplated a program of "educational orders" to industry involving approximately 55 critical items, noncommercial in character, and about 250 separate industrial concerns. An appropriation of $34,500,000 is authorized for the fiscal years 1939, 1940, and 1941; and $2,000,000 per year is authorized for each of the succeeding 4 fiscal years.

The essential provisions of the act of March 3, 1934, dealing with Navy contracts are made applicable to Army aircraft contracts.

Provision is made for the purchase, from not more than three competitors who have been unsuccessful in obtaining orders, of sample aircraft submitted in response to bids. Purchase prices are not to exceed 75, 60, and 50 percent, respectively, of the fair development and manufacturing cost of such sample planes.

AVIATION CADETS

(Approved June 13, 1939. Public Law No. 129, 76th Cong.)

This legislation permits aviation cadets to be commissioned as ensigns in the Naval Reserve or as second lieutenants in the Marine Corps Reserves, provided they can qualify following completion of training.

Such ensigns and second lieutenants, after 3 years' service, may be appointed to the next higher grade if found to be qualified.

Officers commissioned under this act may serve on active peacetime duty only during the 7-year period immediately following completion of training, except that they may be ordered to active duty thereafter to train and instruct members of the Naval Reserve and Marine Corps Reserve.

When officers commissioned by authority of this act are released after 4 or more continuous years of active duty, including duty as aviation cadets, they shall be entitled to a sum of $500 in addition to any other sums. Cadets are eligible for Government life insurance, and such insurance may be continued after discharge at the expense of the individual.

Aviation cadets who have completed active duty undergoing training on the date of approval of this act and who may be commissioned pursuant thereto shall, upon completion of 4 years' active duty, be paid a lump sum determined as $1,000 minus the excess of the pay and allowances received by them prior to the date of such completion of duty over the pay and allowances, including Government paid insurance premiums, which they would have received as aviation cadets had they not been commissioned. Said payments shall be in addition to the $500 lump sum mentioned above.

The Secretary of the Navy is authorized to appoint a board of officers of the Navy and Marine Corps which is to investigate and report on all maters concerning personnel of the flying forces of the Navy and Marine Corps. Such recommendations as the board deems advisable shall be made and the report of the board is to be transmitted to Congress within 10 days of the beginning of the session of the Congress commencing on or about January 3, 1940.

COAST GUARD

(Approved June 2, 1939. Public Law No. 104, 76th Cong.)

In order that the Coast Guard may successfully perform its peacetime police functions and become an efficient part of the Navy during wartime, there is authorized to be constructed three cutters of 20 knots speed, a Coast Guard station and air base in Alaska, and 15 seaplanes of 2,000 mile cruising range. The additional facilities will materially enhance the effectiveness of the Coast Guard activities.

ESSENTIAL MILITARY MATERIALS

(Approved June 7, 1939. Public Law No. 117, 76th Cong.)

There is authorized to be appropriated the sum of $100,000,000 for the fiscal years June 30, 1939, to and including June 30, 1943, for the purpose of acquiring and storing strategic materials necessary to the Army, Navy, and industry for defense purposes.

The Secretaries of War, Navy, and Interior are directed to determine the kind of materials to be purchased. These officials, after determining the need for the materials and after determining the domestic production to be insufficient, shall direct the purchases of supplies, and shall provide storage and maintenance and rotation of supplies where necessary because of deterioration.

The Bureau of Mines and the Director of Geological Survey are to investigate the resources of strategic materials and to inquire into the feasibility of increasing domestic production of such essential minerals.

EXPERIMENTAL EQUIPMENT

(Approved July 15, 1939. Public Law No. 178, 76th, Cong.)

The Secretary of War is authorized to purchase abroad or in the United States, with or without competitive bidding, such ordnance, signal, and chemical-warfare equipment as is necessary for development and experimental purposes.

The purpose of the law is to foster national defense by obtaining samples of new equipment and accessories, and testing them to determine whether or not they may be adapted to our national defense. This authority is limited to sample purchases, and any purchases of larger quantities must be made through regular channels.

NAVAL CONSTRUCTION

(Approved April 25, 1939. Public Law No. 43, 76th Cong.)

The act of May 17, 1938, increased the authorized strength of the Navy and created a board of officers to study and determine the need for additional naval facilities. This legislation is based upon the report of the board, known as the Hepburn Board, and authorizes the Secretary of the Navy to proceed with the con-

struction of certain projects with approximate costs as listed below:

Kaneohe Bay, T. H	$5,800,000
Pearl Harbor, T. H	2,800,000
Johnston Island	1,150,000
Palmyra Island	1,100,000
Wake Island	2,900,000
Kodiak, Alaska	8,750,000
Sitka, Alaska	2,900,000
San Juan, P. R	9,300,000
Pensacola, Fla	5,850,000
Jacksonville and Banana River, Fla	17,000,000
Norfolk, Va	500,000
Quonset Point, R. I	1,000,000
Tongue Point, Oreg	1,500,000

The approximate cost for each project may be varied upward or downward by an amount not to exceed 25 percent, but the total cost is limited to $65,000,000. These expenditures are to be made for the purpose of widening and deepening channels or harbors; development and construction of ramps and other needed equipment used by long-range patrol planes; for providing facilities for necessary repairs, maintenance and storage; for additional training facilities and other related activities.

In addition, the Secretary of the Navy is authorized to proceed with the construction of aeronautical engine and materials laboratory buildings at the Naval Aircraft Factory, Philadelphia, Pa., at a cost not to exceed $1,800,000.

Whenever the Secretary of the Navy believes it to be necessary to the national defense and believes the existing facilities of the Naval Establishment to be inadequate, he is authorized to employ outside engineering corporations, firms, or individuals for the production and delivery of designs, plans, drawings, and specifications required for naval public works or construction of naval vessels, aircraft, etc., without reference to the Classification Act of 1923, as amended, or to section 3709 of the Revised Statutes of the United States. However, no fee may exceed 6 percent of the estimated cost of the project.

In order to speed up the construction program on projects outside the continental limits of the United States, the Secretary of the Navy is authorized, with approval of the President, to enter into contracts upon a cost-plus-a-fee basis. Fees shall not exceed 10 percent of the estimated cost of the project as determined by the Secretary of the Navy. Negotiations shall be between the Secretary and three or more qualified firms, and a naval officer may be detailed to duty under each contract as an executive representative of the contracting officer representing the Government. He shall have authority to attend any meeting of the board of directors or other executive or administrative board or committee so as to ask questions, obtain information, and otherwise act to protect the interests of the United States.

The Secretary of the Navy shall annually report all such contracts and submit copies thereof to the Congress.

NAVAL PUBLIC WORKS AND CONSTRUCTION

(Approved June 2, 1939. Public Law No. 106, 76th Cong.)

In keeping with the administration's program of expanding and modernizing the national-defense facilities, the Secretary of the Navy is authorized to proceed with construction of a number of public-works projects.

These projects are located in many parts of the United States and its possessions, and include construction and repair of drydocks, barracks, explosives manufacturing plants, dispensaries, hospitals, radio direction finders, etc., together with necessary equipment and accessories.

The maximum authorization contained in this act for such purposes is $53,231,500.

RAILROAD REORGANIZATIONS

(Approved July 28, 1939. Public Law No. 242, 76th Cong.)

There is hereby provided a means for alleviating the financial difficulties under which certain railroads are laboring because of heavy capital structures or maturing obligations. The act is intended only for roads in temporary financial difficulties and shall not be in operation after July 31, 1940, though actions initiated prior to that time may be completed in due course.

Roads in temporary financial difficulties may, upon agreement by creditors representing 25 percent of creditor claims, submit to the Interstate Commerce Commission a plan for solution of its difficulties. If the plan is approved by the Commission and by two-thirds of the road's creditors, the railroad may then file a petition with the proper United States court asking authority to carry out its program of adjustment.

There shall then be convened a special court of three judges who will carefully examine all phases of the plan and will take all necessary steps to protect the creditors, stockholders, and the public. After concluding its investigation, the court will file an opinion relating its findings and decision; and, in the event of its approval, shall enter a decree confirming the plan which shall be binding upon the petitioner, creditors, and security holders.

An application for appeal from the final decree of the special court may be made to the Supreme Court within 60 days after the entry of such decree.

RELIEF AND WORK RELIEF

FOR FISCAL YEAR ENDING JUNE 30, 1939

(Approved February 4, 1939. Public Resolution No. 1, 76th Cong.)

This act appropriates the sum of $725,000,000 to supply needed funds for the conduct of the relief program from the date of its enactment to the close of the fiscal year ending June 30, 1939. In the event of an emergency necessitating an additioal appropriation, the President was requested to submit an estimate of the deficiency and to explain the circumstances giving rise to the emergency.

The administrator of the relief program was directed to investigate relief employees with the object of eliminating any persons not in actual need, and a restriction was placed on the use of funds to prevent civil-service workers from being paid from this source if the appointment to civil service was made subsequent to January 10, 1939. No part of the appropriation may be used to establish factories which would compete with existing industries.

No alien may be employed under this act or the Emergency Relief Act of 1938, and all employees are required to file an affidavit setting forth their citizenship status. Preference in employment is to be shown veterans.

Restrictions are placed on political activity with the object of protecting employees from political pressure. Persons employed in a supervisory capacity are forbidden to take an active part in political campaigns or the management of them, and no person is permitted to solicit contributions. Punishment by fine or imprisonment is provided for violation of these provisions.

No person refusing bona fide private employment shall be eligible for employment, and anyone accepting such employment and losing it through no fault of his own shall be entitled to immediate reinstatement in his previous employment.

ADDITIONAL APPROPRIATION FOR 1939

(Approved April 13, 1939. Public Resolution No. 10, 76th Cong.)

By this legislation there was appropriated to the Works Progress Administration the sum of $100,000,000 for the purpose of carrying out the relief program.

This appropriation was in addition to the $725,000,000 appropriated by the act of February 4, 1939, which is known as Public Resolution No. 1 of the Seventy-sixth Congress.

FOR FISCAL YEAR ENDING JUNE 30, 1940

(Approved June 30, 1939. Public Resolution No. 24, 76th Cong.)

There is appropriated the sum of $1,477,000,000 for the purpose of aiding the Works Progress Administration to carry on its program for the fiscal year ending June 30, 1940. Unexpended balances under previous enactments are also to remain available.

These funds will be used for administrative purposes, for projects approved by the President under the appropriation acts of 1935, 1936, 1937, and 1938, and for public works such as highways, public buildings, recreational facilities, public utilities, rural electric systems, sewer systems and water supply, transportation systems, flood control, drainage, irrigation, conservation, eradication of insect and fungus pests, fertilizer for farmers, educational, professional, clerical, cultural, recreational, production and service projects, and aid to self-help associations for the benefit of the needy.

Expenditures for other than labor costs may not exceed $6 per month per worker except that the Commissioner of Work Projects may authorize an increase where it is necessitated by a rise in material costs but in no case shall the average exceed $7 per month per man.

After January 1, 1940, not more than three-quarters of the cost of non-Federal projects may be borne by the Federal Government, and at least one-quarter of such costs must be borne by the State, Territory, etc.

The following maximum limits are placed on administrative expenditures: Salaries, including the field service, $42,500,000; communication service, $600,000; travel, $4,200,000; printing and binding, $500,000.

The Commissioner of Public Works shall send a list of all employees receiving $1,200 per annum or more to the Congress on the first day of each regular session.

The sum of $100,000,000 is appropriated to the National Youth Administration to continue its work in caring for the needy youth of the Nation by means of projects approved by the President under the Relief Act of 1938; by supplying part-time work and training to needy persons no longer in school and unable to secure employment; by helping deserving young persons to continue in schools, colleges, and universities.

One hundred and forty-three million dollars has been appropriated to the Farm Security Administration for the following purposes: farm-debt adjustment, loans, relief, prosecution of projects approved by the President under the 1938 Relief Act; projects to be approved by the President such as provision for additional water facilities, construction and operation of migratory labor camps, and land development to provide work relief for homesteaders on rural rehabilitation projects. Recipients of relief payments under this section may be required to perform useful work on public projects.

In addition to the above-mentioned appropriations, funds are provided for administrative and other expenses of several of the regular Government departments and emergency agencies.

Funds appropriated by this act are to be spread over the fiscal year ending June 30, 1940, so that no additional appropriations

will be needed for these purposes. The Commissioner may allocate not more than $60,000,000 to other Federal agencies so that they may carry out projects authorized in this act but not more than 4 percent of such allocation may be used for administrative expense; furthermore, no allocation may be made for any project if the employment of non-relief persons exceeds 10 percent of the total number of persons employed.

Federal construction projects may not be undertaken unless there has been an irrevocable allocation of sufficient funds to complete the project, and no non-Federal project shall be undertaken unless the sponsor has made a written agreement to finance a fair share of the cost. Limitations are placed upon the construction of any Federal or non-Federal buildings.

The Commissioner is to establish a monthly earning schedule for persons employed under this program and the hours of labor are to be fixed, with certain exceptions, at 130 hours per month while being limited to 8 hours per day and 40 hours per week, except in cases of emergency, etc.

Preference is to be shown veterans in employing persons on these projects and any person, except veterans, who has been continuously employed for more than 18 months shall be removed and shall not be eligible for reinstatement for a period of 30 days. No person shall be retained whose work habits or work record indicate he cannot satisfactorily discharge the duties assigned him, and no one may be employed until the need for his employment has been certified.

All persons employed under this act must make affidavit as to citizenship, and periodic investigation is to be made to weed out ineligibles or those who are not in need. No person who refuses a bona fide offer of private employment at prevailing wages may be employed or retained in employment under the provisions of this act. Such persons shall be eligible for reinstatement upon the expiration of such private employment.

Employees paid out of funds appropriated by this act are exempted from the President's order governing the civil service, and such employees may be hired and paid without regard to the Classification Act of 1923, as amended. The act prohibits the use of funds for theater projects except for the purpose of winding up the affairs of such projects and discharging obligations already incurred.

Strict limitations are placed upon the political activities of employees or officers paid from these funds, and heavy fines and penalties are provided for violation of the restrictions.

None of this money may be used in such a manner as to bring about the production for sale of manufactured articles which would compete with the products of existing industries. Exception is made in the case of municipal electric plants in communities not now adequately served at reasonable rates.

Such funds may not be used for the acquisition of arms or implements of war; for the building of naval vessels or other such purposes.

Any administrative official having general supervisory authority, except those serving at the time of enactment of this law by authority of other law, who is to be paid a salary of $5,000 per year or more shall be appointed by the President, by and with the advice and consent of the Senate; and the salary of any such appointee shall not be increased for a period of 6 months following confirmation of the appointment.

DISASTER LOAN CORPORATION

(Approved March 4, 1939. Public Law No. 2, 76th Cong.)

In order to relieve distress caused by disasters such as floods, fires, windstorms, etc., the Disaster Loan Corporation was created; it is continued in existence by this act, and an appropriation of $20,000,000 is authorized for the purpose.

(Amends 50 Stat. 19, 211.)

LOANS TO INDUSTRY

(Approved March 4, 1939. Public Law No. 2, 76th Cong.)

Since the advent of the Roosevelt administration, the Reconstruction Finance Corporation has been given broad powers with which to fight the depression. Its functions, among others, are to make loans to business, agriculture, and commerce; to provide emergency assistance for financial institutions; to aid in liquidating frozen assets, etc. This legislation extends the life of the Corporation until the close of business, June 30, 1941.

(Amends 50 Stat. 5, 49 Stat. 1186, 47 Stat. 9, 50 Stat. 19.)

RELIEF TO WATER USERS UNDER RECLAMATION PROJECTS

(Approved May 31, 1939. Public Law No. 97, 76th Cong.)

The Secretary of the Interior is authorized and directed to determine what users of water from reclamation projects are unable to pay construction charges to the Government because of crop failure or because of other circumstances beyond their control. Extensions of time for payment may be granted in such cases where insistence upon payment would result in great hardship and where unpaid construction charges would preclude the delivery of water from such projects during 1939.

—

SOCIAL SECURITY AND WELFARE

RAILROAD UNEMPLOYMENT INSURANCE

(Approved June 20, 1939. Public Law No. 141, 76th Cong.)

This legislation is designed primarily to simplify and clarify existing law. Certain minor changes in the 1938 act are contemplated for the purpose of making the act more effective.

Service in Mexico by employees of the Pullman Co., etc., would be substantially eliminated because of the difficulties involved in administration. The 1938 act is amended so as to delete the definition of part-time workers in order that all railroad workers may be treated alike. The result will be less complexity in the law and more equitable and efficient handling of claims.

The waiting period required before an employee is eligible for unemployment benefits is simplified to 1 of 15 days in which there are 8 or more days of unemployment.

The provisions of existing law relating to disqualification are liberalized and the Board is authorized to require the employers to file returns of monthly compensation of employees and to distribute annual statements of earnings prepared by the Board.

The transition from coverage by State law to benefits under Federal law is made easier so as to eliminate possible hardship for the employee.

(Amends 50 Stat. 1094.)

UNEMPLOYMENT COMPENSATION

(Approved April 19, 1939. Public Law No. 36, 76th Cong.)

The social-security law provided for aid to the several States in administering their unemployment compensation laws by making grants to cover the costs of such administration in instances where the State laws met with the approval of the Social Security Board. To accomplish this purpose this act makes available the sum of $80,000,000 for the fiscal year ending June 30, 1939. A like amount is to be made available for each succeeding fiscal year.

(Amends 49 Stat. 648.)

—

TENNESSEE VALLEY AUTHORITY

PURCHASES OF PUBLIC UTILITY PROPERTIES

(Approved July 26, 1939. Public Law No. 224, 76th Cong.)

The Tennessee Valley Authority Act of 1933, as amended, is further amended to permit the acquisition by the Authority of certain electric utility properties owned by the Tennessee Electric Power Co. and the Southern Tennessee Power Co., pursuant to a contract between the interested parties. Other properties of the Alabama Power Co. and the Mississippi Power Co. are authorized to be purchased.

Funds are authorized for rehabilitating such properties, for expense in connection with joining the new properties to the existing system and not to exceed $2,000,000, is authorized for use in aiding local governments to purchase any utility properties referred to in the above-mentioned contract.

The T. V. A. may issue its bonds to effect these purposes but may not issue them in excess of $61,500,000. An annual report of expenditures authorized by this act is required to be filed with the President and the Congress.

—

VETERANS

BENEFITS TO WORLD WAR VETERANS AND DEPENDENTS

(Approved July 19, 1939. Public Law No. 198, 76th Cong.)

Existing statutes governing the eligibility of survivors of deceased World War veterans for death benefits or compensation are liberalized so as to include certain persons heretofore held ineligible and so as to increase the amount of monthly payments to be made to widows of such veterans.

It is estimated that several thousand persons who were formerly ineligible will now be entitled to benefits. Also increases in benefits will be received by approximately 15,000 widows who are already receiving compensation. The cost of increase in benefits has been estimated to be between two and three million dollars annually.

Retired officers and enlisted men of the Army, Navy, Marine Corps, and Coast Guard are placed on a parity basis with other veterans as regards hospitalization and domiciliary care in Veterans' Administration facilities, and are subject to certain regulations providing reduction of monetary benefits to veterans having neither wife, child, nor dependent parent while being furnished hospital treatment, institutional or domiciliary care.

SPANISH-AMERICAN WAR VETERANS

(Approved May 3, 1939. Public Law No. 62, 76th Cong.)

This act seeks to put the veterans of the Spanish-American War on the same footing with the veterans of other wars insofar as hospital and medical treatment, domiciliary care, and burial benefits are concerned. This legislation places these veterans, including veterans of the Philippine Insurrection and the Boxer Rebellion, in the same category as other veterans subject to the regulations of the Veterans' Administration.

—

MISCELLANEOUS

EMPLOYEES' COMPENSATION COMMISSION

(Approved April 1, 1939. Public Resolution No. 7, 76th Cong.)

This act appropriates the sum of $2,000,000 for expenditure during the fiscal year 1939 so as to provide death benefits and disability payments for United States Employees in accordance with the provisions of existing law.

(Amends 52 Stat. 809.)

EXPORT-IMPORT BANK

(Approved March 4, 1939. Public Law No. 3, 76th Cong.)

This legislation extends the life of the Export-Import Bank until January 15, 1941, and provides that the bank may have outstanding not more than $100,000,000 in loans at any one time.

The bank was created February 2, 1934, and has as its purpose the facilitation of exports and imports between the United States and its possessions and foreign countries.

(Amends 49 Stat. 4.)

PETROLEUM

(Approved June 29, 1939. Public Law No. 158, 76th Cong.)

The act to regulate interstate and foreign commerce in petroleum and its products by prohibiting its shipment in interstate and foreign commerce, if produced in violation of State law, is continued in effect until June 30, 1942. This is a continuation of what has been called the Hot-Oil Act.

(Amends 50 Stat. 257.)

SEAMEN'S WAGE ALLOTMENTS

(Approved May 31, 1939. Public Law No. 99, 76th Cong.)

This legislation makes it possible for any seaman to stipulate in his shipping agreement that a portion of his wages shall be paid to members of his family, or that such portion shall be deposited in a savings bank or in a United States Postal Savings depository subject to the governing regulations thereof.

Such allotments must be in writing and must be signed and approved by the shipping commissioner who must examine such allotments and the parties thereto and enforce compliance with the law. No allotments except those made pursuant to this act shall be legal.

Penalties are provided in the event anyone falsely represents himself as an allottee of the seaman.

(Amends U. S. C. title 46, sec. 599.)

THE FRANKLIN D. ROOSEVELT LIBRARY

(Approved July 18, 1939. Public Resolution No. 30, 76th Cong.)

President Roosevelt, realizing that in past years a great many valuable papers of other Presidents had been lost or destroyed or otherwise made unavailable to historians and other interested parties, offered to give his personal papers to the Government, and to donate to the Government 12 acres of land on his Hyde Park estate in the State of New York as a site for a library in which to house such papers and documents.

The purpose of this legislation is to authorize acceptance of such papers and land; to create an administrative board to administer the library which is to be known as the Franklin D. Roosevelt Library; to permit the use of Federal facilities in planning, constructing, and equipping the building. The Government is to be reimbursed for the expense of such construction and equipment.

POLITICAL ACTIVITIES

(Approved August 2, 1939. Public Resolution No. 252, 76th Cong.)

To insure freedom of elections from questionable political influences, the following activities are prohibited:

A. Intimidation or coercion by any person of another person in the exercise of such other person's right to vote, or in his right to vote for or against any candidate for the office of President, Vice President, presidential elector, Senator, Representative, Delegate or Commissioner from the Territories and insular possessions.

B. The use of offical authority by any Federal official or employee for the purpose of interfering with or affecting the election of any candidate for the offices mentioned under (A) above.

C. Promises of employment, compensation, or other benefit, made possible by any act of Congress, in return for any political activity in support of, or opposition to, any candidate or political party in any election.

D. Attempts by any one to deprive any person of employment, or other benefits made possible by act of Congress, because of race, creed, color, or any political support of, or opposition to, any candidate in any election.

E. Solicitation or acceptance by anyone of any contribution for any political purpose whatever from any person known by him to be entitled to, or to be receiving, compensation or other benefit from funds appropriated by Congress for work relief or relief purposes.

F. The furnishing to any political candiate, committee, or campaign manager, for political purposes, of any list of persons receiving compensation or benefits under Federal relief or work-relief appropriations.

G. The use of any appropriation under public-works or relief programs, or the use of authority conferred by such legislation, for the purpose of hampering or coercing anyone in the exercise of his vote in any election.

H. The use of official authority by any employee of the executive branch of the Government so as to influence an election, or the active participation by such officials or employees in political campaigns. (Such persons retain the right of free expression of opinion on all political subjects, and the term "officer" or "employee" shall not include the President, Vice President, persons paid from appropriations for the Office of the President, heads and assistant heads of executive departments, and officers appointed by the President, by and with the advice and consent of the Senate, who occupy policy-determining positions.)

No employee of any Federal agency who is paid from funds authorized by Congress may be a member of any organization which advocates the overthrow of our constitutional form of Government in the United States.

Violations of any of the foregoing provisions of this law will result in heavy fines or imprisonment or dismissal from the Government service.

SOCIAL SECURITY

ADDITIONAL BENEFITS FOR THE AGED AND THE UNEMPLOYED

(Approved Aug. 10, 1939. Public Law No. 379, 76th Cong.)

In an effort to ease the economic hardship of a large number of people who are unable to supply themselves with the necessities of life in accordance with the American standard of living, and believing that all people should be protected insofar as possible against the vagaries of economic factors beyond their control, and further believing that the public health is of national concern to the Federal Government, the President and the Congress have cooperated to liberalize and extend the functions of the Social Security Administration with the object of improving the living conditions of the people of this Nation.

With this in mind, additional requirements are set up providing standards which must be met by the States before they may participate in the old-age assistant program under the social-security law. These requirements are designed to promote efficiency and to more effectively provide for the aged.

1. The old-age insurance tax has been frozen at 1 percent on the worker and 1 percent on the employer for the 3 years, 1940, 1941, and 1942, as against the 1½-percent rates on each under the present act. This will save employers and workers about $275,000,000 in 1940, or a total of $825,000,000 in the 3 years.

2. Only the first $3,000 an employer pays an employee for a year is taxed under the unemployment-compensation provisions. This is already the case in old-age insurance. This will save employers about $65,000,000 a year.

3. Provision is made for refunds and abatements to employers who paid their 1936, 1937, and 1938 unemployment-compensation contributions late to the States. This will save employers about $15,000,000.

4. Thus the savings above mentioned, through 1940, may aggregate some $355,000,000. In addition, such savings for the ensuing 2 years may amount to approximately $550,000,000. This represents total savings of approximately $905,000,000.

Benefits

The old-age-benefits provisions are liberalized so as to advance the date of the start of insurance payments to January of 1940 instead of January of 1942. It is estimated that $2,093,000,000 will be distributed in benefits during the period of 1940–44, an increase of $1,538,000,000 over what was contemplated prior to the passage of this act. An additional 1,100,000 persons under the old-age program and an additional 200,000 persons under the unemployment-insurance program are added.

Under this program each fully insured individual who is 65 years of age and who, subsequent to January of 1940, requests such insurance benefits shall be entitled to receive them until his death. Provision is made for wives to receive insurance benefits subject to certain regulations and restrictions. Likewise, children are also provided for so that they may receive benefit payments upon the death of an insured parent or a parent eligible for primary benefits. Benefits will also be paid to widows and to aged and dependent parents of deceased persons who are eligible under the provisions of this law. A lump-sum death payment may be made in certain cases where it is desirable.

The provision of law requiring half the old-age benefits to be paid by the States and half to be paid by the Federal Government is retained but the maximum amount which may be contributed by the Federal Government, provided such sum is equaled by a like State contribution, is increased from $15 to $20 per month. Hence old-age benefits may be as high as $40 per month.

Federal grants to States

1. The Federal matching for aid to dependent children is increased from one-third to one-half and the age limit raised from 16 to 18.

2. The maximum Federal matching per individual for old-age assistance and aid to the blind is increased from $30 per month to $40.

Maternal and child welfare, vocational rehabilitation, and public-health work

1. Provision is made for a $2,020,000 increase in the authorization for Federal grants to the States for maternal and child-health services. This will increase the present Federal authorization from $3,800,000 to $5,820,000.

2. Provision is made for a $1,020,000 increase in the authorization for Federal grants to the States for crippled children. This will increase the present Federal authorization $2,850,000 to $3,870,000.

3. Provision is made of a $1,562,000 increase in the authorization for Federal grants to the States for vocational rehabilitation work. This will increase the present Federal authorization from $1,938,000 to $3,500,000.

4. Provision is made for a $3,000,000 increase in the authorization for Federal grants to the States for public-health work. This will increase the present Federal authorization from $8,000,000 to $11,000,000.

Administration

1. A Federal old-age and survivor insurance trust fund is created for safeguarding the insurance-benefit funds. The Secretary of the Treasury, the Secretary of Labor, and the Chairman of the Social Security Board are made trustees of this fund.

2. Provision is made to restrict the use of information concerning recipients of State old-age assistance (particularly their names and addresses) to purposes directly connected with the administration

of old-age assistance. This is designed to prevent the use of such information for political and commercial purposes.

3. Provision is made for requiring the States to establish and maintain a system of personnel standards on a merit basis.

4. Other amendments are recommended to simplify and clarify administration of the law.

The chief change in the law is that it turns the old-age insurance into a permanent system of insurance for the aged and their survivors and likewise is a benefit to younger workers and their survivors. In effect, it is a group-insurance policy for 45,000,000 persons.

VICTIMS OF PARALYSIS, PARESIS, OR BLINDNESS

(Approved July 19, 1939. Public Law No. 196, 76th Cong.)

This legislation restores certain benefits to veterans by providing that such persons who are suffering with paralysis, paresis, or blindness, or who are helpless or bedridden as a result of any disability, and who were receiving compensation therefor on March 19, 1933, may be allowed compensation under laws existing prior to the act of March 20, 1933, which placed limitations on veterans' benefits.

The provision barring veterans whose disability arises from willful misconduct is eliminated.

Where such veterans die or have died from causes which this act would recognize as service connected, the surviving widows and children shall receive compensation if otherwise eligible.

It is estimated that 1,100 World War veterans will be restored to the compensation rolls by this law.

MARKETING AND STORING OF WHEAT

(Approved July 26, 1939. Public Res. No. 35, 76th Cong.)

Section 335 (c) of the Agricultural Adjustment Act of 1938, as amended, is further amended so as to liberalize the law dealing with marketing provisions.

A farmer whose wheat acreage does not exceed his acreage allotment may sell, without penalty, the normal or actual production, whichever is greater, of his acreage allotment; also, he may sell wheat from a previous crop if such wheat could have been sold during the preceding marketing year without penalty. Previous to the enactment, a farmer might have been subject to marketing restrictions even though he had complied with the acreage allotment.

A farmer who stores wheat, subject to regulations of the Department of Agriculture, in a lesser amount than would be subject to penalty, shall be presumed to have marketed the amount of wheat which is subject to penalty and which is not stored.

—

TAXATION

THE REVENUE ACT OF 1939

(Approved June 29, 1939, 10 p. m., E. S. T. Public Law No. 155, 76th Cong.)

Corporation taxes

In lieu of the tax now imposed there is substituted a flat corporate tax of 18 percent upon corporations with incomes above $25,000. The new rate will take effect with respect to taxable years beginning after December 31, 1939. The present corporation tax containing the undistributed profits tax feature will be allowed to expire as such tax does not apply to taxable years beginning after December 31, 1939. Corporations with incomes of $25,000 or less are subject to the graduated rates on small corporations provided by existing law. An alternative tax is provided for corporations with incomes slightly in excess of $25,000. Banks, insurance companies, China Trade Act Corporations, corporations in the possessions of the United States, joint-stock land banks, rental housing corporations, and corporations in bankruptcy or receivership are taxed like other corporations; foreign corporations engaged in a trade or business within the United States and mutual investment companies are taxed at a flat rate of 18 percent regardless of the amount of their income; foreign corporations not engaged in a trade or business within the United States are taxed at the rate provided for such corporations in existing law.

With respect to the capital-stock tax, corporations are given the right to increase their capital-stock tax valuations for the fiscal years ending June 30, 1939, and June 30, 1940, but not to decrease such value for such years.

Capital gains and losses of corporations

The existing $2,000 limitation applicable to the capital losses of corporations is repealed, except with respect to domestic personal holding companies and foreign personal holding companies. Under the new provisions, capital losses on assets held for not more than 18 months may be applied only against capital gains on assets held not more than 18 months. If such capital losses exceed such capital gains, the excess loss (if not in excess of the net income) may be carried over into the following taxable year and may be applied against such short-term capital gains of such year. Capital losses on assets held for more than 18 months may be deducted in full against ordinary net income, regardless of the amount of capital gains from such assets. These provisions are applicable only with respect to taxable years beginning after December 31, 1939.

Net operating loss deduction

Taxpayers, with minor exceptions, are permitted to carry over their net operating business losses for a period of 2 years. This provision takes effect with respect to taxable years beginning after December 31, 1939. However, a taxpayer who has sustained a net operating business loss in 1939 will be permitted to carry over such operating net loss in reduction of income for 1940, and, if such net loss is in excess of income for 1940, to carry over such excess in reduction of net income for 1941.

Administrative changes

A corporation which establishes that it is in an unsound financial condition may redeem its bonds, notes, or other evidence of indebtedness in existence on June 1, 1939, at less than their face value without the recognition of gain, if such redemption occurs after June 29, 1939, and in a taxable year beginning prior to January 1, 1943. Corporations may continue bona fide business reorganizations without being subject to taxation immediately upon such reorganization by reason of the assumption by one corporation of the liabilities of the other in the process of reorganization, and will not be subject to tax in the case of such reorganizations in prior years. This change was made in view of the Hendler case (303 U. S. 564). Treasury regulations of long standing, requiring that on the declaration of a stock dividend there should be an apportionment of the basis of the original shares between such shares and the dividend stock for the purpose of computing gain or loss on the sale thereof, are validated. An optional method of taking inventories of goods is made available to all taxpayers on certain conditions.

Excise taxes

The temporary excise taxes, which under existing law expire at the end of June or July of this year, are extended for 2 years, with the exception of the tax on firearms, shells, and cartridges, which is made permanent.

PUBLIC SALARY TAX ACT OF 1939

(Approved April 12, 1939. Public Law No. 32, 76th Cong.)

The compensation of all State and local officers and employees is made subject to Federal income tax for taxable years beginning after December 31, 1938. The compensation of judges of courts of the United States who took office on or before June 6, 1932, is likewise made subject to the Federal income tax. The compensation of all other Federal officers and employees has always been subject to that tax. The United States grants consent to the States to tax in nondiscriminatory fashion the compensation received after December 31, 1938, by all Federal officers and employees. Under reciprocal provisions, and with certain exceptions, the compensation of Federal officers and employees received prior to December 31, 1938, is relieved from State taxation, and that of State officers and employees received prior to such date is relieved from Federal taxation.

—

SECURITIES AND EXCHANGE COMMISSION

TRUST INDENTURES

(Approved Aug. 3, 1939. Public Law No. 253, 76th Cong.)

In furtherance of the administration's policy of requiring complete and pertinent information concerning securities which are to be issued and sold to the public, the Securities and Exchange Commission has been authorized to set up standards with which the sellers of bonds, notes, debentures, and similar securities must comply.

Provision is made for full and complete information concerning such instruments both at the time of original issue and throughout the life of the securities.

The act also provides the means whereby persons to whom such securities are sold may band together for the mutual protection of their interests.

There is further assured the ultimate purchaser of such securities the fair and disinterested services of an honorable trustee who must conform to the highest principles of integrity and conscientious diligence in pursuance of its duty.

When registering securities with the Commission, a statement must be made disclosing (1) such information and documents as the Commission may require to enable it to determine the acceptability of the trustee, (2) an explanation of provisions regarding defaults and notice thereof, (3) the delivery of such securities and the application of proceeds thereof, (4) the release and substitution of property security under the indenture, (5) the satisfaction and discharge of the indenture, and (7) the evidence to be furnished the trustee showing compliance with the provisions of the indenture.

The trustee is required to periodically report to the security holders all pertinent information concerning the relations between the party issuing the securities and the trustee as regards the maintenance of obligations by the issuer, and such other information as will enable the security owner to protect his interests.

Furthermore, the issuer of such securities must perodically report to the indenture trustee such information as shall be required by the Commission. This information will enable the trustee to protect the interests of the security owners.

—

CIVIL SERVICE

RETIREMENT PROVISIONS

(Approved August 4, 1939. Public Law No. 263, 76th Cong.)

This legislation amends the Retirement Act of May 29, 1930, so as to liberalize and extend the provisions governing the retirement of Government employees.

It provides that the benefits of the Retirement Act may be extended to postmasters who have been classified under the civil-service law. An extension of 6 months from January 1, 1940, is

granted to legislative and judicial employees who wish to avail themselves of the privilege of coming within the provisions of the Retirement Act.

Existing law is amended so as to permit an employee, upon his retirement, to elect to receive a smaller annuity than that to which he would ordinarily be entitled, and to specify a survivorship annuity for a designated beneficiary.

The time limitation for execution of claims in cases of employees who at the date of separation from service or within 6 months thereafter are adjudged mentally incompetent may be waived by the Civil Service Commission, but the application for benefits must be filed within 1 year following restoration of competency or the appointment of a fiduciary, whichever is earlier.

In addition to the compulsory contribution of 3½ percent of their salaries, employees may contribute additional sums in multiples of $25 but not to exceed 10 percent of their annual salaries toward the purchase of an increased annuity.

This act is to take effect January 1, 1940.

—

United States Courts

ESTABLISHING AN ADMINISTRATIVE OFFICE FOR THE COURTS

(Approved August 7, 1939. Public Law No. 299, 76th Cong.)

This legislation establishes an administrative office of the United States courts, headed by an administrator, to be appointed by the Supreme Court, at a salary of $10,000 per annum. The Supreme Court will also appoint an assistant administrator at a salary of $7,500 per annum. Such other employees as are necessary to carry out the functions of the office will be appointed subject to the civil-service laws. No such employee may practice law while so employed.

Under supervision of the conference of senior circuit judges, the administrator shall have charge of the following matters: (1) Administrative detail relating to clerical and other personnel of the courts; (2) examination of dockets to determine the need for assistance, transmittal of data to senior circuit judges, etc.; (3) disbursement of money appropriated to support the court operations; (4) purchase and distribution of supplies, etc.; (5) examination of vouchers and accounts; (6) provision of quarters and accommodations for court officials and for the courts; (7) such matters as may be assigned by the Supreme Court and the conference of senior circuit judges.

To expedite the work of the courts, the senior circuit judge of each circuit shall call together a council of the other judges of the circuit at least twice a year to consider the quarterly reports to be submitted by the director and to act as the council deems necessary. Decisions of the council are binding upon the judges of the circuit.

An annual conference is to be called by the senior circuit judge of each circuit which may be attended by circuit and district judges of that circuit and by members of the bar. This conference shall be for the purpose of studying methods of improving the administration of justice within the circuit.

The provisions of this law shall take effect 90 days after its approval.

Reclamation Projects

LIBERALIZATION OF EXISTING CONTRACTS

(Approved August 4, 1939. Public Law No. 260, 76th Cong.)

The Secretary of the Interior is authorized, upon request by water users or their duly authorized representatives, to alter the terms of the repayment or construction charge contracts between the Government and the users of water on reclamation projects. Such alteration may result in the extension of time for repayment of construction charges, etc., but such contracts may not be for a period of time longer than 40 years, nor shall any extension of time exceed twice the remaining period under the existing contract.

Water users under existing contracts may appoint representatives to negotiate with the Secretary of the Interior with reference to alterations of such existing contracts for repayment. When such organizations request it, the construction charges remaining unaccrued may be merged in a total and general repayment obligation which shall be scheduled in such annual installments as the Secretary of the Interior believes will constitute a fair and equitable plan of repayments.

Such repayment may be based on a sliding scale in accordance with variations in crop returns, and provision is made for payments to come due when crop receipts are available. The Secretary may defer the charges whenever he believes it necessary in order to prevent inequitable pyramiding of payments.

Penalties and delinquency charges are to be provided in the contract to be applied when water users default on payments and additional provision is made to protect the Government interests and investments.

The lands involved in existing projects may be classified so as not to place a hardship on persons whose holdings are less productive than other lands, and special consideration will be accorded projects with special problems affecting their ability to repay.

No expenditures may be made nor estimates submitted for new projects until the Secretary of the Interior has carefully examined the proposed project and determined the feasibility of such project.

The authority contained in this law for modification of existing contracts is to remain in effect for a period of 5 years.

Home Owners' Loan Corporation

GRANTING EXTENSIONS OF TIME FOR REPAYMENT OF LOANS

(Approved August 11, 1939. Public Law No. 381, 76th Cong.)

The Roosevelt administration, upon taking office March 4, 1933, sponsored legislation to relieve the distressed home owners of the Nation. The Home Owners' Loan Act of June 13, 1933 (48 Stat., p. 128), was the result. Under that act and amendatory acts there have been more than a million distressed home mortgages refinanced by the Government.

The legislation just approved by the President further amends the Home Owners' Loan Act to permit these loans to be repaid over a period of 25 years instead of a period of 15 years as provided in the original law.

The Corporation, when in its judgment the circumstances of the home owner and the condition of the security warrant such action, is authorized to extend the mortgage for the additional period of years and to make necessary adjustments in the loan payments.

Monetary Control

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

LETTER FROM FORMER REPRESENTATIVE CHARLES G. BINDERUP, OF NEBRASKA

Mr. HILL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. Charles G. Binderup, former Representative from Nebraska:

THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA,
Washington, D. C., August 5, 1939.

Hon. KNUTE HILL,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I notice the New York Sun, in commenting on your bill for monetary control which you recently introduced in Congress, says in an article that your bill is noble in its nature, being intended to restore to Congress the sole power to issue money and regulate its value, to prevent inflation and depression, and to provide a stable currency. This is indeed a compliment to you, friend HILL, coming from a paper that is considered very conservative.

The article goes on to say, "And it starts off with five whereases," of which the following are samples:

Whereas there has developed in the method of conducting commercial banks in the United States the custom of lending the private credit of such institutions under the pretense of lending money; and

Whereas such credit, transferable from one depositor to another on the books of the bank or through clearing houses or otherwise to books of other banks upon the check or order of the borrower or subsequent depositor is now generally accepted in payment of private debts, the said practice in fact provides an uncontrolled and privately created circulation medium of exchange which performs substantially every monetary function in violation of and practical nullification of article I, section 8, of the Constitution of the United States, which vests in Congress the sole power to issue the money of the Nation and regulate its value.

There are others but these give the general drift. The bill proper would require that commercial banks hold all demand deposits "in lawful money of the United States, on hand, or as credit in the Federal Reserve banks of its district," with a proviso that they might also keep part of their deposits in interest-bearing bonds or notes of the Federal Government. A bank short of cash and bonds might make up the total by rediscounting with its Federal Reserve bank so much of its assets as would be necessary. At discretion it could sell "additional common or preferred stock" to its present stockholders or to the outside public.

The bill would set up administrative machinery designed to "expand the currency or credit in active circulation until there is substantially full employment at the wholesale price level of 1926." Some of this would be put into circulation as "social dividends"—pensions of $50 a month to all persons 60 years old or older. A billion would be used to finance the purchase of "individual-type farms, not to exceed $8,000 per unit at 2½ percent yearly." Another $250,000,000 might be spent in assisting children "from the lower-income groups" in acquiring "a desirable education." Any necessary additional expansion would be obtained through further purchases of Government bonds and by developing of the Nation's natural resources.

I am pleased to advise you that a text book for schools is now being completed, the title of which is "Basic Principles of Constitutional Money". The book is definitely nonpartisan in every detail, dealing with facts only, and contains a complete explanation of money and its functions. This book is written in regular school-book style with definitions and questions at the close of each chapter.

The author, Mrs. Etta M. Russell, is a writer and instructor, and has devoted nearly a quarter of a century of her life in the educational field as a teacher and superintendent. Her experience and her thorough knowledge of the monetary question qualifies her excellently for this most important work.

This book gives the simple, basic, and fundamental facts about money, its true nature, function, and importance in the great problem of today—how to distribute the products of modern industry to all of our people, and I might add that the teachings of this book seem to agree entirely with the principles contained in your bill.

Everyone should have the background which this book gives to thoroughly understand our economic or monetary problem. Indeed this step forward has been needed for many years, for monetary education has lagged far behind in our modern program of education.

Sincerely yours,

CHARLES G. BINDERUP.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

PETITION ASKING FOR ENACTMENT OF H. R. 5620, THE GENERAL WELFARE ACT

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

GENERAL WELFARE FEDERATION OF AMERICA, INC.,
Washington, D. C., August 4, 1939.

Hon. SAM HOBBS, M. C.,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: Enclosed you will find petitions signed by voters in your district asking for enactment of the proposed General Welfare Act, H. R. 5620, as follows:

1. R. L. Williamson, 101–103 Tenth Street, Anniston, Ala., and 57 others.

2. J. W. McBryde, Prattville, Ala., and 14 others.

We would appreciate reference to these petitions in the CONGRESSIONAL RECORD under Petitions Received. If you care to send copies of the RECORD to those who have donated their time in obtaining these signatures, we know they would appreciate it.

Thanking you for any consideration you can give to this safe, sane, and reasonable pension measure which is destined to become, in our opinion, the leading issue in the coming campaigns, we remain,

Very sincerely yours,

ARTHUR L. JOHNSON,
Executive and Legislative Secretary.

P. S.—We would greatly appreciate it, as would these petition signers, if you could see your way clear to sign Discharge Petition No. 15 on this bill so that it may be considered by the entire House in accord with American principles.

A. L. J.

Signatures obtained by J. W. McBryde, Prattville, Ala.:

Petition to Congress:

We, the undersigned citizens of the United States, respectfully petition that the Seventy-sixth Congress enact the improved General Welfare Act (H. R. 5620), thus relieving the suffering of our needy citizens over 60 years of age and providing prosperity for America and security for all at 60.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. J. WILL TAYLOR

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

LETTER FROM JOHN J. O'CONNOR TO ARTHUR KROCK, OF THE NEW YORK TIMES

Mr. TAYLOR of Tennessee. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter of Hon. John J. O'Connor, former Representative from New York, to Mr. Arthur Krock, of the New York Times.

WASHINGTON, D. C., *August 5, 1939.*

Re Hatch bill.

Mr. ARTHUR KROCK,
New York Times, Albee Building, Washington, D. C.

DEAR MR. KROCK: Thanks for your letter to me acknowledging receipt of my letter to you of August 3, in reference to your column commenting on the President's statement issued in connection with his reluctant approval of the Hatch bill.

You say:

"Other lawyers tell me that there are decisions which prove that the Court has often examined the statement in debate of the author of a bill or the chairman in charge of it in order to get at the question of intent."

That is correct, providing always that the language of the act is "not free from doubt," and I so stated in my letter to you. That is quite different, however, from the Court paying any attention to the attempt of the President to "make the record" when he approved the bill, or any attention to what the author of the bill, Senator HATCH, said to the President in discussing the bill after both Houses of Congress had passed it.

I note with interest the statement in your letter that "maybe" you should have said in your article that the President's message "should" be competent evidence rather than it "would" be.

Frankly, I doubt if any lawyer experienced in such matters would agree with you. Why should any court pay any attention to what the President or the Attorney General thinks a law means after Congress has expressed its will? To do so would certainly be a drastic departure in judicial construction.

You kindly refer me to the case of *Wright* v. *Mountain Trust Bank* (300 U. S. 440). That case is on all fours with the cases cited in my previous letter to you. Incidentally, Representative WILLIAM LEMKE was of counsel in the case which involved the Frazier-Lemke Act.

At page 463, Mr. Justice Brandeis, in delivering the opinion of the Court, said:

"Since the language of the act is not free from doubt * * * we are justified in seeking enlightenment from reports of congressional committees and explanations given on the floor of the Senate and House by those in charge of the measure."

That is the well-established law, but it affords no foundation for any court paying any attention to what the President said when he approved the law or what the Attorney General said in advising the President as to the effect of the law, or what the author of the bill told the President at the White House after Congress had passed the bill he believed the bill "meant" or what he "intended" by it.

Solely with the idea of "keeping the record straight," I am again writing you.

Sincerely yours,

JOHN O'CONNER,
Former Chairman of Rules Committee, House of Representatives.

One Hundred and Fiftieth Anniversary of the Establishment of the Lighthouse Service

EXTENSION OF REMARKS
OF
HON. COLGATE W. DARDEN, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

SPEECH OF HON. COLGATE W. DARDEN, JR., OF VIRGINIA, ON OCCASION OF THE CELEBRATION AT CAPE HENRY, VA.

Mr. DARDEN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by myself at the one hundred and fiftieth anniversary of the establishment of the Lighthouse Service:

Mr. Chairman, distinguished guests, ladies, and gentlemen, we gather here today to celebrate a very great occasion—the one hundred and fiftieth anniversary of the establishment of the Lighthouse Service—a Service which has rendered since its organization aid and assistance to countless thousands of our own citizens as well as to those of all nations who use the great sea lanes and inland water courses over which they stand guard.

The First United States Congress, in the ninth act which it passed, authorized and directed the Federal authorities to assume the support of the lighthouses, beacons, buoys, etc., which had previously been erected and maintained by the respective Colonies. The act also provided for the erection and maintenance of other aids to navigation.

The original act bore the signatures of distinguished American citizens—officials who are forever associated with the foundation of this great Republic. Muhlenberg signed as Speaker of the United States House of Representatives, John Adams as Vice President of the United States and President of the Senate, and George Washington as President.

I am sure that a few observations in reference to this service will be of interest to you. When the Government of the United States was organized in 1789 there were 12 lighthouses operated by the Colonies—those at Boston, Mass., and Charleston, S. C., being among the oldest. Three lighthouses were under construction but had not yet been placed in operation. Among these were the lights at the entrance to the Savannah River, Ga., and the Cape Fear River, N. C.

Virginia had undertaken to construct a lighthouse here at Cape Henry—in fact, much of the material had been assembled but building had not actually started.

Consequently the Cape Henry Lighthouse, standing on the southerly end of the Virginia Capes and marking the entrance to Chesapeake Bay, was the first lighthouse to be constructed by the United States Government.

The act of March 26, 1790, made the necessary funds available and the State of Virginia ceded to the Federal Government a 2-acre plot of ground for the site. Alexander Hamilton, then Secretary of the Treasury, under whose jurisdiction the Lighthouse Service had been placed, entered into a contract with John McComb, Jr., of the State of New York for the construction of the masonry tower for the light, a frame house 20 feet square and two stories high with a frame kitchen as a dwelling for the keeper and a stone vault 12 feet wide and 20 feet long for the storage of oil—all for the sum of $15,200, to be paid, however, in installments, $4,000 upon signing the contract—this sum to be used by McComb to purchase the necessary materials, $4,000 when the water table was laid, $3,000 when the lantern was raised, $2,000 when the stonework and the lantern were finished, and the remaining $2,200 when the work was completed.

At the risk of spending too much time on this operation I shall make mention of a few of the interesting features of the tower itself in order to show why it has withstood so well the ravages of the passing years and the widely varying seasons.

It was provided that the tower be built in a good and workmanlike manner. The foundation was to be of stone, as was the tower, and sunk to a depth of 13 feet below the water table over the top of which pavement was to be laid, the diameter of which was to be 27 feet 6 inches with a vacancy of about 9 feet in the center.

The diameter of the base was to be 26 feet and the thickness of the walls was to be 6 feet. The height from the bottom of the water table to the top of the stonework was to be 72 feet where the diameter would be 16 feet 6 inches and the thickness of the walls 3 feet. The form of the lighthouse was to be an octagon, having three windows in the east and four in the west.

The lantern was to be supported by eight posts of wrought iron—3 inches square and 20 feet in length—10 feet of which were to be wrought into the wall in the inner part of each corner.

The contract is signed by John McComb, Jr., and Alexander Hamilton, Secretary of the Treasury.

There is then an interesting addition to the effect that on account of the situation of the ground it was necessary to make the foundation of a greater depth and width than had been planned. To this end McComb offered to sink the foundation 20 feet below the water table with walls 11 feet thick; the base to be there 33 feet in diameter at an additional cost of $2,500.

Thomas Newton, Jr., accepted this proposal on behalf of Alexander Hamilton with the further provision, however, that should the cost pursuant to the estimate of McComb appear too high to the President, the extra work was to be determined by three disinterested persons to be mutually chosen. Happily there seems to have been no disagreement on this point, since George Washington approved the agreement on December 6, 1792, in which year the light was first shown.

To superintend the construction of the lighthouse, Mr. Cornick was engaged at $2 per week.

The first keeper of the light seems to have been Laban Goffigan, formerly a resident of Portsmouth, Va.

It is not strange that a tower so carefully and strongly constructed should continue to look seaward to this day, even though it is no longer in active service.

The first lantern seems to have been furnished with eight lamps, each capable of containing six quarts of oil, and hung in two tiers over each other transversely.

This lighthouse, like the others of the same period, passed through various stages of development—the principal changes being in the kinds of oil burned and the introduction of the first lens just prior to the Civil War.

In April 1861 the illuminative apparatus was moved and the lantern destroyed. Shortly afterward a lightship under armed protection was anchored between the two capes and in 1863 the lighthouse was again in operation, protected by a military guard.

The first tower stood about 75 years before there was any indication of disintegration. At about that time cracks began to appear and eventually the tower was declared unsafe.

In 1878 funds were appropriated for a new structure and in 1881 the new tower was completed at a cost of $125,000. The new tower, which is the one in use today, is built largely of cast-iron plates, bolted together along the edges. It is the tallest fully enclosed lighthouse in the country, constructed of cast iron. The lens is 150 feet above the ground and the electric light of 160,000 candlepower is visible for 19 miles.

These few references give you some idea of the equipment necessary for this far-flung service because this light is typical of many others along our coast line.

However, the priceless possession of this great organization is its splendid personnel—with its tradition of devotion to duty. No group in the service of this Republic is more loyal and patriotic than are those who make up our Lighthouse Service.

The highly decentralized nature of the Lighthouse Service today, as well as for the past 150 years, has necessitated personnel policies and procedures quite different from those suitable in other services where large numbers of employees are under immediate supervision. The typical lighthouse keeper, by force of circumstances, has always led a life of considerable isolation, and the Service as a whole has been able to perform its function in a satisfactory manner chiefly for the reason that in general men were selected who could be relied upon for a high degree of faithfulness, devotion to duty, and individual integrity. These basic qualifications for Lighthouse Service duties have not changed through the years.

The operations of the service covering as it does all of our coasts, interior rivers and lakes, and waters bordering outlying territories, impose an unusual obligation of individual initiative on the supervisory officers in charge of the lighthouse districts in recognition of which and of the emergency character of much of the Service work a high degree of responsibility and authority have been imposed on them with results which have been most gratifying. This obligation includes that of personal contact with and supervision of a widely scattered personnel. This task has been done effectively and with sympathy as well as with full understanding of conditions. The welfare of the personnel at large has been one of the first concerns of these officers and on the whole it would appear that there has been a proper consideration of the Government's interest without sacrifice of the individual.

In recent years the conditions of service on board lightships and at the more isolated lighthouses have been materially improved through liberal provisions for leave on shore. The time granted which, as indicated, is in the nature of shore leave, is in addition to regular annual leave, and is for the purpose of compensating for the effects of isolation requiring that even when off duty the men suffer restrictions of their freedom and activities, being unable to normally enjoy such free time.

The personnel of the Lighthouse Service, because of the urgent and hazardous character of the work, must be maintained in a high state of discipline. It was placed under the civil-service rules by President Cleveland. Appointments, employments, and advancements are made solely on a merit basis, for the good of the Service, all persons in responsible positions receive thorough training and extended experience in the work of the Service.

The functions of the Lighthouse Service are well defined, and there has been no expansion or tendency to expand beyond these appropriate functions. There has therefore been no overlapping with other Government activities. These functions, however, have in recent years changed materially in character, involving an increased proportion of highly technical work, and they have had a continually wider application to the commercial and maritime activities of the country.

In more recent years the radio has been adapted to the needs of the Service and the mariner has profited as a result.

Radiobeacons are installed at lighthouses and on lightships, sending out radio signals in all directions for the guidance of ships. Vessels equipped with radio compasses may intercept these signals, and from them determine the direction in which the sending station lies. Each lighthouse or lightship radiobeacon broadcasts a distinctive dot-and-dash signal so that it may readily be identified, and the reception of signals from two or more stations provides a cross bearing accurately establishing the receiving vessel's position.

Radiobeacons have greatly increased the effectiveness of lighthouses and lightships, for they may be heard many miles away when the sending station lies below the horizon or is invisible because of fog, rain, or snow. There are more than 125 of these radiobeacons now in operation, having ranges of from 10 to 300 miles, and covering the entire coasts of the United States and the Great Lakes.

DISTANCE-FINDING SIGNALS

One of the latest means devised by the Lighthouse Service for aiding vessels during fog, are the distance-finding signals. Such signals consist of the simultaneous sounding of a fog signal and a radiobeacon. The signal of the radiobeacon will reach the passing ship instantaneously, while the sound signal traveling through the air moves at a definite speed, which is roughly 1 nautical mile each 5½ seconds. The mariner upon observing the difference in time between the receipt of the radio signal and the sound signal can very simply tell his distance from the sending station. Distance-finding signals are available at all lightships and at many lighthouses.

This year marks not only the one hundred and fiftieth anniversary of the Lighthouse Service, but it also marks, as a result of the reorganization of the Federal departments, its transfer to the United States Coast Guard. These two distinguished services are combined in the public interest.

The citizens of our country have every reason to be proud of them. Each has behind it a record of great achievement. Both have before them the opportunity for service of the highest order.

Behind the Headlines

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

ARTICLE FROM THE WASHINGTON MERRY-GO-ROUND

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in Drew Pearson and Robert Allen's The Washington Merry-Go-Round of August 4, relating as it does to Vermont's senior United States Senator:

Behind the headlines of turbulent wind-up battles on Capitol Hill are two political developments of great significance.

One was the emergence of a new Republican floor leader—courtly, square-shooting Senator WARREN R. AUSTIN, of Vermont.

The other was the formation by die-hard anti-New Deal Senate Democrats of a secret parliamentary organization of their own, with all the trappings of the regular Democratic Party machinery—a floor leader, whips, and general staff.

In Acting Floor Leader AUSTIN the G. O. P. has a sturdy conservative and loyal party supporter, but a man who also believes that principles come before partisan interest. Illustrating his attitude were his votes to confirm Justice Felix Frankfurter and Attorney General Frank Murphy, and his vigorous defense of the sale of war planes to the French.

Other Republicans raged against the two appointments and rushed to make political capital out of the plane deal. But AUSTIN, who would never have named Frankfurter and Murphy himself, readily conceded their ability and integrity. And regarding the sale of planes to France he said, "I will not allow partisanship to influence me in a stand that might be construed as detrimental to my country."

Sixty-two, stocky, well dressed, AUSTIN is a hard fighter but always a fair one. This quality has won him a host of warm friends in all quarters.

One of his intimates was the late Senate Democratic floor leader, Joe Robinson, of Arkansas. Another is Postmaster General Jim Farley, whom he vigorously assailed for canceling the air-mail contracts but who later sent him a photograph with this inscription: "To a real fellow whose friendship I prize."

NOTE.—AUSTIN'S closest friend is his 91-year-old mother, to whom he writes every day he is away from his Vermont home.

Congress No Longer an Order-Taking Body

Annual recurring deficit and rapidly mounting Federal debt has penalized and deceived the American people—House awakened to its responsibilities—must continue efforts to eliminate individual dictation and yoke of excessive taxation.

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. FENTON. Mr. Speaker, I believe this session of Congress will restore public confidence that the House of Representatives has determined to be no longer an order-taking body subject to the dictates of another branch of the Government.

The House has done more in recent weeks to encourage business and restore the Nation's faith in popular government than any other public agency has done in the past 6 years.

Votes to revise taxation in the interest of recovery and a checkrein on the Tennessee Valley Authority as a competitor of private business, are evidence of a new-found courage and independence.

Members of the lower Chamber received little encouragement in their efforts from any other department of the Government, but this did not discourage the Members from deciding important measures by decisive margins.

The reawakening of the House to its responsibilities holds bright prospects for the future—the House is no longer a "rubber stamp."

The strongest guaranty of the preservation of popular government in America is a Congress dominated by a spirit of courage and independence, determined to act in the best interests of the people whom it represents and is supposed to serve.

What the country wants most of all is the healthy recovery of business from depression ills, and jobs for the jobless.

It is indeed gratifying that a check has been made on the so-called spending and pump-priming methods.

The American people have been penalized and deceived through the increase in the annually recurring deficits and the rapidly mounting Federal debt.

The people have been persuaded to ignore or forget that the Federal debt is their debt. The Federal debt touches and, to a degree, impoverishes every man, woman, and child in this Nation. Not only that, not only do the men, women, and children of this Nation owe the Federal debt, but they owe their State, county, municipal, and other governmental unit debts.

The States, counties, and municipalities have been encouraged to squander and spend because they have been encouraged to match funds with the Federal Government in public expenditures.

Since the taxpayer is responsible not only for the Federal debt, but in each State is responsible for his State, county, and municipal debts, this luring into extravagant expenditures of the States and the counties and the municipalities by the Federal Government has amounted to the Government taking one dollar from a taxpayer's pocket and then saying to him, "Spend another one dollar, or two or more dollars, and I will give you part of this one dollar back."

This has been just as true in the Thirteenth District of Pennsylvania as it has been of any other section of the United States.

I desire to incorporate in my remarks at this point some figures showing the population of the Thirteenth Congressional District of Pennsylvania, comprising Schuylkill and Northumberland Counties, the assessed valuation of all taxable real estate in that district, the thirteenth district's share of the national debt on a per capita basis, the ratio of the debt to the assessed valuation in the district, the share of the New Deal debt on a per capita basis, and the ratio of the New Deal debt to the assessed valuation.

The population figures used are based on the 1930 census. The national debt, according to President Roosevelt's Budget figures, will on June 30, 1940 (or at the end of the present fiscal year), be $44,457,845,210. The per capita of national debt on the basis of the 1930 census will, therefore, at the end of the fiscal year of June 30, 1940, be $362. The per capita share of the New Deal debt incurred since March 4, 1933, will on June 30, 1940, be $192.

The assessment figures used in these tabulations were furnished by the bureau of statistics, division of assessments and taxes, Pennsylvania department of internal affairs.

The following statistics show just how my district, Schuylkill and Northumberland Counties in Pennsylvania, are affected in their share of the national debt:

	Population	Assessed valuation of all taxable real estate	Share of national debt on per capita basis	Percent of assessed valuation	Share of New Deal debt on per capita basis	Percent of assessed valuation
Schuylkill	235,505	$126,872,505	$85,252,810	67	$45,216,960	36
Northumberland	128,504	62,195,218	46,518,448	75	24,672,768	40

Of course, this per capita debt laid by the Federal Government upon the shoulders of my constituents in the Thirteenth Pennsylvania District, and the interest thereon, must be paid through taxation.

When we consider the fact, Mr. Speaker, that the actual appropriations of this session of Congress will exceed the Budget estimate, the figures set forth in my remarks are conservative.

Mr. Speaker, I could go on with these figures showing in many ways how my district in Pennsylvania, and my State itself, have suffered from the New Deal system of spending and lending and pump priming; but I have said enough here to amply demonstrate the necessity for a change of administration; a change of system; a return to sane, sound government; a return to sane, sound economics; to sane, sound business; and to sane, sound sense.

If this Congress will go forward along constructive lines that will insure faith and confidence by exercising its rightful prerogatives in behalf of all the people, peace and contentment will come and we will again be a happy nation free from individual dictation and the yoke of excessive taxation.

The Foundation of America

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. BOLLES. Mr. Speaker, Voltaire said that "all the sound of history is the tread of sabots climbing the stairs and the patter of satin slippers going down."

Up this stairway of the centuries, the wooden shoes and sandals of the peasants have clattered to the top, and their wearers have taken over the seats of the mighty, while down the stairs in an unceasing, endless procession, has gone the patter of satin slippers and the glory and fustian and garmenture of those who ruled and reigned without mercy or understanding.

The interval between the close of the American Revolution and the establishment of the Government of the United States was the darkest, most bitter in our history. Across the sea, the defeated British looked with unconcealed joy on the evident breaking down of the new order. They waited in Europe like a hungry pack of wolves for the hunter to sleep when they would again reconquer America. Some here wanted separate States, some a new government with the panoply of empire. There was little sunshine, and great darkness. Israel wandering in the wilderness, wretched, half-starved, and uneasy; fearsome of enemies of the forest and desert, and the signs and portents of nature, was never more in need of the fire from Sinai than the new States created from the American Revolution and the Constitution in 1787.

Mr. Speaker, these thoughts come to me as I read of the coming Wisconsin Day at Valley Forge, when the 161st anniversary of that winter camp of tragic memory—tragic yet glorious in its sacrifice and patriotic devotion to the cause of freedom—will be celebrated.

Out of the Ordinance of 1787 creating the Northwest Territory came five great States, Ohio, Indiana, Michigan, Wisconsin, and Illinois. I want to impress upon you in this hour of national bewilderment, of travail and troubles, when young and old seem to be so worried and distraught, the story of one of those five States. They have billions of dollars in wealth—in lands, in buildings, in great cities with houses and homes and industries. None of these things of material, tangible worth came by magic. Labor, toil, thrift created it.

Thus came Wisconsin into being. Its soil gave laughing refrain in a chorus of crops to the song of the plow. Its lakes and streams, its far-flung wilderness, its prairies and marshes, its lure to the lover of adventure, in two decades of settlement changed forest to farm and village, silence to service, hope to realization, vision to interpretation. A new State was born. It was Wisconsin, and its star took its place on the field of the flag. The foundation of Wisconsin was in the faith of its people.

In Wisconsin we have been a part of the pageantry of an honest civilization. Behind this is a past of honor—a path leading back to another glorious record. There is a scenic vision of pioneers. There is the story of the men and women who came here from the eastern sections of the Nation, and from foreign lands, seeking homes; ever and always following the way that led to the doorstep of a home—the castle and habitation of a sovereign citizen. These men and women were natural builders of empire. Association widened and softened them. They were assimilated into one body politic from common interest. They wrote the wonder epic of the West and became the fountain source of national strength, the shield and buckler for the Nation in times of stress.

The early pioneer lost the narrowness of his vision, as he looked upon God and His works and contemplated in lonely silence the vastness of His domain. So in the Middle West was erected that addition to the mother structure of the United States, which has been its abiding stronghold ever since.

The cornerstone of that structure was liberty; its facade was justice; its carvings and ornaments were prosperity; its embodied spirit was happiness.

When we hear schemers and destroyers talking glibly of the redistribution of wealth, I wonder if they know what they mean in the first or last analysis.

Wealth is not in money, not in Wall Street, New York, or La Salle Street, Chicago, not in banks or in gold or silver. Wealth is in the farms and buildings, in homes and barns and silos and hen houses; in livestock and pastures, in wheat and corn and oat fields; in village homes, in great buildings and little buildings, in sewers and pavements and electric-light poles and gas meters, water mains and automobiles—30,000,000 of them—in docks and wharves and steamships and airplanes; in churches and schools and books and musical instruments; in clothing, dishes and spoons and knives and forks—wherever you look—at trees, growing grass—into the hog pen, the chickenyard or the coal bin, and a thousand other items—there is the wealth of the United States.

Of course, it is divided, but you will readily realize it is not capable of being redistributed by ukase of laws. The reason is clear. Not one single dollar in value of this visible, tangible wealth came by either law or magic. It is the result of labor and labor alone.

No group of 531 men in Congress, or a man in the White House, can create out of nothing one single 5-cent piece of wealth for the people of the United States. The alembic of the alchemist failed to produce gold by artificial process. The alembic of legislation is just as impotent.

But the descendants of those who suffered at Valley Forge and their brethren of the Revolution of 1776 were not alone those who made Wisconsin great and strong. The Badger State was a refuge for the oppressed and persecuted. Fifty thousand Germans escaping from the thralldom following the uprising of 1848 found homes in Wisconsin. Their great leader was Carl Schurz. From Norway came a shipload of settlers who built the foundation for a wide community life. So the Irish, bitterly tired of rack-rents and absentee landlordism and famine, went to Wisconsin. From all western Europe, Holland, Belgium, Bohemia; from Scotland and England, from Denmark, and in a lesser number from France and Italy and Poland, in those early days of growth and expansion, half a million people found homes and a welcome in Wisconsin.

These people were not aliens. They were citizens in their hearts before they left home. They were not parasites, reaping where they had not sown. They chose the road of American sovereignty and had the right to vote. They concocted no schemes to change or overthrow the plan of government. They bit no hand that protected them.

In every little cemetery in the State you will find their names on headstones—the older, yellowed marbles and granites bearing names of men who died in the Civil War, and newer ones of those who helped make up the casualty lists in the World War. Others, too, who died in camp or in battle in the Spanish-American War are there. But great as have been the contributions to the Nation's defense, the real victory has been of peace. Thrift and toil brought the vision of home into reality.

These are the realities that have made Wisconsin great. Here in a setting of beauty, of silver streams and sapphire lakes, of forests which brought riches, of fields that yield bountifully and give pasture to more than 2,000,000 cows, of villages and cities, with industry and shipping and nearly 3,000,000 moving, busy people, the State marches on, keeping step with progress.

The State does not make the people.

The people make the State.

That is Wisconsin.

The Republican Party Is the Party of Reconstruction

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. HALL. Mr. Speaker, if Washington today can be considered a political barometer of only even fair dependence, then on November 5, 1940, the Republican Party will answer the call of the people to again assume control of the Government and to dedicate its best genius and effort to what has ever been its historical task, the reconstruction of the country.

The keen analyst, while finding great interest in the polls currently conducted throughout the country, does not completely measure his evaluation of political trends without considering the greatest poll of all—the legislative poll that is now being daily conducted in the Congress.

When everything is said and done, the reactions of the country find expression in Washington. Here the hustings are reflected. Here public opinion is sifted and weighed by those who must really appraise it in order to act the part assigned to them in a representative democracy as well as wisely to point their political ambitions.

Only a few hours have gone by since the New Deal suffered a stinging defeat through the refusal of the House to even consider the new-fangled Roosevelt lending program—a measure of political deception for which it is hard to find an equal. This action by the House emphasizes the disintegration of the New Deal and is a direct reflection by the country of the demand for emancipation from continued New Deal brainstorms. The Congress is in an extraordinary state of confusion and excitement. New Deal leadership and discipline has no following, and it is evident that many Democrats would rather risk the White House lash than suffer retirement at the hands of their local electorates.

Every observer of official Washington I think will admit that these are crucial days for the New Deal. Never before

has the White House leadership been so impotent and the Roosevelt charm so ineffective. This phenomenon certainly does not find its root here in Washington, but rather the cause lies back home where public indignation and resentment are daily rising stronger at continued New Deal inability to solve the country's economic ills.

NEW DEAL FAILURE

After 7 long years, the country sees its public debt increased by $20,000,000,000; its tragic unemployment rolls fixed between ten and twelve millions, if one takes either the estimate of the National Industrial Conference Board or the figures of the American Federation of Labor; it sees the United States at the bottom of the list in recovery gains throughout the world; it suffers the knowledge that the total wage payments to American labor are less today than they have been for many, many years; it is beginning to feel directly the effects of those subtle changes forced on our democratic system and realizes our rapidly increasing approach to state socialism. Business and labor, together, are more and more feeling the deadening hand of the New Deal. These are simply some of the considerations that show the Washington poll—the greatest of them all—as earmarking the present decline and indicated fall in 1940 of the New Deal.

It has taken the country a long time finally to come to the conclusion that the New Deal is predicated for its survival on spending and lending. Seemingly it knows no other way out, but the people no longer are willing to shunt their minds away from the final day of reckoning. All of the polls indicate that the people are sick and tired of the waste and extravagance of this administration and of its ventures in changes in our constitutional structure. The practical politician knows that had the New Deal attempted to finance its glorious spending program on a pay-as-you-go basis, it would have been swept out of office in 1936.

During the first session of this Congress I think it can be fairly said that the Republican position on national legislation has won not only the approval but the commendation of the country. It will be admitted, I think, that the Republicans in both the House and the Senate have contributed overwhelmingly not only to the defeat of further New Deal hair-raising proposals but also to the accomplishment of beneficial changes, despite Roosevelt objection.

REPUBLICAN ACHIEVEMENTS

In the field of international affairs the Congress, with practically unanimous Republican support, threw back the New Deal's effort to establish a policy of commitment in European entanglements. The Republican strength made the administration back water on its scheme to increase the national debt limit above $45,000,000,000. The so-called Hatch bill, a true reform measure which would purge New Deal officeholders from controlling elections, could never have passed the Congress without the enthusiastic support of the Republicans in both Houses. On other important accomplishments during this session of the Congress the Republicans forced this administration to recognition of public demand.

There are numerous other items, such as those involving the Social Security program where the Republican opposition stood uncompromisingly for the elimination of the fraudulent old-age reserve fund; then there was the elimination of the undistributed-profits tax and an easing of the capital-gains provision; a more realistic W. P. A. policy with emphasis on the elimination of politics and to insuring the benefits of W. P. A. to the unemployed rather than to the New Deal politicians; the removal of the threat of dictatorial powers incident to the reorganization program and retention by the Congress of the power of approval on the merging of certain vitally important independent commissions and offices; the modification of the Government's broader excursion into competition with private industry in connection with the T. V. A. program, and so forth. While the Republicans lost their fight to curtail Roosevelt powers to further devalue the dollar and to put an end to the unconscionable silver-purchase program, their efforts won country-wide acclaim. In my estimation, these accomplishments are real, tangible, and represent great constructive effort and purpose, for which the people are sincerely grateful.

The Republican Party can stride forward confidently. It represents the real leadership for the public demand that is encountered everywhere to put this country back on a sound basis. That leadership will be sustained. Its efforts will be dedicated to the reconstruction of America, in the American way.

Work Projects Administration Employment

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MILLER. Mr. Speaker and Members of the House, yesterday during a lull in the debate on the census bill I went over to the Senate for a few minutes. I entered the Senate Chamber just in time to hear the debate on the motion to suspend the rules and permit approval of an amendment to the bill then under consideration. This amendment would have modified the provision now in the Relief Act of 1939 requiring the Administrator of W. P. A. to discharge all of those who have been employed by W. P. A. for 18 months or longer.

The motion to suspend the rule was defeated and thereby the last chance for action on this subject was gone. A glance at that roll call shows plainly that the members of the Democratic Party would not correct a mistake that was made when the relief bill was passed; they would not act to prevent unnecessary hardship. All of us who voted for the relief bill with the 18-month discharge provision must assume our share of the blame. I for one admit that I made a mistake and I am willing to do whatever can be done to rectify that mistake. However, the blame for not correcting this legislation must be assumed by the Democratic leaders of this Congress.

We passed the Relief Act of 1939 carrying the full amount asked by the President. We put into the law, at the suggestion of the administration, the provision which I am discussing as well as the provision abolishing the prevailing wage on W. P. A.

It cannot be honestly claimed that there was not time to change the Relief Act. On July 17 I introduced a resolution H. R. 7253 the adoption of which would have gone far to relieve the suffering that is being caused by these W. P. A. discharges. If the leadership wanted the resolution adopted, it could have been done in 2 days. To prove this statement I point out the fact that just yesterday the House Banking and Currency Committee was called together for a special session to adopt a resolution making possible the sale of Government-owned cotton to Europe. The committee voted this resolution out in a few minutes and within an hour it had been adopted by the House. Undoubtedly it is by now law. The same could have been done in the case of a resolution affecting W. P. A. workers. It is just as well to state right here that the recent W. P. A. strikes were not called because of the section of the Relief Act which I want to see repealed or amended.

Before we return to our homes it is quite proper that we all know, and that the country should know, just where the blame belongs.

Appropriations, Expenditures, and Obligations of the First Session, Seventy-sixth Congress

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. TABER. Mr. Speaker, for many years it has been the practice of the Appropriations Committee to make reappropriations of large sums of money and almost entirely out of appropriations which would have expired except for the reappropriation. To my mind, an appropriation is an appropriation, whether you call it a "reappropriation" or a "direct appropriation." It takes money out of the Treasury that could not get out in any other way. Therefore, I have always felt that reappropriations should be charged against the year's operations, and I have always included them in the tables that I have prepared, and I shall do so again this year.

We are confronted with a new situation this year. Appropriation bills have been reduced to a certain extent below the Budget estimates by means of contract authorizations, where the funds would not be required until well after the beginning of the next session of Congress, and in some cases not until after the first of next July. It has been customary heretofore to resort to a little of this practice, but in view of the fact that contract authorizations this year have been trebled over any previous year within my recollection, in order to present a fair picture of the operations of this session of Congress I have felt that contract authorizations should also be shown. The following table shows a break-down of the different methods of taking the funds out of the Treasury at this session of Congress:

TABLE I

Total direct appropriations	$9,720,827,313.69
Total permanent appropriations	3,619,934,916.00
Total reappropriations	232,416,332.00
Total contract authorizations	488,420,058.00
Grand total	14,061,598,619.69

This is the largest sum made available to the departments and agencies of the Federal Government for expenditure in peacetime history.

The following table shows a break-down of the amounts made available for each department in the last five sessions of Congress:

TABLE II

Title	1st-74th	2d-74th	1st-75th	3d-75th	1st-76th
Agriculture	$125,157,983.14	$195,565,606.00	$933,783,873.00	$1,089,219,344.00	$1,391,193,433.00
District of Columbia	40,547,115.00	43,500,000.00	47,760,641.00	49,392,686.27	52,386,688.00
Independent offices	777,501,956.20	2,934,751,000.00	1,170,770,677.00	1,596,695,182.00	2,298,240,640.00
Interior	61,220,928.00	116,425,195.00	187,464,006.07	869,065,496.84	223,288,005.00
Legislative	20,746,760.00	23,314,428.00	24,153,536.78	21,762,583.50	22,556,079.00
Navy	458,684,379.00	526,546,532.00	527,829,458.00	552,460,494.00	825,942,201.00
State, Justice, Commerce, and Labor	98,561,895.00	115,012,400.00	127,357,877.00	132,044,795.00	[1] 123,730,220.00
Treasury-Post Office	903,635,678.00	992,524,892.00	2,971,846,413.00	3,954,343,138.00	4,836,097,211.00
War Department	401,998,170.00	577,446,844.00	612,329,767.00	685,577,797.00	549,019,562.00
First deficiency	112,633,830.42	368,234,000.00	948,795,868.89	30,111,009.77	23,765,041.98
Second deficiency	272,901,233.50	2,675,397,537.96	99,737,540.14	291,673,522.50	204,420,059.89
Third deficiency			154,611,238.72		225,347,110.82
Urgent deficiency					3,099,377.00
Interior deficiency		35,000.00			
Emergency relief	4,880,000,000.00		1,974,000,000.00	3,772,405,000.00	1,822,557,150.00
Public acts	102,161,741.47				
Public resolutions	2,635,098.00		472,271,660.00		
Private acts	1,268,332.68				
Rural Electrification Administration		50,000,000.00			
Miscellaneous		10,000,000.00			
Permanent appropriation	2,200,101,127.00	1,505,957,086.82	(2)		
Relief deficiency				250,000,000.00	825,000,000.00
Insect control				2,000,000.00	1,750,000.00
Sugar and crop loans				74,250,000.00	
Labor Department					30,831,470.00
War Department:					
Nonmilitary					306,182,464.00
Supplemental military					293,895,547.00
Employees' Compensation Commission					2,000,000.000
Treasury Department, printing, etc					276,400.00
Petroleum Commission					20,000.00
Total	10,459,756,227.21	10,129,710,521.78	10,252,892,556.60	13,371,001,048.88	14,061,598,619.69

[1] Labor Department made a separate bill this year.
[2] From this year on, permanents carried in the total shown for the various bills.

These figures are as near correct as they can be made. If the statement given out by the chairman of the Appropriations Committee follows the previous practice, they may perhaps leave out either the permanent appropriations, the reappropriations, or the contract authorizations.

The following table shows a break-down of the appropriations of this Congress into regular, permanent, reappropriations, and contract authorizations for each Department of the Government:

TABLE III

Agriculture:		
Regular	$1,194,498,633.00	
Permanent	101,717,800.00	
Reappropriation	94,977,000.00	
		$1,391,193,433.00
District of Columbia:		
Regular	48,002,347.00	
Permanent	3,884,341.00	
Reappropriation	500,000.00	
		52,386,688.00
Independent Offices:		
Regular	$1,668,218,340.00	
Permanent	394,022,260.00	
Contract authorization	236,000,000.00	
		$2,298,240,640.00
Interior:		
Regular	172,679,765.00	
Permanent	23,558,240.00	
Reappropriation	27,050,000.00	
		223,288,005.00
Labor:		
Regular	30,536,170.00	
Permanent	295,300.00	
Reappropriation	0.00	
		30,831,470.00
Legislative:		
Regular	21,851,779.00	
Permanent	704,300.00	
Reappropriation	0.00	
		22,556,079.00
Navy:		
Regular	773,049,151.00	
Permanent	2,185,000.00	
Contract authorization	50,708,050.00	
		825,942,201.00

State, Justice, and Commerce:		
Regular	$122,170,220.00	
Permanent	0.00	
Contract authorization	1,560,000.00	
		$123,730,220.00
Treasury-Post Office:		
Regular	1,700,615,054.00	
Permanent	3,092,554,975.00	
Reappropriated	42,927,182.00	
		4,836,097,211.00
War—Military:		
Regular	$508,789,824.00	
Permanent	18,750.00	
Reappropriated	5,000.00	
Contract authorization	40,205,988.00	
		$549,019,562.00
War—Nonmilitary:		
Regular	305,188,514.00	
Permanent	993,950.00	
		306,182,464.00
War—Supplemental military:		
Regular	223,398,047.00	
Contract authorization	70,497,500.00	
		293,895,547.00
H. J. Res. 83. Relief: Regular		725,000,000.00
H. J. Res. 246. Relief: Regular		100,000,000.00
H. J. Res. 326. Relief:		
Regular	$1,755,600,000.00	
Reappropriated	66,957,150.00	
		1,822,557,150.00
First deficiency: Regular		23,765,041.98
Second deficiency:		
Regular	$157,619,059.89	
Contract authorization	46,800,000.00	
		204,420,059.89
Urgent deficiency: Regular		3,099,377.00
Grasshopper control: Regular		1,750,000.00
Employees' Compensation Commission: Regular		2,000,000.00
Treasury Department, printing: Regular		276,400.00
Petroleum Commission: Regular		20,000.00
Third deficiency:		
Regular	$182,699,590.82	
Contract authorization	42,647,520.00	
		225,347,110.82
Grand total		14,061,598,619.69

Of the $14,061,598,619.69 made available for expenditure, a little less than $1,000,000,000 was spent prior to July 1. Of the balance, perhaps another billion will not be spent until after July 1, 1940. This means probable expenditures in the fiscal year 1940 of approximately $12,000,000,000 in addition to the carry-over appropriations of previous years.

At the present time there is a prospect of gross revenues from all sources to be used toward these expenditures of perhaps $7,000,000,000, including postal revenues, leaving a net deficit in sight of at least $5,000,000,000.

But this is only a part of the serious picture that confronts us. At the end of the fiscal year 1939, the Federal direct debt had increased $3,264,792,095.66; the liabilities of Government corporations in that same time had increased $4,500,000,000. We are now permitting the R. F. C. and a lot of subsidiary corporations to borrow money directly, with a Government guarantee. If the debt of these corporations mounts up as rapidly as it has for the year just passed, the total increase in debt in the current fiscal year (1940) is going to be nearly $10,000,000,000.

We are going to be beyond our debt limit.

The destructive and reactionary policies of the Roosevelt administration have resulted in throwing out of work millions of men. They have prevented successful operations of farming, mining, and business. They have endeavored to make more acute and more direct the distress of the people of the United States; to destroy all private business and establish Government control and operation of everything. Unless the brakes are put on and the people are given an opportunity to do business, we are headed for bankruptcy.

The following table gives the number of employees in the Federal Government beginning June 30, 1930. These figures indicate a steady increase, and it must stop. There has been an increase of 355,000 since the Roosevelt administration came in, an increase of over 60 percent.

TABLE IV

1930	560,456
1931	571,368
1932	570,000
1933	577,170
1934	580,181
1935	751,269
1936	810,418
1937	871,236
1938	855,210
1939	925,260

Since the 4th of March 1933 there has been spent by the Roosevelt administration upward of $50,000,000,000—in 6 years.

At the present time the acknowledged public debt is $40,661,264,822.47; the debt of Government corporations is $13,233,835,247—total, $53,895,100,069.47.

The assets of Government corporations while ostensibly near $13,000,000,000, are actually, in my opinion, less than $8,000,000,000; and our gross public debt at this time is, as stated above, upward of $53,000,000,000—very close to $54,000,000,000—and our net public debt is upward of $45,000,000,000. This just cannot go on.

Radio Correspondents' Gallery

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

OPENING OF RADIO CORRESPONDENTS' GALLERY, JULY 24, 1939

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the proceedings at the formal opening of radio correspondents' gallery, House of Representatives, Washington, D. C., July 24, 1939, WOL–Mutual Broadcasting System, 9:15–9:30 p. m., eastern standard time.

ANNOUNCER. Ladies and gentlemen, we bring you to a room in the United States Capitol, in Washington, D. C.—a room of desks and typewriters, of telephones and microphones—which tonight begins an important and vital career in the American scheme of life—the radio correspondents' gallery of the House of Representatives.

One hundred and thirty-five years ago, when the Capitol Building was constructed, facilities were provided in this democratic Nation to enable the press to keep the people of the country informed as to what their elected Representatives in Congress were doing.

But some 15 years ago a new medium of news dissemination came into being—radio—and since that time radio has been seeking the same rights and privileges for first-hand reporting of the news in Congress that have been enjoyed by a free press throughout these 135 years.

The Mutual network is proud that its own nightly news reporter, Fulton Lewis, Jr., is the individual who finally was responsible for the successful culmination of these efforts. Therefore, it is only fitting that this broadcast formally opening the radio correspondents' gallery should be conducted by Fulton Lewis, Jr. Mr. Lewis.

Mr. LEWIS. Good evening, ladies and gentlemen, welcome to our ceremonies at this formal opening of the Radio Galleries of the United States Senate and House of Representatives.

I feel that this really is a history-making occasion, and I know that I, for one, am proud to be here playing a part in it. In a way I wish you could all be here in person—you who are listening in—because, after all, it's as much your occasion as it is ours * * * but inasmuch as we cannot bring all of you to the ceremonies we are glad to be able to bring the ceremonies to you.

To give you a bit of background. It was just 100 years ago, in 1839, that the Press Gallaries of Congress were set up in their present form * * * and through that century the news that has flowed through these galleries to the American people out in the country has played an all-important part in the building of the American democracy which we enjoy today.

Some 10 years ago the infant radio began to try its own hand in the field of news. In its earlier days it drew that news from the press * * * but it wanted to stand on its own feet, gather its own information, and become an independent news agency in its own right.

Year after year it tried to gain admission to these Halls of Congress, but each time it was turned down, because the press galleries were set up for the press * * * and radio was not the press.

But in this Congress all of that has changed.

In the Senate, two gentlemen stepped forward at this session. They said that old rule should be changed. One was Senator GUY GILLETTE, the Democrat from Iowa; the other was Senator WARREN BARBOUR, the Republican from New Jersey. In the House of Representatives, it was one man who carried the fight—Representative JOHN DEMPSEY, the Democrat from New Mexico. They studied the situation; they introduced necessary legislation at both ends of the Capitol; they put those resolutions through—and these ceremonies tonight are the climax of those efforts—the official opening of the House and Senate radio galleries.

Beginning tonight, thanks to their efforts, radio has its own section marked off in the gallery at each end of the Capitol—full privileges with the newspaper reporters, workroom facilities, with desks, and typewriters, and attendants—and that's what we're celebrating this evening.

Incidentally, we have a very distinguished gathering here this evening: Senator Warren Austin, the assistant Republican leader of the Senate; Senator Warren Barbour, of New Jersey; Speaker William B. Bankhead; Representative Joe Martin, the minority leader of the House; Representative Sam Rayburn, the Democratic leader of the House; Mr. Sol Taishoff, editor of Broadcasting Magazine—I'm not trying to give these names in any particular order, just as they come to me—Mr. Martin Codel, publisher of Broadcasting Magazine; Mr. Neville Miller, president of the National Association of Broadcasters; Representative Eugene Cox, the Democrat from Georgia; members of the executive committee of the Radio Correspondents' Association; Mr. William McAndrew, of the National Broadcasting Co.; Mr. Fred Morrison of Transradio Press, and Mr. Albert L. Warner of the Columbia Broadcasting System.

Mr. Harry Butcher, vice president of C. B. S.; Mr. Frank Russell, vice president of N. B. C.; Mr. Herbert Moore, president of Transradio Press; Mr. G. W. Johnstone, public relations director of WOR, New York, and the Mutual Broadcasting System; Mr. Al McCosker, chairman of the board of Mutual; Mr. A. A. Schechter, director of special events for N. B. C.; and Mr. Howard Chandler Christy, the very famous internationally known artist.

And now, inasmuch as we are speaking to you from the gallery of the House of Representatives, I want to present to you the Honorable WILLIAM B. BANKHEAD, the Speaker of the House. Mr. BANKHEAD.

Mr. BANKHEAD. Mr. Lewis, I feel very deeply that these ceremonies this evening constitute a very important and vital milestone along the way of our great American democracy. Democracy, after all, is government by the people. The citizens of a nation elect certain representatives to conduct their Government for them, and those representatives are supposed to express the will of the people who elected them.

The one great safeguard of democracy is for the people to know, fully and completely, at all times, what those elected representatives are doing. If they are really carrying out the will of the majority, they will be retained in office; if they are not, they will be replaced by someone else.

That is the reason that the free American press has played such an important part in the American system of democracy ever since the Nation was founded. That is why I consider it a notable milestone tonight when radio officially takes its place—independently, but side by side with the press—as a companion function for informing the American people on what is happening in their Government.

There is no question of radio replacing the newspapers. Radio is an additional medium, which broadens the field. It goes into remote places; it brings the developments of the day to far-away listeners, who might have to wait days or even weeks in order to receive their news in printed form. In that way it brings millions of additional citizens into immediate contact with the affairs of the Nation and with the outside world in general.

In performing that vital contribution, to strengthen our democratic system and to make it work more effectively and more truly, it is only logical and proper that radio should have its own rights and privileges, to gather the news which it does disseminate.

And so at this time I take real pride and genuine satisfaction in handing to you, as the first president of the Radio Correspondents' Association of Washington, the key to this new Radio Gallery of the House of Representatives * * * and I have a warm and abiding confidence that radio will forever live up to the great moral responsibility which it takes upon its shoulders at this moment.

Mr. LEWIS. Thank you, Mr. Speaker, and I assure you that radio will forever live up to the responsibility that it takes on its shoulders on this night.

Now, I have here a telegram from America's first citizen, which I should like to read at this time. It is addressed to me as president of the Radio Correspondents' Association, and it reads as follows:

"The formal opening of the Radio Galleries of Congress is an event of deep significance in the evolution of modern communications and marks a decided step forward in the dissemination of news concerning deliberations of our national legislature. Only a well-informed electorate can discharge the duties of citizenship, and the cause of democracy is advanced by every means which carries correct information about public affairs to the farthest end of the country.

"I congratulate the members of the new galleries on the opportunity which is theirs to be pioneers in a great adventure, and I point out what is obvious—that in broadcasting news of actual debate in the Congress, ultimate public opinion will be based on the impartiality and fairness of the reporting. This includes giving equal prominence to both sides of any issue, emphasizing all the implications of the words "equal prominence."

And it was signed "Franklin D. Roosevelt."

And now I want to present to you the father of the radio gallery in the House of Representatives, Representative JOHN DEMPSEY, of New Mexico, who sponsored the resolution at this end of the Capitol, under which radio has been given equal facilities with the press. Representative DEMPSEY, of New Mexico:

Mr. DEMPSEY. Mr. President of the Radio Correspondents, honored guests, and friends. This is an epochal event in the annals of radio, and I am honored and privileged to be invited to participate.

Appreciating, as we in the Congress do, some of the obstacles necessary to overcome before the recognition you are now enjoying was accorded you, and being familiar with the almost unsurmountable difficulties in the path of your now president, Fulton Lewis, Jr., who led the fight which finally terminated most successfully, I feel I should congratulate you.

However, as is usually the case, those who fight the battles do so in order that others may benefit. The people of this Nation and, in fact, almost the entire world, are the ones who really become the beneficiaries by being constantly informed of current events from our National Capital.

Radio has brought great benefits, not only in the way of music and entertainment but that, which, to my mind, is vastly more important, the up-to-the-minute news. In these days when Government is of such supreme importance to the people whom it serves, these gentlemen of the Radio Gallery are able to bring us in closer touch with and give us a more intimate knowledge of its affairs.

A century and a half ago, when the First Congress was legislating for the then infant Republic, weeks passed before the citizens were made acquainted with the affairs of the Government. When they learned what had happened, it was history, too far in the past for them to voice their sentiments or desires.

Today, with the pressing of a button, the flick of a switch, a great portion of the citizenship of the Nation—of the civilized world, in fact—may learn within a few seconds what is transpiring in the Halls of Congress.

We who possess receiving sets appreciate the great benefits they bring us and wish for the day when every home in the land, whether it be in the metropolitan areas or the most isolated rural district, will be equally fortunate.

I feel I cannot let this opportunity pass to congratulate you radio reporters on the accuracy of your news broadcasts. As one who is a constant listener, I often marvel that you are, also, able to make us aware of events that are about to occur.

In conclusion let me impress upon you gentleman of the radio, that if my humble efforts have been of any assistance by your splendid work, I have been amply repaid. You are now and I am sure you will continue to perform a great service to the Nation.

I thank you.

Mr. LEWIS. Thank you, Mr. DEMPSEY. Ladies and gentlemen, that was Representative JOHN DEMPSEY, the father of the Radio Gallery, so far as the House of Representatives is concerned.

And now I present to you Senator WARREN BARBOUR, the Republican from New Jersey, who was cofather, so to speak, along with Senator GUY GILLETTE, the Democrat of Iowa, of the Senate radio correspondents' gallery. Senator BARBOUR.

Mr. BARBOUR. Mr. Lewis, I certainly share your pride in being here this evening—and a very historic evening it is. I am sorry that my colleague, who with me on the subcommittee of the Senate, did his bit to help you accomplish what you have accomplished in this great new field, could not be with us tonight. I am sure that it is going to be well worth while, not only from the point of view of the public, the radio, but the Congress itself, and you certainly have my well wishes for a future that I know will justify an undertaking which you did more to bring about than any other single man.

Mr. LEWIS. Thank you, Senator BARBOUR. Ladies and gentlemen, that was Senator WARREN BARBOUR, of New Jersey, the Republican, who was the cosponsor of the radio gallery in the Senate.

And now I have one voice here that I'd like to have you hear before I sign off the air. I'll see if you recognize it—one of our guests here tonight.

Mr. CARTER. Hello, everyone; this is Boake Carter speaking.

Mr. LEWIS. And now, ladies and gentlemen, we return you to Mr. Stephen McCormick, our announcer.

ANNOUNCER. These few minutes have seen radio take a step forward as a medium for public service. The radio correspondents' gallery in the United States House of Representatives has been formally opened to radio reporters and news gatherers.

This program was conducted by the first president of the Radio Correspondents' Association, Mr. Fulton Lewis, Jr., who is Mutual's regular nightly news reporter from Washington.

This broadcast, originating through the facilities of WOL in the Nation's Capital, was announced by Stephen McCormick. We return you to our Washington studios.

Private Enterprise Must Share the Burden

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, thoughtful persons have continuously implored Congress to discard pump priming and deficit financing as recovery measures. Legislation which was acceptable in an emergency is not always adaptable to a sound long-range program. Pump priming has become a habit. At the end of that road is financial collapse, mass unemployment, and indescribable suffering.

The appeal to terminate pump priming has been answered affirmatively by Congress. In rapid succession the spending-lending bill and the unsound Housing Act were both scuttled. Public opinion demanded this action as a prelude to restored confidence and greater employment in private industry of those millions now out of work.

The American people expect more from their Government than profligate spending. The unemployed expect more than mere relief or a subsistence wage on the W. P. A. pay rolls. Full-time jobs with fair wages in private industry is the goal of honest men who are out of work.

I believe that the preservation of free government in America depends largely upon the efficacy of private enterprise and accordingly I have done my part to remove the Government from the field of private endeavor. A great responsibility now rests in the hands of American businessmen. Idle capital must be put to work. Industry must expand and reemployment must be the battle cry of the day. If our business institutions will perform this task—and they alone can do it—unbalanced Budgets, relief expenditures, and other demoralizing experiments can be buried in the troubled past.

No intelligent person accepts slums as a natural consequence of industrial civilization. They must be razed and livable homes reared in their place. This work can be done by private institutions imbued with a sense of social responsibility. Our industrial system must stimulate itself and cannot rely on the Government for continuing subsidies. The unemployed must be put back to work as a result of economic stimulation so that huge Federal appropriations will be halted. America has an unfilled consuming capacity as the answer to unused productive facilities. The necessary tools for business expansion are ours to use. Economic conditions at this moment are in our favor. The steady upward trend of business in recent months can be accelerated by intelligent, unselfish, and positive action on the part of business leaders.

If business fails to respond to the recent action of Congress, the American people will bs justified in the consequent belief that the appeals of business were in reality complaints, that promises were mere canards. Business must now demonstrate its capacity to solve the problem which they have claimed is rightfully theirs. We who believe in private enterprise and in free government fervently hope that business will succeed and that the stigma of unemployment will be erased from the national escutcheon.

An Invitation to Business

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SCHIFFLER. Mr. Speaker, during the spring President Roosevelt and Secretary Morgenthau appealed to business to cooperate and aid in a recovery in the present depression. They asked that private capital be invested to provide jobs for idle men and women. In return, no assurances were given to businessmen that taxes would be equitably adjusted or reduced, or that the objectives of the New Deal in placing Government funds and property in direct competition with business would be modified or abandoned. Consequently, since there was no overt act indicating cooperation by the administration, the business interests of the country were suspicious and believed that such invitation on the part of the President and Secretary of the Treasury was to induce a greater business activity with the expenditure of energy and capital to provide profits that would, in turn, be employed in competition with such businesses and result in ultimate destruction.

At that time nothing was said as to the attitude of the administration as to its future plans indicating cooperation. Businessmen throughout the country have asked that the Government abandon its efforts to socialize industry and property, and have indicated that in such event private capital could and would cooperate in the solution of the present perplexing economic problems.

Congress has given its signal to the businessmen to move forward in the placing of restrictions upon the Tennessee Valley Authority and other like projects, the defeat of the spending-lending measure, and the housing bill, as well as other constructive and encouraging acts of lesser magnitude. The House of Representatives has given the signal to the people and to business to go forward. I am certain this attitude will continue among the Representatives in Congress and that the orgy of reckless spending has been brought to an end.

It is my sincere hope and desire that the next few months will show activity on the part of the businessmen and women of the country and result in improved business conditions and a vast amount of reemployment of idle men and women, in that when the next session of Congress convenes business will have demonstrated to the country and to the Congress its earnest constructive cooperation.

I include an editorial from the Wheeling Intelligencer, of Wheeling, W. Va., of August 4, 1939, as a part of my remarks.

A CHALLENGE TO BUSINESS

Defeat of the President's lend-spend bill constitutes a direct challenge to American business.

It now is up to business leaders to demonstrate, not only that private initiative can do the job which pump priming failed to do, but that it will do it now that the hand of government has been stayed.

The significance of the historic House revolt is not to be minimized. It marks a turning point in current political history. It closes the case for pump priming. The opposition now has the floor—and it must prove its case if we are not to go back and pick up the collectivist trail again.

Rejection of the President's bill was the result of complete loss of faith in pump priming. The people and the Congress have come to believe that it is impossible to spend back to prosperity. They have become convinced that continued spending by the Government, mounting debt, and growing tax burdens are stifling influences; that they have driven private capital into hiding and implanted fear in the business world. The House vote was a peculiarly responsive reaction to public sentiment.

It becomes necessary, therefore, for private initiative to make good—to prove that this judgment is sound. Mr. Roosevelt, characteristically, says the House's action was a blow to recovery. Had the loans been authorized, he declares, their influence would have been reflected within 90 days in increased employment, accelerated industrial activity, a shrinkage of relief rolls, a reduction in governmental expense. Of course, he has been saying the same thing from the begining of the pump-priming experiment. And we see the negative results. But if business fails to improve, worse still, if it declines still further, we may look for a full chorus of "I told you sos" from the far-flung New Deal propaganda machine. That would mean a perhaps irresistible demand for return to the spending policy. It would mean much more than that. It would mean, in all probability, unavoidable socialism.

For it is well to remember that the bill in question was based on a different concept of spending than that which underlaid its predecessors. It represented a new advance in the move toward collectivism. Whereas the preceding spending programs were offered merely as stopgap enterprises, this latest one was presented as the opening phase of a permanent policy. The money wasn't to be "spent," it was to be "invested." We were told that the

time had come when public welfare demanded that the Government, as permanent policy, invest large sums in industrial activities heretofore considered purely private in character. And the franker members of the New Deal inner circle acknowledged that this meant the eventual taking over of a large part of the industrial plant of the country by the Government. In other words, it meant socialism.

That is why it is so necessary for businessmen to strain every resource in demonstrating that the system of private initiative has not collapsed in this country. True, there remain many retarding influences. Taxes are, to be sure, grievously high. The debt is towering and threatening, and the end is not in sight. The New Deal still is in control, and much of the restrictive force remains active. But a definite break has come. The threat inherent in the lend-spend bill has been removed, and Congress otherwise has given convincing evidence that the "yes" days are over. Business has every reason to believe that most of the grounds for the fear which has paralyzed the business world have been removed—for the time being.

Whether this liberation is to be permanent or temporary depends on what business does. If businessmen fail to recognize their opportunity and to realize the penalty of failure, we will return to the recently abandoned policy in short order, the New Deal will triumph again in 1940, and we will be on our way to socialism in a band wagon. If, on the other hand, the business world rises to the challenge, proves its faith in the system of private enterprise by putting venture capital back to work, and thus brings about promptly a substantial measure of recovery, the New Deal is definitely on its way out and the threat of collectivism is behind us.

Philippine Matters

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

LETTER WITH REFERENCE TO H. R. 198

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks I wish to insert the following letter from a correspondent regarding my resolution (H. Res. 198) calling for a congressional investigation of the Japanese conquest of the Philippines, which has been addressed to the chairman of the House Rules Committee. The letter follows:

Hon. ADOLPH J. SABATH,
United States Congressman from Illinois,
House Office Building, Washington, D. C.

DEAR MR. SABATH: As chairman of the Committee on Rules I should like to address this special appeal to you and to the rest of the committee to bring out therefrom for a vote H. R. 198 by Hon. JOHN G. ALEXANDER asking for an investigation of Japanese infiltration in the Philippines.

It seems to me this is a very important question which is dealt with in Mr. ALEXANDER'S resolution and a matter charged with a large amount of public interest, and, in my opinion, proposing a job which should be done. The resolution makes charges with respect to this question which should be substantiated by an investigation, or disproved. It has been pretty much a matter of common knowledge for sometime, and indeed newspaper and magazine articles have been written about it, that the Japanese are and have been making a peaceful invasion of the islands by settlement and grabbing of essential business enterprises, and I believe an investigation would show this to be true.

Personally I am against ever giving up the Philippines, as the islands are too essential to our economy because of the abundance of essential raw materials and foodstuffs, to say nothing of their military value as an extreme outer line of defense. Independence for the islands will mean their gobbling up in 30 days by Japan, after which our position in Hawaii becomes untenable and even our west coast becomes vulnerable from a military standpoint. I know existing legislation provides for Philippine independence in 1946 but let's get around that and fight for them if we have to. We are going to have to lick the Japs sooner or later anyway.

In the meantime, however, let's give the Japs a good investigating in the Philippines and find out what they are trying to do to us. They have gotten by with far too much already; in fact, they seem to have the whole world bluffed, and it is high time someone was calling their hand.

Very respectfully,

J. CHARLES LINTHICUM.

The Housing Bill

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ARTICLE FROM THE WASHINGTON (D. C.) POST OF AUGUST 5, 1939

Mr. SCHIFFLER. Mr. Speaker, I ask leave to extend my remarks in the Appendix of the RECORD and include therein an article appearing in the Washington Post of August 5, 1939, which I think clearly demonstrates that the Housing Act recently defeated was not in any sense self-liquidating, but utterly and completely socialistic.

In addition to the authorization to the United States Housing Authority to issue bonds in the amount of $800,000,000, such provided for annual contributions by the Federal Government of $45,000,000,000, for a minimum period of 60 years, or an aggregate amount of $2,700,000,000, which in no instance and under no provision of such bill would ever have been returned to the Federal Government.

I voted against such bill because of the tremendous cost to the taxpayers of the country with so little in return to those who at this time are in need of better housing. Any program which is truly American in character and which will aid in providing decent homes for our citizens, both urban and rural, will receive my complete support.

The article to which I refer is as follows:

FACTS DOOMED HOUSING ACT—NOT SELF-LIQUIDATING

(By Mark Sullivan)

For Congress' rejection of the housing bill there were several reasons. One can be identified definitely. The bill purported to be an "$800,000,000 housing bill." That is the way it has been described for weeks, in speeches, statements, and newspapers.

Of course, those who draft any measure must necessarily use technical and legal terms. They cannot be held responsible for the loose phrases by which popular talk and print describe the bills. No one can charge indubitably that the housing bill was written with intent to deceive. The obscurity of it, or the double-meaning of it, may have just happened, naturally, as a result of the technical language that had to be used, the intricate provisions that had to be included.

Those who wrote the bill can defend themselves against any charge of misleading by pointing out one simple, convincing fact: When finally the bill was read with analytical care by one Congressman, he was able to find that it was much more than an $800,000,000 bill—and by pointing that out to Congress was largely responsible for the defeat of the measure.

The bill was also described as "self-liquidating," which would mean that all the money paid out, or guaranteed by the Government, would be paid back. That term "self-liquidating" was more or less official. It was used by President Roosevelt himself in the recent message in which he asked Congress to pass this and similar appropriations. The word "self-liquidating" was also used by officials of the Housing Authority, the Government agency which wanted the bill and would administer it if passed. In the debate in Congress an official of the Housing Authority was quoted as having said that the $800,000,000 provided by the bill was "absolutely returnable, every dollar, with interest"; that the bill would "not cost the public a penny."

This was the impression Congress had. Under this impression, most of Congress was sympathetic to the measure. But the day the bill was up in the House a young Democratic Congressman from Tennessee, Mr. ALBERT GORE, arose and showed clearly that the project was not self-liquidating and that it would cost several times $800,000,000. He said:

"The United States housing program is in no respect self-liquidating. It is not contemplated that any revenue from any project will ever be returned to the United States Government. * * * The United States Housing Authority is guilty of disseminating the most reprehensible, misleading information."

When Mr. GORE concluded his analysis of the bill and condemnation of it he received conspicuous applause—and the bill was doomed. (Incidentally, Mr. GORE'S performance shows that a young Congressman serving his first term can, by intelligence and industry, impress himself on the body with his first speech and push himself to the front.)

There is, as often, a partial explanation of the difference between what the bill seemed to be, and what it was. The bill provided $800,000,000, to be loaned to cities and other agencies, for building houses. That $800,000,000 for building really was returnable by the cities, absolutely. It was to be paid back to the Government in 60 annual installments.

But at the same time, and in the same contract, the Government was to do another thing. It was to pay to the cities annual contributions for 60 years. These annual payments of the Government to the cities were greater than the payments of the cities to the Government. In the net, the cost to the Government over a period of 60 years would be about $2,700,000,000, none of which would be repaid.

The explanation made by friends of the bill, quite accurately, was that the cost of the buildings was one thing—while the annual payments by the Government to cities were a separate thing. These annual payments by the Government were for the purpose of enabling the cities to rent the houses to persons unable to pay an ordinary rent. The annual contributions by the Government were, so to speak, a subsidy by the Government to the rent of low-income families. The Government would lend $800,000,000 to build the houses—and would get that back. At the same time the Government would give $2,700,000,000 to subsidize operation of the houses for 60 years—and would get none of that back.

But after all explanation, the fact remains that the housing bill was going to cost the Government about four times what it purported to cost. This amount, not self-liquidating, seemed to Congress excessive. But even more, Congress felt it was being misled. Congress has come to feel that the New Deal is sometimes artful with words. They have found that when, in the early days of the New Deal, they were passing measures written out by New Dealers without scrutinizing them, they put on the books some things they would not have enacted if they had fully understood them.

It is a fact that the New Deal sometimes practices adroitness with words. An example is the use recently of the term "Government investing." They use this newly invented term to describe and justify many of the expenditures of the Government. But what they now describe as "Government investing" is the same thing which, a few years before, Mr. Roosevelt described and vehemently denounced under the old terms, "Government spending" and "borrowing" and "deficits."

Will Rogers

EXTENSION OF REMARKS

OF

HON. SAM C. MASSINGALE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MASSINGALE. Mr. Speaker, with all that has been said or may be said as to the worth of Will Rogers, the half will not have been told. He came across the American scene with the dust of the corral still on his boots, a lariat in his hands, a product of that pioneer horde which pushed back the southwestern frontier—a son of that colorful pageant which with twinkling eye, a hoot and a "holler," and a laugh, braved the exigencies of a new world.

He made us laugh at our social ambitions, at our political pretentiousness. He once said, "I don't try to be funny. I just read what Congress is doing and report the facts." Intellectual snobbishness he ridiculed. All he knew, he said, was what he read in the papers. The world daily anticipated his little box in the afternoon papers. He held up to our attention those situations which were often sore points in public concern—points on which the fate of nations might turn; and in his simple homespun philosophy, with a shaft of humor, he lighted the way and left us with clear vision and a chuckle of amusement.

Although Oklahoma is justly proud to claim the birthplace of Will Rogers, no State, no country can appropriate him. The world was the sphere of his activity and influence and all mankind his benefactor. I may say that, in my opinion, his supreme characteristic was love of mankind. High or low, rich or poor, saint or sinner—all were Will Rogers' friends. He loved his country, his friends, his family, and the human race. His was truly an unselfish life. The essential elements of his life are epitomized in the language of the poet:

He is true to God who's true to man;
Whatever wrong is done
To the humblest and the weakest
'Neath the all-beholding sun,
That wrong is done to us;
And they are slaves most base
Whose love of right is for themselves
And not for all the race.

National Health Bill, Admission of Refugee Children, Immigration, Anniversary of Death of Justice Cardozo

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ADDRESSES OF HON. ROBERT F. WAGNER, OF NEW YORK

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix the following:

NATIONAL HEALTH BILL

Speeches and articles: Problems of Social Welfare Planning Within the Federal Government—Dr. Martha M. Eliot, Assistant Chief, United States Children's Bureau, and chairman of the Technical Committee on Medical Care of the Interdepartmental Committee to Coordinate Health and Welfare Activities.

Here's to Your Health—Collier's, July 15, 1939.

Letters and petitions: American Association for the Tuberculous, Inc., petition containing 6,000 signatures.

Washington News Letter on Social Legislation, poll of State health departments on national health bill.

ADMISSION OF GERMAN REFUGEE CHILDREN

Article: My Day, by Eleanor Roosevelt, Washington Daily News, July 19, 1939.

Article: Let Them In, by Raymond Moley, in Newsweek, July 10, 1939.

Washington News Letter on Social Legislation—poll.

IMMIGRATION

Letter and statement from the New York Committee, American Committee for Democracy and Intellectual Freedom, July 19, 1939.

ANNIVERSARY OF DEATH OF HON. BENJAMIN NATHAN CARDOZO

There being no objection, the matters were ordered to be printed in the Record, as follows:

NATIONAL CONFERENCE OF SOCIAL WORK,
Buffalo, N. Y., June 19, 1939.

PROBLEMS OF SOCIAL WELFARE PLANNING WITHIN THE FEDERAL GOVERNMENT—THE WORK OF THE INTERDEPARTMENTAL COMMITTEE TO COORDINATE HEALTH AND WELFARE ACTIVITIES AND THE TECHNICAL COMMITTEE ON MEDICAL CARE

(By Martha M. Eliot, M. D., Assistant Chief, U. S. Children's Bureau, chairman, Technical Committee on Medical Care)

Planning by the Federal Government for the development of social-welfare activities with all the many ramifications of service that this term applies has, in general, been opportunistic in character, and certainly has been influenced by the special needs of the times and the extent of understanding on the part of the people of how the needs may be met. This is, perhaps, to be expected from the very nature of the democratic process under which our Federal Government works. Though certain agencies have a major interest in social welfare, actually all executive departments and many independent agencies are concerned in one way or another with the social welfare of the people. Various techniques have been devised to bring about coordination of action of the several departments and agencies at the Federal level and in the Federal-State

relationships and responsibilities that exist when Federal agencies administer grants-in-aid to States. It is the purpose of this paper to illustrate one method of coordinating Federal activities and Federal responsibility for program planning by the work of the Technical Committee on Medical Care, a subcommittee of the Interdepartmental Committee to Coordinate Health and Welfare Activities.

It is obviously not possible for me to deal with the major subject of this session in any comprehensive way, but a brief reference to the use of committees or commissions by the Federal Government as devices for coordination of activities and program planning may help in an understanding of the work of the interdepartmental committee to coordinate health and welfare activities.

Through the years the Chief Executive of the United States under his authority derived from the Constitution has transmitted to the Congress reports and recommendations for legislative action in the social-welfare field that have been prepared by committees or commissions of his appointment. To avail himself of expert opinion on various matters of current concern to the Nation and to equip himself, as directed by the Constitution, "to give to the Congress information on the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient," the President must turn to persons, both inside and outside of government, who are informed in the special fields of his interest. The device of the advisory or the interdepartmental committee has been repeatedly used to this end; the interdepartmental committee to study interagency relationships and to review and coordinate administrative programs and policies, the advisory committee to aid in the formulation of policy and to recommend action. The executive departments also have used the device of advisory committees to study and report upon various problems in this field of social welfare. Furthermore, the Congress has itself from time to time created interdepartmental and other committees to study or to administer programs of social welfare. The membership of such committees, regardless of whether they have derived their authority from Executive order or from act of Congress, has varied greatly. Sometimes the members have been selected from among Government officials only, as in the case of interdepartmental committees; sometimes from among informed citizens, as in the case of purely advisory committees; sometimes from both groups.

During recent years an unusual number of such committees have been concerned with problems of general social welfare and their deliberations and reports have formed the basis of action by Congress or of interdepartmental agreements and joint action. For instance, the Committee on Economic Security, a committee of Cabinet officers, created by Executive order of the President, acting with the advice of an advisory council of informed citizens, a technical committee of Government officials, and a staff of experts, produced the report and made the recommendations for legislation which laid the foundations for the Social Security Act. A still more recent committee of quite different composition was the Advisory Committee on Education appointed by the President. This committee was composed of members of widely diversified backgrounds and interests and included individuals appointed from various Federal agencies, and others from the fields of business, organized labor, agriculture, the profession of education, and public administration. The reports of this committee, developed as a result of studies by a staff of experts in the field, have likewise been transmitted to the Congress by the President and have formed the basis for legislation now pending before the Congress. The National Commission on Law Observance and Enforcement, known as the Wickersham Commission, appointed by the President 10 years ago, is an example of a committee composed of citizens rather than of Government officials. The work of many other committees created by Executive order for special purposes could be cited.

The Interdepartmental Committee to Coordinate Health and Welfare Activities was created by Executive order immediately after the passage of the Social Security Act in August 1935 in order that the full benefit of the varied Federal programs under the provisions of the act might reach with minimum delay and maximum effectiveness the individual men, women, and children for whose aid and service the program was brought into existence. The Social Security Act had imposed on the Federal agencies new and heavy responsibilities in addition to those already carried in the health and welfare field. Because of the extent of these new services and the distribution of administrative responsibilities for them among various Federal agencies, the need for the coordination of planning and program procedure was readily apparent. Obviously, duplication of work and effort, and conflict in policy or procedure among the Federal agencies needed to be prevented, and common understanding and action developed.

The creation of an interdepartmental committee was a logical approach to the solution of these problems, and as members of this committee the President designated at first four assistant secretaries of Government departments—the Treasury, Interior, Agriculture, and Labor—and the Chairman of the Social Security Board, and sometime later added the Surgeon General of the Public Health Service and the Administrator of the National Youth Administration. There was thus created for the first time a committee of Government officials charged with responsibilities of studying health and welfare activities of Federal agencies, of making recommendations, and of coordinating the programs of Federal agencies in these fields.

When first outlining the duties of this Interdepartmental Committee, the President said:

"I am directing this Committee to include within the scope of its work not only health activities, but closely related activities as well. As to its immediate task, I am instructing this Committee to assume responsibility for the appointment of special committees to be composed of physicians and other technically trained persons within the Government service to study and make recommendations concerning specific aspects of the Government's health activities."

"I am confident that this procedure will facilitate the consummation of a series of appropriate cooperative agreements between the various departments of the Government. I am also hopeful that in this way we can eventually bring about a complete coordination of the Government's activities in the health field."

The use of technical committees composed of persons within the Government service to study and make recommendations concerning specific aspects of the Government's health activities was thus defined at the start and was the authority for the work of the Technical Committee on Medical Care as it related to the national health program.

Later, in an Executive order issued by the President on October 27, 1936, the Interdepartmental Committee's duties were amplified, as follows:

"It shall be the duty of this committee (1) to continue to sponsor appropriate cooperative working agreements among the various agencies of the Government in the health and welfare fields, and to continue the work under agreements already in effect; and (2) to study and make recommendations concerning specific aspects of the health and welfare activities of the Government, working toward a more nearly complete coordination of the activities of the Government in these fields.

"The committee will continue to function through the special technical committees it has set up from time to time, and will designate additional committees to deal with new problems."

A small staff consisting of a part-time executive secretary, a research assistant, and a clerk was appointed and financed through contributions of the major executive departments or agencies represented on the interdepartmental committee.

The Interdepartmental Committee device provides a medium through which all the technical and administrative competence of the Federal personnel can be brought to bear on a particular problem and insures that all phases of the problem will be fully explored before final decisions and solutions are proposed.

The Interdepartmental Committee's first task was the setting up of technical committees to work out immediate cooperative agreements between Federal agencies functioning together in the States through grants-in-aid under the Social Security Act. Various fields of activity opened up at once, some involving interdepartmental problems of limited scope, as in the case of public-health nursing, others of much wider interdepartmental interest. The Interdepartmental Committee itself served as a board of review and approval of action taken by the technical committees. When agreement on technical considerations was reached by a particular committee a memorandum of agreement or a report was prepared, reviewed, and acted upon by the Interdepartmental Committee.

One of the earliest of the technical committees established, cited here because of the simplicity and effectiveness of action taken, was concerned with public-health nursing activities of Federal agencies. Its membership was composed of representatives of the two agencies most directly concerned, namely, the Children's Bureau of the Department of Labor and the Public Health Service. Under the provisions of the Social Security Act, the public-health nursing programs of each had been materially extended.

The need for a plan of coordinated action in order to prevent possible duplication or overlapping in this line of activity was obvious. A formal working agreement was developed involving interdepartmental relationships at the Federal level and close interdepartmental collaboration with respect to policy and program planning in Federal-State relationships. The agreement was unanimously approved first by the technical committee and immediately thereafter by the Interdepartmental Committee. The work of this technical committee has continued but without further formal action.

Another technical committee somewhat similar in organization to that of the public-health nursing committee is the Technical Committee on Industrial Hygiene, composed of officials from the Division of Labor Standards of the Department of Labor and the Office of Industrial Hygiene Investigations of the Public Health Service. This committee considered the coordination of efforts made by each agency to promote industrial-hygiene activities in the States and arrived at a working agreement which was formally adopted by both agencies concerned. The agreement stated the common objectives of the two Federal agencies in the program, pointed out the division of function between them, and outlined a similar division of function for the work of State health departments and State labor departments.

The work of these two committees indicated very clearly that the field of interest must extend into that of Federal-State relationships and be concerned with program planning as well as actual coordination of Federal activities strictly within the Federal Government.

At the Federal level it was apparent that there was need for coordination of programs of research, of plans for the education of the public through published bulletins and reports, of programs of assistance or service rendered by Federal agencies or under the administrative supervision of Federal agencies. With

respect to Federal-State relationships the work of the technical committees soon made it clear that the committees must be concerned not only with interagency agreements on scope of the Federal program and content of consultation advice given by Federal representatives, but also with the scope and adequacy of the various State programs supported by the Federal grants-in-aid and with the gaps in each individual type of program or between related programs. The technical committees provided opportunity to pool information with respect to the needs of the States and the sources of information and aid. Having determined the gaps in existing programs, the logical next step in the work of a number of technical committees was interdepartmental planning as to ways and means of meeting the needs.

Altogether 14 technical committees have been appointed, and representation on the committees includes 28 divisions or bureaus of 6 executive departments and 8 independent agencies. As rapidly as any single subject of interest took form a technical committee was set up to deal with the problems presented. The range of subjects covers, in addition to the two already mentioned, food and nutrition; crippled children; public health and safety education; recreation; the Indian medical service; the Farm Security medical service; workers' education; medical care; the needy blind; personnel standards; probation, parole, and crime prevention; and transient and migration problems.

Although the general plan of technical-committee procedure has been the formulation and adoption of working agreements with respect to coordination of activites and divisions of responsibilities, this practice has varied in different ways to meet needs peculiar to the individual committees. So we find committee structure ranging from the simple, informal, discussion group of two or three members to one of complex design with division of its work and membership into groups dealing with research, planning, education, etc. The Technical Committee on Food and Nutrition is an example of this more complex structure. Here, because of the fact that 22 Federal agencies are definitely concerned with one or another phase of the problem of food and nutrition, the organization of the committee had to proceed along much more complicated lines and resulted in the appointment of a steering committee, subcommittees, and study sections to deal with special aspects of the subject. Another committee on which as many as 14 Federal agencies have membership is that on recreation. This committee not only has concerned itself with the Federal program relating to leisure-time activities and the arts but has given special consideration to the expanding needs of communities which became apparent as Federal-State problems were brought up.

The technical committee which has brought before the public the work of the Interdepartmental Committee more definitely than the others is the Technical Committee on Medical Care. In one way or another each of the executive departments of the Federal Government and many of the independent agencies are concerned with the problems of providing medical care either to employees or wards of the Government or to those persons in the population who are unable to do so from their own resources because of lack of income, inadequate income, or inability to budget for the costs of care.

However, the provisions of the Social Security Act and other acts of Congress for grants-in-aid to the States for various public-health activities and for research in this field have placed major responsibility for Federal-State cooperative programs and for study of the need for health and medical services on the Public Health Service, the Children's Bureau, and the Social Security Board. The Social Security Board was empowered by the Social Security Act to study and make recommendations as to the most effective methods of providing economic security through social insurance, and as to legislation and matters of administrative policy concerning old-age pensions, unemployment compensation, and related subjects. Both the Public Health Service and the Children's Bureau are empowered in the organic acts creating them or in other acts of Congress to investigate problems related to health and medical care and to administer grants-in-aid to States for public-health and medical services.

Approximately 1 year after funds became available under the Social Security Act for grants to the States for public health and maternal and child health, the Interdepartmental Committee appointed a small, informally organized committee of one representative each from the Public Health Service, the Children's Bureau, and the Social Security Board to explore the need for a more formal committee on medical care and to make recommendations as to the scope of work that might properly be undertaken by such a committee. The usefulness of such a technical committee as a clearing house for health and medical activities within the Federal Government and in Federal-State relationships was obvious from the start; the possibilities of its usefulness in the coordination of Federal-agency interests in program planning early became apparent.

During the spring and summer of 1937 this informal committee explored, with the aid of the Interdepartmental Committee staff, all existing activities of the various Federal agencies concerned in order to ascertain the scope and magnitude of the work, the cost, the statutory authority, the groups in the population served, and other phases of the work. Informal conferences with members of other agencies not represented on the committee brought individual problems concretely before the committee. The data so gathered and the already apparent usefulness of the informal committee in pooling the interests of Federal agencies in health and medical service resulted late in the summer in the formal organization of the committee and in definite instructions as to the scope of its work. The committee, including in its membership two additional members of the Public Health Service staff, was charged to survey the health and medical-care activities of the Federal Government, to evaluate the work, to determine where the program fell short, and to make recommendations to the Interdepartmental Committee as to next steps.

To accomplish such a program was a large task, but the technical committee was fortunate in having in its membership persons already fully informed as to previous studies of medical care, the National Health Survey, various other investigations by official and nonofficial agencies, and the current administration of health services under the Social Security Act. Time was not lost, therefore, in prolonged study of reports of previous work, and the efforts of the committee could be directed toward evaluation of current activities with a view to appraising the scope and effectiveness of service being rendered, the gaps in the programs, and the ways in which these gaps might best be filled.

Further interviews and conferences were held with responsible representatives of other Federal agencies concerned with public assistance, work relief, public works, and farm security, and with individuals outside the Government who were informed on the need for or provision of medical service, including persons interested in hospital administration and public-welfare and public-health administration. Throughout its deliberations the committee constantly kept in mind two things: (1) The necessity of laying a sound foundation of public-health services on which the structure of medical care could be properly built, and (2) the primary importance of providing adequately for maternity and for the care of children.

As the studies of the technical committee progressed, two facts became increasingly clear: (1) That existing services for the conservation of national health are inadequate to secure to the citizens of the United States such health of body and mind as they should have; and (2) that nothing less than a national comprehensive health program can lay the basis for action adequate to the Nation's needs.

Convinced on these two points, the committee proceeded to draft a report to the Interdepartmental Committee embodying first a statement of need for a national health program and, second, the committee's recommendations as to ways of meeting the need. This report was submitted to the Interdepartmental Committee in January 1938. After careful consideration and revision the report was finally approved by the Interdepartmental Committee and submitted to the President in February 1938. The section of the report dealing with the need for a national health program was at once made available for distribution in order that it might be fully discussed.

On March 8, 1938, the President wrote to the chairman of the Interdepartmental Committee as follows:

"I suggest that your committee give consideration to the desirability of inviting at some appropriate time representatives of the interested public and of the medical and other professions, to examine the health problems in all their major aspects and to discuss ways and means of dealing with these problems."

Following this suggestion, the Interdepartmental Committee called the National Health Conference to meet in Washington July 18 to 20, 1938, to present and discuss the needs of the people of this country for health and medical services and for the reduction of the economic burdens caused by illness, as revealed by governmental and other studies; and to discuss steps which may be taken to meet these needs, as proposed by representatives of the Government and by members of the conference.

Invitations were sent to approximately 275 men and women from the medical professions, from public and private agencies actively interested in health and medical services, and from labor, agriculture, and other groups of citizens. A total of 176 of those invited attended the conference and participated in its discussions. The recommendations of the technical committee were laid before the conference in complete detail.

As stated by the chairman of the Interdepartmental Committee to Coordinate Health and Welfare Activities, those in attendance at the National Health Conference were not asked to endorse any of the specific recommendations of the technical committee on medical care. The recommendations were laid before the conference and the country for attention and constructive criticism.

In her closing remarks at the conference, the chairman of the Interdepartmental Committee made it clear that the committee would continue to explore the opinion of the various groups represented and to seek the advice of members of the conference and others as to next steps in the implementation of the program.

During the following months many conferences were held by members of the interdepartmental and technical committees with individuals, committees, and groups of individuals to explain and discuss and explore the implications of the recommendations.

During this period at least 35 national organizations, professional and nonprofessional, representing large numbers of individuals went on record as favoring part or all of the recommendations of the technical committee. You are familiar, no doubt, with the action of the American Medical Association approving in principle the first three recommendations and the fifth recommendation of the technical committee, and the action of the American Public Health Association and the committee of physicians for the improvement of medical care, endorsing in principle the objectives of the entire program. Resolutions or statements

from 17 other national organizations concerned with the provision of medical care have been submitted to the Interdepartmental Committee. Great interest in the national health program was manifested by organizations representing the purchasers and consumers of medical care and action has been taken in favor of the entire program or of some of the recommendations by such bodies as the American Federation of Labor, the Congress of Industrial Organizations, the American Farm Bureau Federation, and the Associated Women of the American Farm Bureau Federation, the National Women's Trade Union League, the National Federation of Settlements, the General Federation of Women's Clubs, the American Legion, and the National Consumers' League.

At their request formal conferences were held during the fall and winter months with committees representing 18 professional or nonprofessional organizations. The organizations requesting these conferences include the American Medical Association, the American Public Health Association, the American Hospital Association, the Catholic Hospital Association, the Protestant Hospital Association, the Committee of Physicians for the Improvement of Medical Care, the American Dental Association, the National Medical Association, the National Organization for Public Health Nurses, the American Public Welfare Association, the American Association of Social Workers, the American Association of Medical Social Workers, the National Tuberculosis Association, the National Committee for Mental Hygiene, the Birth Control Research Bureau, the American Osteopathic Association, the National Chiropractic Association, the American Optometric Association.

During these conferences many controversial points were thoroughly discussed, light was thrown upon aspects of the program that had not been made sufficiently clear in the report, and misunderstandings were cleared away. Complete agreement on the main features of the program was reached in many of the conference discussions, and substantial agreement on many phases of the program by all the groups.

During this period of conference discussions the Interdepartmental Committee and the technical committees weighed carefully the opinions that were expressed relating to administration, scope of program, methods of financing, methods of maintenance of quality of care, groups of the population to be included, the functions of Federal and State agencies, and many other problems related to the implementation of the program. As a result of these deliberations a final report to the President was drawn up by the Interdepartmental Committee covering the essential points of the program as laid before the National Health Conference but altering in one respect the original recommendations. The final report was submitted to the President in January 1939 and transmitted by him to the Congress later in the month.

The details of the National Health Program itself you will hear shortly from Dr. Falk.

The technical committee on medical care in formulating recommendations for a broad program of health and medical services has carried out, in part at least, the original instructions of the President when he asked the Interdepartmental Committee, through the use of special committees of physicians and other persons within the Government service, to study and make recommendations concerning specific aspects of the Government's health activities. The usefulness of the Interdepartmental Committee and its technical committees as a device for coordinating the work of the various departments and agencies of Government has, in my opinion, been proved. As a device for interagency planning for action in the field of social welfare its usefulness has also been clearly demonstrated.

In our scheme of democratic government, which gives to the Chief Executive responsibility for making recommendations to the Congress for legislative action, it is important that the technical and administrative knowledge and experience of experts within the Government service, as well as from without, be made available from time to time to the Chief Executive. This, of course, may be done and is done through the heads of executive departments when the problems under consideration involve but one department. When, however, the need for legislative action cuts across the functions of several departments, as happens in the fields of health and welfare, the use of an interdepartmental committee to bring together facts and make recommendations to the Chief Executive has proved to be a valuable method of Government procedure.

The procedure outlined in the Executive order creating and instructing the Interdepartmental Committee to Coordinate Health and Welfare Activities is not actually comparable to the British scheme for a "responsible ministry" which may initiate legislative proposals, but it suggests it, in that responsibility has been given to several executive departments and agencies jointly to make recommendations in respect to improving the health and welfare activities of the Federal Government. As I have pointed out, the problems of social-welfare planning within the Federal Government involve nearly all, if not all, departments and many agencies. Reorganization may bring together many of the agencies with primary responsibility in this field. Unless, however, such a Federal department can include also those agencies whose chief concern is the fundamental interests of wage earners and self-employed persons in industry and agriculture, it would seem likely that the Interdepartmental Committee to Coordinate Health and Welfare Activities would still be necessary for continuous and constructive planning in the Federal Government.

[From Collier's Magazine]

WAGNER PUBLIC HEALTH BILL—HERE'S TO YOUR HEALTH

The extreme hand wringers and viewers-with-alarm estimate that about 40,000,000 persons in the United States are without adequate medical care—almost a third of us. The extreme conservatives in the American Medical Association's upper councils say the figure can't be more than 40,000.

We surmise that the truth must lie somewhere between these two extremes. You usually find the truth somewhere between the extremes in any argument.

We also surmise, as laymen who have consulted informed and intelligent medical men, that the national health bill, introduced in Congress by Senator ROBERT F. WAGNER (Democrat, New York), had better pass at this session or the next.

The bill is being cursed as "socialistic" by medical conservatives, and as timid and inadequate by the aforementioned hand wringers—which indicates to us that it must be about as good a bill as the general run of us could ask for.

For all the pooh-poohing of the A. M. A. big shots, the committee on cost of medical care did find an extremely spotty public-health service situation existing in this country as of the year 1932, when the committee's historic 28-volume report on the subject came out.

At that time almost one-half of the more than 3,000 counties in the 48 States were entirely without registered hospitals. Nor were the larger cities and towns adequately served in all cases. Either sufficient medical service was simply lacking or large slices of the population didn't have the money to pay for the medical service they needed.

That was in 1932. Recent surveys show that we have made little, if any, progress away from 1932 conditions. The depression wolf has kept at least one foot stuck in the door all these years. It looks as if only Federal Government action, with State cooperation, can begin a systematic jacking up of the national health.

Senator WAGNER'S bill is aimed at four objectives:

1. The increase Federal grants-in-aid to State public-health work in the fields of maternity and child care and of control of syphilis, tuberculosis, malaria, pneumonia, cancer, etc.

2. To obtain wider and fairer distribution of hospital beds.

3. To systematize medical care for (a) reliefers and (b) people in the lower income brackets who cannot meet current costs of medical care.

4. To develop some sort of insurance program against wage losses caused by sickness or physical disability.

The bill provides for the governmental machinery that would be needed to administer it. It prescribes certain common-sense standards of service. It makes due allowance for the fact that some States are less wealthy than others. The emphasis is mainly on prevention of sickness and on training of personnel on a scale large enough to meet real public needs. Estimated cost is about $85,000,000 a year—small change, indeed, alongside billion-dollar relief appropriations and proposals to siphon hundreds of millions into seemingly 98 percent phoneys like the Florida ship canal.

Maybe we're naive or starry-eyed, though we hope not, but we can't make out how this bill threatens to regiment the doctors or turn them into a gang of Government clerks, as feared by some of the A. M. A. leaders.

The four objectives listed above were endorsed last September by the A. M. A.'s own house of delegates, which makes the regulations that govern the A. M. A.'s members. The bill itself, far from being one of those overnight inspirations that sometimes come to lawmakers to the grave peril of the Nation, was put together by Senator WAGNER only after long and painstaking consultations with doctors, social workers, and public-health officials.

Perhaps the best single argument in the bill's favor is that it is sponsored by Senator WAGNER, who is a careful and conscientious liberal legislator if there ever was one. Incidentally, we don't owe the Senator anything; we simply throw out this compliment in passing because we happen to mean it.

That the masses of America are demanding more, better, and cheaper medical service is a fact, not theory, whether you like that fact or deplore it. That medical service in this country is spottily distributed is indicated by the best evidence available. That it costs too much in some cases seems well established—though it is equally well established that many doctors do far too much charity work, and that a malodorously high percentage of patients make it a practice to pay the doctor's bill last, if at all.

The Wagner bill looks like the best answer thought up thus far to this complex and urgent challenge. It isn't the best answer imaginable, by a long shot. If it becomes law, defects will no doubt begin showing up immediately, and will have to be plugged by amendments.

But as a starter, this one looks good. It we don't adopt this one or something like it, the politicians will most likely sell us some phony system of compulsory State medicine that will enslave doctors and patients alike to the politicians. We don't believe the majority of Americans want that, any more than they want the present happy-go-lucky medical scramble to carry on unmodified.

After all, our whole national wealth and well-being are based on only two prime foundation stones. One of these foundation stones is the health of the land we live on. The other is the average health of the people who live on that land, in city or country.

Hon. ROBERT F. WAGNER,
United States Senate, Washington, D. C.:

Whereas there are over 600,000 tuberculosis cases in the United States, over 80,000 are discharged annually from sanatoria and hospitals and over 50 percent of these die or relapse within 5 years after discharge, the great majority of whom medical authorities state could have been saved by suitable rehabilitation and aftercare, and provisions for alleviation of these conditions are not now indicated in your bill;

Now, therefore, we, the undersigned, respectfully urge that provisions be included in the national health law for the establishment of a separate tuberculosis commission to be set up for the proper control and handling of all phases of tuberculosis. This commission to create facilities for:

1. Vocational guidance, training, and adult education during hospitalization of the tuberculous.
2. Continuation of this training, if necessary, after discharge from the sanatorium.
3. The graduated employment and rehabilitation of discharged patients.
4. Financial aid for the needy discharged tuberculous who no longer need hospitalization but are unable to work.
5. Work in sheltered shops or camps for the chronic infectious tuberculous who can no longer benefit from hospitalization.

SIX THOUSAND SIGNATURES.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C., July 31, 1939.

Senator ROBERT WAGNER,
Senate Office Building, Washington, D. C.

DEAR SENATOR WAGNER: You may be interested in the results of a poll which has recently been conducted by the Washington News Letter on Social Legislation regarding the national health program. Ballots were sent to all State public-welfare directors. These officials were selected for this poll because their work gives them intimate and first-hand knowledge of the problems of low-income groups. Inasmuch as their official position gives them expert knowledge of conditions among socially disadvantaged groups, their judgment should be of special interest and significance.

Eighty-five percent of these officials replying were in favor of the Wagner health bill, S. 1620. Enclosed is a summary of these replies.

Sincerely yours,

GLEN LEET.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C.

Your ballot:

I do favor the Wagner health program.

Comments: I am, of course, very strongly in favor of this bill, in general. However, the bill should make it clear that States should be allowed to operate the plan according to local set-ups. For instance, the existing policy of having States submit a plan for social security is a far better method than designating some particular agency or agencies. The relationship between dependency and the care of the needy sick is liable to be thrown badly out of balance if this work were taken over entirely by the health department, for instance. Other minor amendments will be needed, but the bill, in general, I favor heartily.

Name: David C. Adie.
Position: New York State Commissioner of Social Welfare.
Address: 112 State Street, Albany, N. Y.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C.

I do favor the Wagner health program.
Comments: An excellent beginning in a most important field.
Name: H. Dewey Anderson.
Position: Director, State Relief Administration of California.
Address: 180 New Montgomery Street, San Francisco, Calif.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C.

I do favor the Wagner health program.
Comments: None.
Name: A. U. Johnson.
Position: Commissioner of Public Welfare.
Address: State Office Building, Baton Rouge, La.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C.

I do favor the general provisions of the Wagner health program.
Comments: None.
Name: P. D. Flanner, director.
Position: Public welfare department.
Address: 315 South Carroll Street, Madison, Wis.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C.

I do favor the Wagner Health Program.

Comments: The Wagner Health Program in its practical application brings into action Federal, State, and local resources to produce happier living conditions for all of us. This investment in health serves to compound the returns on our investments in education and other services and in time will, through its positive effect, pay for itself through the elimination of the bill for ill health which has proved so costly in the past.

Name: Charles F. Ernst.
Position: Director, State department of social security.
Address: Olympia, Wash.

CONCORD, N. H., *June 2, 1939.*

GLEN LEET,
Editor, Washington News Letter,
1733 Nineteenth Street NW.:

Further adoption Wagner's national health program assistance in general medical care program especially urgent.

HARRY O. PAGE,
Commissioner, New Hampshire Department of Public Welfare.

STATE OF NEW HAMPSHIRE,
DEPARTMENT OF PUBLIC WELFARE,
Concord, N. H., June 2, 1939.

MR. GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street NW., Washington, D. C.

DEAR MR. LEET: I am hopeful that Congress will act favorably on Senator WAGNER'S national health program. Surely none of us who works in the welfare field from day to day has any question as to the wisdom of the objectives which the bill sets forth. I know that this is especially true in the case of an expanded program for general medical care. An analysis of direct-relief case loads indicates that the need for medical care is a major reason for a large number of persons applying for relief. In too many instances these people who are able to care for themselves until the need for a doctor or hospitalization comes and who do not want to apply for public aid wait too long before calling for medical care and the result is that longer treatment is required at greater costs. Here in the little State of New Hampshire the medical and hospital expenses for direct-relief cases approximate nearly $400,000 each year and this burden is a terrific one upon the counties and towns responsible for the administering and financing of direct relief. The help which Senator WAGNER'S bill would bring to this program would ease considerably the costs upon political subdivisions in the State and would make for more adequate medical care to the needy.

The other phases of the national health program are equally urgent in their need and would tend to alleviate serious problems which we clearly recognize but which because of a lack of funds we are unable to do anything about.

Sincerely yours,

HARRY O. PAGE, *Commissioner.*

STATE OF MONTANA,
DEPARTMENT OF PUBLIC WELFARE,
Helena, Mont., June 3, 1939.

(Re Senator WAGNER'S national health program.)

MR. GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street NW., Washington, D. C.

DEAR MR. LEET: Your wire dated June 1 has been received asking if I favor the Wagner national health program. Let me confess that I have not had the time to study this bill and plan, but that in a general way I favor the extension of Government health services.

In all cases where the individual cannot help himself, it seems to me that it is the function of the Government to render the service. Only a very few people have the knowledge and skill required for preserving their health and training their physical ailments. It is true that these services may be purchased, but usually they come so high that they are not obtained to the extent that the welfare of the individual requires. Group treatment appears to be the solution, and that usually involves action through some branch of the Government.

When a man working for wages is attacked by disease or accident that requires surgical operations and long stay in a hospital, the economic shock to the family is so great that it takes a long time to overcome its evil effects. This should be remedied.

Health is probably the most valuable asset of a human being, and it should be guarded to a greater extent than is now being done.

With all good wishes.

Sincerely yours,

I. M. BRANDJORD, *Administrator.*

SACRAMENTO, CALIF., *June 5, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street:

Just returned to office. Wagner health program socially sound. Amendments to section 200 welfare institutions code of California now before legislature to meet requirements not passed to date.

FLORENCE L. TURNER,
Director, State Department of Social Welfare.

AUSTIN, TEX., *June 1, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street, NW., Washington, D. C.:

Wagner's bill is based on recommendations of special research group composed of Nation's leading health and welfare experts is progressive and forward looking. Social-security program in America will never be complete without health protection for those who cannot afford medical care. Prevention of the need for medical care more important than protection. But as with old-age assistance prevention is too late and protection essential. Socialized medicine in America is seemingly inevitable.

W. A. LITTLE,
Director, Old-Age Assistance Commission.

STATE DEPARTMENT OF PUBLIC WELFARE,
Columbia, S. C., June 1, 1939.

Mr. GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street NW., Washington, D. C.

DEAR MR. LEET: I am in receipt of your night letter of May 31 asking an expression of approval or disapproval of Senator WAGNER'S national health program, and in reply I will say that I have been able to give only limited consideration to S. 1620, introduced by Senator WAGNER on February 28, 1939. Assuming that your inquiry refers to this measure as embodying Senator WAGNER'S health program, I favor the plan.

Yours very truly,

THOMAS H. DANIEL, *State Director.*

INDIANAPOLIS, IND., *June 1, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street NW.:

In the main I favor Senator WAGNER'S national health program.

THURMAN A. GOTTSCHALK,
Administrator, Department of Public Welfare.

RALEIGH, N. C., *June 2, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street:

Have not read complete text Wagner health bill, but strongly endorse its general principles as outlined in digest of bill.

Mrs. W. T. BOST.

JACKSON, MISS., *June 1, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation:

Favor some kind national health program that will provide hospitalization and medical care needy sick.

W. F. BOND,
Department of Public Welfare.

SANTA FE, N. MEX., *June 2, 1939.*

GLEN LEET,
Editor, Washington News Letter on Social Legislation:

The New Mexico Department of Public Welfare favors Senator WAGNER'S national health program. Preventative health services for the State are insufficient. Hospital facilities and medical service inadequate. No economic protection against loss of wages during illness. Health services and facilities offered by the Wagner national health bill will aid in meeting New Mexico health needs.

MRS. JENNIE M. KIRBY,
Director, New Mexico Department of Public Welfare.

MONTGOMERY, ALA., *June 1, 1939.*

GLEN LEET,
Editor Washington News Letter on Social Legislation:

Retel general principles embodied in Senator WAGNER'S national health program favored by me.

LOUIA DUNN,
Commissioner Alabama Department of Public Welfare.

ST. PAUL, MINN., *June 1, 1939.*

GLEN LEET,
Editor Washington News Letter on Social Legislation:

Strongly favor Senator WAGNER'S national health bill. Only one broad qualification for extension of health services. Namely maintenance of principle of patient's choice of physician.

BENJAMIN E. YOUNGDAHL.

STATE OF MINNESOTA,
STATE BOARD OF CONTROL,
St. Paul, June 1, 1939.

Mr. GLEN LEET,
Editor, Washington News Letter on Social Legislation,
1733 Nineteenth Street NW., Washington, D. C.

DEAR MR. LEET: I regret that I have not replied to your inquiry on Senator WAGNER'S national health program before this date. My wire sent you this morning stated:

"Strongly favor Senator WAGNER'S national health bill. Only one broad qualification for extension of health services, namely, maintenance of principle of patient's choice of physician."

To many of us, it is obvious that there are large areas, both geographic and in the population group, that are not today receiving the proper or necessary medical care and health service. This is true not only among those who today are not beneficiaries of some type of public aid but it even includes many who are on the various forms of public-relief rolls. Many of the present relief programs either carry insufficient funds or are so constructed legally or otherwise as to make it impossible to include the proper amounts in the grants for necessary medical services. In some of the programs the legal maxima alone prevents this inclusion. Among those receiving some type of public aid, perhaps the greatest uncared-for need in terms of medical service is in the so-called direct-relief group. The current tendency of local governments all over the country to economize deprives many not only of positive constructive and rehabilitative medical care, but even in many instances of emergency care. This statement is made with the full knowledge that a large proportion of the doctors are usually willing to give free service in emergency situations.

There is one phase of a health program that I would like to emphasize. I believe it necessary to maintain the fundamental principle of the patient's choice of physician. As far as I am able to interpret it, the Wagner health program does not violate that basic principle. The medical-care programs carried out under F. E. R. A. auspices several years ago were quite successful in many States, and that principle was maintained.

One of the important things about Senator WAGNER'S program is that it tends to put the emphasis on public health in general. It seems to me that it is axiomatic that if we are to increase health happiness in this country, a program of health education and a program with emphasis on prevention must receive a large share of attention.

The Wagner health program will probably do another thing. At the present time governmental health and medical services in most of the States are somewhat uncorrelated and disintegrated. Each program carries its own limited qualifications for medical services, and frequently the total services are somewhat disbursed among several State and local agencies. The Wagner plan will have the tendency to merge health services and to integrate them in one administrative agency or under one competent and qualified medical person.

It seems to me that the Wagner plan is worthy of support.

Sincerely yours,

PUBLIC ASSISTANCE,
BENJAMIN E. YOUNGDAHL,
Director.

[Washington News]

MY DAY—IMMIGRANTS WILL CONTRIBUTE TO OUR WELL-BEING

(By Eleanor Roosevelt)

HYDE PARK, Tuesday.—I have just read a little pamphlet called Refugee Facts, a study of the German refugee in America, issued by the American Friends Service Committee. It is an interesting little pamphlet, and some of the facts I think will be new to many people just as they were to me.

For instance, did you know that under the national origins law, enacted in 1924 and amended in 1929, 153,774 immigrants are allowed to come to this country annually, but of this number Great Britain and Ireland have had as their quota 83,574, and last year only 4,551 people came in under those quotas? This means that not 75,000 came into this country, in spite of the larger quota allowance.

During the 6-year period from 1932 through June 1938 a total of 241,962 immigrants were admitted into the United States for permanent residence. During this same period 246,449 immigrants previously admitted to this country for permanent residence moved away, so that, roughly, during the 6 years of the Nazi regime in Germany, 4,487 more aliens departed than were admitted to the United States. Of course, of the number admitted 50 percent are not looking for employment, being children under 18, married women, or old people.

A number of other interesting facts are in this pamphlet, including the experience which England has had with its recent German refugees, Jews, Catholics, and Protestants. The items which interested me most, however, dealt with refugees admitted to the United States. They were the following: "One German textile man used to own a shirt factory in Germany and sold his wares to South America. Having to leave his homeland, he has transferred his factory to our country and is employing American labor to supply his customers as before.

"Harmonicas and accordions used to be imported from Germany; now a refugee has set up a shop for the making of these instruments and American workers are making them.

"A German firm exported until recently certain types of wool hosiery to the United States. Now the three refugees who had owned this firm have reestablished it in Massachusetts and are employing 38 American workers in the manufacture of goods which have been imported previously from abroad. "Another refugee has brought over from Germany a patented process used in the manufacture of gloves. The firm he established to utilize this patent now does an annual business of $100,000."

Since no country prospers if its population is on the decline, the above facts seem to indicate that these immigrants will contribute to our well-being as have similar groups in our past history. They seem to be, in the main, a group of valuable citizens.

PERSPECTIVE

(By Raymond Moley)

LET THEM IN

Apparently our big, brave American Congress, representing the richest, the most powerful, and reputedly the most generous Nation in the world, is groveling before the prospect of a peaceful invasion by 20,000 children. The Wagner-Rogers bill seems to be stuck in the House Committee on Immigration and to have been reported out of the Senate Committee with vitiating amendments, despite the support and despite the moving pleas of the representatives of nonpartisan organizations and of great religious, educational, and social agencies.

This bill is a grant of authority to admit into the United States not more than 10,000 German children in excess of the present quota during each of the calendar years 1939 and 1940. No child would be eligible for admission who is over 14 years of age, and no child would be admitted unless satisfactory assurance had been given by responsible private individuals or by responsible private organizations that the child would not become a public charge. This is the whole proposal—a grant of authority, to the extent that satisfactory assurances are given, permitting as an emergency matter, the rescue from Germany of a limited number of young children. These German children are of all sorts of religions, but it is hardly necessary to say that this country has never entertained the idea of imposing a religious test upon either people who come to it or those who are here already.

The ostensible arguments against this proposal are hardly worthy of note. The answer to the argument that these children will become public charges is direct and conclusive. Plans have been worked out for the selection and placement of the children. Absolute commitments for their care by individuals and social agencies have been made. Neither will these children become important competitive factors in the labor market. The support of this proposal by both the A. F. of L. and the C. I. O. is our assurance on this point. There is a further argument that we should not take German children if we are unwilling to take the children of other nations who are suffering privation and want. But the situation of these German children is not comparable to the situation of the children in any other nation. The governments of the other nations do not actually drive out children, while the German Government is intent upon getting rid of those children it already treats as outcasts. There is the further consideration that, according to every indication, money raised in the United States for needy children in countries other than Germany reaches those children.

Of course the real obstacle to speedy action on this measure is the fear that debate in the open will loose the tongues of certain Members of Congress who are itching to burn verbal fiery crosses. The threat that such a discussion will be precipitated is contemptible blackmail. It deserves summary treatment. Sponsors of the bill need not shrink from this kind of argument. Their cause is unimpeachable. To permit a few bigoted and misguided individuals to impose a check upon the clear duty of this Congress is to underestimate the common sense and to impugn the integrity of the American people.

Many Americans have had occasion in the past few weeks to hang their heads in shame over the tragic circumstance which turned the *St. Louis*, with its 900 homeless and helpless people, back to Europe. We threw up our hands while little Belgium, among others, opened its doors. This callous indifference ought not to prevail again. Every American able to buy a postcard should remind the American Congress to pass the original Wagner-Rogers bill—in the name of America's generous tradition, in the name of common sense, in the name of simple humanity, in the name of God.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C., July 27, 1939.

Re: Refugee children.
Senator ROBERT F. WAGNER,
Senate Office Building, Washington, D. C.

DEAR SENATOR WAGNER: The Washington News Letter on Social Legislation has been conducting a series of polls on expert opinion on matters of social legislation currently before Congress. We have just concluded a poll to determine the reactions of State directors of child-welfare programs to your bill, Senate Joint Resolution 64, regarding refugee children. The child-welfare directors were selected for this poll as being a responsible group, having expert knowledge of the problems of child placement in America; therefore, we considered their judgments on this matter to be of special value.

Replies received to date indicate that 85.7 percent favor Senate Joint Resolution 64. Enclosed is a summary of these replies.

Sincerely yours,

GLEN LEET.

JULY 11, 1939.

I do favor Senate Joint Resolution 64.
Comments:
I am very much interested in the passage of the Wagner-Rogers bill, and believe that it is important that our Government demonstrate at this time that it is still interested in fostering the ideas of tolerance on which it was originally founded.
It seems to me that its disapproval of the bill will not only deprive children of a possible opportunity for a better life, but will indicate that this country has lost the fundamental ideas of freedom.
Name: Rosemary Reinhold.
Position: Director, Bureau of Community Work.
Address: Department of Welfare, Harrisburg, Pa.

WASHINGTON NEWS LETTER ON SOCIAL LEGISLATION,
Washington, D. C., July 7, 1939.

I do favor Senate Joint Resolution 64.
Comments: In the existing strain and stress which recent developments in Europe have brought to the child life there, it would seem that a country as fortunate as ours should contribute to the greatest extent possible toward the relief of such strain and stress. I would, however, qualify my approval of Senate Joint Resolution 64 by saying that adequate plans made for refugee children in this country should be carefully thought out before their acceptance, both for the sake of this group of children as well as for the sake of the many dependent children for whom our country is now caring.
Name: Helen Richardson.
Position: Acting superintendent, Bureau of Charities.
Address: Oak and Ninth Streets, Columbus, Ohio.

I do favor Senate Joint Resolution 64.
Comments: I am in favor of the above bill because I believe that the strength and resources of this country are great enough to share with this group of unfortunate children in spite of the fact that we are faced with extremely serious problems in relation to our own people. My conviction is strengthened by the fact that the plan of care for these children has been worked out carefully and should mean the absorption of the children into families and agencies without any threat to the children here needing the same type of care. One of our staff members has been active in promoting this bill, having been stimulated to do so by Dr. Marion Kenworthy, of New York. Any promotion of the bill has been done on an individual basis and not as a staff member of the department of welfare, Commonwealth of Pennsylvania.
Name: Helen C. Hubbell.
Position: Supervisor, rural extension unit.
Address: Department of welfare.

I do favor Senate Joint Resolution 64.
Name: N. W. MacDonald.
Position: Director of Social Welfare.
Address: Augusta, Maine.

I do favor Senate Joint Resolution 64.
Comments:
This bill if passed will enable the people of the United States to assume their share of responsibility for providing German refugee children with an opportunity to grow up in a democratic setting.
Name: Lena Parrott.
Position: Superior Child Welfare Service, Bureau Social Welfare, Maine.
Address: Augusta, Maine.

I do favor Senate Joint Resolution 64.
Name: Mary Lois Pyles.
Position: Director, Division of Child Welfare.
Address: State Social Security Commission of Missouri, Jefferson City, Mo.

I do favor Senate Joint Resolution 64.
Comment:
While a State such as ours could not participate in any extensive fashion, the Jewish group here is prosperous and active. The separation of the German children from their own kin and roots is regrettable and unsound, but seems to be a humanitarian necessity at this time. United States seems a logical haven for them.
Name: Beth Muller.
Position: State director of Child Welfare.
Address: 1910 Arch Street, Little Rock, Ark.

I do favor Senate Joint Resolution 64.
Comments:
At present the Children's Service Bureau of the Hebrew Orphans' Home is cooperating with the National Jewish Council in the placement of a limited number of Jewish refugee children in the area covered by the Children's Service Bureau.

Because of limited facilities for child-placing in Georgia and the great needs of the children of Georgia, which are unmet, it is impossible for the State of Georgia to assume any responsibility regarding refugee children.
Name: Henry B. Mays, Jr.
Position: Director, Child Welfare Division, State Department of Public Welfare.
Address: 329 Hurt Building, Atlanta, Ga.

I do favor Senate Joint Resolution 64.
Name: Howard L. Russell.
Position: Secretary of Assistance.
Address: Harrisburg, Pa.

I do favor Senate Joint Resolution 64.
Name: Marion A. Joyce.
Position: Director of division of child guardianship.
Address: Statehouse, Boston, Mass.

I do favor Senate Joint Resolution 64.
Name: Josephine Webster.
Position: Welfare training assistant, New York State Department of Social Welfare.
Address: 112 State Street, Albany.

I do favor Senate Joint Resolution 64.
Comments: I am in favor of the above-designated resolution without reservation.
Name: W. L. Painter.
Position: Director of Children's Bureau, Department of Public Welfare.
Address: Travelers Building, Richmond, Va.

I do favor Senate Joint Resolution 64.
Comments: This resolution was discussed with 12 persons holding responsible social-work positions in Utah. Ten of the group favored the proposal provided necessary safeguards were taken to insure placement of the children in accordance with the recognized standards.
Name: Anna Sundwall.
Position: Chief, Division of Child Welfare Services.
Address: 139 State Capitol, Salt Lake City, Utah.

I do favor Senate Joint Resolution 64.
Name: David C. Adie.
Position: New York State Commissioner of Social Welfare.
Address: Albany, N. Y.

I do favor Senate Joint Resolution 64.
Comments: I do favor this bill and have contacted our Representatives in Washington advising this.
Name: Marie V. Smith.
Position: Director, Child Welfare Division.
Address: Colorado State Department of Public Welfare, Denver, Colo.

I do favor Senate Joint Resolution 64.
Name: Kathryn D. Goodwin.
Position: Assistant Director.
Address: Wisconsin Public Welfare Department.

I do favor Senate Joint Resolution 64.
Comment: In my opinion, the Wagner-Rogers proposal merits support as a measure to enable partial treatment of a pressing humanitarian problem on the basis of the needs of the individual children involved.
Name: Charles J. Ernst.
Position: Director, State Department of Social Security.
Address: Olympia, Wash.

I do favor Senate Joint Resolution 64.
Name: Milly N. Pope.
Position: Supervisor, division of children's aid, California State Department of Social Welfare.
Address: 616 K Street, Sacramento.

AMERICAN COMMITTEE FOR DEMOCRACY AND INTELLECTUAL FREEDOM,
New York City, July 19, 1939.

Senator ROBERT F. WAGNER,
Senate Office Building, Washington, D. C.

DEAR SENATOR WAGNER: About 2 months ago the Chamber of Commerce of the State of New York prepared a report entitled "Conquest by Immigration." Our committee considers that report to be a serious attack on American traditions of liberty and tolerance.

Because the report of the chamber is put forth in the guise of science, we had a committee of experts prepare a reply which we are submitting to you for your earnest consideration.

I might add that our reply has received the endorsement of nine of America's leading scientists and historians: Dr. Charles A. Beard, Prof. L. J. Stadler of the University of Missouri, Prof. George H. Shull of Princeton University, Profs. Gordon W. Allport and A. M. Schlesinger of Harvard University, Profs. Robert M. MacIver and L. C. Dunn of Columbia University, Prof. J. M. Cooper of the Catholic University of America, and Prof. Th. Dobzhansky of the California Institute of Technology.

We think that our reply is important enough to be read into the CONGRESSIONAL RECORD, and we should feel highly honored if you would consent to do it.

Respectfully yours,

M. I. FINKELSTEIN,
Secretary, New York Committee.

COPY OF LETTER SENT BY THE NEW YORK SECTION OF THE AMERICAN COMMITTEE FOR DEMOCRACY AND INTELLECTUAL FREEDOM TO THE CHAMBER OF COMMERCE OF THE STATE OF NEW YORK

It was with amazement that we read the report of the special committee on immigration and naturalization of the Chamber of Commerce of the State of New York—and the attendant publicity—proclaiming the very same racial myths which are causing so much hatred and brutality in the world today.

Mr. Harry H. Laughlin, of the Carnegie Institution of Washington, who wrote this report, asserts that immigration into the United States should be cut down to the vanishing point in the interest of "race integrity" and "race improvement."

The underlying principles on which the report is based are that:

1. Every nationality—English, French, Irish, Italian, Spanish, etc., is a "race."

2. Every "race" has its inherent, unalterable, physical, mental, and moral qualities.

3. Some of these "races" are superior and others inferior, and progress in human society and culture is primarily due to the biological endowment of "racial purity."

4. The successful development of a nation requires it to "establish racial standards, to hold the country against all would-be invaders, whether they come as enemies in battle or as friendly immigrants."

5. The immigrant policy of the United States should be governed by biological or racial considerations because "progress cannot be built on mongrel melting pots."

6. The cost of public institutions for the mentally ill and for other public charges is largely due to the immigration of "racially inferior stock."

The entire argument follows the theory of innate racial qualities. Serious psychologists, anthropologists, and sociologists have emphasized over and over again that it is absurd to speak of any nation as a biological unit or race, and that no proof has ever been given to show that the mental, cultural, or moral characteristics of a so-called race can be deduced from its descent. Last December the American Anthropological Association—certainly more competent than the Chamber of Commerce of the State of New York to pass judgment on such matters—unanimously adopted the following resolution: Be it

Resolved, That the American Anthropological Association repudiates racialism and adheres to the following statement of facts:

"1. Race involves the inheritance of similar physical variations by large groups of mankind, but its psychological and cultural connotations, if they exist, have not been ascertained by science. * * *

"3. Anthropology provides no scientific basis for discrimination against any people on the ground of racial inferiority, religious affiliation, or linguistic heritage."

Mr. Laughlin merely asserts that "the immigrant must furnish the blood—that is, the inherent qualities and capacities which will respond favorably to our environment" (p. 39). He does not offer one shred of evidence to prove that such "inherent qualities and capacities" exist. Nor does he attempt to justify himself in assigning "superior" and "inferior" status to the various races he enumerates. We feel justified in the suspicion that there is an ulterior motive in this indiscriminate and unscientific use of the term "race." The term does service as an invective. It is a mere appeal to ignorant prejudice. Surely Mr. Laughlin knows that the modern populations of all parts of Europe as well as of America are the products of unceasing mixtures of peoples, and that the highest types of civilization of their respective times have belonged to such widely different peoples as those of Greece, Rome, France, Spain, Holland, England, Italy, and Germany—wherever historical conditions favored cultural development.

There have been two major waves of immigration into the United States. The first from 1609 to about 1890 brought immigrants chiefly from northern and western Europe; the second, since 1890, chiefly from southern and eastern Europe. The first group came to a country that was still primarily agricultural, offering opportunity for advancement to the pioneer, the farmer, the entrepreneur. With the disappearance of free land, the spread of industrial production, and the rise of the large corporation, fewer opportunities were available to the immigrants of the second wave. Most of those who came after 1890 became industrial laborers in the factories owned by those who had entered the country in the earlier stages. This applies to those coming from northern and western Europe as well.

To Mr. Laughlin these developments in American history have no meaning. He pretends to believe that the difference between the two groups of immigrants is strictly biological. He believes that the

northern and western European is innately a "pioneer land-settler type" and that the southern and eastern European is the "industrial laborer type." This contention was refuted in 1927 by Niles Carpenter, Immigrants and Their Children, Census Monograph No. VII, published by the Bureau of the Census of the United States Department of Commerce. Using the census figures of 1920, Carpenter showed (on p. 293) that the immigrants who came from northern and western Europe after 1890 did not prefer to take up agriculture.

"The Irish and the English, Scotch, and Welsh," he writes, "are engaged in farming to a very limited extent, indeed, and even Germans seem to be so employed to a smaller degree than the Bohemians and Moravians, who are a central European, that is, a 'new immigrant,' people. Neither do the 'new' immigrants engage chiefly in rough, unskilled labor, as is often stated. The Hebrews emphatically do not, and the Bohemians and Moravians are mostly farmers. On the other hand, a considerable number of Irish, who are 'old' immigrants par excellence, are so employed, while an even greater proportion of English, Scotch, and Welsh seem to be coal-mine operatives; that is, they are engaged in work that is heavy and laborious and not so skilled but that the 'unskilled' Polish, Italian, and Slovak peasants may also perform it."

The statistics used by Mr. Laughlin are entirely misleading. The last 107 pages (almost half) of the report are devoted to figures on the number of native and foreign-born inmates of State and Federal hospitals for the mentally ill and of State and Federal penal institutions. The casual reader would naturally assume that this mass of figures substantiates the recommendations made in the report, but on examination it is found that the data, far from supporting Mr. Laughlin, actually supports the opposite of the view he holds.

In order to use statistics to answer the question, Is there a high criminal rate among the foreign-born in the United States? we must first determine the percentage of foreign born in the country. Then we must compare this percentage with the percentage of foreign born in the prisons. This would be the only scientifically valid procedure. Mr. Laughlin did not adopt this procedure, however. He limited himself to an enumeration of the number of foreign-born and native inmates of some State prisons and hospitals. Such an enumeration is meaningless. Furthermore, the age distribution of foreign-born and natives is different, and since the rates of criminality and hospitalization change with age, this element must be taken into consideration.

The following example is typical of Mr. Laughlin's use of statistics. He lists 946 foreign-born inmates in seven New York State prisons out of a total of 6,382 prisoners; that is 14.8 percent. This may seem like a high percentage, and that is obviously the impression intended. But New York State's foreign-born population is 25.9 percent of the total population (1930 census). In other words, 25.9 percent of the population was responsible for 14.8 percent of the crimes (in the cases and for the period to which Mr. Laughlin's figures apply), while 74.1 percent (the native born) was responsible for 82.5 percent of these crimes.

It should also be noted that many official reports are available on just this point. In 1934, the precise period with which Mr. Laughlin is dealing, there was submitted a report of the Legislative Commission on Jails in Connecticut. The statistics in that report are much more complete than Mr. Laughlin's, and the conclusion drawn is that "crime is not primarily the product of the foreign born, but it is chiefly American made, the product of American conditions and American citizens" (p. 72).

Similarly, a statistical study of mental defectives in New York State by Dr. Benjamin Malzberg, of the New York State Department of Mental Hygiene led the author to conclude (American Journal of Physiatry, 1936, p. 137): "Comparing rates of first admission among native- and foreign-born whites, we find that, after due consideration of age and environmental differences, the latter exceed the former by only 8 percent. In several of the more important groups of psychoses there are no significant differences between the rates of the two groups. It is highly probable that if proper corrections could be made for other environmental differences, such as economic and occupational status, the remaining discrepancies in rates of first admissions would be either eliminated or reduced to a degree easily reconcilable with a theory of environmental differentials."

We view with alarm the rapid spread in our own country of the hysterical cry that the alien or the Jew or the Catholic, or some other scapegoat, is responsible for all the ills of society. The report of the Chamber of Commerce of the State of New York seeks to lend scientific support to such demagoguery. We would not be true citizens of a democracy if we did not enter our vigorous protest against any such abuse of science. The scientist has an ethical obligation to avoid conclusions that are not warranted by the evidence. What can we say of the ethics of Mr. Laughlin when he makes a report which so patently violates all the rules of scientific method and procedure, or of the chamber of commerce when it publishes such a report without ascertaining whether Mr. Laughlin's views are supported by reputable scientists?

Science teaches—and we reaffirm—that an individual should be judged by his own qualities and not by assigning him to a group because he happens to have a certain head form, a certain form and color of hair, skin, and eyes, or a certain form of nose. There are differences among individuals, of course. We are not justified, however, in assuming that there are inequalities among the different nationalities (Mr. Laughlin chooses to call them "races") or that one people is born superior to another. Most of the observable differences between peoples of different nations are merely different folk ways, the product of accumulated traditions in their past social history. These are readily transformed by environment, as has been abundantly demonstrated in the great mixture of peoples derived from all nations who have become ideal American citizens when they have lived in the social atmosphere of America for an adequate period of time to become adjusted.

Any report that violates these basic principles—and uses the name of science to support the deed—deserves the outspoken condemnation of all true Americans.

ANNIVERSARY OF DEATH OF HON. BENJAMIN NATHAN CARDOZO

Benjamin Nathan Cardozo died at the height of his genius on July 9, 1938. At this time, approximately 1 year after his passing, I ask unanimous consent to have inserted in the Appendix to the RECORD a brilliant and moving tribute to the late Justice, delivered on July 19, 1938, over station WHN, by Sol M. Stroock, an outstanding member of the New York bar:

BENJAMIN NATHAN CARDOZO—A TRIBUTE

Cardozo is dead! This headline arrested our gaze as we opened our morning newspaper on that July Sunday, scarcely more than a week ago. A whole Nation had known for many anxious weeks that the end was imminent, but, nevertheless, we waited with bated breath, hoping that by some miracle our leader and guide would be spared for continued service and devotion to our country and to our people. Cardozo is dead! But he will live in the lives of those made better by his presence here.

I bring tonight only a few flowers gathered in the garden of memory as a tribute to our beloved friend and comrade. I speak not of the great jurist, the incomparable builder of our law, nor of the distinguished philosopher whose pearls of wisdom have inspired a whole generation of scholars. I speak of the man and the friend whose complete selflessness and whose gentleness and modesty charmed us and bound us to him with ties of enduring affection. Others competent to do so will appraise this great man's contributions to law, to philosophy, to the science of government, and to the many other fields of intellectual endeavor in which he labored so valiantly and so effectively.

Those who knew him best and loved him most count their blessings in the treasures of his self-sacrificing and devoted life, poured out by him in such boundless measure to his own dear ones who have gone before him, to his friends, old and young, and to the countless number of men and women everywhere whose lives he has enriched and enobled.

As memory wanders down the corridors of time, we see before us the brilliant forthright youth who year by year steadily grew in intellectual stature, in assured understanding of life and living, in genuine abiding love of his fellows. His innate modesty, his almost amazing humility at times made those who knew him not jump to the conclusion that he was austere and aloof. But he was an adored leader and a constant sympathetic comrade to those who were permitted to enter the intimate circle made radiant by his presence and by his irresistable quiet sense of humor, his untiring patience and his gentle affability in which there was no trace of condescension.

It will be remembered that Cardozo was always the master of the spoken and of the written word. Contrary to an impression that Cardozo's unique and penetrating lucidity of diction and clarity of expression, especially in his written opinions, were the result of long, painstaking, and laborious polishing of words and phrases, we know that he could and often did speak and write extemporaneously with a grace and dignity which held the eager attention of the listener and the reader.

Like many other truly great men, Cardozo unconsciously, in depicting or describing the character of a friend, often gave us an illuminating portrait of his own life and character. We are thinking tonight of a poignant address made by Cardozo many years ago as he stood at the bier of a devoted friend. Cardozo then drew for us a clear and incisive word picture of himself. He was subdued, yet scintillatingly eloquent. Listen to his tribute:

"The flowers and fruit that his nature put forth were mysterious and divine, like fruit and flowers everywhere. If I could tell you how they were born I could explain the soul of a man. Not for us is such knowledge. We can only reverence and worship."

Do you not feel the heart throbs of Cardozo when he spoke of his friend's loved one who had died? He lets us look into his own heart for a moment as he contemplates the tragic loss of his sister, his lifelong companion. Listen:

"And yet with what fine buoyancy, with what invincible and inspiriting hope and courage he roused himself after the blow had fallen, and tried to pretend, though some of us knew better, that he was still the same man. He would carry on with a smile, for he was to be an irradiating presence while he was a presence here at all. * * * So he turned a brave face to the world. He was doing his best, like the fine gentleman he was."

So we come to our conclusion, and again Cardozo speaks for us in these words:

"And so he went out into the unknown blithely and gaily, unafraid and undismayed, knowing, in Ruskin's words, that if there is to be an awakening later, it will be well; if not, well also, though not so well. * * *

"Precious are these memories, yet they are not the memories that are surging at this hour in your hearts and in mine. We are thinking of other things—the great fundamental virtues of tenderness and gentleness and charity. These are the things that last. The

life seemed simple while it lasted. We may not always have been conscious of its beauty. The end comes; and behold it is illumined with the white and piercing light of the divinity within it. Let us give thanks that it is so.

"I have spoken of the friend who has left us the things that would rejoice our hearts if anyone could say them of us. I have tried to say them simply. I know that I have said them truly. And I have said them with the voice of a friend.

"When the course is finished, when the play is ended, when the lights are out, may the voice of a friend be able to say like things of us."

Cardozo has spoken. For us there is silence and remembrance.

Investigation of National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. WOLVERTON. Mr. Speaker, there is considerable misunderstanding with respect to the necessity for the passage of this resolution (H. Res. 258) in order that there may be an investigation of the conduct of the National Labor Relations Board, with respect to matters coming within its jurisdiction.

That there is widespread criticism of this Board no one will deny. Whether the criticism is justified either in whole or in part merits investigation. It is impossible for the Board to properly and efficiently discharge its manifold duties under the existing cloud. The Board is an important agency of our government. Its decisions vitally affect the welfare of thousands of workers and employers. The administration of the important duties committed to its care must be upon a basis of fairness and impartiality. This is fundamental if the good purposes of the Labor Relations Act are to be made effective.

I do not understand that there is any substantial difference of opinion as to the need and propriety of inquiry being made by a committee of Congress to ascertain what, if any, foundation there is for the charges that have been made against the Board. The only difference of opinion that exists, so far as I am able to discern from the discussion on the floor of the House during the consideration of this resolution, has been with respect to the proper committee to make the investigation. The issue presented by the resolution now before the House is whether such an investigation should be made by a special committee as provided for in this resolution, or, by the Labor Committee of the House, a regularly appointed and duly authorized committee to study and recommend legislation affecting labor in all its relationships.

I am of the opinion that the best interests of all concerned can be best promoted by the investigation being made by the Labor Committee of the House. This committtee under the Rules of the House has jurisdiction over the subject matter involved in this dispute. This committee, and no other in the House, can report to the House legislation to correct any wrongs that may be found to exist. The special committee provided for in the resolution (H. R. 258) does not have such power. Therefore, it could not report to the House any legislation its investigation might find necessary. Therefore, it seems to me that it is far more logical to permit the Labor Committee to pursue its investigation and report any necessary legislation than to create a new or special committee to conduct an inquiry into a subject concerning which it can make no report of legislation to the House. To do so is to deal with the matter in piecemeal fashion rather than with that fullness the importance of the subject demands.

Furthermore, I am of the opinion that the Labor Committee, composed of Members of this House who over a period of many years have given careful study and consideration to matters affecting employer and employee, is far more qualified to give intelligent and worth-while consideration to this matter than a special committee composed of Members with less experience and knowledge in labor matters. The honorable record of accomplishment by this committee under the able leadership of its chairman, Mrs. NORTON of New Jersey, and the able and conscientious chairmen who have preceded her in that important position leaves no doubt that the performance of this task would be performed with the same ability, fairness, and impartiality that has always characterized the action of the Labor Committee of this House.

In conclusion, it is important to also note that the investigation sought by this resolution has already been in progress for several months under the general jurisdiction of the Labor Committee. Hundreds of pages of testimony have been recorded, every person desiring to be heard has been afforded the opportunity. No stone has been left unturned in the endeavor to ascertain every detail that can be of any value in determining the best course to be pursued. The Labor Committee seeks the opportunity to continue its study and make such recommendations to this House as seems best and proper. I shall vote against the resolution in order that the Labor Committee may continue its work of investigation and the preparation of such legislation as may be necessary. I firmly believe that more worth-while results will be thereby attainable than in any other way.

Crackerland in Washington

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

ARTICLE FROM THE ATLANTA JOURNAL

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to extend my remarks and to include therein a short article which appeared in the Atlanta Journal which pays a high and wholly deserved tribute to our able and esteemed colleague from Illinois [Mr. DIRKSEN]:

[From the Atlanta Journal]
CRACKERLAND IN WASHINGTON
(By Ralph Smith)
ABLEST REPUBLICAN

I have before me the duplicate of the ballot I cast in the poll of the press galleries, by the illustrated magazine, Life, to catalog the 10 ablest Senators and Representatives in the present Congress. The name of EVERETT DIRKSEN, of Illinois, appears in third place, with a rating of 82, based on integrity, intelligence, industry, and influence. He was "tops" among the Republican Members of the House of Representatives.

And, folks, DIRKSEN still stands at the top of my list. The more I see and read of this young man—he is just 45—the more certain am I that insofar as he is concerned I made no mistake. He is "tops" today among the Republicans of Congress—the Republicans of the lower house, anyhow.

TRIBUTE TO INDUSTRY

DIRKSEN'S strength in the House is a tribute to the value of industry. He is one of the most industrious men on Capitol Hill, and apparently thrives on research and study. We live at the same hotel and of my own knowledge I can truthfully say that he "burns the midnight oil" as few others, which is one of the reasons why the ramifications of the United States are at his fingertips.

Yes, I'd say that EVERETT DIRKSEN, of Pekin, Ill., knows more about the government of the District of Columbia than either of the civilian Commissioners appointed by the President to run the District.

And he knows far more about the local government than most of its taxpayers.

Likewise, DIRKSEN knows the first and last thing about the Virgin Islands, the Philippines, Alaska, Puerto Rico, Guam, and

what he knows of these insular possessions is nothing to compare with his familiarity with the Federal Government as a whole.

Able and personable, DIRKSEN is due to go a "fur piece" in politics, or I miss my guess, for as the thing looks to me today he is the best bet in the Republican Party, and growing.

No, gentle reader, DIRKSEN isn't the minority leader of the House. He isn't in line for the Speakership if and when the Democrats are unhorsed, as they inevitably will be one of these days.

But these things are no reflection on DIRKSEN's capacity and competence. They find explanation in the fact that the higher titles in the organization of the House go by longevity of service, and DIRKSEN is just now entering upon his eighth year of continuous service.

WINS RECOGNITION

The fact is, however, that DIRKSEN today is the minority leader of the House in everything but name. Titular leadership vests in JOE MARTIN, of Massachusetts. DIRKSEN is his chief lieutenant, his right bower, the man upon whom he relies to take the lead in controversial issues of a partisan nature. MARTIN is the strategist, I'd say, and DIRKSEN the field general.

The Illinoisian is one of the best-informed men in either party and either branch of Congress concerning the far-flung activities and functions of this Government. It is astonishing how much he knows not alone of the Federal organization but of legislative matters on Capitol Hill. His information is dependable and impartial to boot, meaning that he is not the type of politician—and he is a politician—who'll purposely withhold facts in order to strengthen his position.

Proposal for Investigation of Certain Irrigation Projects in Nebraska

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, August 5 (legislative day of Wednesday, August 2), 1939

ARTICLE FROM THE OMAHA (NEBR.) WORLD-HERALD OF AUGUST 3, 1939

Mr. SCHWELLENBACH. Mr. President, a few days ago the Senator from New Hampshire [Mr. BRIDGES] introduced a resolution asking for an investigation of certain irrigation projects in the State of Nebraska. During the course of his remarks he stated that his action was based upon the request of a number of citizens of Nebraska, and two or three publishers of daily newspapers in the State of Nebraska. The World-Herald, a newspaper published in Omaha, which I understand is a very reputable newspaper and very careful in its method of compilation of views, made a poll of all the editors of daily newspapers in Nebraska upon this question in an effort to ascertain who if any of the editors had made this request. That poll was published on August 3 in the World-Herald of Omaha, Nebr. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Omaha (Nebr.) World-Herald of August 3, 1939]

BRIDGES DEMANDS STATE HYDRO INQUIRY; EDITORS DENY REQUESTING ACTION—SENATOR HINTS AT POLITICS IN GRANTING CASH—CHARGES PROJECTS ARE "UNSOUND"; DECLARES WATER INADEQUATE

WASHINGTON, D. C., August 2.—Senator STYLES BRIDGES (Republican, New Hamphire) directed drastic criticism at Nebraska's three P. W. A.-sponsored hydroelectric projects in a resolution introduced in the Senate today, demanding a general investigation of them by the Senate Commerce Committee.

The three projects—Loup River, Tricounty, and Platte Valley—have received more than $60,000,000 in P. W. A. loans and grants.

Senator BRIDGES' resolution stated that Army engineers, the Reclamation Bureau, and in case of the Tricounty projects, P. W. A. engineers investigated and reported the projects "impracticable from the standpoint of both sound engineering and sound economics."

It declared the Tricounty project was "authorized with the full knowledge of the Public Works Administration that the waters to be diverted from the Platte River had already been overappropriated by water users within the watershed of the Platte Valley."

CITES RECENT SHORTAGES

It cited recent water shortages in the North Platte River, and said the storage capacity of the Kingsley Dam is 25 percent greater than the average discharge of the river at that point.

The Loup River project, it added, has "amply justified" previous findings of Army engineers that it is unsound from engineering and economic standpoints, including lack of market for electric power.

"Political considerations," the resolution says, "may have controlled the granting of funds for these projects according to widely spread and never-denied charges, particularly as to the peculiar circumstances surrounding the authorizations for the central Nebraska project * * * discrimination against water users, unduly high commissions to banking interests; of coercion of local participants; of favoritism to engineering firms composed of farmer Nebraska employees of the Public Works Administration; of coercion of the local boards and authorities in charge of the projects by the Public Works Administration of its field representatives; of lawless infringement of State water laws; of unsound financing; of poor construction and engineering; of incompetence and inefficiency; of lobbying in the State legislature; of false and misleading propaganda and pressure on local newspapers; of unwholesome political activity."

SAYS CITIZENS ASKED PROBE

Bridges told the senate many Nebraska citizens, including the editors of "two or three" daily newspapers, had requested the investigation.

The commerce committee or "any subcommittee thereof," would be directed to "make a complete study of and report to the senate upon all of the matters referred to in this resolution and any other matters pertinent to such an inquiry, with a special view of making specific recommendations for necessary remedial legislation."

The investigating body would be authorized to hold hearings, employ experts and clerical assistants, subpena witnesses and records. The limit of expense incurred by the investigating body would be $100,000.

HYDROS DARE BRIDGES; WOULD WELCOME PROBE

Officials of Nebraska hydroelectric districts Wednesday practically dared Senator BRIDGES, Republican of New Hampshire, to go ahead with his oft-repeated threat of asking an investigation into the projects.

Bridges first suggested a probe while addressing the Nebraska Republican founders' day celebration at Lincoln last spring.

R. O. Canaday, secretary of the tricounty district at Hastings, said he would welcome BRIDGES' proposed investigation, but suggested the probe go deep enough to include activities carried on in the State to defeat the hydro program.

"It seems appropriate also," said Canaday, "that any investigation should reveal the sources of Bridges' information and the names of persons who have been goading him to make a national controversy out of the Nebraska program.

ALREADY INVESTIGATED

"We have been investigated pretty thoroughly already. Our activities have been aired in the newspapers to the extent there can be little the public has not had opportunity to know about. If there is anything undesirable, we would be glad to have it pointed out."

Officials of the Platte Valley district at North Platte were unimpressed by BRIDGES' charges. Gerald Gentleman, Platte Valley general manager, said he had heard of but had never seen the "unfavorable reports" referred to by BRIDGES.

At Columbus, Harold Kramer, general manager of the Loup River project, said: "We are ready for an investigation any time, day or night, by BRIDGES or anyone else."

W. R. Maloney, vice president of Platte Valley, issued a statement at North Platte declaring the districts are operated without "any political consideration whatsoever."

DENIES DISCRIMINATION

"We have not had any representation in Washington since 1936," Maloney said.

He denied there had been any discrimination against water users, stating representatives of every ditch receiving Platte Valley water had expressed themselves as satisfied.

"As to the so-called 'unavoidable' report of the Army engineers," said Maloney, "may I point out that the directors of this project have never seen a copy of this report and consequently not having any idea of what it contains, they are unable to comment on it.

"In a project of this magnitude, it is only natural that some mistakes might have been made, but I am sure the board feels that whatever mistakes have been made were honest mistakes."

"For the good of the district," and in order to "clear the atmosphere," Maloney said he hoped BRIDGES is successful in his efforts to obtain an investigation.

REMARK STIRS WRATH; BRAND PROBE ABSURD—POLITICAL INQUISITION SEEN AS RESULT; RAP EAST'S POWER TRUST

Nebraska editors deny it.

They say they didn't prompt Senator H. STYLES BRIDGES (Republican, New Hampshire) to offer his resolution in the Senate Tuesday demanding an investigation of the State's hydroelectric-irrigation projects.

BRIDGES told the Senate his request for a probe of a situation which "smells to me," was made at the request of many Nebraska citizens, including editors of "two or three" daily newspapers.

Most of Nebraska's daily newspaper editors, however, think the suggestion and proposed investigation absurd.

The World-Herald, which made no suggestion to Senator BRIDGES, today editorially says BRIDGES reveals "the depths of his ignorance" and adds "there is nothing Nebraska needs more, nothing that could prove of greater or more lasting benefit to all its people, than what these enterprises are designed to give it."

NAMES OF INTEREST

And the World-Herald's editor says it would be interesting to know the names and addresses of the citizens, including editors, "ready to lend encouragement to attacks on Nebraska irrigation supported by hydroelectric power production."

This is what the other editors say:

James E. Lawrence, Lincoln Star: "No request made by me to Senator BRIDGES for investigation of Nebraska's hydroelectric, or North or Middle Loup irrigation projects.

"Nebraska has two Senators and five Congressmen, including Senator BURKE, Congressman HEINKE, Congressman MCLAUGHLIN, Congressman STEFAN, Congressman CURTIS, and Congressman COFFEE. They, and Senator NORRIS, represent this State—not Senator BRIDGES. I have no personal knowledge of any need of an investigation timed for next year unless it be that next year also ushers in a national campaign. I trust the news accounts of Senator BRIDGES' political aspirations are incorrect."

DEPENDS ON IMPARTIALITY

Arch W. Jarrell, Grand Island Independent: "I have never communicated with Senator BRIDGES over the Nebraska power controversy, although my predecessor, A. F. Buechler, may have done so. The value of an investigation of the public power situation will depend on the impartiality and thoroughness with which it is conducted. If it is conducted either to whitewash or smear, it will be worthless."

Buechler, the former editor mentioned by Jarrell, was coy. "I have nothing to say to the World-Herald," he said, "until I have read the Senator's resolution."

Asked if he had had any communication with Senator BRIDGES, Buechler again said he had nothing to say.

Frank Williams, Nebraska State Journal, Lincoln: "The State Journal has made no request to any Senator for an investigation of any sort whatever."

CONGRESS SHOULD KNOW

Earl M. Marvin, Beatrice Sun: "Have not asked Senator BRIDGES to urge Senate investigation on hydros nor do I know of any movement among Nebraska editors to obtain such inquiry. Large investment of Federal funds in hydros suggests propriety of Congress knowing what the public can hope to get from the investment, but whether Senate investigation is best means of obtaining facts seems questionable."

Edgar Howard, Columbus Telegram: "I have not been in touch with the Power Trust Senator from New Hampshire, either personally or in correspondence. I do not advise a Senatorial investigation of the whole Nebraska power situation unless such an investigation should inquire into the activities of Power Trust emissaries who have tried to impede the efforts of the Columbus and other Nebraska public power projects to do something which the New England-owned private power companies have refused to do, and that is, to give rural Nebraska low-cost electric energy."

Harold Hamil, Hastings Tribune: "Tribune not party to BRIDGES' request. From our position close to operations of State's biggest hydro project, the Tricounty, we have seen nothing which suggests need for a Senate investigation. We see our project, first of all, as a means of bringing irrigation to Nebraska. Anyone who attempts to criticize the program cannot do so without an understanding of Nebraska's irrigation needs. Certainly, Senator BRIDGES lacks such understanding."

FEARS POLITICAL INQUISITION

Editor Kroger, Kearney Daily News: "Not among editors, if any, asking BRIDGES seek Senate investigation. Doubt very much if any good would come of such investigation, even though much confusion prevails in public mind regarding them. Fear probe would simmer down to political inquisition with nobody benefiting and results pigeonholed with no action taken.

Arthur Sweet, Nebrask City News-Press: "News-Press has not asked BRIDGES to press for investigation. Investigation should have been before money was spent to determine if there was market for power."

H. F. Thies, associate editor, Scottsbluff Star-Herald: "Attitude of Editor Wisner and Star-Herald has been one of concern only insofar as State-wide power grid monopoly set-up threatened to take over North Platte Valley power service units and start feeding lower valley hydro current into this section and destroy present market for Guernsey reclamation hydro-station output. In 1938 Guernsey plant gross power sale amounted to $282,000, of which $214,000 dollars net was applied to retire debt of landowners whose land is collateral for cost of Pathfinder irrigation project construction. Star-Herald has many times questioned soundness of Norris project expenditures of tax money in general but has not treated on specific phases, except purchase private utilities, since out territory above 'Norris pet' and not directly affected."

FAVORS HONEST PROBE

Fred Speers, North Platte Daily Bulletin: "Bulletin has never requested Senator BRIDGES to press for a Senate investigation of the Nebraska hydros. Bulletin will be in favor of any honest, fair investigation that will disclose all the facts and not turn into a witch hunt or whitewashing party."

Falls City Journal: "The Falls City Journal has not requested any senatorial investigation of the Nebraska hydro-electric districts. While such an investigation now seems a trifle late, there are aspects in the public-power situation in the State which need a thorough airing."

W. M. Maltman, Hastings Morning Spotlight: "Senator BRIDGES not asked by me. See no reason for investigation. Whole matter is question of whether we are to continue private ownership or take over all utilities to be operated under elected or appointive political boards. Both sides sincere in their opinions. Fail to see where Senate investigation could settle the question."

MIGHT BE BENEFICIAL

Fremont Daily Tribune: "Have not requested Senate investigation of hydros. However, believe complete impartial investigation of whole Nebraska public-power situation might be beneficial to everyone, in view of legislative discussion and wide publicity of charges and countercharges on subject in Nebraska within last few months."

H. D. Strunk, McCook Gazette: "Have had nothing to do with seeking investigation. Believe investigation is entirely in order on Nebraska power situation."

Mrs. R. A. Bates, Plattsmouth Journal: "Plattsmouth Journal did not ask Senator BRIDGES to press for investigation. Do not think need for Senate investigation of Nebraska power situation."

B. L. Getty, North Platte Telegraph: "Asked no investigation. Believe none needed from graft standpoint."

Fremont Morning Guide: "Have not requested BRIDGES' action."

Only Gene Huse, Norfolk News, failed to respond to inquiries. Huse is away from his home town.

Commentary on H. R. 5843, a Bill to Amend the Judicial Code

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. NICHOLS. Mr. Speaker, H. R. 5843, introduced by Mr. SUMNERS of Texas, chairman of the Judiciary Committee, is understood to have been prepared by the attorneys representing the United States who have been charged with the duty of defending the United States, as guardian, against the suits of Indians, who are the wards of the United States. These suits are pending or desired by the wards of the Government before the Court of Claims.

The attorneys representing the United States, it appears, have defeated 98 percent of the claims brought before the Court of Claims by the Indian wards of the Government, and now, to make it impossible for any Indian ward to recover, seek to amend the Judicial Code in such a way as to deny the ward the right to a fair hearing under the established Judicial Code and practice before the courts. The bill provides—section 145A—that in the event of a recovery, under the almost impossible conditions proposed by H. R. 5843, the United States shall receive credit for all gratuities expended for the benefit of the tribe, band, or group.

The Century Dictionary defines the word "gratuity" to be, "that which is given without claim or demand; a free gift; a donation."

For the guardian to charge the ward with a gratuity is inequitable and unjust. But the furnishing of food and clothing and the necessities of life to the wards whose condition compels such advances is justly chargeable against the indebtedness of the United States to such wards and should not be called a gratuity but maintenance and subsistence, reimbursable by agreement or by equitable implication.

The term "gratuity," chargeable against the Indian ward, appears to have been engineered on an appropriation bill without adequate consideration (title II, Second Deficiency Act, August 12, 1935). In conference various tribes were

exempted from this provision, leaving other tribes subject to the provision. (See exhibit A.)

The eastern and western Cherokees were not exempted, had no means of defending themselves against this provision put on the appropriation bill in disregard of the general rule relating to appropriation bills. This amendment was in response to a request from the attorneys representing the United States as guardian.

To illustrate the inequity and the manner of its application under the persuasive eloquence of the assistant attorneys representing the Department of Justice before the Court of Claims, an example is given in the case of the eastern Cherokees:

On June 12, 1838, 7,882,000 acres of land with the improvements thereon, were seized by military force by the United States Government. The eastern Cherokees, on foot, horseback, and in Army wagons, were removed to the lands of the western Cherokees in Oklahoma. One-third of their number died from exposure. This military seizure and removal purported to be authorized by a pretended treaty to which neither the eastern or western Cherokees were parties. After paying for the improvements on these lands, there was a balance of $2,067,000 to be paid for the land. The land, appraised by contiguous land held by the United States, had a value of $9,800,000 for which the treaty provided a payment of $2,067,000 with interest at 5 percent per annum from June 12, 1838, until paid. In 1852 a partial payment was made which liquidated the interest then due, leaving a net credit on the interest-bearing principal of about $78,000 and an interest-bearing principal of a little over $1,989,000 bearing 5 percent from April 5, 1852, and which never has been paid.

The Eastern Cherokees were authorized by a jurisdictional act of April 25, 1932, to bring a suit in the Court of Claims. The Court of Claims dismissed the suit on the ground that the jurisdictional act confined the court to cases arising under the treaties and Indian laws and did not authorize the court to consider a case arising under the treaty and Indian laws and the general law governing partial payments. The court held that the claim arising under the treaty and Indian laws had been heard and paid in full, and the court had no authority to consider the question of partial payments made thereon. The Court of Claims, having dismissed the case and having refused to find the fact that the claim based on partial payments had been asserted as a fact, then found as a fact gratuities amounting to about $2,000,000. These gratuities included every item which the General Accounting Office recited, either before or after the treaty of 1846, when the pledge of this per capita was made. They included all the items of expenditures by the United States in establishing Indian agencies, clerk hire, salaries, and any expenditure made for the general purpose of carrying out the constitutional provision of regulating intercourse with the Indians. They included sums alleged to have been expended for the Five Civilized Tribes in carrying out the general policy of the United States. They included advances made to the State of Oklahoma for general educational purposes which were allotted arbitrarily against the Cherokees, although such advances were made to liquidate an obligation to the State of Oklahoma incurred by the United States in exempting Indian lands from taxation and requiring such taxes to be met by other taxpayers of Oklahoma.

The Eastern Cherokees had no opportunity to defend themselves against these alleged gratuities because the suit was dismissed for want of jurisdiction, and they, therefore, were not in court and had no capacity, not being in court, to defend against the charges of gratuities thus asserted by the attorneys of the guardian.

This illustration has been given to show the inequity and injustice of charging the wards with sums which, in equity and in good conscience, upon examination by a court would not be charged against them. The instance is also given to show the extremes to which technical defenses are pleaded by the attorneys representing the United States as guardian and the success of those attorneys in making such pleas. Therefore the further amendment of the Judicial Code to validate, or attempt to validate, such inequitable procedure is not justified either in law or in good conscience.

Section 145B of S. 2164 forbids any court hearing an Indian case to allow any compensation whatever for property taken from such Indians and retained and enjoyed by the United States or its assigns.

This is a statutory denial of an equitable right.

It is notice to the court that the equitable decisions heretofore made by the courts, as a matter of good conscience and justice and right, shall not in future be exercised by the court. This section 145B is intended to repeal the various decisions of the Supreme Court of the United States and to deny that tribunal the right to do equity as its conscience may decide.

This section proposes to take private property for public purposes without compensation. It authorizes the United States to take property and retain it without paying for the use of such property.

It proposes to do this, however, only with regard to the defenseless wards of the United States, for this section 145B is not to apply to United States citizens who are not wards of the Government. This section is only to apply to those who are peculiarly defenseless, to those who are the subjects and wards of the United States Government. Such an act violates the fifth and fourteenth amendments to the Constitution, as well as being inequitable and unmoral. Apparently it is intended to repeal the opinion of the Supreme Court delivered by Justice Cardoza in the *Shoshone case*, a decision supported by principles of justice and equity and by many other decisions of the Supreme Court of similar purport. So grave was the apprehension of the draughtsman of the unreasonable provision that the second portion of section 145B provides the astounding remedy that if the court should obey its conscience and the established decisions of the Supreme Court, by which it is honor bound, the jurisdictional act shall be, ipso facto, automatically repealed. The provision that the act of the Court of Claims may repeal a jurisdictional act passed by the Congress either heretofore or hereafter is itself a violation of the Constitution of the United States, for even one Congress cannot bind a future Congress, much less a subordinate court by its act repeal a jurisdictional act.

Such proposed legislation is irrational, incongruous, and a violation of common justice and equity and right. This proposed bill should be returned to the Department of Justice for an examination by the Attorney General of the United States to ascertain if, upon further consideration, he, as the official head of the Department of Justice, really approves the proposed amendments to the Judicial Code in H. R. 5843.

Section 145C is an attempt to deny the Indian wards of the United States of any recognition of their rights at any time by acts of Congress, by the history of the case before the committees of Congress, and to confine them to technical proof of every fact which they allege, knowing full well that the unlettered Indian people must rely, and do rely exclusively, upon the records of the United States Government as their sole defense. Section 145C is obviously inequitable and unfair and made to relate only to the wards of the United States.

In the second portion of section 145C it expressly declares that the United States shall be entitled to every technical defense against the ward whose accounts and whose property is exclusively in the hands of and in the control of the United States as guardian. This change of the Judicial Code is a flat repeal of the decisions of the Supreme Court of the United States for over 100 years since the days of John Marshall. The decisions of the Supreme Court in dealing with the defenseless Indian wards have been set forth in various decisions, some of which are now submitted for the consideration of the committee as exhibit B.

When the Judicial Code was amended in 1925, one of the primary objects was to relieve the Supreme Court of a great multiplicity of minor matters which could preferably be adjusted by the districts courts and the United States Court

of Appeals, leaving the Supreme Court, however, the right to hear any special matter through a writ of certiorari.

This event proved—as the country continued to expand—that the Supreme Court had its time so largely engrossed by important cases arising that with the exception of a small percentage of cases in which the Government itself was interested, the opportunity to be heard by the Supreme Court on an application for writ of certiorari was no remedy whatever. The writ of certiorari was a means for relieving the Supreme Court of the duty of passing upon cases. The effect of the amendment to the Judicial Code in 1925 has been to deprive the Indian wards of the United States of any opportunity to be heard even upon the most important cases, except through special acts of Congress, and because Indian cases can only be heard by the Court of Claims and there is no right of appeal from the Court of Claims to a higher court.

Another Communistic Menace—Russian Invasion of Home Market of United States Peppermint Farmers

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. CRAWFORD. Mr. Speaker, we have heard much about the "red" menace recently and I desire to discuss for a few moments how the tenacles of communism are stretching into the farm area of my State as a real menace to one particular group of farmers. I refer to the farmers who devote their acres to the growing of peppermint later to be distilled into oil.

I would appeal particularly at this time to Representatives in Congress from the States of Michigan, Indiana, Ohio, Oregon, and Washington, because your States are the principal peppermint oil producing States.

Russia has suddenly gone into the peppermint-farming industry, and, having reached a point where she can supply her own home market, she is entering the world market; and during the last 6 months she has made startling inroads into the American import market.

As yet her peppermint oil imports to the United States are negligible compared to the production on American farms, but when we consider that only between 50 and 60 percent of American-grown peppermint oil is consumed in the United States, it is time we gave some attention to the threat of the Communists to the market of the products of our own farms.

If you are from a mint district in Ohio you will be interested in knowing that more Russian peppermint oil came to the United States in the month of May than was grown in your Ohio mint fields all of last year. Those of you who represent the peppermint-growing districts of Washington should be interested in knowing that Russia sent more peppermint oil to the United States in the months of May and June this year than was produced on your Washington mint fields during 1938. Imports of Russian peppermint oil in 4 months this year represents 25 percent of the Indiana production last year and 10 percent of the Michigan production.

Depressed prices received by the American peppermint farmers have been largely responsible for the decline in production from 1,352,000 pounds of oil in 1935 to only 732,000 pounds last year.

During 1938 we produced on American farms 732,000 pounds of peppermint oil and at the same time we exported 371,000 pounds.

In 4 months of the current year we have imported from Russia 12½ percent as much oil as we exported to the world in the 12 months of 1938. Russia is multiplying her shipments of this product to the United States, and if she continues to ship into this country during the remainder of the year as she did in June she will have dumped 40 percent as much oil on the American market as the American farmer exported. And let me again remind you that we consume only 50 to 60 percent of oil produced on American farms.

The first shipment of Russian peppermint oil that disturbed the American growers arrived last December. Then in March her shipments amounted to 4,983 pounds; in April, to 6,468 pounds, and in May it jumped to 16,535 pounds, and June totaled 17,988 pounds. Russia has exported more peppermint oil to the United States in any one month this year than the whole world has in previous years. The peppermint growers of our country have reason to be disturbed and they have a right to have protection against their home market being further depressed by the importation of cheap Russian peppermint oil. I hope, on reconvening, this House will consider their plight.

Unlawful to Buy Actual Wheat

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BURDICK. Mr. Speaker, I desire to place in the RECORD a copy of a letter written to members of the Chicago Board of Trade on May 9 by the assistant secretary of that institution. This letter contains an order or ruling by the board of directors of the board of trade practically outlawing, as far as that institution is concerned, sales or purchases of cash grain for deferred delivery. The effect of the ruling is to force members to deal in trades for future delivery instead of dealing in the cash grain itself.

It is a well-known fact that only a very minor percentage of the trades in futures culminate into deliveries of cash grain. I have addressed this House on this many times, and have asserted that these trades in futures, therefore, are not actually trades in grain but just a lot of gambling transactions.

The board of trade has now come out in the open and notified its members that it does not want them trading in cash grain for deferred delivery. It threatens them with discipline if they enter into such contracts. On the other hand, the order states that making contracts for futures delivery is permissible. The board of directors in its ruling says that trading in cash grain for deferred delivery is "detrimental to the interest and welfare of the association." Detrimental, perhaps, because trades in futures contracts brings in big brokerage and commission fees—and detrimental to the welfare of the association, perhaps, because the directors undoubtedly believe that if trades in cash grain for future delivery are permitted the trading in futures contracts will dry up and this source of enormous revenue to commission houses and also the machinery for gambling in grain will be lost to the board of trade.

Mr. Speaker, I have introduced Resolution No. 25 in the early days of this session. The resolution was referred to the Committee of Rules, where it now is. This resolution made provision for an investigation of futures trading. Mr. Speaker, this ruling of the Chicago Board of Trade dated May 9, now makes an investigation of futures trading imperative. On the face of it it proves the statement I have repeatedly made that these grain exchanges are not trading

and do not want to trade in actual cash grain, but are interested only in the maintenance of this gigantic gambling machinery known as futures trading.

I saw by the paper that the Commodity Exchange Administration has requested reports of all long and short accounts in Chicago May wheat. Open contracts on the exchange are five and one-half million bushels and stocks of wheat in Chicago are less than four million, and probably not all of that delivery grades. Someone has sold more May wheat in Chicago than can be delivered and if the same procedure is followed that has been the custom in the past the Chicago Board of Trade and the Commodity Exchange Administration will order the holders of long May wheat contracts to sell and the short sellers will have made another big clean-up at the expense of the grain farmers of this country. The board of trade has complete control, with the Commodity Exchange Administration, of the futures trading machinery on the board of trade and in every case where the short sellers have driven prices down by selling more grain than they could deliver the board of trade has abrogated the contracts by closing the market or abrogated contracts by ordering the holders of long contracts to sell, thus letting the shorts buy in their short contracts at bargain prices. How long must we put up with this skulduggery? Are we willing to sit by and see these fictitious short sales made which lower the farmers' prices and see these same short trades washed out by an order of the board of trade when they mature. Wash trades are unlawful under the Commodity Exchange Act but I maintain that the Chicago Board of Trade washes out trades right along and always in the interest of the short seller and detrimental to the producer of grain in this country.

BOARD OF TRADE OF THE CITY OF CHICAGO,
Chicago, May 9, 1939.

To Members:

At their meeting today the board of directors ordered that the following notice be sent to all members:

"It has come to the attention of the directors that certain member firms have entered into contracts for the purchase and/or sale of deferred delivery of warehouse receipts for grain in store in Chicago.

In the opinion of the directors, this practice is unusual and irregular and is in violation of various rules and regulations of the association, and is detrimental to the interest and welfare of the association under rule 145.

You are hereby notified that members are liable to discipline if they enter into contracts for the purchase or sale for deferred delivery of grain in store in Chicago or of warehouse receipts issued against grain in elevators located in the Chicago switching district.

This interpretation does not affect the purchase and sale of grain for future delivery consummated in accordance with the rules and regulations relating to futures contracts; nor sales in store when payment and delivery is made on the following day in accordance with rule 348.

Very truly yours,

(Signed) WM. B. BOSWORTH,
Assistant Secretary.

Importation of Argentine Beef

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

ARTICLE FROM SAN FRANCISCO CALL-BULLETIN AUGUST 3, 1939

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Curry, published on August 3 in the San Francisco Call-Bulletin:

(By John Curry, secretary of California Cattlemen's Association)

Cattlemen object to the importation of beef from Argentina because they insist that such importations would introduce foot-and-mouth disease into this country and cause tremendous losses.

Some 2 years ago, after a visit to Argentina, Harper Sibley, former president of the United States Chamber of Commerce, said:

"As regards the hoof-and-mouth disease, I found it widespread throughout the cattle herds of Argentina and present intermittently in every area where cattle are raised or fed."

We had outbreaks of foot-and-mouth disease in California in 1924 and 1929.

THOUSANDS SLAUGHTERED

In the 1924 outbreak, it was necessary to slaughter 58,303 cattle, 28,382 sheep, 21,195 swine, 1,380 goats, and 22,314 deer, making a total of 131,474 animals.

According to the magazine California, the direct cost of eradicating the 1924 outbreak was $6,151,000, and a reasonable conservative estimate of all collateral damage was $200,000,000.

The 1929 outbreak of foot-and-mouth disease in California was caused by Argentina meat in the following manner:

The steamship *City of Los Angeles* left San Pedro in October 1928 for a South American cruise. On November 2 the boat put in at Buenos Aires, Argentina, where it remained until November 6.

TOOK ON PROVISIONS

During this period it received provisions, taking on, among other articles, about 18,000 pounds of meat, which included beef, pork, lamb, and veal.

The vessel docked on December 9 at Wilmington, Calif., and on December 20 the remaining meats, amounting to several thousand pounds, were transferred to the steamship *Caliwaii*. During the transfer the meats were trimmed, the scraps being placed in cans which went into garbage. The evidence showed that the garbage which contained the scraps from the South American meat were taken to the Haas ranch.

Authorities at Honolulu were notified that the steamer *Caliwaii* was en route to that port, and this action led to the burning of all garbage from that vessel on arrival to protect the Hawaiian Islands from infection.

NOTICES SYMPTOMS

On January 10 Frank B. Haas, owner of a hog ranch near Montebello, first noticed disease symptoms.

A positive diagnosis was made January 17. All the above facts are from the United States Department of Agriculture Miscellaneous Publication 68, by Dr. John R. Mohler, chief, Bureau of Animal Industry, and Rudolph Snyder, inspector in charge of field activities in California. There is no question about our 1929 outbreak having been caused by Argentine meat.

There was an outbreak of foot-and-mouth disease in this country in 1914 which spread to 22 States. It originated in a bunch of hogs owned by a butcher at Niles, Mich. The butcher purchased Argentine beef from Chicago packers and fed the scraps from his shop to the hogs.

CONSTANT OUTBREAK

There have been outbreaks of foot-and-mouth disease in England in this year and in every year since 1922.

Sir Percy Hurd, member of the House of Commons, was quoted by the United Press late in 1937 as saying:

"The English outbreaks show the major sources of infection are marrow bones from Argentine meat, rinds from Polish bacon and other European bacon, and other raw material products from countries infected with this disease."

In August 1937 the Department of State at Washington issued a statement about the pending sanitary treaty with Argentina.

Mr. Hull's Deparment called attention to the large decline in the value of our exports to Argentina in 1936, as compared with 1929.

It appears characteristic of this Department to refer to dollar statistics in numerous instances, and omit any reference to physical volume.

But dollar statistics are not an accurate index of trade.

BY VOLUMES

For example, the physical volume of all our exports in 1932 was 52 percent of 1929, but the value was only 30 percent. The physical volume in 1938 was 79 percent of 1929, but the value was only 59 percent.

However, even by using Mr. Hull's formula, and using only value or dollar statistics, we find that in 1937 the value of our exports to Argentina exceeded those of 1936 by 65 percent. Our imports in 1937 from Argentina were at the highest annual figure since 1920. Our total trade with Argentina for the 2 years 1937 and 1938 shows that the value of our imports was almost the same as the value of our exports for those 2 years.

The Department's statement said:

"Any importation of meat which developed following ratification of the proposed treaty (with Argentina) would accordingly be confined to lamb and mutton."

NOT SATISFIED

We definitely know that Argentina does not feel this way about it, and we know that Argentina will not be satisfied just to ship lamb and mutton to the United States.

On June 26, 1938, Senor Diaz-Herrera spoke from Buenos Aires on the radio. Diaz-Herrera said Argentina would like to ship 80,000 tons of beef annually to the United States.

Mr. Hull says that Argentina will ship only lamb and mutton if the treaty is ratified; but Senor Diaz-Herrera says Argentina would like to ship 80,000 tons of beef annually to us; and finally Harper Sibley says that he found foot-and-mouth disease in every area where cattle are raised in Argentina.

We are advised that in 1937 Argentina shipped about 350,000 tons of beef to the United Kingdom. In that same year Germany imported from Argentina about 37,000 tons of frozen beef.

Appropriations and Estimates

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. TAYLOR of Colorado. Mr. Speaker, it is usual when a session is drawing to a close or on the eve of adjournment for Members of Congress and for members of the press to try to "beat the gun" with appropriation summaries. That is their right, but such statements are apt to mislead or confound the reader if not complete, or candidly explained and analyzed.

I read a statement the day following adjournment that Congress "had broken New Deal spending records with $13,360,000,000 in appropriations, a $2,000,000,000 increase over last session." First, appropriations and expenditures are not synonymous. Secondly, the appropriation increase over last session is less than $1,231,000,000, which is quite different from $2,000,000,000.

My esteemed colleague, Representative JOHN TABER, who heads the minority members of my committee, has come forward with a statement, which, at first blush, at least, would create the impression that the appropriations aggregate $14,061,598,619.69, of which sum he says approximately $12,000,000,000 will be expended during the present fiscal year ending next June 30. Mr. TABER's statement appears in the Appendix of the CONGRESSIONAL RECORD, page 3970.

It is my purpose to present a picture based upon actual records, and the figures I shall use will be those as to which the records of my committee and of the Senate Committee on Appropriations are in complete accord.

Perhaps I should explain that appropriations are of two general types—annual and permanent, including in the latter so-called trust accounts. I shall include at the end of these remarks a tabulation of the permanent appropriation items, which seem to mystify so many people. Appropriations in the annual category are voted each year by the Congress. The permanent classification comprises appropriations which are renewed automatically each year without annual action by the Congress. While an advance estimate is made each year of such permanent appropriations, their actual amount does not become known until the fiscal year for which made has expired.

The statement which I shall hereinafter insert distinguishes between annual and permanent appropriations.

It shows that annual appropriations for the session just closed, that is, appropriations voted by the Congress, amount to $9,724,302,789.39, assuming that miscellaneous private acts, not yet available, do not appropriate an aggregate amount in excess of $1,000,000, which is a safe assumption. Such sum exceeds the aggregate of annual appropriations for the last preceding session of Congress by $1,078,634,285.71.

Including annual and permanent appropriations, the statement shows a total of $13,349,020,564.39 for the session just closed, contrasted with $12,118,036,335.84, which was the sum total for the last preceding session.

It seems to me it would be well to preface the details of those sums by one or two pertinent observations.

First, as I said before, "appropriations" and "expenditures" are not synonymous, yet one would gather that impression from many published statements. Appropriated funds constitute potential expenditures, but their expenditure in the vast majority of cases extends beyond the fiscal year in which they become eligible for obligation. There are annual appropriations and continuing appropriations. The former must be obligated within the fiscal year for which made but remain available for expenditure to meet obligations incurred within such time limit for 2 additional fiscal years. Continuing appropriations, which consist almost exclusively of appropriations for public works and the construction of naval vessels, continue available until exhausted or until covered into the Treasury by administrative action or pursuant to legislative direction. Patently, therefore, the amounts appropriated are not an "expenditure" gage as to any particular year. The time for entering into obligations is controlled by many factors, but no matter when incurred, all of the funds necessary to discharge them must be available in advance of their incurrence, except where contractual authority has been given.

"Contractual authority" calls to mind Mr. TABER's statement, to which I have called attention, in which he includes in his summarization the amount by which the session of Congress just closed authorized obligations to be incurred in excess of the amounts immediately appropriated. That is information, unquestionably, to which those interested are entitled, but by no stretch of the imagination do they have a place in an appropriation statement or expenditure statement dealing with the present fiscal year. Why? Let me illustrate. We made an initial appropriation for the commencement this year of two 45,000-ton battleships. It will take 5 or more years to build those ships. The money will be provided in annual increments in such amounts as the Congress determines the Navy will need. When we begin the construction of one of those ships we commit ourselves to the whole cost, but that cost will be distributed and appropriated over a number of years. Obviously there is no justifiable basis for charging the whole cost to the building commencement year. It is the rule and not the exception for appropriations to satisfy obligations incurred under contractual authority to be made subsequent to the fiscal year in which the contractual authority has been granted.

Finally, as a prefatory statement I feel that I should say a word about "reappropriations." A reappropriation, it is true, adds to potential expenditures but has no place in any table comparing appropriations for one year with another unless a corresponding reduction is made in appropriations for the year for which the amount reappropriated originally was appropriated. It is not the practice of the Budget Bureau or of the appropriation committees of the Congress to include reappropriations in appropriation statements. Attention is called to them and they are taken into account by the Budget Bureau, and necessarily so, in estimating Treasury withdrawals, but, I repeat, they should not be included in an appropriation statement comparing the appropriations made by one session with those made by a former session of Congress unless the amounts reappropriated have been deducted from the appropriations charged to the session which voted the appropriations wholly or partly reappropriated.

The following table really is self-explanatory. The figures are actual—unaltered or juggled in any way. The last two columns indicate changes between the session just closed and the immediately preceding one and between Budget estimates presented during the session just closed and the appropriations made during such session:

Statement comparing appropriations made during the first session of the Seventy-sixth Congress with Budget estimates and with appropriations made during the last preceding session of Congress

	Column 1	Column 2	Column 3	Column 4	Column 5

[1] Estimated.

[2] Exclusive of reappropriations totaling $131,195,436.

The table shows as to annual appropriations that Budget recommendations were exceeded to the extent of $190,823,095.35 (net). Unbudgeted increases were provided under the Department of Agriculture for so-called parity payments ($225,000,000) and the disposal of surplus commodities ($113,000,000), and also under the War Department for river and harbor and flood-control works ($50,000,000). These and some other relatively small increases not having Budget support were offset by numerous reductions in items under most all Federal agencies, bringing about the net increase figure indicated in the statement.

While, of course, there is joint responsibility between the Senate and House for appropriation measures as finally enacted, I do wish to point out that my committee proposed reductions in Budget recommendations aggregating $157,266,328.12 (net) in the measures which it presented to the House. Much of this reduction survived the legislative gantlet, and, to that extent, contributed to lessening the amount by which all bills, in the end, exceeded Budget estimates.

With respect to the excess of $1,078,634,285.71 over annual appropriations provided at the last preceding session of Congress, larger outlays for agriculture or for purposes under the cognizance of the Department of Agriculture account for $448,708,354 of such sum, and larger appropriations for national-defense preparation ($498,969,274) account for the bulk of the remainder. When it is considered that in addition to these extraordinary demands it became necessary during the session just ended to provide an additional $825,000,000 to supplement appropriations made at the preceding session for relief and work relief, such additional amount being required for expenditure prior to the commencement of the present fiscal year, I submit the record is much better than many have been disposed to acknowledge. Had it not been for the additional W. P. A. draft, it would have been possible to have taken care of the heavy extra load on account of national defense and agriculture and have held the excess over appropriations made at the preceding session to about $132,000,000. To have met the defense and agricultural drafts without having gone beyond an excess of $132,000,000, obviously demonstrates that substantial economies occurred in other directions.

Turning from appropriations to expenditures, the following deductions should be made from the sum total of annual and permanent appropriations made at the last session ($13,349,020,564.39) to arrive at the potential expenditure total chargeable to ordinary receipts, viz:

Appropriations chargeable to postal revenues	$740,000,000
Appropriations chargeable to revenues of the District of Columbia	42,443,500
Annual appropriations chargeable to trust accounts	815,500
Trust accounts included in the foregoing tabulation under the head of "Permanent annual appropriations"	1,861,267,710
Supplemental appropriation for relief and work relief for fiscal year 1939	825,000,000
Deficiency appropriations made for expenditure in fiscal year 1939 (estimated)	108,000,000
Total	3,577,526,710

Subtract that sum from the $13,349,020,564.39 and add to the result reappropriations, amounting, roundly, to $131,000,000, provided at the last session, and the potential expenditure figure becomes $9,902,493,854. That amount compares with $9,407,633,703, which was used in the Budget presented to the Congress on the 3d of last January as the basis for calculating 1940 expenditures. Such calculation indicated that outgo would exceed income the present fiscal year by $3,326,343,200. It would seem reasonable and fair to conclude, therefore, that such estimated deficit will not be exceeded by more than the difference between $9,902,493,854 and $9,407,633,703. There is no available recast of the probable expenditure figures contained in the regular Budget. They will go up or down according to the accuracy of revenue estimates and expenditure demands. I read just the other day the announcement of a well-recognized fiscal student and expert that business thus far in this calendar year has averaged 21 percent over 1938. That is a buoyant sign and encourages the hope that there may be less need to go as far or deeper into the red than was estimated at the turn of the year.

One columnist wrote the other day that—

> The authorization of a $13,000,000,000 expenditure is a phenomenal example of disregard of the mandate of a congressional election wherein, as in 1938, a substantial protest was manifested against spending.

Passing over the confusion of "expenditures" with "appropriations," I should like to ask, In the face of world conditions, in the face of the rearmament race going forward in other lands, should the Congress have turned a deaf ear to building up our defense establishments? Again, I should like to ask, With foreign and domestic markets for agriculture all awry, would the Congress have been justified in denying aid to farmers? True, it may be said that aid in this way is not conducive to bringing about a state of independence or a measure of independence. Paraphrasing an apt expression the other day of my good friend and colleague on the committee, Judge WOODRUM, these and other of our perplexing fiscal problems are subject to three ways of being handled: My way, your way, and the right way. Admittedly we have not found the right way to cure our agricultural ills. Any method, however, which would accomplish such a result, I am sure, would be as welcome to the farmer as it would be to those of us whose responsibility it is to provide for the general welfare. None has been advanced thus far, to my knowledge, and I may say to those who are prone to criticize that the solution is not solely a congressional prerogative.

There is nobody more ready than I to admit that we cannot long continue to live beyond our income. Contraction of Federal outlays must be brought about and brought about soon. We cannot wait upon the growth of national income. We must lay a course that will meet it along its upward climb, which I confidently predict. America has bested every problem in the past and I have abiding faith in her ability to maintain that record.

The answer to our difficulties, however, is not wholly domestic. Commerce is out of joint throughout the world because of wars and threatened wars and war preparations. Normal trade is disrupted, and that reacts in curtailed production which in turn means less need for raw materials, less use for transportation systems, less employment, less buying power, less demand for farm products. We must look beyond our shores for an improved order of things if we would have a more complete and earlier approach to normalcy. I express the hope that our statesmen will be continually alert to take advantage of any opening which may offer promise of a pacific adjustment of differences between other world powers to the end that existing conflicts may be speedily terminated, threatened conflicts avoided, normal intercourse restored, and that the vast outlays being poured into armaments may be diverted into commerce such as is common between nations when at peace.

There follows a tabulation of permanent appropriations and trust accounts for the fiscal years 1939 and 1940:

Permanent appropriations

	Estimates of appropriations, 1940	Appropriations, 1939
LEGISLATIVE ESTABLISHMENT		
General accounts:		
Library of Congress:		
Bequest of Gertrude M. Hubbard, interest account	$800	$800.00
Library of Congress trust fund, interest on permanent loan account	39,500	38,500.00
Total, permanent appropriations, general accounts under Legislative Establishment	40,300	39,300.00
INDEPENDENT ESTABLISHMENTS		
General accounts:		
Smithsonian Institution:		
Interest from trust account	60,000	60,000.00

Permanent appropriations—Continued

	Estimates of appropriations, 1940	Appropriations, 1939
INDEPENDENT ESTABLISHMENTS—continued		
Special accounts:		
Farm Credit Administration:		
Supervision of Federal credit unions	$91,000	$32,880.00
Federal Home Loan Bank Board:		
Salaries and expenses, Federal Home Loan Bank Board	1,400,000	1,320,000.00
Federal Power Commission:		
Payments to States under Federal Water Power Act	19,500	16,743.00
Railroad Retirement Board:		
Railroad Unemployment Insurance Administration Fund, Railroad Retirement Board	9,150,000	14,302,491.00
Total, permanent appropriations, general and special accounts, under Independent Establishments	10,720,500	15,732,114.00
DEPARTMENT OF AGRICULTURE		
General accounts:		
Cooperative agricultural extension work	4,701,165	4,701,165.00
Exportation and domestic consumption of agricultural commodities	90,000,000	144,024,893.16
Special accounts:		
Payments to States and Territories from national-forest fund	1,275,000	1,114,700.00
Payments to school funds, Arizona and New Mexico, national-forest fund	30,000	30,000.00
Roads and trails for States, national-forest fund	510,000	510,000.00
Payment to counties under Migratory Bird Conservation Act	15,000	15,000.00
Total, permanent appropriations, general and special accounts, under Department of Agriculture	96,531,165	150,395,758.16
DEPARTMENT OF THE INTERIOR		
General accounts:		
Colleges for agriculture and mechanic arts	2,550,000	2,550,000.00
Federal Board for Vocational Education:		
Promotion of vocational education	7,000,000	7,000,000.00
Special accounts:		
Payments to States from receipts under Grazing Act	500,000	500,000.00
Payments to States from receipts under Mineral Leasing Act	2,500,000	2,450,000.00
Payments to States from potash deposits, royalties and rentals	37,500	37,500.00
Alaska Railroad special fund	2,625,000	2,360,000.00
Payment to counties, Oregon and California land-grant fund	375,000	375,000.00
Helium production fund	70,000	94,000.00
Total, permanent appropriations, general and special accounts, under Department of the Interior	15,657,500	15,366,500.00
TREASURY DEPARTMENT		
General accounts:		
Payment of interest on deposits of public moneys of Government of the Philippine Islands	2,172,500	2,172,500.00
Expenses of loans (act, Sept. 24, 1917, as amended and extended)	3,595,000	3,500,000.00
Contingent expenses, national currency (reimbursable)	3,100	3,100.00
Total, permanent appropriations, general and special accounts, under Treasury Department, exclusive of public debt	5,865,600	5,675,600.00
General account: Interest on the public debt	1,049,905	976,000,000.00
Public-debt retirements from ordinary receipts:		
General accounts: Sinking fund	583,200,000	580,463,130.00
Special accounts:		
Retirements from gifts, forfeitures, and other miscellaneous receipts	15,000	15,000.00
Obligations retired from Federal intermediate-credit banks franchise tax receipts	880,000	840,000.00
Redemption of bonds, etc., from repayment of principal of loans to States, municipalities, etc., Public Works Administration	500,000	1,500,000.00
Redemption of Liberty bonds issued in the year 1918 from bequest of James Reuel Smith	----------	2,000.00
Total, public-debt retirements from ordinary receipts	584,595,000	582,820,130.00
Total, permanent appropriations, general and special accounts under Treasury Department, including public debt	1,640,365,600	1,564,495,730.00

Permanent appropriations—Continued

	Estimates of appropriations, 1940	Appropriations, 1939

Additional Safeguards Should Be Enacted Into Law To Extend a Nation-wide Nonpolitical Civil Service

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

EDITORIAL COMMENT ON HATCH LAW

Mr. RANDOLPH. Mr. Speaker, yesterday I called attention to the introduction of a bill which aims to extend to State positions, wherein Federal funds are used, the nonpolitical civil service which properly will come to follow the worthy aims of the Hatch bill.

In this morning's Washington Post I find splendid editorial comment on this subject which I include herewith:

SPEAKING OF GENESIS

The primary election in Kentucky today is the first under which the newly enacted Hatch law, to prevent "pernicious political activities," will be operative. And, by not unnatural coincidence, it was the last Kentucky primary, in which Senator BARKLEY defeated Governor Chandler for the Democratic Senatorial nomination, which opened the road for this far-reaching legislation.

President Roosevelt was not wholly accurate in saying, in his message to Congress on Wednesday approving the Hatch bill, that: "The genesis of this legislation lies in the message of the President of January 5, 1939, respecting an additional appropriation for the Works Progress Administration."

The genesis of the Hatch law is actually to be found in an editorial in the Washington Post of April 18, 1938, written nearly 9 months before that Executive request for statutory regulations to eliminate "improper political practices." Senator HATCH himself graciously gave the Post full credit in a speech on the floor of the Senate on July 29. "I do not forget," he said, "that the idea of applying the civil-service rule to prohibit political activities by employees in the nonclassified civil service came from an editorial which appeared in the Washington Post more than a year ago."

The editorial from which the Hatch law evolved was entitled "Patronage and Politics" and was written by Merlo J. Pusey of the Post's editorial staff. It considered the Senate defeat of a bill, sponsored by Senators HATCH and Steiwer, which was designed to prohibit Federal employees from attending political conventions as delegates.

At the time of the defeat of this bill the Kentucky primary race between Senator BARKLEY and Governor Chandler was much in the

public eye. Senator BARKLEY had the support of a powerful machine which utilized Federal employees, while Governor Chandler was supported by a scarcely less powerful organization built up on State and local jobholders. In noting the Senate's consideration of this situation the Post editorial of April 18, 1938, said:

"To deny Members of Congress assistance from political machines composed of Federal employees would put them at a disadvantage in contests with Governors using machines of State employees. Majority Leader BARKLEY's race with Governor Chandler for the Democratic nomination for Senator from Kentucky gave particular emphasis to this contention. Apparently the Senate voted to save its majority leader from unfair competition."

Continuing with its analysis, the Post editorial pointed out that "the worthy purpose" of the Hatch-Steiwer bill was "to prevent the packing of political conventions to keep an individual or an administration in power." No politician, the editorial continued, "should have a right thus to use public servants for his own political advantage. Nor should the will of the rank and file attending conventions be thwarted by an influx of officeholders controlled by patronage. Certainly some action is in order to curb these abuses."

The editorial then concluded that the approach utilized by Senators Steiwer and HATCH should be broadened. "The real objective," said the Post, on April 18, 1938, "should be to divorce Government employees in non-policy-making positions from active participation in all partisan politics. * * * By using this approach to his objective, Mr. HATCH would have an opportunity to press his point a second time—perhaps with more success."

It was precisely this procedure, as Senator HATCH has generously made clear, which he adopted in his bill enacted this week, to make applicable to unclassified employees the civil-service regulations against improper political activities.

The Post acknowledges with gratitude the tribute paid to it by Senator HATCH in connection with the accomplishment of this important reform. It takes occasion to pledge continued assistance in forthcoming efforts to develop a wholly nonpolitical civil service—efforts which the Hatch law has made much easier but by no means superfluous.

ROUNDING OUT REFORM

The newly enacted law which prohibits "pernicious political activities" is applicable to the Kentucky primary election today, and it is very likely to nullify improper pressures which may have been brought during recent weeks on relief workers or others susceptible to overt political influence. The provisions of the act are so specific as to make any attempt at intimidation or coercion of voters a very risky matter.

The fact that the Hatch law is having its first test in Kentucky is the more interesting because of the dominant role which machine organizations play in that State of superheated politics. Still fresh in memory is the furious clash of the State machine, controlled by Governor Chandler, with that based on Federal patronage, controlled by Senator BARKLEY, when these two fought bitterly for the senatorial nomination, just a year ago.

Thanks to the act which the President signed on Wednesday, the day of political machines built with the aid of Federal employees is ending. The Hatch law, extending the civil-service regulations against political activity to unclassified employees, will see to that. But the exercise of similar pressure by State jobholders is still to be reckoned with. The moral is pointed by the current action of one of the candidates for the office of Governor of Kentucky. He has requested the attorney general of that State to "see to it" that State employees "do not violate the spirit" of the Hatch law.

The request is the more reasonable because the dissolution of a local machine composed of Federal employees is likely to accentuate the power and the abuses of a similar machine built out of State and local jobholders. The Kentucky primary of a year ago, for instance, would almost certainly have nominated Governor Chandler for the Senate if Senator BARKLEY had not been able then to oppose the Governor's machine with a parallel organization.

The attorney general of Kentucky doubtless realizes the problem. But he would be able to do much more to forward the spirit of the Hatch law if he had legislation to invoke against "pernicious political activities" by State employees. Indeed, a necessary corollary to the new Federal act is local legislation designed to supplement and round out the good start which has now been made in eliminating Government workers from active party politics.

For that reason the bill introduced by Senator NEELY, of West Virginia, and approved Thursday by the Senate Civil Service Committee, is very important. It would extend the prohibitions of the Hatch act to all State employees paid in part from Federal funds, a procedure which is scarcely likely to be called in question on the score of constitutionality.

To round out and complete the important reform initiated by Senator HATCH, the principles of his bill should be enacted for every State by its own legislature. A decided stimulus to that end is provided by the Neely bill. Its introduction at the end of the current session is in part a constructive gesture. But there is good reason to have confidence in the Senator's prediction that his bill will follow that of Senator HATCH onto the statute books before the 1940 conventions take place.

Donn Fendler

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

PORTION OF SPEECH OF CONGRESSMAN RALPH O. BREWSTER AT JACKSONVILLE CAMP GROUND, EAST MACHIAS, MAINE

Mr. BREWSTER. Mr. Speaker, "And a little child shall lead them."

America and the world seems wandering in a wilderness of ignorance and greed. More and more are coming to the conclusion that like the prodigal it would be well to kneel in prayer.

Soon, like Donn Fendler, we may see the smoke of civilization rising above the forest of our fears.

This recent epic of the Maine woods may well serve to inspire Americans everywhere. The spirit of America survives in modern youth. One boy like Donn Fendler is proof that this rising generation—about which we are sometimes so much concerned—may soon take over the sorry mess we have made of our great heritage and put America back on the straight and narrow path.

The Boy and Girl Scouts of today are the citizens of tomorrow. There is every reason to believe they will be a substantial improvement on the generation that has gone before.

Only those who have gone through the Maine wilderness can appreciate something of the miraculous courage and incredible determination that were shown by this boy of 12.

But above the fortitude and the persistence rose the faith that would not down. American youth everywhere may well read the story of Donn Fendler and rise themselves to greater heights in the face of whatever difficulties and discouragement may seem to hold them back.

Donn's experience is a sermon more eloquent than words can ever preach.

I asked and received permission to put Donn Fendler's story in the CONGRESSIONAL RECORD where it will be preserved for all time for future generations to realize the kind of boys that were living in America in 1939.

An appropriate monument may well be placed upon Mount Katahdin to mark this epic hike. Perhaps in the future Boy Scouts may follow the Fendler trail to test their mettle for life's journey. Understanding will then come as to why he sought and found guidance in a faith that rose supreme above material obstacles of every kind.

Communists insist that religion is the opiate of the masses. Donn Fendler is a living example to prove that to him religion is a thing of life.

REMARKS OF CONGRESSMAN RALPH O. BREWSTER IN CONGRESSIONAL RECORD OF TUESDAY, AUGUST 1, 1939

THE STORY OF DONN FENDLER

Mount Katahdin, mile high, in Maine, is the first spot in the United States to catch the rays of the rising sun. Named for its solitary grandeur in the wilderness in which it rears its granitic head it was long feared by the Indians for Pamola, its evil spirit. Thoreau was one of the earliest white men to visit the mountain just a century ago. "In the Maine Woods" tells the story of its haunting and mysterious beauty.

The Appalachian Trail finds the northern terminus of its 2,000 miles of wooded glories very fittingly at the peak of Mt. Katahdin. There mountain climbers love to come to pit their skill against its cliffs and to study one of the best preserved of glacial cirques to be found throughout the East.

But the wilderness still creeps up all around. Five minutes off the trail may find one hopelessly engulfed.

This happened on July 17, 1939, to Donn Fendler, a 12-year-old Boy Scout from Rye, N. Y. Five hundred men and boys searched the mountain and the forest for 7 days without avail. The nights in this region were bitter cold and he was without protection of any kind.

All hope was given up. Experienced woodsmen were convinced that no boy could ever have survived the rigors of this region without food or shelter.

Thousands of parents followed with yearning and with prayer the progress of the seemingly hopeless search.

When suddenly on the eighth day the country was electrified by the news flash that Donn Fendler had emerged from the forest unharmed. He had literally found himself. Following a water course with the lore of the Scout he had stuck doggedly to his self-appointed task. No temptation of a wood's trail could lead him from that stream no matter how alluringly it might wind.

A burlap bag in an abandoned logging camp served him for a garment through the night. Berries in the woods gave him sustenance as he struggled on. Bears did not frighten him as he recounted they seemed as reluctant as he to make a closer acquaintance when he came upon them in a berry patch.

Eight days of wandering in a wilderness of doubt did not suffice to daunt him in his determination to get out.

Consider your own small son in an experience of this sort. Born and reared in the comforts of modern life and suddenly cast in a trackless wilderness without food and shelter and without the toughness of fiber that enabled the savage to survive, Donn Fendler carried on.

Finally he saw smoke rising across the stream that had now become a river and rescue was at hand.

His first thought was of his parents and their anxiety. His next concern was the trouble he might have occasioned people by getting lost. And then he told his rescuers of the time he had spent in prayer.

America may well follow the example of Donn Fendler in the seeming chaos of the present and kneel once more in prayer.

House Resolution 286

EXTENSION OF REMARKS
OF
HON. A. F. MACIEJEWSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to take this opportunity to explain to my constituents of the Sixth Congressional District of Illinois my position with respect to the important legislation provided in the resolution pending before the House today. The resolution provides that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 7120, a bill to provide for the construction and financing of self-liquidating projects, and for other purposes.

I intend to vote for this resolution, not only because I agree with its provisions but because I am a firm believer in the principle that all proposed legislation of vital interest to all of the people of this Nation such as this should be given an impartial hearing before the entire membership of this body.

For the moment let us analyze the bill, H. R. 7120, to which the resolution before us refers and which may be cited in all fairness as the Self-Liquidating Act of 1939. It authorizes public-works loans to municipalities and States for construction of schools, hospitals, and other improvements necessary to the general welfare of the people; it authorizes loans to the Reconstruction Finance Corporation for railroad equipment on a 10-year basis; it authorizes amounts for rural electrification; it authorizes loans to the Department of Agriculture to provide for rural rehabilitation and to accord aid to the tenants and the farmers of the country; it provides for loans for public roads; it authorizes an additional amount for the Export-Import Bank; and it creates employment for some 500,000 persons. Obviously, such legislation cannot help being of great benefit to the Nation.

It is the cry of those opposed to this beneficial legislation that the authorization for loans contained therein would be a burden on the Government. If we honestly consider the fact that all of these loans are amply secured, are for self-liquidating projects, and that most of the money will be repaid to the Government, we can readily understand that such charges are without foundation.

Therefore, Mr. Speaker, it is my honest conviction that this resolution should receive the support of the Members of this House if they are sincerely trying to restore prosperity to America.

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. DAVID D. TERRY
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from Arkansas

Mr. TERRY. Mr. Speaker, on January 13, 1939, my colleague, WILLIAM BEN CRAVENS, who so ably represented the Fourth Arkansas District in this body, died after a brief attack of pneumonia. Although he had overcome a siege of illness which continued during last session and the summer adjournment period, Mr. CRAVENS had returned to Washington for the opening of the Seventy-sixth session apparently in good health, and his sudden passing was a shock to his many friends, as it had only been a few days before that BEN, as he was familiarly called, had been with us on the floor of this Chamber in the fullness of life.

At the time of his death, Mr. CRAVENS was the dean of the Arkansas delegation, and was chairman of the Committee on Elections, No. 3. He was also a ranking member of the Committees on Expenditures in the Executive Departments, Mines and Mining, and Public Buildings and Grounds.

Mr. CRAVENS was a native of Fort Smith, Ark., having been born there on January 17, 1874, and having resided there all of his adult life. He came of a distinguished family whose history is interwoven with that of his native State. His father, William Murphy Cravens, was sent to the Army post at Fort Smith (from which the city derives its name) during the Civil War.

Mr. CRAVENS received his early educational training in the schools of Fort Smith and later attended the Louisville Military Academy and the Staunton Military Academy. He received his law degree at the University of Missouri, and entered into the practice of law at Fort Smith with his father. In 1897 he was elected city attorney of Fort Smith and served 4 years in that capacity. In 1901 he was elected prosecuting attorney of the Twelfth Judicial Circuit, which includes Fort Smith, serving three terms in that office, until 1906. I have been told that he was one of the most effective, vigorous, and successful prosecutors who ever held the office. In 1907 he was elected to Congress and served three terms, retiring voluntarily to resume the practice of the law, in which profession he was eminently successful.

Mr. Speaker, the political career of Mr. CRAVENS was unusual in that it does not fall to the lot of many men in public service to come back into that field after a long period of retirement, whether such retirement is voluntary or involuntary, yet it was the unusual experience of our friend, after a voluntary retirement of 20 years, to be reelected to the Seventy-third Congress without opposition. He was subsequently reelected to the Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses. As previously stated, during the spring and summer of 1938, Mr. CRAVENS was in poor health, and during the campaign last summer he was confined to his bed and made no public appearances or speeches, and yet in spite of formidable opposition he was overwhelmingly reelected—in fact, led the ticket among the congressional candidates in his State.

If one may sum up the qualities upon which the successes of his life were based, I should say that integrity and honesty were the foundation stones. One instinctively and wholeheartedly trusted Mr. CRAVENS. In him there was no guile

or subterfuge. The term "politician," in the ordinary acceptation of the term, never applied to him. He was a faithful representative of his district and his State, and he was ever assiduous in the discharge of the duties of his office. His people trusted him and he was faithful to the trust. He was popular with his fellow Members and had their entire confidence and respect.

Mr. Speaker, I feel that Mr. CRAVENS' life was an exemplary one. Viewed from any angle it was a success. His public life should be an inspiration to young men who would serve their country, and his private life was ideal. Mr. CRAVENS is survived by Mrs. Cravens and their two children, Fadjo Cravens, a practicing attorney, and Mrs. William Eads.

Mr. Speaker, in the passing of our friend and colleague, the Congress of the United States and the State of Arkansas have lost a tried and faithful Representative whose long career as a public servant was without stain or blemish, and will always be a source of pride to those whose privilege it was to know him.

Indian Affairs

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

DECISIONS OF THE SUPREME COURT OF THE UNITED STATES

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to insert in the CONGRESSIONAL RECORD decisions of the Supreme Court of the United States relative to Indian affairs. I am sure these decisions will be of interest to those interested in the affairs of the Indians of this country. The decisions are as follows:

HOW INDIAN TREATIES SHOULD BE INTERPRETED

The unbroken decisions of the Court of Claims and of the Supreme Court of the United States clearly demonstrate that the treaties should never be construed to the prejudice of the Indians; that Indian treaties should never be construed technically against the Indians; that Indian treaties should be construed as the Indians understood them.

INDIAN TREATIES—HOW CONSTRUED

In the case of *Worcester* v. *The State of Georgia* ((1832), 6 Pet. 515), Justice McLean in a concurring opinion, said:

"The language used in treaties with the Indians should never be construed to their prejudice. If words be made use of which are susceptible of a more extended meaning than their plain import, as connected with the tenor of the treaty, they should be considered as used only in the latter sense. To contend that the word 'allotted,' in reference to the land guaranteed to the Indians in certain treaties, indicates a favor conferred, rather than a right acknowledged, would, it would seem to me, do injustice to the understanding of the parties. How the words of the treaty were understood by this unlettered people, rather than their critical meaning, should form the rule of construction."

In the case of *Kansas Indians* (5 Wall. 737, 18 L. Ed. 667, (May 6, 1867) (*Charles Blue Jacket et al.* v. *The Board of Commissioners of the County of Johnson*)), the Court, in referring to the Indians, said:

"If they have outlived many things, they have not outlived the protection afforded by the Constitution."

In the case of *United States* v. *Kagama, etc.* ((May 10, 1886), 30 L. Ed. 228 (October 30, 1899)), the Court said:

"These Indian tribes are the wards of the Nation. They are communities dependent on the United States; dependent largely for their daily food; dependent for their political rights. They owe no allegiance to the States, and received from them no protection. Because of the local ill feeling, the people of the States where they are found are often their deadliest enemies. From their very weakness and helplessness, so largely due to the course of dealing of the Federal Government with them and the treaties in which it has been promised, there arises the duty of protection, and with it the power."

* * * * *

"The power of the General Government over these remnants of a race once powerful, now weak and diminished in numbers, is necessary to their protection, as well as to the safety of those among whom they dwell. It must exist in that Government because it never has existed anywhere else, because the theater of its exercise is within the geographical limits of the United States, because it has never been denied, and because it alone can enforce its laws on all the tribes."

In the case of *Jones* v. *Meehan* (175 U. S. 1, 44 L. Ed. 49 (1899)), the Court said:

"In construing any treaty between the United States and an Indian tribe, it must always (as was pointed out by the counsel for the appellees) be borne in mind that the negotiations for the treaty are conducted, on the part of the United States, an enlightened and powerful Nation, by representatives skilled in diplomacy, masters of a written language, understanding the modes and forms of creating the various technical estates known to their law, and assisted by an interpreter employed by themselves; that the treaty is drawn up by them and in their own language; that the Indians, on the other hand, are a weak and dependent people, who have no written language and are wholly unfamiliar with all the forms of legal expression, and whose only knowledge of the terms in which the treaty is framed is that imparted to them by the interpreter employed by the United States; and that the treaty must therefore be construed, not according to the technical meaning of its words to learned lawyers, but in the sense in which they would naturally be understood by the Indians (*Worcester* v. *Georgia*, 6 Pet. 515, 8 L. Ed. 483; *The Kansas Indians*, 5 Wall. 737, 760, *sub. nom. Blue Jacket* v. *Johnson County Commissioners*, 18 L. Ed. 667, *Wanzop-e-ah* v. *Miami County Commissioners*, 18 L. Ed. 674; *Choctaw Nation* v. *United States*, 119 U. S. 1, 27, 28, 30 L. Ed. 306, 314, 315, 7 Sup. Ct. Rep. 75). In the leading case of *Worcester* v. *Georgia* (1832) Chief Justice Marshall, speaking of article 4 of the treaty of Hopewell of November 28, 1785, between the United States and the Cherokee Indians, which defined 'the boundary allotted to the Cherokees for their hunting grounds, between the said Indians and the citizens of the United States' (7 Stat. L. 19), said: 'There is the more reason for supposing that the Cherokee chiefs were not very critical judges of the language from the fact that everyone makes his mark; no chief was capable of signing his name. It is probable the treaty was interpreted to them. Is it reasonable to suppose that the Indians, who could not write, and most probably could not read, who certainly were not critical judges of our language, should distinguish the word "allotted" from the words "marked out"?' (6 Pet. 551, 552; 8 L. Ed. 497, 498.) And Mr. Justice McLean, concurring, said: 'The language used in treaties with the Indians should never be construed to their prejudice. To contend that the word "allotted," in reference to the lands guaranteed to the Indians in certain treaties, indicates a favor conferred rather than a right acknowledged, would, it would seem to me, do injustice to the understanding of the parties. How the words of the treaty were understood by this unlettered people, rather than their critical meaning, should form the rule of construction' (6 Pet. 582; 8 L. Ed. 508)."

In the case of *Beecher* v. *Wetherby* (95 U. S. 517 (October 1877)), Judge Field said for the Court:

"It is to be presumed that in this matter the United States would be governed by such considerations of justice as would control a Christian people in their treatment of an ignorant and dependent race."

In the case of *Barker* v. *Harvey* (181 U. S. 481 (October 1900)), Justice Brewer said:

"It is undoubtedly true that this Government has always recognized the fact that the Indians were its wards, and entitled to be protected as such, and this Court has uniformly construed all legislation in the light of this recognized obligation."

In the case of *Seufert Bros.* v. *U. S.* (249 U. S. 197; Mar. 3, 1919), the Court quoted with approval from the case of *United States* v. *Winans* (198 U. S. 371), as follows:

"We will construe a treaty with the Indians as 'that unlettered people' understood it, and as justice and reason demand in all cases where power is exerted by the strong over those to whom they owe protection and counter poise the inequality 'by the superior justice which looks only to the substance of the right without regard to technical rules' (*Choctaw Nation* v. *U. S.*, 119 U. S. 1; *Jones* v. *Meehan*, 175 U. S. 1)."

In the case of *United States* v. *Payne* (264 U. S. 446; Apr. 7, 1924), in referring to the Indians, the Court said:

"They are an unlettered people unskilled in the use of language (*Jones* v. *Meehan*, 175 U. S. 1), with regard to whom the United States occupies the position and assumes the responsibilities of virtual guardianship bound by every moral and equitable consideration to discharge its trust and good faith and fairness (*Choctaw Nation* v. *U. S.*, 119 U. S. 1). Construing the treaty liberally in favor of the rights claimed under it, as we are bound to do (*Hanenstine* v. *Lynham*, 100 U. S. 483), we conclude that the character of the lands thereafter to be set apart for them severally was not restricted."

In *Nielsen* v. *Johnson* (279 U. S. 47 (Feb. 18, 1929)), the Court said:

"Treaties are to be liberally construed so as to effect the apparent intention of the parties, *Jordan* v. *Tashiro* (278 U. S. 123); *Geofrey* v. *Riggs* (133 U. S. 258); *Re Ross* (140 U. S. 453); *Tucker* v. *Alexanderoff* (183 U. S. 424), when a treaty provision fairly admits of two constructions, one restricting, the other enlarging rights which may be claimed under it the more liberal interpretation, is to be preferred. * * * When their meaning is uncertain recourse may be had to the negotiations and diplomatic correspondence of the contracting parties relating to the subject matter and to their own practical construction of it."

In the case of *Winters* v. *United States* (207 U. S. 564 (October 1907)), the Court said:

"By a rule of interpretation of agreements and treaties with the Indians, ambiguities occurring will be resolved from the standpoint of the Indians. And the rule should certainly be applied to determine between two inferences, one of which would support the purpose of the agreement and the other impair or defeat it. On account of their relations to the Government, it cannot be supposed that the Indians were alert to exclude by formal words every inference which might militate against or defeat the declared purpose of themselves and the Government, even if it could be supposed that they had the intelligence to foresee the 'double sense' which might sometime be urged against them."

In the case of *G. W. Choate et al.* v. *M. F. Trapp* (224 U. S. 665 (October 1911), decided May 13, 1912)), the Court said:

"It is conceded that no right which was actually conferred on the Indians can be arbitrarily abrogated by statute * * *."

"But in the Government's dealings with the Indians the rule is exactly the contrary. The construction, instead of being strict, is liberal; doubtful expressions, instead of being resolved in favor of the United States, are to be resolved in favor of a weak and defenseless people, who are wards of the Nation and dependent wholly upon its protection and good faith. This rule of construction has been recognized, without exception, for more than a hundred years and has been applied in tax cases.

"For example, in *Kansas Indians* (5 Wall. 737, 760), the question was whether a statute prohibiting levy and sale of Indian lands prevented a sale for State taxes. The rule of strict construction would have compelled a holding that the property was liable.

"But Justice Davis, in speaking for the Court, said that 'enlarged rules of construction are adopted in reference to Indian treaties.' He quoted from Chief Justice Marshall, who said that 'the language used in treaties with the Indians shall never be construed to their prejudice, if words be made use of susceptible of a more extended meaning. * * *' Again, in *Jones* v. *Meehan* (175 U. S. 1), it was held that 'Indian treaties must be construed, not according to the technical meaning of their words, but in the sense in which they would naturally be understood by the Indians.'"

In the case of *United States* v. *Lineas Winans et al.* (198 U. S. 374 (October 1904)), the Court emphasized this principle where it said:

"And we have said that we will construe a treaty with the Indians as 'that unlettered people' understood it, and 'as justice and reason demand, in all cases where power is exerted by the strong over those to whom they own care and protection,' and compose the inequality 'by the superior justice which looks only to the substance of the right without regard to its technical rules' (*Choctaw Nation* v. *United States*, 119 U. S. 1; 30 L. Ed. 309, 7 S. Ct. Rep. 75; *Jones* v. *Meehan*, 175 U. S. 1; 44 L. Ed. 49; 20 S. Ct. Rep. 1)."

In the case of *United States* v. *Choctaw Nation and Chickasaw Nation; Wichita and Affiliated Bands of Indians* v. *Choctaw Nation, Chickasaw Nation, and United States; Choctaw Nation and Chickasaw Nation* v. *United States and Wichita and Affiliated Bands of Indians* (179 U. S. 494; 45 L. Ed. 291), in reference to how treaties in general are to be construed, the Court said:

"If the words be clear and explicit, leaving no room to doubt what the parties intended, they must be interpreted according to their natural and ordinary significance. If the words are ambiguous, then resort may be had to such evidence, written or oral, as will disclose the circumstances attending the execution of the instrument and place the court in the situation in which the parties stood when they signed the writing to be interpreted.

"To what extent, if at all, have these rules been enlarged or modified when the instrument to be interpreted is a treaty between the United States and Indian tribes? In the *Kansas Indians* (5 Wall. 737, 760), *sub nom. Blue Jacket* v. *Johnson County Comrs.* (18 L. Ed. 667), *Wan-zop-e-ah* v. *Miami County Comrs.* (18 L. Ed. 674), it was said that enlarged rules of construction have been adopted in reference to Indian treaties, citing as the words of Chief Justice Marshall in *Worcester* v. *Georgia* (6 Pet. 515, 563, 582, 8 L. Ed. 483, 502, 508) (but which were in fact the words of Mr. Justice McLean in his concurring opinion in that case) the following: 'The language used in treaties with the Indians should never be construed to their prejudice. If words be made use of which are susceptible of a more extended meaning than their plain import, as connected with the tenor of the treaty, they should be considered as used only in the latter sense.'

"Mr. Justice McLean further said: 'How the words of the treaty were understood by this unlettered people, rather than their critical meaning, should form the rule of construction.' In *United States* v. *Kagama* (118 U. S. 375, 383, 384, 30 L. Ed. 228, 230, 6 S. Ct. Rep. 1109), the Indian tribes in this country are spoken of as wards of the Nation, communities dependent for their food and their political rights, as well as for protection, on the United States. And in *Choctaw Nation* v. *United States* (119 U. S. 1, 28, 30 L. Ed. 306, 315, 7 S. Ct. Rep. 75), it was said that the relation between the United States and the Indian tribes was that of superior and inferior, and that the rules to be applied in the case then before the Court were those that govern public treaties, which, even in case of controversies between nations equally independent, were not to be interpreted as rigidly as documents between private persons governed by a system of technical law, 'but in the light of the larger reason and the superior justice that constitute the spirit of the law of nations.' In *Jones* v. *Meehan* (175 U. S. 1, 11, 44 L. Ed. 49, 54, 20 S. Ct. Rep. 1), it was said that a treaty between the United States and an Indian tribe must be construed, not according to the technical meaning of its words to learned lawyers, but in the sense in which they would naturally be understood by the Indians.

"But in no case has it been adjudged that the courts could by mere interpretation or in deference to its view as to what was right under all the circumstances, incorporate into an Indian treaty something that was inconsistent with the clear import of its words. It has never been held that the obvious, palpable meaning of the words of an Indian treaty may be disregarded because, in the opinion of the court, that meaning may in a particular transaction work what it would regard as injustice to the Indians."

COURT OF CLAIMS CASES

Navarre et al. v. *United States* (33 C. Cls. 235, affirmed in 173 U. S. 77), the Court of Claims said:

"Contention arises over the use of the word 'other' in the treaty. Does it mean 'whites' only or other than their own tribe. * * * The latter view is strengthened by the rule enumerated by Vattel in treaty construction which declared: The words of a party should be construed in accordance with the general reasons and motives of the agreement; and again in *Ross* (140 U. S. 453), when the court said in referring to a treaty, 'all its provisions must be examined in the light of attendant and surrounding circumstances; and again under the well-established rule, that, as between the United States and the Indians, treaties are to be liberally construed in favor of the Indians'."

In the case of *Mille Lac Chippewas* v. *United States* (46 Ct. of Cls., 455) Mr. Chief Justice Booth, for the Court said:

"We are not dealing with acts regulating the administration of Indian property and Indian funds in the sense of their validity or invalidity. The question at issue rests upon the construction of treaties and the acts of Congress in the premises is not questioned. The jurisdiction conferred extends to an inquiry as to what, if any, damages the claimants suffered by reason of the alleged taking of their property acquired under treaties which failed of execution because of acts of Congress. It is a warrant of authority to adjudicate results, and not to determine the means employed to bring about the same.

"In *Cherokee Nation* v. *Hitchcock*, supra, the Court said:

"'There is no question involved in this case as to the taking of property; the authority which is proposed to exercise by virtue of the act of 1898 has relation merely to the control and development of tribal property which still remains subject to the administrative control of the Government. * * * *Lone Wolf* v. *Hitchcock* followed the *Cherokee case, supra*, and the court was therein dealing with administrative measures designed to control the Indian property, a mere change in the form of investment of Indian tribal property * * * (p. 476) courts are constrained to give effect to jurisdictional statutes where the intent of the legislature can reasonably be inferred from the language thereof to vest authority to judicially ascertain the merits of the controversy (*Supervisors* v. *Stanley*, 105 U. S. 305). Doubts are resolved in favor of jurisdiction unless some established law is violated (Endlech on Statutory Construction, sec. 430; *Butler & Vale* v. *U. S.*, 43 C. Cls. 497).'"

And at page 457, the court said:

"The intention and understanding of the Indian tribe of the rights secured to them by conventions of this character is of paramount importance."

In the case of *Chickasaw Nation* v. *United States* (22 C. Cls. 248) the court said:

"* * * the courts in all controversies between the Government and the Indian tribes have adopted a theory of interpretation favorable to the tribes; and while the rules of law applicable to such controversies are not so strict as those governing differences between guardian and ward, they go to the extent, as has been held, that doubts are to be resolved in favor of the Indians; that they are not to be prejudiced by mere technical construction; and that words of doubtful import are to be taken most strongly against the United States."

In the case of *Blackfeet et al. Nations* v. *United States* (81 C. Cls. 101 (1933)), the Court said:

"The courts of the United States, without a single exception, have approached the adjudication of Indian rights arising under Indian treaties with the fundamental principle of law in view, that the Indian tribe, unlettered and subordinated to a superior power, was entitled to have all doubts resolved in its favor, and that the parties to the treaty were not in all respects upon an equal footing. What the representatives of the Indian tribe understood with regard to their rights was a vital factor in determining the scope and effect of treaties. The Indians looked, as long ago said, 'to our Government for protection'; they had faith in the observation of treaties, and above all else they wanted the approval of the President 'whom they addressed as their father,' and the Congress to what was done. No court has ever held that the Indian tribes, parties to treaties with the United States, were in all respects sui juris, or to be treated as such."

SUPREME COURT CASES

In the case of *Shoshone Tribe of Indians of the Wind River Reservation in Wyoming* v. *United States* (299 U. S. 476, 57 S. Ct. Rep. 244), the Court said:

"The adoption by the United States of the wrongful act of any officer is, of course, an adoption of the act when and as commit-

ted, and causes such act of the officer to be, in virtue of the statute, a rightful appropriation by the Government for which compensation is provided." *Crozier* v. *Fried Krupp Aktiengesellschaft* (224 U. S. 290, 305, 32 S. Ct. 488, 491, 56 L. Ed. 771).

"Confusion is likely to result from speaking of the wrong to the Shoshones as a destruction of their title. Title in the strict sense was always in the United States, though the Shoshones had the treaty right of occupancy with all its beneficial incidents. *United States* v. *Creek Nation,* supra (295 U. S. 103, at p. 109, 55 S. Ct. 681, 683, 684, 79 L. Ed. 1331). What those incidents are, it is needless to consider now. Cf. *United States* v. *Cook* (19 Wall. 591, 22 L. Ed. 210); *Pine River Logging & Imp. Co.* v. *United States* (186 U. S. 279, 22 S. Ct. 920, 46 L. Ed. 1164); *United States* v. *Paine Lumber Co.* (206 U. S. 467, 27 S. Ct. 697, 51 L. Ed. 1139). The right of occupancy is the primary one to which the incidents attach, and division of the right with strangers is an appropriation of the land *pro tanto,* in substance, if not in form.

"Third. The claimant's damages include such additional amount beyond the value of its property rights when taken by the Government as may be necessary to award of just compensation, the increment to be measured either by interest on the value or by such other standard as may be suitable in the light of all the circumstances.

"The fact is unimportant that the taking was tortious in its origin, if it was made lawful by relation. *Crozier* v. *Fried Krupp, etc.,* supra. The fact also is unimportant that it was a partial taking only, and that eviction was not complete. *Jacobs* v. *United States* (290 U. S. 13, 16, 54 S. Ct. 26, 27, 28, 78 L. Ed. 142, 96 A. L. R. 1); *United States* v. *Cress* (243 U. S. 316, 327–330, 37 S. Ct. 380, 61 L. Ed. 746); *Hurley* v. *Kincaid* (285 U. S. 95, 104, 52 S. Ct. 267, 269, 76 L. Ed. 637). Finally, the fact is unimportant, there having been an appropriation of property within the meaning of the fifth amendment, that the jurisdictional act is silent as to an award of interest or any substitute therefor. *United States* v. *Creek Nation,* supra (295 U. S. 103, at pp. 110, 111, 55 S. Ct. 681, 684, 79 L. Ed. 1331); cf. *Yankton Sioux Tribe* v. *United States* (272 U. S. 351 359, 47 S. Ct. 142, 144, 71 L. Ed. 294). Given such a taking, the right to interest or a fair equivalent, attaches itself automatically to the right to an award for damages. *Jacobs* v. *United States,* supra; *Phelps* v. *United States* (274 U. S. 341, 47 S. Ct. 611, 71 L. Ed. 1083); *Brooks-Scanlon Co.* v. *United States* (265 U. S. 106, 123, 44 S. Ct. 471, 474, 68 L. Ed. 934); *Seaboard Air Line Co.* v. *United States* (261 U. S. 299, 306, 43 S. Ct. 354, 356, 67 L. Ed. 664).

* * * * * * *

"Power to control and manage the property and affairs of Indians in good faith for their betterment and welfare may be exerted in many ways and at times even in derogation of the provisions of a treaty. *Lone Wolf* v. *Hitchcock* (187 U. S. 553, 564, 565, 566, 23 S. Ct. 216, 47 L. Ed. 299). The power does not extend so far as to enable the Government 'to give the tribal lands to others, or to appropriate them to its own purposes, without rendering, or assuming an obligation to render, just compensation; * * * for that "would not be an exercise of guardianship, but an act of confiscation,"' *United States* v. *Creek Nation, supra* (295 U. S. 103, at p. 110, 55 S. Ct. 681, 684, 79 L. Ed. 1331), citing *Lane* v. *Pueblo of Santa Rosa* (249 U. S. 110, 113, 39 S. Ct. 185, 63 L. Ed. 504); *Cherokee Nation* v. *Hitchcock* (187 U. S. 294, 307, 308, 23 S. Ct. 115, 47 L. Ed. 183). The right of the Indians to the occupancy of the lands pledged to them may be one of occupancy only, but it is 'as sacred as that of the United States to the fee.' *United States* v. *Cook, supra* (19 Wall. 591, at p. 593, 22 L. Ed. 210); *Lone Wolf* v. *Hitchcock, supra; Choate* v. *Trapp* (224 U. S. 665, 671, 32 S. Ct. 565, 56 L. Ed. 941); *Yankton Sioux Tribe* v. *United States, supra.* Spoliation is not management."

What the New Deal Has Done to the Poultry Raisers of America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MUNDT. Mr. Speaker, in addition to its general disruption of the farming industry of America through paying domestic farmers to curtail production while reducing tariff barriers through the reciprocal-trade pacts, and thus encouraging foreign farmers to ship more foodstuffs into America, the New Deal has dealt a serious body blow to the poultry raisers of this country. If New Deal candidates in 1940 have the temerity to ask the question, "Are you better off than you were?" the thundering "No" which will come back from America's poultry industry will be a "shout heard 'round the world."

The following figures are reported by the United States Department of Agriculture and enable anybody from the Nation's biggest poultry raiser to the farmer's wife who looks to the receipts from the sale of eggs for her "pin money" to figure how the farm policies of the New Deal have decreased cash income from eggs. Similar figures could be compiled to demonstrate what an expensive luxury the New Deal has been to those raising chickens, turkeys, and other poultry for market.

Price of eggs, cents per dozen

1921	28.3
1922	25.0
1923	26.5
1924	26.7
1925	34.0
1926	28.9
1927	25.1
1928	28.1
1929	29.8
1930	23.7
1931	17.6
1932	14.2
Average price for last 12 Republican years	25.6
1933	13.8
1934	17.1
1935	23.4
1936	21.8
1937	21.3
1938	20.3
First 6 months of 1939	16.2
Average price for first 6½ New Deal years	19.1

Eggs averaged 6½ cents more per dozen during the 12 Republican years preceding the New Deal than in the first 6½ years of the present administration and 10.1 cents more per dozen than today's price of 15.5 cents. It should be remembered that the 15.5 cents per dozen figure is the Chicago price paid for selected eggs and many farmers are now receiving several cents per dozen less than even this pitifully low price of 15.5 cents. For example, the man on my own farm in Lake County, S. Dak., has recently been getting only 11 and 12 cents per dozen for the eggs he takes to market. It is a simple matter for each of you to revise the conclusions of this talk by inserting the price paid for eggs in your own community instead of the 15.5 cents Chicago price, which I have cited in order to give the New Deal every possible advantage in drawing these conclusions.

NEW DEAL COSTS SOUTH DAKOTA $16,932,500 IN EGGS ALONE

South Dakota produced 260,500,000 dozens of eggs in the 6½ years which the New Deal has been in power. If South Dakota farmers had received the additional 6½ cents per dozen that eggs averaged during the preceding 12 Republican years, the egg producers of my State would have had $16,932,500 more than they did with the New Deal egg prices. Eggs averaged approximately 31 percent more during the Republican years than they have during the 6½ years of the New Deal. The abundant life has proved to be an abysmal fraud for the American farmer, and foreign producers are today the only group who can sing "Happy Days Are Here Again" without choking on the words.

Egg producers of the United States received $1,059,445,000 less during the past 6½ New Deal years than they would have received if they had been paid the prices they obtained during the Republican era.

The price of eggs was 27 cents per dozen the day the new dealers were voted into office—they are 15.5 per dozen today, and lucky is the farmer who is receiving even that.

MR. FARMER—DO YOUR OWN ARITHMETIC

Mr. Farmer, how many dozen eggs were produced on your farm during the past 6½ years? How much money would you have in your pocket if you had the additional 6½ cents per dozen for the eggs produced during this time? Has the New Deal been worth the difference?

Before answering the last question above, you owe it to yourself and your children to also consider the present prices you are receiving for lard (lowest, incidentally, in 72 years), the prices you are offered for your present grain and corn crop, and the way the rest of the prices you are offered for what you raise compare with the price you are asked when

you go to town to exchange this produce for the product of the shop or factory.

THE IMPORTS TELL THE STORY

American farmers pay American taxes. They maintain an American living standard. They are entitled to an American price level. Sooner or later our American farmers are going to insist on their right to the American market, and the politicians who attempt to fool them year after year by trying to kid them into thinking that the huge increase in foreign imports of foodstuffs has had nothing to do with the ruinous price levels of today are going to find deaf ears turned toward their rantings, because any farmer can figure out on the back of an envelope with a pencil just what the New Deal has meant to him.

FROM A "MESS OF PORRIDGE" TO A "MIRAGE OF PARITY"

Taken all in all, the New Deal has reduced the farm income of this country by approximately $2,000,000,000 per year, when the average prices of the nearly 7 years since the beginning of 1933 are compared with the preceding 7 years of Republican administration; when the full 12 years of Republicanism are considered, the case against the New Deal is ever blacker. When it is considered that this $2,000,000,000 annual farm loss results even after adding in all farm parity payments, subsidies, and bounties, it is apparent that the ancient fellow who would sell his soul for a "mess of porridge" drove a shrewd bargain compared to a modern farmer who would sell his substance to the New Deal for a "mirage of parity."

Every serious-thinking citizen realizes that some day the Federal "well" is going to dry up and the program of making annual cash payments from the Government Treasury to the farmers of America will be stopped. To get an honest and complete realization of just how completely the New Deal farm program has failed to provide respectable prices for the products of American farms, each farmer owes it to himself to take time off some day to figure out just how much income he has actually been getting from the products he has sold from his farm the past few years. Such a calculation will give our farmers a "preview" of where we will be when the Government cash payments cease—and it should not be overlooked that these appropriations are not passing by alarmingly scant margins as our national debt approaches its $45,000,000,000 legal limit; it is now over $41,000,000,000. Eventually, this Nation must stop paying farmers for "not raising foodstuffs" and set up a farm program which will pay them a fair and honest price for a full and complete crop.

WOULD YOU CALL THIS FARM PROSPERITY?

Personally, I have voted for every Government parity payment and cash subsidy for farmers which has been before me in Congress, so have practically all the other representatives of farming districts. We do this because we realize that the New Deal's unpardonable program of importing competing farm products would pauperize our entire farming population were it not for these cash benefit payments. But representatives from city districts and from dairy States and other producing areas not receiving these Government checks are gradually realizing what this program costs their taxpayers and are coming within 6, 10, or 15 votes of defeating every such farm appropriation.

What will happen when the checks stop? Where will our farmers then find themselves? During this session of Congress the Government people in their desperate effort to win support for additional appropriations for benefit checks have freely admitted, "Farm prices will be worse than in 1932 if we do not get the full amounts requested." Well, they got the money they asked for and even more in some cases. But where does this leave the farm program when even its administrators admit it is the Government checks and not the farm prices which keep farmers going. And, even so, with all these Government checks who would say we now have farm prosperity?

The present program of cash-benefit checks serves a purpose as an emergency policy to keep our farmers from all being forced off their farms; it has value as a temporary expedient to meet a crisis. It can be justified as a form of "compensation" to the farmers on the part of a Government which by Executive action has given their market away to the peon laborers and coolie farmers of foreign countries. As such I have supported it and voted for its appropriations but all the time I have been working with other Congressmen from farm States trying to compel the Government to quit its ruinous policies of farm imports and to provide cost of production to the American farmers. Thus far, the administration forces have out-voted us and the New Deal has driven back every attempt we have made. But we are making headway. More and more Congressmen from the New Deal corner are discarding partisanship loyalities and joining those of us putting the interests of the farmers ahead of those of the vote-seeking politicians.

IT CANNOT LAST

Nobody seriously believes the present farm program of small Government checks instead of large grain checks either can or should be continued permanently. My mail is filled with letters from farmers saying, "It cannot last; it will not work much longer." The farming industry cannot thrive and prosper as it should on a permanent program of emergencies and crises. It needs a stable policy based on sound economics and which will enable farmers not only to stay on the farm, but which will enable them once again to make legitimate profits and earn enough from their efforts to retire in old age and move to town as had been the American tradition for many generations back. The American farmer must again have a chance to succeed and become independent. Even the most optimistic—and well paid—defenders of the present farm program do not support it as having value as a permanent American farm policy. It is time, now, to pay more attention to the economics of agriculture and less to the emergencies of the administration.

It is indeed time that we give the American market back to the American farmer, and that we replace theories which have failed with a national farm program, giving our farmers a fair price for a full crop. Unless this is done soon, America cannot survive since any lasting prosperity must come first through providing a respectable income for the producers of new wealth upon which all other national wealth is founded.

An Appeal for Our Federal Employees

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 9, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, APRIL 14, 1932

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech made by me on April 14, 1932:

Mr. CANNON. Mr. Chairman, I yield 15 minutes to the gentleman from New York [Mr. SIROVICH].

Mr. SIROVICH. Mr. Chairman, ladies and gentlemen of the committee, from time immemorial political parties have existed. They have been the medium through which the people have expressed their hopes, their ideals, and their aspirations. In the day of the Saviour there were five political groups—the Sadducees, who represented the reactionary group of their time, and who owned and controlled all the material wealth of their day; the Pharisees, who represented the common people of their time, the Democrats of their day; the Zealots, who symbolized national consciousness, the predecessors of Patrick Henry, and who were the first to enunciate the patriotic sentiment, "give us liberty or give us death." They refused to genuflect to any alien or foreign nation, and have always fought for the freedom of their people. They were ready to die to bring liberty into the home, hearth, and fireside of their people; the Scribes, who recorded the valorous deeds of their people and preserved the traditions of their forebears; and, last, the Elders, those illustrious patriarchs, who had

grown gray in the service of God, and who were elected as judges and placed upon the tribunal known as the Sanhedrin.

Centuries passed by and we find in Greece two political groups, the hoi aristoi, or aristocratic element, and the hoi polloi, represented by the common people. When Rome was mistress of the world and her battalions and legions conquered the then known civilized world, political groups were represented by two parties, the patricians and the plebeians. The patricians belonged to the hereditary aristocracy and the plebians belonged to the common people of ancient Rome.

For almost 1,500 years when knighthood was in flower, dukes, lords, and barons represented the landed aristocracy. The common people were feudalistic slaves who had economic security but who were denied liberty or freedom of expression.

In the period the King George III we had the Tories, who represented the philosophy of absolute monarchy, and the Whigs, who represented the liberal party in England in the eighteenth and nineteenth centuries.

Since the creation of our Government our people, in my humble opinion, have been divided into two groups, those who represent the reactionary conservative views, and those who represent liberal principles and ideals. To me a reactionary conservative is one who adheres to the existing order of things and is opposed to any economic change. A liberal, on the other hand, stands not only for stability and order but for progress and reform. I am proud to proclaim myself as a liberal, progressive Democrat, free from narrowness, bigotry, intolerance, or bondage to authority, battling, for economic principles that will bring the greatest good to the greatest number, and justice to rich and poor alike. [Applause.] As a liberal progressive I am frank enough to admit that you can find reactionary conservatives on both sides of the aisle, as well as progressive liberals in the Republican and Democratic ranks alike.

Mr. Chairman, the tragedy of our terrible economic depression at the present time is that the strong are getting the assistance of our present administration, whereas it is the weak, the helpless, the hopeless, who need it most.

The barometer of the civilization of any nation throughout the ages has been the treatment that has been accorded to those who work and toil in the quarries of life. For 140 years the American workingman has struggled, toiled, and drugged to develop an American standard of living. We are all proud of that standard, and we love to see it advanced. In my opinion, labor is the producer of capital and should be entitled to a fairer share in the distribution of the wealth that it creates. [Applause.]

For almost five decades the Republican Party has boldly proclaimed its right to the suffrage of every American citizen. Its economic principles had brought about affluence and prosperity. The full dinner pail appealed to the gustatory joy of the American toiler. In the last campaign the Republican nominee for President promised two chickens in every pot, two automobiles in every garage, and the abolition of poverty. The millennium was at hand.

Now, everywhere throughout the length and breadth of our country 8,000,000 people are out of employment, pleading, begging, and crying for work. Twenty million American citizens are the victims of hunger, penury, misery, and want. Charity is knocking upon the door of self-respecting American citizens.

For 12 years the Republican Party, the reactionary conservative group, has been in control of the destinies of our Republic. They have almost ruined our country socially, economically, and financially. They are floundering in the mire of financial and economic uncertainty. They have no plan, program, or treatment that can restore our economic stability.

It remains, therefore, for the liberal and progressive patriotic element of the Congress of the United States, which is found on both sides of the aisle, to unite to bring our beloved Republic back to the happines, success, and prosperity that every thoughtful and self-respecting American is praying for it to achieve. [Applause.]

Mr. Chairman, the Democratic Party has taken possession of the House of Representatives. If it continues to remain Democratic, true to its ideals and to its traditions, liberal and progressive in its view of economic ideals, loyal to the great masses of people who are looking for new leadership to bring our ship of state, that is being buffeted by economic typhoons and political storms, into the harbor of peace and prosperity, as sure as night follows day the next President and the next House and Senate must be Democratic. [Applause.]

Mr. Chairman, ladies and gentlemen of the committee, there are three kinds of wages that workingmen receive in exchange for their labor. First, saving wages; second, living wages; and third, starvation wages. The democracy of the State of New York, from which I have the honor to come, under the supervision of the Democratic leaders who represent our great Empire State, have been instrumental in placing upon our statute books no starvation wages, yea, no living wages, but the only kind of wages that should exist in our Federal Government and our State governments, and that is saving wages that will make it possible for every man and woman who works for our country to save money from their earnings to help to maintain them when age, sickness, and disease fall upon them. [Applause.]

The Government of the United States has been derelict in its obligation to its Federal employees. It has never paid them saving wages. God knows it has not even been living wages. Post-office clerks, customhouse workers, clerical workers in the different departments of our Government; yea, 87 percent of those who work in the Federal departments receive less than $2,000 a year. The survey of Federal employees and their salaries recently made by the Bureau of the Budget tragically shows the insufficient pay that has been given to those who work for Uncle Sam. The most startling revelation made in their report shows that 221,000 civilian Government workers are paid less than $1,000 a year. Can anyone live in luxury on such a salary? Are these the princely salaries which some Members of Congress would want to cut? More than 80 percent of the civilian workers are found to be receiving less than $2,000 a year. Do the Members of Congress want to balance the Budget by slashing away at these meager and pitiable salaries that these poor people receive from our Government?

More than half of the total amount paid by the Government for civilian salaries goes to men and women who individually are paid less than $1,000 a year. Is there any Member of Congress who would state that this is an adequate amount with which to support an American family in conformity with American standards? There are about 4,000 civilians outside of Members of Congress and the judiciary who are paid more than $5,000 a year. Members of Congress receive $10,000 a year. From the work, toil, and labor that I see each man perform, there is no doubt in my mind that he earns it justly and fairly. Every Member of Congress has to maintain his home in the State from which he comes, live in Washington, contribute to every charitable institution within his district, and help every impoverished family that knocks upon his door seeking assistance. The wonder to me is how any Member of Congress can maintain himself adequately and justly upon this salary.

The absurdity of making the proposed cut apply to the military and naval forces can only be manifested when we realize that the survey shows 290,913 people in this service in which 220,673 receive less than $1,000 a year. Is the United States Government impoverished in the pay that it gives to those who have given the best years of their life to serve our country loyally and faithfully? I say our country has never done enough for its employees. The Federal Government should not join those misguided private employers who are using the present economic condition as a weapon to batter down the American standard of living, which has taken so many years for our Republic to bring into realization. [Applause.]

In 1928 I was a member of the Civil Service Committee of the House of Representatives. At the present time I am ranking member of that committee. We passed the Welch bill to increase the salaries of all working people employed by our Government, particularly those in the lower brackets. Federal employees came to our hearings from all over the country. They pleaded, implored, and besought us to give them an increase in salary during the great height of American Republican prosperity. Mr. Coolidge was President. The bill was voted out unanimously by our committee. Everywhere throughout the length and breadth of our country industrial and white-collar workers had their salaries increased very greatly. Our poor Federal employees had received no increase whatsoever. The Welch bill was reported out with increases in the salaries of our American Federal employees to the extent of $90,000,000. President Coolidge sent for Mr. Lehlbach, the chairman of the Civil Service Committee of the House of Representatives. He advised him that he would veto that bill unless the $90,000,000 of increased salaries was reduced to $18,000,000. The wish of President Coolidge was complied with by all members of our committee. That meant that the working people employed by our Government only received increases of $60, $120, and $180 per year. That was in the height of our great period of economic prosperity. Even in those days these Federal employees appearing before our committee cried that their children had very little clothing, one pair of shoes, food not of the best quality; that when their children were sick they had to go to a dispensary or be admitted as a charity case in the hospitals of our country.

Now, ladies and gentlemen, if that was the state of affairs of our Federal employees in 1928, when our country was enjoying the most prosperous period of its economic history, what would be their sad plight today if you reduce their salaries, which are now insufficient to support their wives and children and those who are dependent upon them? [Applause.]

I say to you, ladies and gentlemen of the House of Representatives, you liberals and progressive like myself, that we as Democrats do not believe in the principle of "soaking the rich." But while we do not believe in this monstrous doctrine of "soaking the rich," neither do we believe in the un-American sentiment of letting the poor starve, who are helpless and hopeless in finding work in this great Republic of ours in the so-called twentieth century of civilization.

Mr. Chairman, the Government of the United States employs about 525,000 people who are working under civil-service regulations. Of this number, 221,000 earn less than $1,000 a year, 204,000 earn between $1,000 and $2,000, 75,000 earn between $2,000 and $3,000, while 25,000 who occupy high executive and administrative positions, earn between $3,000 and $10,000 a year.

Under the present civil service retirement law, the higher-paid employees are being retired at from 18 to 25 percent of their salary, while those receiving $2,400 per annum or less are being retired on from 50 to 75 percent of their salary. An illustration of present injustice under present law is afforded by the following:

Two men in the Department of Agriculture retired for age after more than 30 years' service. One contributed $1,202.56 to the retirement fund, including interest, and received an annuity of $1,200.

The other contributed $4,440.62 to the retirement fund, including interest, and received an annuity of $1,359.31. Thus the first man paid $100.21 per $1,000 of annuity and the second was required to pay $326.68 for each $1,000 of annuity, or three and one-fourth times as much as the first.

So far as we have been able to determine, the Civil Service Retirement Act is the only one which discriminates against the higher-bracket employees. In all other systems the retirement annuity is based upon the salary earned regardless of amount, and as a result the annuity is more nearly proportionate to the value of the service that has been rendered the Government during the active career of the annuitant.

All employees receiving $2,400 per year or less at present retire at from 50 to 75 percent of their salary.

The Civil Service Commission records show that the retired rolls are a fraction less than 12 percent of those on active duty.

Mr. Chairman, from a social, from an economic, and from a political standpoint the proposed reduction of salaries of Federal employees would be instrumental in aggravating the frozen confidence of our American people by continuing longer the economic depression in which we are now floundering.

It would reduce the standard of living in every American home, which has taken us decades and decades to perfect and develop until it has been known the world over as the American standard of living.

From an economic standpoint it would diminish the purchasing power of more than a million Federal employees. It would lengthen the depression and compel the American workingman to economize now more than ever, because of the reduction of his salary. It would be instrumental in changing the living and saving wages that he formerly received into starvation wages.

From a political standpoint, we granted Europe a moratorium. We voted $2,000,000,000 for the Finance Reconstruction Corporation. We thought this tremendous monetary contribution, designed to help railroads, large banking institutions, life-insurance companies, Federal farm banks, and other similar organizations, would be instrumental in trickling down from above to help those who are below and are in destitute circumstances, impoverished, and unemployed, who would be the beneficiaries of this special legislation. This privileged legislation was a financial blood transfusion for Europe and for those great institutions. However, it looks to me as if this financial blood is being attempted to be taken from the anemic, impoverished, self-respecting American Federal employee—1,000,000 of them—to help those who have been responsible for bringing our country into this great economic depression in which we find ourselves at the present time.

Mr. Chairman, the liberalization of all Federal retirement laws through the enactment of a bill granting optional retirement after 30 years of service would save the Government $20,000,000 annually.

On the basis of 550,000 employees subject to the provisions of this act, the total number retired immediately would be about 15,000.

If no vacancies were filled or promotions made within the grades, as is now being considered, the annual saving to the Government would be at least $30,000,000.

If one-half of the vacancies were filled and appointments made at the entrance salary of $1,440, this saving would be about $20,000,000, and new jobs would have been provided for 7,500 of the unemployed.

Many of these faithful and loyal workers of the Federal Government who have worked more than 30 years have passed the peak of their efficiency. They impede the progress of the younger workers of lower salary grades who are not given an opportunity to perform important work. Many of these younger workers are competent and well qualified to perform work of a higher grade, but are held back, due to the stagnation incident to the present retirement law. This amendment provides for a substantial reduction without hardships to any and with benefits to many. The amendment that I have offered has met the approval of Mr. McDuffie, chairman of the Economy Committe, and the approval of Mr. Ramseyer and Mr. Williamson, Republican members of the Economy Committee. In my opinion, it will save at least $20,000,000 without bleeding any workingman.

It will give an opportunity to almost 10,000 to 15,000 men and women who have worked for a period of 30 years, indefatigably, loyally, and perseveringly, and who have given the best years of their lives, but who are disabled to the extent of 20 percent of their physical and mental ability, to retire on the approval of the Veterans' Administration. When you take into consideration the fact that the average earnings of 10,000 men amount to $2,600 a year, it will be seen that $2,600 multiplied by 10,000 amounts to $26,000,000, while 10,000 retired at a pension of $1,200 a year amounts to $12,000,000, a saving alone of $14,000,000 or $15,000,000. This would please the Federal employee and deprive no one of their labor. It would do justice to the Federal employee who has labored in the quarry of patriotic service to our Republic.

My philosophy of life is to aim high, as high as I possibly can, and it is not to cut down the standard of American Federal wages, which has taken years of effort to acquire. Labor has been working for hundreds of years to reach the standard that it has. Do you remember when the industrial revolution was created way back in the time of Adam Smith, Jeremy Bentham, David Ricardo, John Stuart Mill, and Thomas Malthus? Workingmen were laboring 100 hours a week. Women and children were working 60 and 70 hours a week. Men were put in prison for trying to promote the welfare of their fellow workingmen and their labor organizations. I want to protect the rights of those who have acquired property through legal process; I want to conserve the rights of those who have no one to speak for them. This is the duty of every man in Congress. I do not believe in the ipse dixit of President Hoover or anybody else. President Hoover has not shown the great leadership that compels us as Democrats to follow him. We ought to follow the old ideals of Jeffersonian democracy, which have always been our refuge in every hour of need. That is why I am going to plead with you liberals, you Republicans, you progressive Democrats, you who sympathize with those who toil and struggle to keep a standard of living that will make the world better for our having lived in it.

Let us not follow this blind leadership, whether it is on the Republican side or on the Democratic side. Let us follow the instinct of justice and righteousness, so that when you and I retire from Congress and are lying unconscious on our beds, and hear the music of the angels calling and beckoning to us from above, we will hear the voices of those whom we have helped in their hour of need crying and praying for us. Ladies and gentlemen of the House all of the Federal employees are appealing to you as Republicans and to my party as Democrats, in their great hour of need, not to reduce their salaries. I for one, as a Democrat, am going to listen to their appeal. What will you Republicans do to help them? [Applause.]

Rehabilitation Program for Northern Minnesota

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. PITTENGER. Mr. Speaker, under date of July 31 President Roosevelt transmitted to Congress a report of the Northern Lakes States Regional Committee to the National Resources Committee. This report was submitted to the President, who, in a transmittal message to Congress, calls attention to the fact that three States—Minnesota, Wisconsin, and Michigan—have an unemployment problem which has been brought about with changing industrial and economic conditions. The area affected is the so-called cutover lands in these States where lumbering in the days gone by furnished work and income for thousands of people. Now there are more people than jobs, and President Roosevelt stated in his report that the problem is one of trying to take such steps as will make the people of the territory self-supporting rather than one of having the population moved elsewhere. I do not here go into detail with these constructive suggestions found in the National Resources Committee studies, but I do want to direct the attention of Congress to the need of legislation to carry out the suggestions for rehabilitating this territory. I submit herewith a communication just received from the Eveleth Chamber of Commerce calling attention to a resolution adopted by a civic association whose membership is composed of all communities on the Iron Range.

This communication is as follows:

EVELETH CHAMBER OF COMMERCE,
OFFICE OF RAYMOND BENNY, SECRETARY,
Eveleth, Minn., August 2, 1939.

Hon. Congressman WILLIAM PITTENGER,
House of Representatives, Washington, D. C.

DEAR SIR: All residents of this area have read with a great deal of satisfaction, recent newspaper reports that the President has submitted the recommendation of the National Resources Committee to Congress relative to the proposed study and rehabilitation of the cutover timber areas, in the northern parts of Minnesota, Wisconsin, and Michigan.

This is a matter that has engaged the earnest interest and attention of many citizens of this district for several years, and it is gratifying to know that this matter has reached the point where something definite can be done, to remedy a situation that is fast becoming a social problem.

At a meeting held in Virginia, Minn., on Tuesday, August 1, the Range Civic Association, which embraces every community in this part of St. Louis and Itasca Counties, a resolution was adopted, a copy of which is enclosed, urging the active support of Senator HENRIK SHIPSTEAD, Senator ERNEST LUNDEEN, and Congressman WILLIAM PITTENGER, in the interests of putting such a plan as outlined by the National Resources Committee into immediate operation.

We are also enclosing a copy of a resolution adopted at a meeting held in Eveleth, Minn., on July 9, 1935, which may be of interest

to you, and which proves that this problem is one that all thinking citizens of this district are vitally concerned with finding a solution to alleviate this condition.

We trust that this approval will have your active support and can assure you of the gratitude of this entire organization.

Respectfully yours,

GROVE WILLS,
HOWARD SIEGEL,
G. P. FINNEGAN,
Resolution Committee.

RESOLUTION ADOPTED BY THE RANGE CIVIC ASSOCIATION, HELD AT THE RECREATIONAL BUILDING, VIRGINIA, MINN., AUGUST 1, 1939

President Roosevelt having submitted the recommendations of the National Resources Committee to the Congress of the United States relative to the proposed study and rehabilitation of the cut-over timber areas of Minnesota, Wisconsin, and Michigan, the Range Civic Association, in regular meeting assembled, adopted the following resolution:

"Whereas the present unemployment and economic condition of the northern section of Minnesota is at present one of the most depressed in the Nation; and

"Whereas the many problems involved are of such scope that we feel the leadership in studying this problem should be undertaken by the Federal Government; and

"Whereas the many governmental agencies have in the past evidenced a willingness to cooperate in finding a solution of this problem; and

"Whereas we feel that these vast iron ore deposits are in reality a national asset, and as such the Federal Government should be concerned in the future of this district; and

"Whereas we are at present faced with antagonistic legislation now under consideration in the Minnesota Legislature, such legislation known as the Carley Webber bill, the Dietz bill, the occupational tax bill, all such measures which will make the problem of this district far more difficult to solve: Now, therefore, it is hereby

"*Resolved*, To urge the active support for the above program by our two United States Senators and Congressman from this district, to the end that this program may be immediately started."

Respectfully submitted.

RANGE CIVIC ASSOCIATION.

Quezon and Elizalde

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ARTICLE BY PORFIRIO U. SEVILLA

Mr. ALEXANDER. Mr. Speaker, at this time, when world politics and international relations are in such a chaotic state, when we are asking whether to give independence to the Philippine Islands, it is incumbent upon us to keep our eyes open and see just what is going on in our island possessions.

It is our duty, if we are to do justice to ourselves as well as the Filipinos, to ascertain why such things as I have previously reported and recent events are allowed to happen. According to recent dispatches, the Japanese have started regular radio broadcasts from their own stations throughout the islands. This is about the last straw and something should be done by loyal Filipinos about the situation.

Preeminent among those fighting for the social, political, and economic welfare of his people, as an integral part of the United States, is Porfirio U. Sevilla, publisher of the Philippine American Advocate. Untiring in his efforts, Mr. Sevilla has left no stone unturned to insure the Philippines of leadership of unquestioned merit. Through his efforts, legal action now pending in the United States Court of Appeals, has been brought against the gentleman from the Philippines, Mr. J. M. ELIZALDE, contesting the validity of his appointment on the grounds of his being a foreigner, and through the medium of his publication Mr. Sevilla will continue to work that his people might be equitably ruled either by Americans or by real Filipinos.

In the following article, Mr. Sevilla has presented his findings in the case of the gentleman from the Philippines, Mr. ELIZALDE, a Spaniard who, until the day before his appointment as Resident Commissioner, had no interest whatsoever in the Filipinos and who, Mr. Sevilla says, in his present office, is more concerned with the transcendence of his own personal and political ambitions than he is with the welfare of the people he is supposed to represent in the Congress of the United States. Much credit is due Mr. Sevilla for his relentless persistence in pointing out the sore spots of Philippine politics and for the courageous manner in which he has presented his material.

Mr. Sevilla says in the following article that the gentleman from the Philippines, Mr. ELIZALDE, is not only a non-Filipino, but is a failure in his office here in Washington:

The first session of the Seventy-sixth Congress is adjourned until next year, and the people of the Philippine Islands with their eyes and ears keenly attuned to far horizons, search in vain for the spectacular accomplishments of Quezon's representative in Congress, the spokesman of the Filipino people, Spaniard JOAQUIN "MIKE" ELIZALDE. An unbiased, but nonetheless penetrating investigation into the net results of ELIZALDE's tenure of office reveals sadly—nothing. But, "nothing" is too innocent a word. A man of high ideals, full of honest purpose, may accomplish nothing in an adding-machine tabulation of great and thrilling deeds, but when swaying to the manipulations of an arch-politician, a puppet with a kindly face and malicious intent accomplishes the total of an absolute zero then this man has served a "debit" term of office, the burden of which will be borne by true Filipinos, who do not deserve this injustice.

A cleverly controlled Philippine press pictures ELIZALDE as the most successful Resident Commissioner ever appointed to Congress by Quezon. This is no less than Senor Quezon would permit them to print. Carefully circulated reports and public gossip in the Philippines further deceives the gullible, ELIZALDE's wealth and social prominence cause his supporters to claim that Congressmen and Senators flock to his yacht each week end in sufficient quantities to overflow the ship. This is propaganda of wide variance from reportorial fact.

On the scene in Washington it is at once apparent that ELIZALDE is by far the most damaging Resident Commissioner ever appointed to Congress in the 40 years of American administration in the Philippines. ELIZALDE does not so much represent the Filipino cause as he does himself and his mentor, Quezon.

For reasons that we make clear in an editorial printed herewith, we vigorously oppose the appointment of Spaniard ELIZALDE, as we have done from the very beginning. Our warning to the Congress of the United States and other high public officials resounds once again, making the issue as clear as they must admit to themselves.

The passage of House Resolution 7096, amending the Independence Act for the manifest purpose to politically and economically adjust the Tydings-McDuffie Act, was due to the painstaking efforts of Hon. Sergio Osmeña, Vice President of the Philippine Commonwealth and other true Philippine leaders, as well as American statesmen in Washington interested in Philippine-American affairs.

[From the Philippine-American Advocate]

THE ULTIMATE LIMIT OF STUPIDITY

The appointment of Señor JOAQUIN "MIKE" ELIZALDE, a 100-percent Spaniard, both by blood and tradition, and who is only a 3-year-old "Filipino" citizen this year, is only one of the many evidences of the political renaissance of foreign influence taking place in the Philippines ever since the birth of the Commonwealth of the Philippines.

Philippine Commonwealth President Manuel L. Quezon is no more a Filipino, both by blood and by tradition, than the great Toussaint l'Ouverture was the Napoleon Bonaparte of the French. Proud of his Latin superiority, President Quezon has chosen foreigners as his advisers, numbering 30 strong, at the three-century-old Malacanang Palace, from his military adviser down to his Chinese cook.

FOREIGN INFLUENCE IN PHILIPPINE ISLANDS

The appointment of his Spanish protégé, JOAQUIN "MIKE" ELIZALDE, as his government's envoy at Washington in the face of the overwhelming opposition of the people, speaks louder than words of the corrupting influence of foreigners in the political, social, and industrial life of the Philippines.

We would not like to believe that President Quezon appointed Señor ELIZALDE to the second highest post within the gift of the Filipino people simply because of the well-known fact that the first lady of the land is on the pay roll of the ELIZALDE firm in the Philippines. * * * Financial alliances of the President and his family with foreign capitalists and businessmen, we would like to believe, did not influence the President in elevating

an eleventh-hour Filipino citizen to the coveted Philippine-Washington post. * * *

But it strikes us as remarkable, if not mysterious, that the President should have appointed a foreign capitalist, alien to all Filipino feelings and aspirations, as the Resident Commissioner to the United States, instead of a real Filipino whose heart beats for his native land * * * a Jose Rizal, who would fight and die for his "Pearl of the Orient Seas."

MERRY AS A MARRIAGE BELL

The foreign-dominated Malacanang Palace staff of advisers of President Quezon has reason to be merry as a marriage bell over the ELIZALDE appointment. However, it might be the beginning of the end of the nefarious influence of foreigners in Philippine politics as well as in the social and economic life of the country.

President Quezon is not getting any younger; he is now an old gray-haired man, trembling, tottering, on the verge of the grave. And no human has ever succeeded in discovering the spring of immortal youth. So, when he goes to meet his God, to whom he will render an accounting of his worldly sins, which, we confess unabashed, are many and varied, his foreign puppets, half-breed sycophants, and pay-roll parasites, will also meet their doom. They will be stranded and engulfed by the waves of Philippine nationalism as a result of the impending storm. Even now we can hear its distant rumbles.

The new Filipino Resident Commissioner to the United States has been, we venture to opine, aware of that fact right along, which was one of the reasons why he never wanted to become a full-fledged Filipino citizen until he was urged to do so by President Quezon upon his ascension to the presidency of the Commonwealth of the Philippines.

FILIPINO CITIZENSHIP FORCED UPON

In spite of the tragic happenings in Spain, the land of his proud forefathers, Señor ELIZALDE had never given up the hope of retaining his Spanish citizenship in order to avoid being one of a race of "Indios," as his ancestors were wont to call the despised Filipinos for 400 years. But President Quezon is gifted with the truly remarkable power of making people eat out of his hands, and Señor ELIZALDE, like all other weaklings, fell into the Quezon trap. He applied for "Filipino" citizenship simultaneously with the inauguration of the new Quezon government, thus making him a 3-year-old Filipino citizen this year.

THE ELIZALDES EMPLOY FILIPINOS

Señor ELIZALDE may reply that the ELIZALDE firm which has been operating in the Philippines for many years, employs native Filipinos, thereby contributing, in a large measure, to the economic stability and independence of the Filipino people. That's true, but inasmuch as the ELIZALDE firm is doing business in the Philippines, the employment of Filipinos is taken for granted, because that would be in accordance with the axiomatic principle of good business or any business that would survive in an alien land. Were it otherwise, Filipinos would not tolerate the ELIZALDES in the Philippines.

A SACRIFICE?

Señor ELIZALDE has said that in accepting the job as "Filipino" Resident Commissioner, he did so at a great sacrifice, because it means the temporary renunciation of the personal attention which he would dedicate to the vast interests of his firm in the Philippines. He claims that he accepted the position in order not to refuse the compliance of a public duty imposed on him as a Filipino citizen.

Pray, outside of President Quezon, who was or who were the other Filipinos who asked Señor ELIZALDE to become a Filipino citizen and to accept a job with the Philippine government at a great sacrifice because he could not refuse the compliance of a duty imposed on him by the Filipino people? Certainly the Filipinos did not ask Señor ELIZALDE to make such a sacrifice on their behalf. We know we didn't.

CITIZENSHIP FOR CONVENIENCE

The truth of the matter is that Señor ELIZALDE became a naturalized Philippine citizen for convenience—for the convenience of the vast business firm that bears his name. A news article in Time for October 10, 1938, stated that Señor ELIZALDE "became a Philippine citizen to protect the family business, Elizalde & Co., Inc., a corporation engaged in the hemp, sugar, coconuts, lumber, mining, ranching, shipping, distilling, insurance, etc., business." If it was not for convenience or for the good of his business empire, why didn't the señor become a Filipino citizen long ago, instead of waiting until only 3 years ago, after he had passed 40 or 45 years of his life in the Philippines?

The Elizalde family has been in the Philippines for almost the past hundred years, but it was only 3 years ago when one of its members took naturalization papers for Filipino citizenship. The Elizaldes are proud Castilians and have had no desire to be citizens of a country peopled by what they believe an inferior race. It is probable that during the many revolutions which were staged by Filipinos against the Spanish tyrannical domination, Señor ELIZALDE's forebears fought on the side of Spain and contributed not a little to the misery and oppression of the Filipinos in those tragic times.

LACK OF PATRIOTISM

Certainly, Philippine history does not bear any record testifying to the bravery and patriotism of the Elizaldes as they fought side by side with Aguinaldo's forces or with General Luna's ragged army, or making the supreme sacrifice at Biacnabato, the Philippines' Bunker Hill, or at Tila Pass, Philippines' Thermopylae.

As a naturalized Filipino citizen, Señor ELIZALDE is entitled to possess all the rights and privileges to occupy any position in the government of the Philippines which may legally be offered him in the interests of the people and to work with loyalty as Resident Commissioners heretofore have done in Washington for the progress and prosperity of the Nation. But it is quite another thing when Señor ELIZALDE says that he accepted his Washington job only at a great sacrifice, because it is not true.

FILIPINOS APPREHENSIVE OF NATURALIZED FOREIGNERS

Highly indicative of a truly dangerous trend in the problem of proper exploitation of the Nation's natural resources, the Solicitor General has recently promised a determined opposition to dubious petitions for Philippine citizenship as a measure for proper conservation of the country's patrimony.

Federico Mangahas, Manila's only columnist worthy of the name, has the following to say regarding applications of foreigners like JOAQUIN "MIKE" ELIZALDE, etc., for Filipino citizenship.

"It is worthy of notice that in all these citizenship cases the chances are 100 to 1 that the question which decides the application invariably is not what the applicant can contribute to the Nation but what he can get out of the country and its people by swearing to the articles of citizenship."

THE ELIZALDES AND NATURALIZED AMERICANS

The Elizaldes in the Philippines cannot be compared with naturalized Americans who have made good in politics, in industry, in science, in commerce, in education, and in the service of the Government. Take for instance, United States Senator ROBERT S. WAGNER, of New York. He is a naturalized American citizen, but, as a citizen, he made real sacrifices to show his love for America and for the American people. He paid for his citizenship at the cost of much sweat and blood. The same thing is true with F. H. LaGuardia, New York City's militant and dynamic mayor, and one of the outstanding American statesmen of this era. LaGuardia fought in the World War; he was in Flanders field and faced the grim realities of actual warfare. Furthermore, these two great Americans became American citizens, not for the convenience of their private business interests, for they have never had any to boot, but for love of America, for love of human liberty, fraternity, and justice. Alexander Hamilton, Thomas Paine, Andrew Carnegie, Nicola Tesla, Steinmetz, and other kindred spirits were all naturalized American citizens who paid for their citizenship dearly, without counting the cost.

THE ELIZALDES' PATRIOTISM HAS YET TO BE SHOWN

The Elizaldes will have yet to show their love for the Philippines; their patriotism will have yet to be tested; their sacrifice for their adopted country will have yet to be made.

MALACANAN AND CAPITOL HILL

After all is said and done, the Elizaldes' contributions to the economic and social happiness of the Filipinos have nothing to do with the determination of their political status in the American colonial or territorial system. Their economic, industrial, and social life is bound up inextricably with that of their political destiny, the determination of which lies not so much with Malacanan officialdom as with the American statesmen on Capitol Hill.

A QUESTION

Naturally, the question arises: Is Señor ELIZALDE—an eleventh-hour Filipino citizen, a Spaniard, a 100-percent alien to all Filipino feelings and aspirations, and a capitalist who has never had any political experience whatsoever nor has ever held any public office in the Philippines through means of the ballot—the proper official to be the spokesman for Filipino interests on the floor of the American Congress?

Señor ELIZALDE may be a man of an exceptionally brilliant intellect; able, fearless, efficient, and aggressive in the business world, but we regret to note that his activities have been solely in the field of making money through barter and that he has no political record which might give us encouragement to hope for a happy solution of pending Philippine problems in Washington.

FIRST BLUNDER

Even long before he was sworn in at the War Department as Filipino Resident Commissioner, Señor ELIZALDE already had committed his first political blunder when last summer he stated to the American press for American consumption that Philippine independence would bring tragic consequences to the Filipino people and that he was heart and soul for the realistic reexamination of the Philippine problem as advocated by American High Commissioner Paul Vories McNutt and his cohorts of imperialists.

ELIZALDE VERSUS UNITED STATES CONGRESS

That statement alone attributed to Señor ELIZALDE would have been enough to disqualify him as the Filipino representatives in the American Congress. By that statement, Señor ELIZALDE has alienated whatever influence powerful Members of Congress may have upon the determination of a happy solution of the ever-present Philippine problem. Such powerful Senators as BORAH, NYE, FRAZIER, NORRIS, LA FOLLETTE, WHEELER, and other great liberals like Congressmen LEMKE, O'MALLEY, ROBINSON of Utah, WOOD, etc., who have worked assiduously for Philippine independence, could not be expected to have love and affection for or to be very fond of Señor ELIZALDE. These stalwarts of the United States Congress are certain to fight any proposal to be advanced by Señor ELIZALDE to delay independence beyond 1946 as provided in the Tydings-McDuffie Independence Act, and which delay is now being urged and advocated by President Quezon and his clique of Manila politicians.

ELIZALDE'S MONEY TO BUY CONGRESS?

It has been often intimated in Philippine political circles, both in Manila and in Washington, that Señor ELIZALDE, being a millionaire, might use his millions to lobby for his cause. This is an insult to the dignity of the American Congress and the vaunted intellectual freedom of the American people. Imagine Senators BORAH, LA FOLLETTE, NYE, NORRIS, FRAZIER, LODGE, WHEELER, TYDINGS, Congressmen LEMKE, O'MALLEY, ROBINSON of Utah, WOOD, etc., selling their souls for a couple of tea parties or a joy ride to the Philippines across the Pacific. Such audacity, such impudence is incredible.

THE "REGALO" EVIL

The regalo or "gift-giving" system is as thick as a swarm of locusts in the Philippines, and native politicians never fail to encourage it as a means whereby they would condescend to pass legislation desired by rich Filipinos and unscrupulous foreigners. It is a trait handed down from generation to generation, inherited from the venerable forefathers of Señor ELIZALDE—the Spaniards.

A WARNING

But the señor had better not resort to that kind of monkey business in the United States Congress, or he would find himself out on a limb.

Americans and Filipinos live in two separate worlds. Americans are a bit more refined, more intelligent, and more civilized than Filipinos. Americans have more common sense, greater mental balance, and are ever conscious of their role in the world. Filipinos are flibbertigibbets.

LIABILITY OR AN ASSET?

Would ELIZALDE's business connections or activities help the señor in the discharge of his duties in the American Congress toward the Filipino people? Or would they be more of a hindrance than an aid? A liability rather than an asset?

Señor ELIZALDE's firm in the Philippines is engaged in the shipping, rope, sugar, and gold-mining business. Wouldn't it be natural for the señor to look out more for his rope, sugar, and gold whenever these commodities were jeopardized in a congressional legislation affecting Philippine-American relations?

CHARITY BEGINS AT HOME

There's a saying familiar to all that "Charity begins at home," and as Señor ELIZALDE's income just now is in the Philippines (insofar as his business is concerned), it would be tantamount on his part to turning his back against his "country" if he did not fight with the resources at his command for his rope, sugar, and gold. That would not be human. Señor ELIZALDE is, without doubt, a human, unless our scientific knowledge is sadly mistaken.

If and when that occurs, Señor ELIZALDE will come at grips with powerful Members of Congress from the beet-sugar States from the cane-sugar States, from the rope-manufacturing States, from the gold-producing States. And as Señor ELIZALDE is a poor public speaker (certainly, he does not have the ready tongue of one Manuel Louis Quezon, who once upon a time fooled the American people about Philippine independence), he will have a tough time putting over his pet propositions, if not actually making himself the laughing stock of Congress.

THE SEÑOR HATH CHARM

Señor ELIZALDE possesses personal charm and suavity and social aplomb, culture, and wealth that would make him an ideal diplomat to represent any nation in the big capitals of the world. But the Philippine post in Washington is not a diplomatic job, the Philippines being not yet an independent country, but merely a colony.

The Philippine Washington post requires a man of the political experience and ability of a Pedro Guevara, a Manuel Roxas, a Sergio Osmena, a Juan Sumulong, who, when standing on the floor of the House to speak, would command the respect and admiration of his listening colleagues. A man who has no ax to grind, and one who has no private business interests to work for; a man who would devote his time to the study and solution of problems affecting his country.

DANCING AND POLO PLAYING

Playing polo on Long Island, America's playground, with America's dashing young millionaires, or dancing in the pavilions of foreign embassies in Washington, or giving swank parties at the Mayflower or the Shoreham would not, to our way of thinking, contribute to an equitable solution of the Philippine problem. Brains, hard work, and diligent study of problems confronting him are the only means by which a Member of Congress can hope to accomplish something for his constituents.

Again, the same news article in Time for October 10, 1938, previously mentioned here elsewhere, had the following to say on "MIKE" ELIZALDE'S dancing and polo-playing proclivities:

"More striking, however, than the economic talents are the extracurricular talents "MIKE" ELIZALDE will bring to the job of Resident Commissioner, which fun-loving Manuel Quezon plans to take over himself when his presidential term ends in 1941. A millionaire sportsman, Señor ELIZALDE can play as well as trade with United States tycoons. With his brothers, Juan, Angel, and Manolo—one of whom married a Spreckles of San Francisco—he used to have a polo team, rated at 19 goals, which won the Far Eastern title. Besides enjoying the right to speak (but not vote) in Congress, to be entertained by Washington's lion-hunting matrons, Commissioner ELIZALDE will be able to enjoy better golf and tennis (Editor's note: And also dancing) at Washington's country clubs than be could at Manila's."

ELIZALDE CAN LEARN HOW TO LOVE HIS WORK

ELIZALDE's admirers and boosters might say that Señor ELIZALDE could learn how to love his work on Capitol Hill. Supposing it is true, for the sake of argument, but not admitting it, we still maintain that ELIZALDE's lack of political experience, coupled with his well-known business activities in conflict with the best interests of American farm and industrial labor, would militate against his making a success of his job at Washington.

At a time when a man with the best mind of the Philippines should have been chosen to be the Filipino spokesman in the American Congress, President Quezon should have preferred an inexperienced Filipinized Spaniard who has yet to show his ability in the field of Philippine-American relations to a real Filipino of proven ability and statesmanship. President Quezon has made many mistakes during his scintillating political career, but the ELIZALDE appointment will stand out like a huge mountain in an American prairie as the greatest and most stupid blunder ever perpetrated upon the Filipino people.

It is the ultimate limit of stupidity.

If waspy, wily, essentially politically minded and foreign-loving President Manuel L. Quezon and his cohort of evils and coterie of sycophants at the Malacanang had sat down with deliberate intent to think of asinine things to do they could not have devised anything better than the appointment of JOAQUIN "MIKE" ELIZALDE to the coveted Washington post.

ELIZALDE's appointment and presence in Congress is, indeed, a detriment to all true Filipinos and catastrophe to the welfare of the Philippine Islands. Spaniard ELIZALDE cannot and should not claim any credit because he has done nothing so far for the cause of the Filipino people. His appointment and presence on the Capitol Hill as spokesman of the Filipino race is truly an "insult."

ELIZALDE as official spokesman of the Government of the Philippines and of its people is a dismal failure.

A LA BEETHOVEN

It has been said of Beethoven that he composed his Third Symphony to be dedicated to Napoleon Bonaparte as a "hero" in the cause of human freedom, and canceled the dedication when he saw that the hero had turned tyrant. We live in high hopes that those who have criticized us in our vehement opposition to ELIZALDE becoming the "Filipino" Resident Commissioner at Washington, will, a la Beethoven, cancel their criticisms when the vision that we saw turns out to be a reality. We have need in the Philippines of a dynamic magazine like the Philippine-American Advocate to bring back victory to the banners of the Filipino people.

Transportation Bill

EXTENSION OF REMARKS
OF
HON. EDWARD A. KELLY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. KELLY. Mr. Speaker, I wish to express my admiration for the chairman of the Interstate and Foreign Commerce Committee, the Honorable CLARENCE LEA, and the subcommittee he appointed to handle S. 2009, otherwise known as the bill to regulate and improve the transportation situation of our Nation. To these men, namely, the Honorable ROBERT CROSSER, chairman, Hon. ALFRED BULWINKLE, Hon. WILLIAM COLE, Hon. CHARLES WOLVERTON, Hon. PEHR HOLMES, and the Honorable CHARLES HALLECK. They deserve great credit for the splendid work they did in their earnest and diligent way in bringing out this bill to at least try and solve the problems of transportation.

I, as a member of the Committee on Interstate and Foreign Commerce, listened very attentively to the hearings that were held on this bill up until the time of my recent illness.

I wish to state, Mr. Speaker, that in view of the enormous amount of testimony that had been presented by both the proponents and opponents of this legislation, it became a mighty hard task to try and bring out a bill that would satisfy the wants of all concerned. In the many long hours the subcommittee wrestled with the problems before them, I think they have done a remarkable job; true enough, the wants of all could not be satisfied. It all depended, of course, as to what group the regulation fell upon.

I note particularly in the hearings some people representing various carriers wanted the other fellow regulated but not the group he represented. This same theory was practical of the shipper and the manufacturer.

The President of the United States, Franklin Delano Roosevelt, on the 7th day of June 1935, declared to Congress, "It is high time to deal with the Nation's transportation as a single, unified problem." That is exactly what this committee tried to do. Dealing with the great transportation agencies, railroads, highways, waterways, pipe lines, and airways, revenues from the available traffic cannot sustain all the facilities they offer, and their economic situation calls for careful and systematic readjustment in the national interest. The committee, through careful consideration and study, has tried to define the issues that must be met in striking a fair balance among the different agencies with respect to costs, rates, service, regulation, taxation, dependability, and public usefulness, Therefore, Mr. Speaker, this bill tries to adjust the agencies to one another and establish and maintain a smooth and workable relationship between them.

I come from a district in Illinois—namely, the third—that comprises a very large railroad center; many railroads have their yards and offices in it. I also have the Calumet River and the Sag Channel that is being improved today at a great cost by the taxpayers for the purpose of ship and barge transportation.

The railroads more than anything else are responsible for the built-up towns in the south end of Cook County, Ill., that are industrial centers today, with a large population of industrial workers. Mr. Speaker, I listened to Mr. Splawn, of the Interstate Commerce Commission, reiterate the growth of the transportation system in America from its very beginning in the rude and humble way of the canoe on the waterways to the most modern methods of transportation that we have today.

A great factor entering into this legislation is to extend cheap transportation to those who will benefit most. Let it be understood that for 150 years of our Government it has extended to the people hundreds of millions of dollars in the building up of rivers and harbors and canals through inland waterways to satisfy the public welfare; while these projects cost the taxpayers billions of dollars, only a few really benefit for them; and remember the taxpayers have to keep these agencies going for the benefit of the few. I have no quarrel with water carriers, but under the terms of this bill only 3 percent of these water carriers will be regulated, namely, the inland water carriers.

I was one of the first Members of Congress to acquire funds for the building of the Sag Channel and the Calumet Ship Canal, and in view of these facts they will be maintained by the taxpayers. Still, I do not see why they should not be regulated as common carriers, just as well as the railroads are regulated, that pay taxes on its property and pays for its own upkeep.

When Congress passed the Motor Carrier Act of 1935 both Committees on Interstate and Foreign Commerce of the Senate and House ended their reports recommending to each House the passage of the above-mentioned act in similar phrasing to that of the message of the President on June 7, 1935. In the Senate report of the Motor Carrier Act it stated that the bill was a part of a complete and coordinated program of legislation touching all forms of transportation in which will ultimately give the Nation a system of efficient transportation of the lowest possible cost consistent with fair treatment of labor and earnings on investment, which will support adequate credit for expansion and improvement in equipment for the convenience and service to the public.

Mr. Speaker, I supported the committee in its report and supported this bill because I think it is a step in the right direction to solve the serious problems today confronting the transportation agencies of our Nation.

Bonneville Power at Cost for Portland and Salem

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

EDITORIAL FROM THE SALEM (OREG.) CAPITAL PRESS

Mr. PIERCE of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include as supplemental to my address on page 3789 of the Appendix of the CONGRESSIONAL RECORD, on Bonneville Power Contracts With Private Utilities, an editorial from the Salem (Oreg.) Capital Press of August 4, 1939:

[From the Salem (Oreg.) Capital Press of August 4, 1939]

BONNEVILLE POWER AT COST FOR PORTLAND AND SALEM—A PUBLIC DISTRICT—THE ONLY WAY

In full-page ads—paid for by every person who turns an electric switch—the power companies in Portland have told how low their rates are and what a horrible failure public ownership is. Your power bill at the end of the month speaks for itself. The Portland General Electric Co. recently had an entire section of the Portland Journal devoted to their Fifty Years of Progress. But the records of the bankruptcy court—where Pepco now is for the second time in 5 years—and the Federal Power Commission figures showing the rates you pay are a much better index of the progress of these private companies.

Here are the bills for public and private plants in Oregon and Washington:

Electric bills in your home

	40 kilowatt-hours (lights and small appliances)	100 kilowatt-hours (plus refrigeration)	250 kilowatt-hours (plus electric cooking)
Eugene public plant	$1.10	$2.12	$3.92
Pepco:			
Portland and Salem	1.88	3.37	6.07
Hillsboro and Newberg	2.00	3.56	6.26
Tacoma public plant	1.10	1.70	3.20
Mountain States Power Co.: Corvallis and Albany	2.20	4.15	7.85

What is the Bonneville objective rate set for public districts? Here is how it compares to what you now pay Pepco in Portland and Hillsboro:

	Kilowatt-hours per month		
	40	100	250
Pepco:			
Portland and Salem	$1.88	$3.37	$6.07
Hillsboro	2.00	3.56	6.26
Bonneville objective rates	1.00	2.25	4.75

Are these rates possible? A fair question. In the Tennessee Valley 39 cities and public districts are buying T. V. A. power (at rates higher than the wholesale cost of Bonneville power) and here are the prices they charge:

	Kilowatt-hours per month		
	40	100	250
Public districts using Tennessee Valley Authority power	$1.20	$2.50	$5.00

The T. V. A. districts pay full taxes, interest, and principal on their bonds, plus a profit on these rates. What can be done in the Tennessee Valley certainly can be done here in Oregon, where we have cheaper power, higher per capita income, and a progressive citizenry that realizes power is too valuable a resource to be exploited by a few at the expense of our industrial, commercial, and agricultural developments.

But if you listen to the advertising of the Portland power companies you will be told that electricity for your refrigerator is less than the cost of your lipstick, that it is cheaper than a cigarette, or that you can hardly notice it in your annual budget. What are the facts? At Bonneville rates, the present consumer in Portland and Salem will pay $2.25 instead of $3.37 a month, a saving of over $13 a year—enough for a year's supply of silk stockings for the housewife, or Christmas presents for the entire family. Rural residents in Hood River County, who formed a power district on June 19, pay Pacific Power & Light Co. $4.47 for electricity that costs $2.25 at Bonneville district rates. Eugene's public system already has lowered the Bonneville rate, charging $2.12, while the Tacoma system charges $1.70. A half dozen Tacoma rural systems charge $1.80 for electricity Pepco retails for $3.37 to $3.56 and the Mountain States Power Co. charges $4.15.

Let's put it another way: How much extra power can you get for the price you now pay if we form a public district and sell Bonneville power without profit? Suppose your bill is now $3 a month, which is considerably below the average. From Pepco you get 79 kilowatt-hours, hardly enough for lighting and refrigeration. T. V. A.'s city-owned systems and public districts are now selling 125 kilowatt-hours for the same price. Bonneville, under a public district, could give you 138 kilowatt-hours, nearly twice as much. And Tacoma's public system already gives 230 kilowatt-hours against Pepco's 79 kilowatt-hours. So the slogan seems to be "More power to you * * * if you have a public district for Bonneville power."

Cheap power means plentiful consumption. In Oregon in 1937 power in the home cost an average of 2.87 cents per kilowatt-hour, with an average use of 1,307 kilowatt-hours per year. In Ottawa the average cost in 1937 was 0.9 cent—less than a cent a kilowatt-hour—while the average use was 4,080 kilowatt-hours.

ELECTRIC BILLS IN YOUR STORE

How about the businessman? Electricity has become more important than ever in modern stores, yet official Federal Power Commission figures show that the average store in Portland and Salem pays a higher electric bill than nearly anywhere else in Oregon—$59 for 1,500 kilowatt-hours, as against $26.28 in Eugene, $17.50 in Tacoma, and $51 in Corvallis.

Mr. Merchant, here is what light means in your store budget:

	Kilowatt-hours			
	150	375	750	1,500
Eugene public plant	$3.33	$7.16	$13.53	$26.28
Portland Electric Power Co.:				
Portland and Salem	7.50	16.13	30.75	59.00
Hillsboro and Newberg	7.50	16.13	30.75	59.00
Tacoma public plant	3.75	6.25	10.00	17.50
Mountain States Power Co.: Corvallis and Albany	7.00	16.00	28.50	51.00

All official Federal Power Commission quantities.

POWER FOR INDUSTRY

Power is the Northwest's greatest single resource. The Columbia River system has 12,000,000 potential kilowatts, worth nearly $200,000,000 a year to us if we use it. A few people—the Portland Chamber of Commerce and the power companies which dominate it—have been urging that all the power be sold at the dam site to some aluminum factory. They proclaim that they are interested in bringing industries out here to give jobs to the people. Most of us, however, realize that this chorus for dumping Bonneville power in the Columbia Gorge is prompted by their fear of bringing cheap electricity in competition with Pepco's present schedules.

All of us want industrial development. What has the Portland Chamber of Commerce done to bring industry to Portland or Salem? What has Pepco done? For years we have heard how the Hooker Electrochemical Co. went to Tacoma instead of Oregon; how the Pennsylvania Salt Manufacturing Co. brought pay rolls to Tacoma instead of Portland and Salem; how the Nicolai-Neppach Manufacturing Co. moved its Portland plant to Tacoma. Why has Tacoma one of the biggest electric smelters in the world, while Oregon's vast iron-ore beds are not even developed? A good part of the answer lies in a comparison of industrial power costs in Portland, Salem, and Tacoma.

Again, here is indisputable evidence, the 1938 figures of the Federal Power Commission:

	Kilowatt-hours		
	60,000	120,000	200,000
Pepco—private system	$640	$1,150	$2,245
Tacoma—public plant	344	597	1,180

Pepco charged industries these rates, ranging 96 to 110 percent higher than Tacoma's public system.

WHERE YOUR MONEY GOES

Figures are tiresome, but sometimes they are surprising and interesting. Sometimes they show why Pepco's power rates are twice as high as Tacoma's, why 39 cities and public districts in the T. V. A. are successfully selling power far below Pepco's so-called low rates.

Look into Pepco's report to the Public Utilities Commissioner and you will find that President Franklin T. Griffith receives $19,800 a year from the Portland General Electric Co. in addition to $4,500 from the Portland Traction Co. (a subsidiary of Pepco), to say nothing of some $16,670 paid to Mr. Griffith's legal firm by the Portland General Electric Co. Similarly, James H. Polhemus and O. B. Coldwell, P. G. E. vice presidents, get $10,000 and $9,000 each, not to mention another $1,000 Mr. Polhemus gets from the traction company.

Seattle's public plant paid Mr. Ross only $7,500, and the administrator of the whole Bonneville system gets only $10,000.

Pepco may publish full-page newspaper advertisements boasting of 50 years of progress, but while they pay these fancy salaries they are firing scores of their employees and talking of eliminating pensions and insurance on the rest, to which employees have contributed.

While the Eugene public system has paid off nearly the entire cost of its system, Pepco is again in bankruptcy. While Tacoma has paid off almost $20,000,000 of its $24,000,000 system, Pepco stockholders all over Oregon have lost their life savings. The best way to appraise the efficiency of private and public systems is to compare the selling price of Pepco bonds with those of public plants such as Tacoma, Eugene, and Knoxville—and every other public system in the United States.

Why has Pepco defaulted on its bonds and brought despair to all the people unfortunate enough to have purchased its stocks? Look into the Portland General Electric Co. report and you will see where funds which should have been used to pay off bonds and pay dividends to stockholders have been spent for propaganda and perpetuation of the present management. In 1938 that one power company gave $3,669 to the Edison Electric Institute, which is dedicated to fighting the public-power program.

Similarly, strikebreaking organizations like the Industrial Relations Association and the reactionary National Association of Manufacturers received financial support from the power companies.

To gain public favor, Portland General Electric Co. donated $7,500 of its stockholders' funds to the Portland Community Chest—to say nothing of contributions to the Old Ship Zion Mission, the Pisgah Home Colony, the Salvation Army, the battleship *Oregon*, the Portland Junior League, the Crusaders, and even the semipro ball tournament down at Silverton.

When F. H. Young, of the Oregon Business & Investors, Inc., goes around the State (last month he was "Johnny on the spot" at Hood River, forming taxpayers' leagues to fight public districts), remember who is paying the piper. Last year the Portland General Electric Co. paid Oregon Business & Investors, Inc., $10,572.66 for this service. They paid newspapers all over Oregon, roughly, another $10,000 to fight establishment of public districts.

Only last October the Oregonian carried a column-long story telling how the Reverend S. C. Williams, the service supervisor of the Portland General Electric Co., had been convicted and fined in Vancouver, Wash., for assaulting a Townsend leader who had refused to enlist the Townsend movement in Pepco's behalf.

In 1938 the Portland General Electric Co. paid A. A. Smith, former head of the Oregon State bar, $5,074.48 for "legislative services." Some of us wonder how much more was spent last spring at Salem fighting the power district law.

THE OLD TAX BOGY

The people of Portland and Salem—as well as the rest of Oregon—can get the benefits of Bonneville power only if they are willing to fight for it. In every community club, in every fraternal organization, and in every business group are the paid agents of the power companies. Public-spirited citizens must answer these paid agents and give the people the facts. Housewives who want the benefits of electric cooking instead of the old wood range must see that Bonneville power is distributed at cost. School directors who want adequate lighting to safeguard children's eyesight must make sure that no part of their electric dollar goes to pay lobbyists and propagandists and eastern holding companies. Merchants and industrialists who want factories in Portland and Salem and other communities must ask why Pepco rates are twice as high as Tacoma's public system.

The last refuge of the power companies—the tax argument—has been taken from them by the new people's utility district law passed by the Oregon Legislature. Under the new law public power districts will pay exactly the same taxes as private power companies. In addition they will have to pay off their bonds within 30 years—something the private power companies never have been able to do.

At last the public districts can issue revenue bonds, which are payable solely out of electrical earnings.

WE MUST ACT NOW

The only thing that stands in the way of giving the full benefits of the Bonneville system to all the people is their own lethargy, their own unwillingness to fight the huge machine which the power companies have built.

With Bonneville power lines already under construction, with the substations rising in Portland, Salem, and Albany, the time has come for the people to act. If they sit idly by while their greatest natural heritage is brought within their reach, they deserve no further assistance from the Federal Government. The President has given us Bonneville Dam. If we choose to turn it over to the Griffiths, the Youngs, and the eastern holding companies, we can blame no one but our own stupidity and our own shortsightedness.

Bonneville power at cost means more than saving a dollar or two every month on your home light bill.

Bonneville power at cost means more than a saving of a few hundred dollars a year for every merchant.

A people's utility district will mean that Bonneville power will give Portland and Salem and the rest of Oregon one of the lowest power rates in the country. And that means new industry, with jobs for men now out of work.

With our timber resources being cut away rapidly, power is our last great resource—more valuable than the oil wells of Texas or the coal fields of Pennsylvania.

As public-spirited citizens we must not permit Bonneville power to be used by Pepco to enrich a few buccaneers who have defrauded thousands of Oregon citizens out of their life savings.

Just a few days ago the Portland News-Telegram published a full page advertisement, paid for by the Portland General Electric Co. Pepco is in bankruptcy, unable to pay its stockholders, yet it can pour out unlimited funds for lobbying and propaganda to thwart the will of the people.

Worst of all, the power company brazenly tries to deceive the people about President Roosevelt's stand on public distribution of Bonneville power. They say President Roosevelt has not asked for any people's utility districts in Oregon—that he recognizes their low rates.

What are the facts? Where does President Roosevelt stand? Here are his own words, cleverly omitted in Pepco ads, and indicated by a row of asterisks * * *: "Where a community—a city or county or a district—is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable right as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum has been taken, its own governmentally owned and operated service. That right has been recognized in most of the States of the Union. Its general recognition by every State will hasten the day of better service and lower rates."

As to Pepco's low rates: In November 1930, just after Governor Meier was elected on a public-power program, Pepco charged $3.39 a month for home power (100 kilowatt-hours). Today, 10 years later, Pepco charges $3.37—a saving to you of 2 cents a month. Pick up your pencil and write Mr. Franklin T. Griffith, Pepco president, "Thanks for the postage stamp, but we want Bonneville power at half Pepco rates—such as Tacoma's public system charges."

Bonneville power at low cost will not automatically come to us. Unless we have a people's utility district Pepco will continue to take its toll.

If you want to help save Bonneville for the people of Oregon, get behind formation of a people's utility district. That means Bonneville power for all the people—not a selfish few.

Write the Bonneville project at 811 Northeast Oregon, Portland, for copies of the Bonneville Power News, showing what other towns and districts are doing. If you live in Portland, pick up your phone now and call the information division at Lancaster 2161. Read the pamphlet Bonneville Power—What It Costs, How to Get It, and learn the truth. There is no charge for this pamphlet.

In Portland a people's utility district is being formed by the Bonneville-for-Portland Committee, of which Bertha J. Beck, of the Oregon State Grange, is secretary. Her address is 1135 Southeast Salmon Street, Portland. At the same address is the Oregon Committee of the Public Ownership League ready to help all local groups interested in forming public power districts or in getting information.

In Marion, Wasco, Linn, Lane, Umatilla, and Washington Counties similar steps are being taken to form peoples' utility districts.

In Coos, Columbia, Benton, and Clackamas Counties organizations are under way to market Bonneville power at cost through people's utility districts.

If your county has not started to form a district, do it yourself. Talk to the businessmen, labor unions, granges, and women's clubs.

Remember Bonneville is our greatest treasure—let's use it. If it's worth having, it's worth fighting for.

The Farm Program

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. FERGUSON. Mr. Speaker, under general leave to extend my remarks, I wish to do so on the farm problem. I feel that every Member of the House from a farming district was challenged by the gentleman from Virginia [Mr. WOODRUM] the last day of Congress in discussing the appropriation to provide loans supplying $119,000,000 on agricultural commodities.

The gentleman left the direct inference that Congress has failed miserably to solve the farm program. To quote the gentleman from Virginia:

In other words, I might say we do not know anything about it. Now, if that is true, then should we continue spending money for something that we do not know anything about? Personally I was anxious to center the spotlight on this question with the hope it would stimulate thinking upon the subject, and that we should come to a point some time where we would try to do something for the farmer except to have as our objective each session of Congress as piling up additional gifts and subsidies, because that is not helping him. I hope that some place, somewhere, there will be a solution and that we shall be able to find it.

The gentleman from Missouri [Mr. CANNON], in speaking on the same conference report, took a different attitude. If we had followed the gentleman from Missouri, this money for loans would have been included in the House, but the Republicans en bloc opposed his amendment, and thus the Senate had to place the money in the bill. In the closing speech in the adoption of the conference report the gentleman from Missouri said:

The farmer is not asking primarily for loans or subsidies. If you will give him a decent wage for the 14 hours a day he works in rain and sun, through the heat of summer and the frost of winter—if you will give him a fair price for the food his patrons have been mooching at his expense ever since the war, you may keep your loans and subsidies so far as he is concerned. And until you do we can have no permanent economic progress in the Nation.

REPUBLICAN PARTY OPPOSED TO ANY FARM BILL

I am very happy that the Democrats pulled themselves together and came in united to sustain the Senate in providing these funds for loans on wheat, cotton, corn, and so forth. Only this cooperation by the Democrats stopped an attempt by the Republicans to break the price of all farm commodities by refusing loans. The Republicans at this whole session of Congress have tried to cripple the farm program on every important measure before the House. On March 28, 140 Republicans—almost the entire Republican group in Congress—voted against any parity payments. This same group voted against sending the bill to conference, and again 140 Republicans refused to agree to parity payment money when the bill came back for final passage. Three times the Republican Party, en masse, said to the farmers of the Nation, "We are opposed to any farm program," by a vote of almost their entire group in Congress.

Allow me to quote some of the Republican leaders on the farm program. On March 23, the gentleman from Pennsylvania, Mr. DITTER:

Today the Appropriations Committee, for the Department of Agriculture, comes with a bill carrying the largest appropriation in the history of the country. The spenders are loose again. They are having another field day at the expense of the taxpayers.

Mr. Lord, on March 23:

The whole New Deal farm program is unsound and has ruined many thousands of farmers.

The gentleman from Pennsylvania, Mr. RICH, on March 24:

If the Congress would leave the farmers of the country alone and simply let them work out their own salvation, stop importation of farm commodities the farmers produce, and take away all the political leeches, the farmers would benefit greatly.

These statements represent the Republican philosophy on the farm program.

FERTILITY OF SOIL NATION'S GREATEST RESOURCE

As a member of the Agriculture Committee, I accept the challenge of the Republicans who are opposed to all farm legislation and the Democrats who are dubious of the road we are now traveling on agriculture legislation. There are a few fundamental principles that I want to establish in the minds of the Congress. First, the fertility of the soil is just as much a natural resource as coal, iron, or oil. Fertility cannot be restored once it is destroyed. Some things help, such as fertilizer, rotation of crops, legumes, restoring to grass, proper farming methods, such as terracing, plowing

on the contour, but the natural fertility that requires thousands of years to build cannot be restored by man's effort.

THE NATION MUST BE FED

Second, on the farmer rests the responsibility of feeding this great Nation. Through years of both drought and plenty, through the years that insects destroy the crops and nature is bountiful, a constant supply equal to the needs of the Nation must be available. Thus the law of supply and demand runs counter to the safety of the Nation. The very surplus that insures this Nation against want and starvation prevents the farmer from receiving a fair price for his products. When business picks up, factories hang out the sign "Men wanted," orders go out for steel, for parts, and machinery. Engines are speeded up and within a few weeks or months the gears of industry are turning at a rate to supply the Nation's want. Man absolutely controls the production of industry to meet the demands of the Nation. No such system can be arbitrarily applied to agriculture. The bountiful harvest of one year may be followed by a total failure the next, caused by drought, by insects, by heat, by wind, by any number of natural causes over which the farmer has no control. Thus the farmers of this Nation who by their ingenuity and labor have set the national table with a greater variety, a better quality, and a more bountiful supply of food than that supplied to any nation of the world, are penalized for their enterprise because their surplus depresses the market and causes more than half the farmers of this Nation to continue to produce year after year at a loss.

INTELLIGENT CONTROL NECESSARY FOR FAIR PRICE AND TO CONTROL FERTILITY

I do not want to leave the impression that production cannot be intelligently controlled, leaving plenty of margin and security between the domestic requirements and the requirements necessary to carry the Nation through periods of crop failure. This has been the first objective of the present Farm Act. The Secretary of Agriculture allots to every farm what he considers sufficient acreage to produce the amount necessary for domestic consumption, plus a reasonable carry-over, plus the amount of our prospective exports. In my opinion, controlled production must be the cornerstone of any farm program. As I pointed out in my first big principle underlying agriculture legislation, the fertility of the soil is a natural resource. Producing more than we have use for is an unjustified, wanton destruction of a natural resource. Because of this objective, preservation of the fertility of the soil alone, all farm appropriations under the farm act are justified. Economic pressure that forces the farmer to plant every acre of his small plot in soil-depleting crops has been relieved by soil-conservation payments so that the farmer may retain or increase by proper methods the fertility of his soil. The attitude of previous administrations drained the Nation's soil of its fertility and we have reached the point of continuous abandonment of land and decreased production that means this Nation in the not-too-distant future will face a definite food shortage or greatly increased cost of production because of the necessary use of greater quantities of fertilizer.

HOW TO GIVE THE FARMER A FAIR PRICE

I want to discuss for a minute the possible methods of giving the farmer a fair price for the amount of his product domestically consumed. There are three ways of achieving this end. This administration first tried a processing tax. By this method the processor paid a tax when he converted the farm product into something that could be consumed. And this money was returned to the farmer to make up the difference between what his crop brought and a reasonable price for the amount he was allowed to raise. The Supreme Court declared this method to be unconstitutional. In order to continue the farm program, Congress provided that soil-conservation and parity payments should be appropriated from the general funds of the Treasury. It always seems strange to me that the very Members of Congress who are bitterly opposed to reimposing processing taxes are the same Members who wail the loudest because of appropriations out of the general funds of the Treasury. The other possible method is the price fixing, making it illegal for wheat, corn, cotton, and agricultural products to go into the channels of trade at less than a certain fixed price. This method has considerable support in the House, but those who advocate price fixing have all lost sight of the main principle that must be embodied in any farm legislation, that is, first, control of production, and second, maintaining fertility of the soil. There two things, of course, are closely interwoven, because every year a field is planted to soil-depleting crops its fertility is decreased. Not alone, of course, because of the material drawn from the soil by the plant but because cultivation leaves the field open to constant erosion by water and wind.

Thus when we plant every year more acreage than is necessary to supply the requirements of this Nation, we are depleting a natural resource that cannot be restored and a natural resource upon which the greatness of this country depends.

The Department of Agriculture under the present administration, for the first time in history has recognized this great fundamental truth. The Nation is at least becoming faintly conscious of the need of soil conservation, of retaining the soil fertility for a time it will be needed in the future.

But we were discussing how to give the farmer a decent price for his products and what has been done along this line. I realize as well as anyone the weakness in a loan program. I realized this when I urged the Congress to appropriate sufficient funds for parity payments. With this in view I led the fight for larger parity payments in the House of Representatives, and made the following speech:

Mr. FERGUSON. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

"Amendment offered by Mr. FERGUSON to the amendment offered by Mr. CANNON of Missouri: On page 91, line 3, in the amendment to the amendment strike out '$250,000,000' and insert '$500,000,000.' "

Mr. FERGUSON. Mr. Chairman, I ask unanimous consent to proceed for 8 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. FERGUSON. Mr. Chairman, the Committee on Agriculture last year brought before the House the Farm Act of 1938, which, in section 303, provides for making parity payments to farmers. When the Naval Affairs Committee authorizes funds for the construction of battleships the money is voted without question. When the Military Affairs Committee authorizes expenditures for the Army the money is voted without question. The Committee on Agriculture should have the same treatment. As a new member of the Committee on Agriculture this year, I listened to statement after statement about the pitiful condition of the farmer. No member of the committee or no Member of the House that heard these statements or has knowledge of the farm situation will question the pitiful condition of agriculture in this Nation. The average price for cotton sold in the Nation for 1938 was 8.6 cents per pound, the average price for corn was 47.3 cents a bushel, and the average price for wheat was 53.4 cents a bushel. These prices spell disaster, suffering, and actual want for the farmers of the Nation.

These prices, as far as the farmer is concerned, have the same result on the farmer's standard of living as a dollar-a-day wage would have on labor. Another year of these disastrous prices means thousands of farmers abandoning the farm to go on relief in cities or small towns. If the Republicans in this House wish to balance the Budget at the expense of the relief workers and the farmers, let that be their responsibility. The country will not long tolerate a party based on negation, opposed to everything, advocating nothing. In spite of the continuous wave of economy propaganda in the newspapers, the people of this Nation realize that the Democratic Party, the Democratic Members of this House, must accept the responsibility of providing the funds necessary to save this Nation from disaster, and we must not be perturbed by propaganda emanating from those who are not sharing the disasters of the farmer and relief worker.

Realizing that section 303 of the 1938 Farm Act authorized parity payments, I canvassed the members of the committee. I talked to the distinguished chairman, the gentleman from Texas, and the distinguished ranking minority member, the gentleman from Kansas. I talked with every member of the committee. A majority, including the chairman and the minority ranking member, agreed that parity payments should be made. Not a single member of the Committee on Agriculture definitely said he would vote against parity payments. With this in view I asked the Secretary of Agriculture for an estimate of the amount required to pay parity payments that would bring the price of wheat, cotton, corn, tobacco, and rice, the five products included in the bill, to parity.

The Secretary informed me it would require a billion dollars. After talking with many members of the Agriculture Committee we agreed we could not hope to get more than $500,000,000. I was informed by the Secretary of Agriculture, through his Statistical Bureau, that $500,000,000 would bring the price of agriculture products to about 85 percent of parity. If the Congress meant what it said in the Farm Act of 1938, it is the duty of this body to appropriate this $500,000,000 to relieve the shocking conditions of agriculture by raising the prices of these five commodities. If we do not provide these funds, this $500,000,000, a large percent of the next crop of cotton, the next crop of corn, and the next crop of wheat will be stored under Government loans. This means that the warehousemen and elevators will be the main recipients of benefits from the farm programs through storage charges.

The Government already has loans on 207,000,000 bushels of corn 11,000,000 bales of cotton, and 81,000,000 bushels of wheat.

Add to this another crop in 1939 such as we had in 1938 and it will mean huge additions to the storage of farm products under loans, and this will mean absolute disaster for farm prices in this country. The chairman of the Committee on Agriculture [Mr. JONES] himself made the statement on this floor that he thought it might be cheaper to accept this amendment appropriating $500,000,000 than to continue the loan policy. When you take crops out of the loan and let the 1939 crop go into commerce, it will flow into the channels of trade, both foreign and domestic, without ruining the farmer, because parity payments will take up the slack between what he has to sell his product for and what he receives. This $500,000,000 will cost less in the long run than a continued loan policy.

The House has been told that to vote $500,000,000 will jeopardize the chance of getting $250,000,000. I, for one, am not going to let a parliamentary situation keep the farmer from getting a semblance of justice. I cannot believe that any Member of this House in either party—and both parties are pledged to a farm program that will help the farmer—I cannot believe that any Member will vote for an amendment in the Committee of the Whole and then reverse his position when the roll is called in the House.

The condition of agriculture today, with its disastrously low prices, challenges the Democratic Party and the Congress to do something about it. This is your opportunity and probably the only opportunity that will present itself at this session of Congress. Let us accept our responsibility to the 30,000,000 farmers of this Nation by voting up this $500,000,000 amendment.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. FERGUSON. I yield to the gentleman from North Carolina.

Mr. COOLEY. How much is it costing the Government at the present time for storage of the one crop, cotton, which is now in storage?

Mr. FERGUSON. I understand it costs around $30,000,000 to $35,000,000 a year for storage.

Mr. COOLEY. Is it not $45,000,00 a year?

Mr. FERGUSON. Forty-five million dollars may be correct. I may say to the gentleman and to the Committee that when a man receives a payment under the agricultural program he is no longer eligible for relief, and this appropriation would obviate the necessity of spending a lot of relief funds. [Applause.]

[Here the gavel fell.]

As you know, only $225,000,000, instead of the $500,000,000 I proposed, was granted for parity payments. Thus we have to continue the loan policy which we all know is a very dangerous one to follow—a program that will act only as a stopgap until Congress follows one of the three courses I outlined a few minutes ago; either putting a processing tax on to make up the difference between what the farmer receives from his crop and what he is entitled to receive as a fair price, appropriating sufficient money out of the Treasury to actually make up the difference of what the farmer receives and what he is entitled to; or if Congress will not follow through on these methods, we must turn to price fixing, which will be a very difficult problem to work out.

I believe if the Congress could realize how dependent the future of the Nation is on continued production of its necessary food and conservation of its greatest natural resource—its soil—it would not hesitate to appropriate sufficient money to give the farmer his fair share of the national income and at the same time relieve the economic demand now on the farmer and enable him to follow the practices necessary to conserve our greatest natural resource—our soil.

A DEMOCRATIC COMMITTEE ON AGRICULTURE TRYING HARD TO SOLVE THE PROBLEM

As a member of the Agriculture Committee I know that the committee and the majority of the farmers believe that the present administration is intelligently trying to solve the farm problem, and I know that the farmers of this country will recognize the danger signal flaunted in the face of the farmers at this session of Congress by the Republican Party. The votes of 80 to 90 percent of the Republicans against all money to carry out the farm program this year should make the farmers of this Nation realize when and if the Republicans gain control of the Congress there will be no farm program. The Nation will return to its old method of dissipating its greatest natural resource, the fertility of the soil, of the farmer being forced by economic pressure and low prices of his product to put in more and more acres at lower and lower prices and try and feed his family and maintain his farm in operation.

As long as the Democrats are in power, as a member of the Committee on Agriculture, I will have a voice in the continued effort to increase the farmer's income and at the same time save our valuable soil fertility for the use of future generations.

How Canby, Oreg., Did It—The Story of a Public Power Plant

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. PIERCE of Oregon. Mr. Speaker, many of us who live in the Northwest believe that the greatest achievement of this administration is the construction of the great dams on the Columbia River for irrigation, navigation, and power. If we can get the people to distribute that power cooperatively without going through the sticky hands of the Wall Street utility group, we shall have cause to rejoice over Bonneville Dam.

A few weeks ago in this Well I made a statement about the municipal electric system of the little town of Canby, Oreg., having less than 1,000 people. The figures I put in the RECORD at that time have been questioned on the ground that that little town did not make a clear profit of $196,000 in the sixteen and a half years it distributed its power cooperatively. They claim now the exact figure should be about $158,698 clear profit for the little town. They now modestly state that, since the money earned by the light plant was only a loan to the other city departments, the light plant possibly should not have full credit for supporting other agencies. They think, however, they should have credit for one other $1,500 item. Apparently the light plant is sort of a municipal bank.

I now ask unanimous consent to extend my remarks in the RECORD, Mr. Speaker, and to put in the revised figures showing the exact amount they found that this little town has saved by cooperatively distributing its power. Now it will take power from Bonneville, as the transmission line is being built, and they will be able to save even more money.

This little community in Oregon started the work of distributing its own electricity during the year I was elected Governor of Oregon, in 1922. I encouraged them all I could during the 4 years I was Governor. I lived near this little town while at the State capital.

I call this statement to the attention of my colleagues in the House who are interested in electricity, particularly the gentleman from Michigan, and I ask them to read this showing of the little town of Canby, Oreg., with a population of under a thousand people, that in less than 20 years has saved out of the operations of its electric plant almost $200,000.

The SPEAKER. Is there objection to the request of the gentleman from Oregon [Mr. PIERCE].

There was no objection.

The statement referred to follows:

HOW CANBY IN OREGON DID IT—A REMARKABLE STORY OF SUCCESSFUL MUNICIPAL OWNERSHIP IN A SMALL CITY

(By A. C. Heyman, of Albany, Oreg.)

(The following article is a summary of four addresses delivered by Mr. M. J. Lee, of Canby, for the chambers of commerce in Brownsville, Harrisburg, and Halsey and the Lake Creek Grange in Linn County, Oreg. It was prepared by A. C. Heyman, chairman

of the sponsors committee of the proposed Linn County people's utility district. The figures have been confirmed by the mayor, the city treasurer, and the superintendent of the water and light department of Canby.)

One of the most outstanding achievements in public ownership of power is that of the little town of Canby, Oreg.—population 744—as told to several Linn County audiences by Mr. M. J. Lee, of Canby, who was one of the city council in 1922 when the new venture was made and who is still a leader in the civic improvement projects. Mr. Lee was chairman of the light and water committee and sought to serve his town to the best of his ability. On investigation he found that the citizens of Canby were paying $3.30 for 20 kilowatt-hours of electricity when other neighboring towns were paying to other private utilities only $1.49 for the same amount of energy. This appeared to the committee very much like discrimination, and so it sought to correct the matter.

TURNED OFF THE LIGHT—TURNED ON THE HEAT

The franchise of the private utility serving the town had expired and the committee decided to use this leverage to get free street lighting for which it was paying $75 a month before renewing the charter. The private utility bluntly refused, with the excuse that it could not be done. At the following council meeting the matter was further discussed with the owner of the private utility, with the result that both parties went home that night furious with anger. The owner was so enraged that he turned off the street lights the next night and left the town in darkness. This was his Waterloo.

The townspeople then became even more enraged, and the next night, through the initiative of Mr. Lee, the whole town turned out to a mass meeting. The result of this meeting was an organization setting on foot a movement for public ownership of light and power. It also confirmed the conviction of many that private utilities cannot be controlled or regulated by State public-utility commissions or any other regulating bodies. From here on action was speedy.

HOW THE CITY GOT A REASONABLE PRICE

The owner of the private utility bought his "juice" wholesale from the Portland Electric Power Co. and served seven other small towns besides Canby. The light committee dickered with the owner for his distribution system in Canby. He wanted $25,000. The price was outrageously high. A survey was made of the property and it was found to be worth only $5,500. Then the owner came down to $14,000. No agreement could be reached. The city, therefore, called an election to vote general-obligation bonds for $10,000 to build an entirely new distribution system. Bids for construction were received.

While still trying to bluff, the owner saw that the city meant business and became more amenable to reason. The committee recommended the purchase of the going business if a reasonable purchase price could be agreed upon rather than enter into competition and all kinds of litigation. After considerable wrangling $7,000 was offered by the city for the system and this was finally accepted by the owner. This was in the middle of October 1922. On the 1st of November the city of Canby became the owner and operator of its own distribution system.

THE CITY BEGINS OPERATION

Of the $10,000 bonds voted by the citizens only $8,000 was issued; $7,000 for the distribution system, $500 for engineering services, and $500 for some immediate improvements.

Thus, by January 1, 1923, with the acquiring of the water system 6 years previously, Canby had a debt with bonds and outstanding warrants drawing 6 percent interest of $56,000, together with an interest payment of $3,360 due on January 1, 1923. The city-owned water system had only enough income to pay interest and operating expenses and when new mains were laid or extensions made new bonds had to be issued. The water system therefore increased rather than diminished the city debt.

When the city took over the light system the two systems—light and water—were put into one department and under one management. The previous manager of the private system was retained as the superintendent of the newly created department of light and water and has now been serving the city for 17 years.

A 30-PERCENT INITIAL REDUCTION IN RATES

The first stroke of the new department was to reduce the light rates 30 percent, give the city free street lighting, besides extending the street lights and doubling the watt capacity of the lamps. This saved the city immediately $100 a month on street lighting. It also gave the city free electricity to run three motors for the water system, which was also costing the city another $50 a month.

OTHER RATE REDUCTIONS

To the question, "Did you make any further reductions in rates after the first reduction of 30 percent?" Mr. Lee replied: "Yes; we made four or five reductions, amounting in all to something like 10 percent. Whenever the people protested that rates were too high we made a reduction, and then we published the fact loudly far and wide, just as the private companies do. But we did not reduce the rates any faster than we had to because there were other things that we wanted to do. We wanted to pay off our debt and get rid of the interest burden; also, we wanted the other things mentioned below. Our citizens are now glad that we have these things, and it is not particularly hard for them to get them in this way."

The following rate reductions have been made since taking over the system November 1, 1922:

October 1922, 20 kilowatt-hours	$3.30
November 1922, 20 kilowatt-hours	2.25
September 1930, 20 kilowatt-hours	1.25
April 1933, 18 kilowatt-hours	1.00
March 1939, 20 kilowatt-hours	1.00

LAST YEAR'S NET PROFIT $5,464

Hearing of the success of the municipal plant at Canby, the citizens of Woodburn, a considerably larger city about 12 miles away, sent a committee down to Canby to inquire into the matter. An examination of the books showed the Woodburn committee that the plant was making an annual profit of $5,464 a year, besides saving the city in many other ways.

In the calendar year of 1938 the committee found Canby's gross receipts from electric customers were $16,025.50. Expenditures the same year were $8,802.38 for the purchase of power and $1,759 cost of administration, a total of $10,561.38—leaving a net profit of $5,464.12. To this could be added the free street lighting, which would have cost the city $1,104 under private ownership; also the electricity used to light the city hall and to pump the city water. This would bring the net profits for the year up to $7,480.87. However, Canby ignores the items of free service and figures its net profit for the year at $5,464.12.

Out of the net profit the city spent $1,868 for various improvements and extensions, equipment, etc., including transformers, poles, wire, meters, labor, and other necessities to keep the system in good working order. Subtracting these items leaves still a net of $3,595. But if the value of the free services is added this would bring the figure up to $5,611.

MAKES AND SAVES $158,698 IN 16½ YEARS

Speaking of the final results of the municipal-ownership enterprise in Canby for the period of 16½ years that the city has owned the system, Mr. Lee submits the figures below to show that the city has made and saved a total of $158,698.

PAID FOR IN 10 YEARS

The following are the payments made on the system during the 10 years to pay for it:

Date	Bonds and warrants outstanding	Payments on principal	Payments on interest	Total payments
Jan. 1, 1923	$56,000	----------	[1]$3,360	[1]$3,360
Jan. 1, 1924	49,000	$7,000	3,360	10,360
Jan. 1, 1925	42,500	6,500	2,940	9,440
Jan. 1, 1926	40,000	[2]2,500	2,550	5,050
Jan. 1, 1927	35,000	5,000	2,400	7,400
Jan. 1, 1928	28,000	7,000	2,100	9,100
Jan. 1, 1929	18,500	9,500	1,680	11,180
Jan. 1, 1930	7,500	11,000	1,110	12,110
Jan. 1, 1931	1,500	6,000	450	6,450
Jan. 1, 1932	----------	1,500	90	1,590
Total	----------	56,000	20,040	76,040

[1] Paid by city warrants and later repaid out of income.
[2] In 1926 Canby built a 10,000-gallon steel water tank and tower paid for out of earnings of light department.

Of the above $76,040, all but $14,292 has been paid out of the earnings of the light and water plants.

Mr. Lee's audiences marveled at this remarkable showing in a city the size of Canby in paying off such a large debt in less than 10 years. "But wait," said Mr. Lee, "the half has not yet been told. We had money to do other things as well as pay off the debt. The following improvements and donations have been made from money coming out of our light income:

Improvements to light and water system:	
189 light and water meters, at $10	$1,890
317 water meters, at $16	5,377
43 transformers, at $125	5,375
1 100,000-gallon steel tank and 110-foot tower	10,000
Spring for water reservoir, pump, and motor	8,500
Engineering fees	500
Total	31,642
Donations to high school:	
Water main and hydrant	819
Transformer	587
Total	1,406
Other donations:	
20-acre cemetery for city	$4,000
Part payment on city hall	6,500
Riverside Road paving	1,000
Total	11,500
Savings:	
16½ years' street lighting	16,500
16½ years' power for water system	9,900
Cash reserve in bank	21,000
Total	47,400

Losses covered by plant earnings:	
Bank failure	$2,000
Damage suit for personal injury	3,000
Total	5,000

SUMMARY

Summarizing the above figures we have amounts made and saved by the plants:

Payments on bonds, warrants, and interest	$61,750
Improvements to system	31,642
Donations to high school	1,406
Savings on light and power	47,400
Other donations	11,500
Losses covered	5,000
Grand total for 16½ years	158,698

This money was saved for the benefit of the Canby community and not contributed to the profiteers and holding companies.

IS IT A GOOD POLICY?

Several individuals asked Mr. Lee if he thought it was a good policy "to keep rates up in order to raise money for other city expenses?" To this Mr. Lee replied: "There are two theories in setting rates and use of revenues of publicly owned utilities. One theory is to set the rates just high enough to care for operating, maintenance, interest, amortization, and depreciation. In this manner the people get the benefit of the lowest rates possible as is the case in Eugene (Oregon municipal plant). The other theory is to keep the rates high enough so that after taking care of all operating and other fixed charges there remains a surplus for other purposes. Your choice of the two methods will depend on your circumstances. The citizens of Canby choose to have a surplus for other purposes."

"How do your rates compare with those in surrounding towns?" was another question asked of the speaker. To this Mr. Lee replied: "Our last reduction brought our rates down in every respect to the rates of the Portland Electric Power Co., from whom we buy our energy wholesale, costing us about $8,800 a year. With this rate we still made a surplus last year of $5,464, and at the present time (April 1939) we are making a net profit of $1,000 a month."

He further explained that Canby is seeking a contract with the Bonneville project for energy at the announced rate of $17.50 per kilowatt-year. At this cost the city would save another $4,000 annually.

WILL AID IRRIGATION

Mr. Lee also brought out another interesting and unique feature of this Canby municipal plant. It proposes to aid the surrounding rural and farm population by helping them to develop their irrigation system. With the savings effected already and additional savings that would result from the lower rates for power purchased from the Bonneville project, he said, there will be some surplus power at off-peak periods which the city will give to an irrigation project of some 2,500 acres adjacent to the town. "Canby has agreed to furnish free of cost," he said, " half of the energy required to pump the water for this proposed project."

A WARNING

"But there is a final warning," said Mr. Lee. "Look out for the agitators who undermine the public sentiment for public ownership. After we were running smoothly for 5 years our success looked too good to the private power company. Our example, they thought, would very likely stimulate other communities to undertake municipal ownership, as indeed it already has done. So the Portland Electric Power Co. offered to buy our water and light system for $45,000. The Canby council refused. But the hired agitators succeeded in bringing the sale to a vote. No one thought the city would sell out and so the vote was very small. We saved our plant by only two votes.

"This vote being so close, the power company agitators called another election as early as possible, hoping to gain the few votes necessary for victory. But by this time the Canby voters awakened to what was going on and we beat the sell-out by a 2-to-1 vote."

The reproduction value of the Canby light and water plants is figured at $64,500, the actual value at $54,000. The reproduction value of the light plant alone is figured at $19,988 and the actual value at $15,450.

Warehousing of Government-Owned Cotton

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. CRAWFORD. Mr. Speaker, the more one digs into the labyrinth of King Cotton in this country the more amazing the story becomes. It bears out the old story that truth is stranger than fiction. Little did the unsuspecting public ever dream that the ever-normal granary and loans on cotton would lead to the unbelievable situation which now governs.

One needs only to refer to a bill just reported out by the House Banking and Currency Committee. It is one of those short so-called noncontroversial bills which the chairman called up on short notice and rushed through committee without permitting anyone to appear and be heard on the bill. Using unusual tactics, the chairman of the committee even refused to grant congressional courtesy to Members of Congress to appear for the specific purpose of showing how the Government and taxpayer are being fleeced through the racket which is being carried on. Although a formal demand was made by one of the committee members—who had unearthed a lot of damaging information—that officials of the Commodity Credit Corporation be called before the committee to present further information which would run contrary to the interests of the firms drawing dividends from the racket which has been legalized, the chairman refused to permit anyone to be heard.

The whole proposition hinges about the storage of some 12,000,000 bales of cotton on which the Commodity Credit Corporation has made loans. When it comes to storing such a vast quantity of cotton at rates of 25 cents per bale per month, that means $3 per bale per annum, or a neat little sum of, say, $36,000,000 per year. Of course, it is difficult to get Congress to even respect a sum so small as this. If it were $3,600,000,000 or thirty-six billion, it might draw some attention. However, the sum of $36,000,000 is something when it comes to running a few strings of warehouses.

But to the taxpayer the warehouse fee is not the controlling factor. It is the influence the warehousemen exercise in preventing cotton from being fed into the market. You can understand that if 1,000,000 bales of cotton are sold, shipped, and consumed it ceases to draw storage rates for the warehouse from which it was shipped. Cotton is worth so much more to the warehouseman when stored than when located on some ship going to the foreign mills or when located at a mill ready for consumption. Therefore the warehouseman is very friendly to the idea of greater storage stocks, a sluggish market, more loans, and incidentally more storage fees.

The farmer gets a loan on a bale only once, but the warehouseman gets his year after year so long as the cotton remains on storage.

It is not difficult therefore to understand the warehouseman's interest to keep the cotton on storage indefinitely and, above all, to prevent its removal to some other place of storage no matter how much saving that might mean to the Government.

The cotton-storage racket is a new one but a very powerful and very profitable one. Obviously, the interests who are fattening at this Government trough will not give up such a rich morsel without a struggle.

An enormous vested interest has been created in the continuance of the cotton-loan program and in the freezing of the loan stocks tighter and tigher, right where they are.

The story really starts with the first Government cotton loan in 1933.

It is not known to what extent the interior warehouse lobby influenced the decision at that time to make the loan at a flat rate all over the South, regardless of location. It is known that interior warehouse interests strongly urged this course.

Under this plan a farmer, for instance, in Lubbock, Tex., gets exactly the same loan on his cotton as a farmer at Greenville, S. C. Nevertheless, the market price of cotton in Greenville, S. C., is $5 per bale more than at Lubbock. The same is true of all points in North and South Carolina and to somewhat less degree of Georgia points.

As one prominent gentleman from South Carolina expressed the matter:

> Under this plan not only is the South Carolina farmer "gypped" when he makes his loan, but the South Carolina warehouseman is also "gypped" because the very first cotton to be sold out of the loan is South Carolina cotton, due to its higher value on the market, and then our South Carolina warehousemen lose the storage.

For the same reason cotton at Lubbock, for instance, is the first to go into the loan and the last to come out of it.

It is common gossip in west Texas that the most profitable business in that community is the storage of Government-loan cotton.

There is a facetious saying in west Texas that if the Government loan will only hold out for a few years more there will be a substantial increase in the value of west Texas farm lands, not for agricultural purposes but as sites for new warehouses in which to store Government cotton.

Most of the west Texas production now goes into the Government loan and stays there.

Meantime concrete, fireproof, sprinklered cotton warehouses will have unoccupied space for many hundreds of thousands of bales of cotton which they would be glad to store at an enormous saving to the Government if storage and insurance are available, but the political power of the interior warehouse lobby, with their swollen profits, is so great that the hands of administrative officials are tied.

Having supported the idea of storing cotton those in the know proceeded to build additional cotton storage space. Rates have been assessed and are being collected on somewhat of an emergency basis. Like when you build a plant for the production of arms and ammunition during a war period. You try to jack up the price sufficiently high that if the war ceases rather suddenly, you will have sold your production at such a high price over cost as to enable you to amortize the cost of your plant and equipment, and then have it as a gift so you may convert it to the production of peacetime goods.

It is interesting to note that one company was paid $467,338.60 for one period and for the following period it was paid $2,874,748.35, and for the period about to be settled for this same warehouseman is to receive $5,176,631.18. Another warehouseman is to receive a total of $942,271.16 for the period up to July 31, 1939; still another is to receive $1,296,087.88. The first-mentioned company is the Federal Warehouse & Compress Co., of Memphis.; the second is the Southeastern Compress & Warehouse Co., of Atlanta; the third the Union Compress Warehouse Co., of Memphis. If this is illustrative of how the ever-normal granary is to work out in the interest of the primary producer—the farmer—then we must admit it is a new type of subsidy, but not one that will increase the purchasing power of the man who tills the soil.

The amazing part about this whole program comes to the surface when the Government, acting through its agency, the Commodity Credit Corporation, desires to deliver cotton under the provisions of the barter deal recently made with England. The Commodity Credit Corporation finds its hands tied. To meet the quality, staple, and fiber requirements of the purchaser—England—the Commodity Credit Corporation must procure title to the cotton on which it has heretofore made loans to cotton growers. So, S. 2697 is approved by the Senate and sent to the House for action. The Senate approves a bill which carries provisions that would enable the Commodity Credit Corporation to procure, convey, transport, handle, store, maintain, or rotate the cotton on a basis as would cost the Government and taxpayers much less for storage and insurance charges than has heretofore been paid under acts which were so designed as to give particular warehousing-fee benefits to this small group of operators who have exercised and continue to exercise such an extraordinary influence over the Congress. The Banking and Currency Committee of the House has absolutely refused to allow the present law, which was written in a manner to protect the warehousemen at the cost of the taxpayer and the farmer, to be amended by the Senate bill so that the Commodity Credit Corporation could effect savings and prevent exploitation by the warehousemen.

Under the bill as reported by the Banking and Currency Committee, the Government agency is powerless to proceed on a program of obtaining reasonable rates on storage and insurance on cotton actually owned by the Government or one of its agencies. It is almost unbelievable that a group of warehousemen, through their Representatives here in Congress, could be so powerful as to exercise such arbitrary control over commodities actually owned by the Government. With the Government becoming the largest holder of so many of these commodities, such an influence exerted by the warehousemen can become all-controlling in preventing these goods from finding their way into the normal channels of trade. As in the case of cotton, the warehousemen can prevent the Commodity Credit Corporation from reconcentrating the fiber at points where prospective buyers can have access to quick selection by sampling. In the legislation under consideration, the warehousemen, acting through their strong control over Congress, are proposing to say to England just what cotton she shall have access to, just what stocks she shall select from, the position of the warehousemen being to force England and other buyers to take from such stocks as may be selected by the warehousemen instead of letting England have freedom of choice, as any other buyer would want to enjoy.

So we have here another form of trade barrier dictated by an entrenched group of warehousemen who deny to the Government—as a result of legislation they have been able to have enacted into law—the right to say what it shall do with its own cotton; who say to prospective and actual customers for this cotton that they shall have to take such cotton as the warehousemen stamp with approval and are willing to release; and all of this because of the fat warehousing fees being enjoyed by the warehousemen in control.

The House should, of course, reject the bill which has been reported out by the Banking and Currency Committee and accept the Senate approved bill and in this manner break the control now exercised over the cotton in storage by the warehousing group.

It is reasonable to assume that English agents sent to this country will want to make inspection of the actual cotton to be exchanged for tin, rubber, or other strategic and critical materials for which we may wish to barter. If barter is to become the order of the day, it is reasonable to assume that other countries may wish to trade for some of our lard, cottonseed oil, fruits, and many of the other commodities the Secretary of Agriculture will be called upon to place on the "surplus" list. If undue control is to be exercised by a string of warehousemen who prefer much more to have the goods in storage in their warehouses than traveling through the channels of trade and into consumption, as in the current case of cotton with which we are now dealing, then in that case we are serving notice on our prospective customers that, while the Government may be the greatest single holder of these surplus commodities, freedom of action with reference to reconcentration at strategic points acceptable to the prospective customer will not be forthcoming. The "ring" will be the controlling factor.

One fundamental fact should not be overlooked; that is, if the farmer pays off the loan and takes back the commodity, he will either have to pay these excessively high storage and insurance charges or the Government will have to absorb them and charge the fancy fee to the taxpayer. If the Government takes control of the commodity through acquiring ownership from the farmer and proceeds to export the goods on a subsidy basis, as Secretary Wallace has announced he will do with cotton, surely under those circumstances the taxpayer will be burdened not only with the subsidy but with all of the unreasonable carrying charges. So, anyway you look at this, the matter becomes a "racket" in behalf of and for the specific benefit of the warehouse "ring."

This case further illustrates the impossibility of a free flow of trade on or in basic commodities when politics and government control dictate the terms by which the trades shall be made. Politics and government move too slowly, impose too great a burden in the form of time-market risk and excess charges for the traffic to bear. The will to make the trade, move the goods, and assume the natural risks involved ceases to function because the buyer has no chance of profit. It all operates contrary to the rules which have governed in a trading economy since its inception. Perhaps we, the people, still have this lesson to learn.

William F. Kopp

EXTENSION OF REMARKS

OF

HON. FRED C. GILCHRIST

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. GILCHRIST. Mr. Speaker, shortly after the close of the Seventy-fifth Congress and before the convening of the Seventy-sixth Congress there passed from this life into immortality the Honorable WILLIAM F. KOPP, of Henry County, Iowa, who served for 12 years in this House.

When I came into Congress he was old in membership and he gave me out of his great store of experience, friendship, love, and knowledge, most valuable help, counsel, and advice.

He was one of the great men whom my State has sent here. He was born in Iowa, lived in Iowa, served Iowa, and died there. His father was a veteran of the Civil War and was in the earlier days a member of the house of representatives in the State legislature. Mr. KOPP himself later served in the State legislature before he came to Congress, and in April this year the house of representatives at Des Moines passed resolutions of tribute to him from which I quote the following:

From the rural school Mr. KOPP came to the middle preparatory school of the liberal arts department of Iowa Wesleyan University, Mount Pleasant, Iowa, in 1885, graduating from this college with his bachelor of arts degree in 1892. In 1894 he graduated from the law department of the State University of Iowa.

On December 4, 1894, he was married to Miss Clara Regina Bird. Together they made an ideal home for nearly 44 years. It was a home of love, hospitality, books, culture, and warm friendships. Here students, who came to the campus of Iowa Wesleyan College, shared the idealism and companionship of this Christian home.

He began the practice of law at Mount Pleasant, Iowa, in 1894; he served as county attorney of Henry County, Iowa, from 1895 to 1899; was a member of the Henry County bar for 44 years; was postmaster at Mount Pleasant, Iowa, from 1906 to 1914; represented Henry County in the Iowa Legislature in the Thirty-sixth General Assembly, 1915–1917; was elected to Congress of the United States from the First District (1921–33), Sixty-seventh to Seventy-second Congresses.

Mr. KOPP achieved a splendid record during his years of political service, making lasting friendships while serving as legislator and representing his county in the State and his district as Congressman from the First Congressional District. He always promoted the good of the farmers of Iowa. He was a leader in Congress during his 12 years in office. At the beginning of his second term he was made chairman of the committee to investigate expenditures of the Navy and was chairman of the Labor Committee from 1925 to 1930. He was chairman of the Pensions Committee in 1930. He rendered notable service in flood-control work.

He was ever a friend of ex-service men. The Civil War veterans knew him as a friend, and the Legionnaires knew him and loved him. He marked this verse in a recent publication:

"I ask not pomp nor power
Like kings, to give command;
The wealth I crave is power
To serve my fellow man.
I want to feel the hand clasps
That joys and sorrows blend;
I want to hear him saying,
'Ah, sir, you've been my friend.'"

A member of the Methodist Curch of Mount Pleasant, Iowa, for nearly half a century, Mr. KOPP was active in every department. For many years he was a member of the official board. He was a friend of Christian education and for 30 years was a trustee of Iowa Wesleyan College.

It is evident that three absorbing interests possessed the life of WILLIAM F. KOPP—his home, his church, and his country. He loved to serve others, particularly those whose lives were shadowed by sorrow and poverty. The needy and unfortunate found in him a friend. One of the gifts that endeared him to his friends was his recognition of merit in others. In his heart was a happy, joyous, witty strain which brightened the atmosphere about him.

With WILLIAM F. KOPP there was simplicity and integrity. There was always a fidelity to the highest in patriotism, justice, honor, and Christianity. There was no pretense in his make-up. He never compromised with his convictions nor retreated from responsibility. Whenever a noble cause needed support he never counted the cost. He was a man of high ideals, and his devotion to those ideals was constant and abiding.

Certainly we may join in the text selected by his pastor at the time of his funeral and say with Samuel:

Know ye not that there is a prince and a great man fallen this day in Israel?

Debt and Inflation

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MURDOCK of Utah. Mr. Speaker, recently Stuart Chase treated us to a delightful and instructive study of "the tyranny of words." It seems to be characteristic of human beings that they should allow themselves to be oppressed by highfalutin phrases. When we hear a word that tinkles on the tongue we are quite apt to let its melody, or its awful harmony, seduce and lead away our thinking powers, like the children who followed the Pied Piper of Hamlin. There was a time when all that was necessary to ostracize a man from decent society was to label him "abolitionist." The late President Harding, in his campaign for the Presidency, aroused enthusiasm for his plankless platform by repeatedly pronouncing the magic term "normalcy." Later, to our sorrow, we discovered that "normalcy" was a word that covered a multitude of—well, the Teapot Dome scandal, for instance. History is replete with similar examples. Strangely enough, we seldom analyze these rabble-rousing terms, but troop along after them like a herd of sheep follows a bell wether. Of all the fields of human endeavor certainly politics is most subject to the tyranny of words.

For instance, at the present time large numbers of people have harkened to the siren song about the public debt, which has lured many men on to the rocks of shoddy thinking. It seems that one has only to refer to the public debt, even in the jolliest gathering, to produce long faces and watery eyes. One of the most successful of the public-debt heart wringers is a certain Mr. W. L. Crum, who is said to be a professor of economics and consulting expert of the United States Treasury. His connection, however, has not prevented this oracle of woe from uttering frequent and ever more pathetic prophesies of the doom of the United States. In the RECORD of July 19, on page 9506, we were treated to his prediction that "inflation and repudiation of the public debt lie ahead."

Again, in the Appendix of the RECORD, page 3742, under the auspices of the gentleman from Montana [Mr. THORKELSON], we were given an opportunity to read what, it is hoped, is Mr. Crum's latest and most fearful lament. Most calamity howlers are satisfied if they can hit upon one nerve-racking word of doubtful meaning. Mr. Crum has gone further. He has selected two words of horrible timber and little meaning. He has blended together the words "inflation" and "repudiation" to produce a truly sensational political dirge. The only trouble is that Mr. Crum, soaring around on the wings of ambiguous phrases, is unable to get down to the lowly level of facts. Let us have a look at his record. He says "inflation is already here; rise in the public debt is inflation." What can this possibly mean? Inflation, according to ordinary common-sense language, is a drastic rise in prices. The only possible relation between debt and inflation is through the effect of debt on prices. Let us look at the facts. The total public debt in this country today is almost twice what it was in 1929, and the debt of the Federal Government alone is about two and one-half times as great. And yet the wholesale price index which stood at 95 in 1929, 1926 being 100, is only 75 at the present time. Obviously there must be something wrong with the idea that a rise in debt in itself constitutes inflation.

If Mr. Crum meant anything at all, certainly he did not mean what he said. Since the public debt has mounted, what

Mr. Crum says is that we are already wallowing in the mire of inflation. But when "inflation" means a rise in prices, and prices have actually fallen, the absurdity of the statement shines through even the misty veil of meaningless words. So Mr. Crum and the other prophets of doom try to persuade us that we are trembling on the brink of inflation, and that the building up of the public debt will surely plunge us into the abyss. He says:

Some set of circumstances will set it (inflation) off—don't ask me when.

The same warning has been repeated several times every day for the past 6 years, and some of its terrors have been tamed by time. Perhaps we can discover just how ridiculous it is by comparison.

We hear much in these days about the prosperity of England, which, we are told, has made a phenomenal recovery from depression without resort to the policies of the New Deal. Let us examine for a moment conditions in England. The total public debt of England, including local units as well as the National Government, amounts to $1,050 per capita as compared with $450 in this country. In other words, the per capita debt in England is almost two and one-half times what it is here. Surely if there is anything in the theory that our debt is rapidly becoming so large that inflation and repudiation are just around the corner, England must already be engulfed in a disastrous inflation accompanied by the repudiation of her public obligations.

The actual facts are quite different. In the last 5 years England has been enjoying one of the most extraordinary periods of prosperity in her history. Prices have been steady, production has been at all-time high, and employment is above the 1929 level. Government bonds are selling at remarkably low yields. And all this has taken place with a public debt almost two and one-half times as large as ours. In other words, when we have a public debt of $125,000,000,000 we will still be short of the "crushing burden" under which England has enjoyed such extraordinary prosperity.

If inflation and repudiation are just around the corner, it is strange that the bankers, insurance-company executives, and wealthy capitalists of this country are so stupid that they are willing to pay continually higher prices for Government bonds. Yield on the average long-term Government bonds recently got down to 2.07 percent, an all-time low, which means that the Government is selling its obligations on the most favorable terms in its history. And yet we are told that the policies of this same Government are leading us to financial ruin.

What we are suffering from at the present time is a deficiency, and an excess, of demand for goods. As long as we have a deficiency of demand or, in other words, a surplus of commodities, prices, instead of soaring to inflationary levels, are going to lag in their present depressed condition. The distribution of purchasing power by the Government, through its borrowing and spending operations, tends to sustain demand at something like a tolerable level. But with the tremendous productive power that both industry and agriculture in this country have developed, the amount of purchasing power necessary to raise prices, even by a small amount, would have to be much greater than at present. As the money that consumers have to spend increases, the flow of goods which industry and agriculture will put on the market will also increase. Only when we have absorbed all of our idle men and resources and the factories and the farms of the Nation are producing at full blast can there ever begin to be talk of inflation.

But consider for a moment what would happen to the Federal Government's finances if we reached that happy condition of full employment and full productive activity. Tax yields, without any increase in tax rates, would increase so tremendously that the necessity for further borrowing to finance expenditures would automatically cease. If there be any doubt as to the accuracy of this statement I need only call attention to studies of the Treasury which show that the Budget will be balanced with an $80,000,000,000 national income. This level of income, according to the estimates of exports, will still be somewhat short of the amount necessary to employ our men and our resources fully.

Putting the whole thing in a nutshell, any increase in the total spending of the Nation that would tend to make prices rise would call forth a tremendous increase in industrial and agricultural production. Slightly higher prices, together with increased production and increased employment, would mean larger incomes and hence larger revenues for the Treasury. The necessity for further borrowing would cease and the danger of inflation through further increases in the public debt would automatically disappear.

Delay of Legislation for Dairy Farmers Regrettable

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

RADIO ADDRESS BY KENNETH W. HONES

Mr. HULL. Mr. Speaker, among the numerous important measures awaiting consideration as Congress adjourns is my own bill, H. R. 6500, which would make dairy products a basic commodity, and permit the dairy farmers to share in the general agricultural-adjustment program, parity payments, and so forth, along with the growers of corn, cotton, wheat, and so forth. Extensive hearings were held on this measure by a subcommittee of the Committee on Agriculture, but the subcommittee has postponed further consideration until the January session.

Still another measure on which I had hoped to obtain action is H. R. 6871, designed to stop the flood of farm foreclosures in the Middle West by readjustment and refinancing of farm-mortgage indebtedness. My bill H. R. 7455 to the same end, which was included by the Banking and Currency Committee as an amendment to the spending bill, failed when the House declined consideration of the latter measure, although a similar amendment had been adopted in the Senate by a vote of 74 to 7.

Realizing the distressed condition of thousands of dairy farmers in the Northwestern States, I sincerely regret that adjournment of Congress postpones consideration of these as well as numerous other measures also designed to aid in the relief of this difficult and devastating farm situation.

In support of H. R. 6500 I shall insert in my remarks a radio speech by Kenneth W. Hones, president of the Wisconsin Farmers Equity Union, over the National Broadcasting Co.'s network on the Importance of Dairying as a Basic Commodity. Mr. Hones is a dairy farmer of wide experience in the farm movement of Wisconsin and knows well his subject.

The address is as follows:

THE IMPORTANCE OF DAIRYING AS A BASIC COMMODITY

The dairy industry of the United States is the greatest single unit of agriculture from the standpoint of national gross income, number of farmers engaged in it, and the importance that it plays, not only in the diet of the children but the general consuming public as well.

Thus being this important, it is relatively important that we protect the producer in maintaining this great plant and protect the consumers in giving them an adequate supply of quality product at fair prices.

The vast investment that dairy producers have to make in order to produce this important food makes it extremely important that he be fairly compensated for his efforts if he is to stay in the business of producing a quality product.

Under the past and present conditions of running this great plant in a disorganized manner the producer, as well as the consumers, have received a deal that is not to the advantage of either one.

The dairy farmers throughout the Nation are losing their farms by the thousands under past and prevailing prices paid to them. Especially is that true in the great areas producing milk for manufacturing butter, cheese, and condensed milk.

There are those who will say that they can't understand how farmers can be losing their farms when prices that consumers pay are taken into consideration. That is just the point consumers do not understand, but we, as producers of milk for manufacturing, know that we cannot continue long to produce at prices we now receive, with the exception of special areas and specially protected markets. The dairy industry is on the verge of bankruptcy and unless we can receive assistance to adjust the industry very soon the whole situation will become a serious national problem.

Seasonal and annual surpluses have caused undue low prices to producers, while on the other hand consumers have paid exorbitant prices for certain types of dairy products in off-season production, due mainly to the lack of a national dairy program participated in by individual farmers. We have been dictated to in both cases by processors of all types and other groups of handlers who only look for commissions and profits on volume, regardless of the producers' milk check or the consumers' ability to pay. The dairy farmers of the Midwest have themselves finally decided to call a halt to this kind of operation, and through meetings recently held in Wisconsin and Minnesota voted overwhelmingly to seek the assistance of Congress to pass legislation which will give us a share in the benefits as well as the responsibilities in a national agricultural economy. We believe it is possible for us dairy farmers to have a program that is fair to us and also fair to the consumers. It is good national economy to use an ounce of preventative rather than a pound of cure. It is evident now that our present production capacity may be on the verge of throwing the dairy industry on an exportable-surplus basis, and if this happens it will be far more serious than the problem confronting cotton or wheat, because we produce a perishable product that cannot be stored only temporarily. We believe we are just entering the stage of annual surplus production, and unless we as farmers rally collectively to prevent this there will be hectic days ahead.

Whether this is absolutely the case or not, it is important that we as producers organize in a national way to improve our situation and work out a correlated program; therefore we seek to make dairy products a basic commodity under the present farm bill. We ask that we receive our proportionate share of moneys appropriated for price-adjustment payments. We ask that the cow population be stabilized at its present level until economic purchasing power and increased consumption permits more production to be absorbed at prices fair to the producers.

There is much to be done within the industry itself in improving the production unit and raising standards of quality; therefore we seek as a part of the program such practices by producers as herd improvement, herd health, and the use of production-bred sires. This will lower the cost of producing a pound of butterfat and increase farm efficiency. To safeguard the consumers we advocate and stress practices to improve quality and sanitation, to be a part of the program and for cooperating farmers to receive recognition for same, by practice payments for compliance.

If stabilizing cow numbers through farm allotments does not produce the desired results, we have made provision for marketing quotas to be invoked only after dairy farmers themselves vote to do so. The allotment to be set only on that portion of the production that is marketed and that portion of the production consumed on the farm is not to be considered. We believe that stabilization of price is as essential to the consumer as to the producer. Out of the experience with past programs, especially under the Farm Board, it has been proven that stabilization of price without stabilization of production is as ineffective as stabilization of production without stabilization of the market. Due to this experience we now have, for those basic commodities named in the act, provisions for marketing quotas, loans, farm and terminal storage, and surplus removals. For the dairy industry stabilization of price means to keep the price of dairy products within the range of the consumers' purchasing power throughout the year. Consumers have paid exorbitant prices for products during off-production periods of the year and the producers receive their low price when their plants are producing at full capacity. By stabilizing the market we would raise the general price level, but would prevent undue high-price periods to consumers, which do not to any appreciable degree reflect in the producers' annual income.

To bring the stabilization part of our program about we have provided for such operations through an agency composed of cooperative dairy processing associations, to be financed in such manner as may be determined to be in the best interest of the industry.

Other basic commodities now named in the act have a program of storage on the farm, with loans to each farmer for his share of the national, seasonal, or annual surpluses. Because dairy products are of highly perishable nature, it is impossible for dairy farmers to store on the farm their share of these annual or seasonable surpluses; therefore, it is important that the dairy industry have a collective national agency for all producers to use in the storage of such surpluses, and to regulate in an orderly manner their return to the channels of trade.

It is also very important that the Federal Surplus Commodity Corporation has sufficient funds with which to remove any burdensome surpluses from this agency and distribute to the needy through relief channels as now being currently worked out by the Secretary of Agriculture.

Our program is primarily designed to assist farmers whose milk goes into the channels of manufactured products. We are making no attempt to disturb the fluid milksheds but to strengthen their position by stabilizing the market for the manufactured products, because milkshed contracts are based on current prices of butter and cheese.

When we present the program to Congress in a few days now, we are convinced that they are going to have before them in this bill the most complete picture of any commodity so far presented. We are not tackling our problem by parcels, nor have we any one patent-medicine remedy. This is a picture of the whole situation as it now stands.

The program is fair and just from every angle both to the producer and consumer; it covers the complete route from participation by the individual dairy farmer to the marketing of the product. We have made provisions for taking care of the family-sized herd through exempting from the program anyone who does not produce for market in excess of 500 pounds of butterfat or its equivalent during any one year. Because dairy products are so essential to the general welfare of all of us we are not advocating a program of scarcity, but one to bring about a better balance in the dairy industry for everyone. There is certainly no consumer who does not want the producers to have a healthy, prosperous industry with purchasing power sufficient to maintain industry.

This program has been discussed at length with producers and businessmen of the Midwest. It has the endorsement of the National Farmers Union, the National Wheat Conservation Committee, the Northwest Farmers Union Legislative Committee, and other farm groups from different sections of the Nation. In meetings completely covering the States of Wisconsin and Minnesota the farmers themselves, irrespective of organization affiliation, have endorsed the program and have raised nickel, dime, and quarter contributions, the funds necessary to send our committee to Washington. Creameries, cheese factories, condenseries, fluid milksheds, farm organization locals, and last, but by no means least, many small-town businessmen have put on drives to assist in raising these funds.

We have been here in Washington for some time now working out the draft for the bill and analyzing the whole agricultural picture. I do not believe it is unfair to say that if the American farmer wants any farm program he had better wake up. There are potent forces at work to destroy what we now have and they are using the same old game to do it. They are advocating programs of general phrases which have no underlying philosophy or principle common to the farmers' best interest. We farmers have at times been led away from our sane objectives by false and malicious propaganda that seems to us very unfair to the Secretary of Agriculture and the President.

Only to be here in Washington working closely with them can one understand their keen desire to do what farmers need to have done. Sincere farm groups seem to be having no trouble in securing the attention and assistance of the Secretary of Agriculture in preparing proper amendments to improve the present farm program. Remember that Congress, after all, has the responsibility of making any program work. It is not just enough to pass a piece of legislation, but the appropriations that go with it are the meat of the whole program as to whether they work or not. Why not ask your Representatives in Congress, "If the farmers of this Nation are the ones on whose heads the Budget must be balanced?" The lack of proper funds to operate a farm program will be more reason for its lack of effectiveness, if any, than any other reason.

We are certain that our dairy program is going to have militant opposition, as has already been intimated, but it is up to every dairy farmer to get behind this program if they ever expect to have a well-balanced agricultural program on a parity with other industries.

Let us keep what we now have and perfect it from time to time as conditions change, but let's work for more equality for more farmers and more commodities. Our dairy program needs your support at this time. Let your Congressmen know that you want it by hearing from you by card or letter. The whole agricultural program is in danger not because it isn't doing any good but because Congress is hearing from its enemies more than from those who want a program. We farmers are sleeping at the switch. I was in a Congressman's office the other day and in the great stack of letters he received from all types of national industry there was not one from his farmers. It is because of our negligence and indifference that Congress is failing to give our farm program the proper support, so it is important to let your Representative know that you want the agricultural program saved and improved, and that you want dairying made a basic commodity with a program designed to meet our objectives of stabilization.

In 1934 the Government brought forth a dairy program and presented it in a series of meetings to the dairy farmers of this Nation. Many of us attended those meetings as actual producers. The processors, dealers, speculators, market operators, and every type of commercial interest packed the meetings and consumed the time to where the farmers had but little opportunity to voice their views, and when they did the farmers were booed, hissed, and heckled down. Well, the program was defeated at that time because the meetings were packed with three processors or their office help to every one farmer. The dairy farmers did not turn the program down and we charged the processors with having headed off a program at that time, and they have never answered that charge to this day. Some of us did not accept that defeat as final. Since that time a number of us producers have been working out

a program that we felt would meet the needs of our industry at the present time, and one that was broad enough to meet changing conditions. We think we have it now and it will be presented to Congress next week. The dairy farmers of this Nation have a present responsibility perhaps greater than ever before. They will enlist, by their interest in our present plans, many sincere defenders of the rights of dairymen to sit at the national dinner table and partake of their fair share of the national income.

Ladies and gentlemen, I thank you.

American Lumber Industry Helped by Trade Agreements

EXTENSION OF REMARKS

OF

HON. ROBERT L. MOUTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ARTICLE FROM THE TIMBERMAN

Mr. MOUTON. Mr. Speaker, there has been a great deal said concerning so-called adverse effects of the reciprocal trade agreements program in its relationship to the American lumber industry. Statements have been placed in the CONGRESSIONAL RECORD in an attempt to stir opposition to the program. In many instances conclusions are hastily drawn from incomplete information that the American lumberman has been "sold down the river." To anyone with a rudimentary knowledge of foreign trade in lumber it must be apparent that the trade-agreements program has substantially helped the lumber industry. Biased and incomplete information, used by a small group of opponents, serves no useful purpose.

Mr. Axel H. Oxholm, managing director, Pacific Forest Industries, an outstanding authority on the lumber industry, in an article carefully analyzing the relationship between trade agreements and the lumber industry and recently published in the Timberman, stated:

[From the Timberman for December 1938]

RESULTS OF OUR TREATY NEGOTIATIONS

Pacific Northwest export industries as a whole undoubtedly feel disappointed in regard to the results of the United Kingdom trade agreement, and naturally everybody is looking for the proverbial goat. Few people take the trouble of studying the agreement as a whole, but are considering the value of the treaty, based on the effect on their particular industry, or, at best, on their particular region. Neither do they take a long-range viewpoint. This is natural and inevitable in a large country where most industries are organized on the basis of watertight compartments and have little relations with each other. Everybody agrees that closer commercial relations with the United Kingdom and the British Empire will be of the greatest importance also from the point of view of international politics.

The greatest achievement of the trade agreement is, unquestionably, that it caused a reversal of the strong tendency to build up preferences within the British Empire. While the treaty, in its present form, may not have broken down Empire preferences to the extent hoped for by certain groups, it does leave "the foot in the door," and subsequent agreements and a possible revision of the present agreement may lead to better direct results for the American export industries involved, especially those in the Northwest. Unquestionably, the treaty will have indirect benefits to practically every industry in the United States. If, for instance, our wheat farmers should succeed in disposing of their surplus crops of wheat in the United Kingdom under the duty-free arrangement secured by the agreement, the economic effects will be felt by every branch of industry catering to our farmers' needs. The same reasoning applies to all other of our industries directly benefited by the agreement.

For once has the American Government taken the lead in an intelligent and consistent foreign tariff policy. If, as majority of experts agree, we must maintain a foreign trade, it is obvious that our foreign policy, which is largely concerned with trade and commerce, must be conducted on a sensible and consistent basis. The industries catering to foreign markets cannot possibly exist on the basis of a temporary advantage gained at the expense of some foreign country during times of stress because such agreements and advantages are of short duration. Likewise an export industry cannot afford to be tied up with a political party so far as the tariff question is concerned. A glance at our tariff schedules for the past 25 to 30 years will clearly show the abrupt changes in our own import tariff, and the retaliatory steps taken by foreign countries against us, all of which has led to a disruption of our trade relations with foreign countries. Particularly during the last few years it has been evident that our representatives in both Houses of Congress are overworked. For this reason alone it should be evident that a highly technical and intricate matter such as our foreign policy cannot possibly be handled by Congress because very few men in political life today have even a superficial knowledge of international trade, tariffs, and related matters. Happily, Congress relieved itself of this work, placing it in the hands of the most competent men available for the purpose. Business leaders, who have studied the present set-up in Washington, are convinced that our negotiators are capable, impartial, and free from political bias. The mere fact that the results of the United Kingdom trade agreement came as a complete surprise to even the largest of our industries is in itself a tribute to the manner in which politics were kept out of this tariff question. The reciprocal trade agreement matter is neither an orginal idea of the New Deal nor is it a political issue, since it has strong supporters among keymen in both parties.

In conclusion let it be said that it is no easy task for our negotiators to achieve favorable results. Foreign nations, rightly or wrongly, charge this country with having started the tariff war and that the barriers which they have placed in the way of American merchandise are merely in the nature of retaliation. We should also remember that in international trade relations the same principle applies as in any other business deal—unless an agreement is fair and equitable to both parties, it cannot be of lasting value. The countries of the world today are keyed up to the maintenance of an export trade. Our negotiators are not dealing with impractical theorists but with men in the closest position possible with business interests in their respective countries. Our Northwest export industries, therefore, should continue the close relations with our negotiators and sooner or later this part of the country will receive valuable direct benefits. If anyone should be of the opinion that it would be better to take a chance on the spoils of war and have the tariff question revert to politics, they should first make a simple calculation and ascertain the relative number of voters in the Northwest compared to other districts in the country, often having foreign-trade interests opposed to ours. There is no important country in the world today where the foreign-tariff matter is handled by politicians, and in our own country it is more and more realized by responsible interests that important questions of a technical nature should be handled by experts and divorced from politics. The handling of the foreign-tariff matter is a case in point.

Felicitating the Taxpayers

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. JOHNS. Mr. Speaker, after listening to the complimentary remarks and those who have congratulated others for efficient services rendered in this House, I am reminded of an incident in the life of the late Will Rogers, in which it was my privilege to participate. He had been invited and accepted an invitation to address the Kiwanis International Convention at Los Angeles. Prior to being introduced he had listened to the international secretary introduce some 100 persons on the stage. It seemed to impress Will, and when he arose to speak he said:

I have listened to this bald-headed man introduce all the people on this stage. He gave them all a name; whether it is their right name or not I do not know. But he has introduced them all; and now, if it will not take too much time, I would like to introduce the audience.

So this afternoon as I listended to these congratulations, after we had appropriated over $13,000,000,000, exceeding the Budget estimate by some $300,000,000, I felt, if it would not take too much time, I would like to congratulate the taxpayers of the country upon the fact we are adjourning tonight and going home.

What Is Economy?

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
August 5, 1939

Mr. BURDICK. Mr. Speaker, with 11,000,000 out of work, I wonder what the reaction to a self-styled economy Congress will be. This Congress, in effect, left the unemployed to shift for themselves in the name of economy. Yet, on the whole, it appropriated $250,000,000 more than the Government asked for.

It might be well to find out what economy really means. The dictionary defines this term "economy" as follows:

> The management of the affairs of a community, estate, or establishment directly concerned with its maintenance or productiveness.

The test of what is economical cannot be determined by immediate conditions alone nor by mere prophecy. The test must include both the present and the future. For example, in a city like Cleveland, with thousands hungry and no work, what is the economical thing to do so far as the Government is concerned? To let the people starve; is that economical? To refuse to supply them with jobs so they can help themselves; is that economy? To provide a loan fund to loan to States, counties, and cities to aid their waning relief funds; is that economy?

To wash our hands of the whole consideration of relief, the unemployed, the distressed, as the conservative Members of Congress have determined to do, is that economy? Some Members of Congress believe in letting the people shift for themselves, and therefore their voters back home believe in that. Is that economy?

As I view the situation, our greatest asset and our greatest list of values in the United States are the lives of the people. My greatest pledge, which I have sworn to defend, is defined by the Declaration of independence, "life, liberty, and the pursuit of happiness" for the people. Every move I have ever made, or ever shall make while a Member of this body will be designed to accomplish this guaranty to the people of the United States. Are we doing that when we refuse to assist those who cannot help themselves because of conditions which they did not create and which they cannot prevent?

I am still convinced that our greatest wealth is the condition of the great mass of human beings living in this country.

One of our greatest weaknesses of government is found in the rules of the Congress. Many times a majority cannot grant needed assistance to the people because of the rules under which Congress and particularly the House is governed. Under these rules any man can become the chairman of a committee who lives long enough and is elected long enough. He obtains his rank on the committees in the same way. We had a good demonstration of that in the defeat of the appropriation for commodity-credit loans to assist in preventing a wholesale price slump. The House defeated the appropriation of $119,000,000 for that purpose. The committee handling this matter was headed by the gentleman from Virginia [Mr. WOODRUM], as the majority spokesman, and by the gentleman from New York [Mr. TABER], the ranking Republican member. Both spoke the same language—one a Democrat, the other a Republican—differing in name only, but united to defeat this measure to save a collapse of the price structure this year among the farmers. These men convinced enough Members to follow them and the appropriation was defeated. The Republican Members voted a stone-wall vote, only a few Members breaking away.

The gentleman from Virginia [Mr. WOODRUM] was in his position because of his length of service, so was the gentleman from New York [Mr. TABER]. Both were creatures of our committee system.

When the Senate restored this appropriation by an overwhelming vote, the conferees were compelled to restore the appropriation, and when this restoration was made in the House, both the gentleman from Virginia [Mr. WOODRUM], and the gentleman from New York [Mr. TABER], spokesmen, asserted that they did not know anything about the farm problem, and were sure that no one else in Congress knew what to do about it. The first part of their statement was true—that they did not know anything about the farm problem. Everyone in Congress will admit that, since both have confessed to it. Their second statement was not true—that no one else knew what to do. There are a hundred Members of Congress who know what to do, but under the rules they cannot do it. The gentleman from Virginia [Mr. WOODRUM] holds the key position on the Democratic side and the gentleman from New York [Mr. TABER] holds the key on the Republican side. No one can speak one line on the matter of a conference report unless these two gentlemen yield time. Those who know what to do are shut out of all debate, while those leaders who confess they do not know a thing about the farm problem do all the talking.

The friends of the farmers in Congress have never tried to arbitrarily fix a price for their crops that will insure them prosperity, while all other lines of our public business suffer, including the consumer. All the farmer has ever asked for is a price for his products that shall be fair and just as compared to all other commodities. On this question there are over 100 Members of Congress who know what to do. The farmer will not complain of 50-cent wheat if with that price he can buy a binder at a corresponding price. But he remembers when wheat was $1 and binders were $150. Now wheat is 40 cents and a binder $400. In other words, this is a clear-cut demonstration that the farmer's price is unjust and unfair as related to other commodities. It seems to me that this unfairness should finally percolate through the brain cells of these leaders in Congress who say they do not know anything about it. That unjust and inequitable relation between the price the farmer gets and what he has to pay out ought not to be too difficult for these leaders to comprehend. I admit that it is a great tax on their thinking ability, but for the welfare of the whole country they should diligently try to understand.

When it comes to other questions they show a brilliancy of mind that is phenomenal. When we come to the questions of issuing Government bonds drawing interest for the next 50 years, when we do not have to issue one bond, these leaders understand that. They refuse to let the Congress issue greenbacks, drawing no interest, which are as sound as the bond. These leaders insist that the control of the flow of our money shall be privately handled. They insist upon deflation, which results in low agricultural prices and low wages. When crop prices are low, wages small, money commands a premium. When money is scarce and hard to get—that makes it worth more. If we reverse the process and cheapen money, crop prices rise and wages increase, and everyone benefits except the Shylocks who loan money. Their business falls off, but the people prosper. These leaders understand this all right, as every move either one of them makes carries out the needed protection to the private control of our circulation.

How long the people of the United States can be humbugged by party names, I do not know. Whenever the people rise up in their power and vote for men and not a party label they will control the Congress of the United States, and not before. If the people do not soon wake up to the deceit practiced upon them by the two-party system, their Government will come to a tragic end. We are headed in that direction now. There are a few truths that these reactionary Democrats and reactionary Republicans must be made to understand. They must be told with full authority of the people backing up that statement:

First. Honest people have a right to live and not be hungry in a land of plenty.

Second. God created all the massive resources of this continent for the people who should inhabit it, and no class or clique should have the right or authority to obtain control over these resources to the detriment of all the people.

Third. Private enterprise and initiative should be allowed to have free expression in this country until such time as such individual activity interferes with the public good; when that time arrives the general public good is paramount to all other rights and privileges.

Fourth. We have gained nothing in our fight to throw off feudalism and establish personal liberty if we allow a more devastating feudalism to obtain a permanent hold in the United States—a financial feudalism that, through the control of the flow and value of our money, can make prices high or low, wages fair or wages unfair, employment or unemployment at will.

I believe the people of the United States are going to insist upon these rights, and the sooner the reactionaries understand it the better it will be for all, including those who want to perpetuate this unjust and unlawful and unconscionable principle of individual interference with the workings of democracy.

Will Rogers

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. CARTWRIGHT. Mr. Speaker, when I became a Member of Congress in 1927 I was surprised one day when Will Rogers called on me. He said, "I wanted to see the color of the man's hair that could beat my old friend Charley Carter. You know us Indians have got to stick together." He was very proud of his Indian blood, and my predecessor, Hon. Charles D. Carter, was five-eighth degree. I had never met Will personally, though his picture hung on the wall of the Masonic lodge room where we were both members, at McAlester, Okla. I had read most everything that he had written and I had heard so much by word of mouth from his old friends and associates I felt that I knew him. After our first meeting I knew I knew him.

He told me about having bought the old home ranch place and how he had recently fixed up the old well in the yard. He said when he went back there he always drew himself a fresh, cold drink and drank out of the bucket, that it seemed more natural than using a dipper. He spoke of many pleasant memories of the old home. One thing in particular was how he used to rope the hogs, when they got in the field, and drag them out on his horse.

He was then high on the roll of fame and his taking time to talk with a freshman Congressman convinced me that his greatness was largely his commonness in an uncommon degree.

I next heard him convulse hundreds at the Jackson Day Dinner in Washington in 1928. Mrs. Cartwright and I attended the Will Rogers Day celebration in connection with the opening of the Will Rogers Hotel in Claremore, where people had gathered from all over Oklahoma. It was interesting to see him mix with his old cronies. He put on a pair of blue denims and he and his son, Bill, played polo to the satisfaction of the vast crowd. Mrs. Cartwright and I were seated in the grandstand with his daughter, Mary, and his sister, Mrs. McSpadden. Will was solicitous of their comfort and came around every little bit to see how they were enjoying the game.

The last time I talked with him was shortly before his untimely death. I was going through Statuary Hall to the Senate Chamber and saw him wandering around among the statues. He spoke and began to tell me about having been in to see Vice President GARNER. He said: "I asked to see the V. P. and a clerk told me I could see him all right, but he was asleep and 'I have orders not to wake him until 3 o'clock.' I said, 'I don't want to see him like that; I'll come back at 3.'" When I saw Will he was looking at the statue of Sequoyah, another Cherokee Indian. Since then I have wondered if he ever entertained the idea that he might be the other one in the Hall of Fame from Oklahoma.

I told him Speaker Byrns was in and I would return with him to the House Chamber and call the Speaker out. I left Will at the east door while I went in to notify the Speaker. The Speaker said he would be delighted to see him. I returned and conversed with Will until the Speaker could arrange to come out. I asked him how his sister, "Aunt Sally" (Mrs. McSpadden) was getting along. He said: "Ain't she fine! She is 17 years my senior and when my mother passed away Sally took mother's place in my life. I have her in my home in California just now on a visit, and I am afraid she will go back to Oklahoma while I am gone. I wish she would live with us." The Speaker came out and took Will to his private office.

Next came the awful news of the terrible plane crash in Alaska, at the top of the world, when he was at the top of the world in fame and glory. I could not express my feeling at the sad news of the passing of Will Rogers and Wiley Post, Oklahoma's two world characters.

Mark Twain is probably the widest read of all American humorists. Will Rogers was the widest seen and heard. When he came by Congress one time he said, "They are passing out appropriations like hot biscuits at a farm home." It was he who said, "Congress opened with a prayer and ended with an investigation." Relative to foreign affairs he said: "This country never lost a war or won a conference." So typical of him is the inscription on his statue: "I never met a man I didn't like."

I think perhaps if his now silent tongue could speak he would say to the thousands that gather before his statue: "Howdy, folks," and then start off in that familiar vernacular and homely philosophy. When asked how he won his unique position, he drawled: "Jes' gum an' gumption." And that was literally true. No man in the public eye had more gumption or chewed more gum.

It is painful to meet the realization that we can never see and hear him again. As I gaze on his statue, as I so often do, I think as Anthony must have felt when, looking upon the silent form of the man whom once he loved, he said:

> His life was gentle, and the elements
> So mixed in him that Nature might stand up
> And say: "This was a man."

Correcting the Record on Farm Imports

EXTENSION OF REMARKS

OF

HON. BEVERLY M. VINCENT

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VINCENT of Kentucky. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, page 3544, there appeared a table showing some imports of farm products in 1933 and in 1937 with the inference that the increases were the results of trade agreements. The person who prepared this table should be made to qualify as a witness. To indicate that such person was not qualified I present herewith a few outstanding errors in the import side of the table. The part referring to acreage displacement does not deserve honorable mention.

Error 1: For 1933 the table shows imports of wheat as 10,286,236 bushels—all of this was imported in bond for milling and exported to foreign countries. In showing 1937 imports of wheat the table shows 17,423,837 bushels—this figure includes both wheat imported in bond for milling and exported to foreign countries and wheat imported for domestic uses. Less than half of this figure was imported for domestic uses. It should be remembered that the severe drought of 1936 made necessary imports of wheat in 1937 to supplement domestic shortages of a particular type.

Error 2: The table lists imports of soybeans for 1933 at 42,630,809 pounds. This figure represents imports of sesame seeds. The 1937 figure of 109,418,304 pounds of soybeans represents imports of soybean oil cake and meal.

Error 3: The table reports imports of cottonseed for 1933 at 7,004,025 pounds. This figure represents cottonseed oil cake and meal. Imports for 1937 are listed at 194,030,618 pounds which, in reality represents cottonseed oil, not cottonseed.

Error 4: The table shows imports of molasses—which should be listed as inedible molasses—for 1933 as 169,936,000 gallons. This total appears to be an addition of both quantity and value figures.

Error 5: The table in showing imports of eggs and products reports for both 1933 and 1937 a figure which in addition to eggs and products includes $604,546 worth of meat extracts and gelatin for 1933 and $2,543,251 for 1937.

It is difficult to imagine that men of responsibility would descend in their attacks to presenting alleged facts with a total disregard for accuracy.

It is somewhat shameful that certain caustic critics of the reciprocal trade-agreements program, having failed to discredit the efforts of Secretary Hull to restore our foreign markets for farm and factory commodities by logic and calm reasoning, continue to misrepresent and appeal to prejudice and engage in statistical manipulations. Not content with attempting to mislead farmers by showing a list of selected imports of farm products, and drawing therefrom hasty deductions which cannot be supported, these same critics hope to undermine the program by padding and diluting trade data. Public opinion in America, when the facts are known, has never countenanced the use of unfair methods to win even worthy objectives.

Douglas Henry Johnston

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

FUNERAL ADDRESSES AT OKLAHOMA CITY AND TISHOMINGO, OKLA.

Mr. CARTWRIGHT. Mr. Speaker, the death on June 29, of Hon. Douglas H. Johnson, of Tishomingo, Okla., removed a figure that had long been associated with the Chickasaw Indians of Oklahoma. For 40 years he had been Governor, or chief, as it would be called among other tribes. He was the last elected Governor in the Indian Territory before statehood in 1907, and continued to administer the duties of that position up to the hour of his death. His administration, which marked his great fidelity and devotion, gave to him recognition as a champion of the cause of his people and made him a familiar figure in Washington.

I was reared from the age of 12 in Johnston County, named after this illustrious Chickasaw, and he was one of my boyhood heroes. He was a very distinguished-looking man, always immaculately dressed, smoked cigars, and drove fine horses.

His personal qualities were of that loving nature which wins the warmest attachment. His social and business relations were characterized by a geniality and courtliness of bearing and conduct which tended to make both official and personal contact with him more than ordinarily agreeable. His work was always faithfully and honestly performed. He will long be remembered, loved, and respected by the Indians, as well as all others who had the pleasure to know him.

Governor Johnston's body lay in state in the State capitol building of Oklahoma and Hon. William H. Murray, ex-Governor of Oklahoma, who had married into the Johnston family, delivered the funeral address which was as follows:

ADDRESS OF HON. WILLIAM H. MURRAY AT THE STATE CAPITOL, OKLAHOMA CITY, OKLA., ON THURSDAY, JUNE 29, 1939, AT THE FUNERAL OF DOUGLAS H. JOHNSTON, GOVERNOR OF THE CHICKASAW NATION

Ladies, friends, and countrymen, we have gathered here to pay last but sad memory to the departed—something that will befall all of us. My remarks on this occasion will be more historical and biographical rather than eulogistic, for the reason that eulogy is but a reflex by rhetorical means of one's real character. The history of this corpse, his true biography, bespeaks to the analytical mind his real character.

The departed I have known for more than 40 years, during that entire time perhaps more intimately than any other man living. I have often said in his lifetime and I repeat it now, "He was the most generous man I ever knew, the most diplomatic man I ever knew, and the greatest judge of men I ever knew." And he believed in the ultimate and final preservation of justice as strongly as Calvin, the great minister, believed in the "final preservation of the saints." In the course of my remarks I will give you incidents that will make that clear to you.

My first meeting with Douglas H. Johnston was when I was practicing law with Madison Lucas and S. C. Treadwell, of Tishomingo, and I observed him walking and I said to them: "Who is the man so eloquently and yet so tastefully dressed?" They said, "That is Douglas Johnston, candidate for Governor of the Chickasaw Nation." Later on he came into our office from time to time. At that time his opponent, the candidate of the opposing party, lived in Tishomingo; all of the great merchants belonged to the opposition party; all of the minor tradesmen and citizens of the town lined up for his opponent, white and Indian, and they all commended him. The only men in the Chickasaw capital who were for Douglas H. Johnston was Dr. W. Poyner (long since gone to his last reward; may God have mercy on his soul), and the others, Treadwell, Madison Lucas, and myself. After the campaign was over and he was elected Governor in 1898, he walked in the office one day and said to Lucas: "Why don't you equip your father so he can sell goods to these Indians at a reasonable price?" Lucas replied that he had no money. Said Johnston: "I will go your note for all you need." That illustrates the Indian gratitude, for no man ever suffered from being Johnston's friend; and I am pleased on this occasion to pay these tributes to him, because he was the greatest financial friend in my youth, due to my loyalty and faithfulness in friendship to him.

Said he to Lucas: "I am going to see that the debts of the Nation are paid." Warrants were canceled at 40 cents; and he said: "Don't you cancel them for more than 25 percent; I will see they are paid within 2 years"; and within 2 years they were paid.

Their first legislature passed numerous laws. They were sent up under the Atoka agreement that was negotiated in 1897, to be approved by the United States authorities, all except the general appropriation bills. One day, while it was gloomy and rainy, Ed Bradley, his bodyguard, drove up to my office in a closed carriage, and he said: "Governor Johnston wants to see you at the mansion, and wants you to remain overnight; come, go with me."

When I went down, with my customary business directness, I said: "What will you have?" "Time enough yet," said he. We talked about various things that didn't relate to any public matters, ate the customary supper, and came in and conversed until about 10 o'clock. I was impatient then to know the business. I have since learned why, not from him but by his custom, he was studying me.

Finally he drew a letter out of a drawer from the Secretary of the Interior, saying, "Read that." The Secretary, in very harsh language, said: "We are returning certain papers purporting to be laws. They are disapproved because they lack form, and are therefore void." And when I looked up, the Governor said: "Can you write those laws?" My reply was rather egotistical; I said: "I can write anything, from a political platform to the constitution of a republic."

Said he, "How do I know?" I said, "If I can't, it won't cost you a cent." Again he told of his policy; and he said: "I will have only a portion of these bills passed. One bill I will have written by the United States attorney, who is interested in the bill of $30,000. The others I want you to write, and I want them put through as quickly as the legislature can enact them." Said I: "If you will let me have a talk with them, we can pass them under your constitution in 5 days, but that is the shortest possible period."

I drew those laws and the United States attorney drew his. They were all sent up, and all I had written were approved; the others were turned down for reasons that I would not now care to mention. The Governor asked me what I charged, and said I, "Five

hundred dollars." "Well," he said, "this legislature has usually hired a draftsman at $4 a day. They won't pay it, but I possibly can pay it." I said, "Governor, you can't pay me anything." And I therefore refused anything.

Then, calling the legislature again, other bills were written by other people, and they were again disapproved. He called me in one day and said: "If you will write these bills, I will see sometime, some way, that you are paid." One day he said: "Now, I am getting ready to pay the debt. I want you, or advise you, to go to this old Commission, the Dawes Commission, Chickasaw, that negotiated the Atoka Agreement, and tell them you will collect their money within 2 years, charging them 25 percent. They will readily agree, because, if they had the warrants today, they would have to cancel them at 40 percent."

I got it signed up and inside of a week the legislature passed that appropriation for the Commission, and my part was $3,600. I, as you see, was fully paid. Every man who ever befriended him has been fully paid.

Illustrating again his method, he never quarreled with anybody; he never resented any kind of effort to treat him unfairly, but invariably punished the man without the man's knowing it. I recall a young man that worked for him by the month. He noticed the young man paying attention to a half-blood girl, and thought it would be a good match; and he said to his hired hand, "If you need a buggy and team to go see the girl, we'll let you have it."

So he drove this girl in a fine rig. (He was very fond of horses; in fact, Biby offered him $600 for one team.) And finally, the marriage was consummated, and Governor treated him as an equal. One day he said: "I want you to bring a little bag of alfalfa seed from Milburn." The former hired man brought it over, and when the Governor and his family were talking to him, he said: "Governor, you forgot something." The Governor said, "What is it?" "You owe me for bringing the seed out." "Oh, how much is it?" "Fifteen cents."

He paid it, but that was the dearest 15 cents that he ever accepted in his life. Talking to me later, he said, in disgust, "Think, Murray, of a man charging 15 cents, a landowner charging another landowner 15 cents for a little courtesy." That fellow never knew, but he did know later and felt very sorely the lack of friendship of a noble soul, in whom there was no guile; no littleness.

Governor Johnston has been Governor, with the exception of one term, since 1898. He has had fewest enemies I ever knew any man who held office or was in public life half that length of time. Indeed, he had fewer enemies, and yet he was always firm. Indeed, if he had been Governor of Oklahoma, he would have made as good a Governor as anybody, and he had gone out more popular than any Governor ever elected in this State because of his even balance, of his discretionary diplomacy, and of his wonderful judge of men.

Again, when I was in Congress, Senator Owen wanted to honor a certain politician of this State and said he: "I wish you would get Governor Johnston to appoint him as attorney." Because the Governor, whenever Republicans were in power, always appointed a Republican attorney in good standing; when Democrats were in power, he appointed a Democrat attorney; and, as he intended to appoint one upon the election of Wilson and about whom to select, I said: "Senator, I wouldn't presume to tell Governor Johnston whom to appoint; I will advise him on any other question, but he knows men better than I ever knew them. I know men when I have had experience with them; he knows men by looking at them; every man to him has a window that he looks through to his soul; I will mention it to him and leave it with him."

The Governor replied when I approached him: "I will be pleased to befriend Senator Owen; you tell that fellow that I am going to give a dinner; that you and Cornish and McMurray and one or two others will be present, and the Governor especially asks you to be present." When we got to the dinner this fellow wanted to show "Mr. Injun" that he was a wonderful fellow. He began to tell the Governor about living in North Dakota, and the best I could get out of it, that politician made the State of North Dakota, dug the Red River of the North, and spread out the valley that grows the finest seed Irish potatoes in the United States; and when he stopped talking the Governor pulled his mouth around to one side and tells a dry story and the fellow would start again. Finally, when he had concluded he adjourned the meeting.

I said to the Governor next morning: "What about it?" "Murray, he won't do," he said. "That man couldn't spell the word faithfulness. He would be running around telling everybody he was running my office. I know what policies I want to lay down; I want a lawyer that will lay down the law to govern those policies." He had read that politician perfectly. Within 2 years I experienced the truthfulness of his observation about that politician, and that is one of the things that marked his success.

He said, "Do you know another lawyer that is a Democrat?" I said, "The only one suitable I know is a Chickasaw Indian by the name of Reford Bond, at Chickasaw." He went home and went up to Chickasaw and walked into Reford Bond's office and said, "I am looking for an Indian that lives out about Minco, I think; somebody told me you know him well." Reford said, "Have a seat."

That was what he went in for, and he talked to Reford a while, never having before seen him, and then went to the hotel and wrote me a letter and said: "You go to the Interior Department and tell them that I have selected Reford Bond as my attorney." That illustrated his uncanny knowledge of men, because all men had a glass window into their soul through which he could look.

I remember two other occasions of observing around his house that white people, Indians, and Negroes for miles about almost lived upon him. I have seen as high as a hundred and twenty-five people dining at his house at one time. Such was his generosity. I know of only one other man in history who could duplicate it, and that was Thomas Jefferson in his career. In fact, Thomas Jefferson's friends ate him out of house and everything; and they pretty near ate Governor Johnston out of house and home, because he died a poor man after serving all but one term from 1898 to 1939.

That one exception was due to this: The constitution of the Chickasaws provided that no Governor could succeed himself more than once. He was elected twice and then he put in Moseley, Palmer S. Moseley. The vote on Moseley was a tie, but showing 47 illegal votes against him, he was elected. He served one term, then Johnston "went to the bat" again, with everybody in the Nation knowing that election would be the last, and whoever was elected would hold for life.

I happened to be the manager of the Johnston party. We went for it with the idea of electing everybody on the ticket. Indeed, we elected the 20 members of the house, 12 senators, attorneys, probate judges in each county, constables in each county, high sheriffs, and everything except one little constable in Pontotoc County. To give you an idea of how popular he was as a result of his first two terms—yet his party was a minority party—you may wonder what elected him. For years he had been head of Bloomfield Academy, an academy for girls, most of whom were of mixed blood, and he educated a thousand or so of these girls; they married, many of them, white men, and all of them the most prominent members of the tribe.

These women elected him, although he was a minority party candidate. The best politician I ever knew was a Chickasaw woman. She never played politics; she doesn't care to vote, she would rather not have the vote; but in her modest way she controlled more husbands than any other woman in this State; and they elected Johnston Governor, although he was of a minority party. I am illustrating—all of them saying, "I want to see Uncle Doug," as they call him, "elected again." That made him Governor for life; that made the legislature until the legislative authority ceased; that made the judges until they ceased. And let me state at this time that the district judge in felony cases was Judge I. O. Lewis, the late father of Attorney William Lewis, who resigned, I believe, last year, as United States attorney in Judge Vaught's court. Judge I. O. Lewis admitted me to practice in the Indian courts, and only Chickasaw citizens could practice therein.

Johnston was left for the purpose of signing titles. Understand the Five Civilized Tribes were the only Indians in the United States that owned the lands in fee simple. They were the sovereignty of the soil, and every allotment had to be signed by the governors in their respective nations. In the Chickasaw and Choctaw Nations, as they held their lands in common, they had to be signed by the governor of the Chickasaws and principal chief of the Choctaws. There have been some five or six principal chiefs of the Choctaws since Green McCurtain, a great man, last elected by the Choctaws.

Every allotment, every town lot, every parcel of land sold or transferred from the nation from west of Duncan and Chickasaw to Arkansas; every foot of land south of the Canadian River bears the name of Douglas H. Johnston, as grantor, representing the sovereignty of that soil. That in itself is a monument.

Again, to illustrate his patriotism, when the Government called upon everybody to register that was subject to registration under law, he busied himself for weeks notifying the Chickasaw Indians of that fact. One day he walked in, a little thrilled, more than common for him, and said he: "Murray, I am a happy man, I have just checked the tribal rolls—the tribal rolls show the name and age of everybody—with the Government rolls, and I find that every Chickasaw has enrolled for the war."

PUSHMATAHA

Let no man ever say that the Chickasaws lacked patriotism, and again that illustrated the prophecy of the greatest Indian that ever lived, Pushmataha. Pushmataha was always a friend of the United States. Pushmataha, who died on Christmas eve, 1824, and was buried with a military escort more than a mile long, with a monument in Congressional Cemetery at Washington to commemorate his memory. Pushmataha was a brigadier general, helped the Government whip the Creeks at Horseshoe Bend, and was in the Battle of New Orleans with Andrew Jackson; came into the western country and spent 3 years, from 1815 to 1818, looking out for his tribesmen. He approached General Jackson to buy the western lands for the Choctaws.

Of course, Jackson would be glad to do anything for him, and he and General Hinds negotiated a treaty, in which he traded lands in Mississippi for lands west. On October 18, 1820, Pushmataha bought every foot of land in this State south of the Canadian River. Some day Oklahoma will honor Pushmataha with a monument. He was not only a statesman but a great warrior, a great general, and a man of high honorable character. When he concluded everything he called on Jackson to agree to take 50 square miles of their land east of the Mississippi and sell it and reinvest the funds and let the interest become a perpetual fund for the education of Choctaw youths; he rose and complimented the Indians and said to Jackson, "This treaty for a new home in the West, with that provision for education, I predict there will grow from that the time in the future when the Indians of that section

will be 'holding office in the white man's Government and fighting in the white man's wars.'"

How true was that in the Spanish War, when Ben Colbert, a Chickasaw Indian, was the orderly of Col. Theodore Roosevelt; how much more true in the World War. Out of all of the heroes, white or otherwise, that went on the fields of France there are two outstanding characters that have the record of honorable portion, both in France and in America. They were Joseph Oklahombi, at Wright City, McCurtain County, a Choctaw, and Otis Leader, a Chickasaw. Oh, but you may reply that the record showed Otis Leader was a Choctaw. That is meaningless. I knew him from his birth, born on Blue, now in Johnston County, where he resided with his father all his life; and in that connection let me state Turner McLish was enrolled as a Chickasaw and his twin brother, John, as a Choctaw. Those mistakes often occur, because they got an equal amount of land, and it didn't make any difference; but, in keeping with that prediction of Pushmataha's, the Chickasaws and the Choctaws as well gave the greatest heroes of the World War. A far-seeing statesman was he and such was Johnston.

In the matter of education, the Chickasaws had common schools that went through the grades, never allowed less than 10 nor more than 35. Then, with only 6,000 citizens, they had two male academies and two female academies and an orphan's home. They gave the pupil in the common school $8 a month to attend school. The finest compulsory system I ever heard of. My wife, I remember, was teaching school when I married her, tells the story of a full-blood woman bringing a little boy over with his foot cut, so as not to lose his week, as that excused it. Then they could go to the academy and were furnished free board, all they had to furnish was their clothing. Then they selected 12 of the most promising boys every year to go somewhere in the States and gave them $30 a month. From that contribution Charley Carter, long-time Congressman, was educated. From that contribution Judge William Bourland became a graduate from Leland Stanford in California. Most of them went to Vanderbilt; but, when you speak of their educational system, their educational system was educational with the stress on the word "education."

We have a system now among white men that is a fine educational system without the word "education" to it. Not so with those Indians.

Again, Johnston was the most diplomatic man, and he could do it in such a shrewd way. All the treaties of the Five Civilized Tribes specified that preparatory to allotment the schools of their nation should be given up at the end of a certain period—8 years. The Government of the United States, and particularly through the Interior Secretary, Secretary Hitchcock, sought to grasp every authority, legal or illegal, and they sent a superintendent down to take charge of the schools from Washington, some politician from somewhere, and all the four nations surrendered. Governor Johnston never surrendered.

He came down when I was aiding the Governor with his work. He lived in the Governor's house. The Governor would take him for a drive in his carriage, but he never would "talk business" with him. He stayed there 2 years, then went back to Washington without control of the Chickasaw schools. Governor Johnston kept those schools for 8 years after the other nations had surrendered, because he said: "I am determined that the Government shall carry out the law." And he carried it out without fussing. Hitchcock wanted to dismiss him, but he found he couldn't do it. He matched many "scraps" with Hitchcock and won every "scrap." I know, because I wrote the briefs at his direction.

To illustrate his belief in the "ultimate preservation of justice," he said to me one day, "I am going to do all in my power to wipe from the rolls 4,300 fraudulent claimants to citizenship, taking some $30,000,000 in property." That case had been tried before the different courts in the Indian Territory, had gone to the Supreme Court on the question of constitutionality of the legislation, and it was decided against them before he went into office. The Governor preceding him had surrendered. I said to the Governor: "It occurs to me that the fight ought to have been made at the other end of the line." He slapped his chair arm with his fist, and he said: "Murray, I do not believe that injustice can prevail with an honest citizenship." He said, "I don't want any advice about what ought to be done; I want you to tell me how best to do it." And there appeared for the first time a new court to try the cases, through efforts of Mansfield, McMurray, and Cornish, who were employed to represent them, and they finally found the loophole.

That loophole was that, while the law said—and very fortunate for the Indians later—that in the Chickasaw Nation service could be had only on the Chickasaw governor and in the Choctaw Nation on the Choctaw chief, when, as a matter of truth, the property was owned in common. They raised the question that the court didn't have jurisdiction, because they didn't have all the owners of the soil, and by that method they were all wiped off and tried anew; and all of them were finally wiped off on an individual trial of each claimant but 133. He was right in his belief that "justice will finally prevail." These characteristics can only be known by giving the facts underlying them and by giving the history of the transactions as they occurred, otherwise words and rhetoric would be meaningless and but a shadow of the character of the man.

To me he comes as nearly as any man I have ever known being a perfect man. He had a shrewd way of advising the white men that lived around him, and they frequently consulted him. One of the best stories was: A white man came up living near Emit, when he came home, as a number of others did, and, said he: "Governor, how are you going to vote?" "Well," the Governor said, "I am a Democrat, but I never talk about it, because I have to deal with the Republicans." The man said, "Well, I am a Democrat, too, but what about Al Smith?" This illustrates his method: "Well, what of Al Smith? They tell me if he is elected he will move his family over to Washington."

The Governor said, "There must be some mistake, because I know he is an old bachelor." And the fellow went off shaking his head and saying, "What lies they tell in political campaigns." By that method, they usually followed it, because he was a wise counselor. He was truly diplomatic, he was just in his actions, he was superb in his conduct. He was one of God's souls. I never knew a man so long in politics who did not swear oaths, except Woodrow Wilson, and yet so well balanced in all of his actions. I never heard him utter an oath. I know I couldn't do it, and Woodrow Wilson didn't do it.

Again in 1929, when a few men wanted to put him out of office and called a meeting that was held in Tishomingo in order to send to the Department of Interior serious objections to his continuing in office. The Governor did not make a speech; he had someone else to read his report to the body. The house was about half full-blood men and women, and the other half mixed-blood and white citizens. The greatest orator of the Chickasaws at that time—and he, too, has gone to his "long sleep" (may God rest this good man's soul in peace)—a noble soul, was Robert Imotichee, a full-blood. He was the greatest orator I have ever heard, and I said, "Robert, you take the floor and tell those full-bloods in their own language the things that Governor Johnston has done, and we'll rest it with them"; and pretty soon those full-bloods began, "Ugh," a grunt which meant "yes."

When the vote was called—all having been brought there by the opposition—every full-blood voted for Johnston and more than half of the mixed and white citizens. In truth, they came to "condemn but left to praise." Such was his method and his wonderful career. Speaking of white and full-blood, his party was always primarily a full-blood and white man's party, and nearly all of the full-bloods were for him, nearly all of the white citizens. The mixed-blood for the most part belonged to the other party, but he whipped them invariably with this backing.

When you speak of the full-bloods, he had the best idea of less selfishness of what ought to be done about tribal property. I had one of them say to me, "Murray, the coal lands, we can never sell them; what ought to be done is to turn them over free to the Government with the understanding that it shall be a perpetual fund to educate full-blood children." You could not get a mixed-blood to say that; he had too much white man's selfishness, but the full-bloods' idea is a benevolent one, it's a sound one, and so you cannot wonder that they stood behind a man like Johnston.

Oh, if Oklahoma would stand by their faithful servants and not listen to those who want public office who have no interest in government except to draw pay from the taxpayers; if they would quit listening to the tax eaters and listen more to taxpayers and consider their own interest, there would be a different state of conditions in Oklahoma; because, as old Solomon said: "The law of no country is better than its citizenship." If you have no better, the voter is to blame, not the politicians; because the politician is following what he thinks the active people will approve. He will sell his soul to get their approval. He follows blocs because there are votes; and always ignores the needy because there are no votes there. When asked if he gave Greece the best law, Solon, the world's first great lawgiver, replied: "No, I have given them the best they would have." So has it been in every government since.

We are long on educational institutions because there are votes there. We are short on the poor orphans. We have nearly 4,000 orphans in private homes in this State. We have less than a thousand in homes. Why? Because the orphans cannot vote and their parents are dead.

Johnston was one man who could carry out his policies successfully because he had a noble citizenship, a discerning citizenship, a citizenship that would stand behind his wholesome policies, not a state of citizenship "hunting loaves and fishes." I fear, in modern times among the whites, there are too many that turn back as when Christ told them they must be born again. "Whatsoever you sow, so also shall you reap." I would like to continue with this historical recital because I know it, perhaps, as no other man knows it; but I have said a lot and some day I will add to it for the benefit of my fellow citizens who may in the future profit by the script. Therefore I will conclude by repeating again that Johnston was the most generous man I ever knew, the most diplomatic man I ever knew, the greatest judge of men I ever knew, who believed in ultimate "preservation of justice among men"; a man who never flinched, yet at the same time gave no one offense; who was a noble soul, indeed, and, if service on earth among the creatures of God Almighty counts with Him, certainly the soul of Johnston will be found there when the last call is made for us all to face Him who quieted the madness of the multitudes and stayed the tempest; who will in the end call unto Himself His own, wiping from the slate the corrupt, whether it be in politics or religion or what not.

When that time comes those who have the same hope may expect to shake hands again with one of the noblest men of our State, Douglas H. Johnston.

May the grace of the Lord, Jesus Christ, the Redeemer; the Peace of God the Father, and the Communion of the Holy Spirit be with him, and with us, now and forevermore.

After the funeral ceremony at the State capitol, his body was carried to the old Chickasaw Indian capitol at Tishomingo, where it again lay in state; and before burial in the Tishomingo cemetery, Hon. Melven Cornish, of McAlester, Okla., who had been Governor Johnston's attorney for many years, delivered the following funeral address:

ADDRESS OF HON. MELVEN CORNISH AT THE OLD CHICKASAW CAPITOL, TISHOMINGO, OKLA., ON FRIDAY, JUNE 30, 1939

With bowed heads and with hearts filled with sorrow, we stand in the presence of the last mortal remains of our departed friend and your fallen leader, Douglas H. Johnston, the last elected Governor of the Chickasaws.

I find it difficult to utter the words that come to me upon this sad and solemn occasion; and I only hope that I may be able to say something that may be of some comfort to his loved ones in their grief, and at the same time help others to know something more of the private life and public services of this great and good man.

The private life of Governor Johnston is an open book, which has been read by and is known to all who have come in contact with him.

He was gentle and kind in all of his personal contacts, and throughout more than 40 years of intimate association with him I have never heard his voice raised in anger or reproof; yet he had "nerves of steel and the heart of a lion," and by precept and example he upheld—and inspired others to uphold—the highest standards of human relationships.

Like old Abou Ben Adhen, of song and story, in his love for his fellow man "his name led all the rest."

Few men have been so privileged as I to know the extent and value of his public services, and for more than 40 years I have been called upon to assist in my humble way in their performance. Based upon the recorded history of the United States, in its relations with Indians and Indian nations, and in the presence of his last mortal remains, it is my considered conclusion that, when gaged by actual results, Douglas H. Johnston was the greatest American Indian that ever lived.

In the veins of Governor Johnson were intermingled the best blood of the Old South and the best blood of the proud Chickasaw Tribe of Indians.

His father, Col. John Johnston, Sr., was closely related to Generals Joseph E. Johnston and Albert Sidney Johnston of the Confederate Army.

After assisting in the emigration of the Chickasaw and Choctaw Indians from Mississippi to Indian Territory, and over the Trail of Tears, Colonel Johnston returned and settled among the Indians and married Mary Cheadle, a Chickasaw Indian, and a member of the well-known family of Kemps.

Toward the end of the Civil War Colonel Johnston died and was buried at old Fort Washita, near the present city of Durant, leaving a family of four boys, of which Douglas H. Johnston was one.

He was named for Gen. Douglas H. Cooper, who commanded the Chickasaw and Choctaw troops in the Civil War.

Governor Johnston grew to manhood in the Chickasaw and Choctaw country and was educated in the Indian schools and academies.

In 1884, at the age of 26 years, he was made superintendent of old Bloomfield Seminary, an institution for the education of Chickasaw Indian girls. This institution was, in later years, moved to the city of Ardmore, and it is now maintained by the United States Government.

He held this position for 13 years, or until 1897.

When first elected Governor of the Chickasaw Nation in 1898, the tribal reign was supreme over the old Chickasaw Nation, which comprised the southwestern one-fourth of Indian Territory.

Since then the Chickasaw government has been forced to go the way of all other Indian governments, notwithstanding solemn treaty guaranties.

The election of Governor Johnston at the beginning of these trying times and his opportunity for service during those trying years, has been no less than providential; and no general of a defeated and retreating army has ever been confronted with more harassing and perplexing problems in the leadership of his people from the peace and contentment of an isolated tribal citizenship to the new and strange responsibilities of State and United States citizenship.

De Soto and his followers, when beset by hunger and the perils of the western wilderness, found the Chickasaws on the banks of the Mississippi River, where they had lived for many generations. Later on, after the organization of the United States Government their lands were set apart to them and guaranteed by treaties.

Early in the preceding century, the Chickasaws and Choctaws were forced to surrender their eastern homes to make way for the States of Mississippi and Alabama; and they were given homes in the West, likewise guaranteed by treaties, in which it was agreed that they should never be disturbed.

It is generally understood that the Government promised the Indians that they might occupy these new homes "so long as grass grows and water runs." That is not correct. What the Government really promised the Indians (in the treaty of 1855) was that they might occupy these western lands, "so long as they exist as a nation and live upon it."

The Chickasaws organized a government patterned after the governments of the surrounding States. Their lands were improved, the cattle ranges were stocked, and they became a prosperous and happy people.

Schools and academies were organized and many of their sons and daughters were sent to eastern colleges; and there prevailed, among these contented and kindly people, an atmosphere of culture and refinement that provoked the wonder and admiration of all who had the privilege of knowing them as they really and truly were.

Notwithstanding the treaty guaranties of the great Government of the United States, this strange condition of an isolated civilization in this strange western land could not last. The tide of so-called white civilization, propelled by the greed of the white man for Indian lands, again arose as it had arisen and swept them from Mississippi and Alabama several generations before.

Settlers from the surrounding States of Arkansas, Kansas, and Texas ventured into the Indian country and begged to be permitted to occupy surplus lands. Others came as the years passed, and the Indians received them kindly, and, not foreseeing what must be the inevitable result, permitted them to remain and prosper.

Railroads were built, towns sprang up, and before the Indian owners of the lands realized what had come to pass, the whites overwhelmingly outnumbered the Indians, and began to assert their "rights," which had no foundation except in the charitable tolerance of a kindly people.

Congress heard and heeded. The act of 1893, creating the Dawes Commission, was the entering wedge. Other congressional acts followed, and slowly and sadly the Indians realized that their dream of the peaceful and isolated occupancy of their western homes, "so long as they shall exist as a nation and live upon it," was at an end.

Then came the treaty of 1898, to which the Indians were forced to agree, providing for allotment, for abolition of tribal governments, and paving the way for Oklahoma statehood.

Governor Johnston, having been elevated to the governorship at the same time this treaty was adopted, realized that further actual resistance to the plans and policies of the United States Government would be futile, and, throughout the intervening period of more than 40 years, he has consecrated his life, and applied those splendid powers with which Providence has endowed him, to the service of his people, in conducting them and their affairs through the perplexing difficulties that arose and overwhelmed them.

When his administration began, McKinley was the President. He witnessed the going of McKinley, the coming and going of Presidents Theodore Roosevelt, Taft, Wilson, Harding, Coolidge, and Hoover, and has witnessed the coming and reign of the present incumbent of the White House.

He has, likewise, witnessed the coming and going of scores of Cabinet officers and scores and hundreds of Senators and Representatives in Congress.

Throughout all of these years he has established and sustained intimate friendships with all who have been officially connected with Indian affairs. His manners were those of a southern gentleman of the old school and of the highest type, and his persuasive powers were those of a finished statesman and diplomat. By the exercise of the courage of one who knew the rights of his people and dared contend for them, and, by preserving at all times the dignity of his high office and never forgetting the splendid traditions of the Indian tribe which he has so long and ably represented, he won and held the sympathy and friendship of the most powerful leaders of the United States Government, and thus the rights and interests of the Chickasaws were guarded and protected.

Early in his first administration both the Indians and the United States realized that the Atoka Agreement of 1898 was defective and must be superseded by a new agreement.

Therefore, in 1902, the supplementary agreement was negotiated and ratified.

Under this agreement, the wrongs contained in the former agreement were righted, and the lands and moneys of the Chickasaws and Choctaws have been divided and distributed among the enrolled members.

It is deemed appropriate to set out some of the most notable achievements of Governor Johnston on behalf of his nation and people.

(1) When the life of the Chickasaw tribal government was endangered by the nonpayment of tribal taxes and the surrender of Chickasaw schools was demanded, he went direct to President Theodore Roosevelt, and Executive orders for the collection of tribal taxes and the retention of the tribal schools were made; and thus the life of the tribal government was saved and the control of tribal schools was retained to the end of the treaty period.

(2) When some 4,000 white adventurers from the surrounding States, by fraudulent representations and perjured testimony, forced themselves upon the tribal rolls, through judgments of the United States courts, and took possession of the tribal lands of the value of many millions of dollars, Governor Johnston again appealed to President Theodore Roosevelt, that apostle of the "square deal."

The "supplementary agreement" of 1902 was made, and a new court for the retrial of the cases was created. The cases were retried, the claimants were ousted from Indian lands, and the rights of the tribe and the good name of the United States Government were again preserved.

(3) When Oklahoma statehood came on in 1907, the new State, sorely in need of taxes, sought to tax Indian lands, in violation of treaty guaranties.

Governor Johnston, single handed and alone, challenged the right of the State to trample under foot solemn treaty guaranties and to confiscate the lands of a helpless people.

The memorable Choate case was filed and carried through the intermediate courts to the Supreme Court of the United States. In 1912 the great Court rendered its opinion, holding that treaty guaranties relating to taxation were binding on Oklahoma; and thus again were the rights of the Indians made secure and the good name of the Government, in dealing with its wards, saved from reproach.

(4) When the period of tax exemption expired in 1926 and 1927, many original Indian allottees were still alive and in possession of their lands.

Restricted Indians of half-blood and more were still unable to pay taxes, and taxation still meant confiscation.

The President and Congress were again appealed to. The result was the passage of the act of 1928, making inalienable and nontaxable 160-acre homesteads of restricted Indians, and thus these helpless people were made secure in the possession of their homes for another period of 25 years.

(5) When it appeared that the affairs of the tribes were drawing to a close, Governor Johnston asserted, to the President and before Congress and the departments, that considerable moneys were due and payable to the tribes, because of illegal and unauthorized acts of the Government in the administration of their property.

The act of 1924 was passed, providing for the trial of all claims against the Government. These suits, involving many millions of dollars, have been prepared and filed and are now pending in the United States Court of Claims, and it is expected that they will be finally disposed of in the near future.

The wife of Governor Johnston, who was Betty Harper, of distinguished Chickasaw Indian ancestry, was a teacher at Bloomfield Seminary at the time of her marriage to Governor Johnston, and she and the children and grandchildren, while they are left to mourn, are comforted by the deepest sympathy of mourning friends throughout the old Chickasaw Nation, the State of Oklahoma, and extending on to the National Capital.

Mrs. William H. Murray, the gentle and cultured wife of former Gov. William H. Murray, was a graduate of Bloomfield Seminary, and was a niece of Governor Johnston.

She was called to her reward a year ago, and now rests in the same cemetery where the remains of Governor Johnston will be laid.

Governor Johnston has served as the chief executive of his nation continuously since his first election in 1898 to the present time, with the exception of 2 years, from 1902 to 1904. He was still serving at the time of his death, with the consent of the President of the United States, being the last elected chief executive of his tribe under the Chickasaw constitution; and it is gratifying to an overwhelming majority of the members of the nation that he has been permitted to serve them to the end of his long and useful life.

I dare say that it is their wish that his plans and policies for the protection of his nation and people be carried forward without interruption or change.

Thus, throughout all the years from 1898 to the present time Governor Johnston has stood as the accredited representative of his nation in all matters affecting the well-being of his people.

Gentle, courteous, and kindly, he was revered by all who came into personal contact with him.

By the exercise of a courage of the highest order and an immovable firmness in the official conduct of all matters affecting the rights and interests of his nation and people he has won and held the respect and admiration of all public officials, both in Oklahoma and at Washington.

William Cullen Bryant, the poet, in that classic Hymn of Death, wherein he admonished the traveler upon how to approach the awful hour of death, must have had in mind just such men as Governor Johnston when he said:

"So live that when thy summons comes to join the innumerable caravan that shall move to that mysterious realm where each shall take his chamber in the silent halls of death, go thou not like the quarry slave—scourged to his dungeon—but soothed and sustained by an unfaltering trust, approach thy grave like the traveler who wraps the drapery of his couch about him and lies down to pleasant dreams."

Work of Congress

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

RADIO ADDRESS BY HON. SAM RAYBURN, OF TEXAS

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address to be made during the National Radio Forum arranged by the Washington Star and broadcast over a National Broadcasting Co. network next Monday night, August 7, 1939:

It has become customary for the majority leader of the House of Representatives to give the people over the radio an account of his stewardship and that of his colleagues after the close of each session of Congress.

I would like here to express my sincere thanks to the Evening Star National Radio Forum and the National Broadcasting Co. for giving me this opportunity to review the work of the first session of the Seventy-sixth Congress—and I say "work" advisedly, because this has been a working Congress. We have not been able to accomplish all that we would have desired. Some measures that we hoped to enact have at least gone over for later consideration.

To prove this has been an industrious and working Congress I will now review some of the outstanding accomplishments of this session.

The first two things that I shall discuss are the amendments to the Social Security Act and the revision of the revenue laws. Let me say to you that I think these acts are so outstanding that if they had been our full work the Congress just adjourned would have deserved the thanks of the American people.

This is the first administration in the history of the country that ever undertook a real program of social legislation. Under this administration the first Social Security and Old-Age Pension Acts were passed—one of the most far-reaching and beneficial steps ever taken in this or any other government.

At this point I should like to summarize the most significant features of the social-security amendments.

The three principal phases relate to the tax changes, the liberalization of the Federal old-age insurance system, and the augmentation of the Federal-State program of social security.

The old-age insurance taxes have been frozen for the next 3 years at 1 percent on employer and 1 percent on employee, which results in an estimated reduction for the 3-year period of some $825,000,000. The unemployment-compensation taxes have been limited to the first $3,000 of an employee's wages, in conformity with the old-age insurance tax provisions. The resulting annual savings are some $65,000,000, and, in addition, provision is made for refunds and abatements, which means an additional saving to taxpayers of some $15,000,000. In addition, what might be termed "nuisance contributions" of fraternal and certain other nonprofit organizations are eliminated.

The liberalization of the old-age insurance provisions is of the utmost importance. Not only is the date for beginning monthly benefit payments advanced from 1942 to 1940 but the benefit provisions for retired workers are liberalized and eligibility requirements are made easier for those retiring in the early years. In addition, the new law provides for auxiliary benefits in the case of the retired worker with an aged wife or children under 18 years of age. Of vital interest to all people covered in the Federal insurance system, regardless of age, are the survivor's benefits that will now be payable to a young widow with children, to aged widows, and to dependent parents (if there is no widow or children) on the death of a covered worker.

The effect of paying additional benefits to the married older workers who retire and of paying benefits to the survivors of workers is to afford lifetime family protection, instead of only individual old-age protection. This extension of the Federal old-age insurance system increased by millions those who will be protected and makes the protection that is afforded now more complete, since it recognizes the family circumstances.

Moreover, the coverage of the expanded Federal old-age and survivors' insurance system has been extended to include thousands of employees who were not included under the former language of the law. The main groups of employees which are now covered are sailors and national-bank employees and employees of Federal building and loan associations.

Another main category of changes relates to the cooperative Federal-State program of social security, which covers millions of men, women, and children in this country. The amendments authorize increased Federal financial aid for public health, maternal and child welfare, crippled children, and vocational rehabilitation. The amendments also increase from $30 to $40 a month the maximum monthly amount for old-age assistance and blind assistance for which a State may obtain 50 percent financial aid. Another amendment increases the Federal matching ratio to States for aid to dependent children from one-third to one-half of the aid granted.

In my opinion, the social-security amendments of 1939 represent as great an advance in providing security to the people of this country as did the original Social Security Act enacted in 1935. The tax relief granted should be of tremendous value in helping the general economic situation of the country. The increased benefits provided will not only furnish greater security to millions of individuals but also do much to assist the general purchasing power of the country as a whole.

Another important act of the present session of Congress was the removal of tax deterrents to business expansion and investment.

For many years a business with alternating profit and loss was required to pay higher taxes over a period of years than a business with stable profits, although the average income of the two firms might be equal. This was especially true with respect to new enterprises and the capital-goods industries which are especially subject to wide fluctuations in earnings. The new tax bill corrects this situation by allowing corporations, partnerships, and individuals in business to carry over their net operating business

losses for a period of 2 years. Under this provision, a taxpayer sustaining a net operating loss in 1939 is permitted to carry over such operating loss in reduction of his income for 1940 and if such net loss is in excess of his income for 1940, he can carry over such excess in reduction of his income for 1941.

Another provision of the existing law which resulted in hardships to corporations and for which relief had already been extended to individuals and partnerships by the Revenue Act of 1938, was the provision limiting capital losses in excess of capital gains of corporations to be applied against other income only to the extent of $2,000. The new tax bill removes this tax deterrent and permits corporations which have sustained capital losses on assets held for more than 18 months—known as long-term losses—to apply such capital losses in full against their ordinary income for the taxable year in which the loss was realized. In the case of capital losses on assets held for not more than 18 months—known as short-term losses—the corporations are permitted to carry over the excess loss into the next year to be applied against short-term gains of such year. The effect of this change is, of course, to place corporations upon a parity with individuals and partnerships with respect to capital losses.

There have been many complaints against the undistributed-profits tax. While in the form of the Revenue Act of 1938 the tax produced little return, it had acquired prominence as a psychological irritant largely because of the widespread emotional criticism directed against it. Legislation recently enacted at this session removes the undistributed-profits tax and substitutes for it a flat tax of 18 percent upon corporations with net incomes above $25,000. The small corporations, that is, those having net incomes below $25,000, were not subject to the undistributed-profits tax under the Revenue Act of 1938, but were subject to graduated rates ranging from 12½ to 16 percent. These small corporations which comprise about 90 percent of all corporations filing taxable returns, were left undisturbed by the new act. However, banks and insurance companies which, under the old law were subject to a flat rate of 16½ percent, even though their income was below $25,000, are now permitted to be taxed at the rates applicable to small corporations where their incomes are not in excess of $25,000. This will afford considerable relief to small banks and insurance companies.

Another feature of the new Revenue Act will materially aid railroads and other corporations whose bonds can be purchased at the present time at less than their face value. This provision permits a corporation in an unsound financial condition to redeem its bonds, notes, or other evidences of indebtedness in existence on June 1, 1939, at less than their face value without the recognition of gain if such redemption occurs after the enactment of the law and in a taxable year beginning prior to January 1, 1943. This provision will result in a real incentive for railroads and other corporations to liquidate their indebtedness and place themselves upon a firm financial basis.

Under the old law the capital-stock tax provisions were found to operate harshly against corporations which were unable to anticipate their earnings accurately over a period of years. Under the Revenue Act of 1938 the capital-stock tax is based upon a declared stock value, which the taxpayer may revise every 3 years. An excess-profits tax applies to the profits in excess of 10 percent of such declared value. Therefore, if a taxpayer is unable accurately to anticipate his profits and declares too low a capital-stock tax value, he may be subject to a heavy penalty tax on such profits. To remedy this situation corporations were given the right to increase their capital-stock tax valuations for the fiscal years ending June 30, 1939, and June 30, 1940, but not to decrease such values for such years. This will afford relief to corporations which have declared too low a capital-stock tax value for those years and should result in an added stimulus to business.

I do not believe that the American people want Government ownership of railroads. I certainly do not. One of the surest ways to prevent it is to enact fair and just transportation legislation that will bring under Government control all instrumentalities of interstate commerce.

The railroads are now and have been for some time what may be called a "sick" industry. Many railroads have not been able to collect enough revenue to even meet their fixed charges, much less pay dividends.

The recent session of Congress—both House and Senate—enacted legislation bringing under regulation all forms of transportation in an effort to stop cutthroat competition and have a well-rounded transportation set-up in the country. These bills are now in conference between the House and the Senate and it is the hope that an effcient and workable law will come out of these deliberations.

A railroad reorganization bill was passed, which, in my opinion, will save two or three railroads in this country from going through tortuous and expensive bankruptcy proceedings.

This transportation legislation, in my opinion, is of major importance.

Another outstanding accomplishment is the measure known as the reorganization bill. For 40 years every President has recommended a reorganization of the executive branch of the Government. Under this act the President was given the authority to group, coordinate, and consolidate agencies with a view to reducing expenditures to the fullest extent possible and to increase the efficiency of the operations of the governmental departments.

This reorganization is now under way. It will enable citizens to contact proper departments and get their information at one place instead of having to go from one department to the other in order to complete an answer to a question raised.

Another measure of great importance to agriculture and business as well is the one authorizing the Commodity Credit Corporation to exchange surplus agricultural commodities held under loans for stocks of strategic and critical materials which the Government of the United States needs to hold in reserve. By what is known as the Barter Act the United States Government will get rid of from six to seven hundred thousand bales of surplus cotton in exchange for rubber of equal value supplied by the British Government.

Another 150,000 bales of surplus cotton will be gotten rid of under an amendment to the Commodity Credit Corporation Act, authorizing it to sell at a price slightly under the market level on condition that the foreign governments purchasing such commodities commit themselves to hold the stock acquired in reserve completely apart from the market.

Another outstanding act passed by this Congress was the extension of the power of the President relating to the stabilization fund and the power to alter the weight of the dollar. The extension of these powers will enable the President and the Secretary of the Treasury to continue to cope with any world monetary emergency which may arise in the next 2 years and thus maintain the position of the United States in world trade and protect domestic interests from the damaging effects of currency-depreciation wars which may threaten.

The function of the stabilization fund, consisting of $2,000,000,000, is to prevent undue day-to-day fluctuations in the foreign-exchange value of the dollar. The devaluation power was originally granted and exercised to stabilize the dollar at its former international level after drastic depreciation of their currencies by other leading nations had seriously altered that level. Such depreciation proved extremely detrimental to American industries producing for domestic or export consumption in competition with foreign producers. The power to revalue the dollar and the stabilization-fund powers make a long step forward in the promotion of national welfare.

Last month the Congress passed a bill amending the Tennessee Valley Authority Act. It was a bill welcomed by the utility industry as well as by the Authority. To the Authority it meant that its electricity program could go forward in an orderly manner. To the utilities it meant relief from doubts and fears. The amendment permitted the T. V. A. to join with almost 40 other public agencies to purchase the electric properties of the Tennessee Electric Power Co. from the Commonwealth & Southern Corporation. There is no longer any reason for the private utilities to fear that they will be damaged because of the Government's power program in the Tennessee Valley. The passage of this legislation proved that the Congress agreed with T. V. A.'s intention to purchase at a fair price the facilities it required to distribute its power. There will be no duplication of lines and services—no destructive competition.

On August 15 the properties will be conveyed. T. V. A., an agency of the Federal Government, will acquire the company's generating plants and its high-tension transmission lines. Municipalities and rural cooperatives will purchase the distribution systems. The Commonwealth & Southern Corporation will receive $78,600,000, with which it will pay the company's bondholders and preferred stockholders—the public investors—100 cents on the dollar.

The merchant-marine bill provides for rehabilitation of domestic vessels so that vessels nearly obsolete might be turned in to the Commission and replaced by a modern fleet. Another bill modernized motorboat legislation, preserving all security features of existing law but materially relieving from the burdens of unnecessary fines and penalties.

Other legislation in the interest of the fishery industry provided through the medium of the Surplus Commodity Credit Corporation benefits similar to those accorded agriculture and provided for an educational and promotional campaign in the interest of increased consumption of fishery products.

Legislation was passed authorizing construction of additional and larger locks at the Panama Canal, so constructed as to provide so far as humanly possible ample accommodation for the transit of the largest naval vessels contemplated in the next 75 years. They will be bombproof and located so as to be immune from any damage which might be sustained by the existing locks in the event of attack.

President Roosevelt has recently written a letter to Chairman LEA, of the Committee on Interstate and Foreign Commerce of the House, recommending legislation to prevent waste in oil. In response, Mr. COLE of Maryland introduced a bill known as the Conservation Act of 1939. An able subcommittee is now considering this whole question with the thought of reporting legislation to the next session of Congress. It is the hope that this will be done.

The Connally law, known as the Connally "Hot Oil" Act, expired this year, but has been renewed to June 1941. It prohibits shipment of petroleum in interstate commerce which has been produced in violation of the State conservation laws.

The interstate oil compact, which expires on September 1, 1939, has been renewed. The existing compact included New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas. Michigan, for the first time, is named in the new compact.

Extension of the Civilian Conservation Corps' activities will take another quarter of a million youths off of the streets and highways. It will direct the energies of this youthful legion into various channels of improvement—for self and country. It is an investment in humanity. Clean-cut manhood is the C. C. C. dividend.

The youth of today is the counselor of tomorrow. That led also to the establishment of the National Youth Administration.

Convinced we are on the right path, this Congress wisely guaranteed the continuation of the N. Y. A. for another period. It is taking care of an army of young people that could not go to school at all. It provides a job paying them $15 a month, so educational opportunities which might otherwise be lost can be theirs. N. Y. A. has laid low the barriers of social caste and financial consideration.

The appropriation bill for W. P. A. provides for reducing the number on relief rolls from ?,000,000 in 1939 to 2,000,000 in 1940, for the reason it is believed that a million more people on work relief will be employed in private industry in the fiscal year of 1940 than in 1939.

It has been demonstrated that when one person on relief is taken into private employment, three people unemployed—not on relief—are employed in private industry. It is our hope and belief that these 4,000,000 people will be absorbed by industry, thus reducing the number of unemployed by 4,000,000 in the year 1940 over 1939.

As a result of the realinement of European powers and the constantly changing world economic conditions, the links in the chain of national defense were greatly augmented by Congress, so that today the United States is in a better position to protect its national interests than it has been at any time in its history.

The Congress authorized an increase in the Air Corps of the Army by providing for a total of 6,000 Army planes.

Legislation was passed providing for the use of civilian flying schools for the primary training of pilots, instead of having to expend additional sums to increase the size of the existing Air Corps training center.

Provision was made for an increase in personnel to take care of our air force.

Additional air bases are also to be constructed under this program. These new bases will provide a judicious distribution of flying facilities in every section of the United States and its possessions, to be available immediately to the Air Corps.

We have enacted a program here for the Air Corps and the Navy that will put this country in the position where it can defend itself against any country on earth that might attack us. I believe in the adoption of this program that the Congress met the wish of every patriotic American citizen. We want no war with any nation on earth. We covet the territory of no nation of the globe, but we are determined that this country, its people and its liberty, shall be protected by building up a line of national defense that no nation on earth will dare attack us. This program of national defense is the greatest insurance against war that could have been enacted.

These are only a few of the high lights in the program that has been adopted in this session of Congress. These alone would justify me in saying that this has been a working Congress and has passed a tremendous amount of remedial, far-reaching, and beneficial legislation.

The fundamental principles of the founders of the two parties were diametrically opposed to each other. It has come on down to now. It has been the theory of the Republican Party, from Hamilton to now, that the way to make the country prosperous is to make the rich very rich and prosperous and their prosperity will trickle on down to the fellow at the bottom. The theory of the Jeffersonian or Democratic Party has been and is now that in order to make the country prosperous the first thing is to have all of the people reasonably prosperous so that they have buying power. If you give the man in the lower income brackets sufficient prosperity and give him buying power, that buying power spreads. Farm prices had become so low in 1930, 1931, and 1932 that the 33,000,000 people on the farms of the country had no buying power, or had it reduced to the very vanishing point. That, of course, closed factories and banks and brought about general conditions of unemployment and distress.

Let me say something right here about business improvement.

The best barometers of general business conditions in this country are current tax receipts, movement of durable goods, and employment among nonagricultural workers.

During the first half of this year estimated Federal revenues increased $958,000,000, the sale of durable goods was up half a billion dollars, and employment among nonagricultural workers increased a million and a quarter.

We have made mistakes. Everybody in the administration admits that. All the things we tried have not worked—as we hoped they would—but we tried and when one thing has not worked, we have abandoned it and tried something else, if it were sound. All in all the program of the last 7 years is unmatched by any administration in this Republic in trying to do something for all the people and especially the average man.

The officials of the Republican organization have brought forward Dr. Glenn Frank as their head "brain truster" and program developer, if any.

Dr. Frank up to this good hour has brought forth no settled program, but has contented himself with the issuance of statements that can have no more force than the cryptic generalities which they are.

I note my friend, JOE MARTIN, the Republican leader of the House, has issued a statement to the tune of 14 points. I challenge any unbiased person to say he has enunciated a program. Most of the things he says the Republicans have done during the last session of Congress were all reported by Democratic committees and almost unanimously supported by Democrats.

In 1933 Franklin D. Roosevelt came to the Presidency and Democrats came into control of the Senate as well as the House. President Roosevelt brought hope to a Nation where there was only despair. He brought action to solve the problems of the depression where there had only been inaction and bewilderment.

Not only did he move to solve the problems of the depression, but he furnished leadership to solve great social problems that had accumulated in 12 years of Republican inaction. You know what that program of legislation has been. Would the Republican Party, if it came into power, repeal any of the legislation which is now on the statute books as a result of President Roosevelt's leadership?

In addition to the many achievements that I have briefly related the first session of the Seventy-sixth Congress has done much to perfect and carry on programs previously undertaken by this administration.

Our program has been based on the Democratic principle of doing the greatest good to the greatest number of our people.

The Republicans have offered no substitute program except to advocate a return to the old economic order of giving special privileges to the favored few at the expense of the underprivileged many.

They have not sought to repeal the permanent and monumental acts by which the Roosevelt administration will be judged in time to come.

Have they tried to repeal the Social Security Act, with its assistance to the aged, its unemployment insurance and its benefits to crippled children, the blind and other unfortunates? They have not.

Have they tried to abolish the Civilian Conservation Corps, which has taken hundreds of thousands of young men off the street and road and given them useful employment and wholesome training? They have not.

Have they tried to abolish the Federal Deposit Insurance Corporation, which has saved thousands of banks from ruin and protected the hard-earned funds of millions of depositors? They have not.

Have they tried to repeal the Securities and Exchange Act, which protects millions of honest American investors from the manipulators of the stock market? Still the answer is: They have not.

Since this administration found the country in chaos and despair in March 1933, the farm program has conserved our soil and turned agriculture back on the road to recovery.

With the aid of the Federal Housing Administration, the Home Owners' Loan Corporation, the public-works and the work-relief agencies, the Reconstruction Finance Corporation, and many other agencies created or revitalized by this administration, banks and private business firms have been put back on their feet; homes, schools, bridges, roads, and dams have been built, and the material wealth of this Nation has been increased from the Atlantic to the Pacific.

I might cite other long overdue reforms and accomplishments of the Roosevelt administration, which the Republicans will not and dare not oppose for the simple reason that these reforms and accomplishments are sound and supported by an overwhelming majority of our people. They will remain as monuments to this administration and will continue to be administered in the future no matter what party may be in power.

There are those who do and will criticize. Criticism and fault-finding will not satisfy the American people. What they want and what they are determined to have is action when action means progress.

In 1939 we stand where we will stand in 1940, as a party, proud of and defending the accomplishments of this administration.

Sense Versus Nonsense About Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. BEVERLY M. VINCENT

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VINCENT of Kentucky. Mr. Speaker, slightly more than 5 years ago Congress enacted the Reciprocal Trade Agreements Act authorizing the President to enter into trade agreements with foreign countries for the purpose of liberalizing world trade and restoring foreign markets for the products of the United States. This vitally important objective to our whole economy—agricultural and industrial—is being accomplished in the only practical way—that is, by reciprocal modification of excessive trade barriers.

Our national leaders failed to recognize the implications of excessive trade restrictions when they placed the Hawley-Smoot Tariff Act on our statute books in 1930. Foreign nations finding they could no longer sell their customary products in the United States quickly took retaliatory steps to exclude our products from their markets. Our foreign trade—exports and imports—dropped to a fraction of its former level.

In terms of resulting economic repercussions throughout the Nation this collapse of world trade represented a major phase of the depression. Nevertheless a vociferous handful of opponents, who would be the last to admit that no effort should be made to restore our foreign trade, persistently continue to snipe at Secretary Hull's efforts to reverse the trend toward disastrous economic isolation and seek to turn American farmers against the program by artfully compiling misleading trade data. Such devices may fool the unwary and deceive the unsuspecting, but it does not require much reflection to pry beneath the plausible appearance of such misleading propaganda and recognize the trickery involved. This procedure has brought into sharp focus the weaknesses of the charges made against trade agreements.

I should like to call the attention of the membership of this House and the farmers of this country to a statement by the gentleman from South Dakota, Representative KARL E. MUNDT, appearing on page 3761 of the Appendix of the CONGRESSIONAL RECORD, in which he decries the use of misleading data. One would imagine, after such a praiseworthy exposition of a rule of procedure, that he would be guided by it. How disappointing to find he ignores his own principle.

In presenting his indictment against trade agreements and the imaginary injurious effects it has had on the farmer, Mr. MUNDT adopts a study made by the American Good Government Society, and by conveniently giving to it the appellation "nonpartisan" hopes to inspire confidence in its conclusions. The truth is that the study is cunningly devised propaganda to stir farm opposition against the trade-agreements program—propaganda wholly unsound in its premises, wholly deceiving in its deductions, and fundamentally opposed to the real welfare of both the farmer and the Nation. Such shameful bias is inimical to true Americanism.

FARMERS SHOULD HAVE THE TRUTH

Simple honesty and ordinary fairness require that any valid conclusion demonstrating the effects of trade agreements on farm income must take as a basis of comparison the trade-agreements period against the Hawley-Smoot tariff period. The Hawley-Smoot Tariff Act was placed on our statute books in 1930 and continued to function uninterrupted until September 1934, at which time the first trade agreement—that with Cuba—was signed. By the close of 1935 three more trade agreements were added.

In the light of these facts is it obviously clear and irrefutable that the only sound basis of comparison in order to measure the effects of the trade-agreements program is to examine the farm situation under the 4 years of Hawley-Smootism and the 4 years under trade agreementism.

What are the facts? Total cash farm income under Hawley-Smootism amounted to $25,049,000,000; under trade-agreementism the total is $30,976,000,000—a gain to farmers of $5,927,000,000. These figures do not include Government payments.

I present here a table showing the farm situation under Hawley-Smootism and trade agreementism broken down into the totals for various classifications of crops.

Cash farm income

Commodity	Income received by farmers		Gain to farmers, 1935-38
	Under Hawley-Smootism, 1930-33	Under trade-agreementism, 1935-38	
Grains	$2,469,000,000	$3,272,000,000	$803,000,000
Cotton and cottonseed	2,360,000,000	3,168,000,000	808,000,000
Fruits	1,445,000,000	1,821,000,000	376,000,000
Vegetables	2,074,000,000	2,187,000,000	113,000,000
Tobacco	673,000,000	1,098,000,000	425,000,000
Meat animals	6,608,000,000	8,632,000,000	2,024,000,000
Dairy products	4,912,000,000	5,678,000,000	766,000,000
Chickens and eggs	2,614,000,000	2,885,000,000	271,000,000

Free discussion concerning the trade-agreements program transcends partisan politics, because there is too much at stake to jeopardize the economic well-being of the Nation for the sake of political gain. Honest differences of opinion may reasonably arise, and such a difference of opinion will command respect. Innuendos, half truths, and misleading information, on the other hand, can serve no useful purpose.

Accomplishments of the First Session of the Seventy-sixth Congress

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. RAYBURN. Mr. Speaker, it has been my custom for the past several years at the close of each session of Congress to extend my remarks upon the work done by the House and by the Congress.

The most cursory examination of the records will show that this session has been a working one. It is manifest, from the character of bills considered and passed, that no Congress has had any more important problems with which to deal than have we in this session of the Seventy-sixth Congress.

You will appreciate that obviously it would be impossible for me to discuss here every bill considered and enacted by the House, since we have made so many laws during this session. However, I do wish to discuss some of these measures. It may be that I will overlook some important ones and it may be that I will include some relatively unimportant ones. It is my hope, however, that I shall forget none having a general effect upon the country. I shall not discuss them in any particular order or with any reference to their relative importance, but shall call them to your attention as the occur to me.

As a result of the realinement of the European powers and the constantly changing world economic conditions, the links in the chain of national defense were greatly augmented by Congress during this session, so that today the United States is in a better position to protect its national interests than it has been at any time in its history.

The House Committee on Military Affairs held extensive hearings on the new problems concerning national defense. The committee heard American Ambassadors to France and England, the Secretary and Assistant Secretary of War, as well as General Craig, recently retired Chief of Staff of the Army, General Arnold, Chief of the Air Corps of the Army, and other ranking officers.

As a consequence of these hearings, the Congress authorized an increase in the Air Corps of the Army by providing for a total of 6,000 Army planes. Funds have been made available to increase the present 2,000 planes to an actual strength of 5,500 by the end of the year 1941. Approximately 4,000 planes will actually be delivered to the War Department during the next 2 years.

To increase the Air Corps personnel in order to obtain pilots for the new planes, legislation was passed, providing for the use of civilian flying schools for the primary training of pilots, thus obviating the expense of increasing the size of the existing Air Corps Training Center at San Antonio, Tex. Aircraft may be loaned to these schools as well as military instructors. After successful completion of the primary training the officers would then follow the regular secondary training of the Army as heretofore.

The expansion of the Air Corps has necessitated an increase in the officer personnel of the Army as a whole. Hence the total number of officers has been increased from 14,659 to 16,719, of whom the Air Corps shall comprise 3,203, an increase of 1,111. These additional Air Corps officers are to be commissioned over a period of 10 years. To obtain the officers needed immediately, Reserve officers are to be called to active duty so that 3,000 Air Reserve officers will be on duty instead of the present 1,350. Instead of 5 years, these Air Reserve officers may be kept on active duty for 7 years during the period of expansion where necessary. This year

nearly 300 Reserve officers will be given commissions in the Air Corps after taking a competitive examination, and approximately 125 will be commissioned each succeeding year, until the 10-year expansion program is completed.

The strength of the enlisted men in the Air Corps will be more than doubled by increasing the present 21,500 men to a total of 45,000. These men will be enlisted through the regular recruiting channels and will be trained in a variety of trades in order to provide the skilled mechanics necessary to maintain the aircraft in perfect flying condition at all times, as well as to perform observation, photographic, and gunnery work in actual flying.

Additional air bases are also to be constructed under this program—one in the southeastern United States, one at Puerto Rico, and another in Alaska. These new bases will provide a wide scattering of flying facilities to be immediately available to the Air Corps, so that it may carry on its operations in any section of the United States or its possessions.

Legislation providing for construction, rehabilitation, and installation of more adequate defenses for the Panama Canal department has been enacted; $23,750,000 will be expended to construct necessary buildings and appurtenances to house antiaircraft, seacoast defenses, and auxiliary units, and the defense garrison will be augmented by 7,000 men and 200 officers, which will require the expenditure of nearly $4,000,000 for their pay and equipment.

In order to prepare industry for the part which it must play in the event this country should again be faced with armed combat, the Congress has authorized the expenditure of $34,500,000, which sum will be used to purchase from private industry those technical munitions not ordinarily manufactured during times of peace. It will also be spent to purchase gages, dies, jigs, and tools necessary in such manufacture. These tools will be stored in readiness for immediate installation, so that in case of need private industry can commence quantity production in such munitions. These educational orders thus will provide for the procurement of 55 critical items, noncommercial in character, from about 250 separate industrial firms.

To further carry out the defense program the Congress appropriated $10,000,000 for the procurement of strategic war minerals, which are not produced commercially in this country but which are essential to our everyday needs, such as rubber, tin, and so on. This will provide for a reserve supply of these minerals which must be imported into this country, so that in the event our merchant marine is needed for other purposes we shall have on hand an adequate supply of these minerals in case of necessity.

I want to call to your attention certain figures which I believe you will find interesting in connection with the program for our national defense.

[In millions of dollars]

	1938	1939	1940
Interest of debt	927	976	1,050
Retirement of debt	581	583	585
Navy Department	520	624	773
War Department	418	532	732
Veterans	586	548	561

Authorized for purchase of airplanes, $300,000,000.

Between $50,000,000 and $60,000,000 has already been expended in construction of necessary housing, airplane hangars, and similar buildings on Army posts in providing the necessary facilities for the Army expansion program.

The Seventy-sixth Congress, first session, appropriated a total of $815,157,461 for the United States Navy; of this sum, $209,593,712 was for new construction and machinery. This includes 2 battleships, 2 light cruisers, 8 destroyers, 8 submarines, 1 repair ship, 2 small seaplane tenders—a total of 23 new ships, as well as 121 vessels previously laid down.

Many detached observers consider that United States naval aviation is the most efficient and best in the world. To maintain this position and keep abreast of the unprecedented building of foreign airplanes and seaplanes, Congress has appropriated $82,798,000 for naval aviation.

The board of which Admiral Hepburn was senior member submitted to the Congress, in compliance with the direction of Congress, a detailed and well-reasoned report on the bases that were needed by the Navy from which to defend our coasts and our sea frontiers. With the exception of Guam and Wake, approval was given to all those bases which the Navy Department recommended as of immediate importance.

The Secretary of the Navy has been authorized to proceed with certain of these bases. Other public works to increase the efficiency of the fleet and overhaul facilities were appropriated for to the sum of $53,719,500. This will increase employment of civil personnel and stimulate certain industries. Under the public-works portion of the bill, to carry out the provisions of the Hepburn Board report, Congress made provision for establishment of air bases in the Pacific at Kaneohe Bay, Hawaii; Midway Island; Johnston Island; Palmyra Island; Kodiak, Alaska; Sitka, Alaska; Pearl Harbor, Hawaii; and Tongue Point, Oreg.; as well as San Juan, P. R.; Pensacola, Fla.; Jacksonville, Fla., and Banana River, Fla.; acquisition of land at Norfolk, Va., and Quonsett Point, R. I., in the Atlantic. Work has already begun in certain localities to insure that those vital strategic points of our defense will be protected at the earliest practicable date.

In the closing days of Congress, in the third deficiency bill, provision was made for drydocks at Pearl Harbor, Mare Island, Puget Sound, and drydock facilities at Boston; a naval supply base at Oakland, Calif., which will increase the readiness of the Navy for an emergency in either ocean.

The navy yard facilities for ship construction were brought up by Congress to a point where they can adequately handle the increase of the fleet which is now under way in accordance with the Naval Expansion Act of the last session of Congress.

Major overhaul and modernization of five battleships and three submarines was authorized in order to bring the fleet to as efficient a state as possible.

It is well that the fighting efficiency of a navy is dependent upon its personnel. In order to man the Navy's ships and airplanes the annual appropriation bill provided for a total enlisted strength of 116,000 men. The Chief of Naval Operations in his report to the Secretary of the Navy said that "The battle efficiency of our fleet and the training and morale of our men are believed to be unequaled by any major naval power."

In an emergency the Navy must have a trained reserve. The new Naval Reserve material law will increase greatly the efficiency of the Naval Reserve and contribute much to our national defense.

A condition whereby excellent young men with broad educational background, taken into the naval service and trained as aviators, were being sent to the fleet with commissioned officer's duties, but without commissioned officer's status, was corrected by the enactment of the Naval Aviation Reserve Act of 1939, which authorized the commissioning of naval aviation cadets in the Reserves.

This session of Congress has maintained the policy of the administration in insuring that this country is safe from any aggressor and that the Navy, the first line of defense, is able to guard positively our sea frontiers. This session of Congress was of the majority opinion that the Navy built and building will be able to intercept any force that might proceed to attack our coasts. This Congress saw fit to appropriate for a United States Fleet that will be of sufficient strength and efficiency to defeat the fleet of any single power wherever it can be brought into action.

In a chaotic world, it is the will of the American people as expressed through their duly elected Representatives that the country have sufficient force to protect its interests and its national policies and insure peace for the Nation. That has meant a Navy "second to none" and Congress has in all essential points after hearings and due deliberations enacted necessary legislation toward this end.

So far as national defense is concerned in relation to the Navy no other Congress since the days of the World War has made such advanced provision for the readiness of the fleet.

The Congress has enacted a bill, reported by the Banking and Currency Committee, which authorizes the Commodity Credit Corporation to exchange surplus agricultural commodities held under loans made by it for stocks of strategic and critical materials which this Government needs to hold in reserve, whenever the President has concluded a treaty for the exchange of such commodities between this Government and a foreign government. The act conveys the necessary authority to carry out a treaty with the British Government, ratified by the President on July 17, which provides for the exchange of 600,000 bales of cotton supplied by this Government for an amount of rubber of equal value to be supplied by the British Government. The act will also enable the Commodity Credit Corporation to carry out any further treaties which this Government may be able to negotiate with foreign governments for similar exchanges.

Arrangements of this nature will have the advantage of providing a new market for American cotton and perhaps other agricultural surpluses now held under loan. Such purchases by foreign governments will be entirely in addition to the ordinary commercial demands, and those governments will at the same time commit themselves to hold such stocks in reserve, completely apart from the market, for a period of at least 5 years. The British Government has agreed to hold the cotton for a minimum period of 7 years, unless it is needed in the meantime to meet a major war emergency, and even after 7 years the cotton can be sold by the British Government only after it has consulted with this Government regarding means of disposing of such cotton and after taking all steps to avoid disturbance of the markets.

At the same time that this Government is enabled to dispose of some of its surplus agricultural commodities, it will receive in return stocks of raw materials of great importance to American industry which are not available in this country. Such stocks will be held in reserve by this Government against an emergency created by war involving this country or war elsewhere in the world which interrupts the supply of such commodities from the usual foreign sources.

The Congress has adopted another act authorizing the Commodity Credit Corporation to sell surplus agricultural commodities held under loan by it to foreign governments at a price slightly under the market level on the condition that the foreign governments purchasing such commodities commit themselves to hold the stocks acquired in reserve, completely apart from the market, for a minimum period of 5 years unless their use is required in the meantime to meet a major war emergency. I understand that enactment of this bill clears the way for the sale of 150,000 bales of cotton immediately and there is the possibility that much larger amounts will be disposed of in the near future.

The effect of sales of cotton under these terms will also be to increase the world market for American cotton since this demand will be entirely in addition to the ordinary commercial demand. Cotton sold under these terms will still be held in storage but the carrying charges will be borne by the foreign government instead of by this Government.

Among other measures sponsored by the Banking and Currency Committee were:

A bill extending for 2 more years the existence of the Commodities Credit Corporation and the Export-Import Bank; increasing from $500,000,000 to $900,000,000 the amount of bonds, notes, debentures, and so forth, which the Civilian Conservation Corps may have outstanding; and limiting the outstanding loans of, or other obligations of the Export-Import Bank to $100,000,000, the capital for which the Reconstruction Finance Corporation may continue to supply through loans or subscription to preferred stock.

A bill permitting extension or renewal of loans made prior to June 16, 1933, to executive officers or members of the Federal Reserve System to June 16, 1942, but such extension or renewals must be accompanied by written agreement for regular amortization payments on the principal.

A bill that continues the existence of the R. F. C. to June 30, 1940, and allows the maturity date of the Corporation's surplus to be subsequent to its existence; also continues the existence of the Electric Home and Farm Authority to the same date; and increases the maximum authorized capital stock of the Disaster Loan Corporation by $20,000,000, and extends the authority of such Corporation to make flood or other catastrophe loans through 1940.

A bill providing for a national census of housing to aid in the formulation of a national housing program in order that we may improve the living conditions of the American people.

A bill extending to June 20, 1941, a period during which direct obligations of the United States may be used by Federal banks as collateral security for Federal Reserve notes.

Legislation of the Committee on Merchant Marine and Fisheries involves the merchant marine, fisheries, Coast Guard, Panama Canal, Coast and Geodetic Survey, Lighthouse Service, and marine hospitals. Two hundred and twenty bills were referred to the committee, 54 reported to the House, 49 passed by the House, and 40 acted on by the Senate. Forty-seven public hearings were held on 82 bills, and 85 bills were considered in 30 executive sessions. In the first session of the Seventy-sixth Congress more bills had been considered and more reported than in the first session of the Seventy-fifth.

Bills reported, passed, and enacted into law comprehended the merchant marine bill, amending in many particulars existing legislation and providing for rehabilitation of domestic vessels similar to that existing in other maritime countries, whereby vessels nearly obsolete might be turned in to the Commission and replacement provided with a modern fleet. Public, No. 99, authorized allotment of wages by seamen to savings banks and depositaries, thus encouraging thrift. Public, No. 16, implemented the Officers' Competency Certificates Convention, 1936, looking to further safety. Another bill modernized motorboat legislation, preserving all security features of existing law but materially relieving from the burdens of unnecessary fines and penalties. H. R. 4983, which passed the House and Senate, made definite provisions for requisitioning of vessels by the Government in time of emergency. The number of seagoing vessels required to abide by the standards of the Load Line Act were increased.

Legislation was enacted authorizing any two or more of the Atlantic Coast States to enter into compacts or agreements for the uniform regulation of fishing and other matters connected with the industry with a view to better market conditions, superior quality of fish products, and the conservation of fishery resources.

Other legislation in the interest of the fishery industry provided for that industry through the medium of the Surplus Commodity Credit Corporation benefits similar to those accorded agriculture and provided for an educational and promotional campaign in the interest of increased consumption of fishery products. Provision was made for further study during the recess of fishery matters and an investigation into the Alaskan fisheries with a view to the stabilization of the industry generally and improvement in conditions of the fisheries throughout the United States.

New Coast Guard stations were established in Grand Traverse Bay, Mich., near the city of Monterey, Calif., and at Wrightsville Beach, N. C.

One bill provided a modernized and efficient promotion and retirement system for enlisted members and offered greater opportunity for advancement.

Another provided for a Coast Guard Reserve to be composed of owners of motorboats and yachts instructed in maritime laws, rules, and regulations and operated as an aid in the dissemination of information on maritime matters with a view to more comprehensive observance of law.

Another bill consolidated the former Lighthouse Service with the United States Coast Guard pursuant to the plan of the President effecting economies in the administration and operating costs and increased efficiency.

Other legislation authorized the Coast Guard base in Alaska, provided for the celebration of the one hundred and fiftieth anniversary of the Lighthouse Service and increased

the efficiency of the Coast Guard in the interest of national defense and the performance of its maritime police functions.

Coast and Geodetic Survey: Legislation was enacted authorizing construction of new vessels needed to continue the survey of many thousands of square miles of uncharted Alaskan waters.

Panama Canal: H. R. 5129 authorized construction of additional and larger locks at the Panama Canal so constructed as to provide so far as humanly possible ample accommodation for the transit of the largest naval vessels within contemplation within the next 75 years—bombproof, protected from sabotage, and located so as to be immune from any damage which might be sustained by the existing locks in the event of attack.

Other legislation gave greater recognition to civilian employees and increased efficiency of administration of affairs of the Panama Canal and Canal Zone as well as provided for the celebration of the twenty-fifth anniversary of the opening of the Panama Canal.

On April 3 the President signed the reorganization bill. For 40 years every President has recommended a reorganization of the executive branch of the Government. Authority was given the President in this law to group, coordinate, and consolidate agencies with a view to reducing expenditures to the fullest extent consistent with the efficient operation of the Government, to increase the efficiency of the operations of the Government and to reduce the number of agencies by placing together those having similar functions under a single head and to abolish such agencies as may not be necessary for the efficient conduct of the Government, in order that overlapping and duplication of effort be eliminated. Under the terms of this act Congress did not abrogate any of its powers but it delegated to the President the right to place his own branch of Government in order, subject, however, to disapproval by the Congress in the event his recommendations were not considered in the public interest.

In less than a month the President submitted to Congress his first recommendations. In this plan the President provided for a new set-up in the executive office, for a Federal Security Agency, a Federal Works Agency, and placed all lending agencies under one head.

On May 9 the President submitted to the Congress plan No. II. Scores of Government agencies were affected by the two Executive orders. They met with Nation-wide approval, and Congress, by resolution, provided that both plans should become effective July 1.

As a result of this first step under the reorganization law millions will be saved to the taxpayers in future years.

The President has announced that throughout the summer and fall he will be continuing his investigations and when Congress reconvenes in January he will submit additional plans to the Congress. Thus this Congress has accomplished what Presidents since the days of President McKinley, without exception, have endeavored to accomplish.

The Congress enacted a bill extending until June 30, 1941, the time within which the powers of the President relating to the stabilization fund and alteration of the weight of the dollar may be exercised. The extension of these powers will enable the President and the Secretary of the Treasury to continue to cope with any world monetary emergency which may arise in the next 2 years and thus maintain the position of the United States in world trade and protect domestic interests from the damaging effects of currency depreciation wars which may threaten.

The function of the stabilization fund, consisting of $2,000,000,000, is to prevent undue day-to-day fluctuations in the foreign-exchange value of the dollar. At the present time practically every country in the world has abandoned the pre-1931 gold standard. Consequently the values of foreign currencies depend chiefly upon the day-to-day decisions of governments based upon continually shifting economic, political, and monetary considerations. Under such conditions the operations of the stabilization fund are necessary to protect American trade by maintaining the dollar's position in the world market.

The devaluation power was originally granted and exercised to stabilize the dollar at its former international level after drastic depreciation of their currencies by other leading nations had seriously altered that level. Such depreciation proved extremely detrimental to American industries producing for domestic or export consumption in competition with foreign producers. Likewise, American producers of agricultural commodities, such as wheat, cotton, sugar, and so forth, suffered greatly and the domestic prices of such commodities were severely depressed. Countries tempted to further depreciate their currencies in order to acquire competitive advantages in the world market are discouraged from undertaking such action when the United States is ready to meet promptly any such challenge.

By extending the power to revalue the dollar and the stabilization fund powers, Congress took a long step forward in the promotion of the national welfare.

Legislation pertaining to our great petroleum industry has again occupied a most important part in the deliberations of Congress.

The Connally law, known as the "hot oil" law, which expired on June 30, 1939, was renewed for a 2-year period to June 30, 1941. This law prohibits shipments of petroleum in interstate commerce which has been produced in violation of the State conservation statutes. The law functions through the Tender Boards set up where needed by authority of the President under the supervision of the Secretary of the Interior. At the present time the sole Tender Board is operating in east Texas and has been doing very effective work. Under authority of the same law, investigators have been busy in other fields.

The interstate oil compact, which expires on September 1, 1939, was renewed by a resolution of Congress consenting thereto for another 2-year period. The existing compact included the following States: New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas, and the new compact includes the State of Michigan for the first time.

On July 22, 1939, President Roosevelt addressed an important letter to the chairman of the Committee on Interstate and Foreign Commerce, from which letter I quote:

> As you know, despite the progress which has been made toward oil conservation under State law and regulation the production of petroleum is attended by waste. In view of the vital part which petroleum plays in the national defense as well as its importance in commerce and industry, the prevention of waste in petroleum production should be the subject of an enactment by the Congress.
>
> I appreciate the thoroughness with which the Committee on Interstate and Foreign Commerce conducted the petroleum investigation in 1934 in response to H. R. 441, but in the light of changes that have taken place, I believe the committee may wish to study developments since that time by investigation and hearings prior to the next session of the Congress. To this end, and with a view to the enactment of suitable legislation in the next session of Congress, I request that the petroleum conservation bill which I today discussed with you and Representative COLE of Maryland be introduced at this session.

In compliance with the foregoing recommendation by the President, Representative COLE of Maryland introduced H. R. 7372, known as the Conservation Act of 1939.

Because of the importance of this subject, as demonstrated by the letter from President Roosevelt and in compliance with his request that the investigation of the petroleum industry as conducted by the Cole Committee in 1934, the House authorized, under House Resolution 290 of the Seventy-sixth Congress, further investigation of the petroleum industry along the lines indicated. A subcommittee composed of Congressmen COLE of Maryland, KELLY, of Illinois, PEARSON, of Tennessee, MAPES, of Michigan, and WOLVERTON of New Jersey was appointed to conduct this investigation and will report thereon at the next session of Congress.

It is my understanding that in the important study which this committee will make, that testimony will be taken during the interim between the adjournment and the convening of the next session in Washington and possibly in one or two other cities convenient to the large number of witnesses who will appear and be heard by the committee.

For years all well-informed persons have recognized acute problems in our great transportation system. The situation

has been intensified by the depression, by the development of new competitive conditions in the last two decades, and by an incomplete system of regulation. There has been a widespread demand for Congress to meet this situation so far as there might be a legislative remedy.

In the spring of 1938 the President initiated a series of studies which culminated in the passage of comprehensive measures by both Houses of Congress during this session. The measure passed in the House is a substitute for the Senate bill. These measures, now in conference, are well on the road to enactment in the early weeks of the next session.

The transportation bill as it passed the House establishes a national policy of equal treatment to all types of carriers and the preservation of the inherent advantages of each form of transportation. It provides a more practical plan of consolidation of carriers, with approval of the Commission. It looks toward the adjustment, equalization, and stabilization of our freight-rate structure.

Perhaps the more far-reaching and progressive feature of this legislation is that it provides for bringing all our domestic interstate carriers, whether by water, highway, or rail, under one unified system of regulation. It provides for the coordinate control of competitive transportation agencies. It prepares the way for more effective and comprehensive regulation to increase its efficiency and give all forms of transportation greater stability and certainly in their operations. It takes more effective control of competitive regulation. It makes the Interstate Commerce Commission the regulatory body and prepares it for more prompt decisions. It attempts to lessen, to some extent, at least, the expense to persons having matters before the Commission.

For many years rails alone were under interstate regulation. A few years ago we took over highway transportation and pipe lines. There has heretofore been a partial regulation of our intercoastal and coastwise carriers by the Maritime Commission. Certain other water carriers were under the regulation of the Interstate Commerce Commission, and still others have been unregulated. The result has been an interchange of traffic without a comprehensive or a unified system of regulation and without coordination of competitive agencies. The resulting chaos has become a menace to the financial stability of all our carriers and without any comparable benefit to the public.

The bill as it passed the House includes what is known as the Ramspeck resolution, which directs the Interstate Commerce Commission to investigate the rates on manufactured and agricultural products between points in one classified territory to another and to rates within such territories. The Commission is directed, by appropriate orders, to remove any discriminations in rates it finds to be unjust or discriminatory.

The bill amends and broadens the present law prohibiting discriminations so as to include regions, districts, and territories as areas against which discriminations are prohibited.

This part of the bill grew out of many complaints from the southern and southwestern parts of the country against alleged discriminations in freight rates.

Students of our transportation system are pretty well agreed that our rate structure can be revised and readjusted in justice to both shippers and carriers. Greater equality in treatment between different sections, industries, and classes of traffic can be established. The unified and coordinated control of our transportation agencies which this bill provides, looks positively to this end as one of the most available means for the improvement of our transportation situation.

This does not present a spectacular remedy for transportation ills but it does provide a just approach to improve the situation substantially on a sound, conservative, and practical basis.

This transportation measure is a distinct, progressive, forward step toward more definitely sound and stabilized conditions.

The American people are paying $7,000,000,000 a year for our public transportation service. Is it not possible for this essential, useful service of the Nation to be so regulated that the public will be well served, and the carriers placed upon a fairly stabilized and sound basis of operation? A fundamental problem of regulation is to place these carriers on a fair self-supporting basis. The unified control of coordinated regulation that this measure provides looks to that end.

The committee on Interstate and Foreign Commerce was busy with other legislation also. For your information permit me to comment that during the session this committee had 89 bridge bills referred to it for consideration, of which number 14 were superseded by Senate or later House bills, 14 are awaiting consideration by the subcommittee, and 61 have been reported to the House. Three are on the calendar awaiting House consideration, 23 have been approved, and 35 have passed both the Houses and are awaiting Presidential consideration.

During the first session of the Seventy-sixth Congress there were referred to this committee 149 other bills and resolutions. Of this number 112 are awaiting committee or subcommittee consideration, 22 have been superseded or otherwise disposed of, and 15 have been reported to the House. Of these 15, 1 was defeated on the floor of the House, 2 are on the calendar, 2 awaiting consideration by the Senate or concurrence by the Senate to House amendments, and 1 is in conference. Seven have been approved and 2 are currently awaiting Presidential consideration.

At this point I should like to summarize the most significant features of the social-security amendments.

The three principal phases relate to the tax changes, the liberalization of the Federal old-age insurance system, and the augmentation of the Federal-State program of social security.

The old-age insurance taxes have been frozen for the next 3 years at 1 percent on employer and 1 percent on employee, which results in an estimated reduction for the 3-year period of some $825,000,000. The unemployment compensation taxes have been limited to the first $3,000 of an employee's wages, in conformity with the old-age insurance tax provisions. The resulting annual savings are some $65,000,000, and in addition provision is made for refunds and abatements, which means an additional savings to taxpayers of some $15,000,000. In addition, what might be termed "nuisance contributions" of fraternal and certain other nonprofit organizations are eliminated.

The liberalization of the old-age insurance provisions is of the utmost importance. Not only is the date for beginning monthly benefit payments advanced from 1942 to 1940, but the benefit provisions for retired workers are liberalized and eligibility requirements are made easier for those retiring in the early years. In addition, the new law provides for auxiliary benefits in the case of the retired worker with an aged wife or children under 18 years of age. Of vital interest to all people covered in the Federal insurance system, regardless of age, are the survivors' benefits that will now be payable to a young widow with children, to aged widows, and to dependent parents—if there is no widow or children—on the death of a covered worker.

The effect of paying additional benefits to the married older workers who retire and of paying benefits to survivors of workers is to afford lifetime family protection instead of only individual old-age protection. This extension of the Federal old-age insurance system increases by millions those who will be protected and makes the protection that is afforded more complete, since it recognizes the family circumstances.

Moreover, the coverage of the expanded Federal old-age and survivors' insurance system has been extended to include thousands of employees who were not included under the former language of the law. The main groups of employees which are now covered are sailors and national-bank employees and employees of Federal building and loan associations.

Another main category of changes relates to the cooperative Federal-State program of social security which covers millions of men, women, and children in this country. The amendments authorize increased Federal financial aid for public health, maternal and child welfare, crippled children, and vocational rehabilitation. The amendments also increase from $30 to $40 a month the maximum monthly amount for old-age assistance and blind assistance for which

a State may obtain 50 percent financial aid. Another amendment increases the Federal matching ratio to States for aid to dependent children from one-third to one-half of the aid granted.

In my opinion the social-security amendments of 1939 represent as great an advance in providing security to the people of this country as did the original Social Security Act enacted in 1935. The tax relief granted should be of tremendous value in helping the general economic situation of the country. The increased benefits provided will not only furnish greater security to millions of individuals but also do much to assist the general purchasing power of the country as a whole.

Another bill of importance passed at the present session of Congress was the enactment of legislation removing tax deterrents to business expansion and investment. For many years a business with alternating profit and loss was required to pay higher taxes over a period of years than a business with stable profits, although the average income of the two firms might be equal. This was especially true with respect to new enterprises and the capital-goods industries, which are especially subject to the wide fluctuations in earnings. The new tax bill corrects this situation by allowing corporations, partnerships, and individuals in business to carry over their net operating business losses for a period of 2 years. Under this provision, a taxpayer sustaining a net operating loss in 1939 is permitted to carry over such operating loss in reduction of his income for 1940; and if such net loss is in excess of his income for 1940, he can carry over such excess in reduction of his income for 1941.

Another provision of the existing law which resulted in hardships to corporations, and for which relief had already been extended to individuals and partnerships by the Revenue Act of 1938, was the provision limiting capital losses in excess of capital gains of corporations to be applied against other income only to the extent of $2,000. The new tax bill removes this tax deterrent and permits corporations which have sustained capital losses on assets held for more than 18 months—known as long-term losses—to apply such capital losses in full against their ordinary income for the taxable year in which the loss was realized. In the case of capital losses on assets held for not more than 18 months—known as short-term losses—the corporations are permitted to carry over the excess loss into the next year to be applied against short-term gains of such year. The effect of this change is, of course, to place corporations upon a parity with individuals and partnerships with respect to capital losses.

There have been many complaints against the undistributed-profits tax. While in the form of the Revenue Act of 1938 the tax produced little return, it had acquired prominence as a psychological irritant largely because of the widespread emotional criticism directed against it. Legislation recently enacted at this session removes the undistributed-profits tax and substitutes for it a flat tax of 18 percent upon corporations with net incomes above $25,000. The small corporations, that is, those having net incomes below $25,000, were not subject to the undistributed-profits tax under the Revenue Act of 1938, but were subject to graduated rates ranging from 12½ percent to 16 percent. These small corporations, which comprise about 90 percent of all corporations filing taxable returns, were left undisturbed by the new act. However, banks and insurance companies which, under the old law, were subject to a flat rate of 16½ percent, even though their income was below $25,000, are now permitted to be taxed at the rates applicable to small corporations where their incomes are not in excess of $25,000. This will afford considerable relief to small banks and insurance companies.

Another feature of the new revenue act will materially aid railroads and other corporations whose bonds can be purchased at the present time at less than their face value. This provision permits a corporation in an unsound financial condition to redeem its bonds, notes, or other evidences of indebtedness in existence on June 1, 1939, at less than their face value without the recognition of gain, if such redemption occurs after the enactment of the law and in a taxable year beginning prior to January 1, 1943. This provision will result in a real incentive for railroads and other corporations to liquidate their indebtedness and place themselves upon a firm financial basis. Under the old law the capital stock tax provisions were found to operate harshly against corporations which were unable to anticipate their earnings accurately over a period of years. Under the Revenue Act of 1938 the capital-stock tax is based upon a declared stock value which the taxpayer may revise every 3 years. An excess-profits tax applies to the profits in excess of 10 percent of such declared value. Therefore if a taxpayer is unable accurately to anticipate his profits and declares too low a capital stock tax value, he may be subject to a heavy penalty tax on such profits. To remedy this situation corporations were given the right to increase their capital stock tax valuations for the fiscal years ending June 30, 1939, and June 30, 1940, but not to decrease such values for such years. This will afford relief to corporations which have declared too low a capital stock tax value for those years and should result in an added stimulus to business.

Last month the Congress passed a bill amending the T. V. A. Act. It was a bill welcomed by the utility industry as well as by the Authority. To the Authority it meant that its electricity program could go forward in an orderly manner. To the utilities it meant relief from doubts and fears. The amendment permitted the T. V. A. to join with almost 40 other public agencies to purchase the electric properties of the Tennessee Electric Power Co. from the Commonwealth & Southern Corporation. There is no longer any reason for the private utilities to fear that they will be damaged because of the Government's power program in the Tennessee Valley. The passage of this legislation proved that the Congress agreed with T. V. A.'s intention to purchase, at a fair price, the facilities it required to distribute its power. There will be no duplication of lines and services, no destructive competition.

On August 15 the properties will be conveyed. T. V. A., an agency of the Federal Government, will acquire the company's generating plants and its high-tension transmission lines. Municipalities and rural cooperatives will purchase the distribution systems. The Commonwealth & Southern Corporation will receive $78,600,000, with which it will pay the company's bondholders and preferred-stock holders, the public investors, 100 cents on the dollar.

This is one deal that seems to please everybody. After August 15, 145,000 consumers who have been buying electric energy from this company will be served by public agencies. T. V. A. rates will be in effect at once, and during the coming fiscal year the savings of those consumers will total over $4,000,000. The consumers like that—in factories, in stores, in homes, they like it. T. V. A. is gratified because next year these new customers are estimated to raise the Authority's power revenues to a new high of almost $12,000,000. The utilities should be satisfied, because they know now, and the investing public can see how groundless were their fears of disaster as a result of T. V. A.'s operations.

Private utilities have not been hurt by the T. V. A. program, except as the dire predictions of some of their managers have discouraged investors and hindered expansion. Rather, they have benefited. Since T. V. A. put in its low rates 6 years ago the earnings of the companies operating in the area have steadily increased and the manufacturers and dealers in electric appliances have experienced a genuine boom. The reason is simple. The companies reduced their rates, not to T. V. A. levels but enough to increase the average customer's consumption to more than double the 1933 figures and to swell the companies' revenues.

In spite of that benefit the private companies saw in T. V. A. an agency which might destroy them by duplicating their own facilities. They saw a future of parallel lines erected down country lanes and city streets, they visioned a conflict which would have impaired if not destroyed their investment. From the beginning the T. V. A. has said that it would purchase existing facilities; that wherever possible direct competition would be avoided. That policy has been announced and followed. But still the utilities were timorous. They feared the Government would not be fair in its dealing, that they would be ruined by a forced sale. No sensible man can

longer be afraid. The price and terms of the contract were fair. And T. V. A. now has an integrated market which will absorb substantially all the power the Authority will have to market.

The utilities can go ahead with the program of expansion they have promised but delayed. The promises of this administration have been carried out and this great public project is under way without loss to investors.

At this point I want to call to your attention some of the great acts handled by the Committee on Agriculture.

The Cotton Net Weight Act, which authorizes the Secretary of Agriculture to establish official cotton-tare standards, including specifications and tolerances of weight, strength, and so forth, or materials used for bale coverings. It also directs him to establish standard specifications for markers or other tags to identify different types of bales of cotton. The bill grants adequate authority to enforce the standards and prevent the movement in interstate commerce of cotton that does not conform to the standards and specifications established by the Secretary.

A measure providing that interest rates in excess of the rates set forth in notes or other obligations taken by the Federal Farm Board or the Farm Credit Administration for loans made from the revolving fund authorized by section 6 of the Agricultural Marketing Act shall not be charged or collected, whether such loans have been heretofore or are hereafter paid in whole or in part, except that in those cases where a borrower by special contract has agreed to pay a higher rate of interest, the contract rate shall be charged for the period agreed upon; and any excess interest collected over the rates thus set forth or contracted for shall be refunded out of the revolving fund or credited on the borrower's indebtedness.

A bill authorizing the Secretary of Agriculture to use funds made available or to be made available for eliminating white-pine blister rust by preventing, wherever necessary, the spreading to or eliminating such rust from all forest lands, irrespective of ownership, provided that, in his discretion, matching funds may be required for such work on private or State lands. Such work on Indian lands is to be subject to the approval of the Federal agency or the Indian tribe having jurisdiction over such lands.

A bill which reduced from $10,000 to $5,000 the maximum soil conservation and domestic allotment payment which may be made to any one person and reduces by 25 percent the amount in excess of $1,000 due as such a payment. It further provides that in computing a payment the amount representing a landlord's share of an approved tenancy shall not be included, and there shall also be excluded amount representing payments to cooperatives having at least 50 participating members or stockholders with substantially equal interest, if 75 percent of the persons actually engaged in its farming operations are participating members or stockholders or children or members of their families.

A bill providing that the $1,800,000 for the retirement of cotton pool participation trust certificates shall be available until December 31, 1939, and the authority of the manager of the cotton pool to purchase such certificates to be continued until September 30, 1940. Without this law the $1,800,000 fund would have not been available after June 30, 1939, and the manager's authority would expire December 31, 1939.

A bill providing that wheat marketing quotas shall not be applicable to farms on which the normal production of the acreage planted to wheat is less than 200 bushels. Without this measure such quotas would not be applicable where the normal production of wheat was less than 100 bushels.

A bill providing special marketing quotas for burley, fire-cured, and dark air-cured tobaccos shall not be proclaimed in any marketing year in which there is a general marketing quota for tobacco.

A bill providing that a determination of an excess supply of tobacco necessitating the proclamation of a marketing quota may be made at any time. Another providing that the Secretary of Agriculture may convert the State marketing quotas for tobacco into State acreage allotments, using past acreage in lieu of past marketing. Another providing an amendment to section 314 of the Agricultural Adjustment Act whereby the penalties for the marketing of any tobacco in excess of a marketing quota shall be subject to a penalty of 10 cents per pound in the case of flue-cured, Maryland, or burley, and 5 cents per pound in the case of all other kinds of tobacco.

Numerous bills from the Agricultural Committee with reference to soil conservation in connection with our national forests were passed by the House during this session.

For the protection of the great 4–H clubs among our boys and girls on the farm, a bill was reported and passed by Congress to prevent the use of 4–H club emblems and signs by nonmembers.

The Federal Seed Act, for the purpose of protecting our farms from the results of unfit and undesirable seeds moving in interstate commerce.

A bill providing that handling orders issued pursuant to the Agricultural Marketing Agreement Act shall be applicable to hops until September 1, 1942.

A bill providing for the eradication and the control of the pink bollworm.

A bill amending the Commodities Exchange Act to extend its provisions to fats and oils (including lard, cottonseed oil, and peanut oil), cottonseed meal, cottonseed, and peanuts.

One which authorizes $500,000 annually to be allotted to the several States for cooperative extension work in agriculture and home economics.

A bill providing that the cotton allotments not to be used by original allottees shall be apportioned to farmers, under the Secretary, who received inadequate allotments for their compliance with the curtailment program.

Provides that orders of the Secretary of Agriculture under the Agricultural Marketing Agreement Act regulating the handling of agricultural commodities shall be applicable to Pacific Northwest boxed apples.

One which authorizes the Secretary of Agriculture to make advances to producers who are participating, or who agree to participate, in a program formulated pursuant to section 8 of the Soil Conservation and Domestic Allotment Act for the purpose of assisting them to insure their crops with the Federal Crop Insurance Corporation.

A bill providing that the additional 25-percent allotment of planted acreage granted producers of wheat, cotton, corn, or rice, whose planted acreage is less than 80 percent of their allotments under the Soil Conservation and Domestic Allotment Act, is discontinued.

A bill providing that the cotton acreage allotments, the additional county and farm acreage allotments, and the minimum county and farm acreage allotments prescribed by section 344 of the Agricultural Adjustment Act and applicable to 1938 and 1939 are extended to subsequent years.

A bill providing that handling orders issued pursuant to the Agricultural Marketing Agreement Act shall be applicable to hops until September 1, 1942.

A bill whereby the Secretary of the Interior is authorized to consider the money or any part thereof made available to settlers or prospective settlers for the Farm Security Administration as all or a portion of the capital required of settlers under the act of December 5, 1924, and to require a reentryman, before an entry is allowed, to enter into a mortgage contract with the F. S. A. to secure the advance made by the administration.

Now, I would like to direct your attention to some of the principal bills originating in the Judiciary Committee.

First, a bill providing that benefits under the Bankruptcy Act for the composition of obligations issued by local taxing units to defray the cost of local improvements, and payable out of the proceeds of special assessments, shall be sufficient if they aver that the property liable for payments is not of sufficient value to pay the principal and interest, and that the accrued interest on such obligations is past due; and if they contain a list of creditors, a separate list of creditors who have accepted the plan of composition and a list of the recorded owners of the real estate involved.

A bill making it a crime to advocate or teach the desirability or propriety of overthrowing the Government by force, violence, or assassination of governmental officers; to print or knowingly circulate any pamphlet advocating such overthrow by force; to openly or deliberately justify the unlawful killing of any Government officer because of his official character or act or to justify any other crime with intent to teach the desirability of overturning the Government; to organize or become affiliated with any group advocating the overthrow of the Government by force or unlawful means. The bill has many other provisions for the protection of the Government and its stability and further provisions of the disseminations of disloyal information in the Army and Navy. Further, the bill prevents aliens from becoming naturalized when they do not believe in our form of government or bodily engage in or seek employment and directs the deportation of aliens who engage in crime or espionage or who belong to an organization advocating change in the form of our Government.

A measure permitting the Government to appeal in criminal cases to the circuit court of appeals from a decision or judgment of a district court quashing, setting aside, or sustaining a demurrer or plea in abatement to any indictment of information or arresting judgments of conviction, where validity of a statute or construction of a statute upon which the indictment or information is filed is not involved. This bill broadens the right now enjoyed by the Government to appeal those cases direct to the Supreme Court wherein the validity of a statute or construction of a statute is involved by extending it to pleas in abatement and informations.

A bill increasing from 2 to 10 years the term of imprisonment which may be imposed for espionage.

A bill amending the Propaganda Agency Act so as to redefine the meaning of "foreign principal," as meant by the act, to include a domestic organization subsidized directly or indirectly, in whole or in part, by a foreign government, political party, or group. Under the amendment, register is to be required every 6 months. The Secretary of State is authorized to withdraw from public record the registration statement of persons who cease to be required to register under the act when he deems it appropriate to save such persons embarrassment.

A great many bills providing for changes in location and times for holding court in various judicial districts were reported from the Judiciary Committee and passed by the House in the interest of speeding up the machinery of the courts and the implementation thereof.

A bill extending the National Stolen Property Act to cover feloniously converted property, money, and securities and forged or counterfeited securities of the value of $5,000 or more—other than securities of governments, banks, or corporations. Conspiracy to violate the act is made punishable also.

Among the responses made by Congress, upon recommendation by the Judiciary Committee of the House, to the urgent need for improved judicial procedures, is a bill providing that the Chief Justice, the circuit justices of the judicial circuits, and the senior circuit judges thereof may assign circuit judges to hold district court within their circuits when requested to do so by or with the consent of the senior district judge for such district; and it is further provided that district judges and retired judges within each circuit shall be competent to sit as judges of the circuit courts of appeals when a circuit judge is disabled or disqualified or a vacancy exists.

A bill providing that all laws which result from bills and joint resolutions, prior to the beginning of the Seventy-sixth Congress, were presented to the President less than 10 calendar days—Sundays excepted—prior to an adjournment—other than a final adjournment at the end of a Congress—of the House of Congress in which the same originated, and were pocket vetoed by him, are repealed as of the date of their enactment. This bill clears up a most important technical question and quiets a doubt of the invalidity of bills so pocket vetoed in the past.

A bill providing that the rules of civil procedure promulgated by the Supreme Court shall apply to the Federal District Court for Puerto Rico industrial appeals therefrom.

A bill providing that certain aliens of an obnoxious character whose deportation cannot be effected within 90 days shall be taken into custody and transported to a place of detention. Detained aliens under the bill may obtain relief by giving a bond and by making approved arrangements to leave the United States.

A bill setting forth that in actions against a common carrier for injuries or death of an employee such employee shall not be held to have assumed the risk of his employment, except those risks incident to the employment, where the negligence of the common carrier, its officers, agents, or employees, have contributed to such injuries or death.

A bill providing that at the time any person is convicted of a felony any firearms or ammunition found in his possession may be confiscated and disposed of by court order.

A bill providing that any permanently disabled judge appointed to hold office during good behavior shall be permitted to retire with full pay after 10 years' service. Judges so disabled who have served less than 10 years may retire under the provisions of the bill at a sum equal to such proportion of his salary at the date of retirement as the total of his years service bears to 10 years.

A bill providing that an indictment for any Federal offense punishable by death may be found at any time without regard to any statute of limitations.

A measure which makes it unlawful—

First. For any person to promise employment or compensation provided for by an act of Congress to any other person as consideration for political activity.

Second. For any person to intimidate, threaten, or coerce others in their right to vote.

Third. For any Federal administrative employee to use his official authority for the purpose of intefering with elections, and makes numerous other provisions for the protection of Government employees and W. P. A. workers.

A bill providing that the suspension of the prohibition against directors, officers, and employees of member banks of the Federal Reserve System serving as directors, officers, or employees of other banks with respect to those serving in dual capacities on August 23, 1935, is extended until February 1, 1944.

A bill creating the Administrative Office of the United States Courts to speed up administration in the offices of clerks and to take care of disbursements and purchases of supplies, as well as audit all vouchers and preparation of Budget estimates.

A bill providing that the Supreme Court shall be competent on petition of all the parties to require by certiorari that the Court of Claims certify cause to it for determination of all errors assigned, and the Court of Claims shall include in such certification the findings of fact, conclusions of law, the judgment, or decree, as well as such other parts of the record, as are material to the errors assigned.

This bill gives the Supreme Court authority to review errors assigned to the effect that there is a lack of substantial evidence sustaining the finding of fact, that an ultimate finding is not sustained by the findings of evidentiary or primary facts, or that there is a failure to make any finding of fact on a material issue.

A bill increasing authorized appropriation for the temporary National Economic Committee.

A bill providing that the rules of civil procedure promulgated by the Supreme Court shall apply to the Federal District Court for Hawaii and to appeals therefrom.

The Committee on the District of Columbia has proceeded with its usual diligence during this session, and as a result a new record in the number of District bills passed was established—43 enacted.

A few of the most important of these are:

A District of Columbia revenue act revising the tax structure for the District in many particulars. The greatest in-

ovation of the bill is the imposing of an income tax. This bill repeals the intangible personal-property tax and continues the present business privilege tax upon gross income but with a change of rates.

A bill providing that personal-property taxes shall not be collected from insolvent District of Columbia building or homestead associations if such tax would diminish the assets necessary to pay in full amounts due on share accounts. Taxes heretofore levied are abated.

A fair-trade act was passed at this session for the District of Columbia in order to eliminate unwholesome and unfair trade practices.

A bill which extends the law prescribing a penalty for commission of crimes of violence while armed with a pistol to crimes committed while armed with a knife, razor, or other weapons of dangerous kind. This bill also increases the penalty on first conviction. This bill also contains a provision that any person now possessing a pistol in the District of Columbia must present it to the police department for registration within 60 days, and that all pistols purchased or brought into the District hereafter must be presented within 10 days.

A bill which provides that probation may not be permitted to malefactors guilty of crimes of violence while armed.

A bill covering damages and condemnation proceedings in the District of Columbia for alleys and minor streets.

A bill requiring certificates of authority for foreign building and loan associations to transact business in the District of Columbia.

Right here I want to mention some of the changes made in our immigration and naturalization laws. These changes were sponsored by the Committee on Immigration and Naturalization and will result in great benefits to our country and its citizens.

A bill authorizing a person under 21 years of age to petition the district court for determination of his citizenship whenever a doubt relative thereto may exist. Upon satisfactory proof thereof the court may render an order to that effect and grant such petitioner a special certificate of citizenship for the purpose of quieting doubt as to his status.

A bill amending the Alien Exclusion Act so as to deny admission to, and authorizes deportation of, those aliens believing in or advising in the making of any changes in the American form of government.

A bill amending the immigration laws regarding repatriation of native-born women by providing that such women who are married to aliens but who have resided continually in the United States since their marriage shall be deemed citizens.

A bill providing that native Filipinos residing in the continental United States may, at their request, be returned to the Philippines and that those so returning shall be entitled to reenter the United States only as quota immigrants.

A bill amending the naturalization laws respecting the registration requirements of citizenship-seeking aliens at the port of their entry by allowing waiver of such requirement for those entering before July 1, 1924. Our present law allows such waiver if entry was made prior to June 3, 1921.

Experience in the administration of the immigration and naturalization laws has developed the need for perfecting amendments and corrections in those laws from time to time. In addition to the many important new laws reported from the Immigration and Naturalization Committee and passed by the House have been a number of such correctory pieces of legislation to make more effective our immigration and naturalization laws and to modify many unnecessary burdens in the administration of those laws.

A bill extending until May 25, 1940, the time for naturalization of alien veterans of the World War and alien veterans of allied armies who were lawfully admitted to the country for permanent residence and then departed for the purpose of and did serve in the armed forces of the United States during the World War.

Among these bills I might mention one which provides that women born in Hawaii prior to June 14, 1900, who have lost their citizenship by marriage and for other reasons shall be considered to have been citizens of the United States at birth and shall not be barred from naturalization because of racial reasons. Another I might mention is one amending the Immigration Act of 1924, which authorizes admission to the United States of any person ineligible to citizenship who is Chinese wife of an American citizen married before May 26, 1924, by making it applicable to any alien wife so married.

A bill providing for the deportation of aliens found to be guilty, under certain circumstances, of espionage or sabotage, or who have violated any narcotic laws or who are drug addicts.

Of the many acts originating in the Committee on Ways and Means during this session of the Congress, a most important one is that providing for a consolidation and codification of our internal-revenue laws. There has long been a great need for this measure in order that better enforcement of our tax laws might result, and in order also that a better understanding among lawyers and the laity might result. A certain result of this measure will be shown in the increased revenues accruing to the Federal Government and in the fewer violations of law due to misunderstanding of applicable statutes in the collection of Federal taxes.

Another Ways and Means bill which has become law originated by this committee, which redefines "gross income" for the purposes of the Federal income tax to include salaries, wages, or compensation for personal services as an officer or employee of the State or any political subdivision thereof or any agency or instrumentality of any one or more of the foregoing. It repeals the exemption granted compensation of teachers in Alaska and Hawaii from the Federal income tax. Also it provides for taxing of compensation of Federal judges who took office on or before June 6, 1932. Likewise it concedes to the imposition of nondiscriminatory income taxes by the States on the compensation of all officers in the Federal Government, in a Territory or possession, the District of Columbia, or any agency of the foregoing, including legislators, judges, and court officers. It contains reciprocal provisions operating to prevent taxation of salaries held prior to January 1, 1939, by Federal or State employees. Let me call your attention to some other measures from this great committee.

A bill deleting the limitation of $30,000,000,000 on the face amount of bonds issued under the Second Liberty Bond Act.

A bill extending for 10 years the time within which application for benefits under the World War Adjusted Compensation Act may be filed.

A bill authorizing appropriations for the purpose of assisting States in the administration of their unemployment compensation laws.

To relieve small distillers and rectifiers, a bill was reported from Ways and Means and passed by the House providing for the refund of taxes paid on spirits lost or rendered unmarketable by reason of the floods of 1936 and 1937 while in the possession of the person originally paying the tax or of a rectifier for rectification and bottling.

While we have not been able to get all the legislation we have desired to regulate our foreign relations, the Foreign Affairs Committee has been instrumental in bringing before the House and Senate for enactment many important measures, a few of which I propose to mention here.

A bill authorizing the Secretary of State to consider, adjust, and pay any claim not exceeding $1,000 accruing after March 31, 1937, resulting from damages caused by the activities of the International Boundary Commission, United States and Mexico.

A number of bills from this committee have been passed at this session affecting the Foreign Service personnel, its efficiency, opportunities, advancements, and operations.

A bill making available the facilities of the Public Health Service to ill and injured officers of the Foreign Service who become disabled as the result of service on foreign assignments.

For the promotion of better understanding and closer cooperation, a bill was passed at this session authorizing the President to utilize the various departments of the Government to render a closer relationship between this country and

the 21 American republics, and to create such advisory committees as may be necessary.

The limitations of time prevent me from mentioning all the measures enacted or all the committees of the House which have all been so diligent, constructive, and cooperative as I would like to do. However, before closing, I want to mention a few more important bills and give a few tabulations which I believe will be of interest.

A bill increasing the pensions to widows and children of World War veterans dying of known service-connected disability, who at the time of death would be entitled to compensation for 10-percent disability directly or presumptively incurred in or aggravated by World War service, upon a schedule of rates considerable in excess of those previously in force. The bill also increases the payments to widows of veterans who died from service-connected disabilities as well as other provisions of minor character.

A bill amending the Civilian Conservation Corps Act so as to eliminate the restrictions upon the length of time the act is to be operated, and providing that the corps—except Reserve officers, enrollees, and unskilled laborers—shall be governed by the Civil Service Commission laws and the Classification Act of 1923, and making certain minor changes in the operation of the act.

A bill authorizing payment to Spanish-American War volunteers—or parent, widow, or child—who were held to service in the Philippines after conclusion of peace with Spain, or certain benefits.

Among other bills, one providing that claims for funeral expenses of veterans may be filed at any time subsequent to death—under present law such claims must be filed within 1 year, which is entirely too short a time—and increasing from 6 months to 1 year the period within which to file evidence necessary to complete application on request of the Veterans' Administration.

A bill giving domiciliary care, medical treatment, burial benefits, and protection of term yearly renewable insurance in the same manner as now applied to veterans of any war to Spanish War veterans not qualified under sections 6 and 17 of the Economy Act.

A great many bills for the equalization of hours of service, pay schedules, and duties have been reported by the Post Office and Post Roads Committee for the benefit of various classes of employees in our Postal Service.

Officers and clerks in the Railway Mail Service and the Postal Inspection Service have long been subject to arbitrary transfers from one place to another for permanent duty. This practice unfortunately has resulted in great burdens and unreasonable expenses to individuals in those services at times. At this session, to remedy this situation, a bill has been passed to allow personnel in such circumstances necessary expenses for moving household goods, not in excess of 3,500 pounds.

A bill abolishing the Village Delivery Service and instituting City Delivery Service in lieu thereof.

A bill amending existing laws penalizing communications relating to kidnaping, extortion, and like offenses by broadening their scope and in some cases reducing penalties.

A bill declaring firearms capable of being concealed to be mailable matter when mailed for the use of the Coast Guard.

The House Committee on the Post Office and Post Roads had 97 bills referred to it at this session of the Congress. Of this number 20 bills were reported favorably by the committee, 18 of those reported have passed the House, one is now in conference, and 1 is still awaiting action by the House while 10 of these bills successfully managed through the House by Post Office and Post Roads are now public laws.

Other bills of importance are:

A bill to provide that the Secretary of War shall accomplish without delay all excessive-cost public works located outside the continental limits of the United States and authorizing him to enter into contracts upon a cost-plus-a-fixed-fee basis without advertising for proposals. Such fee shall not exceed 10 percent of the estimated cost.

A bill providing for pensions for minor children of Spanish War veterans to continue during minority.

A bill authorizing the construction, repair, and preservation of 68 works of improvement on rivers, harbors, and other water ways in 26 States and Alaska.

A bill providing authority for the Secretary of War to allot funds for snag removal in navigable waters and further provides that flood-control funds shall be made available for authorizing examinations and surveys and makes section 2 of the Rivers and Harbors Act of 1938 applicable to authorizing works of flood control. This bill authorizes 23 preliminary flood-control surveys in 16 States and Hawaii and Puerto Rico.

A bill making extensive changes in retirement system for Government employees. Among some of the important provisions of this act is that extending to classified employees who have rendered 30 years' service the option to retire at age 64 in general; that an employee at the time of retirement may elect to receive in lieu of a life annuity a reduced annuity payable to him for life and on his death to a designated beneficiary; that increasing the contribution of Federal employees to the retirement fund from 3½ percent to 4 percent; that permitting employees to deposit additional sums in multiples of $25, but not to exceed 10 percent of their salaries, for the purchasing of additional annuities at the time of their retirement; and that providing if employees who transfer to a position not subject to the retirement laws or who resign shall be repaid sums deducted for retirement purposes with 4-percent interest on amounts contributed to July 1, 1939, and 3 percent on amounts deposited thereafter.

A bill making certain amendments with reference to retirement annuities for Alaska Railroad employees to correct certain inequities and injustices.

A good many other bills for the perfection of the civil service in Alaska and elsewhere were reported favorably at this session by the Committee on the Civil Service and the large majority have already passed the House.

A bill setting up local grazing district supervisory boards in connection with the administration of the Taylor Grazing Act.

A bill permitting of the transfer or lease to States or political subdivisions thereof certain recreational demonstration projects for recreational purposes.

A bill granting approval to the Rio Grande compact between the States of Colorado, New Mexico, and Texas with reference to the apportionment of the waters of the Rio Grande.

A bill transferring the local offices of the United States Employment Service to the States.

The Patents Committee has been active during this session in reporting long-needed amendments to our patent and copyright laws. The large majority of these bills have been passed by request of the Commissioner of Patents, the American Bar Association, and other interested patriotic organizations. Without doubt these new laws will result in many needed reforms for the better protection of inventors and for greater efficiency in the Patent Office.

A bill providing for a general revision of the trade-mark laws.

A bill authorizing the Commissioner of Public Lands of Hawaii to sell such lands for cash to citizens who possess the qualifications of homesteaders and who have received loans under the Bankhead-Jones Farm Tenant Act of 1937.

A bill providing that Alaskan municipalities, corporations, and public-utility districts that have an outstanding bonded indebtedness which is subject to be paid or redeemed may issue negotiable refunding bonds for the payment of such indebtedness.

A bill which amends the Toll Bridge Eradication Act by providing that regular and secondary Federal-aid funds shall be made available thereunder.

The Trust Indenture Act, which offers protection to investors by requiring registration of indentures and prescribing strict qualifications. Certain exemptions are provided by the act for securities issued under mortgage insured by F. H. A., securities issued in amounts of less than $1,000,000, securities exempt from the provisions of the Security Act of 1933, securities issued prior to or within 6 months of en-

actment hereof, and securities issued by foreign governments or their subdivisions.

A bill authorizing the acquisition of the library and historical collection of the President and providing for the upkeep thereof.

A great many bills have been passed by the House at this session which originated in the Library Committee and which provide for various and sundry matters relating to expositions, historical work of art, and statues commemorating our great heroes and historical events.

The Committee on Expenditures in the Executive Departments has shown its customary diligence in reporting numerous bills, which the House has passed, relating to routine matters in the executive establishment of the Federal Government. These bill will result in increased economy and higher efficiency in the many activities of the executive branch of the Government.

The Public Lands Committee of the House has been extremely diligent, as it always is, during this session in successfully managing a great many bills to final enactment, affecting the improved administration of our national forests. Many needed boundary corrections and necessary inclusions have been effected thereby as well as other worthy purposes.

Data on legislation handled by the Committee on War Claims is as follows: House bills reported favorably, 23; House joint resolution reported favorably, 1; Senate bills reported favorably, 3; total, 27. Of these 27 bills there were: House bills passed by House, 18; House bills passed by Senate, 11; Senate bills passed by House, 2; House bills recommitted, 8; Senate bill recommitted, 1; House joint resolution still in House unacted upon, 1; House bills approved by President, 2; House bills vetoed by President, 2; Senate bill vetoed by President, 1. Re-reported to House in omnibus bill; House bills, 5; Senate bill re-reported in omnibus bill, 1; recommitted bills still in committee, 1; bills on which committee has held oral hearings, considered fully and reported adversely (estimated), 15.

As of this date there have been 1,370 bills referred to the Committee on Claims, including the usual type of claims against the United States growing out of personal injury, property damage, or death inflicted by agents or instrumentalities of the Government; claims growing out of contracts of individuals or corporations with the United States Government; bills asking for jurisdiction to be conferred upon the Court of Claims or the United States district courts; claims for refunds of bonds, fees, or fines; bills waiving the time limitations of the Employees' Compensation Act in order to allow the claimants to have their claims otherwise considered on merit by the Commission; bills to provide for adjustment and settlement of accounts of disbursing officers, postmasters, or other agents of the United States; claims for services performed for the Government which for some reason could not be compensated for under the existing laws; bills representing reimbursement for supplies or goods furnished the Government; and many other miscellaneous claims.

Three hundred and eighty-one bills were favorably reported by the committee, 287 of which have passed the House.

Seventy-eight bills were adversely reported by the committee as the result of full committee consideration, and 267 bills were rejected under the committee's rules.

Forty-three bills were re-referred to other committees.

Eighty-three bills and resolutions were referred to the Committee on Rivers and Harbors during this session. Seven bills were reported to the House by this committee—4 special bills and 3 omnibus river and harbor bills. Two bills passed the House. These were omnibus river and harbor bills, and in them the provisions of 42 of the bills mentioned were embodied.

The record of the Irrigation and Reclamation Committee for the first session of the Seventy-sixth Congress is as follows:

Bills referred to committee, 22; bills considered by committee, 8; reported out by committee, 6; enacted into law, 4; passed House, pending in Senate, 2; recalled by author of bill, 1.

In closing, I want to take this opportunity to thank the committees, their chairmen, and membership for their cooperation in helping to put over the majority program in the House during this session. They have been as helpful and as fine as is humanly possible.

A study of the following statistical recapitulation will demonstrate beyond all doubt that the Seventy-sixth Congress is a working Congress:

The total laws of the first session, Seventy-sixth Congress, numbered 279.

The House passed 615 House bills and 46 House joint resolutions and 279 Senate bills and 18 Senate joint resolutions.

There were introduced in the House 7,541 bills, 297 resolutions, 381 joint resolutions, 35 concurrent resolutions.

The House committees made 1,471 reports.

Fourteen Senate bills and Senate joint resolutions were pending on House calendars.

There were 500 bills entered upon the Consent Calendar, of which 448 were acted upon, leaving 52 upon the calendar.

Nineteen motions to discharge committees from consideration of bills were filed, 18 of which did not receive a sufficient number of signatures for entry on the calendar of such motions. One motion to discharge committees was placed on the Discharge Calendar.

The President transmitted to the House 5 messages, which were referred to the Committee of the Whole House on the state of the Union; executive departments transmitted 1,061 communications.

Petitions filed numbered 5,188.

The Spending-Lending Bill and What We Should Do to Bring About Recovery

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. LUDLOW. Mr. Speaker, in taking my position against the enormous increase in our national debt and our national contingent liabilities that inevitably would have resulted from the so-called "spending-lending bill" I had in mind the sorry picture of 10,000,000 or 12,000,000 good Americans—as good as you or I—out of work and not knowing in their despair where to turn or what to do to earn their daily bread; the picture of 2,000,000 more struggling to maintain themselves and their families on the synthetic employment and meager wages of W. P. A. work-relief rolls, and 950,000 more equally good and true Americans who have been certified for W. P. A. employment in the various States and localities and who, after suffering the anguish of a long and seemingly interminable period of waiting, find that they cannot get the work for which they have been certified.

These people have been, and are, on my mind and my heart to the exclusion of all things else. They are the tragic victims of our economic maladjustments. They are the ones who are groping through the Garden of Gethsemane, with spirits drooping and minds heavily laden, hoping against hope, with no sign or signal pointing the way out.

Mr. Speaker, I speak sincerely when I say that I would rather be a true friend of these people in the darkness of their night than anything else I can imagine. They are America's No. 1 problem. They deserve the very best we can give them in sound thinking and sound action. They are our brothers and sisters, our flesh and blood, innocent victims of the indescribable economic cataclysm which they had no part in creating. If there be Members of Congress whose hearts fail to warm up to them in love and sympathy, I can only say that such Members deserve no place in this great legislative body.

Let us not minimize the importance of the problem presented. Let us not imagine that it is a problem from which anyone can disassociate himself. Let us not forget that

unless the maladjustments are corrected and times get better, any one of us may find himself ground under the millstone. As an approach to the subject we would do well to turn for inspiration to sacred philosophy and remember this injunction:

Whatsoever ye would that men should do unto you, do ye even so unto them.

What, then, can we do to help these unfortunates? The answer, I believe, is this:

We can help them most if we will assist business and industry to take over into regular jobs the millions now on work relief or without employment of any kind. Until such time as that transfer can be made we must appropriate generously for relief, for people living under the American flag must not be allowed to go hungry and naked.

I yield to no one in my admiration of the many fine constructive things that have been done by our national administration. The handling of the bank situation, the guaranty of bank deposits, the regulation of "blue sky" vendors, the saving of countless thousands of homes and farms from foreclosure, and other achievements I might mention were services of the highest order for which President Roosevelt will be entitled to a permanent place in history. As a Member of Congress, I was glad to cooperate and to do my part in bringing about these reforms.

But the time comes when there must be an end of the spending program—when every additional dollar appropriated, except for imperative necessities, becomes a nail to fasten and perpetuate conditions that are intolerable. I believe that time has arrived. My vote against the spending-lending bill was a vote against debt.

It was a vote against debt, because I believe that debt, with threat of still more debt, is the biggest factor now retarding recovery and normal reemployment.

The railroad trainman, if he be a sound thinker, does not want to run the railroad. But he wants the railroad to run. He wants it to run so he may have regular employment, under the best of working conditions, at a wage that will enable him to raise and educate his children and save something for the rainy day. So it is with our friends in all of the laboring crafts. They do not want the miserable wages of a relief worker. They do not want anything tinged with charity. They want constant employment with compensation sufficient to support themselves and their loved ones, and they have a God-given right to that employment. What they want is that factories shall open and that all businesses and industries shall operate, so as to furnish a labor market that will give work under happy conditions to all who want work.

But business and industry are now atrophied with fear and will never thaw cut until assurance is received that there will be an end of debt increases and colossal deficits. We have tried spending for 6 years, and candor compels the admission that our employment situation is improved little, if any, compared with what it was 6 years ago.

I sincerely believe that a cessation of spending is the only policy that will save us; the only policy that will restore general employment in private industry; the only policy that will bring about general recovery, contentment, and happiness.

It was reasoning along this line that led me to vote against the spending-lending bill. My vote was not a hasty and inconsiderate act, but was cast after much thought and reflection. In voting against this measure, which would impose colossal new debts and liabilities on the country, I voted to give business and industry an opportunity to revive and to reopen millions of jobs to those who are now on work relief pauper wages or who have no jobs at all.

I believe that the passage of that bill carrying $1,950,000,000 would have been a final knock-out blow to business and industrial revival. As competent experts on national financing as we have in America have agreed that $45,000,000,000 is as large a national debt limit as this country could safely impose upon itself and that any debt beyond that limit would cross the border line of danger. In recognition of that consensus Congress passed a law fixing $45,000,000,000 as the debt limit of the United States. Our national debt, with the legislation encompassed in bills passed at the recent session, is now about $44,500,000,000, or within half a billion of the limit.

The spending-lending bill, if enacted, would repeal the statutory debt limitation by indirection and would fasten upon the taxpayers of our country contingent liabilities that would be appalling. This would darken our whole business and industrial prospect, and would be very, very bad.

Undoubtedly the bill was born of the best intentions and the noblest humanitarian purposes, but I believe its passage would have had a most unfortunate effect in preventing, or at least in retarding, the recovery for which we all so fondly pray.

The "Nerve" of Moley

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. CELLER. Mr. Speaker, I read with increasing disappointment, if not disgust, the articles by Raymond Moley appearing serially in the Saturday Evening Post. One is assuredly impressed with Moley's faithlessness and brazen conceit. He probably received a goodly sum for his efforts from the antiadministration Saturday Evening Post. He barters away the fine and gracious tokens of the friendship that existed between him and the President. Secrets of state are for anyone's gaze. He sells for a mess of porridge the confidence Roosevelt reposed in him.

Moley grudgingly praises Roosevelt, but only when necessary. He never fails to smudge him with mean phrases and snide remarks; for example, Roosevelt's "facts and knowledge were neither exact nor orderly"; he "is often inaccurate in conversation." He ever strives to disparage the Roosevelt administration and most of its adherents.

Moley makes of himself the "cock of the walk." He struts and preens his feathers. No one is correct but he. One wonders how in thunder Roosevelt has managed without him these last few years. He thumbs his suspenders and practically says, "Without me Roosevelt, in the earlier period of his administration, would have been like a ship without a rudder."

Thank goodness, Washington is well rid of his bluster and conceit. Roosevelt finally plucked his plumage. That is why, in all likelihood, Moley is so angry and bitter.

Moley's belittling of some of Roosevelt's main supporters is contemptible. His allusions to Hull are wretched. His recital of events leading up to the London Economic Conference is the climax of perfidy. No confidence is sacred. He strips himself of every garment of fairness and decency and stands naked in his sordidness.

Roosevelt made him—lifted him out of obscurity. He becomes a beggar on horseback. He rewards his benefactor by trying to stab him in the back. A facile pen and an easy flow of language does not excuse his meanness.

I paraphrase a story he tells of a newly elected alderman who prayed: "O Lawd, keep me from temptation. But if de traction company"—in Moley's case the Saturday Evening Post—"tempts me and ah fall—and write these articles of my faithlessness—let it be a big fat temptation that ah falls to."

We Should Expand Our Good Samaritan Program While Enacting Remedial Legislation

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 2, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, all Members no doubt feel great concern about the social-security measure now in conference. The conferees have been devoting much time and energy to this highly important and complicated bill, with nearly 200 amendments proposed by the other body, and will bring the best that human judgment can furnish in the solution of the problems, and undoubtedly they have the prayers of all of us who believe in the great social program for a correct solution of some of our difficulties. There are several amendments which I hope the conferees will accept and concur in. For my own part, I would like to see a larger proportion of funds contributed by the Federal Government. It will be pleasing to me to have the United States put up two-thirds to match the State's one-third, within reasonable limits, for most of these benefits.

There is one field of division, as for instance, in regard to crippled children and also in regard to vocational rehabilitation of disabled persons, in which the Federal Government has been contributing one-third to match the State's two-thirds. Now it is proposed in those two respects that the Federal Government should contribute 50 percent to the State's 50 percent, up to a certain limit. I certainly favor this move to increase the Federal contribution. I notice also that the Senate has been more generous than the House in that for vocational rehabilitation the minimum for each State has had a suggested increase from $20,000 to $30,000. From a fairly intimate knowledge of the situations in certain States, I heartily approve of this Senate amendment and hope it may be concurred in.

I am glad to note that certain increases have been suggested over and above the provision in existing law amounting to $1,020,000 in the case of crippled children and $2,000,000 in the case of vocational rehabilitation, which will be thrown in as a part of the matching program, and I further notice that in the case of crippled children an additional million dollars has been set up which does not require matching on the part of the States and that this extra sum will be apportioned according to the existing need. Now, I have knowledge of certain recent surveys concerning crippled children, especially in the State of Arizona, and I am inclined to feel that the need is greater than is officially recognized at this moment. Therefore, I am more than pleased with this proposal to furnish a million dollars to be divided among the States without matching for the further help of crippled children.

It is a well-known fact that whenever a census is taken there are usually some individuals who are not counted and some items of the inquiry overlooked. If that is true of our carefully planned official counts, it is likely to be true also of the count of crippled children or other unfortunates enumerated. I feel sure, in my own mind, that there are more crippled children in the State of Arizona than the official records show.

Great and humane as the task is of caring for crippled children, in mending broken bodies and improving their physical well-being, there is another task which ought not to be neglected. The schooling of crippled children is not so well taken care of, and it stands to reason that it ought to be considered by a humane government along with hospitalization and medical care. Naturally, I would put it first, but at least it is equally important and I feel that too little is being done along this line. Usually every thinking person realizes that the proper care of the oncoming generation is one of the great functions of government, a function which has been too long neglected. It is to be hoped that this proposed increase of appropriation and enlargement of the function and scope of the program is but an earnest of what may yet be done by a humanitarian effort to improve the lot of all of our people.

Canadian Commodity Labeling Law—Industry Asks Regulation—Wool First

EXTENSION OF REMARKS
OF
HON. JOHN A. MARTIN
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. MARTIN of Colorado. Mr. Speaker, when Congress undertakes legislation to prohibit unfair and deceptive acts and practices in any branch of industry, there is such a hue and cry set up by the beneficiaries of these acts and practices, and by Members of Congress who mistakenly take their side in the controversy, that it is difficult for a Member overloaded with other duties—and every Member is overloaded—to make his own investigation and determine where the truth lies.

When the Securities and Exchange Acts were in process of passage through Congress, the president of the New York Stock Exchange came to Washington and publicly proclaimed that the enactment of these laws would destroy the stock and bond exchanges of the country, and do vast and irreparable injury to the great stock and bond business and the investments of the people. Nothing has been destroyed, except the president of the New York Stock Exchange, who lost his job over the attack and afterward went to prison. The stock and bond business and the exchanges of the country are still doing business at the old stand, but under rules and regulations which give the people of the United States who invest their savings in stocks and bonds a fairer chance than they had before; protection against practices which destroyed tens of billions of dollars of their savings in the great explosion of 1929. A proposal to repeal the Securities and Exchange Acts would meet with the instant protest of the exchanges themselves.

The story of the securities and stock exchange legislation is the story of regulatory legislation in all other fields of finance, commerce, and industry. The same hullabaloo, propaganda, lobbying, and all the other tricks of the trade to confuse and to frustrate.

Applying these observations to the Wool Labeling Act, it is almost incredible how long and successfully the game can be played in the face of seemingly overwhelming odds. I know of no legislation before Congress in the past 7 years which has received such overwhelming support. The farm organizations of the country, which are a unit for wool labeling, comment that it is the first time that agriculture and labor have united in support of a piece of legislation. In addition to these is such a great organization as the National Federation of Women's Clubs.

Representatives of all three of these great organized groups testified before the subcommittee of the House Committee on Interstate Commerce that they have been pressing for this legislation for 20 to 25 years. In addition to these, there are many large consumers' organizations in the country endorsing this legislation. Even the textile workers' organization joined all these others in support of fiber-identification legislation.

Equally significant is the fact that not a single organization, large or small, representing the farmers, the workers, the women, or the consumers of the country, have protested the legislation in the 3 continuous years it has been before the committees of the House and Senate.

The movement is by no means confined to the United States. Only recently Canada, our great neighbor to the north, has put into effect legislation governing the grading

and marketing of commodities and establishing commodity standards, under a commission known as the Dominion Trade and Industry Commission. This commission was established in 1935. In the last session of Parliament the commission was implemented with legislation supplementing the act.

Wool, the first industry affected, itself sought the fixing of rigid standards. The regulations finally recommended by the commission resulted from conferences attended by the Canadian Woolen and Knit Goods Manufacturers Association, experts from the National Research Council, and the commission itself. The textile manufacturers are working out among themselves the basis for standards in fabrics. As experience is gained from the application of this first set of regulations affecting wool fabrics, it is expected gradually to extend the application of standards to many commodities. Not only wool but all other fibers used in fabrics are to be defined and regulated.

Wool means the product from the fleece of a sheep or lamb, Angora goat, camel, or like natural animal fiber. Cotton means the product made from the fibrous material of the cotton plant. Linen means the product made from the fibrous material of the flax plant. Silk means natural silk, the product from the cocoon of the silk worm. Rayon means the textile fiber of yarn produced chemically from cellulose or with a cellulose base.

When a combination of two or more textile fibers is used, all must be indicated, providing they each amount to more than 5 percent.

Descriptive terms, such as botany, lisle, mercerized, crepe, chiffon, must be used only in combination with the description of the fiber; for example, botany wool, lisle cotton, mercerized cotton, rayon crepe, silk chiffon.

Trade names or brands may not suggest a fiber content except in combination with the word or words authorized for describing the actual fiber content.

This will give an idea of the scope and character of the Canadian law. The legislation has grown out of the necessity of protecting the consumer. Unless the United States follows suit, we may anticipate American money crossing the line to get what it pays for.

An Answer to "Reactionary"

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BENDER. Mr. Speaker, those who are more interested in propaganda than in honesty have been asserting for years that the Republican Party is reactionary. We have been labeled in the public prints as a group devoted to the preservation of the status quo in industry, finance, and government. Students of government have known for years that this charge is utterly untrue.

Republican leaders have pioneered in dozens of the most progressive movements of American history. We fostered and developed the direct primary; we battled for legislation designed to curb child labor. G. O. P. leadership is responsible for much of the minimum-wage regulation which prevails in the States of the Federal Union. The so-called "liberals" like to forget that the first anti-injunction-labor bill was passed by an overwhelmingly Republican Congress. They seek to make us forget, too, that such devices as the Reconstruction Finance Corporation were first conceived and introduced under Republican national leadership.

If further proof is needed to demonstrate the active interest of the Republican Party in forward-looking steps for industry and government, the conclusions of the special subcommittee of the United States Senate, created to study industrial profit sharing, should serve as convincing evidence. In the deliberations of this committee, Senator ARTHUR VANDENBERG, of Michigan, one of the leading Republicans in the upper Chamber of our Congress, was the most active participant. His thought guided the investigation, stimulated its thinking, and aided greatly in determining its conclusions.

The Senate subcommittee found that, surveying industrial conditions by and large, peaceful relationships and labor efficiency were materially promoted where profit-sharing plans have been in operation for a considerable time. Of course, it was not the purpose of this group to discover how to earn the profits for sharing. Yet the first point is clearly made. Republicans are not in opposition to the progressive development of industrial programs. They are no less eager than their liberal colleagues to enhance American business prosperity and to hasten the day when labor will enjoy its right to work to the fullest possible extent.

Meanwhile, the question continues unanswered, How shall we gain the profits which will make possible a profit-sharing scheme on any tangible basis? The New Deal remains as silent on this vexing question as ever. Until this problem is solved, the work of progressive Republican thinkers will be wasted on the desert air.

The myth of reactionary Republicans has been steadily created by the subtle propagandists of the New Deal. It is high time that it were laid to rest along with the sorry corpse of the New Deal itself.

Alcohol Blends and the Carbon Monoxide Hazard

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SHANLEY. Mr. Speaker, I wish to place in the RECORD at this time an answer to a resolution printed in the CONGRESSIONAL RECORD of July 17, 1939, on a subject that is of vital importance to the Nation. The answer comes from the pen of one of the foremost authorities on carbon monoxide in the country, Prof. L. C. Lichty, associate professor of mechanical engineering at Yale University. Undoubtedly one of the great students of the entire subject, Professor Lichty's remarks will prove of great value to the country.

I appreciate the unanimous consent given to me to present this brochure and thank the Members.

The matter referred to follows:

A resolution of the Multnomah Civic Club, of Portland, Oreg., printed in the CONGRESSIONAL RECORD of July 17, 1939, which resolution urges Members of Congress and the President of the United States to make mandatory the blending of 10 percent of alcohol with gasoline on grounds that are not only false but also dangerously misleading. The resolution erroneously states that blending 10 percent of alcohol with gasoline eliminates the carbon monoxide present in exhaust gases and the attendant hazard to health and life.

Extensive research under rigidly controlled conditions which assure scientific accuracy has conclusively established that the amount of carbon monoxide in exhaust gases is dependent upon the carburetor setting and condition of the engine and not on the type of liquid fuel used; further, that when carburetors are comparably adjusted for the particular air-fuel requirements of gasoline, 10-percent or 20-percent alcohol blends, there will be no sensible difference in the carbon-monoxide content of exhaust gases. These findings resulted from exhaustive tests on the products of combustion of gasoline, 10-percent alcohol blends and 20-percent blends, which were made at the School of Engineering, Yale University, by a co-research worker, C. W. Phelps, and myself, and which were published by the American Chemical Society in its official journal, Industrial and Engineering Chemistry, May 1937 issue.

The results of these tests clearly show not only the complete lack of truth of propaganda that alcohol blends will eliminate carbon monoxide from exhaust gases, but point to the vicious danger that such propaganda might lead to a false sense of security in motorists purchasing alcohol blends. encouraging carelessness, which might

result in death. I quote the findings of the tests most pertinent to this point:

"2. The carbon monoxide present in exhaust gases will be practically the same for both gasoline and alcohol blends if comparable air-fuel ratios are used. At maximum power air-fuel ratios, about 2.7 and 3.8 percent carbon monoxide is found in the exhaust of a single- and a multi-cylinder engine, respectively, regardless of the fuels used. In other words, at the same richness of mixture the carbon monoxide will be practically the same for all fuels used.

"7. Under conditions in which a health hazard from carbon monoxide does exist from the operation of automobile engines on gasoline, the substitution for gasoline of gasoline-alcohol blends containing 10 to 20 percent of alcohol would not eliminate or sensibly reduce this hazard. Obviously, therefore, it is dangerous to operate an automobile engine in a closed room or garage because of the carbon monoxide in both the exhaust and blow-by gases, regardless of whether gasoline or alcohol blends are used."

The unwise resolution of the Multnomah Civic Club states "* * * that the poison gas known as carbon monoxide is the product of imperfect combustion, and is present in all kinds of smoke, especially in the exhaust of internal-combustion engines," and "* * * the form of monoxide given off by the combustion of gasoline or petrol is one of the worst forms of this poison," and "* * * that the only remedy is to augment the combustibility of the fuel in the engine by the addition of alcohol, so that the combustion will become so perfect that all monoxide and soot will be consumed."

Only the first statement is correct. The second and third are absolutely false. Incomplete or imperfect combustion is an inevitable result of normal operation of present-day internal-combustion engines using any liquid fuel, and is controllable within limits by carburetor settings, although dependent to same degree on engine conditions. Thus carbon monoxide is always present in exhaust gases at adjustments for satisfactory performance, particularly in automobile engines.

Proponents of alcohol fuels would do well to curb their enthusiasm and confine their claims to well-established technical facts. This is especially true in regard to carbon monoxide in exhaust gases, where public health and human life are at stake.

What the Roosevelt Administration Has Meant to Minority Groups

EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MITCHELL. Mr. Speaker, in turbulent times such as the world is passing through at this moment, I think it is well for this body to give attention to the security, the welfare, and justice to minority groups. You will probably recall that on April 10, when I was eulogizing the life and work of the late Senator James Hamilton Lewis, of Illinois, I used these words: I quote, "I am in position to know real friends as many of you might not be. I have come in contact with men of all races and of all nations, in this country and in many foreign countries. Because of the color and hue of my skin and the race with which I am identified, I have an opportunity to see the bigness of men's hearts as a great many people cannot see it." Minority groups must study and understand the trend of national affairs of this day in order to survive. I have always manifested a deep interest in the welfare of minority groups.

Mr. Speaker, permit me to call attention to a telegram which I sent to the President of the United States from Chicago, Ill., October 12, 1938, with reference to another minority group.

OCTOBER 12, 1938.

HON. FRANKLIN DELANO ROOSEVELT,
President, United States, Washington, D. C.:

As representative of a minority group in America, an underprivileged group which has been subjected to prejudice and mistreatment from time to time, we are interested in the attitude of majority groups throughout the world toward minority groups. At the present time we are greatly disturbed because of the intolerance of certain major groups toward the Jewish people residing in European countries and wish to have our voice heard in the interest of justice and fair play for all racial groups. We believe that the same spirit of intolerance which is working so tremendously against the safety and sacred rights of the Jewish people, if permitted to go unchallenged, will manifest itself sooner or later against all minority groups, perhaps in all parts of the world. Your fairness toward all human beings, the good-neighbor spirit between nations and races which you have been foremost in proclaiming and promoting, causes us to request you, the highest representative of our Government, to use every reasonable and peaceable means at your command in securing protection for the Jewish people in this hour of sad calamity.

ARTHUR W. MITCHELL,
Congressman, First Illinois District.

THE WHITE HOUSE,
Washington.

MY DEAR MR. MITCHELL: I fully appreciate the concern expressed by you in your telegram of October 12, 1938, regarding the Palestine situation. I have on numerous occasions, as you know, expressed my sympathy in the establishment of a national home for the Jews in Palestine, and, despite the set-backs caused by the disorders there during the last few years, I have been heartened by the progress which has been made and by the remarkable accomplishments of the Jewish settlers in that country.

As I have had occasion to inform a number of Members of Congress within the past few days, we have kept constantly before the British Government, through our Ambassador in London, the interest which the American people have in Palestine, and I have every reason to believe that that Government is fully cognizant of public opinion on the matter in this country. We were assured, in the discussions which took place in London a little more than a year ago, that the British Government would keep us fully informed of any proposals which it might make to the Council of the League of Nations for the modification of the Palestine mandate. We expect, therefore, to have the opportunity afforded us of communicating to the British Government our views with respect to any changes in the mandate which may be proposed as a result of the forthcoming report of the Palestine Partition Commission. I understand, however, that, under the terms of our convention with Great Britain regarding the Palestine mandate, we are unable to prevent modifications in the mandate. The most we can do is to decline to accept as applicable to American interests any modifications affecting such interests unless we have given our assent to them.

You may be sure that we shall continue to follow the situation with the closest attention.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

The attitude taken by the President, as expressed in this letter, is indicative of the fine tolerant spirit of fair play and justice which he has shown to minority groups throughout his entire administration. It takes more than ordinary courage for a white American in office to deal with absolute fairness and justice toward Negroes. This should not be the fact, but everyone at all conversant with conditions in America knows this is a fact.

It is to the everlasting credit of this administration that President Roosevelt has been fair and just to all the minority groups in America, including my group. There have come many matters before him for consideration which tested his tolerance, patience, and absolute justice toward racial groups. In every case he has measured up to the standard. It is my opinion that the Negro has received more consideration, a larger degree of justice and actual help from the administration of President Franklin Delano Roosevelt than he has received from all of the other administrations since Lincoln. What, then, has the Negro to quarrel about insofar as the continuation of this administration in power is concerned? This administration has not only given a larger number of Negroes responsible and well-paying jobs than any other administration but it has reached down to the sharecroppers and day laborers, whether white or black, and said to them: "This is your Government; you are entitled to benefits and protection from this Government the same as the richest man in the Nation."

I ask once more, What has this administration done during its 7 years of handling the Nation's affairs to offend my group—the Negroes of America? Has any administration other than this one ever given attention to the type of houses in which Negroes live, and has said to them "the Government will assist you in the acquisition of homes and will build for your use decent quarters in which to rear your families"? Does the Negro quarrel with the administration for this? Does the Negro disapprove the thousands of colored high-school and college boys and girls who have been aided in their struggles through school by this administration? Is the Negro displeased with the administration because it has

opened up thousands of schools for adults and today hundreds of thousands of Negroes who could not read nor write are being taught at the expense of the Federal Government? Should the Negro quarrel with this administration because it has created more than a million jobs for them and saved them from starvation?

I wish to say again that I am at a loss to find a single reason why the Negroes of America should look with disapproval upon the administration of Franklin Delano Roosevelt. I stand here speaking in my humble capacity and hail our great President as being the greatest humanitarian this Nation or any other nation has seen. He is second only to the Christ. [Applause.]

Un-American Activities

REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 2, 1939

Mr. DICKSTEIN. Mr. Speaker, the city of New York during the past several months has become the victim of an experiment that has long passed the stages of rumor. This experiment is singularly identical with the one which took place in Rome, Berlin, and Madrid—Fascist inspired, they rapidly swept beyond the confines of mere experiment, became threats, and eventually reality. In order to prevent such realization of the aims of Europe's totalitarian states from occurring in America, the truth behind this latest Fascist experiment must be revealed.

The nucleus of this activity, fostered by the misnamed Christian Front, takes on a new meaning when the methods, membership, and aims of this organization are studied and analyzed.

To many outside of New York City the name "Christian Front" may have no meaning. In New York it is rapidly spelling fear, bewilderment, and a form of persecution of certain of New York's minorities. The persecution of the Jews has suddenly arisen in our own country. Here in a democratic country settled by peoples fleeing from persecution of one form and another it arises and threatens to outstrip any former menace of racial or religious persecution experienced by the inhabitants of these United States. Those who were ashamed of the wild night rides of the perfidious Ku-Klux Klan or the terrorism of the Black Legion can well prepare their bending heads for another mechanical dip if the present spread of the Christian Front is not curtailed.

Our committee on un-American activities has thus far reported the possibility that General Moseley has Fascist leanings, and has provided the press with occasional news items of investigations to come and more frequently with some commonplace item of almost universal knowledge that supposedly was echoed by the gentleman from Texas [Mr. DIES], or one of his associates. More frequently, however, the public has been made to feel that the committee was a farce and the Government was willing to ignore the open operations of undeniably Nazi-Fascist groups.

It does not take $125,000, or an extensive investigation to uncover un-American activities in New York City. One week spent attending open meetings and speaking to the leaders of these meetings would convince any sincere American that something un-democratic was afoot.

What is the Christian Front? Why is it ignored? Why are its leaders—well known in New York City—permitted to openly plot the overthrow of democracy? Must independent citizens be forced to carry on a fight to subdue these un-American individuals themselves, or is their government willing to give the help and cooperation it owes her citizens. It would be well to keep in mind that the history of revolution in democratic countries arose directly from the unfulfilled promises of democracy.

THE CHRISTIAN FRONT

The Christian Front in New York City is an autonomous militant structure whose purpose is to link together a group of independent organizations into a closely knit unit with the aim of inspiring a Nazi form of government in America. This organization has no offices, and handles its business through P. O. Box 69, Station G, New York City. Its leaders are Walter D. Ogden, secretary, and Marcel Honore, president.

Operating independently but directed by the Christian Front as to methods are the following organizations: Father Coughlin's Social Justice Distributors Club, Crusaders for Americans, German-American Bund (O. D. storm troopers), German-American Business League, American Nationalists, American Nationalists Youth Division, Citizens Protective League, American Patriots, Christian Mobilizers, Christian Workers' Alliance.

As you will note, the names of these organizations in no way signify their purpose. However, taken separately and analyzed, their true purpose is easily ascertained.

First, the American Patriots—certainly a desirable name for a worthy organization, but not for a group whose history has been smirched with un-American mire ever since its inception. Its leader is A. Allen Zoll, at present indicted for attempted extortion of $7,500 from radio station WMCA, which refused to carry Father Coughlin's radio program without first approving the script. This same Zoll visited Goebbels in Berlin at the Hotel Adlon in 1936. Shortly thereafter he offered the services of his organization to Dr. Roy Akagi, Japanese propagandist, for $5,000 a month. Zoll's bail was taken care of by Seward Collins, who last year put up $5,000 bail for Mrs. Maria Griebl, held as a material witness in the Nazi spy case. The American Patriots had attained notoriety earlier this year when they were refused meeting space at Carnegie Hall, due to suspicion as to their true patriotism, and went instead to the Hotel Great Northern. State Senator John J. McNaboe expressed surprise, as did other eminent speakers who were invited as guests and found the American Patriots the antithesis of their name.

The Crusaders for Americanism is headed by two individuals, George A. Van Nosdall and Edwin Westphall. This organization plays to the group of its followers in typical Nazi fashion. They appeal to the underdog instincts of their group and give them artificially inflated egos by supplying a scapegoat in the guise of the Jew.

Let us examine Van Nosdall: Van Nosdall, a member of the German-American Bund, refers to Fritz Kuhn as the greatest living American and idolizes Hitler. A violent anti-Semite, he stated from the platform of their meeting place—Tri-Boro Hall, One Hundred and Thirty-eighth Street, the Bronx:

> When we get through with the Jews in America, they will think the treatment they received in Germany was nothing * * * Judaistic gore will soon flow in the gutters of New York City.

Edwin Westphall, another of the Crusaders for Americanism leaders, said on June 20, 1939:

> When you are in a crowd, yell "Kill the Jews" * * * what we need here is another Franco or Hitler * * * three cheers for Moseley, our new leader, and three cheers for Coughlin, who is our new Hitler.

Another frequent speaker for the Crusaders for Americanism is Wilhelm Kunze, press agent for the German-American Bund. He admits making numerous trips to Germany in the last 6 years, and has learned to emphasize the importance of the Aryan theory. He eulogizes America's "patriots" (?), Moseley, Deatherage, Kuhn, Edmondson, and Coughlin, and warns the audience to stick by their organizations as the time is rapidly coming for a show-down. He then rushes into a discussion of the advantages of national socialism to Americans, the abolition of States' rights, and the forming of a strong central government. "When the new wave finally sweeps the country," Kunze said, "the so-called defense weapons of Jews and Communists, such as liberalism, democracy, and tolerance, will be thrown into

the ashcan." Frequent "heils" and use of the Fascist salute punctuate Kunze's talks.

This same organization boasts that it was the first to sell Father Coughlin's Social Justice at Times Square and to establish the Sunday picket line on radio station WMCA.

The German-American Bund has already achieved notoriety through its encampments, its leader, Fritz Kuhn, and its most recent violation of the uniform laws of New Jersey, which resulted in the removal of the camp's liquor license. Possibly this punishment was reasoned on the basis that without a little inebriating fluid the bund members would not drill, plan for the downfall of democracy, or indulge in their favorite pastime; that is, Jew-baiting. The German-American Bund boasts in its membership such men as Fritz Kuhn, James Wheeler-Hill, Wilhelm Kunze. In the past they have had such members as Severin Winterscheidt, of the Julius Streicher entourage, and twice arrested on immorality charges; Dr. Griebl; and J. C. Fitting, the phony minister from North Bergen, N. J.

Fritz Kuhn, presently awaiting trial for mismanagement of the bund's funds, was pronounced guilty of larceny in Germany, fled Germany when he committed his second theft and entered the United States from Mexico, falsifying his citizenship papers. This record of Kuhn's is known to Government authorities but no action has been taken on it.

James Wheeler-Hill specializes in his contacts with Count Vonsiatsky's White Guard Russian troops. He was called before the McNaboe investigating committee in June 22, 1938, and claimed to have been born in the United States, although there is a record that he was born in Baku, Russia. On January 13, 1937, he addressed a White Guard Russian meeting in the Russian language, inciting racial hatred against the Jews.

On October 8, 1937, he gave a like speech before the White Russian Officers' Club in New York City. Wheeler-Hill is also valuable to the Nazis in America because of his Italian Fascist connections. On September 7, 1937, he was guest of honor of the Circulo Mario Morgantini. For his character reference, one can apply to the Star Printing Co., of New York City, from which firm he was fired because of incompetence.

Kuhn has issued edicts to bund members all over the United States—there are at present 93 locals of the bund, called Ortsgruppen, each headed by their Ortsgruppen-Fuehrer—warning all German-Americans to oppose the melting-pot principle and to form a strong racial bloc. In this way Kuhn hopes to form a German minority population in the United States. His plan is simple. If the German-Americans cannot Americanize, they must of necessity isolate themselves in opposition to democracy. Then they are to play the same part played by the German minority in the destruction of the Czechoslovakian democracy.

This report on the German-American Bund is in no manner to be construed as an attack on German-Americans in the United States. I am firmly convinced that not more than one-tenth of the German-American population in the United States sympathizes with the bund or with the Nazi form of government. However, this nine-tenths must be protected from the strong-arm methods of the organized one-tenth, who employ techniques ranging from terrorizing to the packing of meetings in order to gain control of various German societies. The slogan "My country, right or wrong" in reference to Germany is first applied. Failing to convince with this weak bit of propagandizing, they resort to threats of bodily harm to those relatives and friends visiting in Germany. Proportionately few of our German-Americans do not have relatives abroad.

In New York City alone the list of German-American societies controlled by Nazi sympathizers is quite impressive—the United German Societies of Brooklyn, the League of Sudeten Germans, the League of the Saarlanders, the Citizens' Protective League, the German-American Voters' League, the German-American Business League, the Grovewood Social Club, the German-American Settlement League, the United German Societies of Westchester County.

The Christian Front as an autonomous unit was organized in August 1938. It was set up ostensibly with Marcel Honore as its president and Walter D. Ogden secretary and treasurer. Its earliest platform was one to establish a boycott listing of Jewish shopkeepers and manufacturers in addition to an index—a pledge to be signed by Christian shopkeepers to buy only Christian-made commodities—published by the Greater New York Committee for Christian Action.

When various interested organizations set up to combat nazi-ism in the United States began to study the growth of nazi-ism the Christian Front organization became more pronounced in its Fascist leanings.

Odgen, secretary of the Christian Front, is also one of the directors of Zoll's American Patriots. The Christian Front also boasts membership of several ex-radicals: First, Osher, president of the Old Transport Workers' Union; second, Joe E. McWilliams, a bund speaker and leader of the Christian Mobilizers; third, Stanley E. Smith, president of the American Nationalists; fourth, Edward Smythe, president of the Protestant War Veterans, an alleged criminal; and, fifth, a Mr. Burke, retired, United States Navy, and a member of the Pelley Silver Shirts.

The American Nationalists, headed by Stanley E. Smith, meets weekly at the Tri-Boro Palace, One Hundred and Thirty-eighth Street, the Bronx. One of the frequent speakers for this group is Joe E. McWilliams, organizer of the Christian Mobilizers. Henry Clinton, one of the American Nationalists speakers, was cheered lustily June 14, 1939, when he told of the need for an armed force to carry out the designs of the organization. Smith, their leader, preaches the fact that Canada really belongs to the States and should be taken back from Great Britain.

Other leaders of the American Nationalists include Arthur Goadby, treasurer; E. Andrews Moriarity, secretary; and Robert Edward Edmondson, recognized Nazi propagandists, Louis A. Zahne, a Nazi agent, was loaned to this organization for public speeches by the bund. Other speakers include Major Crandall, former Army officer and former relief official in the Home Relief Bureau of New York, fired by Mayor LaGuardia for incompetence, and Judge N. W. Rogers, of Putnam, N. Y., who is a frequent contributor to the Weckruf, official paper of the German-American Bund.

The Christian Mobilizers is one of the most recent hate groups to organize in New York City. Its leader, Joe E. McWilliams, claims to be a former Texan, and at an American Patriot meeting at the Hotel Great Northern stated that his boys from Texas would be able to clean out the Jews in New York City when they arrived in the fall. McWilliams is a former Communist Party speaker and a member of the National Socialist Party. McWilliams also uses the name of Joseph R. MacWilliams.

Associates of McWilliams are Joseph Paul Antonio, lawyer, who makes emotional appeals for members to unite as Christian knights against the Jews as Franco's group did in Spain; Arthur Dykman, secretary; Joseph Hartery, allegedly the person who threw bottles at Mike Quill, New York City councilman and American Transport Workers' Union leader, also member of the German-American Bund; Edward Smythe, Christian Front member who praises Coughlin and speaks frequently about one Rosenfeld—in re the President—with an adjective that would indicate illegitimate birth. The membership of the Christian Mobilizers is limited to men 18 years of age and over.

It will be noted that all of these groups that operate as independent units are tied together by an interlocking group of speakers. Leaders of these groups do not limit their membership to one group, but frequently appear as members of two or three or more of these groups.

Literature is ever present at these meetings. Customarily, there are two tables flanking either side of the entrance to the meeting hall. Displayed on these tables are the following publications: Weckruf, official organ of the bund; National American, newspaper of the American Nationalists Party; Liberation, official magazine of Pelley's Silver Shirts; Social Justice, Father Coughlin's weekly magazine; Black

Shirt, publication of the Italian Fascists; Illustrierter Beobachter, published in Munich; in addition to the latest anti-semitic literature published by such personalities as Colonel Sanctuary or James True. This indicates the cooperation between these groups. The purpose of establishing so many of these groups, as explained by their own members, is to confuse the public as regards their strength, their purposes, and to make it difficult to keep abreast of their plans. However, the Christian Front autonomous unit is so constructed that all of the groups could be welded together within a few hours' notice.

There is also a frequent exchange of meeting places, as for example: The Crusaders for Americanism meet every Tuesday evening at the Tri-Boro Palace at One Hundred and Thirty-eighth Street, the Bronx; the American Nationalists meet every Wednesday night at the Tri-Boro Palace, and the American Nationalists' youth division (under the directorship of the American Nationalists) meets several Thursday evenings of each month at the same place. The German-American Bund meets in various places, including the Turnverein Hall on Lexington Avenue; Camp Nordland, Andover, N. J.; and Ebling's Casino, One Hundred and Fifty-sixth Street and St. Ann's Avenue, the Bronx. The Citizens' Protective League meets at the Turnverein Hall, the Christian Mobilizers meet at the Tri-Boro Hall, Ebling's Casino, and at Donovan's Hall, 308 West Fifty-ninth Street at Columbus Circle. The Coughlin Social Justice Distributors' Club also meets in Donovan's Hall, as does the Irish Republican group in New York City. This again indicates a closely knit group of units operating separately in order to confuse the public.

One interesting point that has not been answered by investigators of these groups is, Who supports their cause financially? They do have expenses, ranging from the cost of printing broadsides, magazines, newspapers to the expenses incurred by their leaders who for the most part have no visible means of financial support. As, for example, how can Edwin Westphal, who less than a year ago peddled razor blades on Times Square, afford to give all of his time to the Crusaders for Americanism without reasonable compensation?

Their publications carry little or no advertising and sell for less than their cost of production, so that they must operate at a loss. Membership fees for these organizations could not support them for a week. Who does support them? Private individuals who desire to spread racial hatred or foreign powers who must spread their dogmas if they hope to perpetuate their politics? Every indication points to this last-named group—methods used, sympathy of members, leaders frequently trained in Germany or directly in the Nazi employ, literature disseminated frequently of German origin or styled after similar propaganda pieces that led to the downfall of the German Republic.

Have these groups actually started riots? Have they damaged property? Have they harmed individuals? How and when have they infringed on other citizens' rights?

In May the front of the Lyceum Theater, where Brown Danube was being played, was smeared with swastikas.

On June 12, at One Hundred and Sixty-third Street and Amsterdam Avenue, a young girl asked a question of a Christian Front speaker and was thrown to the ground and pummeled. Two policemen rescued her, but no arrests were made.

On June 14, Samuel Applebaum, a French instructor at the New Utrecht High School was walking through Union Square. A small group were slandering the Jews and Applebaum protested. He was thrown to the ground and stabbed in the hand.

On June 22, at Two Hundred and Fourth Street and Perry Avenue, a woman protested against the abusive language used by a speaker in reference to the Jewish race, and was thrown down and beaten.

On the evening of June 26, a Christian Front meeting was being held with an attendance of approximately 500. At the height of the evening, a group of hoodlums, several identified as Coughlin Social Justice vendors were found hiding among parked cars with over-ripe fruit, bottles, and other dangerous missiles. Quick action on the part of a police sergeant and his patrolmen prevented any damage.

These are but a few incidents that are occurring nightly in New York City.

Father Coughlin, on the evening of July 30, finally openly allied himself with the Christian Front. Coughlin claims his fight is against Communism, but in effect it has every indication of a Nazi inspired movement. He said, "If you persist in carrying on your fight by denying us liberty of speech, liberty of press, and consequently, liberty in politics, we will fight you in Franco's way, if necessary." Father Coughlin seems to forget that followers of democracy are not inclined to sanction Franco's way, and may be somewhat skeptical about Coughlin's real aims if he advocates recourse to Franco's way.

It is interesting to note, in speaking of Coughlin, the close parallel between some of his material included in Social Justice and that released by Goebbels. On December 5, 1938, Coughlin published a defense of nazi-ism in Social Justice entitled "Background of Persecution." On September 15, 1935, Paul Joseph Goebbels, Reich Minister of Propaganda, delivered a speech before the Nazi Party Congress at Nuremburg. This speech was published September 10 by the Franz Eher Press, Munich. The speech of Goebbels and the resultant article by Coughlin are so closely parallel that the source of Coughlin's material can scarcely be denied. Let us examine a small portion of this speech and the later article by Coughlin.

Goebbels said:

> On April 30, 1919, in the courtyard of the Luitpold Gymnasium in Munich, 10 hostages, among them 1 woman, were shot through the back, their bodies rendered unrecognizable, and taken away. The act was done at the order of the Communist terriorist Agelhofer and under the responsibility of the Jewish-Soviet commissars Levien, Levine-Nissen, and Axelrod.

Coughlin wrote:

> On April 30, 1919, in the courtyard of the Luitpold Gymnasium in Munich, 10 hostages, among them 1 woman, were murdered. The act was perpetrated by the direct order of the Communist terrorist Agelhofer and under the responsibility of the Jewish-Soviet commissars Levien, Levien-Nissen, and Axelrod.

The following magazine piece continued to parallel the speech of Goebbels so closely that no doubt is raised as to the source of Coughlin's material. Articles appearing in Social Justice are constantly of an anti-Semitic or pro-Nazi nature, and yet Coughlin persists in disclaiming anti-Semitism or pro-Nazi relationships.

Coughlin has made many incongruous statements if he chooses not to be termed a Fascist. In the October 17, 1938, issue of Social Justice, Coughlin defended Hitler's seizure of Austria and the dismemberment of Czechoslovakia. He praised Mussolini for his attack on the Ethiopians as was reproduced on pages 17–19 of A Series of Lectures on Social Justice, by Charles E. Coughlin. In the March 6, 1939, issue of Social Justice a pro-Japanese article appears under the by-line of Leon Hamilton. His February 13, 1939, issue compares the democracies unfavorably with the Fascist powers. In a radio speech September 26, 1935, Coughlin advocated the use of bullets when any upstart dictator in the United States—referring to the President—makes this a one-party Government. This would scarcely indicate a prodemocratic sentiment on the part of Father Coughlin.

All of these organizations direct their vitriolic speeches against the New Deal and every liberal-minded statesman; attacks on Mayor LaGuardia, Thomas Dewey, President Roosevelt, and so on, are frequent. Policy in reference to the Jew ranges from those who advocate killings and tortures

more brutal than those directed by the Gestapo and the Uschla to the less violent members who advocate imprisonment or deportation for all those of the Semitic race, and for the "gentile bastards" who will not support "our" cause.

It has been interesting to note the typical Nazi ideology followed in the past months, starting with mere hatred of international Jewry and now slowly encompassing all peoples in the United States who will not back their plan of a strong centralized government with the elimination of States' rights. A conflict does arise, however, as to who the leader would be. Will it be Fritz Kuhn, the national fuehrer, or Coughlin, or, less likely, Joe E. McWilliams, who would be satisfied to start as mayor? Whoever it will be, Kuhn promises his loyal followers that they will be rewarded with Governorship and mayoralty posts in major metropolitan areas.

It is a well-known fact that the work of the Gestapo is carefully divided into three groups—the "termites," the "torpedoes," and the "harbor patrols." New York at the present time is overrun with the "termites," and unless the work of this insidious group is counteracted the people of New York City may well expect frequent bloody street riots, sabotage, and violence of all sorts within a period of months. This can be laid to the following sources: The racial hatred and pro-Nazi propaganda spread by Father Coughlin's group, and the "termites" branch of the Gestapo whose purpose is to spread Nazi propaganda and submit reports to their cell head, who in turn reports to Nazi propaganda headquarters in Germany.

There is no room in a democracy for racial hatred, the spread of various "isms," and striving for dissension or planning of sabotage. This situation in New York City must be remedied if violent mass rioting is to be prevented.

"Roosevelt Propaganda Attempts To Deceive the People"

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. TABER. Mr. Speaker, in his press releases recently, the President has stated that because of Congress' reduction in the amount of appropriations for alleged relief, that it was necessary to reduce the number of people to whom benefits could be given, and that the failure of Congress to pass the so-called housing bill and the so-called spending-lending bill would be apt to throw us into the depths of a depression.

What are the facts?

For alleged relief, the President's original Budget submitted to the Congress on January 5, appearing on page 121 of the CONGRESSIONAL RECORD called for $1,750,000,000 for the W. P. A., the N. Y. A., and the Farm Security Administration. The amount finally agreed upon and appropriated by Congress called for W. P. A. the exact amount that Mr. Roosevelt asked for originally in January—$1,477,000,000; for N. Y. A.—$100,000,000, or $23,000,000 below the amount recommended by the President; for the Farm Security Administration—$143,000,000, or $20,000,000 above the amount recommended by the President. For other agencies:

Puerto Rico, $7,000,000, as against a Budget estimate of $10,000,000.

Administrative expenses, $25,650,000.

The total ran to $1,752,000,000, or $2,000,000 more than the President's original Budget estimate and $3,000,000 below his final estimate.

The cut in the suggested appropriation for the N. Y. A. still left them $25,000,000 above their previous year's appropriations, and the cut did not stop relief activities but only the establishment of more camps, which were not relief activities at all, and more theater projects, and such things as that.

Why the President should make such statements and say that the failure of Congress to provide the funds that he asked for for relief can only be attributed to one purpose, an absolute determination to deceive the people.

With reference to the matters about which some ill-informed relief workers have been striking, I will say that the requirements for the 130-hour week and the elimination from the bill of the so-called prevailing wage will be shown by an examination of page 20 of the hearings of the Appropriations Committee to have been made upon the recommendation of Colonel Harrington, the President's W. P. A. Administrator. When you give him just what he asks for and just the way he wants it you still have him trying to dodge and shift the responsibility because he has neither the character nor the courage to stand by his own recommendations. Is it not time that the people ceased to be deceived?

The President has berated Congress for failure to pass the so-called housing bill. This would have provided for the expenditure of $2,500,000,000 of Federal funds which never could have come back into the Treasury. The average cost under this program for housing facilities for 1 family to the Federal Treasury—entirely out of pocket, with nothing coming back—would have been approximately $16,000. How many of our people live in a $16,000 house? The facilities provided through the Housing Authority, only in rare occasions, provide housing for the poor people who are obliged to give up the cheap quarters they have occupied. In one community with which I am somewhat familiar, where they actually did tear down some low grade dwellings, the poor people who were driven out are now herded 12 families to a single house, at higher rent and with poorer quarters than they had before. They will, none of them, ever be able to live in the gorgeous quarters that are being provided at great Federal expense.

Instead of being a proposition to get rid of slums and provide quarters for the poor people, the program is nothing but a racket. It had a sob appeal which the President has made the most of in his attempts to deceive the people. Out of the $800,000,000 which the United States Housing Authority has had available for a year and a half, only $68,376,200 had been spent by June 30, 1939. As far as providing employment goes, it has been a very minor factor. As far as creating a big debt and obligations goes, it has done fine. As far as providing permanent obligations against the Treasury goes, it has been a great success. As far as relieving the housing conditions and providing for the general welfare goes, as compared with the amount of disbursements required, it has been a colossal failure.

The so-called spending-lending bill as reported to the House called for $1,950,000,000, as follows:

(1) To the Public Roads Administration, $500,000,000, to be loaned to the State, municipalities, and other public bodies to build roads, at a time when all of these outfits that are entitled to credit in any way are able to borrow all the money that their debt limits will allow in the open market at low rates of interest. This would not have provided one single job.

(2) To the Public Works Administration, $350,000,000, which could only be used for loans at a time when all of these corporations can borrow money up to the debt limit from private sources.

(3) For railroad equipment, $250,000,000, at a time when the R. F. C. already has authority to make such loans and has at present a borrowing capacity of $2,640,000,000.

(4) To the Rural Electrification Administration, $350,000,000, to take the place of an authorization for annual

appropriations of $40,000,000 for which there has already been appropriated and allocated upward of $200,000,000. There is now $40,000,000 available for this purpose, an amount sufficient to take care of all the loans which would be made under normal circumstances.

(5) For tenant farmers and sharecroppers, $400,000,000, to be used to loan, mostly in the sections of the South, for the building of houses in places where they already have more housing facilities than there is demand. It will thus be seen that this bill was not a bill which would relieve anything except as it would provide a racket in the building of farmhouses, and where there would be nothing ever coming back to the Treasury. The plans were for $2,000 houses for tenant farmers who would have no facilities whatever to pay back the money.

The whole program was just a grand fraud upon the people of the United States. The only way it was self-liquidating was that the minute it went out of the Treasury never a cent could have come back. Is it not time that the people of America woke up to the way they have been deceived and the way the administration has tried to avoid responsibility for the complete failure of its economic policies?

The program of Tommy Corcoran and Benny Cohen, who control Mr. Roosevelt and his policies, has been to destroy private initiative, private business, and to do away with the private employment of our people. It has brought nothing but distress upon our people.

When Congress does something constructive in stopping crazy schemes, it should get the credit for it; and the President should be blamed for proposing Tommy Corcoran's and Benny Cohen's destructive schemes.

Our Economic Problem

EXTENSION OF REMARKS
OF
HON. FRANK W. FRIES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. FRIES. Mr. Speaker, Congress' 10 years of wandering in our economic jungle leaves us still with no path out of the wilderness.

Hate, fear, insecurity, and distress in a land of abundance—a deplorable condition existing in our great America.

This condition is not an accident. It is a situation made possible by and through the stupidity of public officials responsible to their people—officials who have proved incompetent to deal with our economic and social problems.

To maintain government those in charge of government must recognize their responsibilities and give their best to the people they represent if respect of government is desired.

Equality of opportunity is a principle which every statesman and representative of the people advocates, but it does not exist in this land of plenty at the present moment.

It seems to be the consensus of opinion amongst businessmen, professional people, and the country as a whole that the method of Congress in dealing with our economic and social problems is a miserable failure.

Our economic problem is entirely different than that of any other country in the universe.

Many who are unfamiliar with the issues which now concern our American people are of the opinion that we have an overproduction of goods. I fail to subscribe to this philosophy. The maldistribution of the necessities of life is the major problem of our Government.

It is not overproduction but rather underconsumption of the necessities of life which troubles our whole economy and our whole people.

The disgraceful thing is that it would be a very easy matter for the United States Congress to make it possible to correct all of the irregularities which now exist in our economic and social program.

Most countries of the universe are troubled with the problem of adequate natural resources and adequate production of the necessities of life for their people, but our Government in our great land is blessed with all of the necessities of life man could wish for.

The distribution of these necessities is pathetic, and the United States Congress' haphazard manner of dealing with the problem of economic sufficiency and stability for from one hundred and thirty to one hundred and forty million people is a discredit to our democracy.

Many are of the opinion we should continue the old program of attempting to dispose of our surplus products by reciprocal-trade agreements with other nations. Such an attempt is impossible of completion, and such a program is worse than useless.

Facts prove beyond contradiction that revolutionary conditions in the economic and social life of the entire world have deprived America of the right to participate in the world markets.

Many are of the opinion we should subsidize our agricultural products in order to preserve a place in the world markets.

To me this is the height of fallacy.

Since the World War many countries—to name some, Russia, Germany, Italy, and Japan—have established fertile agricultural areas which produce, among other supplies, all of the cotton they can consume.

Prior to the World War, the world was solely dependent upon America for its cotton. Today that situation does not exist. The countries above mentioned have developed their own cotton fields, and today are our competitors in the world's cotton market. In other words, we have lost the cotton business throughout the world.

The same situation exists in the industrial fields. Many of the countries who were solely dependent on America to furnish them machinery, automobiles, electrical appliances, and so forth, today are producing their own industrial goods, and that market is gone and will never be regained for America.

To think we can regain this market is not to face the facts. It can never be regained, and it is wishful thinking to think we can recover it.

AMERICA—A GREAT NATION, AND NOT JUST A LOOSELY CONNECTED SYSTEM OF 48 STATES

Those of us who honor and love our form of government have a responsibility which we must recognize and accept. It is absolutely essential that we deal forthrightly and earnestly with the problems which beset America if we desire to continue our form of democracy. The time has arrived when every true American must assist in correcting the irregularities now existing—must deal with these problems as they concern a whole people—a whole Nation, and not simply for the benefit of one section, one State, one district, or one class. If we are to survive we must face our problems as one family, and not as unrelated groups trying to take advantage, each of the other.

We Members of Congress have attempted to cope with the problems which beset our American people by a method of "guess" and taxation—a policy, which, whenever it has been pursued, has led to the destruction of governments since the beginning of civilization.

No citizen in private industry would attempt to carry on in the same manner we have carried on as representatives of our Government.

It is immediately necessary that we ascertain what the problems are which concern our American people. When I first came to Congress I introduced a bill which would give to the American public a true picture as to what and why we have this deplorable economic and social condition in this great land of abundance.

My bill would give to the United States Congress true and definite information as to the number of people we have employed, the number of hours they are employed, and the nature of their employment. It would also give the number of people unemployed, why they are unemployed, the number of years they have been unemployed, and what they are qualified to do.

If we had this information, which should be obtained through a committee appointed by the United States Congress, I am confident the Congress could then deal with our economic and social problems in an intelligent, businesslike, and efficient manner.

It is highly important that we find the number of hours it is necessary for man to toil, with the assistance of modern machinery, to produce the necessities of life.

If we find—to illustrate my point—that it takes 300,000,000 hours a day for man to toil, with the assistance of modern machinery, to produce all the necessities of life, and we have in America 50,000,000 people who are qualified to participate in our economic program, then I am confident—and I think everyone will agree with this philosophy—it is the height of fallacy to compel two-thirds of our people to work 8 and 9 hours a day, and force them, through taxation, to contribute to a fund to maintain an army of ten to twenty-five million unemployed people, who are willing, able, and well qualified to participate in our economic program.

Unless we deal with this problem in a manner which will make it possible for all of our people to participate in a program in which all of us are concerned, we cannot expect the underprivileged people of our country, who are solely dependent on charity and relief measures, to respect our Government.

I would recommend to the United States Congress that immediately after learning the number of hours necessary for man to toil so every citizen may be employed at a living wage that Congress subsidize business, and go to its rescue; that we help rehabilitate every industry in our Nation, making it possible for private industry to absorb this vast army of unemployed people.

With such a program in operation we could abolish the W. P. A. and other purely relief measures.

I think a program of this kind would meet with the approval of every red-blooded American citizen who is desperately trying to combat communism, fascism, nazi-ism, and other un-American "isms."

It is my conscientious belief that the citizens of this great America are not desirous of having a change of their form of government, and that they desire, in every way humanly possible, to aid in maintaining our democracy.

A program, such as I have mentioned, would enable the farmer to receive a decent price for his product, and give the laboring man the fruits of his labor. Business in every way would enjoy greater returns if we began to legislate on the basis of one hundred and thirty to one hundred and forty million people and their needs, and not on a basis of sectional or any other kind of prejudice or preferment.

The Answer of the Coal Industry to the Question, "Has T. V. A. Injured Coal?"

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit herewith a statement concerning the viewpoint of the Bituminous Coal Industry with respect to the effects of T. V. A. on that industry, as follows:

The T. V. A. and its proponents continue to dispute the contentions of the bituminous-coal industry with respect to loss of coal markets implicit in T. V. A.'s hydroelectric power program. They have recently come forward with renewed assertions that T. V. A. is a blessing in disguise for the coal industry. They bolster this preposterous claim with figures supplied by the Federal Power Commission and other sympathetic Government agencies purporting to show that—

(1) Twice as much coal is now being utilized in electric power generation in the Tennessee Valley as in 1929.

(2) That more than twice as much electricity was generated by coal last year in the four States of Alabama, Georgia, Mississippi, and Tennessee than in 1929.

(3) That whereas only 7.3 percent of total electric generation in these four States in 1929 was by coal, 12.8 percent of the 1938 output was by coal.

(4) That whereas only 1.4 percent of the total coal output in these four States in 1929 went into the generation of electric power, 4.5 percent of the total coal output in these States in 1938 was utilized for electric-power generation.

By making similar comparisons between 1932 at the bottom of the depression and 1937 and 1938, the percentage gains on this method of reckoning are even larger. For these gains (magnified out of all proportion) in the consumption of coal, in steam generation of electricity, in the four principal States in the Tennessee Valley, T. V. A. takes all the credit to itself.

These figures are well calculated to distort the real picture, to pervert the real facts, and to deceive the casual reader. The truth of the matter is:

(1) That the gains as recited are relatively infinitesimal;

(2) That the gains came about through factors wholly unrelated to the T. V. A. and in spite of the T. V. A.;

(3) That the real impact of T. V. A. hyro power upon coal and coal markets in the Tennessee Valley is on the way but has not yet arrived (because T. V. A.'s hydro-power output is still in its infancy);

(4) That the figures in nowise refute the basic contentions of the bituminous-coal industry as to the comparative economy of steam power over T. V. A. hydro power, and as to the inescapable and self-evident fact that when and if T. V. A. completes its electric-power program and gets into full operation and generates, distributes, and sells upward of 8,100,000,000 kilowatt-hours of electricity annually, it thereby has deprived the coal industry in perpetuity of a vast future outlet for coal.

The essential facts with respect to past, present, and future relationship of coal to electric-power generation in the Tennessee Valley are exceedingly simple.

We have first the fact that prior to the advent of hydro power promotion by the Federal Government, the question of hydro power versus steam power rested entirely upon the comparative costs. The private-utility companies naturally sought the most economical medium.

Twenty years ago it required 3 pounds of coal to generate 1 kilowatt-hour of electricity. Today, thanks to the great strides in plant efficiency, it requires less than 1½ pounds of coal to generate 1 kilowatt-hour (the national average in 1937 was 1.42 pounds of coal equals 1 kilowatt-hour), and in some new steam plants it takes only 1 pound of coal per kilowatt-hour.

Inasmuch as the principal item of cost in the generation of electricity by coal is the fuel, this cut in fuel consumption of 50 percent or more has completely altered the picture when it comes to figuring comparative cost of steam power to hydro power.

The principal item of cost in hydroelectric-power generation is in the building of dams and reservoirs, which vary widely according to the physical characteristics of the site, the flow of water, etc.

Twenty and thirty years ago, when the cost of steam-power generation was more than double what it is today and when so-called cheap water-power sites were readily at hand in the Tennessee Valley, the private utilities in that area turned to water power. They made extensive developments and hydroelectric power occupied the major position in the total power output.

But the coal industry, prior to the initiation of the T. V. A., surveyed the future with confidence (1) that electric output in the Tennessee Valley in the years to come was bound to double and treble; (2) that with the greatly lowered cost in steam generation and the absence of further water-power sites in this area susceptible of really economical development coal would inevitably be the medium for providing the new increments of electric power.

The advent of the T. V. A. destroyed this prospect. T. V. A. is proceeding to build hydroelectric-power facilities regardless of unit cost and regardless of comparative cost with steam plants. It is foreclosing any chance for coal in supplying the future needs of this area for electricity. It is projecting a hydroelectric-power supply so large as will more than meet the requirements for generations to come, granting these requirements will be greatly augmented by the progress of the age we live in.

Under these circumstances, the statistics which the proponents of the T. V. A. are now publicizing are entirely beside the point.

Figures showing the combined coal production in the four States of Alabama, Georgia, Mississippi, and Tennessee, year by year, since 1920, and the big drop after 1930, and partial recovery in the last 2 or 3 years, are utterly meaningless as respects the relation of the T. V. A. to the coal industry. They are the product of many factors and a small segment of a national picture, the explanation and consideration of which has no bearing on the T. V. A. issue.

The totals as to coal consumed in the generation of electric power in these four States, ranging from 1,360,000 tons in 1925, 213,000 tons in 1935, and 677,000 tons in 1938, are similarly of no probative force because they are the product of many diverse factors.

The coal industry knows from sad experience that when the Alabama Power Co. purchased hydroelectric power generated by T. V. A. at Muscle Shoals, the Alabama Co. shut down its Gorgas steam plant which ordinarily burned 20,000 tons of coal every month, and when the Alabama Co. terminated its purchase of T. V. A. power, it reopened its Gorgas steam plant.

The coal industry knows from sad experience that when T. V. A. supplies a municipality with T. V. A. power which had previously generated its own electricity from coal, this outlet for coal is gone forever. It is pertinent to recall the recent case at Nashville where the private company, prior to its acquisition by the T. V. A., had proposed to build a new steam-generating plant which would have consumed upward of 100,000 tons of coal annually.

To the coal operator and his mine workers who for years have been supplying the requirements of some nearby steam-generating plant—small perhaps, but large enough to keep going this particular mine—and when this steam plant is superseded by T. V. A. hydro power and this mine loses its principal customer and can find none to take its place and is obliged to close, there is no comfort in a lot of statistics of national averages and trends and comparative percentages. The miners and the mine owner face the hard fact that the miners are permanently out of jobs and the mine owner is out of business.

The assertion by the T. V. A. that T. V. A. is developing new markets for coal in the Tennessee Valley is pure fiction up to date, and what the future holds in store is pure conjecture. T. V. A. boasts of the projected industrial development in its area to be achieved through the medium of vast quantities of "cheap" electricity. The benefits of any such development to coal are at least intangible, if not entirely negligible.

Furthermore, insofar as this move by T. V. A. entails a relocation of industry, its transplanting from some other region to the Tennessee Valley, the result may likely enough be to subtract from coal's present markets in other regions.

T. V. A. contends that its acquisition of the facilities of the Tennessee Electric Power Co. will prove a boon to the coal industry because henceforth T. V. A. will be so busy in supplying the customers it has now acquired that it will have no reason to venture into other territory, and so coal may be able to pick up some new business with the private utility companies elsewhere.

T. V. A. contends that its example and influence will prove a spur to increased electric consumption throughout the Nation and this increase will accrue to the benefit of coal in those areas where the chief reliance for electricity is upon coal-burning steam plants, which will then be expanded, and in the next breath cites figures to show that whereas electric power generation in the country as a whole reached a new peak in 1937, coal consumed in electric power generation had declined as compared with the previous peak year of 1929.

The T. V. A. suggests that since the Nation-wide decline in coal output has resulted in very large unemployment among coal miners, "alternative fields of employment are necessary to take up the slack," and then credits itself with "having taken up part of this slack" through its manifold activities in the construction and operation of dams, power plants, and transmission lines, which it implies is an added reason why the coal industry should be grateful to the T. V. A.

This line of reasoning, in our judgment, is slicing the baloney pretty thin.

Opportunity for the Eskimos

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DIMOND. Mr. Speaker, a few hours ago both House and Senate agreed to the conference report on the third deficiency appropriation bill of this session of Congress. That bill, which has now been adopted by both Houses and which will undoubtedly be approved by the President, contains an appropriation of $795,000 for carrying out the provisions of the Reindeer Act of September 1, 1937.

That act, as we all know, authorized and instructed the Secretary of the Interior to purchase all of the non-native-owned reindeer and usable reindeer range equipment in the Territory of Alaska, and to either distribute the same among the natives of Alaska or to hold the same in trust for the use and benefit of the natives. The act further authorized and directed the Secretary of the Interior to organize and manage the reindeer industry or business provided for in such manner as to establish and maintain for the natives of Alaska a complete and self-sustaining economy, and to encourage and develop the activity and responsibility of the natives in all branches of the reindeer industry or business. Further provisions of the act gave direction as to the distribution of the reindeer among the natives of Alaska, for the making of range rules and regulations so as to protect the deer and protect the range, and, wherever practicable and to the best interests of the natives, the Secretary was directed to appoint natives to supervisory and other positions in the administration of the reindeer business.

But until adequate appropriation was made by Congress, the Reindeer Act was practically a dead letter.

In 1938 I urged upon the Appropriations Committee the making of an appropriation of at least $1,000,000 to carry out the purposes of the Reindeer Act. At that time the House Appropriations Committee declined to recommend the appropriation, and instead it was provided that a special committee, to be appointed by the chairmen of the House and Senate Appropriations Committees, should make an inquiry into the entire subject and report back to Congress. That committee was appointed and consisted of Mr. Charles E. Rachford, of the Department of Agriculture; Dr. I. D. Wilson, professor of biology, Virginia Polytechnic Institute; and Mr. Frank H. Reeds, of Grand Junction, Colo. This special committee made a thorough and painstaking investigation of the subject in Alaska during the summer of 1938, and thereafter made report to Congress recommending that the Reindeer Act be carried out, and pointing out clearly the disasters which would overtake the reindeer, and the ensuing suffering to the native inhabitants of Alaska who lived in the reindeer area, if the act were not thus put into effect.

Finally, we have an appropriation to commence the work, an appropriation of $795,000, and, by the Department of the Interior supply bill, a further appropriation of $75,000 for administrative purposes. While the sum is not as large as I had hoped to secure—for I recall the House Committee on Appropriations had first recommended an appropriation of $1,070,000—it may well be that $870,000 is all that can be profitably expended during this fiscal year. At any rate, we have enough money to make a substantial beginning of the program, and with that we ought to be reasonably content. But lest it be thought that Congress will never be requested to make any further appropriation, it may be well for me to state here that it is likely an additional appropriation, or appropriations, will be required from time to time up to the limit of the $2,000,000 which was authorized to be appropriated by the Reindeer Act itself.

Mr. Speaker, I rejoice at the action thus taken by Congress looking toward the carrying out of the Reindeer Act. I rejoice because it means at last a real opportunity for the Eskimos and other natives of Alaska who can use reindeer. It means that with good administration, instead of being poverty stricken, suffering, and half starved, the Eskimos will in the course of a few years inevitably attain a measure of security which they could not otherwise enjoy. In passing the Reindeer Act and then in making this appropriation, Congress has opened wide the doors of opportunity to the Eskimos and the other natives who may share in the reindeer. It is true, of course, that all may be lost by poor

administration or by bad administration, but I am very hopeful and, indeed, confident, that the administration given will be not only honest but far-seeing and efficient, and that in a few years the Eskimos themselves will be able to undertake that administration and make it a success.

The Eskimos of Alaska are an admirable people. They are truthful, honorable, honest, and generous and hospitable almost beyond the conception of any other race of mankind. The late distinguished Tom Lopp used to call them "a pleasant, smiling people." He loved them and they loved him.

May I repeat that this is an opportunity for the permanent well-being of the Alaska Eskimos as a race. They have all the virtues and all the qualities necessary to success, if in the beginning they are properly instructed and have the right type of leadership. But in the final event, everything depends upon them. It will be necessary for them to do the work, and the work at first will not be easy. The wolves are threatening to destroy the reindeer herds entirely. Most of the burdens of killing off such predatory animals will fall upon the Eskimos. But they will have the satisfaction of knowing that Congress has already appropriated nearly $900,000 for their assistance, and to help them to help themselves, and they may fairly rely upon securing such further help as may seem to be justified.

Their opportunities, Mr. Speaker, are the greater because with the purchase of the deer and the range equipment now owned by others than natives, the title and ownership of all the reindeer and all of the reindeer range equipment will be in the natives themselves or will be by the Government for their benefit. They have been given and are being given a monopoly of the reindeer, both for private use and as concerns the ownership, use, and management of the reindeer as an industry. Surely that is a great and a generous gift for the Congress of the United States to bestow upon the native people of Alaska. I am confident that it is a gift of which our people will make the fullest and most profitable use.

Once the Eskimos were virtually robbed of almost everything necessary to support life. The white men destroyed large sources of their food supply, particularly the caribou; but now the Government, in making amends for that action, is giving to the Eskimos another assured source of supply of food and clothing in the reindeer and the reindeer range will belong to them and to their children and to their children's children forever. This is a mark of confidence which the Eskimos will, I know, deeply appreciate and the advantages of which they will eagerly grasp.

But in order to avail themselves of the opportunity thus given into their hands, it will not be sufficient that a few Eskimos here and there do their work and perform their duty; it is necessary that the whole people faithfully determine each to do his or her part and thus the welfare and safety and security of all will be promoted and made certain; theirs will now be the responsibility, but accompanying that will be the assurance of outstanding benefit and advantage to the whole people if their work is well done.

Few native inhabitants of any country which has been taken over largely by an alien race have ever been granted the exceptional and unique opportunity which has thus been placed before the Eskimos, but I feel confident that they will gladly and eagerly and proudly accept the responsibility and opportunity which have thus been offered to them. They will be faithful to their trust.

While I have spoken largely of the Eskimos as if they would be the only natives of Alaska to be benefited by putting into effect the Reindeer Act, as a matter of fact those benefits will accrue to many of the natives of Alaska who are not racially Eskimos. While the Aleuts are sometimes classed as Eskimos, others consider them a separate race. I have in mind particularly that with the purchase of the non-native-owned reindeer, all of the Eskimos and all of the Aleuts and many of the other natives of Alaska will be able to share in the reindeer so purchased. It is expected that the widest possible distribution will be made of the reindeer so that every native of Alaska who desires and can use reindeer will be given a reasonable number of them. For some years past the natives of the Alaska Peninsula and Aleutian Islands region have been asking for reindeer, but none have been available. The opportunity is now at hand to secure the reindeer which they need. The same is true of at least one settlement of the natives of southeastern Alaska, who insist that they need reindeer and that the deer will survive and flourish in that area, and reindeer will be there, as elsewhere, of distinct advantage to the native economy.

For myself, Mr. Speaker, I am deeply grateful to the many friends in both House and Senate who contributed to this final and most happy outcome. I wish I could name them all, but the roll is too long. They have been indeed kindly and helpful and generous, sparing no labor to accomplish the end in view, but I know the others will not be hurt if I mention one without whose assistance we would be defeated and despondent. I refer to the able and beloved chairman of the Appropriations Committee, the Honorable EDWARD T. TAYLOR, of Colorado. I want every Eskimo of Alaska and every other native of Alaska to know, as I know, the debt that we owe the gentleman from Colorado [Mr. TAYLOR] not only for his sympathy and good will and boundless charity but for the persistent, effective, driving power in securing this appropriation. Other members of the Appropriations Committee and other Members of the House and Senate were friendly and helpful; and yet I know that but for the voice and the determination and the influence of the gentleman from Colorado [Mr. TAYLOR], the appropriation would not have been made and thus the whole plan would have been doomed to failure, whereas now we are on the high road to success.

Service Biography and Record of Hamilton Fish on Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. KEEFE. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following brief service biography and record of the gentleman from New York, Honorable HAMILTON FISH, on legislation affecting the interests of veterans and their dependents.

The gentleman from New York, Representative HAMILTON FISH, has served for 20 years in the House of Representatives from the State of New York, and has been a champion of the veterans in all matters affecting their interests which have come before the Congress during that time, having introduced many bills himself in their behalf, as the following record will attest.

This is but natural, as the gentleman from New York, HAMILTON FISH, is a descendant of a long line of patriots who have served their country in time of need. His great grandfather, Nicholas Fish, was a colonel under George Washington in the American Army of the Revolution and was an intimate friend of and executor for Alexander Hamilton. His first counsin, Sgt. Hamilton Fish, served with Col. Theodore Roosevelt's Rough Riders in Cuba, and was the first soldier killed in the American Army during the Spanish-American War.

No man in the Seventy-sixth Congress demonstrated his Americanism and love of country more than the gentleman from New York, Representative HAMILTON FISH, and in order that the country at large may know of his magnificent war

record and interest in veterans' legislation, I desire to incorporate in the RECORD the following short detailed summary of his record in behalf of the veterans and some of his outstanding achievements in their interest:

HAMILTON FISH

1913–16: Served as a member of the New York State Assembly, to which he had been elected as a Progressive follower of Theodore Roosevelt from 1913 to 1916. Attended Plattsburg training camp, 1915–16.

1917–18: Served throughout the World War as company commander of the Fifteenth New York Volunteers, later known as the Three Hundred and Sixty-ninth Regiment of Infantry. Awarded American Silver Star and French Croix de Guerre for gallantry in action near Sechault, France, in September 1918. Served as major of infantry in Fourth Division of the Army of Occupation and graduated from the Army General Staff College of the A. E. F.

1919: Discharged from United States Army. Attended the convention or caucus of the American Legion held at St. Louis as a delegate. Appointed chairman of committee of three that wrote the preamble to the American Legion constitution, which has not been changed in one iota to this day; termed by General Pershing as the most patriotic declaration since Lincoln's Gettysburg Address.

1920: Elected to Congress from Twenty-sixth New York Congressional District. Introduced immediately a bill to bring back the body of an unknown soldier for burial at Arlington, approved by Congress and signed by President Woodrow Wilson as the last official act of his administration on March 4, 1921. Introduced a bill to designate November 11, Armistice Day, as a national holiday.

1921: Advocated in Congress preference to veterans in civil-service examinations. Offered amendment for payment of adjusted compensation to veterans from interest payments made on the war debts by foreign nations. Submitted an amendment to the Sweet bill, which was adopted, to increase allowances for attendants or nurses for the blinded, legless, armless, and totally disabled ex-service men from $20 to $50 per month. Advocated and offered an amendment to provide for insurance payments to widows and dependents of veterans killed in action who failed to carry Government insurance. Introduced a bill authorizing the bestowal upon the Unknown Soldier to be buried in the Memorial Amphitheater of the National Cemetery at Arlington, in accordance with the provisions of the bill he had previously sponsored, the Congressional Medal of Honor and the Distinguished Service Cross.

Placed first wreath on the Tomb of the Unknown Soldier, as author of the bill and as representative of all World War veterans, on November 11, 1921, at ceremonies in the Memorial Amphitheater.

1922: Introduced bill providing transportation to parents and widows of deceased veterans buried overseas and who lost their lives in action. Advocated approval of plan of Allied Patriotic Societies to establish schools for the Americanization of aliens in this country. Submitted to Congress George Washington's views on payment of adjusted-service compensation to soldiers, in support of pending legislation. Advocated adequate hospitalization facilities for veterans.

1923: Introduced and helped to secure enactment of a bill creating a special House committee to handle veterans' legislation, known as World War Veterans' Legislation Committee of the House of Representatives.

1924: Introduced bill providing for appropriation for transportation, maintenance, and subsistence to and from burial places overseas for gold-star Mothers. Advocated 20-year endowment insurance for veterans of the World War. Sponsored bill for appropriations to relieve starvation conditions of women and children in Germany. Advocated additional hospitalization facilities for veterans. Introduced legislation to admit mothers and fathers of naturalized World War veterans who served in the United States Army during the war.

1925: Appointed chairman of a special committee to investigate fake veterans' relief organizations, not functioning in the interest of veterans; supported by American Legion, Veterans of Foreign Wars, Disabled American Veterans, and other legitimate veteran groups. Advocated erection of monument in France to the Ninety-third Division A. E. F. killed in action. Introduced bill to replace with granite the marble on Tomb of Unknown Soldier.

1926: Voted to override the President's veto of the bonus bill.

1927: Upheld loan value of adjusted-service certificates for loans through banks.

1928: Introduced bill providing for preference to veterans in civil-service examinations. Sponsored legislation to provide for monthly allowances to veterans confined in hospitals, for personal necessities.

1929: Appointed chairman of President Coolidge's Advisory Committee on Veterans' Preference. Recommendations of this committee resulted in issuance of an Executive order by the President granting preference to all veterans in United States civil-service examinations, and the precedent set was followed by many of the States.

1930: Appointed chairman of Special House Committee to Investigate Communist Activities in the United States. (Page 13 of "Isms," compiled by American Legion.) Mr. FISH has since been accorded the place of enemy No. 1 by the Communists, Nazis, Fascists, and so forth, for his continuous and aggressive speeches and actions in exposing subversive activities in this country and his championship of Americanism and our republican form of government. His efforts have been supported vigorously by all veteran groups. Secured passage of an amendment to the Census Act providing for preference to veterans in appointing enumerators, supervisors, and other census jobs.

1931: Advocated extension of emergency officers' retirement benefits, and the extension of compensation benefits to provisional officers who served during the World War.

1932: Defended the American Legion over the radio and through the columns of various magazines against charges of lobbying activities, etc. Advocated reduction of interest on loans on adjusted-service certificates to veterans. Introduced bill for readmission of aliens who served in the United States Army during the World War and providing for their naturalization; endorsed by the American Legion.

1933: Protested injustices done disabled veterans and dependents under President's economy program; advocated full restoration of benefits to veterans with service-connected disabilities.

1934: Voted to override the President's veto of legislation restoring compensation benefits to disabled veterans and defended the American Legion against attacks for demanding restoration.

1935: Introduced bill to reduce interest on loans made to veterans on their adjusted-service certificates.

1936: Secured adoption of an amendment sponsored by him for preference to veterans on all W. P. A. jobs; continued by present Congress.

1937: Defended right of American Legion to take strong stand on the Supreme Court issue in reaffirming its faith in an independent judiciary and constitutional government.

1938: Introduced bill to regulate the formation and activities of alien-controlled military groups in this country, including Nazis, Communists, and Fascists.

1938–39: Representative FISH was promoted to rank of colonel in Army Reserve Corps. He is the oldest veteran in point of service in the Republican Party in either the House or Senate. He is the ranking Republican member of the Committee on Foreign Affairs, one of the four Republicans serving on the powerful Rules Committee, and a member of the Republican steering committee in the House of Representatives, and is president of the American group of the Interparliamentary Union, which holds its annual conference at Oslo, Norway, this year, for the promotion of world peace.

1939: Introduced bill to reduce interest rates on loans made by veterans on Government life-insurance policies from 6 percent to 3½ percent. Led successful fight in the House for the arms embargo and maintenance of American policy of nonintervention, peace, and neutrality.

How High Is Our Cost of Government?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BENDER. Mr. Speaker, in 1938 the entire income of the western half of the United States, from the Mississippi River to the Pacific Ocean, was $17,696,000,000. A huge figure, indeed, yet in the same year Federal, State, and local governmental units of our Nation spent $18,000,000,000.

When we pause to ponder these almost incredible figures, we are struck with their implications. The Western empire, with its vast output of gold, silver, copper, wheat, corn, milk, cheese, potatoes, beef, sugar, coal, and lumber earned less in 1 year than it cost to operate our Government.

And further analysis gives us no source of comfort. From every dollar earned by the producers of our national wealth in 1938, 30 cents went to maintain the governmental units which we have created.

To be sure, this money spent by our governing officials went to many a valuable cause. For one thing, it served to keep our needy from acute distress. But those who imagine that this was the major expenditure on our national budget are in for a rude surprise. Of every $6 expended by our spending officers, only $1 went for relief.

Almost every other large increase in our spending program can be accounted for by study of the amazing increase in the Government services added to our burdens by fruitful

minds bent on augmenting the functions of Government in every area of public life.

In the last 7 years 67 new Federal boards, commissions, administrations, authorities, and agencies have been created to supervise the conduct of our business life. From shelling peanuts to producing steel, not an industry has been intentionally omitted by our governing agents.

Down in the Tennessee Valley huge, publicly owned electricity-producing dams have been built to compete directly with already existing private utilities. There are almost daily rumors in the Nation's Capital which place the Federal Government in new areas formerly served solely by private enterprise. The railroads, steamship lines, coal mines, oil wells—all of these have been prominently mentioned as ready for the hand of Government ownership—state socialism.

Apart from the wisdom or folly of these proposals, there is a highly important question, "Does our Nation want to expand its Government into these fields? Do the American people favor the destruction of private enterprise through agencies maintained and paid for by public taxation, which frequently is derived from precisely those enterprises which are marked for destruction?"

The question is simple. Shall we agree to pay out increased taxes to expand our Government? Or shall we seek to expand private business which pays those taxes directly and indirectly?

In 1940 the American people will have the opportunity to answer these questions. We are convinced that they will answer in favor of the traditional American technique—more business and less government.

Sweetpotatoes—Investigation and Control of Diseases

EXTENSION OF REMARKS

OF

HON. RENÉ L. DEROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

STATEMENT BY HON RENÉ L. DEROUEN, OF LOUISIANA, BEFORE THE HOUSE COMMITTEE ON AGRICULTURE, FRIDAY, MARCH 3, 1939

Mr. DEROUEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my statement before the House Committee on Agriculture on Friday, March 3, 1939, as follows:

Mr. DEROUEN. Mr. Chairman and members of the committee.

Mr. CANNON. Mr. DEROUEN.

Mr. DEROUEN. I am appearing in behalf of an agricultural commodity that perhaps we have never helped very much or appropriated any money for, and that is the rehabilitation of the sweetpotato industry throughout 22 States. I have a list here of the production by States and years, the acreage harvested, the yield per acre, the production, and the value of production, which I would like to include in the record if it is agreeable, Mr. Chairman.

Mr. CANNON. How many pages does it cover, Mr. DEROUEN?

Mr. DEROUEN. It is very short.

Mr. CANNON. That may be included in the record.

Mr. DEROUEN. I secured this from the Department of Agriculture. The table referred to is as follows:

Sweetpotatoes

State	Acreage harvested			Yield per acre			Production			Value of production	
	Average 1927–36	1937	1938	Average 1927–36	1937	1938	Average 1927–36	1937	1938	1937	1938[1]
	Acres	*Acres*	*Acres*	*Bushels*	*Bushels*	*Bushels*	*Bushels*	*Bushels*	*Bushels*		
New Jersey	14,000	17,000	14,000	137	142	105	1,980,000	2,414,000	1,470,000	$1,714,000	$1,470,000
Indiana	4,000	4,000	3,000	103	125	115	398,000	500,000	345,000	475,000	310,000
Illinois	6,000	6,000	6,000	85	85	108	501,000	510,000	648,000	388,000	356,000
Iowa	3,000	3,000	3,000	87	90	100	228,000	270,000	300,000	289,000	270,000
Missouri	11,000	14,000	12,000	82	85	85	852,000	1,190,000	1,020,000	1,035,000	714,000
Kansas	5,000	3,000	3,000	99	80	125	470,000	240,000	375,000	233,000	281,000
Delaware	7,000	6,000	5,000	127	130	100	865,000	780,000	500,000	491,000	350,000
Maryland	8,000	8,000	8,000	144	125	130	1,205,000	1,000,000	1,040,000	640,000	780,000
Virginia	37,000	39,000	34,000	116	130	105	4,282,000	5,070,000	3,570,000	3,042,000	2,142,000
North Carolina	83,000	80,000	81,000	97	96	108	7,915,000	7,680,000	8,748,000	5,683,000	5,686,000
South Carolina	53,000	57,000	66,000	85	90	80	4,898,000	5,130,000	6,468,000	3,796,000	4,204,000
Georgia	109,000	114,000	123,000	74	75	75	8,001,000	8,550,000	9,225,000	8,806,000	7,841,000
Florida	22,000	21,000	20,000	72	65	70	1,548,000	1,365,000	1,400,000	1,324,000	1,330,000
Kentucky	20,000	24,000	24,000	82	90	95	1,639,000	2,160,000	2,280,000	1,771,000	1,710,000
Tennessee	57,000	55,000	53,000	90	102	103	5,126,000	5,610,000	5,450,000	3,815,000	3,275,000
Alabama	86,000	100,000	107,000	83	88	80	7,071,000	8,800,000	8,560,000	8,272,000	6,848,000
Mississippi	74,000	82,000	87,000	94	92	89	6,819,000	7,544,000	7,743,000	6,563,000	5,807,000
Arkansas	37,000	37,000	43,000	78	95	75	2,828,000	3,515,000	3,225,000	2,847,000	2,419,000
Louisiana	92,000	90,000	99,000	71	73	70	6,494,000	6,570,000	6,930,000	4,533,000	4,504,000
Oklahoma	18,000	17,000	21,000	70	70	70	1,298,000	1,190,000	1,470,000	1,226,000	1,250,000
Texas	64,000	52,000	58,000	74	72	75	4,748,000	3,744,000	4,350,000	3,519,000	3,262,000
California	11,000	11,000	13,000	102	111	117	1,108,000	1,221,000	1,521,000	1,734,000	1,673,000
United States	824,000	840,000	883,000	86.1	89.3	86.8	70,274,000	75,053,000	76,647,000	62,186,000	56,482,000

[1] The 1938 price and value figures are preliminary.

Mr. DEROUEN. Then I have another record showing the losses that have occurred due to field losses, storage losses, black-rot losses, and wilt losses.

Mr. CANNON. Yes; that may be included in the record.

The table referred to is as follows:

Sweetpotatoes—estimated losses from diseases

	5-year average 1928–32		1936–37	
	Bushels	Value	Bushels	Value
Field disease losses (all diseases)	6,497,500	$5,652,830	7,900,000	$6,840,000
Storage losses (all diseases)	7,915,380	6,826,380	2,670,000	2,310,000
Black-rot losses	2,678,000	2,330,190	----------	----------
Wilt losses	1,963,620	1,708,350	----------	----------

Loss, $16,517,750.

Mr. DEROUEN. I would like to have both of those included in the record, because they are from the Department. This is an agricultural commodity which we believe, through experiments in our university, could be rehabilitated and brought up so that it would bring in a good revenue to the farmers in the form of adding to the diversification of their farm products.

In the scientific experiments we have carried on, progress has been made by mutation and asexual breeding of sweetpotatoes causing them not only to bloom but seed as well, which is something new. I do not think we have ever done that in this country before. Now, you might ask, "Why was that necessary?" Sweetpotatoes have a tendency to acquire the diseases that are in the land and that is the only means by which we can control diseased roots, soil and stem rot, and other diseases and insects.

Then, we have gone further than that. Experiment has shown we can control the size of the potato, making it more uniform, and also increase the nutritive or food value of the potato, such as dextrine and sucrose and other elements.

Mr. LEAVY. Mr. DEROUEN, are you actually raising sweetpotatoes now that you grow from the seed instead of the slip of the plant?

Mr. DEROUEN. Yes, sir. We are doing so now, and my purpose in appearing before the committee is to ask that a small amount of help and financial assistance be given the universities to carry on this good work. We are not asking your committee to buy any land or establish any set-up. The colleges have the set-up but they will need about $80,000 to carry out the work and pass on this valuable information and these methods to the other States.

Mr. LEAVY. I do not think they will ever arrive through scientific investigation at the point where they will be able to produce sweetpotatoes from the seed.

Mr. DEROUEN. Yes, sir; we have done it. It is not a question any more. It has been done.

Mr. LEAVY. But they have not demonstrated it on a basis broad enough yet to say that it is practical?

Mr. DEROUEN. Yes; I think we have. What we are trying to do now is to pass this on to the rest of the 22 States, which are New Jersey, Indiana, Illinois, Iowa, Missouri, Kansas, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas, and California.

Mr. DIRKSEN. You are asking for an increase of what amount, Mr. DEROUEN?

Mr. DEROUEN. We are not asking for an increase. This is a new item.

Mr. DIRKSEN. It is a new item?

Mr. DEROUEN. Yes, sir. I am asking that you approve this item and include it in the appropriations for the Bureau of Plant Industry under project 4, "Vegetables investigation, Bureau of Plant Industry, Department of Agriculture" (p. 210, 1940 Budget of the United States).

Mr. DIRKSEN. It has never been submitted to the Budget, has it?

Mr. DEROUEN. Yes, sir.

Mr. DIRKSEN. It has?

Mr. DEROUEN. It has been submitted to the Bureau of the Budget. I submitted it myself, and you will have estimates here on it. The figures on losses, from the Department of Agriculture, show that from 1928 to 1932 the losses were $16,517,750 from field disease, storage, black-rot, wilt, and so forth. Now, that deals specifically with only the four diseases mentioned above. In marketing sweetpotatoes, at this time we can only market about 50 percent of our production, because in grading about 50 percent are classed as culls due to the size and shape of the potato itself. The potato is crooked in shape, it is too large or too small, and not being uniform in size cannot qualify under United States grading.

Reverting to the matter of the submission of this item to the Budget, Mr. Chairman, I have here a copy of a letter under date of February 28, 1939, which I addressed to Mr. Daniel W. Bell, Acting Director, Bureau of the Budget. The letter is as follows:

"DEAR MR. BELL: Enclosed herein please find clipped pages from the CONGRESSIONAL RECORD of February 1, 1939, containing my speech on sweetpotatoes and the importance of the continuation and expansion of the research work now being conducted in connection therewith.

"The purpose of my speech and my writing you is to obtain an appropriation for this work so that the present studies and experiments at Louisiana State University may be continued, a better potato produced, and additional cash income put into the pockets of the small farmers of the twenty-odd potato-producing States. I will greatly appreciate your giving this matter your serious consideration and immediate attention with a view of submitting an estimate to the House Committee on Appropriations as to the amount of money that can be profitably expended in furthering the experiments presently being conducted. This is of vital importance to us and I am sure you will appreciate the urgency of the situation and will make your recommendation as soon as possible, so that it may be considered by the committee on the hearings on the 1940 Department of Agriculture appropriation.

"This appropriation item should be included in project No. 4, 'Vegetable investigation, Bureau of Plant Industry, Department of Agriculture' (p. 210, 1940 Budget of the United States).

"I am of the opinion that $80,000 would be adequate and cover the 21 sweetpotato-producing States, as I understand each State has its own set-up and necessary land for the experiments. I am not seeking any funds to purchase lands, merely sufficient moneys to conduct the experiments themselves.

"In closing I would again reiterate that these experiments are to be conducted by the Bureau of Plant Industry, Department of Agriculture, at Louisiana State University and other State universities of the sweetpotato-producing States, which, I understand, have the necessary lands and set-up required.

"Thanking you for your cooperation, with best wishes and kind regards, I am,

"Sincerely yours,

"RENÉ L. DEROUEN, M. C."

Mr. TARVER. Mr. DEROUEN, I am sure the committee is very much interested, and I know I am, but I did not hear your statement on account of the confusion in regard to the items that you desire increased.

Mr. DEROUEN. It is a new item.

Mr. TARVER. A new item?

Mr. DEROUEN. Yes; a new item, and you have never appropriated any money for that purpose before.

Mr. TARVER. How much do you desire for this item?

Mr. DEROUEN. I am told by the horticulturist at the university that about $80,000 will carry on all of the work, because they have the buildings and equipment and there is no necessity of purchasing any land.

Mr. TARVER. Under what bureau or what subdivision of the Department of Agriculture would this be carried on?

Mr. DEROUEN. Under the Bureau of Plant Industry.

Mr. TARVER. What subdivision?

Mr. DEROUEN. This is under project 4—included in project No. 4 under the Budget.

Mr. LEAVY. You say they are going to go to the Budget and get an estimate for it?

Mr. DEROUEN. Yes; I have requested Mr. Bell, of the Bureau of the Budget, to furnish the estimate.

Mr. CANNON. It has not yet been received.

Mr. DEROUEN. I understand it has not been sent over yet.

Mr. TERRY. How much have you asked?

Mr. DEROUEN. We have asked for $80,000, and think that we can carry on the work with that amount of money. It is a very small item, but it will lead toward further uses of the sweetpotato and its byproducts. I will give you an illustration of what I mean. Now, where I live we can raise 100 bushels of corn to the acre without any fertilizer at all, down there in the Mississippi Valley, but it has so much water that we cannot use the corn at all. Consequently we do not raise any corn for the market. We could raise alfalfa very profitably, and dispense with all of our sugarcane land, but here again the question of overhumidity enters. When we attempt to take the water out of it we raise the cost so high that we are not able to compete with alfalfa grown elsewhere. What I am trying to bring to your attention is the contribution that you can make to those farmers in every State by appropriating this small sum of money to further these experiments. To the farmers potatoes are just potatoes. They are not uniform. There is no attempt made to improve the potato.

Mr. CANNON. Have you tried dehydration in potatoes, corn, and alfalfa?

Mr. DEROUEN. No; not in potatoes; I merely cited corn and alfalfa to show you what we have to contend with. We can build up sweetpotatoes just as we did our sugarcane. After we have standardized them for markets I think we can manufacture a starch which will not harm the other starch, made of corn, and so forth, but it will take the place of sago, tapioca, and all of those starches that we bring into the country from abroad.

Mr. CANNON. What amount of sweetpotato starch is used in the production of mucilage at the present time?

Mr. DEROUEN. Well, I don't know, but I think very little.

Mr. CANNON. It is my understanding that all of the mucilage used by the Bureau of Printing and Engraving is a potato product.

Mr. DEROUEN. They use sago and they use various kinds of starch, I believe.

Mr. DIRKSEN. Insofar as the adhesives that are used by the Government now for postage stamps and other purposes are concerned, they are made from tapioca starch, which is imported by Baltimore firms from the Dutch West Indies.

Mr. DEROUEN. I think we bought about 240,000 tons in 1937 of those foreign root starches.

Mr. CANNON. What is the difference between these two samples of starch? They are both sweetpotato starches and they are both from the Laurel starch plant.

Mr. DEROUEN. There is no difference.

Mr. DIRKSEN. One of them rubs off on the fingers a little bit more than the other.

Mr. CANNON. These are all samples of the same starch?

Mr. DEROUEN. Yes; they are all samples of the same starch.

Mr. CANNON. And it is made from sweetpotatoes?

Mr. DEROUEN. Yes, sir.

Mr. LEAVY. It is my recollection that last year we increased the item for investigations at Laurel, Miss.

Mr. DEROUEN. Yes, sir; that is correct.

Mr. LEAVY. They have been carrying on work there that has proven quite valuable to the people in this industry.

Mr. DEROUEN. That is correct.

Mr. DIRKSEN. Since Mr. DEROUEN has made an observation on

Mr. DEROUEN. That is correct.

the amount of foreign starch used in this country, last year the Department of Commerce advises me that 466,000,000 pounds of tapioca and sago starch were imported from the West Indies, and virtually all of the starch used for sizing in the cotton mills of this country was imported.

Mr. TARVER. The man in charge of this Laurel plant testified the other day that they are producing a product which is a satisfactory substitute for the foreign starches, and that they produced 2,000,000 pounds last year, and they have the capacity for a larger market.

Mr. DIRKSEN. We are bound to have tapioca starch on the free list under the agreements with the Netherlands.

Mr. DEROUEN. We do not produce the potatoes now that we would be producing under this scientific research. The present potato throughout the United States carries about 16 to 18 percent starch

on the average. What we would have to do is raise the starch content in the potato to 30 percent without disturbing the food value. We shall also have to carry on further experiments with the byproducts because that is the most valuable.

Mr. CANNON. That is where the real profit lies—in the byproduct.

Mr. DEROUEN. Yes; we are experimenting with the byproduct. Give us the money to scientifically improve the potato, and we can show you very conclusively that we have developed a sweetpotato that will meet those conditions, and also protect the potato against all diseases. We are not prepared to do it by ourselves, as it is too expensive. In grading your potatoes to No. 1 grade you lose about 50 percent of them on account of the variation in size and lack of uniformity in shape. We are trying to carry on this experiment in such a way that we will not lose the food value of the sweetpotatoes and protect the land from infection. Some of the advantages of this project will be that the farmer can sell at any time a few crates or a few bushels of No. 1 sweetpotatoes out of his crop.

Mr. LEAVY. If you could bring that starch content up to 30 percent, would you then be able to capture the whole American market against the foreign market?

Mr. DEROUEN. That is what we want.

Mr. LEAVY. You think you could do that even though the starches coming in from abroad are on the free list?

Mr. DEROUEN. That is correct, because we would have reduced the cost of it by protecting the land and also improve the quality; we can save $21,000,000 a year in raising the standard of the sweetpotato. Take sugarcane: We brought the sucrose content up from 10 or 12 percent to about 20 or 30 percent.

Mr. LEAVY. You would not need a tariff wall to protect starch?

Mr. DEROUEN. I do not care to bring the tariff in now.

Mr. LEAVY. I know, but Mr. DIRKSEN stated it is on the free list.

Mr. DEROUEN. Yes; it is on the free list.

Mr. LEAVY. Even though foreign starch is on the free list, it is your contention that if you raise the sweetpotato starch content to 30 percent you can drive the foreign seller off of the market?

Mr. DIRKSEN. You are not going to drive him off the market with the rate at which tapioca can be bought today.

Mr. DEROUEN. Yes; we would have to have some protection, either by reciprocity or tariff or something like that, but above all we must standardize and bring the sweetpotato to a higher standard, as well as protect the land from diseases, insects, and infection before anything can be done.

I want to specifically call your attention again to the fact that this money is not needed to buy land or equipment.

Mr. CANNON. It is all to be spent in personnel, is it, Mr. DEROUEN?

Mr. DEROUEN. It is all to be spent in personnel and equipment for the experiments.

Mr. CANNON. You will require material and equipment?

Mr. DEROUEN. Yes.

Mr. CANNON. Will some of this be in the nature of capital investment or a recurring item?

Mr. DEROUEN. Well, I do not know. I think most in capital investment, and do not believe it will be a recurring item.

Mr. CANNON. Is there any further inquiry?

Mr. DEROUEN. In conclusion, gentlemen, permit me to state that my prime purpose or motive is to secure sufficient money to continue experiments and work which will bring about the standardization of the sweetpotato, the control of soil rot, stem diseases, insects, and other blights, thereby increasing the income of the small farmers of the sweetpotato-producing States and at the same time put into cultivation much idle land which has been withdrawn from cultivation of the five major farm commodities or crops. The increase of the starch content of the potato for commercial purposes is secondary and does not enter the picture until later, when sufficient good potatoes are being produced. Mr. Chairman, if you will permit me to insert this table on the importation of cassava and sago in the years 1933, 1934, 1935, 1936, and 1937, I should appreciate it.

Mr. CANNON. When you revise your remarks, you may include that material in the record.

Mr. DEROUEN. Yes.

The data referred to are as follows:

United States importation of starches

[In thousands of pounds]

Year	Cassava [1]	Sago [2]
1933	190,302	12,317
1934	176,109	12,761
1935	202,112	24,806
1936	269,504	36,434
1937	432,858	33,470

[1] Figures are for tapioca (cassava), crude, flour, and prepared.
[2] Figures are for sago, crude and flour.

Mr. DEROUEN. I also desire to submit for inclusion in the record a copy of my speech on sweetpotatoes, from page 1046 of the CONGRESSIONAL RECORD of February 1, 1939, which is as follows:

"At the Louisiana State University we have been doing extensive research work in an attempt to control the many diseases and insects which are peculiar to sweetpotatoes. As you know, the sweetpotato is a tuber and is apt to contract rot from roots and infections in the ground. At this time we have produced by experiment a sweetpotato that will bloom as it has never done in this country—and will produce seed, and this is something new. We believe that by further research along the lines that we have been carrying on at the university we can furnish throughout the United States seed which can be controlled. Sweetpotatoes more or less have a tendency to acquire the diseases that are in the land, and by breeding we can treat it so the diseases will not be transferred to the new area or to the next potato that comes along. We also have in mind controlling the sizes, and we believe that through the experiments we are carrying on in Louisiana we can produce an attractive potato instead of irregular, small, or crooked potatoes.

"I believe the sweetpotato industry should be delved into more thoroughly, so we may make use of some of the lands that are lying idle, and, for instance, because we may not be permitted to raise more of one crop or another, we should substitute in one crop what we lose in another.

"The sweetpotato is the most important single food and feed crop in the South. It is outranked only by the Irish potato as a vegetable crop for the entire Nation. It has often been said that had it not been for the sweetpotato on many occasions a large portion of the population would have gone hungry. The sweetpotato has also aided greatly in supplying food for armies of the Revolution as well as for later conflicts.

"As a food, it is a particularly balanced one. It contains practically all of the growth vitamins; it is reasonably high in proteins; and is particularly high in carbohydrates, such as dextrins and sucrose.

"The sweetpotato was originally introduced from the more tropical areas of North America, probably from the West Indies, and when brought under conditions of continental North America it rarely, if ever, produced seed, and therefore it has been reproduced asexually from the time it was originally introduced. Any improvements in this crop have resulted from vegetative mutations, therefore systematic improvement has been slow.

"Realizing the great importance of the sweetpotato crop, the Louisiana Agricultural Experiment Station has made every effort to improve it in Louisiana, and in the past 2 years methods have been worked out for inducing the sweetpotato to bloom and set seed under Louisiana conditions. The past season we have been able to grow around 1,500 seedlings, and for the coming year we will probably have around 4,000; whereas, in reality, under an expanded breeding program, we should have at least 15,000. Due to limited equipment and manpower, our program has been hampered materially.

"Our purpose in breeding the sweetpotato are threefold:

"First. To improve the nutritive value, market quality, and shape. This would include breeding for high sugar and vitamin content and for a very uniform shape. Most of our varieties are very ill-shaped, and the growers are able to market only about 50 to 60 percent of the crop.

"Second. To breed varieties having a higher starch content than existing varieties. The importance of starch is increasing in Southern States. We are now importing over $9,000,000 worth of cassava starch per year, used primarily in the South in the manufacture of paper and in the textile mills, which could be made from the sweetpotato. Incidentally, this cassava starch is coming in duty-free under the name of cassava flour. To produce higher yields of starch would require varieties bred for that purpose. Good starch varieties should yield from 20 to 30 percent starch. Table varieties usually run around 16 to 18 percent starch.

"Third. To breed varieties resistant to diseases, such as the soil, stem, and black rots. These diseases are taking a heavy toll at the present time. The soil rot in particular is threatening the sweetpotato-producing areas of Louisiana, while the stem and black rots are more severe in other important sweetpotato regions of the country.

"Systematic and rapid progress with the above three items can only be made through sexual breeding.

"To indicate the great interest in the sweetpotato-improvement program delegates from practically every Southern State and representatives from States as far north as Delaware, Indiana, Iowa, and Kansas have made special trips to the Louisiana Agricultural Experiment Station to study the work under way there. They are anxious to see the work expanded so that they might take greater advantages of the work now under way.

"We have here a challenge to American enterprise, and especially to the South, where the sweetpotato could be grown in unlimited quantities and of superior quality. The maximum capacity of the Southern States for sweetpotato production is not known. Sweetpotato growing has been more than a minor farm industry.

"Never before has an appropriation been requested for this important crop. It has been estimated by the growers and horticulturists interested in the improvement of the crop that the expenditures necessary to take care of the need for improvement of this crop in the various States would require an annual appropriation of only $80,000.

"In closing, I wish to urge the representatives of the various sweet-potato-producing States to join with me in appealing to the Appropriations Committee for the needed $80,000 which is necessary to carry on the investigations and research now under way. This sum should be included as an item in the Department of Agriculture appropriations bill."

CHLOROTIC STREAK, A VIRUS DISEASE OF SUGARCANE, REPORTED IN LOUISIANA

Mr. DEROUEN. I also wish to call your attention to another emergency existing in sugarcane. In May 1928 chlorotic streak, a serious virus disease of sugarcane, was identified and reported in Louisiana by an expert of the Department of Agriculture. Since the Plant Quarantine Act was passed in 1912, no other major disease of cane has entered the United States, with the possible exception of mosaic, which may have been introduced about 1912. The manner in which chlorotic streak reached the commercial cane area of the South is not known, but the supposition is that it was brought on cane cuttings by some individual in ignorance of the law. The disease does not exist at the Federal or State experiment stations, which are the only legally constituted agencies for importation of new varieties of cane.

Mosaic, also a virus disease, brought virtual ruin to the industry, the production of sugar falling from several hundred thousand tons per year to a low of 45,000 tons in 1926, after which there was a gradual rise in production due mainly to the development of resistant varieties by the Department of Agriculture. Mosaic remains a major problem in seven States of the South. Great progress has been made in restoring production, but thus far no completely immune varieties have been produced by breeding, and the disease therefore persists.

One of the main projects of the Department of Agriculture's Division of Sugar Plant Investigation is breeding for immunity to mosaic, which is the only hope for complete elimination of the disease.

Chlorotic streak is apparently a disease of similar nature, but very little is known about it except that poor germination of seed cane and consequent faulty and deficient stands result from planting infected seed cane. This effect of chlorotic streak is a serious complication in the Southern States, because replanting is impossible due to limited season for making the crop. In Queensland, Hawaii, and Puerto Rico, where the disease has also recently appeared, serious losses may occur, but within time limits the crops may be replanted if serious stand failure results from the original planting of seed cane.

Another disastrous consequence of chlorotic streak common to all countries is failure of the ratoon crops—that is, the crops harvested in succeeding years from an original planting of seed cane.

Nothing is known of the manner in which the disease is spread to healthy plantations, the resistance or susceptibility of local commercial cane varieties to the disease, the environmental conditions of soil, nutrition, rainfall, and so forth, that favor or retard spread of the disease, or, in fact, any of the essential information on biology of chlorotic streak that would suggest means of combating or eliminating it.

It is fortunate that up to the present chlorotic streak is apparently restricted to the area east of the Atchafalaya River in Louisiana. The disease was not found in Mississippi, Alabama, Georgia, or Florida in rapid reconnaissance survey during the latter part of the past season, but the survey, due to lack of special financial provision for it, was not very complete. The tentative assumption is that in some manner unknown the disease was brought into an area centering in the southeastern part of Louisiana and gained a foothold there in the very recent past. From careful observations of the past few months it is proved that under our conditions the disease spreads to new plantings; and that fact, together with the fact that it causes poor germination, faulty stand of plant cane, and more serious injury to ratoon crops, comprises about all that is definitely known.

The situation parallels the accidental importation of mosaic which brought such great havoc and ruination to scores of thousands of farmers who depended upon cane for cash income. In the case of chlorotic streak, an earlier identification of the disease and more prompt realization of the danger makes possible the avoidance of the former disastrous experience.

An immediate study of the disease to establish the cause, manner of spread, relative effect on present commercial varieties, possibility of breeding resistant varieties, or the evolving of other measures to check or eliminate this serious threat to the industry is urgently needed. Alertness to recognize this new threat may justly be attributed to the wise provision of experts by the Congress for study of the cause of mosaic. The specialists trained in that work have made progress but are still preoccupied with a more satisfactory ultimate solution, the development of completely immune varieties, and cannot be diverted from it without sacrifice of essential features of the project.

It is the studied opinion of a committee representing 19,000 sugarcane farmers that provision for immediate, adequate study of chlorotic streak be made to prevent a repetition of the disastrous experience with mosaic and that an emergency appropriation of about $35,000 be made for that purpose. This is an emergency, gentlemen.

Thank you, Mr. Chairman and gentlemen of the committee.

Bill to Curb Expansion of Interstate Foreign-Owned Chain Stores, H. R. 1, Will Be Considered by Congress at the Commencement of the Next Session, January 3, 1940—Now is the Time for All Friends of This Measure to Let Their Wishes Be Known to the Members of the House of Representatives and of the United States Senate—It is Recognized That Social as Well as Economic Problems are Involved in This Major Issue

Definite trend in this country against invasion of local communities by absentee owners.

Concentration of money and credit through foreign-owned chains is threatening the continuance of our form of government.

Foreign-owned interstate chain companies are attempting to hide behind the several thousand local chains that will not be affected by the passage of H. R. 1 in their attempts to mislead and deceive the people into believing that the general welfare of the people will be promoted by Wall Street interests being permitted to exact a tollgate fee from every local transaction.

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. PATMAN. Mr. Speaker, I am assured that consideration will be given to H. R. 1, a bill providing for a Federal tax on foreign-owned chain stores, when Congress meets January 3, 1940. The bill is pending before the Ways and Means Committee of the House.

TRAINED DECEIVERS

I will present my answer to some of the questions that are propounded daily relative to this very important bill, about which a campaign of misrepresentation is being carried on by highly paid truth evaders, fact distortionists, and trained deceivers.

NET PROFITS TAKEN AWAY FROM LOCAL COMMUNITY

We are "dead set" against the interstate foreign-owned chains that milk the community dry by taking money in the form of net profits away from local towns and local banks and by crushing out the life of independent business. Such chains are neither economical, efficient, nor in the public interest.

The Robinson-Patman Act, which greatly benefits the independent merchant and the public, does not prohibit the chains from using profits from many stores in towns where they already enjoy a monopoly to enable them to sell goods at a loss in another town until the independent merchants in that town are put out of business. That is why the Federal chain-store tax bill is necessary.

INDICTMENTS AGAINST INTERSTATE CHAINS

Here are a number of direct indictments against the interstate absentee-owned chain systems:

They are the products of a few monopolistic money masters of Manhattan.

Cost of food is higher in chain-controlled towns and communities.

They do not contribute to local relief, local schools, churches, or charities, except a miserly sum—entirely out of proportion to their business—in an effort to buy goodwill.

They break down local rent schedules by destroying the independent merchants.

They compel our boys and girls to work for absentee owners for long hours at starvation wages.

They crush out labor as monopoly invariably does.

They are draining capital from local towns.

They destroy the independence and self-reliance that built this Nation.

They do not create. They take away what others have created.

They never guarantee a doctor bill for an unfortunate employee.

They take away local privileges and opportunities that formerly enabled local citizens to assume local relief assistance and responsibility.

They never send an unnamed Christmas basket to a poor family.

They never fail to beat down the price of farm products.

They are the first to arrive after a town is built and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disaster.

They charge different prices in different cities in the same State, and even in the same city, according to competition from the independent merchant across the street who is marked as the next victim.

They owe their growth to chiseling, cheating, racketeering methods, wrecking others to build themselves.

They never operate in a distressed community.

They never render temporary assistance in the form of credit to any citizen.

They never pay their just and fair share of taxes in proportion to their volume of business.

They have never raised the standard of living in any community. Absentee control of business is a detriment to the future welfare of all classes and there is no class or group that escapes its detrimental effect upon our economic life.

Net profits from farms, mines, or business are the only means of building towns, cities, and States. These net profits—under the chain system—fly overnight to New York.

Every dollar that is taken from your State or mine in net profits is a loss of many times that $1 in buying power to the local residents.

Net profits remaining in the community and deposited in the local bank circulate many times a year among local citizens.

FINANCE MORE WIVES OF FOREIGN COUNTS

Chain-store net profits go to distant owners to buy automobiles there, not in our community; to build schools and churches there, not in our community; or to finance more wives of foreign counts, who will spend such profits not in America but in foreign lands.

CHANCE OF PASSAGE

Question. Is there a good chance to pass H. R. 1 at the next session of Congress?

Answer. Yes. However, success will depend upon the interest manifested by the people. If each person who is interested in this legislation assumes an air of indifference or a "Let George do it" attitude, the bill will not have a chance. If the good fathers and mothers of this country, who want their sons and daughters to have a fair and equal opportunity in life, take the proper interest in this bill, and if the people of this Nation who are opposed to monopoly make the fight that should be made for this bill, there is no doubt about its passage at the next session of Congress. After all, it is just a question of reaching the people with the truth about the conspiracy among a few Wall Streeters to obtain control of retail distribution in this country and calling their attention to what the destructive consequences will be. If the people get the facts, public sentiment will compel the passage of this bill.

HOW YOU CAN HELP PASS H. R. 1

Question. How can I, as a local citizen, help in the campaign to secure the enactment of H. R. 1?

Answer. I would suggest that you endeavor to convince your Representative in Congress and your two United States Senators that the enactment of this bill is in the public interest. I do not recommend coercion, intimidation, or threats as a method to be used; in fact, neither should be resorted to. I do recommend the use of logic and reason. Since you have the right side, you do not have to use unfair methods and underhanded tactics. The most effective work can be done from home by your cooperating with neighbors and friends in an effort to convince your Representatives and Senators in Congress that the cause is just and right and that the bill should be passed. Anything printed in the CONGRESSIONAL RECORD may be quoted and reprinted without special permission. This is not a political campaign; it is a crusade. We must gospelize our cause, which we know is just and right. A few letters from honest-to-God folks back home who have vision and who can vividly picture the evil consequences of absentee ownership to a Member of Congress have more weight and influence than thousands of inspired telegrams. More than 150 Members of the House have stated to constituents that they expect to vote for this bill.

CANDID FACTS

Next year is Presidential election year. If we make a good showing in January, we have an excellent chance of getting this bill passed before the Democratic and Republican conventions in June of next year. Everyone interested in this legislation should contact his Member of Congress between now and January and fully inform him of the necessity of this legislation. He should also confer with his two United States Senators. Not only that; he should make sure that the ones who represent his district and State at the Democratic and Republican conventions next year are in sympathy with the objectives of this legislation. In this way there are two chances. The first is to get the bill passed in Congress before the conventions meet; and the next is, if we should fail in that, to make it such a paramount issue that both major political parties will advocate our proposal in the Presidential campaign of next year.

Question. Some newspaper correspondents are carrying the statement that H. R. 1 does not have a chance of passing Congress. Is the statement true?

Answer. That is the stock phrase always used by the opposition to a bill—"It does not have a chance." It is very effective sometimes in preventing people from joining in a fight that would meet with success were their efforts joined with others who knew differently. The selfish interests said the same thing about the Robinson-Patman Act and thought they had silenced the sentiment in favor of the bill in that way. Its enactment came like a thunderbolt out of a clear sky. People who are interested in economic changes, that are opposed by those who have considerable control over the press and by those who use much paid time over the air, should be on guard against such propaganda and not be influenced by it.

This is the third national campaign that I have assisted in conducting. The two former ones were successful—one involving millions of men—World War veterans—and billions of dollars, and the other, the Robinson-Patman Act, which affected millions of people and denied to the greedy few the advantages equal to hundreds of millions of dollars a year which they were not justly entitled to receive. I predict success in this campaign, as we have considerably more support in behalf of this bill than we had for either of the others.

This is not a "share the wealth" proposal, but it is a bill providing for sharing the privileges and opportunities.

INDEPENDENTS GAINED IN 1939

Question. The interstate chains through their lobbying headquarters claim that two States, during the year 1939, nullified chain-store-tax laws and that this shows public sentiment is in favor of the chains. Is this claim well founded?

Answer. During the year 1939 the interstate chains have spent millions of dollars in public-relations work and for lobbying before Congress and the legislatures of 44 States that were in session. The independent merchants did not have a coordinated program during 1939, but depended upon spontaneous support of the people. Two States—Kentucky

and Pennsylvania—had chain-store-tax laws that were declared unconstitutional by the State courts in 1939. Public sentiment had nothing to do with these decisions. They relate only to opinions of courts to the particular type laws that the courts passed upon.

During 1939, when these 44 State legislatures were in session, and each of these 44 States having anti-chain-store laws on their statute books, not one of these laws was amended or repealed in favor of the chains.

If the independent merchants can hold their own so well at a time when so much money has been spent against them and with no coordinated program of any kind of their own, they certainly should be in a good position to obtain overwhelming public sentiment in their favor when they really reach the people with the truth in behalf of their cause which is the people's cause.

Not only did the independents hold their own but actually during 1939 four State legislatures amended their chain-store-tax laws by increasing the taxes on foreign-owned chain stores.

The fact should not be overlooked that during the year 1939 when 44 State legislatures were in session there were numerous bills before these legislatures providing for the repeal or weakening of anti-chain-store laws and other bills that would be helpful to foreign-owned chains but not one was enacted into law and not one passed either house of any legislature.

The Wall-Street-owned chains were unsuccessful in all their efforts in 1939 after spending millions of dollars in a 100-percent organization. The independents had no organization, spent no money, but actually succeeded in making substantial gains in four States and suffered no losses.

OPPOSED BY FOURTEEN AND ONE-HALF BILLION DOLLARS

Mr. Carl Byoir, president of Carl Byoir Associates, Inc., and public relations counsel for the Atlantic & Pacific Tea Co., made a speech at Rye, N. Y., September 19, 1938, before the members of the National Association of Chain Drug Stores, in which he, according to the printed proceedings, stated:

I have clients in American industry with assets of $14,500,000,000.

How much is $14,500,000,000? It is twice as much as all the money in circulation in the United States. It is equal to the value of all the retail stores in the United States. It is equal to the value of all the public utilities in the United States. I estimate that this vast aggregation of wealth includes 90 percent of all the national advertising in this country.

Why do Collier's, Saturday Evening Post, Chicago Tribune, and many other large publications want big concerns instead of small ones? The answer is simple. If the citizens of every town owned its own telephone company, these publications would not get thousands of dollars a day or week for full-page advertisements from one national telephone concern. Instead the local newspapers all over the country would benefit from such advertising. If any line of business or industry is owned or controlled by a few people in one city the owners of the big newspapers and magazines have little trouble and practically no expense obtaining advertising of tremendous value to them. Whereas if such business is separated into smaller units and scattered over the country, the smaller newspapers get more of the advertising and the larger ones less. It is in the selfish interest of the owners of the means of communication, including the newspaper and magazine, the radio, and the news reel, that a few people control all business, industry, and banking. Therefore they may be expected to oppose any proposed law that will retard, restrict, or prevent absentee or foreign ownership of business.

This fourteen-billion-and-five-hundred-million statement by Mr. Byoir was evidently made for the following purposes:

First. To let the newspapers of the country know that he controls enough advertising to determine whether or not any one newspaper which is dependent upon advertising is able to survive in business. By making this threat, newspapers that are dependent upon advertising for support will be very reluctant to fail to print and fail to give good publicity to any statement that is sent to them by Mr. Carl Byoir and will very quickly throw into the wastebasket anything against his interest.

Second. To threaten every member of the legislatures in all of the States, Members of the United States Congress, and all other public officials who have the power to restrict or curb absentee ownership of business. It advises them of his influence over the press and lets them know that it is within his power to injure them politically if they oppose his Wall Street clients.

Third. To advise the country that he possesses tremendous power over means of communication to the people, which results in obtaining favorable publicity for what he wants and the "playing down" or the stopping of all news that might be helpful to independent business.

Mr. Byoir's statement is an admission that the rich people of the Nation have pooled their wealth, their advertising, and their influence for the purpose of deceiving the people.

Mr. Byoir said in the same speech:

It is necessary to create organization to bring that force of public opinion to bear on the legislators or Congressmen or elected public officials. That is a thing that remains yet to be done.

In the same speech he quoted:

If I were a politician and I wanted to make a public reputation, and I wanted to be sure that, in the present state of public opinion, I would have the support of the great majority of the American people, I would pick the Patman bill.

In other words, Mr. Byoir says that the Patman bill is right; that public opinion will support it; that public men can make a great name for themselves by advocating it; but he, Mr. Carl Byoir, is such an expert at directing the minds of the American people and teaching them what to think and what to believe that he can take the millions of dollars furnished to him each year for that purpose, backed by the advertising of the concerns worth fourteen and one-half billion dollars, and cause the American people to oppose a bill that is in the interest of the general welfare of all the people.

His plan evidently contemplates getting his statements published and read by the people and at the same time preventing the statements from those in favor of the proposal from reaching the people.

Distortion and deceit accompanied by suppression of opponents' views represent a very powerful weapon. The people are getting wise to deceitful propaganda.

Mr. Byoir has not agreed to make Congressmen believe that black is white or that white is black, but he has taken upon himself a task just as extraordinary, and that is to make Congressmen believe that it is in the interest of the country for local business to be destroyed, private initiative crushed, and the wealth of the Nation concentrated into a few hands.

In addressing that group of chain-store representatives he said:

You had better sit down and assess yourselves at $20, $40, $60, or $80 a store, and had better put it in a fund.

That was tantamount to saying that they should immediately raise from three to twelve million dollars and put it in a fund. This fund would be in addition to the one already created by the Atlantic & Pacific Tea Co., which aggregates millions of dollars. They are people who believe they can take a large slush fund and control State legislatures and Congress.

AGGRESSIVE CAMPAIGN ON TO HELP ABSENTEE OWNERSHIP

The interstate chains will soon commence a movement, according to statements of their representatives, to repeal all laws that have been passed in the States and by Congress which are considered detrimental to their interest. Not only will they attempt to repeal all of these laws but they will also make an effort to obtain the passage of laws that will make it easier for them to destroy independent merchants everywhere and permit them to obtain more quickly a complete and effective monopoly in retail distribution and in other lines of business.

HOW FARMERS AFFECTED

Question. How does chain buying power affect the farmer?

Answer. The chains' representatives know when perishable and other products of the farmer are moving to the market. They know exactly where each car is traveling every night. If they want to reduce the price on that market, all they have to do is to withdraw for the period of time necessary to effect their purpose. In this way they force prices down or force the farmer to take his products back home to await a more favorable market. The farmer cannot return his products because the freight charges would be more than his products would be worth.

As the interstate corporate chains have grown in number, size, and power, the farmer's plight has become more and more acute. As the sales volume of these concerns approached their peak, farmers' prices sunk lower and lower, until the yearly total of agriculture income became so low as to cause national alarm.

PRICES, AMOUNT OF GOODS SOLD, AND PRODUCTION

Question. Will the passage of H. R. 1 make it harder on the farmer and producer by keeping high prices, less goods sold, less production, and less tax collections for the Government?

Answer. In every chain-store argument one point is emphasized, and that is: "We keep prices down." If the farmers had $12,000,000,000 a year gross income, as they should have, instead of six or seven billion dollars a year, one of the greatest markets in the world would be created for all goods and services produced in America. This additional purchasing power would represent "acres of diamonds" here in our own yard and would be better than the entire foreign trade of several of the other countries of the world. But with the interstate chains keeping the farmers' prices down, that reduces the buying power of the farmers, who are the best customers of the people who live in the cities. The people who live in the cities have lower wages because the farmers cannot buy; therefore low prices to farmers force low wages to factory workers. Low wages to the factory worker means he will buy less, because his debts, taxes, and other fixed charges have become proportionately higher by reason of his low wages.

So the effect of the passage of H. R. 1 will mean more purchasing power to the farmers in the form of higher prices, but not unreasonably high prices. It means more goods sold, because the aggregate wages will increase, which will make fixed charges easier for the wage earner to pay and will cause him to have remaining a much larger percentage of his earnings to buy goods, which will mean more goods sold. This will lead to more production and more tax collections for the Government.

Any consumer who demands a price so low that the farmer or wage earner does not receive a fair price or a fair wage to give him purchasing power is demanding a price that will destroy the purchasing power of two-thirds of our people and will eventually destroy our Nation. If low prices were the paramount consideration, repeal of the protective tariff would be the logical step in that direction.

CONSUMERS PAY MORE—FARMERS GET LESS

July 11, 1939, F. L. Thomsen, of the Bureau of Agricultural Economics of the Department of Agriculture, gave a statement to the newspapers, which was published July 12, 1939, in which he stated that consumers are paying higher than prewar prices for food, although the farmers are getting less for the raw materials, after computing a survey covering 58 food products. Mr. Thomsen, who made the survey, said that in 1913–15 the farmers received 53 cents of every dollar spent by the consumers for the 58 products. Last year he said the share was but 40 cents.

As the business of the foreign-owned chains increased, the farmer received less and less of the consumer's dollar.

LOW-INCOME GROUPS NOT HELPED BY CHAINS

Question. Is the statement made by representatives of chain-store groups true, that the chain stores help low-income groups?

Answer. If that is true, which I deny, H. R. 1 will not deprive low-income groups of such help, as the passage of this bill will only seriously affect one-third of 1 percent of the chain-store companies. It will not destroy the one-third of 1 percent but will have a tendency to restrict each company in this category to the boundaries of one State or a smaller area.

Question. Do low prices help the low-income groups?

Answer. What is known as the submerged one-third of our people will be helped more by good prices and good wages than they will by low prices and low wages. Suppose we should arbitrarily reduce prices 50 percent and wages 50 percent. The argument would be made that the wage earner earning $2 per day under the new scale would be able to buy as much as he formerly bought when he received $4 per day, since prices had been reduced in proportion. This is a beautiful theory, but in practice it does not work out. The people of this Nation owe more than $200,000,000,000 in debts. Much of it is owed by the one-third of our people in the low-income class. If we reduced their wages and prices 50 percent, we in effect would double their indebtedness, in what they have to pay with. Instead of owing $100, they will owe $200, measured in their paying power, and instead of paying 6 percent interest they will pay 12 percent interest.

Further, there are certain fixed charges that cannot be reduced and which become cheap or lower only with good prices and good wages. I refer to electricity, gas, water, and telephone service; also to railroad freight and passenger rates and such fixed charges as interest, debts, and taxes.

The lower the wages and the lower the prices of farm products and other commodities that go to make up purchasing power, the higher in proportion becomes the debt and tax burden.

DECEITFUL PROPAGANDA

The owners of large interstate chain stores caused to be organized the National Consumers' Tax Commission, of Chicago, Ill. It is supported by the large fortunes of a few very wealthy men, who made their money destroying community life. The object is to hire prominent women over the country to be a "front" for the interstate, absentee owned chain stores, and carry on a deceitful and misleading fight in their behalf. Many prominent women have become victims of this treacherous and sordid conspiracy. Information is now in my possession which indicates enormous sums of money have been spent in organizing these associations locally. I was astounded to learn that many prominent women, who have held responsible positions with different women's organizations, have accepted huge sums from the owners of giant monopolies in return for the use of their names, which carries with it their prestige and standing, in behalf of those who are working against the interest of the plain people of this country and who would deny to the very children of these misled mothers a fair and equal opportunity in life. I am receiving information from all over the Nation about the activities of this association, and I hope people continue to send me this information, as I believe that some action in the direction of a congressional investigation should be taken soon after the next Congress meets.

Deceitful propaganda is very damaging to the interest of the general welfare of the people of this Nation and should be exposed at every opportunity. As further evidence of deceitful and misleading propaganda that is being published by the interstate chains through their 100-percent-owned Institute of Distribution should be mentioned the stand of the American Federation of Labor on this bill.

A. F. OF L. DID NOT CONDEMN OUR BILL

Last October 1938 the American Federation of Labor had a convention at Houston, Tex. One morning a headline article appeared on the front page of practically all of the newspapers in this country to the effect that this great organization had condemned the so-called Patman anti-chain-store bill. This article purported to give several paragraphs of a

resolution that was supposed to have been passed at this convention condemning this proposed legislation.

This purported resolution was presented to different labor organizations all over the country in order to induce them to pass similar resolutions, and in many cases they did, the efforts of the interstate chains being successful.

The truth is no such resolution was passed by the American Federation of Labor at Houston, Tex., in 1938, nor any resolution condemning this bill. This false claim has been exposed, yet I have never seen the correction carried in one newspaper in America, although it has been fully carried in the CONGRESSIONAL RECORD at different times. This is exhibit No. 1 of the influence of fourteen and one-half billion dollars.

WALL STREET DIRECTORS

Another sly, deceitful way of misleading the people is to quote misleading information or use information regarding a situation that is not analogous.

I made the statement that the 20 interstate chain-store companies that will be seriously affected by the passage of H. R. 1 are Wall Street concerns. I stand by that statement because it is a fact that these concerns are connected up directly with Wall Street interests and largely dominated by Wall Street bankers.

If the directors of these 20 concerns are named and their connections given, no one will dispute their Wall Street connections and dominations in order to mislead the people.

Chains, through their Institute of Distribution, bring in the 7,000 chain-store companies, most of which are not even concerned about this bill and will not have to pay a penny tax if it passes, and make the assertion that home offices of chain-store companies are located in every State and that New York State only has 13.8 percent of them. The misleading part about this statement is that figures concerning all chains are used and not just the ones that will be affected by this bill.

A PIPE LINE FROM EVERY COMMUNITY IN AMERICA TO WALL STREET BANKS

The Chase National Bank of New York, which has assets of $3,000,000,000, has interlocking directorates with the Atlantic & Pacific Tea Co., the Borden Co., Allied Stores, Inc., Oppenheimer-Collins Co., and H. L. Green Co.

The Guaranty Trust Co. of New York, with assets of two and a quarter billion dollars, has interlocking directorates with the Atlantic & Pacific Tea Co., W. T. Grant Co., McCrory Stores, Inc., and McClellan Stores Co.

The Atlantic & Pacific Tea Co. has a director on the board of the Chase National Bank and the Guaranty Trust Co.

Twenty-four banks own one-third of the resources of the entire 16,000 banks in America; 13 of these 24 banks are in New York city; the 2 banks—Chase National and Guaranty Trust—own one-fourth of the resources of these 24 banks.

A few men controlling a few banks now control the corporate wealth of the Nation.

The hand of greed should be taken from the throat of the American people.

NO VISION, THE PEOPLE PERISH

Would you believe that one New York bank has more than 4,000 directorships in the largest manufacturing, industrial, and other concerns in every section of the Nation? Would you believe that another large New York bank has more than 2,000 such directorships? What chance have you in the face of such power and influence? These men may intend to be good, but power naturally begets greed. They seek greater power, influence, and wealth. Where there is greed there is no vision, and the Bible says that where there is no vision the people perish.

PEOPLE SHOULD WAKE UP

Our country's welfare is distressingly at stake. Opportunity for the young and security for the aged hang in the balance. Do you want private monopoly to continue to operate to the benefit and advantage of a few New York bankers? Do you want a community life built and sustained by local independent merchants or one bled white and cold-bloodedly exploited by absentee owners? Let us save America by preventing monopoly, by keeping the broad road of opportunity open, and by passing a law that will regulate selfishness and restrain greed.

The Administration's Ruinous Trade Treaty Program

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. TREADWAY. Mr. Speaker, when the President in 1934 sought authority to negotiate foreign-trade treaties without submitting them to Congress for approval and to reduce American tariff duties in pursuance of such treaties without being bound by any legislative yardstick for rate making, the Republican minority on the Ways and Means Committee, in connection with their minority report on the bill, filed the following summary of objections thereto:

MINORITY VIEWS

Mr. TREADWAY, in behalf of the minority, submitted the following minority views:

SUMMARY OF OBJECTIONS

For the following reasons, among others, the minority are unable to support the bill (H. R. 8687) giving the President the power to fix tariff duties and to enter into reciprocal trade agreements with foreign nations without public notice or hearing[1] or subsequent ratification thereof by Congress:

1. It delegates to the President discretionary legislative power in tariff making—not simply an administrative power to apply a definite formula laid down in advance by Congress, such as is given under the present flexible tariff provisions—and thereby provides for an unconstitutional delegation of the supreme taxing power of Congress, contrary to what a prominent Democrat has called "the plainest and most fundamental provisions of the Constitution."

2. It has no counterpart in past legislation, Republican or Democratic, since in each previous reciprocity measure Congress has either fixed in advance the concessions or retaliations the President might use as a basis for negotiation, or it has reserved the right to both the House and Senate to approve or reject any treaty or agreement entered into by him.

3. Any previous legislation giving the President authority to put a prescribed legislative policy of Congress into effect upon the finding by him that a certain state of facts existed is no precedent for giving him the power under similar conditions to put into effect rates of duty which he himself prescribes.

4. If the expansion of our foreign trade seems desirable, it should be accomplished by existing constitutional means.

5. Although the bill attempts to lend itself a color of constitutionality by a recitation that it is an emergency measure, yet by its own terms it has unlimited life, indicating that it is, and is intended to be, permanent legislation.[2]

6. It contemplates the abandonment of the principle of protection for domestic industry, agriculture, and labor by allowing existing duties to be modified without reference to the difference in cost of production of domestic and foreign articles.

7. It strikes at the very heart of the President's own recovery program, and is wholly inconsistent with it, because any lowering of tariffs such as is scheduled to follow the enactment of the bill will further depress our great agricultural industry thus subjected to foreign competition and will make it impossible for domestic producers operating under industrial codes to compete with the resulting influx of cheap foreign goods produced by the pauper labor of Europe and the Orient, where living standards and production costs are far below those of this country.

8. It places in the hands of the President and those to whom he may delegate his authority the absolute power of life and death over every domestic industry dependent upon tariff protection, and permits the sacrifice of such industries in what will undoubtedly be a futile attempt to expand the export trade of other industries.

9. While no one would question the good faith and high purpose of the President in any action he might take under the powers conferred, such as the determination that a particular industry was not entitled to tariff protection, the fact is that he will not be

[1] Bill subsequently amended to require notice of intention to negotiate and to require hearings before negotiation, but not on completed treaty.

[2] Bill subsequently amended by limiting President's authority to 3 years.

able personally to give his attention to the negotiations incident to the conclusion of the contemplated trade agreements, but will be compelled to rely upon others whose opinions as to what is for the best interest of the country and the industries affected would not be entitled to the same measure of respect as his own.

10. The bill gives no indication as to what domestic industries may be put upon the auction block in the negotiation of foreign trade agreements, nor were any of the accredited representatives of the administration appearing before the committee willing to give such an indication except in the most general and meaningless terms.

11. It provides no opportunity for domestic industries to be informed or heard with reference to any proposed Presidential tariff changes, even though their very existence is at stake.[3]

12. In view of the apprehension which will constantly exist in the minds of all domestic producers over the possibility that their respective industries may, without notice or hearing, be sacrificed overnight for some alleged or passing advantage to an export product, the bill is not calculated to aid in the restoration and rehabilitation of domestic industry at large, but does contain serious possibilities of disastrous consequences.

13. It presumes to give advance congressional approval to any trade agreements into which the President may enter, however injurious may be their effect upon any domestic industry or industries, thus making it impossible for Congress to rescind his authority except by passing new legislation over his veto, which would require a two-thirds vote of each House and would at the same time place this Nation in the position of violating a completed and binding international agreement.

14. Instead of promoting our export trade where possible by such methods as the imposition of countervailing or retaliatory duties on noncompetitive foreign articles now enjoying free entry into the domestic market, such as silk, coffee, tea, rubber, etc., the bill contemplates the granting of tariff concessions on dutiable foreign articles coming into competition with domestic products. The minority feel that instead of destroying branches of domestic agriculture and industry, the two-thirds of our imports now coming into this country duty free could well be used as a lever to secure favorable consideration for our exports in world markets.

15. The increased importation of competitive foreign goods will displace equal quantities of our own products, thus adding to the unemployment in the industries so affected and to overproduction.

16. Any hoped-for increase in domestic exports as a result of permitting increased foreign imports will be largely illusory, since foreign countries will naturally buy in the cheapest market no matter how much of their goods we import, and unless we can meet world production costs and are prepared to sell at world prices we cannot compete in world markets. For this reason the export trade we might gain will not offset the domestic trade we are bound to lose.

17. Foreign countries, in most instances, have the advantage in reciprocal bargaining, because their rates are generally known to be "padded" for trading purposes.

18. The bill fails to take account of the changed economic conditions throughout the world as evidenced by the nationalistic policies of all nations and the tendency of the agricultural countries to develop home manufactures and the manufacturing countries to produce so far as possible their own foodstuffs, the result of which has been a drying up of the Old World markets.

19. It holds out the forlorn hope of increased foreign markets for our surplus products in the face of the well-known fact that they can be exchanged only for agricultural and industrial products with which we are already abundantly supplied.

20. The bill overemphasizes the importance of our export trade, the value of which in 1929 was but one-tenth that of the total domestic production of movable goods and one-seventeenth the amount of the national income. This clearly illustrates the fact that domestic prosperity is more dependent upon the home market than the foreign market, since it consumes 90 percent of what we produce and is responsible for approximately 95 percent of the national income.

21. It ignores the fact that this Nation is the world's richest market, with one-half the business of the world being done within its borders. Foreign countries, however, are not insensible to this fact and will be insistent upon participating in this great market with no appreciable return benefit to our own people or home industries.

22. It erroneously presupposes that foreign trade consists of dollar-for-dollar exchange between two nations, when, as a matter of common knowledge, it follows much the same course as domestic business, each nation selling its surpluses wherever it can find a demand for them, and buying in the cheapest market such articles as it does not produce, all without reference to the balance of trade with any country.

23. It is based upon the false premise that the decline in international trade is the cause, rather than the effect, of the depression. Our own experience shows us that the foreign trade of this country, both in imports and exports, was constantly on the increase up to the time of the 1929 crash.

24. To abandon our present policy of equal tariff treatment for all nations in favor of bilateral concessions to individual countries is a backward step which can only serve to breed further tariff wars and thus result in retaliation and discrimination against our goods in many foreign markets.[4]

[3] See footnote 1. While hearings are held before the treaty negotiations are begun, there is no opportunity to be heard on the completed treaty, which is not made public until it is signed by the President and has become binding on this country.

After a general discussion of the legal and economic aspects of the trade-treaty program, the minority report concluded as follows:

The bill starts out with what has been referred to as a "pious prayer" that the expansion of our foreign trade through reciprocal tariff concessions will assist in restoring the American standard of living, in overcoming domestic unemployment and the present economic depression, in increasing the purchasing power of the American public, and in establishing a better relationship among the various branches of American industry, agriculture, and commerce.

The minority, however, are unable to see how the reduction of the tariff can possibly restore the American standard of living, or even maintain it at its present level; how the importation of increased quantities of foreign products can decrease unemployment in the industries thereby adversely affected; how the constant threat to all industry that overnight it may be destroyed by Executive decree can assist in overcoming the depression; how the reduction of wages and other production costs to meet foreign competition can increase the purchasing power of the American people; or how the destruction of various industries can possibly result in a better relationship among the several branches of industry. On the other hand, we believe that the bill has no relation to domestic recovery, and fear that instead of promoting recovery the bill may serve to impede it.

When the bill was before the House for consideration, Republican Members offered a number of amendments designed to protect the interests of American agriculture, industry, and labor, and the people generally, but all these amendments were voted down by the then overwhelming Democratic majority. If adopted, they would have prevented tariff reductions below the amount of duty required to offset foreign cost-of-production advantages, and would have required congressional approval of the trade treaties before they should become effective.

It is submitted that the objections to the trade-treaty program raised by the Republican minority of the Ways and Means Committee in 1934 are as sound today as when originally made, and certainly the program has not worked out as its sponsors believed it would. Rather, the prediction made by the Republican minority that it would result in surrendering our rich domestic market for lean and illusory foreign markets has proven to be prophetic.

The President's powers under the original Trade Treaty Act expired in 1937, and a joint resolution was passed at that time to continue his authority for 3 additional years, or until June 12, 1940. The Republican minority on the Ways and Means Committee opposed this extension, not only for the reasons stated previously, but because the results of the treaty program's operation had been adverse to the best interests of the country. In our minority views, filed in connection with the 1937 extension resolution, we summarized our objections as follows:

VIEWS OF THE MINORITY

We, the minority members of the Ways and Means Committee, are opposed to the extension of the Reciprocal Trade Agreements Act, in its present form, for another period of 3 years as provided by House Joint Resolution 96.

GENERAL STATEMENT

In opposing the joint resolution, we wish it to be distinctly understood that we are in no way criticizing the doctrine of genuine reciprocity with foreign nations. The Republican Party has actively espoused this policy in previous measures, notably the McKinley tariff of 1890 and the Dingley tariff of 1897.

We feel it necessary to make this statement at the outset since it has been generally assumed that because we have consistently opposed the methods of administration of the present trade agreements program, we do not favor any reciprocal negotiations whatsoever with foreign countries. Such, however, is not the case. We yield to none in our earnest desire to expand the foreign trade of the United States, whether by reciprocity or otherwise, but our advocacy of the general policy in question does not justify us in approving the present Trade Agreements Act, which presents in fact pseudo-reciprocity, and is open to many serious objections.

[4] When the bill was subsequently amended to provide for the extension of our treaty concessions to all countries without requiring them to give us reciprocal concessions in return, it opened up the further objection that the treaties were not truly reciprocal, since this country stood to give up more than it could hope to gain.

SUMMARY OF OBJECTIONS

House Joint Resolution 96 continues the present Trade Agreements Act, with all its defects, without change. It is subject to the same criticisms which we interposed with respect to the act when it was originally under consideration, and the results since its enactment have justified our objections at that time.

It continues, first, to delegate to the executive branch of the Government, contrary to the Constitution of the United States, the tariff, taxation, and treaty-making powers of Congress.

Second, to take away from American producers the right which they ordinarily would have had under section 516 (b) of the Tariff Act of 1930 to litigate matters arising out of the trade agreements, including the question of constitutionality.

Third, to deny the Congress an opportunity to approve or reject the trade agreements, however injurious may be their effect upon domestic producers.

Fourth, to ignore the principle of protection for American agriculture, industry, and labor by permitting tariff rates fixed by Congress to be altered without reference to domestic production costs.

Fifth, to deny American producers an adequate opportunity to be heard on the actual terms of the trade agreements before they become effective.

Sixth, to provide for the general extension of the concessions made under a trade agreement with a single country to all other countries in the world, notwithstanding the known existing discriminations against American commerce by many foreign countries.

Seventh, to permit the Executive, in effect, to bind the hands of Congress by "freezing" the existing tariff or excise treatment of articles with respect to which the Congress may, in the exercise of its constitutional responsibilities and duties, wish to legislate in the future.

These are among the more important objections to the Trade Agreements Act, which preclude us from giving our support to House Joint Resolution 96, providing for its extension for 3 years.

In our minority report, we reviewed the operation of the trade-treaty program up to that time. The following extracts cover our findings:

RESULTS OF OPERATION OF TRADE-AGREEMENT PROGRAM

We now turn our attention to the actual results of the operation of the trade-agreement program to date. The avowed purpose of the Trade Agreements Act was to expand the foreign markets of the United States. It is so stated in the act. However, the administration has failed to make much headway in this direction.

Most of the recovery in our export trade thus far, from the depression level of $1,611,000,000, occurred before the Trade Agreement Act became operative. At the end of the calendar year 1934, our exports had risen to $2,133,000,000, or some $500,000,000 in excess of the depression low. Thus, any increase in exports under the Trade Agreements Act must be calculated from this point, and not from the depression figure as some of the advocates of the program are attempting to do. Even then, the entire increase cannot be attributed to the effects of the agreements, because our trade with nonagreement countries has also increased materially since 1932.

Because of dollar devaluation and the administration's monetary program, value figures as to the increases in imports and exports do not tell the whole story. We must look at quantities to see the true picture.

From 1933 to 1935, the total quantity of our exports increased 13 percent. In the first 11 months of 1936, exports showed a 17 percent increase in quantity over 1933.

Our imports, on the other hand, increased in volume by 23 percent between 1933 and 1935 In the first 11 months of 1936, imports reached a volume of 35 percent above those of 1933.

But this still is not the whole story. The quantity of raw materials exported actually declined between 1933 and 1935; crude foodstuffs showed an insignificant increase, and manufactured foodstuffs declined. On the other hand, the quantity of raw foodstuffs imported increased 40 percent between 1933 and 1935, and manufactured foodstuffs nearly as much.

OUR FAVORABLE BALANCE OF TRADE DISAPPEARING UNDER ADMINISTRATION'S TRADE POLICY

The effect of the administration's foreign-trade policy can best be judged by its influence upon our favorable balance of merchandise trade, or excess of exports over imports. In 1934, this favorable balance was $478,000,000. In 1935, the first year in which the Trade Agreement Act was in effect, it dropped to $235,000,000. In 1936, it fell to the lowest level in 41 years, namely, $34,000,000. We may expect this year to have an adverse balance of foreign-merchandise trade.

The imports and exports of merchandise are not the only things we should consider. The state of our international balance of payments is also of great significance. A statement of our net balance of payments on merchandise and service items (including in the latter, transportation services, immigrant and charitable remittances, Government transactions, tourist outlays, interest and dividends, and silver purchases, but excluding all capital items and gold movements) shows that in 1934 we had a net favorable balance of $375,000,000. In 1935, however, that balance of payments became unfavorable to the extent of $128,000,000. In 1936, although final figures are not yet available, we can estimate a figure at least several hundred million dollars more unfavorable than in 1935, because of the negligible net merchandise trade balance and the large net imports of silver. If we took account of our huge imports of gold, our adverse balance of international payments would be further increased by more than a billion dollars.

It has been contended that we must give foreign countries, through our increased imports of all types, sufficient excess credits in order that they may buy more American products. As a matter of fact, however, most of the present foreign excess credits are being used to purchase American securities, repatriate their own depreciated bonds, and increase their commercial balances in this country.

Thus it would seem that the fears of Secretary Wallace, as expressed in his annual report for 1934, were well justified. He stated on page 10 of that document:

"But the foreign-trade program would involve the risk of producing results other than those expected. * * * The purchasing power which foreigners would obtain in the United States market, were they permitted to sell more goods here, might be left on deposit or invested in American securities * * *."

IMPORTS INCREASING FASTER THAN EXPORTS

The explanation for the shrinkage in our favorable merchandise trade balance is that under the administration's program our imports have increased faster than our exports. From 1934 to 1935 the increase in imports was $392,000,000, as against an increase of only $149,000,000 in exports. From 1935 to 1936 our imports increased $372,000,000, as against an increase in exports of only $171,000,000. Thus it is clearly apparent why this country is rapidly shifting from the position of an "export" nation to an "import" nation.

We realize, of course, that not all the increase in imports has been due to the trade agreements which have been entered into. But it is likewise true, as we have already pointed out, that not all the so-called increase in exports has been due to these agreements. It is evident that the agreements have a more stimulating effect upon our imports than upon our exports.

INCREASED IMPORTS INCLUDE MANY COMPETITIVE ARTICLES

The representatives of the administration have gone to great lengths in their attempts to justify the increase in imports as compared with the increase in exports. They assert that most of these imports are of noncompetitive products. This we deny. We can prove the inaccuracy of their assertion by reference to the actual trade figures.

Approximately two-thirds of our imports are on the free list. These are almost exclusively noncompetitive products. The other third, which are of a competitive nature, are dutiable. In 1935 our noncompetitive imports increased 22 percent over 1934, as compared with an increase in competitive imports of 29 percent. Similarly, in the 11-month periods of January through November 1935 and 1936, our noncompetitive imports increased only 14 percent, as against a 23-percent increase in competitive imports. In 1936 the actual increase in noncompetitive imports was $149,000,000, compared with $173,000,000 in competitive imports. If the administration's contention were correct, the increase in noncompetitive imports would, instead, have greatly exceeded the competitive.

OUR TRADE WITH TRADE-AGREEMENT COUNTRIES SHOWS NET BENEFIT TO FOREIGN COUNTRIES

Assistant Secretary of State Sayre, in his testimony before the Ways and Means Committee, protested that it was not possible at this early date to draw definite conclusions as to the effect of the various trade agreements upon our imports and exports. Yet he proceeded to fill the record with statistics purporting to show the benefits of the trade agreements to our domestic exporters. Nothing was said about the increased imports from these agreement countries and their effect upon American agriculture, industry, and labor.

The Cuban agreement, which became operative on September 3, 1934, has been in effect for a longer period than any other. The Department of State recently published a detailed analysis of our trade with that nation, and according to the administration's own figures, it appears that the Cuban agreement has resulted in much more benefit to Cuba than to the United States. In the 12-month period of September 1935 to August 1936 prior to the agreement, compared with the same period our exports to Cuba increased by $28,500,000. However, our imports from Cuba during this period increased by $67,000,000. This shows that for every $1 of increased exports to Cuba we have taken from that country $2.35 of increased imports.

The Canadian trade agreement became effective January 1, 1936. In the 11-month period from January through November 1936 our total exports to Canada increased over the same period in 1935 by $50,000,000. Our total imports from Canada during this period increased by $77,000,000, thus showing that Canada has benefited from the treaty much more than has this country. Operations under most of the other trade agreements show similar results.

American agriculture was adversely affected by a number of duty reductions under the Canadian agreement. The State Department contended that, while this was true, our farmers would receive more than a compensating benefit by reason of lowered duties on American farm products going into the Canadian market. We think that American farmers will be greatly interested in the figures published by the Department of Agriculture in Foreign Crops and Markets, for December 28, 1936. They show

that in the 10-month period ending October 1936 exports of agricultural products to Canada increased by less than $8,000,000, as compared with a $21,500,000 increase in agricultural imports from Canada.

In 1937, as in 1934, Republican Members of the House attempted to amend the trade-treaty legislation so as to prevent reductions in tariffs below the amount of duty required to offset foreign competitive advantages and to require congressional approval of the treaties before they should become effective. Again our efforts were fruitless, due to the opposition of the Democratic majority.

Since 1937 our foreign trade has been influenced to this country's advantage by a number of factors having nothing whatever to do with the trade-treaty program. While during the first part of 1937 imports continued to increase faster than exports, threatening this country with an unfavorable trade balance for the first time in more than twoscore years, the situation completely changed during the last half of the year, due to a great upsurge in exports. An analysis of this increase in exports disclosed the fact that they consisted almost entirely of war materials for European and Asiatic countries. It was somewhat ironical that the trade-treaty program, which Secretary Hull regards as an instrument of world peace, should be saved from complete discredit by reason of these increased exports of war materials, which, of course, are not in any way influenced by trade treaties.

During 1938 exports of war materials continued to increase, although our total exports declined by $255,000,000, or 8 percent, over 1937. Imports declined even more, but not because of any increased tariffs under the trade-treaty program, since the trade-treaty rate revisions are all downward. The result was that we had a large favorable trade balance in 1938, due to factors other than the trade-treaty program. It resulted from the fact that our imports declined much more than our exports in that year.

The explanation for this situation is found in official Government reports. For example, in the February 11, 1939, issue of Commerce Reports, it is stated:

> Exports of a number of manufactured articles for which demands in foreign countries had greatly increased in 1937, partly as a result of armament programs, continued to expand during 1938.

On February 1, 1939, the majority leader [Mr. RAYBURN] inserted in the RECORD a Department of Commerce release dealing with foreign trade which contained the following statement:

> The demand for American machinery and metal manufactures has continued strong, due in a considerable measure to the heavy requirements of the rearmament programs of several European countries which have prevented those normally large exporting countries from supplying both export and domestic demands.

This statement is worthy of more close analysis. When foreign countries are busy making preparations for war, they not only cease to be our competitors in our home market, but they become customers for our own goods. It is only the armament programs abroad which have kept our home market from being flooded with cheap competitive imports under the tariff reductions made by the trade-treaty program. In other words, our experience following the free-trade Underwood tariff of 1913 is repeating itself. If peace is restored, we may expect the same sort of a flood of imports as we had following the World War, when it became necessary for the incoming Republican administration to pass an emergency tariff bill to save our home market from complete disruption.

The explanation for the decline in imports in 1938 is found in two Government publications. In the November 5, 1938, issue of Commerce Reports it is stated:

> Import trade reflected the recession in business activity and the improvement in agricultural production in the United States.

The Department of Agriculture, in the August 13, 1938, issue of Foreign Crops and Markets, stated:

> The decrease in business activity influences the value of practically all our imports, both agricultural and other. It was accompanied by lower prices and by a general falling off in demand. Raw materials were needed in smaller quantity by factories and finished products were purchased to a lesser extent by workers.

This statement proves that the amount of our foreign trade is to a large extent based upon the prosperity of the home market. During the early 1930's our foreign trade declined because of the depression, not because of the passage of the 1930 Tariff Act.

But to get back to present-day trade, we find that in the first 6 months of 1939 our total export trade has again declined over the previous year, while our imports have increased over the same period. According to the Department of Commerce, we exported 11 percent less in the first 6 months of 1939 as compared with 1938, but imported 14 percent more. The decrease in exports was due to a sharp decline in European purchases of United States agricultural products, yet the farmers of this country were assured that the foreign-trade program would result in increased foreign markets for their products. They have found out differently, and they are growing more and more concerned over the reduction of agricultural tariffs which is resulting in increased imports of competitive foreign farm products. American farmers are thus losing both their foreign and their domestic market under the trade-treaty program.

American farmers were told that the British treaty, particularly, would result in giving them an increased outlet for their surpluses. But in the first 6 months the British treaty has been in effect our exports to Great Britain, which consist chiefly of farm products, have declined by 10 percent. Imports from Great Britain, on the other hand, increased by 41 percent. The imports consist chiefly of manufactures.

Up to the present time, more than 1,000 reductions in duty have been made under the treaty program. One-third of the reductions have amounted to the full 50 percent permitted under the act; one-half amount to more than 40 percent, and seven-tenths to more than 30 percent. Hence it is obvious that the rate-reduction program not only has been general, but it has been drastic. The purpose is conceded to be to permit increased importations of foreign goods, which of course displace our own products and take from our people the opportunity for a livelihood.

No objection can possibly be made to the expansion of our foreign trade, provided it is done without injury to domestic producers. There is no reason why the foreign-trade program cannot be carried on in connection with the maintenance of adequate protection on products which we can and do produce ourselves in commercial quantities. President McKinley, who probably ranks as the leading exponent of reciprocity in this country, and whose public statements have many times been improperly quoted as an endorsement of the present alleged reciprocity program, laid down what he considered to be the true purpose of reciprocity. Said he:

> The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves and which do not involve any loss of labor to our own people but tend to increase their employment.

Under such a policy, reciprocity and protection would go hand in hand. McKinley, however, would never support the present policy of psuedo reciprocity because it involves reductions in duty on competitive foreign products.

On April 26 of this year, in a speech before the House, I laid down what I considered to be the five most fundamental objections to the present trade-treaty program. To date no one has succeeded in challenging them. I repeat those fundamental objections:

First. The trade-treaty program involves an unconstitutional delegation of the tariff- and treaty-making powers of Congress by giving to the executive department discretionary legislative authority in reducing tariff duties and in entering into foreign-trade treaties without Senate ratification.

Second. By encouragng the importation of competitive foreign products, the trade-treaty program runs contrary to the basic purpose of foreign trade, which is to exchange our

surplus products for the products of other lands that we need but do not produce ourselves.

Third. By permitting tariff reductions below the amount of duty necessary to offset foreign cost-of-production advantages, and thereby subjecting our home producers to unfair competition from the cheap products of other lands, the trade-treaty program drives our home producers out of business, takes jobs away from our workers, depresses our price structure, and undermines our American wage and living standards.

Fourth. The present program is one-sided and not truly reciprocal, because the concessions which we make to a particular country in return for concessions from that country are extended generally to the whole world, save Germany alone, without requiring these other countries to give us reciprocal concessions in return, and despite the fact that in many instances such other countries actively discriminate against American products.

Fifth. The negotiation of the trade treaties is carried on in an arbitrary and high-handed manner. The only opportunity American producers have to be heard on a proposed treaty is before its actual negotiation takes place, and then only before a "buffer" committee which has nothing whatever to do with the actual negotiations.

With two amendments to the reciprocal-tariff law, the trade-treaty program could be made useful and beneficial and free from most objections which have been leveled against it. These amendments are: (a) Guarantee American producers at least an even break with foreign producers in the home market by maintaining sufficient tariff protection for that purpose, and (b) provide for congressional approval of the trade treaties before they become effective. As an alternative to the latter, Congress could fix minimum rates of duty on products which the President could use for bargaining purposes. Congress having exclusive tariff-making authority under the Constitution, it is essential that the legislative function be preserved either by setting forth what concessions the President can make or by providing for subsequent ratification of the concessions he proposes.

The present trade-treaty program will undoubtedly be one of the big issues in the next election campaign, just as it was in the last congressional elections. Many of the new Republican Members owe their election, in a large measure, to dissatisfaction with the treaty program as now administered. As the legislation authorizing the negotiation of the treaties expires next year, it is a problem which the Congress will have to deal with at the coming session. Many of the Democratic Members who voted for the original legislation did not vote for its extension, and there is no question but that it has lost many more friends in the meantime. Virtually every one of the 169 Republican Members of the House can be counted on to vote against its further extension in its present form, and under the circumstances there is at least some hope for American producers that the present destructive program may not be continued.

LaGuardia Assails New Deal Crop Policies

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BENDER. Mr. Speaker, President Roosevelt's woes are not yet at an end. Despite the adjournment of Congress after a series of smashing defeats of pet New Deal proposals, the opposition to White House policies continues from ever-increasing sources. Latest of the opponents to arise on the scene is Mayor LaGuardia, formerly one of the most vociferous supporters of F. D. R. In an address before the annual convention of the Retail Meat Dealers' Association in New York City this month, LaGuardia bitterly criticized the plow-under program of the Department of Agriculture.

The mayor declared that he did—

> Not believe in any system that curtails production and destroys products. It might be necessary to take drastic measures such as subsidizing exports and by doing that make friends of our neighbors. I don't believe in destroying what God Almighty gave us.

Pointing out the city folks must recognize the needs of our agricultural population:

> City people must realize that prosperity for the farmer is prosperity for all. The farmer must have a fair return on his product to buy the things we make in the city. They must realize that the American farmer is the best market for American goods.

LaGuardia declared in emphatic terms, "I do not believe that we suffer from any surplus in this country. We have a lack of purchasing power to provide for all the people. When we can return to the old American breakfast and the good old American diet, then and only then will we see what surplus we have. It is not a surplus of meat that troubles us, but it is lack of funds of the average American."

This assault upon the crop-curtailment program is a far cry from the usual LaGuardia outpouring. It indicates once more that the people of the Nation are becoming more and more articulate; they have begun to think of their future more maturely than in the days of the first depression. No longer is there a defeatist attitude toward the needs of our future. Even the most ardent disciples of the New Deal are beginning to question the wisdom of the "brain trust." When Fiorello LaGuardia leaves the ship even for a momentary excursion of his own it is time for the rest of us to question the efficacy of the captain's course.

Crop curtailment has been frequently criticized as an absurdity in a society in which millions are suffering from undernourishment according to social-service workers in every section of the land. No one ever sought to justify it on any basis other than its necessity as an emergency. Now that the emergency psychology is vanishing, the necessity for its continuance has vanished with it. LaGuardia, more New Deal than new dealers, has recognized its futility. The rest of the Nation must join him wholeheartedly.

Five Years of Tyranny in Puerto Rico

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks on the subject of Five Years of Tyranny in Puerto Rico, granted to me on August 5, 1939, I submit the following:

Ex-Gov. Blanton Winship, of Puerto Rico, was summarily removed by the President of the United States on May 12, 1939. I had filed charges against Mr. Winship with the President during two visits that I had with him, and subsequently, on April 27, 1939, I wrote a letter to the President filing additional charges in support of my request for the removal of Mr. Winship. During my visits at the Executive Office of the President of the United States I informed him of many acts of misfeasance as well as nonfeasance, among which were the tyrannical acts of the Governor in depriving the people of Puerto Rico of their civil rights, the corruption and rackets that existed, and were made possible only by the indulgence of the Governor, and the extraordinary waste of the people's money. In my letter to the President dated April 27, 1939, I specifically pointed out that Mr. Winship had been responsible for the granting of a contract to draw plans for the graving dock in San Juan to a friend of his, to wit, Frederick R. Harris, in a manner

which was contrary to the Political Code of Puerto Rico, and hence illegally granted. This cost the people of Puerto Rico $75,000. My written, as well as oral, charges were transmitted by the President to Secretary Ickes, of the Department of the Interior, and on May 11, 1939, the President informed me by letter that my charges with regard to the award of the drawing of the plans for the graving dock in San Juan, P. R., had been transmitted to the Secretary of the Interior, Hon. Harold Ickes, for investigation.

The Secretary of the Interior, by code, wired Mr. Blanton Winship to return to the United States. In response to this wire, Mr. Winship came here and visited the Secretary of the Interior. The Secretary of the Interior demanded that Mr. Winship resign. Mr. Winship flatly refused to resign, and stated that inasmuch as he was a Presidential appointee, he would not resign until he had had an opportunity to appeal to the President. After various unsuccessful efforts, Mr. Winship finally saw the President, and pleaded that he be permitted to remain Governor of Puerto Rico on the ground that his resigning while he was under fire might be misinterpreted. What the President told Mr. Winship I do not know. I do know, however, that he made a very unfavorable impression on the President. When Mr. Winship left the White House with the bravado which is characteristic of a swivel-chair general, he invited friends of his and newspapermen to visit him in Puerto Rico in September of 1939, thereby giving the impression that he would remain as Governor.

On May 11, 1939, I took the floor in the House of Representatives, objecting to exempting Puerto Rico from the provisions of the wage and hour amendment, and in that speech I made an attack on Mr. Winship, and revealed that I had made charges against him, and stated specifically that the charges were being investigated by the Department of the Interior at the request of the President of the United States. The following day the President made the announcement that Admiral William D. Leahy would succeed Mr. Winship as Governor of Puerto Rico. Up to and including the time that this terse announcement was made, Mr. Winship had not resigned. Even a school child knows that the announcement of one's successor before one has resigned is tantamount to dismissal. Blanton Winship was dismissed by the President of the United States.

I had intended to remain silent and let the dismissal speak for itself without further comment. However, since the dismissal Mr. Winship has been hailed by crooked politicians, lobbyists, and by his own entourage of personal appointees as a great Governor. The day he finally returned to the United States government employees in Puerto Rico were forced to leave their offices and, together with the armed forces of the United States, joined in a display of farewell, which was grossly exaggerated by the disreputable reporter for the New York Times and Associated Press, Mr. Harwood Hull, about whom I shall particularize later on. Upon Mr. Winship's return to the United States he arrogated unto himself a desk in the Department of the Interior and, I have been informed, continued to draw a salary, notwithstanding the fact that he had no longer any official connection with the Government of the United States nor the government of Puerto Rico. He devoted all of his time since he was kicked out as Governor to two tasks: First, to that of self-glorification; and second, to further damage the best interests of the people of Puerto Rico.

In the first category he attended cocktail parties, the opening of the world's fair pavilion for Puerto Rico, and was given a dinner by the phony Society of the Americas, at which he was hailed as a candidate for the Presidency of the United States. At all of these occasions, where a halo was placed on his brow, it was done by the representatives of the Wall Street entrenched interests of Puerto Rico, by his stooges whom he had led to the public trough, and from which they have been gorging themselves, and as well by those whose jobs are dependent upon the ex-liberal Ernest Gruening.

In the second category, his activities were in keeping with his 5 years of terror in Puerto Rico. He acted the part of a slimy lobbyist, and fought by means fair and foul to have the wage and hour law amended so that the sugar companies could continue to pay 12½ cents an hour instead of 25 cents an hour, and thereby gain $5,000,000 a year, so that the exploiters of labor in Puerto Rico could continue to pay the intolerable wages they have been paying, a wage system which was made possible under his regime, so that the system of abysmal wage slavery could be perpetuated in Puerto Rico. Up to the very closing days of Congress this kicked-out Governor fought to have Puerto Rican workers removed from the protection of the wage and hour law. He made a frantic appeal to the Speaker, Hon. WILLIAM BANKHEAD, to suspend the rules and recognize someone who would offer the amendment which would have removed Puerto Rico from the provisions of the wage and hour law. This was done after he, together with his stooge and personal lobbyist, James J. Lanzetta, had made all efforts and failed to have the Barden and other amendments considered by the House, which not only would have affected the workers of Puerto Rico but would have also exempted 2,000,000 workers in the United States from the protection of the Fair Labor Standards Act. The welfare of 2,000,000 workers in the United States meant nothing to Blanton Winship or his appointee, who incidentally had had plenty of experience in the matter of lobbying, as was indicated in the proceedings of the trial of the convicted William Buckner, chief lobbyist in the Philippine railroad bond scandal.

The sacrificing of 2,000,000 workers in the States and the sacrificing of labor's welfare in the States as well as in Puerto Rico meant nothing to these gentlemen who were hell-bent on doing the bidding of the financial and industrial corporations of Wall Street that have kept the workers of Puerto Rico in the tentacles of imperialism and wage peonage. I take this occasion to praise the patriotism and statesmanship of our Speaker, Hon. WILLIAM BANKHEAD, who treated the dismissed and disgraced ex-Governor of Puerto Rico with a flat and patriotic "no." This "no" was given after I had spoken to the Speaker who had promised me that there would be no suspension of the rules or the considering of any legislation that would exempt Puerto Rico from the provisions of the Fair Labor Standards Act at this session of Congress.

In the face of these activities, treacherous and detrimental to the people of Puerto Rico, I felt that I should no longer remain silent. I felt that I should not permit this ex-Governor or his stooges to any longer use the prestige of his office which he so disgraced, to the benefit of the exploiters of the Puerto Rican people. I would be derelict if I did not tear off the cloak of virtue in which this destroyer of liberty, protector of grafters, and exploiter of the people of Puerto Rico had enshrouded himself. Therefore, Mr. Speaker, here is his record:

1. CIVIL RIGHTS AND MURDER

In his 5 years as Governor of Puerto Rico, Mr. Blanton Winship destroyed the last vestige of civil rights in Puerto Rico. Patriots were framed in the very executive mansion and railroaded to prison. Men, women, and children were massacred in the streets of the island simply because they dared to express their opinion or attempted to meet in free assemblage.

Citizens were terrorized. The courts became devoid of any prestige because of the evil influence exerted upon them by politicians who acted with the connivance and consent of Mr. Winship. American workers were persecuted and shot down whenever they sought to exercise their right to strike or to organize and protest against the abominable wages that were paid to them by Mr. Winship's pals. The insular police was militarized and transformed from an honest police organization to an organization of provocateurs and murderers, such as existed in the darkest days of czaristic Russia. The gestapo of Hitler could learn many lessons of torture and cruelty from Mr. Winship's so-called police. Nero played the fiddle while Christians were massacred in the days of ancient Rome. Winship drank cocktails and danced in the Governor's palace while the police ruthlessly killed and persecuted Puerto Rican citizens. The

following are just a few cases illustrative of Winship's Neroism. Neither time nor space permits me to give a full history or the list of victims of which the American people know very little or nothing at all.

On Palm Sunday, March 21, 1937, in Ponce, the second largest city in Puerto Rico, the police forces fired with machine guns, rifles, and pistols into a crowd of marching Nationalists. Seventeen were killed, more than 200 wounded. The Nationalists were going to hold a meeting and a parade in Ponce on March 21. The mayor, Tormes, issued a permit. One hour before the time set for the parade and when the demonstrators were ready to march, the mayor canceled the permit on frivolous grounds. As Winship pointed out in a statement issued after the massacre, the parade was called off by the mayor at the request of Gov. Blanton Winship and Police Chief Colonel Orbeta.

Governor Winship went out of San Juan. Colonel Orbeta went to Ponce and concentrated there a heavy police force, among which he included all the machine gunners. For many days the government had been planning action in Ponce.

Chief of Police Guillermo Soldevilla, with 14 policemen, placed himself in front of the paraders; Chief Perez Segarra and Sgt. Rafael Molina, commanding 9 men, armed with Thompson machine guns and tear-gas bombs, stood in the back; Chief of Police Antonio Bernardi, heading 11 policemen, armed with machine guns, stood in the east; and another police group of 12 men, armed with rifles, placed itself in the west.

The demonstrators, at the order of their leader, and while La Borinquena, the national song, was being played, began to march. Immediately they were fired upon for 15 minutes by the police from the four flanks. The victims fell down without an opportunity to defend themselves. Even after the street was covered with dead bodies policemen continued firing. More than 200 were wounded; several were killed. Men, women, and children, Nationalists and non-Nationalists, demonstrators, and people passing by, as well as the people who ran away, were shot. They were chased by the police and shot or clubbed at the entrance of the houses. Others were taken from their hiding places and killed. Leopold Tormes, a member of the legislature, told the reporters how a Nationalist was murdered in cold blood by a policeman, after the shooting, in his own arms.

A 7-year-old girl, Georgina Maldonado, while running to a nearby church, was shot through the back. A woman, Maria Hernandez, was also killed. Carmen Fernandez, aged 33, was severely wounded. After she fell down a policeman struck her with his rifle, saying, "Take this; be a Nationalist." Marie Hernandez was a member of the Republican Party, and while running away was clubbed twice on her head by a policeman. Dr. Jose N. Gandara, one of the physicians who assisted the wounded, testified that wounded people running away were shot and that many were again wounded through the back. Don Luis Sanchez Frasquieri, former president of the Rotary Club in Ponce, said that he had witnessed the most horrible slaughter made by police on defenseless youth. No arms were found in the hands of the civilians wounded nor on the dead ones. About 150 of the demonstrators were arrested immediately afterward, several of them being women. All the Nationalist leaders were also arrested. They were released on bail. More than 15,000, as was reported by El Mundo, a Puerto Rican newspaper, attended the funerals at Ponce, and more than 5,000 at Mayaguez.

The above is not a description of the Ponce events by a Puerto Rican Nationalist. It is quoted from a speech of Representative John T. Bernard, of Minnesota, in Congress and appeared in the CONGRESSIONAL RECORD of April 14, 1937. Does not this bring to mind the Boston massacre in 1770 and the shooting of Russian peasants by the Czar in 1905? Remembering the events of Easter Week in Dublin, 1916, do not you agree with Jay Franklin, Washington commentator for the Stern papers, that Puerto Rico is the Ireland of the Caribbean?

April 16 is a legal holiday in Puerto Rico. It is the anniversary of the birthday of José de Diego, former speaker of the House of Delegates, noted orator, poet, jurist, and outstanding advocate of independence. Every year the Nationalist Party celebrates a mass, a demonstration, and a meeting in his honor. Wreaths of flowers are deposited on his tomb. Another demonstration and a meeting are held to honor Manuel Rafael Suarez Diaz, a martyr of the cause of independence. Flowers are deposited on his tomb also.

In 1937, a few weeks after the Palm Sunday massacre, the city manager of San Juan, under Winship's pressure, denied permits for these meetings and demonstrations. As was even reported in the New York newspapers, although the ecclesiastical authorities gave authorization to hold the mass on the 16th, the cathedral was closed, and policemen posted at its doors. The cemeteries were closed and the Puerto Rican people forbidden to go in groups larger than two to deposit flowers on the graves of the patriots. General Winship again mobilized the Regular Army and National Guard, subject to call.

Arthur Garfield Hays, attorney for the American Civil Liberties Union, went to Puerto Rico and investigated the Palm Sunday massacre, and his conclusion as reported in the report of the American Civil Liberties Union was as follows:

The facts show that the affair of March 21 in Ponce was a massacre.

This committee, headed by Arthur Garfield Hays, was composed of emminent and responsible citizens of Puerto Rico, to-wit: Emilio S. Belaval, secretary, president of the Antheneum, San Juan; Mariano Acosta Velarde, president of the Bar Association of San Juan; Fulgencio Pinero, president of the Teachers' Association of San Juan; Francisco M. Zeno, editor of La Correspondencia, San Juan; Antonio Ayuso Valdivieso, editor of El Imparcial, San Juan; José Davila Ricci, editorial staff of El Mundo, San Juan; and Manuel Diaz Garcia, past president of the Medical Association of San Juan.

Governor Winship tried to cover up this massacre by filing a mendacious report. Mr. Ernest Gruening, who is Director of the Division of Territories and Island Possessions of the Department of Interior and mentor of Blanton Winship since 1936, sought to use this fake report as a cover-up. However, the photographs that were brought to Secretary Ickes by a committee consisting, among others, of former Congressman Bernard, of Minnesota, and myself, photographs of children shot in the back and of police wantonly firing on unarmed people from four sides, could not be ignored. What did the tyrant do? Instead of ceasing the terror, he continued it, and immediately had arrested the friends of people who had been killed on charges of conspiracy to commit murder. Two trials were held. The first trial resulted in a mistrial, and in the second trial the defendants were acquitted.

In the meantime the reign of terror continued. While the victims of the Ponce massacre were being tried for murder, the police forces were given a free hand to continue the orgy of murder. A policeman by the name of Ramon Virella viciously killed two peaceful and honest citizens and seriously wounded a third one at a public market in Rio Piedras, P. R. Virella asked one of the traders in the market, called Matias Gonzalez, to take his bags from the sidewalk he happened to pass by at that moment. As Sanchez did not obey his order promptly, Virella shot at him several times, killing Sanchez and a bystander named Marcelino Perez. Another bystander, Ramon Galvarin, was seriously wounded. Virella was promoted, in spite of public protest, and was retained in the active service of the general police headquarters at San Juan, P. R. This tragic episode took place on September 23, 1937. The Governor ignored public clamor, following the same policy adopted when the persons massacred were nationalists. The victims in the above case were nonpolitical.

On the 19th of October 1937, while the trial of the survivors of the Ponce massacre was still going on, the chief of police of Manati, P. R., Juan Martinez, shot at and killed his

subordinate, Jose Vicente Serra. He was promptly exonerated by Gov. Blanton Winship, despite the public demand for an investigation. By this time Winship had been able to put over his suggestion to abolish the remnants of the institution of the grand jury in force in February 1936, which provided for the investigation and indictment of public officers, including the Governor, by a grand jury.

Under such a provision the murderers of Elias Beauchamp and Hiram Rosado, charged with the killing of the late chief of police, Col. Francis E. Riggs, an incident which I shall describe later on, were indicted of first-degree murder. An indignant public opinion forced the Government to convene the grand jury, which, after investigating the case, bitterly assailed the practices of the police and tried to determine the responsibility, if any, of the Governor in that case. They left the door open for further inquiries. Governor Winship got the law repealed soon afterward. So that at the time of the Ponce massacre, denounced in this House by Congressman John T. Bernard on April 14, 1937, in the brilliant and moving speech which appears in the CONGRESSIONAL RECORD of that date, page 4499, and to which I referred above, the district judges of Ponce denied a petition made by prominent citizens of that community, who represented every sector of public life, when they asked for the convening of a grand jury to investigate the case. As the law now stands, the citizens are helpless when the aggression originates with the top public officials, because the prosecutors are appointed by and are to a great extent responsible to the Governor.

On October 25, 1937, the trial of the survivors of the Ponce massacre was still going on when a policeman named Victor Martinez shot to death in the police station of Toa Alta the judge of the municipal district of the towns of Toa Alta, Toa Baja, and Dorado. Attorney Antonio Novarro Ortiz, who was a brother of the district judge of Mayaguez, P. R., Francisco Navarro Ortiz, and a member of the Union Republican Party.

Meanwhile, in Camp Buchanan and during the last days of August 1937, the police forces were trained in the use of those arms used by G-men in their fights against gangsters. Mr. Edgar K. Thompson, who was at that time at the head of the Division of Federal Investigation in Puerto Rico, and Mr. Myron E. Gurnes served as special instructors. The policemen were trained in the use of machine guns, equipped with luminous bullets which enables one to locate the enemy while aiming at him and at the same time to shoot from a place of safety, a place protected by the shadows.

Public indignation reached its highest peak with the murder of Judge Navarro Ortiz. Col. Enrique Orbeta, the insular chief of police, who planned with Winship the Ponce massacre, complained that he had "too much responsibility and too little authority," and orally resigned before Governor Winship, as reported by the press, but finally agreed to continue in his post. Now Frankenstein was turning against its masters.

On June 29, 1938, Capt. Rafael Igaravidez, while chief of police of Ponce, P. R., was killed by one of his men, Policeman Ramon Cruz Reyes. Orbeta was quoted in El Mundo as saying that the murder of Igaravidez was the result of a conspiracy plotted by the police force at Ponce. The sanguinary nature developed in the police corps under Winship's influence provoked a state of profound general unrest in the entire island.

Early this year a sergeant of police committed another crime so shocking and unbelievable that one cannot imagine how a person can be so devoid of moral principles. The case is as follows: Three youngsters were arrested at Vega Baja, P. R., on charges of stoning the father of Sgt. Juan Correa, who was serving at Barrio Obrero, Santurce. The aggressors were set free on bail after being accused of assault and battery. Several days later Sergeant Correa received a telegram at his post informing him of the death of his father. He immediately departed for Vega Baja. He went to the police station, explained the case to the policeman on duty, took him in an automobile, and went in search of the three men; and when he found them he took them to the police station. As soon as they returned, so it was reported, Correa killed the three prisoners in the presence of the chief of police in service at Vega Baja at that time, Angel Perez Segarra, who had been in charge of the machine-gun unit of nine men that gunned from the back the paraders massacred on Palm Sunday in Ponce, P. R., in 1937, as described above. The policeman who aided in the arrest was also a witness to the horrifying triple murder. Later it was learned that the medical certificate showed that the ferocious sergeant, even accepting for the sake of argument the repugnant rules of the savages, did not have any basis for this action as his father did not die as a result of the wounds inflicted upon him but of an infection.

Another incident illustrative of the cruelty of Mr. Winship's tyranny occurred on February 22, 1936, when two men were arrested for the killing of former Police Chief Francis E. Riggs. Elias Beauchamp and Hiram Rosado were brought to the police station and there shot down in cold blood by the police.

A frame-up "a la Medici" was something at which Mr. Winship would not stop. Dr. Pedro Albizu Campos, a Harvard graduate and leader of the Nationalists, together with several of his followers, were indicted under a post Civil War statute of a conspiracy to insurrect against the Government of the United States. They were framed at the Governor's palace. Mr. Rockwell Kent, famous American artist, describes what took place at a cocktail party in the Governor's palace immediately after the first trial, and I quote from his letter to Senator HENRY F. ASHURST, chairman of the Senate Judiciary Committee, dated May 21, 1939:

> I was present in San Juan during the progress of the first trial of Albizu Campos for treason, and I was a guest of Governor Winship's at a cocktail party on the terrace of his residence a few hours after the conclusion of that first trial through a disagreement of the jury. The party was a large one and the guests were mainly Americans—tourists and residents of San Juan—and upper-class Puerto Ricans. There was naturally a great deal of talk about the trial, and much of this talk centered about Judge Cooper, who had presided. The comments were heatedly pro government; and in my hearing condolences upon the miscarriage of justice were repeatedly voiced to the judge. These were received without rebuke. At that party a Puerto Rican friend of mine introduced me to a Mr. Cecil Snyder as the prosecuting attorney in the Campos case. We three withdrew for conversation to a corner of the terrace. My friend complimented Mr. Snyder upon his brilliant summing up and deplored the jury's failure to bring in a conviction. Mr. Snyder assured him that he had already received a despatch from Washington telling him to go ahead with a new trial and that the Department of Justice would back him until he did get a conviction.
>
> Mr. Snyder drew a paper from his pocket and handed it to my friend, saying "This is to be my next jury. What do you think of them?" I recall that my friend was familiar with the name and position of all but one of those listed, and that he assured Mr. Snyder that they could be counted upon for a conviction. This appeared to agree with Mr. Snyder's own knowledge. The jury of the second trial of Albizu Campos contained several men whose connections were identical with those in the list submitted to my friend by Mr. Snyder. How the prosecuting attorney could determine in advance who would compose his next jury, I don't know. I do state as fact that Mr. Snyder said, "This is to be my next jury." I have subsequently given this information all possible publicity. The defense counsel at the Ponce trials asked me to come to Ponce to testify to what I knew about Federal prejudice. I was accompanied on the plane by the Federal marshal of San Juan. He spent literally hours of the trip attempting to persuade me not to go to Ponce, not even to leave the plane at San Juan. He urged me to put myself under his protection, to stay with him at the Condado Hotel, to meet his friends, who, he said, were the people I ought to know in Puerto Rico, and to avoid association with friends of the defendants. He warned me that my life would be in danger from the moment I set foot in Puerto Rico. From the moment of my arrival in Puerto Rico I was viciously attacked in the government-controlled evening paper. Before my appearance on the witness stand, it was published that Cecil Snyder and the prosecuting attorney of Ponce, after a session together of some hours the night before, had agreed that I should not be permitted to testify. It was rumored in Puerto Rico that if I did testify, I would be immediately arrested.
>
> A suggestion as to the origin of these rumors is contained in a statement attributed to Cecil Snyder and published in a recent issue of Ken. I was not permitted to testify, although the entire matter of my testimony was put into the record by the defense counsel. You will recall that the Ponce trials resulted

in the acquittal of all the defendants. As a result of these experiences my own feeling is, naturally enough, one of serious distrust of Federal law enforcement in Puerto Rico. That this distrust is felt by innumerable thousands of Puerto Ricans we know. As an American citizen deeply concerned with the well-being of American citizens of all classes and races, and particularly concerned at this time with promoting the unquestioning loyalty of all the American people to the principles of democratic government, I beg you to reflect seriously upon the reappointment of Judge Cooper and of all or any of those Federal officials in Puerto Rico whose tenure of office has been coincident with, and whose acts have presumably contributed to the growing popular distrust of our Federal Government which appears in Puerto Rico today. We have a situation there that must be changed. The wisest step would be a clean slate for a new clean start.

Sincerely yours,

ROCKWELL KENT.

The trial took place, and by a prejudiced jury, by jurors who had expressed publicly bias and hatred for the defendants, Campos and his colleagues were railroaded to jail. Mr. Speaker, these innocent men languish in Atlanta Penitentiary today because they were convicted by a fixed jury, a jury representing the economic interests of Wall Street in Puerto Rico. They did the bidding of Blanton Winship. An idea of what took place in the jury room is contained in the following letter to President Franklin Delano Roosevelt by Elmer Ellsworth, one of the jurors who convicted Campos:

DEAR MR. PRESIDENT: I understand that a petition is being submitted to you in behalf of clemency for the eight Puerto Rican Nationalist prisoners, headed by Dr. Albizu Campos, now serving terms for seditious conspiracy in Atlanta prison. As one of the jurors who convicted them, I feel it is my duty to lay before you certain facts in connection with the jury's deliberations which may enable you better to weigh the merits of their conviction. Immediately when the jury went out to deliberate I found myself to be alone among the 12 men in opposing a conviction. In the 8 hours of discussion the voluminous evidence was whittled down to four factors—one, a speech by Dr. Albizu Campos; another, a resolution of the Nationalist Party; third, an article by one of the defendants in one of the party papers; and, fourth, a leaflet, signed by two of the defendants. I finally agreed with my fellow jurors that if Trial Judge Cooper held any or all of this evidence to be in violation of law I would vote for conviction, and they, on their part, agreed that if the judge held this evidence not to constitute a conspiracy they would vote to acquit. The form of question put before the judge was agreed upon and the foreman presented it to the judge in open court. The judge expressed himself on the question in such language that I was obliged to arise in the jury box and ask him whether he meant yes or no. Confronted with the necessity for a definite answer, he finally replied in the affirmative. The jury thereupon retired and brought in a verdict in accordance with the agreement. In making this statement to you concerning the jury's deliberations, I cannot refrain from saying that my associates on the jury seemed to be motivated by strong, if not violent, prejudice against the Nationalists and were prepared to convict them, regardless of the evidence. Ten of the jurors were American residents in Puerto Rico and the two Puerto Ricans were closely associated with American business interests. It was evident from the composition of the jury that the Nationalists did not and could not get a fair trial.

Very sincerely yours,

ELMER ELLSWORTH.

This frame-up is one of the blackest pages in the history of American jurisprudence. The continuance of this incarceration is repugnant to our democratic form of government; it is repugnant to our Bill of Rights and out of harmony with our good-neighbor policy. There is no place in America for political prisoners. As long as Puerto Rico remains part of the United States, Puerto Rico must have the same freedom, the same civil liberties, and the same justice which our forefathers laid down for us. Only a complete and immediate unconditional pardon will in a very small measure right this historical wrong.

Following the conviction of the Nationalist leaders, Governor Winship had his job—controlled and corrupt legislature abolish the grand jury. Will not my colleagues be amazed to know that there is no longer any grand-jury system in Puerto Rico? It is significant to note that the grand jury had existed as an institution to investigate illegal practices of public officials and Governors. Naturally Mr. Winship did not want a grand jury. He did not want any investigation of his public officials, and particularly did he not want any investigation of himself, for he too well remembered that one of his predecessors, former Gov. E. Mont Riley, had been indicted by a grand jury. I am reasonably certain that despite the strangle hold that Winship had over law-enforcement officials in Puerto Rico, that if a grand jury had been in existence during the last year and a half, that Mr. Winship would have been indicted. I am certain that Benigno Fernandez Garcia, attorney general of Puerto Rico, would have had to act in response to the great public clamor that existed against Blanton Winship's tyrannical activities, just as he acted in the murder of Rosado and Beauchamp.

The massacres and killings which I have just described followed such massacres as occured in Rio Piedras on October 24, 1935, when four Puerto Rican Nationalist leaders were killed by the police in a closed automobile and one was badly wounded. Mr. Winship incidentally provoked the Puerto Rican people in his speeches by his insults and his intolerance. He must assume full responsibility for all acts of violence. Tyranny brings violence. Insults constitute provocation. Terror and persecution cause desperation. When we ask ourselves, "Can it happen here?" the Puerto Rican people can answer, "It has happened in Puerto Rico."

2. MISRULE IS THE TWIN BROTHER OF TYRANNY

A comparative study of the reports of the attorneys general of Puerto Rico shows that under the administration of Mr. Winship crime has increased about 50 percent. Instead of dealing with strikes in the American way, he attempted to call out the troops to suppress the dock strike, which was a peaceful strike. He deliberately sabotaged the wage-racket investigation. He was the spearhead of the conspiracy against the enforcement of the Fair Labor Standards Act in Puerto Rico. He advised employers to ignore the provisions of the law. He deliberately informed them to disregard the efforts of Dr. Robert W. Claiborne, who was Territorial representative of the Wage and Hour Division of the Department of Labor. In fact, he went so far as to try to frighten Dr. Claiborne by saying to him that he would not be responsible for his personal safety if he tried to enforce the wage and hour law. Dr. Claiborne, incidentally, has been shot at three times since Mr. Winship's threats were made. In fact, Winship went further, and on one occasion he attempted to intimidate him. As I stated above, after Winship was removed from office he exerted all efforts to have the Fair Labor Standards Act amended so that it would no longer protect the Puerto Rican workers.

He sabotaged the investigation of the racket in the legislature. In a report filed by Campos del Toro, who is the First Assistant Attorney General of Puerto Rico, with the Secretary of the Interior, Harold Ickes, on February 14, 1939, we find one of the most shocking conditions in the history of contemporary government. From this report we learn the following:

The investigation reveals that in the insular senate certain senators, employees, and officers incurred irregularities, sets of misfeasance, and law violations. As to the irregularities we may mention, among others, the following:

1. Failure to keep a register or record showing the domicile and residence of each employee working in the insular senate.
2. Conferring verbal appointments to employees to do overtime work.
3. Failure to keep a record of the overtime work done by the employees.
4. Failure to require that the interested party himself sign and check the pay roll showing his work.
5. Delivery of checks to persons other than the interested parties.
6. Submitting to the office of the auditor of Puerto Rico uncertified pay rolls.
7. Submitting to the auditor's office pay rolls lacking the signatures of the interested parties.
8. Allowing that the interested party or employee testify by himself to the pay roll showing the work done by him without any previous investigation by a higher-up officer.
9. Certifying pay rolls signed by employees in the name of others, no one person appearing to be responsible for the presentation of such pay rolls.
10. Approval of pay rolls without checking the items contained therein in connection with overtime work.
11. Appointing persons to positions for which they were not adequately qualified, thus resulting that a person was appointed as a stenographer without knowing stenography and a person was appointed as clerk without knowing how to read or write.
12. Approval of pay rolls of employees who did not attend the senate to work or who were absent from Puerto Rico or working in the P. R. R. A. or for private enterprises.

13. Appointment of persons as employees who had been convicted of public crimes and could not lawfully draw any compensation from the insular government because of their incapacity resulting from their not having been reinstated to the enjoyment of their civil rights.

The following are acts of misfeasance:

1. Appointment of persons as employees who received compensation from the government without having rendered any service therefor.

2. Payment of salaries to women employees who did not render any services to the people of Puerto Rico and unduly collected such salaries through the influence of their senator friends or other persons.

The acts of infringement or violation of the law can be condensed as follows:

1. Appointment of employees to be paid from the "incidental expenses" in violation of the provisions contained in paragraph 11 of article 34 of our organic act.

2. Appointment and payment of employees for overtime work who are not employees of the insular government, thus contravening the provisions of section 2 of the Budget Act of 1938, which authorizes the auditor to pay extra compensation at the rate of 75 cents per hour to those employees of the insular government who may be utilized as such by the insular legislature or by the committee thereof. The validity of the said legal provisions is much debatable and doubtful. In our judgment it should be eliminated from the budget act.

3. Failure to take the oath of office and allegiance to the Constitution of the United States and laws of Puerto Rico before taking possession of the office or employ, as required by act No. 93, approved May 13, 1936. In some instances, the oath was taken after we required a certified copy thereof of the secretary of the insular senate. In other cases, when we required a copy of the oath, it appeared that the oath had never been taken, although the employee had been acting as such for more than 8 months. In a specific instance, the oath was never taken, and after the employee had been out of his employ and as a result of the investigation, the employee was called to take the oath, which was made effective as of the date on which he had been appointed.

4. Employees who did not render any service for which they collected (sec. 83 of the Penal Code).

5. Employees and one senator who filed in the office of the senate false and forged pay rolls and a forged oath of office (sec. 114 of the Penal Code).

6. Employees who forged checks and appropriated for themselves the amounts thereof (sec. 413 of the Penal Code).

7. Employees who appropriated public funds for themselves without any authority (sec. 372 of the Penal Code).

In the same report we find that out of 356 employees which have been included in the pay rolls as working, the number may be figured at 100 who actually worked. The other 256 were dummies who received pay for no work at all, and in certain instances their checks were forged and the money was collected and pocketed by politicians and senators. The situation was so scandalous that Antonio Pomalles, secretary to the president of the senate, Rafael Martinez Nadal, committed suicide after he had been questioned by Campos del Toro, the assistant attorney general, who had been conducting the investigation.

All of this could not have happened without the Governor having known of it. In fact, consequently, he permitted this condition to exist. It is only natural that Mr. Winship would not punish supine legislators which had consistently done his bidding. The Governor deliberately went out of his way to hamper the Attorney General and his assistant in carrying out this investigation and prosecuting the culprits. The office of the district attorney was vacant, and for 7 months Mr. Campos del Toro demanded an appointment so that a prosecutor could take office and prosecute the guilty ones, and yet Mr. Winship never made the appointment. He did not want to prosecute his pals. The link between these racketeers and the Governor is found in the person of Leslie A. McLeod, the auditor of the island.

I have filed charges against him. All checks had to pass through his hands, and had to receive his approval, and this man who has more power than the Attorney General of the United States put his stamp of approval to this racket. He was directly responsible to the Governor. He would never have dared to overlook this corruption if he did not know that it had the benevolent approval of the Governor.

Winship's sabotage of the 500-acre law and of the little T. V. A. is well known throughout the island. Winship, the darling of the public-utility interests and the protector of the sugar barons, wanted neither a little T. V. A. nor a 500-acre law. He and his public-service commission were responsible for the racket and monopoly in public conveyance and for the desperate plight of chauffeurs.

He deliberately made appointments to the judiciary against the advice of the Attorney General and yielded to the pressure of the politicians. The courts naturally fell in complete disrepute under his regime. His political appointments to the bench caused general disregard of the courts.

A congress was held in Puerto Rico called the economic convention of Puerto Rico on March 12, 1939. It was composed of people representing all political parties, trade unions, fraternal organizations, chambers of commerce, and all forms of business and agricultural groups. In his opening address Mr. Felipe L. De Hostos, president of the Chamber of Commerce of Puerto Rico, stated that "the economy and social structure of the island was in imminent danger of disintegration."

I have recently called the President's attention to the fact that over 1,000,000 persons in Puerto Rico, an island of 1,800,000, are without work and food.

In my debate for more relief funds for Puerto Rico I pointed out the fact that 1,225,000 people were in sore need of relief. Small farmers on the island are being pushed off their land by unwarranted foreclosure proceedings brought by Mr. Ernest Gruening to collect loans made for hurricane relief, and yet, despite this despairing economic situation, Mr. Winship's regime will be known as a carnival and orgy of superextravaganza.

While the people asked for bread, parties at the Governor's palace were scandalously extravagant. While the mayor of the city of New York, a city of over 8,000,000 people, has at his disposal only one car which was purchased in the early part of 1934 and is still being used by him, this Caribbean Nero has had at his disposal five cars purchased at a price of $10,269.14, and costing the Government $4,796.93 a year for upkeep. These are the official figures given out for the year ending December 31, 1938, by his own auditor, Leslie A. McLeod.

While the people starve and the economy of the island is diminishing to the vanishing point, Mr. Winship took care of his pals and friends and the political obligations of Ernest Gruening.

Besides Winship's salary and his expenses for parties, entertainment and other carnivals for which the people of Puerto Rico paid, the following is a most amazing list of the squandering of the public's funds.

He formed a tourist bureau, which experience has taught us has brought no benefit to Puerto Rico, and the salaries alone for this tourist bureau amount to $75,000 annually. He then hired an advertising outfit by the name of Buchanan & Co., for which $60,000 annually is paid by the people of Puerto Rico. This advertising was not sufficient. He had to have more publicity. So for publicity purposes he hired Steve Hannegan, paying him an annual salary of $25,000 and expenses in the amount of $25,000. However, this was not enough publicity for Mr. Winship. He also hired a Mr. Walter Wilgus, paying him the sum of $4,800 a year. Then he needed a lobbyist. Here, however, I want to be charitable to Mr. Winship. He was forced to make the following appointment by none other than Ernest Gruening. I had defeated Mr. James J. Lanzetta for Congress. Mr. Lanzetta knew too much about Mr. Gruening's interference in my political campaign. Mr. Lanzetta had to be taken care of, and Winship appointed him, at Gruening's request, to the tune of $10,000 a year, plus $2,800 for expenses. Of course, as I said before, Mr. Lanzetta is especially qualified to be a lobbyist. His connection with the convicted Bruckner Philippine bond scandal, and Mr. Bruckner's lobbying activities make Mr. Lanzetta indeed exceptionally qualified.

Despite the fact that Mr. Winship had the Solicitor of the Department of the Interior at his disposal, the Department of Justice of Puerto Rico, as well as the Department of Justice of the United States at his disposal also, he had to hire an attorney, a pal of his, Col. William C. Rigby, at $10,000 a year salary and $2,800 for expenses. Another pal of his

also had to be taken care of, so he hired him as an attorney for $4,000 a year, by the name of Col. Hugh C. Smith. These gentlemen certainly did not perform one function that was very necessary and that was, to have told Mr. Winship to obey the Political Code of Puerto Rico, as well as the laws of the United States of America.

Then he had to have a financial and economic adviser, Mr. Manuel Domenech, at a salary of $6,000 a year and $4,000 expenses, even though there exists an insular treasurer at $6,000 a year who, under the organic act, is the Governor's financial and economic adviser. A Governor, of course, has to have secretaries—Walter Cope, secretary, at $4,800 a year. Then he had a have a private secretary, Mr. Fred Heins, at $4,000 a year.

Mr. Winship still had to have more publicity, so he has a publicity secretary, Arnaldo Meyners at $3,600 a year. Then besides the $75,000 for salaries and other incidental expenses, which are paid for the Tourist Bureau, he had to have an adviser of the Tourist Bureau, Jack Paton, who was paid $4,000 a year. Then he had to have a director of the world's fair exhibit, Mr. E. Gonzalez Geigel, at $10,000 a year. He has since resigned his post as member of the house of representatives from the district of Santurce to occupy his present $10,000-a-year position which formerly was occupied by his uncle, Fernandez Geigel, in charge of the Bureau of Commerce. When there was no world's fair to take care of his pal he had a Puerto Rican Bureau of Commerce. When the world's fair came along the Bureau of Commerce was reorganized and placed under the jurisdiction of the Puerto Rican exhibit at the world's fair.

This represents a total of direct personal patronage in the amount of $255,000 a year, saddled on the people of Puerto Rico. Many of these appointments were made in contravention of the organic act, and in certain instances without the authorization of the legislature. He knew very well how to handle the legislature. He appointed members of the legislature to other government-paid positions. In fact, he appointed some to occupy other and better positions, after having permitted these legislators to obtain these positions for themselves, using their influence as members of the legislature. This alone is in violation of the law and warranted his removal.

At some other time, and at the proper occasion, I shall give the story of nepotism in Puerto Rico, which was carried on only with the consent and approval of Mr. Winship.

In order to finance the extravaganza that I have hereinabove mentioned, this island of honest people, who have been crushed into abject wage slavery, is compelled to pay 100-percent tax on salt. Nowhere in the world has such a condition existed since the pre-Revolutionary days of the French Revolution. It has been estimated that $15,000 a month is being squeezed out of the Puerto Rican people in the form of a tax on salt. This tax was imposed by the legislature in 1937 at the request of Mr. Winship.

The cost of government today in Puerto Rico is $58,-225,000 a year, which is a record. Government costs in Puerto Rico have doubled in the past 8 years. This money is not spent for the benefit of the people. It is spent in the form I have above described. While he was throwing money away on publicity and on lame-duck congressmen and on his friends he caused the closing of school children's lunchrooms because of the lack of $35,000. This was done while he was throwing away $100,000 on the pavilion of the world's fair, paying Mr. Lanzetta's salary, Mr. Rigby's salary, and Mr. Hannegan's salary, and so forth, at a cost of over $255,000 a year. No lunches for school children but plenty of pork for politicians and politicians' pals. Only an honest auditor can tell the real story of extravagance and waste of funds. What I have given you is what I have been able to glean out of the present auditor's report, who has followed Mr. Winship's instructions implicitly and whom I now have under charges.

In my written charges to the President I pointed out how Mr. Winship had deliberately permitted the expenditure of $75,000 of the funds of the people of Puerto Rico for the drawing of plans for the graving dock at San Juan. This work was given out contrary to the organic act of Puerto Rico to a pal of Mr. Winship's, Mr. Frederick Harris. It was unnecessary to spend this $75,000, as there existed plans in the office of the Commissioner of the Interior of Puerto Rico which were similar to the plans that Mr. Harris furnished. But what did $75,000 mean to Mr. Winship as long as the tax on salt existed in Puerto Rico?

I do hope that the new Governor of Puerto Rico will read this statement of mine and will make note that irrespective of what his political views may be that plain, ordinary honesty requires an end to this saturnalia of corruption and this orgy of extravaganza which Mr. Winship foisted on the people of Puerto Rico with an iron heel. His first duty is plain. He must clean house and remove from the backs of the Puerto Rican people these parasites who are gorging themselves on the blood of the Puerto Rican workers who are compelled to pay a 100-percent tax on salt.

Even the University of Puerto Rico was not left untouched by Mr. Winship. The corruption and political racketeering in this university astounded the members of a commission appointed by the President of the United States to make a study of conditions in the university. I shall not dwell at length on their report as each member of the commission is filing his own individual report. I can now prophesy that the collective report will be to the effect that it is better to have no university at all than to have one under the present existing conditions. Is it any wonder that the satellites of Ernest Gruening and Mr. Winship, who were running the university, conferred upon Mr. Winship a degree after the President had kicked him out of office? Their turn is coming, too. Just wait until the report of the commission is made public. There are also now pending in the United States Department of Justice complaints of irregularities in the office of the Commissioner of Education of Puerto Rico.

Mr. Speaker, no matter what one's solution may be for Puerto Rico, no matter what one may advocate as a permanent status for Puerto Rico, there is one proposition over which all honest men must agree, and that is that we cannot permit corruption, graft, racketeering, nepotism, and waste of the public's money anywhere where the American flag flies. Governor Leahy must clean house. His is the responsibility. I shall watchfully wait.

Mr. Winship resisted all efforts to bring the New Deal to Puerto Rico. He was out of harmony with the spirit and objectives of the New Deal, and he persistently threw monkey wrenches into the New Deal in Puerto Rico, and in all Federal agencies that were set up to help the people of Puerto Rico. His efforts to obstruct the Puerto Rican Emergency Relief Administration are well known. Some of his speeches have been used by enemies of the New Deal as attacks upon the President and the President's policies. His appearance before the Ways and Means Committee was an old-fashioned Tory speech against the policies of Franklin Delano Roosevelt. He brazenly and shamelessly openly cavorted at public dinners with agents of General Franco in Puerto Rico. He encouraged the Spanish Fascist phalanx in Puerto Rico. Instead of stamping out the Nazi-Franco spies he let them operate wide openly in Puerto Rico. The situation was so noticeable that even Mr. Cecil Snyder, the United States attorney, has had to announce a drive on spies in Puerto Rico. A Fascist-minded general, a Nero governor, playing ball with Fascist spies who have been propagandizing the idea that Puerto Rico must be recaptured for the Franco-Spanish empire.

This, Mr. Speaker, is the record of the man who was kicked out, and who had the temerity to appeal to you to suspend the rules and amend the Fair Labor Standards Act so that the people of Puerto Rico would be perpetually chained to abysmal wage slavery.

3. SUPPRESSION AND DISTORTION OF THE NEWS OF CONDITIONS IN PUERTO RICO

Mr. Speaker, my colleagues may ask why it is that we have not learned from the press of these conditions in Puerto Rico. The answer is found in the control of the news services

to the United States by Messrs. Gruening and Winship. The two largest distributing news services are the Associated Press and the United Press. Mr. Harwood Hull represents the Associated Press and the New York Times in Puerto Rico. Mr. William O'Riley represents the United Press and the New York Herald Tribune in Puerto Rico. Both of these gentlemen are also parasites on the backs of the people of Puerto Rico, placed there by Messrs. Gruening and Winship. Mr. O'Riley has been an employee in the insular government, appointed through the Governor and his job was dependent on Mr. Winship. Mr. Harwood Hull was appointed by Mr. Gruening in the Puerto Rican Reconstruction Administration at the time that Mr. Gruening was in personal charge of the Puerto Rican Reconstruction Administration. Hence we find the most unusual situation: That the representatives of the press who send the news to the people of the United States with regard to Puerto Rico are actually on the government pay rolls, whose strings are in the hands of the two men who are considered the enemies of the people of Puerto Rico. Any news that they send must necessarily be news not offensive to either Mr. Gruening or Mr. Winship. Their jobs depend on their remaining in the good graces of Messrs. Winship and Gruening.

Whenever an incident occurred, Hull would send a report, suppressing news that was unfavorable to Mr. Gruening or to Mr. Winship. Mr. O'Riley would do the same thing. The next day or even the same day, they would send a statement from Mr. Winship. If any questions were to be asked in the States, the reporters would then call on Mr. Gruening, because of his position as director of the Division of Territories and Island Possessions of the Department of the Interior. Here again the public would receive biased and prejudiced versions from Mr. Gruening. Mr. Winship would then follow up the press statement with an official report to Mr. Gruening.

What chance have the American people had with this set-up to receive any real news about Puerto Rico? I do trust that both the Associated Press and the United Press, that both the New York Times and the New York Herald Tribune will investigate the tie-up and economic dependency of their representatives in Puerto Rico, Messrs. O'Riley and Hull, with those who have been responsible for the 5 years of tyranny in Puerto Rico.

Mr. Speaker, it is not the purpose of this statement to deal with Mr. Ernest Gruening, ex-liberal and former editor of the Nation, now repudiated by every single one of his liberal friends. However, I must say that there is only one mitigating factor in Mr. Winship's favor, and that is that since 1936 he became the tool, the veritable Charlie McCarthy and the front man for Ernest Gruening. Every commission and every omission of Mr. Winship were the detailed execution of the machinations of the behind-the-scenes manipulator, Ernest Gruening. This maker of political parties in Puerto Rico, this would-be maker of Congressmen from certain districts in the Union will be unmasked. Mr. Speaker and my colleagues, I promise you that this task will be fulfilled in the very near future.

Federal Pay Rolls Hit New High Point

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BENDER. Mr. Speaker, the United States Civil Service Commission reports that the Federal pay roll is now at the highest point in the history of our Government. Mounting steadily ever since the advent of the New Deal administration, our Federal employees, exclusive of those working on W. P. A., P. W. A., or the military forces of the Nation, now number 925,260. This figure standing in isolation gives no fair conception of the tremendous increases which have occurred in the last 6 years. On March 4, 1933, there were 563,847 men and women at work for the United States. Within the short period of the "brain trust's" domination of national affairs, 362,413 persons have been added to the taxpayers' burden.

To gain some fair idea of the changes which have occurred, we need only remember that the additional employees added by the Roosevelt regime would be sufficient to populate the entire city of Indianapolis. Within the city of Washington itself, 120,309 Federal employees are busily at work. In 1933, there were only 66,802. The 53,507 additional workers would fill a city the size of Decatur.

Never within the history of the Nation has there been so vast a civilian-employee group employed by the Federal Government. Even during the World War, the tremendous emergency needs of our Government did not require the number of workers now laboring for the Federal overlords of our Nation. In 1918, only 117,103 men and women were at work in Washington. There are more than 3,000 men and women over and above this war-time peak within the Capital today. There are 801,756 employees working outside of Washington today. At the most critical point of the World War, there were 799,736 Federal employees scattered throughout the Nation. Yet even this figure has been passed by the fertile job creators of the New Deal.

The increase of employees has not been limited to any small group of governmental departments. In the Department of Justice, Attorney General Frank Murphy, who recently urged a billion-dollar slash in the Government's pay roll and a cut of 1,000,000 employees from Federal, State, and local governmental units, the universal tendency to increase pay rolls has manifested itself with equal force. In January, when Attorney General Murphy took his position, there were 8,918 employees on his rolls. Today there are 9,605, a 7.7 percent increase.

Yes, indeed, the new dealers know how to create jobs. They are not jobs in private industry, to be sure. They are on the public purse. But to the New Deal there seems to be no difference. To the rest of us the difference is taxingly obvious.

The Work of the Ways and Means Committee During the Past Session

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. TREADWAY. Mr. Speaker, looking back over the past session of Congress it becomes apparent that sanity in government is on the way back and that the Congress is gradually reasserting its legislative authority. This wholesome change has been brought about in a large measure by the militant Republican minority under the brilliant and effective leadership of my colleague from Massachusetts [Mr. MARTIN].

In the election of last fall the people expressed in no uncertain terms their dissatisfaction with New Deal failures. By increasing the Republican membership in the House from 89 to 169 they made it possible for the minority, with the assistance of a small group of Democratic Members who put country above party, to muster sufficient strength to check New Deal waste and extravagance, to remove some of the impediments which the present administration has placed in the way of recovery, and to take definite steps toward the restoration of representative government.

After 6 years of New Deal bungling with the affairs of the Nation a Republican tide has set in. As is evident from a review of events of the past session, the people have already

begun to reap the benefits of this change, which will be more complete when full responsibility for the conduct of the Government is placed in Republican hands.

The reverses the President has experienced during the past session have been the people's victories. The defeat of the spending-lending bill is in point. This measure was blocked by a solid phalanx of 146 Republican votes and 47 Democratic votes. Other examples could be cited. In these remarks, however, it is my purpose to confine myself to the legislation which came before the Ways and Means Committee, of which I am the ranking Republican member.

MEASURES CONSIDERED BY WAYS AND MEANS COMMITTEE

The committee was busily engaged all during the past session. In addition to numerous minor bills, which I shall not take time to mention, it considered the following measures of general interest:

H. R. 2762, enacting the internal-revenue title of the United States Code as absolute law (Public Law No. 1).

H. R. 3790, subjecting the salaries of State and municipal officers and employees to Federal income taxation and permitting the States to tax the incomes of Federal officers and employees (Public Law No. 32).

H. R. 5450, extending the time for filing claims for soldiers' adjusted compensation (now before President for signature).

H. R. 5482, increasing Federal grants for administration of State unemployment-insurance systems (Public Law No. 36).

H. R. 5748, removing the limitation on the amount of Federal long-term bonds that may be issued within the present authorized statutory debt of forty-five billions (Public Law No. 201).

H. R. 6466, the so-called Townsend bill (defeated in House, 96 ayes to 302 noes).

H. R. 6635, amending the Social Security Act (now before President for signature).

H. R. 6851, the revenue bill of 1939 (Public Law No. 155).

In addition to giving consideration to the foregoing matters, the committee held extensive hearings on the proposal to tax the interest on future issues of Federal, State, and municipal bonds. Action on the proposal was deferred until next session, pending further study by the Subcommittee on Internal Revenue Taxation.

Of the foregoing measures, the two most important from the standpoint of national interest were those relating to social security and taxation. In both these matters the legislation was largely for the purpose of correcting previous mistakes made by the Democratic majority. Republican criticism of administration policies was an outstanding factor in bringing about the changes made.

SOCIAL-SECURITY REVISION

The revision of the Social Security Act was by all odds the greatest task that the Ways and Means Committee has undertaken since the original act was passed in 1935. The committee began hearings on this measure on February 1, and they lasted until April 7. The printed hearings cover three volumes aggregating 2,600 pages and include considerable testimony on the Townsend and general-welfare bills (H. R. 2 and H. R. 11).

Following more than 2 months of hearings, the committee sat for 2 additional months in executive session preparing the bill, which was reported to the House on June 2. Prior to reporting the bill, the committee reported the revised Townsend bill (H. R. 6466) to the House without recommendation, so as to give the membership an opportunity to vote on this measure before the social-security bill was called up.

The social-security bill passed the House on June 10 with only two dissenting votes. It was reported to the Senate on July 7 and passed that body on July 13. Then followed a protracted conference lasting 21 days, during which time House and Senate conferees sought to adjust differences between the two bodies. A compromise was finally reached on Friday, August 4, the day before Congress was scheduled to adjourn. The principal point of disagreement between the two Houses was over the so-called Connally amendment, which the Senate had adopted, which provided for 2-to-1 matching by the Federal Government with respect to the first $15 of old-age pensions provided under State law, and 50-50 matching on amounts over $15 and up to $40. This same amendment had previously been overwhelmingly rejected by the House.

Another amendment over which there was considerable controversy was the Senate amendment striking from the bill the so-called Massachusetts plan for permitting States which had adequate unemployment reserves to reduce their unemployment tax. The conference agreement resulted in the elimination of both the Connally amendment and the Massachusetts plan. I was personally very much opposed to the Connally amendment, and therefore heartily concur in this action, but I regret exceedingly that some compromise on the Massachusetts plan could not have been reached so that States like Massachusetts, which are exacting from employers much more in pay-roll taxes than is necessary to pay unemployment benefits, could reduce their taxes. I am in hopes that at the next session some acceptable plan can be worked out. Of course, the existing law provides a method whereby individual employers within a State, if they have good employment records, may secure a reduced rate; but the Massachusetts plan would have extended the same benefits to all employers within a State where the State as a whole had a good employment record.

Following is a brief summary of the principal provisions of the bill as passed by Congress and sent to the President for signature:

Old-age pensions

1. Present 50-50 matching of State funds continued, with increase in maximum Federal contribution to $20 per month per person instead of $15, making possible a pension of $40 if States contribute a like amount.

2. States required to select administrative personnel on merit basis.

Old-age insurance

1. Pay-roll taxes frozen at 1 percent for next 3 years, instead of increasing to 1½ percent next year, thereby saving employers and workers $275,000,000 annually during 1940, 1941, and 1942, or a total of $825,000,000 in that 3-year period.

2. Mythical $47,000,000,000 reserve fund abandoned in favor of a moderate contingent reserve.

3. Scope of old-age insurance provisions extended to cover bank employees and seamen.

4. Definition of exempt agricultural services broadened and exemption granted to employees of nonprofit organizations (lodges, chambers of commerce, and so forth) in cases where their compensation does not exceed $45 per quarter. Complete exemption granted to student employees of college fraternities.

5. Date for beginning payment of monthly retirement benefits advanced to January 1, 1940, and required coverage reduced from 5 years to 3 years.

6. Schedule of monthly retirement benefits liberalized in the case of workers retiring during the next few years.

7. Old-age insurance benefits provided for aged wives of retired workers, and for aged widows, dependent children, and aged dependent parents (if no widow or dependent child survives) of deceased workers.

8. Workers permitted to continue tax payments after reaching 65 so as to qualify for monthly retirement benefits or build up increased benefits.

Unemployment insurance

1. Federal pay-roll tax for unemployment insurance limited to first $3,000 of each employee's annual wage, instead of total wage as at present.

2. Definition of exempt agricultural services broadened, and exemption granted to employees of nonprofit organizations—lodges, chambers of commerce, and so forth—in cases where their compensation does not exceed $45 per quarter. It is also made clear that such officers and employees will not be counted in determining whether the employer has eight or more persons in his employ. Complete exemption is granted to student employees of college fraternities.

3. Scope of unemployment insurance provisions extended to cover bank employees.

4. Ninety percent penalty waived for taxable years 1936, 1937, and 1938 where employer failed to pay his State unemployment-insurance tax in time to receive a credit against his Federal unemployment tax.

Dependent children

1. Federal assistance increased from one-third to one-half of amount paid out by States for aid to dependent children.

2. States required to select administrative personnel on merit basis.

Maternal and child welfare

1. Federal grants increased.

2. States required to select administrative personnel on merit basis.

Vocational rehabilitation

Federal appropriations increased to $3,500,000 annually.

Public health services

Federal appropriations increased to $11,000,000 annually.

VIEWS OF THE REPUBLICAN MINORITY ON SOCIAL-SECURITY BILL

The following extracts from the supplemental views of the Republican minority of the Ways and Means Committee on the social-security bill explain our position with reference to the bill in general and certain of its provisions.

At the outset of our report we stated:

While the bill in no sense represents a complete or satisfactory solution of the problem of social security, it at least makes certain improvements in the present law (some of which we have ourselves heretofore suggested) which we believe justify us in supporting it despite its defects.

With reference to the elimination of the $47,000,000,000 reserve, for which we believe ourselves entitled to considerable credit, we said:

We particularly commend the abandonment of the staggering and illusory $47,000,000,000 reserve fund for old-age insurance, which we have criticized from the very beginning as being unnecessary, misleading, and dangerous. The substitution of a pay-as-you-go system, with a moderate contingent reserve, as provided by the bill, is in line with what the Republican minority has always advocated. It is in accord with the Republican platform of 1936, and with the recommendations made in January 1937 by the minority group which was named by the Republicans of both branches of Congress to study the question of social security, composed of Senators VANDENBERG and TOWNSEND, and Congressman REED of New York and JENKINS. The recommendations of the latter group led to the appointment by the Senate Finance Committee and the Social Security Board of the Advisory Council on Social Security, which in December 1938 submitted a report suggesting many of the changes made by the pending bill, including the establishment of the pay-as-you-go policy. Those serving on the Advisory Council included outstanding businessmen, labor leaders, and experts in the field of social problems.

Republicans in both branches may deservedly be proud of the part they have played in calling to the attention of the country the dangers and burdens inherent in the present reserve structure, and in bringing about the changes proposed. The action taken by the committee is an acknowledgment of the soundness of the major Republican criticism of the existing law.

Concerning the freezing of the pay-roll tax at 1 percent, we said:

As a consequence of the abandonment of the $47,000,000,000 reserve fund, a 3-year delay in the scheduled increase in the old-age insurance pay-roll tax has been made possible. Under existing law, the tax under title VIII would automatically increase next year to 1½ percent each on employers and employees instead of 1 percent on each as at present. Under the pending bill, the 1-percent rate will be continued for 3 more years, thus eliminating the immediate threat of higher pay-roll taxes.

There is no question but what the present schedule of pay-roll taxes is excessive and that these taxes constitute a powerful deterrent to business recovery. They put a direct penalty on employment and reduce the purchasing power of millions upon millions of employed persons. We heartily approve the reduction proposed by the bill, which will result in considerable relief to business and at the same time permit employed persons to retain for their own purposes a larger portion of their pay envelopes. The postponement of the scheduled increase in the pay-roll tax was one of the principal recommendations made in January 1937 by the Republican group to which we have previously referred. It, of course, was an essential feature of the pay-as-you-go policy advocated by the Republican Members of both branches.

It is estimated that as a result of the postponement of the tax increase, there will be a saving to employers and employees of $275,000,000 annually, or a total of $825,000,000 over the 3-year period 1940–42. This amount will go into the channels of trade instead of into the Treasury to be squandered by the present administration.

The following comment is made on the advancement of the date of beginning monthly benefit payments to 1940:

Insofar as the workers themselves are concerned, the bill proposes to reduce the eligibility requirement from 5 to 3 years coverage under the system, and to commence the payment of benefits in 1940 instead of 1942. This change has been advocated by the Republican minority for several years. In fact, the report made by the minority group in January 1937, to which we have already called attention, proposed that payments begin on January 1, 1939.

The amendment waiving the 90-percent penalty in the case of employers who failed to pay their State unemployment tax in time was offered by a Republican member of the committee, the gentleman from Kansas [Mr. CARLSON]. This amendment will result in a saving to taxpayers of $15,000,000 for the taxable years 1936, 1937, and 1938.

Concerning the increase in the Federal grant for old-age pensions, we of the Republican minority stated in our report:

When the original Social Security Act was under consideration in 1935, the Republican minority offered a motion to increase the Federal contribution to a maximum of $20, which, with a like contribution by the State, would have provided a pension of $40 per month. This motion was defeated, due to the opposition of the Democratic majority.

The committee, by its action in incorporating such an amendment in the pending bill, has agreed that the change we then proposed is desirable.

Our purpose in offering the original motion was that we considered a pension of $30 per month to be inadequate. Unfortunately, the States have not provided anything approaching even this amount on the average, despite the willingness of the Federal Government to contribute one-half the total. As of March 15, 1939, according to figures submitted by the Social Security Board, the average pension being paid throughout the country was only $19.51. The average payment by States ranged from a low of $6.11 in Arkansas to a high of $32.47 in California.

* * * * * * *

Of course, until the States take action to increase the amount of their old-age pension payments, no benefit to elderly persons will result from the more liberal Federal contribution which the bill provides. However, we hope that this evidence of a willingness on the part of the Federal Government to do its share in bringing about an increase in old-age pensions will give rise to action by the States along this line. The responsibility is now theirs to see that more adequate pensions are provided.

The increased amount provided in the House bill for vocational rehabilitation was included as a result of the strong plea made by one of the Republican members of the committee, the gentleman from New York [Mr. REED], who has had a great deal to do with this legislation since its inception, which dates back many years prior to the general social-security program.

Social security is not a partisan question. It has received as much support from Republicans as from Democrats. We of the Republican minority, in criticizing the present law, have done so as friends of the law anxious to build it upon a sound foundation and to extend and liberalize its benefits, keeping in mind not only the needs of the people but their capacity to underwrite its tremendous cost.

THE REVENUE BILL OF 1939

The revenue bill of 1939, insofar as it modified existing taxes which act as business deterrents, represents another victory for the Republican minority and another retreat by the New Deal. As we Republican members of the Ways and Means Committee said in our report on the bill:

We of the minority have vigorously and consistently opposed the restrictive and burdensome taxes of the present administration, which reached their peak with the enactment in 1936 of the iniquitous undistributed-profits tax, which even the Treasury Department now admits was a mistake. Our predictions as to the disastrous effects this law would have upon business, upon employment, and upon recovery were accurately prophetic. In 1938 the New Deal was forced to drastically modify this unsound and destructive levy, but for strictly face-saving purposes a fragment of the principle was retained for 2 more years, which under existing law expires this coming December 31.

A further modification of administration tax policies is now under way and we of the Republican minority are happy to see that our constructive criticisms are gradually bringing results. Much work remains to be done. The pending bill leaves many glaring defects and iniquities in the existing tax structure.

Numerous business deterrents remain to be remedied. There is need for a thoroughgoing revision of the tax structure all along the line, and it has been too long postponed.

The 1939 revenue bill embraced two separate and distinct subjects, namely, first, continuation of the expiring nuisance taxes, and, second, tax relief for business. We of the Republican minority favored the proposed tax relief so far as it went, but would have made it effective in 1939 instead of postponing it until 1940. We were opposed, however, to any further continuation of the nuisance taxes, which were originally imposed 7 years ago with the promise that they would be allowed to expire in 1934.

By way of business relief, the 1939 tax bill contains the following major provisions:

1. Allows the present undistributed-profits tax to expire at the end of 1939 and substitutes, beginning January 1, 1940, a flat corporate income tax of 18 percent on corporations with net incomes over $25,000. Smaller corporations will continue to be taxed as under existing law—at graduated rates ranging from 12½ to 16 percent.

2. Allows business concerns to carry forward net operating losses to be applied against taxable incomes in the 2 succeeding years. Losses for 1939 are the first that may be carried forward under this provision.

3. Repeals the $2,000 limitation on the amount of long-term capital net losses which corporations can deduct from ordinary income. Short-term capital losses—losses on capital assets held for less than 18 months—will be allowed as deductions only against short-term gains, but any net short-term loss may be carried forward one year to be applied against any short-term gains in the second year.

4. Allows corporations which are proven to be in an unsound financial condition to buy up their outstanding bonds at prices below par without incurring liability for tax on the gain. This provision expires December 31, 1942.

5. Extends to all corporations the privilege of using the "last in, first out" method of accounting in valuing inventories for tax purposes.

6. Allows corporations the privilege of making a new declaration of value of their capital stock for capital-stock tax purposes, provided the new value is increased. This privilege applies to the years ending June 30, 1939 and 1940. The purpose is to give corporations an opportunity to relieve themselves of a high excess-profits tax by reason of having declared too low a value on their capital stock. Under existing law the privilege of making a new declaration of value is limited to 3-year intervals.

7. Extends the time for filing claims for refund of amounts collected under the Agricultural Adjustment Act. A similar extension affecting claims for refund of floor-stock taxes was included as a Senate amendment to the social-security bill and was retained in the bill as finally passed.

With respect to item 2 above, relating to the net loss carry-over, Republican criticism was instrumental in forcing its extension to individuals and partnerships after the Democratic majority of the Ways and Means Committee had first limited its application to corporations alone. The following extract from the minority views on the bill refers to this matter:

The bill as introduced on June 15 was in the form recommended by the tax subcommittee, and denied the benefit of the loss carry-over provisions to businesses carried on by individuals and partnerships.

Republican members of the tax subcommittee endeavored to have these provisions extended to noncorporate business, but our efforts were defeated.

However, in reporting the bill to the House the following day, the full Ways and Means Committee, after a party caucus on the part of the Democratic members, unanimously voted to adopt in substance the amendment originally suggested by the Republican members of the tax subcommittee. We of the minority congratulate the majority in having so quickly seen the light.

To have given this relief to corporations and denied it to businesses operated by individuals and partnerships would have been indefensible and a rank injustice. The small, noncorporate business concerns are perhaps more in need of the relief proposed than many of the large corporations whom the Democratic majority on the subcommittee at first seemed to favor.

Had the amendment not been adopted by the full Ways and Means Committee, we of the minority would have offered it from the floor. By reason of the action taken, it will now be offered as a committee amendment, and we propose to support it enthusiastically.

When the bill was before the House, Republican members of the Ways and Means Committee proposed to amend it in three particulars:

(1) Strike out title I, relating to continuance of the nuisance taxes and the 3-cent postage rate.

(2) Make the repeal of the undistributed-profits tax and the substitution of a flat corporate income tax effective January 1, 1939, instead of January 1, 1940.

(3) Make the net loss carry-over provision applicable to 1938 losses so that they might be offset against 1939 income.

These amendments were all opposed by the Democratic majority and as a consequence were defeated.

Concerning the deferment of the tax relief proposed in the bill, the Republican members of the Ways and Means Committee had this to say in their minority report on the bill:

As stated at the outset, we are in favor of the tax-relief provisions of the bill so far as they go—which is not far enough in our opinion—but we believe that the proposed relief should be given now, and not held off until next year.

We challenge the Democratic majority to offer any valid and compelling reason for the postponement of the effective date of several of the major relief proposals.

Just as it is no solace to a drowning man to assure him that he will be thrown a life preserver tomorrow, so the prospect of future tax changes is no relief from present-day burdens and restrictions.

Since existing tax methods are acknowledged—even by the Treasury Department—to be business deterrents, it follows that any delay in modifying them acts to defer and impede recovery, which under this administration the country has long sought but never achieved.

During the past 6 years, the New Deal has not hesitated to make tax increases effective as of the first of the year in which the respective revenue measures have been enacted, and we of the Republican minority cannot see how the Democratic majority can consistently refuse to make tax relief currently effective, especially when no loss of revenue is involved.

With their effective date postponed until next year, certain of the tax-relief proposals are little more than a gesture. If they are not to go into operation at once, then why all the rush to write them into law? We of the minority particularly feel that the repeal of the undistributed-profits tax and the provision for carry-over of net business losses should apply to this year's corporate incomes.

THE NEED FOR A THOROUGH OVERHAULING OF THE FEDERAL TAX STRUCTURE

In every year since the New Deal has been in power we have had a revision of taxes, and this in no small measure has contributed to business uncertainty. During this time, the method of taxing corporations has been changed several times. In 1934 and prior years, corporations paid a flat income tax. In 1935, as a part of the President's "share the wealth" tax program, there was enacted for the first time a graduated corporate income tax. Before this tax method had a chance to become operative, the President proposed a revolutionary change in the method of taxing corporations—namely, the imposition of the iniquitous undistributed-profits tax. As finally enacted, this was levied in conjunction with a graduated corporate income tax. Two years later Congress was forced to drastically modify this tax. It was entirely repealed with respect to small corporations, who were taxed at graduated rates on their net incomes, while large corporations were made subject to a graduated tax of from 16½ to 19 percent, depending upon their dividend distribution. As a result of this year's tax revision, large corporations next year will be subject to a flat corporate income tax, while small corporations will continue to be taxed at graduated rates. In view of all these changes in the method of taxing corporations it is no wonder that businessmen look to the future with fear and uncertainty.

Not only have there been frequent changes in tax policy, but there has been little regard for the effect of certain tax methods and excessive rates on business and on the revenues. In some instances, rates have gone beyond the point of diminishing returns. Even the Secretary of the Treasury was forced to concede this during his appearance before the

Ways and Means Committee in connection with the 1939 tax bill.

The Republican Members of the Ways and Means Committee, in their minority views on this bill, made the following recommendation:

We favor an interim study of the whole tax question so that at the next session of Congress a more satisfactory Federal revenue system may be set up without further delay.

In the closing days of Congress a resolution was adopted by the House authorizing the Tax Subcommittee of the Ways and Means Committee to conduct an investigation of the Federal tax structure during the interim between sessions. It is to be earnestly hoped that the subcommittee will do a thorough job.

For the last two sessions I have had pending before the committee a bill to create a Federal Tax Commission for this purpose, to be composed of four Members of Congress—two from each body—and six members representing various groups interested in the tax problem—business and industry, agriculture, labor, individual taxpayers and consumers, tax lawyers and accountants, and tax economists. It is my firm belief that Congress should give these groups more opportunity to participate in the discussion and working out of the tax problem. My criticism of congressional and Treasury tax investigations is that they do not give sufficient consideration to the taxpayer's viewpoint. Being responsible for the existing laws, congressional and Treasury investigators are prone to defend them from all attacks and to overlook or ignore their defects.

During the testimony of Secretary Morgenthau before the Ways and Means Committee this past session, I called his attention to my bill for the creation of a Federal Tax Commission, and while I did not endeavor to obtain his approval of the set-up of the committee I proposed, I did obtain from him 100 percent approval of the declaration of policy contained in the bill. Following are extracts from the hearings on the 1939 revenue bill embracing my colloquy with the Secretary regarding these principles:

Mr. TREADWAY. In view of the fact that you suggest the creation of a small commission, don't you think that there are serious questions involved in the whole tax picture that would deserve an investigation by a nonpartisan commission?

Secretary MORGENTHAU. Well, Mr. TREADWAY, I made this suggestion in order to raise a question which I think is a very important one. And just how Congress, in its wisdom, will handle it, naturally I will leave to them. But ever since I have been in the Treasury I have felt that this question of overlapping taxes is one of the important ones, and I take the liberty of bringing this to the attention of Congress so that you really might do something about it.

Mr. TREADWAY. Well, the modesty of Mr. JENKINS leads me to exhibit a similar modesty, but I call your attention to a measure which I introduced in two Congresses. In the last Congress I introduced a resolution, and repeated it in the Seventy-sixth Congress, extending this Commission's study on a broader scale than what you are suggesting here. Therefore, I would like to ask that House Joint Resolution 35 of the Seventy-sixth Congress also be given the attention of your experts, wherein it is stated:

"It is hereby declared to be the policy of the Congress—

"(1) To establish a stable, more permanent Federal tax policy."

You would agree that that is desirable, would you not?

Secretary MORGENTHAU. Yes.

Mr. TREADWAY. Then, in the second place—

"To raise the necessary revenue for the support of the Government with the least possible burden on individual taxpayers and business enterprises."

I take it this very statement you are making to us this morning is along that very line, is it not?

Secretary MORGENTHAU. I think both aims are laudable.

Mr. TREADWAY. Thank you. Then—

"(3) To give due regard to the natural economic law of diminishing returns in fixing tax rates."

You would approve of that, would you not?

Secretary MORGENTHAU. Yes.

Mr. TREADWAY (reading):

"(4) To base Federal taxes, insofar as may be practicable and expedient, upon the principle of ability to pay."

That is a good policy of the Government, is it not?

Secretary MORGENTHAU. Excellent.

The CHAIRMAN. It sounds like the Democratic platform.

Mr. KNUTSON. It does sound like it, but Mr. TREADWAY wants to carry it into effect.

Mr. TREADWAY. Then—

"(5) To eliminate insofar as may be possible indirect and hidden taxes."

Is there anything worse in our whole tax program than hidden taxes?

Secretary MORGENTHAU. I think we can agree on that.

Mr. TREADWAY (reading):

"(6) To simplify the Federal tax system, including the forms of taxation, the statement of the law, and the methods of administration."

Those are all laudable purposes, are they not?

Secretary MORGENTHAU. Very.

Mr. TREADWAY (reading):

"(7) To alleviate hardships and inequities in the application and administration of the internal-revenue laws."

That is a good doctrine?

Secretary MORGENTHAU. Yes.

Mr. TREADWAY (reading):

"(8) To minimize double taxation by coordinating the Federal tax system with those of the State and local governments."

That is exactly what you are recommending, is it not, in this small board you recommend setting up?

Secretary MORGENTHAU. Yes, sir.

Mr. TREADWAY. So that you approve of that?

Secretary MORGENTHAU. Yes, sir.

Mr. TREADWAY (reading):

"(9) To prevent tax avoidance."

That is the objective of all of us?

Secretary MORGENTHAU. It is.

Mr. TREADWAY. And—

"(10) To make such other changes as will improve the Federal internal-revenue system."

Secretary MORGENTHAU. Fine.

Mr. TREADWAY. Those are the declarations of policy. Then this modest bill of mine, timidly offered for your comment at this time, goes on to set up a Commission composed of two members of the Senate Finance Committee, two members of the Ways and Means Committee, and six members, none of whom hold any office in the Government of the United States or are engaged in activities of any political party, to be chosen by the President.

Secretary MORGENTHAU. Very good.

Mr. TREADWAY. That is a good board, isn't it?

Secretary MORGENTHAU. It sounds very good to me.

Mr. TREADWAY. Then, so far as I can see—the rest of it is more or less detail, method of procedure, and so on—so far as I can gather from your responses to my inquiries, you and I are in hearty accord as to the desirability of setting up such a nonpartisan commission.

Secretary MORGENTHAU. If I again might answer, it seems that you and Mr. JENKINS, the President, and I are all in accord.

Mr. TREADWAY. It looks very like it, and I am very glad to have you come around to our way of thinking.

Mr. Chairman, I would like to ask that my resolution be inserted in the record at this point.

The CHAIRMAN. That may be done.

House Joint Resolution 35, introduced by Mr. TREADWAY, is as follows:

"[H. J. Res. 35, 76th Cong., 1st sess.]

"Joint resolution establishing a Federal Tax Commission, and for other purposes

"Resolved, etc., That it is hereby declared to be the policy of Congress—

"(1) To establish a stable, more permanent Federal tax policy;

"(2) To raise the necessary revenue for the support of the Government with the least possible burden on individual taxpayers and business enterprises;

"(3) To give due regard to the natural economic law of diminishing returns in fixing tax rates;

"(4) To base Federal taxes, insofar as may be practicable and expedient, upon the principle of ability to pay;

"(5) To eliminate insofar as may be possible indirect and hidden taxes;

"(6) To simplify the Federal tax system, including the forms of taxation, the statement of the law, and the methods of administration;

"(7) To alleviate hardships and inequities in the application and administration of the internal-revenue laws;

"(8) To minimize double taxation by coordinating the Federal tax system with those of the State and local governments;

"(9) To prevent tax evasion and avoidance; and

"(10) To make such other changes as will improve the Federal internal-revenue system.

"SEC. 2. There is hereby established a Federal Tax Commission (hereinafter referred to as the "Commission"), to be composed of 10 members, as follows:

"(1) Two members who are members of the Committee on Finance of the Senate, one from the majority and one from the minority party, to be chosen by such committee;

"(2) Two members who are members of the Committee on Ways and Means of the House of Representatives, one from the majority and one from the minority party, to be chosen by such committee;

"(3) Six members (none of whom holds any office in the Government of the United States or is engaged in the activities of any political party) to be chosen by the President, by and with the advice and consent of the Senate, one of whom shall be representative of agriculture, one of labor, one of business and industry, one of individual taxpayers and consumers, one of tax lawyers and accountants, and one of tax economists.

"SEC. 3. It shall be the duty of the Commission—

"(1) To make such investigations as it may deem necessary or advisable in order to carry out the purposes of this resolution;

"(2) To publish from time to time, for public examination and analysis, proposed measures for carrying out the policy of Congress herein expressed; and

"(3) To report to the Congress from time to time, and in any event not later than January 3, 1942, the results of its investigations, together with such recommendations as it may have to make.

"SEC. 4. (a) The Commission shall meet and organize as soon as practicable after at least a majority of the members have been chosen, and shall elect a chairman and a vice chaiman from among its members, and shall have power to appoint and fix the compensation of a secretary and such experts and clerical, stenographic, and other assistants as it deems advisable. A vacancy in the Commission shall not affect the power of the remaining members to execute the functions of the Commission, and shall be filled in the same manner as the original selection.

"(b) The Commission is authorized to hold hearings and to sit and act at such places and times, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, to have such printing and binding done, and to make such expenditures, as it deems advisable. The cost of stenographic services in reporting such hearings shall not be in excess of 25 cents per hundred words. Subpenas for witnesses shall be issued under the signature of the chairman or vice chairman.

"(c) The Commission is authorized to utilize the services, information, facilities, and personnel of the departments and agencies in the executive branch of the Government, of the Joint Congressional Committee on Internal Revenue Taxation, and of the office of the Legislative Counsel.

"(d) The Commission shall have the same right to obtain data and to inspect returns as the Committee on Ways and Means of the House of Representatives or the Committee on Finance of the Senate, and to submit any relevant or useful information thus obtained to the Congress.

"(e) The members of the Commission shall serve without compensation for such service, but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

"(f) There is hereby authorized to be appropriated so much as may be necessary to carry out the purposes of this resolution. Amounts appropriated for the expenses of the Commission shall be disbursed by the Division of Disbursement, Treasury Department, upon vouchers approved by the chairman or vice chairman.

"(g) All authority conferred by this resolution shall terminate on the expiration of 3 years from the enactment of this resolution."

* * * * * * *

Mr. TREADWAY. Just one further reference, if I may, Mr. Secretary. May I ask that House Joint Resolution 35, which we discussed earlier, be given consideration by your Department?

Secretary MORGENTHAU. We will be very glad to give it consideration.

Mr. TREADWAY. And a report made to the committee.

Secretary MORGENTHAU. Delighted.

CONCLUSION

Mr. Speaker, it is the duty of the Ways and Means Committee to prepare legislation which will raise sufficient revenue to carry on the Government. Since this administration has been in power, it has not made one single effort to balance revenues with expenditures. The last time any serious effort was made to balance the Budget was in 1932, when a billion-dollar tax bill was passed. While in enacting that bill Congress did not succeed in raising the required revenue, it at least made an honest and sincere effort in that direction. Although we have had revenue bills in every succeeding year, in not one instance has any effort been made to balance the Budget, despite all the promises made during the 1932 campaign.

It is true that the task of the Ways and Means Committee in raising sufficient revenue has been made difficult, if not impossible, by the ever-increasing cost of government under the New Deal. In the fiscal year which closed last June 30, there was a Treasury deficit of three and a half billions, exclusive of statutory debt retirements. In just the first month of the current fiscal year—July—there was an excess of expenditures over receipts of $500,000,000.

If the only task of the Ways and Means Committee were to raise sufficient revenue to offset the July deficit, it would find difficulty in raising even this amount. It could probably be done by means of a general manufacturers sales tax, such as was proposed by the Ways and Means Committee in 1932, but the sales tax field now has been largely preempted by the States. There has been considerable talk of broadening the base of the income tax, but if the exemption for single persons were lowered to $800 and that of married persons to $2,000 the net increased revenue would be only $56,400,000, according to recent Treasury estimates, and most of this increase would come from taxpayers in the higher brackets by reason of increasing their taxable income by the amount of the reduction of the exemption. An additional $68,000,000 could be obtained by increasing the normal tax from 4 percent to 5 percent, and the Treasury estimates that if this were done in conjunction with the lowering of the exemptions the combined increase from these two sources would be $135,600,000.

Some additional revenue could be obtained by increasing the surtaxes in the middle brackets, but again the amount realized would be small in comparison with that needed. There is no use even considering increasing the surtaxes in the highest brackets, because we are already taking as much as 79 cents out of every dollar of net income in these brackets, and even if we confiscated the entire income the increased revenue would be very small. The Treasury strongly feels that the surtax rates in the highest brackets have passed the point of diminishing returns, and that more revenue could be realized if they were lowered.

With this picture in mind, it can be seen how difficult it is to raise additional revenue in a substantial amount. There is, of course, an alternative—one that I have been preaching for years—namely, reduction of expenditures. It is absolutely impossible to raise sufficient taxes to balance the Budget at a level of nine or ten billion dollars without crushing the taxpayer.

We have now had 9 successive years of staggering deficits, and we are just entering upon the tenth year with every reason to believe that we will have another deficit as large, if not larger, than last year, especially in view of the thirteen billions of expenditures authorized by the Congress just adjourning. Six years ago last March, the President said that, in view of our unbalanced Budget, we were on the road to national bankruptcy. Today we are much farther along that road—$20,000,000,000 farther—and we are traveling at a greatly accelerated pace. When Mr. Roosevelt took office on March 4, 1933, the national debt stood at $20,937,000,000. On July 31, 1939, it stood at $40,661,000,000, and by the end of the current fiscal year it will undoubtedly reach the present authorized statutory debt limit of forty-five billions.

It is time for those who love their country to act, or else we are destined to plunge into ruinous inflation or debt repudiation. The Republican minority in Congress has made a gallant effort to hold down expenditures. A small group of patriotic Democrats has done likewise. In the next session there will have to be a drastic program of economy if the credit of the Nation is to be saved. Before the people should be called upon to pay additional taxes, they should be assured that the administration in power is making every effort to eliminate waste and extravagance. The people will pay until it hurts to save their country's credit, but they will not stand for increased taxes simply to continue to fill the pockets of New Deal spendthrifts.

Soviet Russia at the World's Fair

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BENDER. Mr. Speaker, millions of Russia's poverty-stricken would gasp in amazement and indignation if their Government would pay the expenses of their trip to New York to witness the world's fair, for there they would see one of the most extravagant displays ever created, designed to impress the visitor with the successful functioning of the

Union of Soviet Socialist Republics. To the gullible, this dazzling demonstration is no less impressive than the huge gatherings created and directed by Hitler's Ministry of Propaganda.

Yet both leave unspoken the truth which they seek to suppress. In the exhibit of the Soviet there is no altar of freedom. There is no spot of ground dedicated to freedom of speech, freedom of religion, freedom of thought. There are no portals through which may enter the man who dares to doubt; nor are there shelves of books written by those who urged their fellow men to change the society in which they live.

There is danger in the peculiar appeals which the subtle propagandists of communism and fascism make to the minds of men. Each presents a system in which the daily necessities of life have become matters of routine. In the Nazi state, those who can find no employment elsewhere are absorbed into the business of manufacturing munitions and weapons. In the Soviets of Russia they are drafted into the production of goods for a nation which is generations behind the rest of the world in its ability to feed, clothe, and shelter its vast population. Of course, there is work enough for all in both these regimentations. Each operates under an "emergency" program. Each insists upon mobilizing its men and women into an unthinking army, trained to fight and to work but never to think for themselves.

Overnight, we in America could do what they have done—and solve all our problems. But theirs is not the American way. We choose, in our Nation, to view our people as men and women of independent minds, strong in body and soul, far above the level of the beast. We do not feed them upon futile hatreds, nor inspire them with animal lusts, to further our own aggrandizement.

There are strange contradictions in the spectacle of the Soviet exhibit at the world's fair. To make men free, Russia has mimicked the mechanical wonders of the Occidental world. She has copied our machines, duplicated our inventions. And having done today what we learned to do long ago, she claims to be great. Yet our greatest achievement, the freeing of men's minds, she steadfastly refuses to follow. She is still in the days of the czars, and her exhibit at the world's fair is a snare and an illusion to those who dream of mankind in terms of human progress.

Jurisdiction in the Marginal Seas

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DIMOND. Mr. Speaker, during the session of yesterday the House considered and passed the bill (H. R. 7235) to prohibit the maintenance of gambling establishments within the admiralty and martime jurisdiction of the United States, and for other purposes.

It appears from the bill and from the debate which took place at the time it was under consideration in the House that four gambling ships are anchored a little more than 3 miles from the coast of California in the vicinity of the city of Los Angeles; that about 100 motorboats journey to and from these ships from the wharf at Santa Monica each day; that the gamblers in control of these ships hire the motorboats to convey patrons to the ships and no charge is made for such service; that the ships are maintained solely for gambling purposes; that they fly the American flag and are operated by four corporations incorporated under the laws of the State of Nevada; that as many as 6,000 persons, on occasion, visit each ship within a single day, or a total of more than 24,000 for the 4 ships.

It further appears that the State of California has heretofore passed a statute denouncing as a criminal offense the operation of the small boats which ply between Santa Monica and the gambling ships, but that the Supreme Court of the State of California has declared that statute unconstitutional because the ultimate destination of the small boats is beyond the 3-mile limit, and therefore outside the jurisdiction of the State.

The bill provides that whoever, on any waters within the admiralty and maritime jurisdiction of the United States and out of the jurisdiction of any particular State, or upon the high seas on board any vessel used principally for a violation of any provision of the bill, and belonging in whole or in part to the United States or any citizen thereof, or any corporation created by or under the law of the United States, or of any State, or Territory, or district thereof, shall set up or operate any common gaming or gambling establishment for the purpose of gaming or gambling or playing any game of chance for money or other thing of value, or whoever shall in pursuance of any such gambling enterprise, permit any person to bet or play at any such establishment, shall be punished by imprisonment for a term of not more than 2 years or of a fine not exceeding $10,000, or both. Section 2 of the bill makes unlawful the operation or use of any vessel for the carriage or transportation of any passengers for hire or otherwise between any point or place within the United States "and any foreign vessel on the high seas out of the jurisdiction of any particular State, Territory, or possession of the United States," but it is further stated that the provisions of section 2 shall not apply to any vessel carrying or transporting any persons to any foreign vessel in case of any emergency involving the safety or protection of life or property. By the provisions of section 3 the Secretary of Commerce is authorized to prescribe rules and regulations to carry the act into effect.

In support of the bill it was said that—

> The territorial jurisdiction of the United States, and therefore the territorial jurisdiction of the coastal States, extends only as far as the so-called 3-mile limit.

Citation was made of several adjudicated cases of the courts and of the writings of at least one author of works on international law as applied to territorial waters. The citations include the case of *Cunard S. S. Co.* v. *Mellon* (262 U. S. 100) and *Murray* v. *Hildreth* (61 F. (2d) 483), the latter being an opinion of the Circuit Court of Appeals for the Fifth Circuit.

Our attention has also been invited to article XXI of the Constitution of California, from which it appears that the State claims jurisdiction 3 miles seaward from the shore line, the language reading as follows:

> Thence running west and along said boundary line to the Pacific Ocean and extending therein 3 English miles.

It is clear from the debate which took place on the bill that its enactment is urged because, in the opinions of the sponsors of the bill, the United States is forbidden to enact any such legislation operative beyond the so-called 3-mile limit. The theory being, that under the principles of international law, no nation may exercise jurisdiction for any such purpose more than 3 miles from the shore, except in the case of closed seas and bays which were referred to in the discussion had upon the bill.

Some time ago, Mr. Speaker, I had occasion to examine into the question of jurisdiction on the marginal seas, particularly as relating to the fisheries. In that examination it was necessary to make a review of the entire subject. It is true, as indicated in the discussion on H. R. 7235, that the United States and Great Britain have been strong protagonists, at times, of the 3-mile-limit theory. It is, in my opinion, equally true that the general or universal 3-mile-limit rule has no certain foundation in international law and it is not sustained by the principles of that law and, therefore, we may, if we desire to do so, by municipal law, claim and exercise for certain reasonable purposes a much wider jurisdiction over the territorial seas than 3 miles and

enforce that jurisdiction in proper instances without running counter to any principle of the law of nations.

It may be well to revert for a moment to the essentials of that concept of the relations of civilized states, which is commonly referred to as international law. International law may be defined to be that body of principles, based upon considerations of natural right and justice, which are by common consent assumed to govern civilized states and their relation to each other. Law generally, as we all know, is a rule of action laid down by a supreme power. To be of moral obligation, any law must be founded upon principles of natural justice. With respect to international law, the demands of right and justice may have even greater weight than they have with regard to municipal law.

All law, it is obvious, should be based upon concepts of right, illuminated and interpreted by reason. Anything which is set up as law, and particularly international law, that cannot be justified as being right and reasonable, is in truth not law at all although asserted to be such by the most powerful nation or nations of the earth. For with respect to international law, if the supreme authority, that is to say, the body of civilized nations, has no moral right to make the rule of action, then no one is under the slightest moral obligation to obey the pretended law so laid down. Of course it is recognized as a practical matter that whether or not the supreme authority, which makes the rule of action, is rightly entitled to pronounce the particular rule, that authority, by reason of its force of arms on land or sea, may be able to compel obedience to anything which is asserted to be law no matter whether the thing so asserted is or is not in harmony with right or justice.

After all, no nation has the absolute authority to bind other nations of the world by its own declaration of what is international law and, likewise, no nation at the present time possesses the absolute power to do so. Historically, a few of the great nations have either individually or in conjunction with each other boldly asserted and maintained as international law certain things which suited their own convenience, but which ran counter to the safety and to the welfare and to the good order of other nations and the citizens of those nations, and therefore upon principles of natural right and justice, those things are not deserving to be considered as a part of the law of nations.

International law is not in reality a fixed and rigid body of rules that every nation must obey and observe but only a mass of customs which civilized nations have found it convenient to adhere to as a common rule of action. This body of customs, like all other things in the world, is subject to change from century to century, and even from decade to decade, and necessarily so, for the obvious reason that a rule of action for the nations which may be convenient to observe by civilized countries today may run counter to the welfare or even the safety of some of those countries a few years hence; and, therefore, the nations which feel themselves endangered by an outworn concept of what may have been theretofore regarded as international law will not hesitate, and rightly so, to refuse to be longer bound thereby.

However, the present discussion of international law concerns only jurisdiction of the marginal seas—that is to say, the seas adjacent to the land masses of the earth. At the outset it may be well to observe that the jurisdiction seaward exercised by any nation may not be the same distance for all purposes. It may be sufficient for a nation to claim general and practically complete jurisdiction—perhaps sovereignty would be the better term—for only 3, or 4, or 10, or 12 miles offshore, but equally necessary for the same nation to claim and exercise a more extensive jurisdiction for special purposes, such as the protection of the customs, or of the national fisheries, or for national defense.

Some of the law writers, some of the statesmen, and some of the jurists have referred to the minimum marginal belt over which all nations under all circumstances may exercise control as being within the sovereignty of the states, and some have referred to the larger power which may be rightly exercised according to circumstance and condition for special purposes a greater distance from the shore as being an exercise of the jurisdiction of the bordering state. Nearly all, however, admit that, even within the narrower belt, other nations have free right of passage for all except ships of war, so that it may be conceded that even within the narrower minimum belt the riparian state does not exercise sovereignty in the full sense of that term, for if that were the case, the ships of other nations would not be permitted freedom of passage.

The standard definitions of jurisdiction and of sovereignty do not give much help, for jurisdiction, in international law, is generally thought to mean the rights exerciseable by a state within the bounds of its sovereignty, and sovereignty as the equivalent of the power of the whole Nation or society. It is simpler, perhaps, to say that the nation bordering on the sea is entitled to exercise jurisdiction or power or authority over the marginal waters for a certain minimum distance in all cases and for all purposes, except to prevent peaceful passage of the ships of other nations, and may exercise a larger jurisdiction over a broader belt for special purposes, such as the protection of the customs and of the fisheries.

The claims of nations over the seas adjacent to their coasts have varied widely from time to time, and there never has been, and is not now, unanimity of opinion among the civilized nations of the earth with respect to the nature and extent of such jurisdiction. It was once the fashion to claim extensive jurisdiction over the high seas, so as to embrace most of the principal trade routes of the world. And at other times the claims of jurisdiction have shrunk to what is popularly known as the 3-mile limit. But at no time have all, or even a majority, of the civilized nations of the world acquiesced in the rigid application of the 3-mile limit rule except as a minimum distance over which territorial jurisdiction may be exercised for any and every purpose. At no time have all nations acquiesced in the greatly enlarged claims of jurisdiction to extend, for all purposes, hundreds, and even thousands, of miles over the high seas. And at the present time, while a number of powerful nations, under the leadership of Great Britain, may assert that the 3-mile limit is the only one recognized by international law, that claim is made upon the theory only that those nations by their control of the sea can make and enforce what they assert to be international law thereon, in other words, a claim of naked force.

From the earliest times it has been understood and commonly accepted that upon principles of natural right and justice, and that duty of self-defense and self-protection which is inherent in the societies of men as well as in human beings, that the authority of sovereignty or jurisdiction of the Nation did not end at its shores washed by the seas but extended some distance beyond. If any principle may be said to have the authority of true international law, the principle which I have just now mentioned possesses that authority. Nowhere has the general principles been expressed more lucidly than by the late great Senator Elihu Root in his argument before the North Atlantic fisheries tribunal, wherein he said:

> The sovereign of the land washed by the sea asserted a new right to protect his subjects and citizens against attack threatening their peace, to protect their revenue, to protect their health, to protect their industries. That is the basis and the sole basis on which is established the territorial zone that is recognized in the international law of today.

It will be remembered that in making this argument Senator Root was pressing for a narrow delimitation of the territorial seas of Canada and Newfoundland in order to preserve under treaties the largest possible rights and privileges of American fishermen.

Many people, including judges, law writers, and statesmen, have in recent years made the large, and I believe unfounded, statement that the 3-mile limit of territorial waters has been established in international law and is, in fact, part and parcel of international law, indicating that any nation not recognizing the 3-mile-limit rule is running counter to international law if not actually transgressing it. It may be well,

therefore, as a preliminary to determine just how the 3-mile-limit theory arose and upon what it rests.

The first notable assertion which, afterward, without the knowledge or consent of the author, evolved into the 3-mile rule was that every nation had a right to claim territorial jurisdiction over so much of the sea adjoining its coast as could be protected and defended by cannon planted on the shore. There was reason in this. For a nation from its upland may actually defend and control and keep in its armed possession, without leaving the shore, so much of the adjacent sea as could be traversed by its cannon shot when its cannon are planted on the shore on land under its ununquestionable jurisdiction. This idea was set down by Hugo Grotius, a brilliant Dutch lawyer, in 1608, in his Mare Liberum, wherein he observed that the sovereignty and jurisdiction of any state extended as far over the marginal seas "as those who sail in that part of the sea can be compelled from the shore as if they were on land."

A little later Cornelius van Bynkershoek, a judge of the Supreme Court of Appeal of Holland, in his De Dominion Maris Dissertatio, Caput II, pages 364, 365, expressed Grotius' idea by saying that the control of the land over the sea extends as far as cannon will carry and that "the control from the land ends where the power of men's weapons ends." In a subsequent work, Quaestionum Juris Publici, book I, chapter VII, page 59, Judge Van Bynkershoek used language slightly different, saying:

Imperium terrae firniri, ubi finitu armorum potestas.

Which may be translated into:

The territorial dominion ends where the power of weapons terminates.

At the time of the pronouncement of the cannon-shot theory by Grotius and Van Bynkershoek, it is likely that the utmost limit of a cannon shot was 3 miles. The cannon of that day was a primitive thing. But as men always seek to make more certain that which may be indefinite and to reduce every proposition to a mathematical formula, if possible, it was inevitable that the cannon-shot theory of jurisdiction over the marginal seas would be displaced by some standard of measurement with which all men were familiar, and so we have the so-called 3-mile limit. It was apparently an Italian jurist, Galiani, who first suggested that the cannon-shot rule should be changed or transmuted into a 3-mile rule. This is found in a work of Galiani's, published in 1782, wherein Van Bynkershoek's cannon-shot limit was stated in a unit of measurement which could be applied with greater certainty, namely, 3 miles. At that time it appears to have been thought that no cannon would ever be made the shot from which would traverse a greater distance than 3 miles. So, instead of following the reasonable rule announced by Grotius and Van Bynkershoek—the rule of the cannon shot—in later times nations pursued instead Galiani's formula of the 3-mile limit. In this year of 1939 the Galiani rule has nothing in reason to support it and it is merely an arbitrary statement of what some nations, from tradition or self-interest, claim to be international law with respect to the subject, and in which others acquiesce because they are too careless or too weak to contest it.

Despite the total absence of reason to sustain it at this time, the 3-mile-limit rule is widely asserted to be supported by international law. Its most redoubtable champion is Great Britain, and in this connection it is interesting to note that, for what she has doubtless conceived to be her own interest, Great Britain since the eighteenth century has made a complete about face of her position on that question of international law with respect to jurisdiction in the marginal seas. In the eighteenth and early nineteenth centuries Great Britain passed and enforced a number of statutes in which she claimed jurisdiction for certain purposes as far from shore as 100 leagues, or 300 marine miles. In prior centuries Great Britain claimed an even more extensive and complete jurisdiction, and in all the surrounding seas had compelled the ships of foreign nationals to dip their flags and lower their sails whenever they met a British warship.

With the passage of the years it became more and more to the interest of Great Britain to limit territorial sovereignty to a very narrow margin surrounding the shore. Since Great Britain controlled the sea, and since her welfare depended upon the control of the sea, and upon the passage of her merchant ships to all parts of the earth with the greatest possible freedom from restraint, the British Government tended more and more to support and to enforce on other nations, the 3-mile-limit rule.

But desipte her insistence upon the 3-mile-limit rule, as the rule which must be followed by other nations and as the rule claimed to be part and parcel of international law, Great Britain has always reserved to herself in her statutes and her parliamentary debates and by her judicial decisions a much wider claim of jurisdiction to be exercised in case the interest of the Empire should demand it. For we find in the preamble of the British Territorial Waters Jurisdiction Act of 1878 (41 and 42 Vict. 73) the following language:

The rightful jurisdiction of Her Majesty, her heirs, and successors, extends and has always extended over the open seas adjacent to the coasts of the United Kingdom and over all other parts of Her Majesty's dominions, to such a distance as is necessary for the defense and security of such dominions.

Light is thrown on the Territorial Waters Jurisdiction Act by the statements made by the Lord Chancelor and by Lord Halsbury in the British House of Lords on May 6, 1895. (Parliamentary Debates, 58 Vict., vol. 33, p. 504). At that time the House of Lords had under consideration the sea fisheries regulation bill for Scotland.

During that debate the Lord Chancellor observed that he was far from saying that 3 miles was to be the limit of territorial waters for all time. Lord Halsbury then referred to the Territorial Waters Jurisdiction Act of 1878, and remarked that in that act care was taken to avoid any specific measurement and that the distance was left at such limit as was necessary for the defense of the realm, and thus the way was left open to establish any limit which might be advisable for the particular purpose in view.

In this Nation we have followed largely, as in many other matters, the example of Great Britain. By declaration of executive officers, and by treaty, we have agreed on a number of occasions that the 3-mile limit rule is of general force. On other occasions and even in recent years, we have made other equally solemn declarations in which we have said in substance and effect that the 3-mile limit rule is not of universal operation. And while our courts, as in the case of Cunard S. S. Co. against Mellon, to which reference has been made, have occasionally used language which has been interpreted as supporting the general 3-mile limit rule, in other decisions the courts have clearly shown that there are necessary limits to that rule and, therefore, that it is not of universal application. I shall first discuss the legislative acts and afterward make reference to the judicial decisions.

CUSTOMS ACTS

From time to time down all the years from the date of the organization of our Federal Government until the present day, Congress has enacted laws for the protection of the customs and in those laws has not been content to confine jurisdiction to the limit of 3 miles seaward, now so confidently asserted to be the utmost limit within which jurisdiction may be exercised over the marginal seas. By the act of August 4, 1790 (1 Stat. 138) it was provided that vessels might be searched and seized for violation of customs laws "in any part of the United States or within 4 leagues of the coast thereof, if bound to the United States."

So from the years since 1790 we have claimed for the protection of the customs a limit of at least 12 miles for the exercise of jurisdiction over the marginal seas. And that portion of the act of August 4, 1790, to which I have just averted, is not an ancient or an isolated claim of such larger sovereignty. In fact the principle of that declaration has been our national law from August 4, 1790, until the

present time. It has never been repealed except by the passage of an act which embraced a similar statement of legislative principle. In section 581 of the Tariff Act of 1922 (42 Stat. 979) the scope of the act of August 4, 1790, was enlarged by providing for the search and seizure of all vessels within the four-league zone of the coast of the United States irrespective of whether such vessels were bound to the United States or not. That provision stood as the law of the land until the passage of the Tariff Act of 1930 (46 Stat. 747). Section 580 of the last-mentioned act is substantially a reenactment with slight modifications of section 581 of the Tariff Act of 1922 and provides for the search and seizure of any vessel or vehicle at any place in the United States or "within four leagues of the coast of the United States."

THE HOVERING ACTS

In the early years of the nineteenth century there was a great deal of smuggling of slaves from Africa into the United States, which was finally suppressed and entirely wiped out by the year 1827. This trade called for a special law, which was passed and approved on March 2, 1807 and is to be found in volume II, Statutes at Large, pages 426–430, inclusive.

Section 7 of this act provides that if any ship or vessel shall be found in any river, port, bay, or harbor or on the high seas within the jurisdictional limits of the United States or hovering on the coast thereof having on board any Negro, mulatto, or person of color, for the purpose of selling them as slaves with intent to land the same at any port or place within the jurisdiction of the United States, every such ship or vessel shall be forfeited to the United States. Provision was made authorizing the President to consider such ships or vessels to be seized "wheresoever found on the high seas" and brought into any port of the United States for forfeiture.

No reference was made in the act mentioned to any 3-mile limit or other territorial limit, and in fact, by the explicit provisions of the act, authority was given to seize the offending vessels "wheresoever found on the high seas." This statute with some modifications was reenacted as sections 5551 and 5559, inclusive, of the United States Revised Statutes and the provisions thereof have been carried forward and are now a part of the Criminal Code of the United States (title 18, secs. 421–422, inclusive, U. S. C.).

Hence, the old Slave Trade Hovering Act passed in 1807, as modified, is the law of the land today and under it a slave trader may be lawfully seized when "hovering on the coast of the United States."

Section 433 of title 18, United States Code, provides that:

> Every vessel which is found in any river, port, bay or harbor, or on the high seas, within the jurisdiction of the United States, or hovering on the coasts thereof, and having on board any person, with the intent to sell such person as a slave, or with intent to land the same for that purpose, either in the United States or elsewhere, shall, together with her tackle, apparel, and furniture, and the goods and effects on board of her, be forfeited to the United States.

It will be observed that provision is made for forfeiture of vessels which are found on any waters within the jurisdiction of the United States and also for like forfeiture of vessels found "hovering on the coasts" of the United States whether within or without what may be ordinarily considered its territorial jurisdiction. It will be noted that the disjunctive "or" is used and not the conjunctive word "and" and so there can be no question of the intent of Congress, to provide for seizure of slave traders both within and without the ordinary territorial waters of the United States. No other reasonable construction can be assigned to the particular language used. The original statute of March 2, 1807, expressly so provided in authorizing the seizure of offending vessels "wheresoever found on the high seas."

So it will seem that from the very early days of our Government it was not considered sufficient that we accept or advocate a 3-mile limit for all purposes and we find that with respect to customs of August 4, 1790, and by subsequent statutes, and with respect to slave trade by the act of March 2, 1807, the United States claimed in the one case a 12-mile jurisdictional limit for the protection of the customs, and in the other case a limit to which the bounds might be set only by the test of reason for the suppression of the slave trade. Hence, any argument that we have ever, from the beginning of our existence as a nation until the present time, sought a general rigid 3-mile jurisdictional limit for all purposes is not in harmony with the known facts.

Doubtless it was realized in 1807 with respect to the slave trade, as it is realized now in 1939 with respect to the great salmon fishery of Alaska, that a rigid 3-mile limit ignores our substantial national rights and that such a limit would make it impossible to provide adequately for national defense. It is obvious that the protection of a great industry may be just as important to the national welfare as the prevention of a trickle of slaves from Africa to the United States.

THE ANTISMUGGLING ACT

Now we come to the one act of Congress which has gone further than any other to negative the idea that we are committed to a rigid 3-mile-limit rule for all purposes, and that is the act of August 5, 1935 (49 Stat. 517), commonly known as the Antismuggling Act. The title of the act is "An act to protect the revenue of the United States and provide measure for the more effective enforcement of the laws respecting the revenue, to prevent smuggling, to authorize customs-enforcement areas, and for other purposes."

The act contains a considerable number of amendments to the general customs laws of the United States but it embraces one new feature for it provides wherever the President finds and declares that in any place or within any area on the high seas adjacent to, but outside customs waters, any vessel or vessels hovering or are being kept off the coast of the United States and that by virtue of the presence of any such vessel or vessels at such place or within such area, the unlawful introduction or removal into or from the United States of any merchandise or person is being or may be occasioned, promoted, or threatened, the place or area so found or declared shall constitute a customs-enforcement area for the purposes of the act; that such customs-enforcement areas may not extend more than 50 miles seaward beyond the customs waters, and the customs waters are defined as the waters within four leagues of the coast of the United States, or such other waters as may be prescribed by treaty within which the United States is authorized to board, examine, search, and seize vessels for violation of the laws of the United States.

Accordingly, we find in this recent declaration of the will of Congress and the Executive, authority for the search and seizure of vessels for violations or threatened violations of the customs at any place the President has declared a customs-enforcement area for the region within which any vessel hovers and is so searched and seized.

The history of the Antismuggling Act is worthy of passing comment. After the repeal of the eighteenth amendment and the National Prohibition Act, the country was temporarily flooded with alcohol and alcoholic liquors by maritime rum runners, which lay safely beyond the 12-mile limit, or beyond the 1-hour sailing distance prescribed by treaty. No adequate way was found of stopping this evil, and so the Treasury requested the passage of legislation. Hearings were had on the bill before the House Committee on Ways and Means and the bill was passed and has been enforced since the date of its passage, and its enforcement very speedily and effectively stopped the gross violations of our customs which had theretofore been committed. The law has not only worked and has been found highly efficacious but it is of value in another direction for it temporarily at least has broken the thralldom to the 3-mile limit superstition.

THE RUM TREATIES

Reference has been made to treaties between the United States and other nations for the protection of the customs in the waters adjacent to our coasts and particularly to prevent the smuggling into the United States of intoxicating liquors, entered into during the period of the life of the

eighteenth amendment and of the National Prohibition Act and other kindred prohibitory acts.

We all recall the difficulty encountered in preventing the smuggling into the United States of intoxicating liquors by the vessels of foreign nationals, and it is not unfair to say that such smuggling appears to have been at least tacitly encouraged by several foreign governments.

Singularly enough, our authorities apparently did not rely upon the four-league customs zone, established first by the act of August 4, 1790, and continued as we have seen by subsequent congressional legislation. At first, it was thought by our officials that foreign merchant vessels carrying on trade between the United States and other nations were not forbidden by the eighteenth amendment and the National Prohibition Act from carrying alcoholic liquors into our waters as ship stores for the use of the crew and for sale to passengers, provided that sales did not take place within 3 miles of our shores. In fact, at first the regulations of the Treasury required only that liquors upon such foreign vessels should be placed under seal when the vessels were in our ports or in our territorial waters. While this opinion prevailed, our State Department approached Great Britain with a view of securing an agreement or treaty under which Great Britain would make no objection to a search of their vessels which appeared to be rum runners within 12 miles of our coast. Evidently being unwilling to give up the lucrative rum-smuggling trade, Great Britain refused to entertain any such proposal because, as was said by their representative, the British Government "do not feel that they can properly acquiesce, in order to meet a temporary emergency, in the abandonment of a principle to which they attach great importance." So spoke the British Government on October 13, 1922.

A decision by the Supreme Court of the United States shortly thereafter had the effect of placing the United States Government in an advantageous position with regard to the treaty which it was urged. In the case of *Cunard Steamship Co.* v. *Mellon* (262 U. S. 100), decided on April 30, 1923, the Supreme Court held that foreign as well as domestic vessels were equally bound by the provisions of the eighteenth amendment and the National Prohibition Act while in the ports and within the territorial waters of the United States, and equally without the jurisdiction of those laws when without the ports and the territorial waters of the United States. After this decision it was no longer possible for foreign vessels to offer to passengers on the high seas sailing out of American ports and coming into American ports, all of the commercial advantages attendant upon the availability of alcoholic liquor on board such vessels, to the exclusion of corresponding advantages on board vessels of the United States.

Then for the first time it was discovered that the "principle" was of not such importance after all, and so the so-called rum treaty was made between Great Britain and the United States, whereby it was agreed that the British Government would make no objection to the search and seizure in proper cases of British-flag vessels within 1 hour's sailing distance of those vessels from the shores of the United States and the ports of the United States. It was agreed that the liquors used as ship stores on board the British vessels might be brought into the territorial waters of the United States under seal. It was further provided with respect to the clause relative to 1 hour's sailing distance of the vessels mentioned that in the event a foreign vessel made contact of the shore by a smaller vessel the speed of the smaller vessel should determine whether search and seizure might be made. This treaty with Great Britain was signed in Washington on January 23, 1924, and it followed quite promptly the decision of the Supreme Court in the Cunard Steamship Co. case, which was rendered on April 30, 1923. Here we see an instance where principles of great importance were found to be not so important when they came into conflict with commercial advantages. However, Great Britain insisted and the United States agreed that article 1 of the treaty should contain the following:

> The high contracting parties declare that it is their firm intention to uphold the principle that 3 marine miles extending from the coast line outward and measured from low-water mark constitute the proper limits of territorial waters.

The United States shortly thereafter signed treaties on the same subject with a number of other nations, namely: Germany, May 19, 1924; Sweden, May 22, 1924; Norway, May 24, 1924; Denmark, May 29, 1924; Italy, June 3, 1924; Canada, June 6, 1924; Panama, June 6, 1924; France, June 30, 1924; the Netherlands, August 21, 1924; Belgium, December 9, 1925; Mexico, December 23, 1925; Spain, February 10, 1926; Cuba, March 4, 1926, and March 11, 1926; Greece, April 25, 1928; Japan, May 31, 1928; Chile, May 27, 1930; and Poland, June 19, 1930.

It will be observed that article 1 of the convention with Great Britain, which has been quoted, is also embraced in the treaties made with the Netherlands, Germany, Cuba, Panama, and Japan; but in negotiating the treaties with the other nations mentioned, namely, Norway, Sweden, Belgium, Denmark, France, Italy, Spain, Chile, Greece, and Poland, those nations declined, and, in fact, flatly refused to say in the conventions severally entered into with them that 3 marine miles extending from the coast line outward and measured from low-water mark should constitute the proper limits of territorial waters. The corresponding formula used in the conventions with the nations mentioned reads as follows:

> The High Contracting Parties respectively retain their rights and claims, without prejudice by reason this agreement, with respect to the extent of their territorial jurisdiction.

It is plain from the text of the article, and still more certain from the conversations which occurred when the treaties were under discussion, that the larger number of the nations with whom we made these treaties would not agree that 3 marine miles from the coast outward was the proper limit of territorial jurisdiction in all cases.

These treaties show, as perhaps nothing else can show, that the 3-mile limit rule is not supported by even a fair majority of the civilized nations of the world, and can have no just claim to be considered as a part of the law of nations. The rule has no sanction except the preponderant naval force of the particular nations which assert it to be an integral part of international law.

INTERNATIONAL DISCUSSIONS

The question of the proper extent of territorial jurisdiction at sea has been considered on several occasions by international bodies, such as special commissions of the League of Nations, and never on any of these occasions, where the civilized nations of the world generally have been represented, have those nations been able to reach an agreement as to the limits of the territorial seas.

The proceedings of the second committee, which, under the auspices of the League of Nations, on April 3, 1930, held a conference for the codification of international law as applied to the marginal seas, shows clearly the total inability of the representatives of the several nations to agree upon what is or what ought to be regarded as the width of the territorial sea, or the width of the marginal waters over which nations may claim jurisdiction for any purpose. A single brief quotation from the report of the committee shows vividly the outcome:

> The fixing of the breadth at 3 miles was opposed by those States which maintain that there is no rule of law to that effect and that their national interests necessitate the adoption of a wider belt. The proposal to recognize a wider belt for these States and for them alone, led to objections from two sides. Some States were not prepared to recognize exceptions to the 3-mile rule, while the above-mentioned States themselves were of opinion that the adoption of such a rule would be arbitrary and were not prepared to accept any special position which was conceded to them merely as part of the terms of an agreement. The idea embodied in the third point, namely, the acceptance of a contiguous zone, found a number of supporters, though it proved ineffective as the basis of a compromise.

JUDICIAL DECISIONS

The decisions of the courts of other nations, as well as those of our own, throw some light on the subject. Of particular value are the cases of the *Le Louis* (2 Dodson 249)

(1817) and *Regina* v. *Keyn* (Law Repts., Exchequer Division, II, p. 215) (1876).

In the case of the *Le Louis*, the great Sir William Scott, while fully supporting the principles of the law of nations, recognized the validity of hovering laws which provided for search and seizures of all vessels in waters adjacent to the coast without any special reverence to any 3-mile or other specific limit.

In the case of Regina against Keyn, a German ship, the *Franconia*, collided with a British ship, the *Strathclyde*, resulting in the death of a British citizen on the *Strathclyde*. The collision took place through carelessness or poor seamanship on the part of the master of the *Franconia*, Captain Keyn, within 3 miles of the shores of England. Captain Keyn was tried and convicted of manslaughter in a British court and his case was appealed. The conviction was reversed upon the ground that the admiralty never had exercised criminal jurisdiction over foreign ships on the high seas and that if the sea, on which the accident took place, was to be considered as British territory, it could not come under the jurisdiction of the admiralty. So the question was resolved upon the point of admiralty jurisdiction. In speaking of the 3-mile limit, Lord Cockburn observed of the rule, "To this hour it has not, even in theory, settled into certainty." Lord Cockburn further stated that English courts cannot obtain jurisdiction by the concurrent assent of nations without local legislation and that in the absence of such legislation the ordinary law of the local state will not extend over the waters involved.

One of the first and to this day one of the leading decisions on this subject is that of *Church* v. *Hubbart* (2 Cranch 187, decided 1804), the opinion having been rendered by Chief Justice Marshall.

This case was an action of an insurance policy written on a vessel, the *Aurora*. The policy excepted from its terms losses arising from "illicit trade with the Portuguese." The vessel was seized by Portuguese authorities some 12 or 15 miles off the Brazilian coast for alleged illicit trade with Portuguese possessions. The insured contended that the policy was effective because the seizure was unlawful and the conduct of the vessel at that distance from the shore could not have been a violation of the Portuguese law, because the Portuguese law could not extend more than 3 miles from the shore. The court held in substance that the Portuguese law not only might, but did in this particular instance, extend more than 3 miles from shore, and that therefore the underwriter must be relieved from liability.

In the two following cases, *Rose* v. *Himely* (4 Cranch 241, 1808) and *Hudson* v. *Guestier* (4 Cranch 293, 1808; 6 Cranch 280, 1810), similar conclusions were arrived at.

Another relevant case and one which has a special bearing upon the principles of law involved in H. R. 7235 is that of *Manchester* v. *Massachusetts* (139 U. S. 240, 1891).

In this case an act of the Legislature of the Commonwealth of Massachusetts prohibited fishing with certain types of gear "anywhere in the waters of Buzzards Bay within the jurisdiction of this Commonwealth." Under this statute one Arthur Manchester was charged and convicted of fishing in Buzzards Bay, in violation of the law, within about 1¼ miles from shore. The question was whether the State of Massachusetts had jurisdiction over the waters adjoining its shores. The Supreme Court held that it had jurisdiction and that the law in question was valid in the absence of any affirmative action of Congress assuming control of the fisheries in those waters. Reference was made to the distance to which jurisdiction might lawfully be exercised over marginal waters and the Court held that under the law of nations it was conceded that the control of the fisheries to the extent of at least a marine league from the shore belongs to the nation on whose coast the fisheries are prosecuted.

Passing by without comment a number of other judicial opinions having to do more or less directly with the subject under consideration, we come to the case of *Cunard Steamship Co.* v. *Mellon* (262 U. S. 100, 1923).

In this case suits were brought by the Cunard Steamship Co. and other steamship companies operating passenger ships between the United States and foreign ports, to enjoin threatened application of certain provisions of the National Prohibition Act. It was contended by the companies that they had the right to carry on their ships into American waters alcoholic liquors as a part of their sea stores and particularly for the customary use of their crew. At first this was permitted under the administrative regulations of the Bureau of Internal Revenue, which provided that the liquors must be kept under seal while the vessels were in ports of the United States, but on October 6, 1922, the Attorney General of the United States gave an opinion to the effect that the National Prohibition Act, construed in connection with the eighteenth amendment to the Constitution, made it unlawful for any ship, whether domestic or foreign, to bring into territorial waters of the United States, or to carry while within such waters, intoxicating liquors for beverage purposes, whether as sea stores or cargo. As we all remember, the eighteenth amendment prohibited the manufacture, sale, or transportation of intoxicating liquor within, the importation thereof into, and the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes. One of the questions involved was as to the meaning of the word "territory" in the phase "the United States and all territory subject to the jurisdiction thereof." The Supreme Court, speaking through Justice Van Devanter, held that the territory subject to the jurisdiction of the United States included the land area and the marginal seas extending outward for the distance of 3 miles and used in that opinion the following language:

> It is now settled in the United States and recognized elsewhere that the territory subject to its jurisdiction includes the land areas under its dominion and control, the ports, harbors, bays, and other enclosed arms of the sea along its coast and a marginal belt of the sea extending from the coast line outward a marine league, or 3 geographical miles.

This was followed by a citation of a number of judicial opinions and the works of a number of law writers on the subject of international law. However, a reference to the opinions and texts cited, with one possible exception, will show that they do not support the concept of a 3-mile rule universally applicable on all occasions and for all purposes. Let us consider for a moment the exact language used.

The Court said, "It is now settled in the United States and recognized elsewhere" that the territorial jurisdiction extends 3 miles at sea, but in this connection it should be remembered that in the trial of the case the representatives of the United States agreed, for the purpose of the suit at least, that the territorial seas extended a distance of 3 miles from shore and no more, and as a consequence, in rendering an opinion in that particular litigation, the Court was bound to follow the admission or stipulation which had been so made. In other words, the extent of the marginal seas was not an issue before the Court. The plaintiff companies, the Cunard Steamship Co. and others, and the United States, which was defendant in the action, agreed to the marginal limit of 3 miles. It would have been strange, indeed, if, in deciding that particular case, the Court had reached any different conclusion. It will be noted that the Court was careful not to pronounce the 3-mile-limit rule as of universal application or as being a part of that great body of customs known as international law. The Court merely said that the question was settled in the United States and recognized elsewhere.

Now, the question at once arises as to how that principle had become "settled in the United States." It must have become so settled either by Executive action, by legislative declaration, or by judicial decisions. A search of the judicial decisions of our country up until that time will show no controlling case supporting such a statement, and, in fact,

as we have seen, the great authority of Chief Justice Marshall is against it. An examination of our history fails to show any legislative declaration that the 3-mile-limit rule is of universal application, and so the opinion must be founded upon the statements or the actions of the executive branch of the Government, particularly as exercised through the Department of State, and finding its most vigorous expression in the rum treaties with Great Britain, Germany, Japan, and others. Evidently that is how the principle became "settled."

It is true that the principle is recognized elsewhere, with qualifications, and the Court had no occasion to go further and say that the principle was not recognized by all the nations or that it had been rejected and denounced by the majority of the civilized nations of the world, because such a declaration would have been beyond the scope of the suit upon which the court was then making a decision.

There is nothing in the language of the Court in this case of the Cunard Steamship Co. against Mellon to indicate that the Court would not just as firmly support statutory enactment of the United States which would declare jurisdiction over the marginal seas to a much greater distance than 3 miles, if such additions could be deemed reasonable under all the circumstances; and if, to quote the language of the able Elihu Root, "the legislation was necessary for the protection of the citizens, their revenue, their health, or their industry." This question of extent of jurisdiction over the marginal seas is another case where "the rule of reason" ought to apply.

Students of the subject would do well to consult the illuminating statement of Dr. Hessell E. Yntema, professor of law, University of Michigan, before the Ways and Means Committee on March 13, 1935, when that committee was considering the bill which as passed is the Antismuggling Act; and also the comprehensive and scholarly work of Dr. Joseph Walter Bingham, professor of law, Stanford University, published by Stanford University Press, and entitled "Report on the International Law of the Pacific Coast Fisheries."

There is no need for us to be bound, as by chains, to the rigid 3-mile-limit rule, unless we find it to our national advantage to be so bound. But even if we should find it so to our national advantage to proclaim and, so far as we can, enforce the rule of the 3-mile limit, we are not justified in brutally exercising our strength to cram such a rule down the throats of a majority of the civilized nations of the world when they will have none of it except under force or threat of force.

From the foregoing it must be apparent that municipal law has a necessary place in protecting the rights of a nation in the waters adjacent to its coast. The broad assertion of Root before the north Pacific fisheries tribunal, wherein he referred to the need of protection of its citizens against interference and injury, against attack, against invasion, to protect their revenues, to protect their health, and to protect their industries is not too broad.

Every nation worthy of the name has the right and is under the obligation of furnishing all of that protection to its citizens. A nation which fails to do it cannot long survive in the first rank.

Such protection can be given in two ways: Either by the general acquiescence of the other people of the earth in harmony with their concepts of the law of nations, using that term in its broadest sense, or else by municipal law. Only within very narrow scope and within indefinite and slight limits can the law of nations operate to furnish such protection; and therefore as a practical matter we find that municipal law generally must afford whatever protection is given to the citizens of a nation. Without municipal law the rights of no people would live long without invasion.

If international law were as certain and definite, and its principles were as well recognized, as those of municipal law, the solution of the problem would be easy. But such is not the case. International law is, in many respects, vague, uncertain, indefinite, and largely devoid of international sanction, relying for its very existence upon the general assent or acquiescence of civilized states. It is impossible, within the realm of fact, to say that international law contains any general, accepted rule with respect to the geographic extent of jurisdiction or sovereignty over marginal waters. The problem further arises as to how international law can be enforced. No penalties are prescribed for nonobservance. Its force and power are largely founded upon the exercise of jurisdiction under municipal law. The utmost that can be said of it is that it may restrain or restrict or nullify municipal law, where municipal law seeks to invade the rights of nations generally, and is not founded in reason and therefore not deserving of obedience.

So unless the municipal law of the state provides, by adequate legislation, for jurisdiction over the marginal seas, the state has no jurisdiction over such seas, and there may easily be a "no man's land" in which neither international law nor municipal law applies. When such a case arises it is necessary not to amend international law so as to expand its provisions or change its nature or application but instead it is necessary to amend or change or make municipal law.

The duty of the littoral state to its own citizens requires that its municipal law should be sufficient in scope to care for the substantial rights of those citizens in its marginal seas. International law will not do it and cannot do it.

The extent of international law therefor can be judged by the result when it comes in conflict with municipal law. Ultimately the courts must declare all law in reaching their decisions in specific cases. The decisions of the courts upon disputed questions where it is asserted that municipal law cannot operate because international law has monopolized the field are bound to be enlightening and of much more value than the declarations of statesmen and politicians that international law requires one or another course of action. In three such instances courts of great authority have spoken and each of them has said in explicit terms that municipal law may operate in the marginal seas and that it is not limited for all purposes to a 3-mile zone immediately adjacent to the coast. These courts have asserted that such legislation is based on right and not upon privilege or acquiescence. But they have further said that such statutes must be reasonable and just, so as to warrant acceptance by other civilized states.

When we reflect, as we must, that never to this day have all of the civilized nations of the earth, or even a majority of them, given their assent to any theory of the law of nations which would limit the marginal seas for all purposes and under all circumstances to the distance of 3 miles outward from shore; when we consider that the greatest judicial minds of their respective periods have declined to give their consent to the 3-mile limit rule; when we consider that as recently as 1930 the special commission of the League of Nations was obliged to report that the nations embraced in the League, and other civilized nations, were not in harmony and could not adopt any general rule as to the extent of the jurisdiction over the marginal seas and did not even say that such a rule existed; when we consider that our own Congress and our own President in 1935 gave their consent, without serious objection, to an extension of the marginal seas adjacent to our coast up to a total distance of 62 marine miles from shore for the protection of our customs; when we consider that from the earliest days of the Nation we have claimed without protest the right to exercise jurisdiction in the customs waters, a zone extending 4 leagues from our shores; the conviction becomes overwhelming that not only is the 3-mile limit not supported by the law of nations but that the true intent and meaning of the principles of the law of nations must run counter to the theory upon which the 3-mile rule is based; and it may be well to recall once more that the 3-mile rule was based upon the old cannon-shot rule and to follow rigidly the 3-mile rule under modern

conditions is as absurd as would be an attempt to carry the civilized nations back to conditions existing in the first dawn of primitive history.

The objection will doubtless be made that by reason of our own declarations and actions in support of a rigid 3-mile-limit rule we are bound by that rule; that it is "settled" in this country; and that such a settlement should not be broken or ignored or changed by our statutory legislation. There is no logic in such an argument, because it assumes the absolute immutability not only of international law but even of those enactments which constitute municipal law. Surely no one can justly say that any principle, either of international or national law, may not be changed. Even in the brief consideration we have given to the subject here we know that the law of nations with respect to the marginal seas and with respect to jurisdiction upon those seas has been changed many times within the last 300 years. We know, as reasonable men, that all human law is in a state of constant change. As I have tried to point out, the 3-mile rule has not the sanctity of international law, for in no respect can it be called a part of international law. No one can seriously question or doubt that the rule in all its rigidity has never been agreed to by anything like a majority of the civilized nations of the earth; no one can doubt that it has not received the common assent and the common acquiescence of the nations of the world, nor even a majority of them. True, in isolated and individual instances it has been maintained by power and the threat of power by some of the great nations, such as Great Britain and the United States; and in other instances, by legislation and otherwise, both Great Britain and the United States have rejected the rule as one of general application. We rejected it in the Antismuggling Act. We rejected it in the hovering laws. We rejected it as early as 1790 and as late as 1932 in the customs or tariff acts. How, then, can we say that we ourselves have given it uniform and constant support? We cannot make such a statement and remain within the bounds of fact. Now, if the rule is not a part of international law, why are we bound to support and sustain it in the future? To ask that question again is to answer it, because there is no obligation on our part to so support it. Logic must be abandoned before one may contend that some of the nations should be bound by a certain rule of action because it is said to be international law and that an equal number of the civilized nations should not be bound by it because they claim, with greater justice, it is not a part of international law. In any such case it is clear that the challenged rule is not, in fact, international law. And although some nations in the past have supported such a rule and claim it to be international law, if thereafter it becomes clear that it is not such, those nations are surely no longer bound by it any more than are other nations which have never supported it.

With respect to matters of this kind involving questions of international law, there is no such thing as an estoppel. Either the asserted principle of international law is really such and thus of universal application, or else it is nothing. If it is nothing, no nation is obliged to conform to it even though theretofore some particular nation might have advocated it as a principle of international law.

May I suggest, Mr. Speaker, that, with respect to H. R. 7235, what we need is to avoid the mistaken idea that we are bound by a rigid 3-mile rule as a part of international law. If we once clearly conceive the true condition of the law with respect to those matters and if we go back to basic principles, there is no reason why we cannot legislate nationally to end the operation of all such antisocial activities as the gambling ships now operating off the Santa Monica coast, whether of United States or foreign registry, provided they so operate within a reasonable distance from our shores, by legislation of this Congress, basing it on the ancient and tested foundation of the necessity to protect the welfare and the health of our citizens. It does not matter whether the operators of those vessels are corporations of the State of Nevada or whether the vessels are owned by citizens of foreign nations, and the vessels are not vessels of the United States. There is nothing in the Constitution to forbid. There is nothing in any decision of the highest Court of our land to prevent. That Court, like the other courts, is bound to follow and support the will of Congress if Congress has the wisdom and the fortitude to act.

Will Rogers

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, the late Will Rogers, Oklahoma's most illustrious son, admired and beloved by people of all ranks, religions, and political faiths, was known as the Ambassador of Good Will. Wherever his path led, whether in America or on foreign soil, the peoples of the earth flocked about him and listened to his simple but cheerful homespun philosophies.

The millions of people of all races, creeds, and classes who had the opportunity of seeing or hearing the cowboy philosopher, humorist, and statesman were of one accord—that he was in fact, as well as in name, the world's greatest ambassador of peace and good will.

Will Rogers was more than a good-will ambassador; he was more than a philosopher; more than a statesman and far more than a humorist; he had a deep and sincere affection for all mankind. It is significant that he stated many times to his close personal friends, "I never knew a man that I didn't like." He had a deep and abiding faith in his fellow man. He always saw the best side of everything in life, rather than the dark side. He was not a faultfinder. He did not look for the shortcomings in his fellow man but was generous and understanding of those with whom he came in contact. He was a natural-born optimist. No obstacle was too difficult for him to tackle.

I had the unusual privilege of personally knowing the late Will Rogers. For years it was his custom when in Washington to call on a member of the Oklahoma delegation in Congress, the late W. W. Hastings, a close friend and a member of the same tribe. Occasionally he would dine with the Oklahoma Congressmen.

Some of the stories and experiences he told us have made lasting impressions upon my mind. Of the many stories he related, none of them was tainted nor off color. A few minutes with the late humorist was like a tonic to anyone. To sit in his presence, laugh at his wit and uncanny humor, was an experience I shall cherish the remainder of my days.

The life and character of the late Will Rogers is and should be an inspiration to every school boy and girl in America. Born on a farm, of humble parentage, without any special privileges, and with meager advantages, he rose to a position of fame and popularity by his own efforts and determination.

Although his life was suddenly cut short in the prime of his activities, he left a heritage of a simple, honorable, upright life that all of our citizens, young and old, might well emulate. When his life was snuffed out in far-off Alaska while on his last flight in the interest of peace and good will with his close friend, the late Wiley Post, the whole world mourned, and still mourns, his untimely passing.

If all of our citizens everywhere, including statesmen and the rulers of the earth, would adopt the simple, humane philosophy of Oklahoma's late illustrious son, there would be no more wars nor rumors of war, but peace and good will would breathe as fragrantly throughout the earth as if the day of its redemption had come.

Work of Congress

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SIMPSON. Mr. Speaker, I wish to render to the voters of the Eighteenth District of Pennsylvania an accounting of my stewardship as their Representative during this first session of the Seventy-sixth Congress.

More than all other things, I am proud to tell them that I played the best part I could in helping to remove any further odious beliefs that this august body was a "rubber stamp" Congress, hopelessly under the spell of a voice long held to be golden and infallible.

In the midst of great national issues and tremendous world alarms, fed by cross-currents of hate, greed, and cold-blooded propaganda, and fears, we as a legislative body deliberated to the best of our ability; and our votes, I am sure, were made with only the thought in mind of the greatest good for the majority.

Some of my constituents wished me to vote other than I did on certain measures. Going contrary to their wishes was not easy, but I felt duty bound to serve the majority when I felt that majority knew all the facts and had not been misled.

Perhaps the most outstanding achievement of this Congress was the salubrious effect on the country as a whole, when they saw us assert our independence of the executive branch. Huge savings, long frozen through fear of restrictive legislation and confiscatory taxes, are being released throughout the Nation. Credits are becoming freer and there is a general hope that government is at long last assuming its proper function of regulating business for the national good rather than entering into competition with private industry.

To summarize our activities is difficult. Measures for strengthening national defense bulked largest in our work this year. With much of the world living in hourly fear of brutal, conscienceless dictators and hundreds of thousands of people being killed and maimed in savage, undeclared wars, Congress saw fit to enforce the respect of the world by greatly augmenting the might of our armed forces on land, sea, and sky.

Thousands of well-meaning citizens saw fit to protest against this national preparedness. Fast-moving events, however, quickly proved that we were right; that instead of seeking war we wanted peace and the surest way of having peace was to make ourselves invulnerable. In passing the greatest peacetime army, navy, and aviation budget in our history we also made it plain to the world that our first-line defenses were not on the Rhine but were confined to the shores of the Atlantic and Pacific. After this declaration of Congress, all nations of the world knew that the United States is not actually interested in the real-estate fights of European nations.

I challenge anyone to assert that world affairs did not swiftly change for the better when Congress made this declaration clear. Old World nations, against whose cabals George Washington had solemnly warned us, saw the writing on the wall and realized our citizenry meant to finance no more foreign wars nor even take sides in their diplomatic schemes and squabbles.

Few of my constituents will realize the pressure applied to Members of the Seventy-sixth Congress by those who wanted us to scrap our neutrality law. This pressure was cold-blooded and ruthlessly indifferent to American lives and property. Most of us saw through the smoke screens of those who craved personal power in world affairs. We saw and we refused to jeopardize either American lives or American dollars. The lessons learned in the World War are still too poignant and fresh. America wants no more involvement in European squabbles and the way to avoid them is to straightforwardly say so. A majority of us said this through our Foreign Affairs Committee.

Through efficient Republican leadership and effective Democratic support, we resisted the administration's efforts to gain more public funds for New Deal squandering by raising the national debt limit of $45,000,000,000. Like the majority of the country, we wanted no more absurd experiments in so-called pump-priming, spending-lending, and other schemes which the past 7 years have proved fallacious.

Despite bitter administration opposition, we forced tax revisions to relieve business of punitive levies. We liberalized the Social Security Act and saved citizens countless millions in future taxes by eliminating the full-reserve plan. This will eventually stop the diversion of pay-roll taxes into Government coffers—a New Deal device which already has cost us a billion or more dollars. The money which citizens paid into the Treasury toward their future social security was promptly borrowed out to continue New Deal spending schemes. Eventually taxpayers still unborn will have to make this up to the workers who contributed their share during the past 2 years. This was unfair and obviously fraudulent. Thanks to our efforts this session, hundreds of millions of dollars have been saved to both employers and employees.

We continued the work-relief program but we added teeth to prevent the cold-blooded regimentation of workers for selfish political purposes. We wanted no more merciless exploitation of those who were promised a "bountiful life" in exchange for their votes. My own State especially suffered last fall from this exploitation.

As usual, the Seventy-sixth Congress concerned itself with the problems of agriculture and sought for adequate ways to lighten the burdens of the farmers of the Nation. A billion two hundred million dollars was appropriated for the various purposes of soil conservation, crop-parity payments, surplus products, harvesting loans, pest control, and farm roads.

Of special interest to my constituents were the efforts of House Republicans to force an inquiry into the damage to agriculture and industry by the strange, so-called reciprocal-trade policies of the administration—trade treaties which have forced farm-products prices to new low levels, wrecked our export markets, and flooded our home one with low-priced wheat, corn, meats, dairy products, and what not, to the detriment of our hard-pressed agrarians. It does not make sense to us that our farmers should be kept on relief while foreigners are permitted to glut our markets with competitive farm products.

Five bills were passed for veterans of our wars and their dependents. One of these, the Rankin Act, qualifies veterans of the Spanish-American War, the Boxer Uprising, and the Philippine Insurrection, hitherto prevented by sections 6 and 17 of the Economy Act, to domiciliary care, medical treatment, burial benefits, and protection of term insurance.

Another laudable act was the passage of a bill to aid dependents of World War veterans whose service disability was less than 10 percent.

Other legislation was passed to aid alien veterans and to provide flags for the caskets of all veterans of the United States Army, Navy, or Coast Guard. Another bill restores certain benefits to World War veterans suffering from paralysis, paresis, blindness, or who are bedridden.

Mr. Speaker, our Chief Executive has openly charged that the members of my party here in this House, together with those splendid Democrats who joined with us in fighting New Deal follies, have "gambled with the fate of a billion and a half people and of leading American business to a precipice over which it may plunge next spring."

I resent this. Neither the solemn oath of our Chief Executive nor that of a Member of this body commits him or us to

legislative concern for the welfare of the whole world. I am as charitable and as concerned over the plight of mankind in general as any other man, but I contend our first obligation is to our own 130,000,000 citizens. All too long they have been neglected and deluded with hollow promises while we were asked to settle other nations' problems.

As for leading American business to a precipice over which it may plunge next spring, that is as consistent as the New Deal slogan—"Forward with Roosevelt!" I do not think any of us here are eager to either lead or be led any more. Instead, we want to rest a while and take stock of what we still have left for ourselves and our descendents after 8 years of this "forward" business.

If there is a precipice ahead of us, it is not of our creating.

The Arkansas Valley

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DISNEY. Mr. Speaker, ever since the World War, which proved the importance of the Nation's great rivers for rapid, bulky transportation, great sums of public money and tremendous numbers of good and bad speeches have gone toward the development of the great rivers of the Nation and their important tributaries. Before the war the Panama Canal was built to facilitate and cheapen east-west water transportation, and wonderful harbors for ocean-going and coastwise vessels were developed on the east and west coasts. Rural electrification, flood control, cheap power facilities for cities, navigation, irrigation—these terms have become commonplace to this Nation as it has worked toward the eventual completion of these waterway developments.

As a result we find canals have been built, great levees have been constructed at enormous expense, rivers and harbors have been dredged to permit entrance of freight-carrying vessels, tremendous dams have been constructed to form huge lakes for power and irrigational purposes, and farmers are being treated to the novelty of cheap electricity, crops are growing luxuriantly in formerly barren regions, and cheap freight transportation are the dividends for Mr. American Public.

Through this heyday of water enthusiasm the people of the Arkansas Valley have cheerfully contributed their share to the development of the tremendous projects on all sides of them. They have watched the great Mississippi River become gradually mastered by hundreds of miles of huge levees, have seen other Mississippi tributaries improved by dredging, construction of locks, and dams being built to guarantee even flow of water for navigation, for irrigation, and for flood control.

Having finally tired of peering at the marvelous waterway developments in neighboring regions, we of the Arkansas Valley have glanced about our own doorstep only to find that the hustle and bustle of recent activity has bestowed the dubious distinction upon the great Arkansas River as being the only major tributary of the Mississippi that is undeveloped for navigation, although navigational possibilities exist, that fertile areas in our own valley are in sore need of irrigation, although the dam sites for the retention of irrigation and flood-control waters have never been utilized, and that our own farmers are begging for cheap electricity in regions where tremendous amounts of electricity could be generated from proper improvements of the Arkansas and adjoining streams. You say that perhaps we do not need our water resources developed? Let us see.

The improvement of the Arkansas River for navigation would be a novelty for the youth of the Arkansas Valley, for the great river has been permitted to degenerate to the point where crumbling banks, sand bars, snags, and seasonal flows are more characteristic than deep flowing waters would be. For the patriarchs of the valley, however, navigational improvements of the Arkansas would merely recall the colorful past, would merely restore to the Arkansas the characteristics it originally had and should never have been permitted to lose. They know that for over a hundred years the Arkansas River was a commercial artery from the Mississippi River up to as high as Fort Gibson, Okla., isolated instances even being recorded of trips as high as Wichita, Kans. History books will reveal that famous historical personalities are associated with this old river. Such famous names as Albert Pike, Captain Bell, Thomas Nuttall, Washington Irving, George Catlin, Latrobe, and Sam Houston loom out of the past to impart glamor and romance to the Arkansas, for each of these men traveled on its waters during the early days of the Nation as they forged ahead in the mysterious, savage regions to the west.

These pioneers were soon followed by different kinds of expeditions traveling up the Arkansas. The steamboat had been developed and eager traders were not slow to see commercial possibilities in the furs, hides, crops, and Government supplies that must travel up and down the river. Thus, in 1820 we find the steamer *Comet* making its way up to Arkansas Post, 8 days out of New Orleans, and the Cincinnati-built *Eagle* of 118 tons pulled into Little Rock in 1822, these early steamers being the precursors of later vessels bearing troops and supplies to a military outpost called Cantonment, which is now Fort Gibson, Okla.

For 50 years this trade flourished, the cheap transportation being accepted as a matter of course by the inhabitants of the valley. But the railroads came into the region along in the seventies. They offered cheap rates and added conveniences to the people accustomed to river travel. The competition was too strong—the railroads gradually replaced the steamboats as the transportation medium. The Arkansas was left to the ravages of spring freshets, upstream water was diverted for various uses or sank in the sandy soil, and by 1908 the navigation of the Arkansas up to Fort Gibson had outlived its usefulness to the people of the Arkansas Valley.

Meanwhile, however, the completion of the Panama Canal had brought water rates into competition with transcontinental freight rates, and the railroads found it necessary to raise inland rates to offset the reduction in rates to meet the new threat. Now the people of the Arkansas Valley found themselves faced for the first time with high transportation costs and little opportunity to do anything about it. The public attention had become centered upon railroad transporation; the development of our rivers for navigation was frowned upon.

When the World War forced the attention of our military leaders upon the necessity of having dependable, rapid transportation for bulky goods, the river enthusiasts found invaluable allies. Subsequently the river improvements came along—to all except the Arkansas. Consequently, while freight rates have progressively been reduced to the East, to the North, and to the South, as river navigation became available to Tennessee, Missouri, and south central Texas, the high freight rates have remained with the Arkansas Valley, the inhabitants of this region being forced to cope with the second highest freight-rate structure in the United States although a potentially navigable river is at hand.

Careful plans have been made to restore the navigation of the Arkansas, plans to canalize the lower White River, an Arkansas-White River cut-off, up the Arkansas to the mouths of the Grand and Verdigris Rivers, and up the Verdigris River to Catoosa, Okla., 15 miles from Tulsa. Details have been worked out—navigational improvements to extend 537 miles; 36 single locks, 110 by 600 feet, on the White and Arkansas Rivers; and 4 single 62- by 480-foot locks on the Verdigris River; a reservoir—Oologah—on the Verdigris River, to guarantee sufficient, dependable flow, and so on—but a recent adverse report by Army engineers on

the navigation plan has again brought disappointment to those living in the Arkansas Valley.

This Army report on the feasibility of the navigation of the Arkansas was based upon a variety of factors. The annual charges on maintenance of the navigation was estimated by Army engineers to be about $18,712,000, which an estimated saving in transportation costs of about $10,222,240 failed to offset by more than $8,000,000, and the total estimated cost of the project was placed in this report as a little over $200,000,000. Certainly the people of the Arkansas Valley would not care to nor attempt to foist a burdensome, unprofitable project upon the people of the Nation and were the comparison between the Arkansas project and other projects, such as those improving the Missouri or Tennessee Rivers, as undeniably unfavorable as these figures indicate at first glance, the entire plan would be dropped without complaint.

However, direct comparisons are in order between these navigation plans of Mississippi River tributaries. If one tributary is considered navigable, profitably so, by certain standards, it follows that these same standards should be followed in ascertaining the advisability of navigation improvements of another tributary. But has this been done? Let me point out certain facts:

In determining the economic justification for the navigation improvement of the Missouri River 100 percent of the total available traffic was given, but when even that estimation did not overcome a 4-percent annual capital charge, the charge was dropped and the improvement for navigation was pronounced economically justified. In arriving at the figures for the Arkansas improvement only 10 percent of the total available traffic was used, the 4-percent annual capital charge added, and maintenance and depreciation charges also included in arriving at the conclusion that the project is economically unfeasible. Had the standards applied to the Missouri River been applied in a like manner to the Arkansas, the Arkansas navigation project would have been found 400 percent more economically justified than the Missouri.

Moreover, in arriving at the economic feasibility of navigation improvements of the Tennessee River, a project that would have been found inadvisable judged by present traffic available, the district engineer applied to the future the ratio of traffic growth averaged over the preceding 25 years, and concluded that the Tennessee River would be economically justified by 1950, when it would be completed. This same standard was not applied in arriving at the discouraging conclusion in the Arkansas report, although it is incontrovertible that were the phenomenal growth of the Arkansas Valley in population and traffic projected 25 years into the future, the result would have a distinct bearing upon such a project as this.

As I stated in previous remarks upon this matter, I am not caviling at the Corps of Engineers of the United States Army for their conclusions on the feasibility of the Arkansas navigation project. However, there should be uniformity in the methods of determination of these reports, for it is unfair to the inhabitants of one region to be denied improvements on grounds of economic unfeasibility when similar improvements are extended to adjoining areas and found justified economically by the elimination of the very factors that rendered the one report inadvisable.

The importance of navigation to the Arkansas Valley cannot be overstressed. This region is primarily agricultural, a producer of raw materials. The burdensome freight rates that have come since the loss of navigation facilities therefore cut twice as hard into the returns of the inhabitants as might be expected. They must pay freight charges on their raw materials to the markets of consumption, then face the additional burden of paying the freight charges on manufactured goods from the point of manufacture to the point of consumption. The elimination of the freight-rate discrimination between this region and neighboring regions would remove strong deterrents to population growth, permit encouragement of the establishment of new industries, and would facilitate expansion of those industries already established in the Arkansas Valley.

The Arkansas Valley is a region just budding into economic maturity. Its past has been filled with striking booms, but this impetuosity and intemperance of youth has passed, and the region has settled to an orderly, progressive development of its tremendously rich, natural resources. The great area included within the watershed of the 1,500-mile length of the Arkansas was described in the Army report as including—

> The southeastern section of Colorado, more than half of the State of Kansas, a large portion of northeastern New Mexico, the Panhandle of Texas, the entire northern portion of Oklahoma, a section of southwestern Missouri, and more than half of the State of Arkansas—

An area of over 160,000 square miles, and comprising almost 14 percent of the entire Mississippi River watershed. The population of the region approximates 5,000,000 people, engaged for the most part in agricultural pursuits that produce grains and fruits of great diversity, which are transported to all sections of the Nation. The crops of greatest importance are wheat and cotton, but the temperate climate and usually generous rainfall permit a fortunate diversification, including alfalfa, corn, fruits, berries, vegetables, kafir, rye, and oats, with even rice being grown on the lower Arkansas. These products must travel via railroads for marketing. Should this rich region be taxed disproportionately by discriminatory freight-rate charges merely because freight competition in other parts of the country force levying of high rates in those regions not blessed with navigational improvements?

Although agriculture is the main occupation of the Arkansas Valley, attention should be directed to the richness of other natural resources that inure to the national well-being. In this time of great mechanical specialization, the most striking asset of the valley to be called to mind is the great midcontinent oil and gas field through Kansas, Oklahoma, and Arkansas, although great national importance is attached to the lead and zinc mines of the Arkansas watershed, that produce 70 percent of the lead and zinc of the American Continent. Other industries include coal mining; lumbering operations; manufactures of cement, brick, and tile; gold and silver mining in Colorado; salt and gypsum from Kansas and Oklahoma; and those industries associated with the handling of farm products, such as cotton gins, meat-packing plants, elevators, grain mills, and beet-sugar factories. Large-scale metal industries include a steel mill at Pueblo, Colo., which is the largest steel mill west of the Mississippi, and several airplane factories at Wichita, Kans., and Tulsa, Okla. All of these industries, excepting possibly oil, which evades the discrimination by means of pipe lines, must transport their products to markets and compete with similar products from regions which can ship their goods from greater distances to the same market at less expense.

In a country dedicated to free and equal opportunity such a situation which places millions of people at an economic disadvantage with people in other regions should be rectified. Navigation improvements of the Arkansas, the next logical step in national waterway improvement after the development of all other major tributaries and the main stem of the Mississippi, would go far in this respect.

Associated with the problem of navigation and partially included in its scope is the matter of flood control. Flood control projects oftentimes dovetail with navigation projects, since the careful utilization of available waters for navigation purposes often means the retention of seasonal floodwaters for gradual release during low-water periods. Such retention protects lower regions from the ravages of unrestrained floods, and at the same time guarantees sufficient water depth for navigation purposes.

However, there are, of course, many regions that are patently unfit for navigation, yet have flood control problems with which to contend, particularly those sections of rivers with more or less seasonal waters flowing through cities and rich agricultural regions. Such problems are included among those of the Arkansas Valley, since numerous

important cities lie on the banks of the Arkansas and have repeatedly suffered catastrophic losses in human lives and property from uncontrolled floods. The magnitude of this problem merits close attention. Average annual flood losses on the main stem of the Arkansas and its tributaries run in excess of $4,500,000, with approximately 4,000,000 acres liable to inundation. The greatest flood danger is, of course, on the lower Arkansas, where the overflow plain increases to a marked extent, the volume of water is supplemented materially by that from large tributaries, and there are more cities and towns along the banks. However, during years past Pueblo, Colo., located on the upper Arkansas where the Rocky Mountains merge with the Great Plains, has experienced tremendous losses from destructive floods of such intensity that hundreds of lives were lost and over $25,000,000 in property damage occurred during but 1 year. In 1927, Oklahoma alone suffered over $20,000,000 in property losses from uncontrolled floodwaters, while on the Arkansas' main stem over one and three-quarters million acres of cropland were inundated. Great losses of livestock occurred, including over 21,000 head of cattle, 9,250 mules, 66,500 swine, and about 525,500 barnyard fowl. Sometimes floods occur several times during one year, as, for instance, on the Verdigris River in Oklahoma and in Kansas, and on the Caney River which meets the Verdigris in northern Oklahoma. Also serious need for flood protection is recognized at Tulsa, Garden City, Dodge City, Wichita, and Arkansas City, which were hard hit by the disastrous flood of 1927.

Unfortunately, flood threats seem to be increasing instead of being alleviated. For example, it is recorded that the Missouri River reached a crest above flood stage only about 12 times before 1900, but over 30 times since 1900. This trend has been brought about by intemperance in land development. Great forests along the upper reaches of the river have been razed with careless abandon, wide expanses of land have been cleaned of prairie grass by firing and overgrazing, and the demands of the World War, forcing high-powered methods of crop production, have reaped the evils of worn-out land now left to the ravages of ruinous erosion. Thus, the loss of the forests and grasslands and the decrease in productivity of large areas have facilitated a rapid run-off of rain waters. That the Arkansas has therefore become an important factor in lower Mississippi floods was recognized by Gen. Lytle Brown, of the Corps of Engineers, when he stated:

> Because the Arkansas River enters the Mississippi so far down in the alluvial valley its great potential flood volume and its direction of flow at right angles with the Mississippi at the junction point, this stream presents the greatest single threat to the lower Mississippi.

Just what efforts have been made to control these floodwaters of the Arkansas and its tributaries? For the most part flood-control projects have been local and minor in nature. In the upper reaches of the river practically the sole flood-control development is at Pueblo, Colo., for the protection of that city. From Pueblo to Hutchinson, Kans., about 459 miles by channel, there is minor flood protection to protect railroads and head gates to irrigation ditches, and on the remainder of the stream in Kansas are channel improvements at Wichita, levees at Arkansas City, and additional levee protection to agricultural lands in the Big Slough area. Proceeding on down the river over that section included in Oklahoma, we find that practically no protection at all has been erected against floodwaters in this region, while below Fort Smith, Ark., protection exists against moderate floods by means of about 180 miles of levees which cost approximately $3,000,000.

In view of the tremendous area liable to inundation and the great annual damage caused by uncontrolled floods, several flood-control projects have been advanced for consideration by the War Department and have been reported upon. This report states that projects economically justified on the main stream would cost about $10,286,000, with estimated benefits of $10,718,400, including:

> The Caddoa Reservoir for combined use of flood control and irrigation for the protection of flood-plain areas in eastern Colorado and western Kansas; of Arkansas City, Kans., by levees; and the protection, by means of levees, of a number of farm areas in the flood plains through Oklahoma and Arkansas. Because of the concentrated values affected and the possibility of loss of life projects for the protection of Wichita, Kans., Kaw and Tulsa, Okla., and North Little Rock, Ark., should be undertaken at an early date; the total project cost for the protection of these urban areas is estimated at $6,535,000, and the benefits from their construction as $1,774,600.

Further analysis of flood-control projects on tributary streams revealed additional justifiable flood-control projects, which were described as follows:

> The total project cost of the most practical protection works is estimated as $71,800,000, with the total estimated benefits from the construction as somewhat more than one-third of that amount; projects economically justified at the present time cost about $8,707,000, with estimated benefits as $8,838,000, and include the protection of Augusta and Winfield, Kans., and Blackwell, Okla., by means of levees, and the protection of Oklahoma City from North Canadian River waters by a reservoir at Fort Reno, Okla. Because of concentrated values affected and the possibility of loss of life, projects for the protection of Hutchinson, Kans., and Clarksville, Ark., should be undertaken at an early date. The total project cost for the protection of these urban areas is estimated as $3,567,000, and the benefits from their construction as $1,884,000.

As I pointed out, the improvement of the lower Arkansas must deal with navigation and flood control, but on the upper Arkansas an entirely different problem is presented. Over half of the entire watershed, all that region west of the ninety-ninth meridian, needs irrigation to supplement its rainfall during the months from March to October. Most of this area is in Colorado and Kansas, above Garden City, Kans., and about 200 miles above Hutchinson, Kans., although on the north bank of the Arkansas below Little Rock, Ark., over 125,000 acres were being irrigated for rice in 1929 by water obtained from wells.

Well over 750,000 acres of land was irrigated by water from the Arkansas in 1929, the greater part of this irrigation being in Colorado. However, there is considerably more irrigable land than available water supply, a situation that additional irrigation projects and dams would remedy by conserving winter flows and infrequent flood flows lost during irrigation season. Projects contemplated for this purpose and judged of the greatest economic feasibility by the War Department are the Caddoa Reservoir, the Purgatoire Reservoir, and the Bear Valley Reservoir Projects.

The Caddoa Dam, to be located on the main river just below the mouth of the Purgatoire River, about 122 miles above Garden City, Kans., is estimated to cost as a combination flood-control and irrigation project about $10,000,000. The dam would be 120 feet in height and would afford a reservoir of 680,000 acre-feet capacity. It was described in a report by the district engineer submitted in 1935 as "the most efficient project for the development of water resources and flood control in eastern Colorado and western Kansas."

A smaller dam, that on the Purgatoire River, a tributary of the Arkansas, would be about 118 feet in height and would, as stated in Col. W. J. Barden's report of 1935, "afford a supplemental water supply of 48,500 acre-feet to the Arkansas River." This project would be supplemental to the Bear Valley Reservoir Project, which consists of a diversion dam about 100 miles below the Caddoa dam site to furnish water to "an off-channel reservoir" at a cost of about $700,000. Although both of these projects are recognized as feasible by Colonel Barden, the Caddoa Dam is recommended as the most practical.

First Legislative Assembly in the New World

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. BLAND. Mr. Speaker, on July 30, 1619 (O. S.), there met at Jamestown, Va., the first legislative assembly in the New World. The annual recurrence of this important event

should be observed. It has not been appropriately remembered, and preparations should be made to commemorate by something more than perfunctory recognition the three hundred and twenty-fifth anniversary of this meeting. In these days when democracies are threatened, it is important that their worth and virtue, as well as their trials, should be recalled.

James Truslow Adams, in his Building the British Empire, to the end of the first empire, says that in general, with some exceptions, this popular assembly was the form into which each colony was to develop, and has developed ever since, a royal Governor, forming a link with the Crown, and popular representation in legislature, having to a large degree local self-government, supported by the power of England and safeguarded by English law.

Adams reminds us that—

In considering the fatal faults of the Stuart regime, it is well to recall that at least it originated the system of liberty within law for the English overseas.

Yeardley returned to Virginia as Governor in 1619 with broader powers than had been granted before. Immigration at once increased. Chandler and Thames in Colonial Virginia say that the spread of the good news in England that Virginia was henceforth to be governed on broad principles caused settlers to flock to the colony, and in a little while the population had grown to be about 2,000.

I quote:

The most surprising and far reaching in their influence of the instructions that Yeardley carried back with him to Virginia was the granting of the right to establish in the colony such government as would be best for the inhabitants. Yeardley had not been long in the colony after his return before he announced that he, on the authority of the London Company, had decided to establish a General Assembly, in which the representatives of the colony would hereafter frame the laws that should govern the colony. This assembly was to be composed of the Governor, his council, and two representatives from each of the scattered plantations. There were eleven of these plantations, and two representatives from each would make an assembly of twenty-two representatives coming directly from the people. The plantations at the time of the organization of the assembly were as follows: James City, Charles City, City of Henricos, Kiccowtan, Brandon, Martin's Plantation, Smythe's Hundred, Martin's Hundred, Argall's Gift, Flower de Hundred, Captain Lawne's Plantation, and Captain Ward's Plantation.

Paul Wilstach, speaking of Tidewater Virginia, in his book by that name, and referring to that part of Virginia which includes all of Virginia east of a line drawn between Richmond and Washington, through Fredericksburg, and on the south by the land south of the James and east of the Washington-Richmond line projected to the North Carolina line, says that this section is, beyond comparison, more interesting to an American than any other equal area between the two oceans.

I quote:

In it the English made their first permanent settlement on the American Continent. Here, from the crudest pioneer condition, flowered a civilization, and here grew a race of philosophical and practical and patriotic statesmen through which it contributed incomparably more than any equal area to the development of the idea of independence and to the passion for it; it was a leader in the activities of the Revolution; and it was the nursery of the great contributors to the constructive organization and practical operation of the new nation.

In Tidewater assembled the first truly representative legislative body on the continent. Here was erected the first church in that area which later comprised the Thirteen Original States. It was here that, on this continent, the white man first exercised the right of suffrage, Negro slavery was first introduced, the first free school was operated, and trial by jury was first given the people.

Discussing the first legislative assembly in the New World, Matthew Page Andrews in Virginia, the Old Dominion, says, at page 85:

But matters of economic import, however vital, are overshadowed by the purpose of the London-Virginia Council to transfer governmental prerogatives to the company's colonial offspring. This course was definitely determined on November 18, 1618; and a comet was observed that night, a "portent" associated with the sailing of the *Sarah Constant* eleven years before; so that this natural phenomenon was the accompaniment of the two most notable events in connection with the beginnings of American settlement—the sailing of the first settlers and the grant of self-government.

Henceforth, the colony was to be governed—and the terminology is interesting—by "two supreme councils": The Council of State, which was to consist for the present of the Governor and his Counsellors, chosen by the company court in England, and the General Assembly, which was to consist of the aforesaid Council of State and two Burgesses chosen out of each Town Hundred or other particular plantation.

As council members of the first legislative assembly in the New World, the following names have come down: Captain Francis West; Captain Nathaniel Powell; John Pory; John Rolfe; William Wickham; and Samuel Macock, with Governor Yeardley presiding. From the time of the arrival of Yeardley upon the good ship *George*, the Governor and council ruled the colony until an election could conveniently be held; i. e., after the crops were well under way. The planters dwelt in four major units, or "incorporations": The City of Henricus, Charles City, James City, and the "Burrough of Kiccotan."

The members of the lower house were called burgesses, two from each borough. On August 9 (N. S.) the assembly gathered. Both Houses sat together in the choir of the Jamestown church, first as a unicameral body, later separately, in sessions that bear detailed description, since they established precedents in American history.

In an introductory note to Proceedings of the First Assembly of Virginia, 1619, contributed in 1856 by George Bancroft and published in Collections of the New York Historical Society, second series, volume III, part 1, page 333, Mr. Bancroft says of this assembly:

Many things are noticeable. The Governor and Council sat with the burgesses and took part in motions and in debates. The Secretary of the Colony was chosen Speaker, and I am not sure that he was a Burgess. This first American assembly set the precedent of beginning legislation with prayer. It is evident that Virginia was then as thoroughly a Church of England colony as Connecticut afterward was a Calvinistic one. The inauguration of legislative power in the Ancient Dominion preceded the existence of Negro slavery, which we well believe it is destined also to survive. The earliest assembly in the oldest of the Original Thirteen States at its first session took measures "toward the erecting of" a "University and Colledge." Care was also taken for the education of Indian children. Extravagance in dress was not prohibited, but the ministers were to profit by a tax on excess in apparel. On the whole, the record of these proceedings well justifies the opinion of Sir Edward Sandys that "they were very well and judiciously carried." The different functions of government may have been confounded, and the laws were not framed according to any speculative theory; but a perpetual interest attaches to the first elective body representing the people of Virginia, more than a year before the *Mayflower*, with the Pilgrims, left the harbor of Southampton, and while Virginia was still the only British colony on the whole Continent of America.

This assembly continued until August 4, 1619, and well commands the admiration of its successors.

Challenge was made of the right of Captain Martin's burgesses to have any place in the assembly because there was a clause in his patent which not only exempted him—

from that equality and uniformity of lawes and orders wch the great Charter saith are to extend over the whole Colony; but also from divers suche lawes as we must be inforced to make in the General Assembly.

It was ordered that the said two burgesses should withdraw themselves out of the assembly until such time as Captain Martin had made his personal appearance before them, at which time, if upon their motion he would be content to—

Quitte and give over that parte of his Patente, and contrary thereunto woulde submitte himselfe to the Generall forme of Governmente, as all others did, that then his Burgesses should be readmitted, otherwise they were utterly to be excluded, as being spies, rather than legal Burgesses, because they had offered themselves to be assistant at the making of lawes, wch both themselves & those whom they represented might chuse whether they would obaye or not.

On Sunday, August 1, Mr. Shelley, one of the burgesses, died.

On Monday, August 2, Captain Martin appeared and declared that he would not—

infringe any part of his Patente, whereupon it was resolved by the Assembly that his Burgesses should have no admittance.

Legislation followed providing—

1. That no injury or oppression should be wrought by the English against the Indians whereby the present peace might be disturbed and ancient quarrels might be renewed.

It is interesting to note that this was less than 3 years before the great massacre by the Indians in 1622.

2. That an idler or "runagate," though a freedman, should have appointed for him a master and for him to serve for wages until he showed amendment.

3. To prevent gaming at dice and cards.
4. Against drunkenness.
5. Against excess in apparel.
6. That people of the colony "neither utterly to rejecte" Indians to converse with them or to live and labor among them, "nor yet to drawe them to come in."
7. For education of a "certaine number of the natives' children," * * * "in true religion and a civile course of life."
8. As to planting corn.
9. For planting mulberry trees.
10. For planting "silke flaxe."
11. For planting hemp, English flax, and "anniseeds."
12. For planting and maintaining 10 vines by every householder "until they have attained to the arte and experience of dressing a vineyard."
13. For paying tradesmen "according to the quality of his trade and worke, to be estimated if he shall not be contented, by the Governour and officers of the place where he worketh."
14. For enforcement of all contracts made in England between the owners of land and their tenants and servants "which they shall send hither."
15. To prevent enticement away of tenants and servants of one person by another.
16. To protect prices of goods sent to the "Magazin" till such time as they might be taken "off their handes at the prices agreed on," and "that the price thereof may be uphelde the better."
17. To prevent and reform abuses complained of at the "Magazin."
18. To regulate prices of tobacco as a medium of exchange.
19. To secure proper curing of tobacco.
20. Remedies and relief in various private matters.

On August 4, 1619, the record shows that—

By reason of the extream heat both paste and likely to ensue, and by that meanes, of the alteration of the healthes of diverse of the General Assembly, the Governour, who himself also was not well, resolved should be the laste of this firste Session.

There followed that day laws relating to trade with the Indians, requiring names of servants and terms and conditions of service to be sent to the Secretary of State, also terms and conditions of those coming to the colony, and that ministers in March of each year should submit a report of all christenings, burials, and marriages.

There were prohibitions against killing of cattle without leave of the Governor, and prohibiting under penalty of being declared a felon taking boats, or oars, or canoes without leave of the owner.

Provision was made as to the duties of ministers, with authority to them and church wardens "to presente all ungodly disorders," "reformation of swearing."

All persons passing Jamestown by water were required to stop there, "to knowe whether the Governour will commande him any service"; and trade into the bays was prohibited without license from the Governor and subject to certain restrictions.

All persons were required to "frequente divine service and sermons, both forenoon and afternoon," those bearing arms to bring their "pieces, swordes, poulder, and shotte"; consent was required for marriages of maids or women servants; and contracts for service were required to be enforced.

Inquiries were made on the last day into matters which might prejudice relations with the Indians, and particularly that one, Spellman, had informed the Indian Emperor, Opechancanough, that within a year there would come a Governor greater "than this that nowe is in place."

By wch and by other reportes it seemeth, he hath alienated the minde of Opechancano from this present Governour & brought him in muche disesteem both to Opechancano and the Indians, and the whole colony in danger of their slippery designes.

Spellman was censured, and finally "degraded" of his title "of Capitaine at the head of the troope" and condemned to perform 7 years' service to the colony, "in the nature of an Interpreter to the Governour."

A matter involving discharge of certain bonds given to Capt. Samuel Argall was adjusted and provision was made for compensation for the speaker, clerk, sergeant officers, and "the Provost Marshall of James Citty," to be paid in tobacco.

The general assembly commanded the speaker to present their humble excuse to the treasurer, Counsell & Co. in England—

For being constrained by the intemperature of the weather and the falling sicke of diverse of the Burgesses to breake up so abruptly, before they had so muche as putt their lawes to the engrossing.

Their "last humble suite" to the treasurer, Counsell & Co. in England was—and this is most significant—

That the said Counsell and Company would be pleased, so soon as they shall finde it convenient, to make good their promise sett down at the conclusion of their commission for establishing the Counsell of Estate and the General Assembly; namely, that they will give us power to allow or disallowe of their orders of courte, as his Ma^{ty} hath given them power to allow or rejecte our Lawes.

This declaration shows unmistakably that the spirit of independence was alive and the seeds of the revolution were then sown.

Well did John Esten Cook, in Virginia, a History of the People, page 115, say:

The event was a portentous one. The Old World had passed away and the new was born. Popular right in America had entered on life and the long struggle to hold its own. It might be strangled in the cradle, or done to death before it reached full manhood, but the blessed fact remained that at least it had been born.

The three hundredth anniversary of the first lawmaking body on the Western Hemisphere was celebrated in the House of Delegates, Richmond, Va., August 15, 1919, and addresses were made by Gov. Westmoreland Davis, Dr. John Leslie Hall, Dr. Thomas Nelson Page, and others.

There may be found also an address by Hon. William Wirt Henry on The First Legislative Assembly in America, in chapter XXI of the Annual Report of the American Historical Association for the year 1893.

Men now engaged in legislative processes and in preserving democracies may be interested in the record of this assembly.

I shall introduce in the next session of the Congress a resolution for the commemoration of this great event on its three hundred and twenty-fifth anniversary, July 30, 1944.

"Republican Claims to Congress Control Fool Nobody"

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SABATH. Mr. Speaker, for the last few days Republican newspapers with blaring headlines and Republican leaders with gleeful shouts have been broadcasting that President Roosevelt and the New Deal had lost control of the House, and that the Republican minority with the aid of reactionary Democrats allowed only such legislation to pass as was agreed upon in their unholy coalition.

The pages of the controlled Republican press and the statements of the excessively jubilant Republican leaders also are charging President Roosevelt and the New Deal with the appropriation of $13,000,000,000.

What an inconsistency! How can Roosevelt and the New Deal be charged with this appropriation if the combination of the Republican minority and "spite Roosevelt" Democrats control the House? Fortunately for the country, charges that President Roosevelt was responsible for this appropriation and Republican boasts that the House is under their control are both untrue.

It is true that the solid Republican vote, coupled with the vote of those Democrats who are trying to undermine President Roosevelt and the New Deal, was responsible for stopping passage of the Neutrality Act, this to the detriment

of the safety of our Nation. It is true that their vote defeated the lending bill, which was designed to aid business, industry, agriculture, and labor and which called for no appropriation of money. It is true that their vote defeated the housing bill, which would have been of great benefit to States, counties, and municipalities who had set up housing authorities to provide decent living quarters for its poorer citizens and to abolish slums and crime-infested areas.

The lending bill would have authorized the issuance of bonds to obtain a fund from which the Government could make loans to private business and industry. Such bonds would pay only 1⅜-percent interest. Loans would be made to private enterprises at an interest rate of 3 percent. Thus, instead of providing for an appropriation of money, the lending bill would have provided a profit for the Government—the same type of profit the Government now realizes from R. F. C. loan payments. Moreover, this bill would have provided private business and industry with much-needed capital that the banks refuse to provide in spite of the fact that National and State savings banks today have on deposit more than $52,000,000,000, a greater amount than any ever held on deposit in the history of these United States.

I am convinced that when the people of this country become familiarized with the real intent of the lending bill they will condemn rather than applaud the Republican-Democrat reactionary coalition that was responsible for its defeat.

Within the last year upward of 240 State and municipal authorities have been organized by legislation to eliminate slum areas and provide decent living quarters for more than 2,000,000 families. The housing bill was drafted to aid them in this work. It is also a bill that does not provide for an appropriation of money. Rather, it would have authorized our Federal Housing Authority to issue $800,000,000 in bonds—bonds which the bankers awaited with open arms. These bonds, let out at 1⅜-percent interest, would provide funds sufficient to make loans to the various housing authorities throughout the country at a rate of 3 percent. Loans, under the housing bill, would be given only after the authorities provided ample security.

The housing bill would have enabled States, counties, and cities to provide suitable living quarters at modest rentals to millions of people of our poorer class. It was advocated by all labor organizations in the United States, by the lumber, steel, and other building industries, and by every civic organization having at heart the interests of that underprivileged class of people who are sadly in need of healthful and comfortable housing facilities. The bill, in addition to satisfying this human necessity, did not appropriate a dollar. Moreover, its provisions assured the Government of a profit on its loans.

In view of these facts, it is not difficult for me to predict that those Republicans and reactionary Democrats will not long point with pride to their accomplishments. In days to come they will be put to task to explain their spiteful action, and their unwarranted opposition to this beneficial bill will plague them not only in the next campaign but for many successive years.

If we concede that the Republican-disgruntled Democrat coalition holds, as it boasts, control over the House, how can they possibly blame President Roosevelt and the New Deal for that enormous $13,300,000,000 appropriation? The people will come to know that this appropriation runs $300,000,000 greater than the appropriation recommended to Congress by President Roosevelt and the Budget Bureau. Is there not a remarkable streak of inconsistency in the gleeful shouts of these anti-Roosevelt legislators?

I do not envy these reactionaries their present hilarious jubilation. It will be terribly short-lived. The people will get on to these conniving and scheming gentlemen for, in the words of the founder of the Republican Party: "You can fool some of the people all of the time, and you can fool all of the people some of the time, but you can't fool all of the people all of the time." To my reactionary Democratic colleagues, I have often, on the floor of the House, given warning to "beware of Greeks bearing gifts," but their actions show that they paid no heed. They have persistently followed the futile policy of "cutting off their noses to spite their faces."

I deeply regret that there are 40 to 46 Democrats, elected on the Democratic ticket under the banner of President Roosevelt, who for personal reasons have, from time to time, gone far afield in their efforts to destroy the constructive, humanitarian program of President Roosevelt and the Democratic Party. In spite of their vicious attacks, our President's determination to aid the American people will never waver. He will continue to protect our Nation from those destructive forces which, in order to ease their burden of taxation, would like to unload the cost of Government on the shoulders of those least able to bear it—the working class.

In conclusion, I make this prediction: That regardless of what his enemies may say or do, President Roosevelt will retain not only the confidence but the love of the American people, and when 1940 comes the people will demand that he continue his great service for another 4 years.

The Economic Situation

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, August 5, 1939

STATEMENT BY HON. KENNETH McKELLAR, OF TENNESSEE

Mr. BARKLEY. Mr. President, in accordance with permission granted me on Saturday, August 5, 1939, on page 11126 of the RECORD to extend my remarks on data on the economic situation, I herewith offer for the Appendix of the RECORD a statement by Senator McKELLAR printed in the press of the country, as follows:

The Congress just closed, on the whole, has done a very excellent job and has aided the administration in bringing about greater confidence and stability in our economic situation.

We have given farm problems the greatest attention, and farm prices have been substantially maintained, except in one or two cases, and in some cases greatly improved. In our part of the country the most serious problem is the cotton surplus. By wise laws and careful administration this surplus is being reduced, and at the same time cotton prices have increased considerably within the last 6 months. On March 31, 1939, the Government had loans on between 11,000,000 and 12,000,000 bales of cotton. It is estimated at the present price of cotton the Government's holdings are worth $50,000,000 more than they were on March 31 of this year, and there is a much more active demand for cotton, all of which is encouraging. Our sales and barters of cotton abroad are increasing, and during the year we hope to reduce our tremendous surplus very substantially.

Our banking system is in good shape and our law guaranteeing bank deposits has worked admirably. Indeed, it is one of the outstanding accomplishments of the Roosevelt administration.

I have seen statements that we have appropriated some $14,000,000,000 at this session. Such statements are not true. The amount appropriated is just a little more than $12,000,000,000, and a great deal of that sum will not be spent during the year 1940.

It is true that our national debt has increased to some $40,000,000,000, but I see nothing alarming in that. Our bonds were never more valuable and never sold for a higher price. Both our bonds and our dollars are gilt-edged.

The indications are that our national income will be substantially increased this year and that our Government's income will be larger than the estimates. A survey of any good newspaper on any recent date will show a marked improvement in business throughout the country.

While it is true that during President Roosevelt's administration we have increased the national debt from about $21,000,000,000 to about $40,000,000,000, we certainly have a great deal to show for the increase. The national income has increased from $40,089,000,000 in 1932 to $63,993,000,000 in 1938, and this year it is estimated that our national income will amount to $67,000,000,000. One year's increase in national income is largely more than the increase in the national debt.

Besides that, during the 6½ years of the Roosevelt administration we have built up the Nation's roads to a marvelous degree; we have spent much for public buildings of every kind, nature, and description, including many schoolhouses and much-needed courthouses; we have built up a system of rural electrification that will greatly benefit the rural population of America; we have built marvelous parks for the proper recreation of the people; we have built up air transportation for the benefit of all the people; we have established a system of social security in this country for the benefit of the unemployed, for the benefit of the aged, for the benefit of the helpless, and for the benefit of all those who work for their daily bread. Only this year we have revised, amended, and made better these social-security laws. We have amended the Securities and Exchange laws, which laws have done so much to protect American investors. At this session of Congress we gave the President authority to consolidate Government bureaus and commissions, and we believe this will prove of benefit. We have built self-liquidating power dams all over the country, thereby reducing electric rates to the people.

Because of world conditions, we have been obliged to spend several billions more on our Army and our Navy than we otherwise would have spent; we have loaned millions of dollars to men and women all over the country for the improvement and the saving of their homes and farms; we have furnished the money with which to build great and needed dams throughout the country, notably in the Tennessee River Valley, in the Columbia River Valley, in the Colorado River Valley, and on numerous other watercourses in America. While requiring large initial outlays, all of these amounts will be paid back in full.

We have added to our criminal laws the better to protect our citizens from lawbreakers and racketeers.

We have tried our best in making our laws to put employers and employees on a surer and firmer foundation, providing for better and more stable wages and for retirement funds for the old age of workers.

Laws have been passed strengthening the R. F. C., and that organization has done a wonderful work in restoring business. It is one of the large successes of this administration. During this administration the R. F. C. profits have amounted to some $2,000,000,000, all of which belongs to the Government, and, of course, constitutes a credit on the $40,000,000,000 national debt that we owe.

During the Roosevelt administration we have spent $15,846,734,000 for relief to keep people from starving. The figures are as follows:

1933	$1,335,652,000
1934	2,379,098,000
1935	2,523,480,000
1936	3,254,195,000
1937	2,868,777,000
1938	3,485,532,000

To this amount must be added $1,477,000,000 for the present fiscal year, making a grand total of $17,323,734,000. It will be noted that the amount appropriated for the next fiscal year has been reduced to less than half last year's appropriations, and the expense of administering relief has been in like manner greatly reduced, and we believe that under the present system all needy persons will receive the help they need to get by with.

It is true that the present administration has increased the public debt, about $19,000,000,000 in round numbers, less R. F. C. profits of about $2,000,000,000, leaving a net increase of $17,000,000,000—and it is seen that approximately $17,000,000,000 has been spent for public relief. This money has been spent by the Congress; and although I have not examined the record votes, it is my recollection that a large majority of both Democrats and Republicans voted for all of these relief bills. Who will say that this money ought not to have been so used? The States did not have the money and the cities did not have the money to spend for this relief work. The Federal Government, therefore, was obliged to make the appropriations, and they have been made. For the most part, these moneys have been spent wisely and economically. Those who complain of the increase of the national debt are in the attitude of complaining of these appropriations for these purposes. My personal opinion is that we have gotten out of the mire in which we found ourselves in 1932 with marvelous skill and ability, and the amount appropriated for relief for the fiscal year 1939–40 is only about one-half of what it was in 1938, which shows that the long contest with the economic depression is on the wane.

In considering the increase of the national debt there is another item to be noted, and that is that the total debts of the States, counties, and municipalities amounted to $19,517,000,000 in 1932 and today they amount to $19,170,000,000. This is because the Federal Government has assumed so large a share of relief.

It is true that three pieces of legislation, greatly needed and all favored by the administration, were not approved by this Congress. One was the Neutrality Act, which should have been passed by all means. Our present neutrality law is indefensible and should be changed so that America can sell her goods abroad at any time to anyone and under any circumstances, provided only that the purchasers are able to pay for such goods. The cash-and-carry plan of our Secretary of State, Cordell Hull, as eloquently presented by him, is fine. The neutrality law which we now have is more likely to get us into war than it is to keep us out. I believe there will be a revision of this law at the next session of Congress.

Second, the amendment to the housing law was defeated, and this was a misfortune. It will certainly be passed at the next session of Congress.

Third, the lending bill, in proper form, should have been passed. It would have made our present up-turn in business much safer, and under the lending management of Mr. Jesse H. Jones it would not have cost the Government anything.

The truth is that the Roosevelt administration and the Congress have done a marvelous job for the American people. Our country is getting in better condition every day. Let us quit croaking and get to work. The only kind of prosperity worth having is that which you work for.

I note that our Republican friends are claiming that they have made great progress during this session of Congress toward finding an issue for 1940. I am afraid that all they have got is an exalted optimism and a desire for the offices. They have no issue in the increase of the public debt, because the public debt was increased solely and alone for relief purposes, and a majority of the Republicans in both Houses voted for every relief bill. I mention again that our increase in the national debt is some $17,000,000,000 plus, and our appropriations for relief almost the identical sum. The money was spent to keep the people from starving. Who is there base enough to deny relief to the starving? So that issue fades.

Their next complaint is about what are called New Deal measures. They cannot make an issue out of these complaints, because a large majority of them in both Houses voted for nearly every one of the New Deal measures. They voted for relief, as I have stated; they voted for the various aids to agriculture, including the Agricultural Adjustment Administration, the Surplus Commodity Act, the Seed Loan Acts, and the Commodity Credit Corporation Act; the Civilian Conservation Act; the Maritime Commission Act; the Public Works Act; the Works Progress Act; the National Youth Administration Act; for the Banking Act, especially the Federal Deposit Insurance Corporation Act was earnestly advocated by them and even by one of their leading candidates for the Presidency, Mr. VANDENBERG; they voted for the increases in the Army and the Navy, known as the National Defense Act; they voted for the Social Security Act and kindred acts; they voted for the Securities and Exchange Act; most of them voted for the N. R. A. and the National Bituminous Coal Commission Acts, which were declared unconstitutional; they voted for the Farm Tenancy Acts, the Parity Payment Act, and for every other Roosevelt administration act substantially, save the Court reform bill, which was not passed, but the objects of which were accomplished by public debate.

If ever there was a political party without an issue it is the Republican Party at this good hour. It is true that they said the W. P. A. should be turned over to the States, but they cannot make an issue out of that question, because they could not get anyone to believe the Federal Government should appropriate money and turn it over to the States to be administered. They also complain about particular instances of dishonesty in the administration of the W. P. A., and there have been particular instances of dishonesty in that organization; but the persons responsible have been tried, convicted, and punished. So that issue is out of the way.

They have not been able to find a single Teapot Dome, a single naval oil scandal, a single dishonest Cabinet member, and not even a Veterans' Bureau scandal. They have multitudes of complaints, but they have not found an issue in 7 years of Roosevelt's administration. They certainly can get no issue out of that administration. They will be obliged to get a candidate who has not been in Congress, for any candidate who has been in Congress any length of time has voted for the New Deal or administration measures.

As I stated before, all our Republican friends have in this next campaign is an exalted optimism and a real desire to get into office again. They have no issue; they only have complaints and claim to believe that they could have managed the country better during the last 7 years. They were in power 12 years from 1921 to 1933. They never passed a single measure for the benefit of the plain people of this country, and when the Democrats came in and passed all these measures they voted for them; and we all know that if, by any mischance, they could get into power again they never would repeal any of the laws now placed on the statute books by the Democrats, but would leave them just as they are.

Rural Electrification—Dedication of Four-County Power Association

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ADDRESS BY HON. JOHN E. RANKIN, OF MISSISSIPPI, AT STATE COLLEGE, MISS., ON AUGUST 4, 1937

Mr. RANKIN. Mr. Speaker, under the permission granted me to extend my remarks in the RECORD, I am inserting the

record of the proceedings of the celebration at the dedication of the Four-County Electric Power Association at State College, Miss., on Friday, August 4, 1939:

INTRODUCTION BY HON. W. G. ROBERDS

Mr. ROBERDS. Ladies and gentlemen, it is most appropriate that the principal address of this occasion should be delivered by the Honorable JOHN E. RANKIN, who so ably represents us in the halls of the National Congress, and who is more responsible than any other man alive for the construction of this great rural power project which we are here to dedicate.

Mr. RANKIN is known throughout the Nation as the father of rural electrification. He was co-author of the bill creating the Tennessee Valley Authority and has devoted his time and energies to bringing its benefits to the people of this section of the country, and especially to the people living in the rural districts.

He conceived the idea and visualized the possibilities, as well as the means, of furnishing electric current to the rural sections, especially of his own district. By his untiring efforts, his unswerving determination, his faithful devotion to the interests of his people, together with his great influence in Congress and with the administration, he has made this celebration possible. He secured loans through the R. E. A. and donations for labor by the W. P. A. for the construction of rural lines and made it possible for the farmers in these four counties to enjoy the benefits of cheap electricity from the Tennessee Valley Authority.

There have been many obstacles to overcome, and they have been overcome only by his help and leadership. It is but a statement of fact to say that but for him we would not be celebrating here this evening, and it is extremely doubtful whether the thousands of farmers served by these lines would have lived to see electric lights in their homes if it had not been for him and his untiring devotion to the cause. It gives me great pleasure to express to him the profound gratitude of everyone served by, as well as everyone connected with, this great cooperative electric power association, which was organized and is operated, not for profit, but for service to the people of these four counties.

Ladies and gentlemen, I take great pleasure in presenting to you the Honorable JOHN E. RANKIN, Member of Congress from this district.

Mr. RANKIN. Ladies and gentlemen, I first want to thank my distinguished friend, Judge Roberds, for his generous words, and in turn to commend him for the splendid work he has done, and the great service he has rendered the people of this district, by his diligent efforts in behalf of this Four-County Power Association. I know of no man who has worked harder, or who has given more liberally of his time and his energies, to help make this project a success, or who has rendered greater assistance generally in bringing the blessings of cheap electricity to you people than he has. You owe Billy Roberds a lasting debt of gratitude for his services in this cause.

I also want to thank the members of the board of directors for their unselfish services in this cause, L. L. Martin, of Macon; W. G. Evans and Eugene Hardy, of Columbus; Henry M. Ivy, of West Point; and R. L. Carpenter, of Crawford. These men are also entitled to your everlasting gratitude for the great work they have done in helping to make possible this celebration, and enabling you and your children to enjoy the benefits of T. V. A. power at T. V. A. rates.

For my part, it is impossible for me to adequately express my feelings on this occasion. This is one of the proudest moments of my life. I am seeing one of my major dreams come true. This celebration marks the culmination of a battle I have waged for years to secure cheap electricity for the people I represent, and to get it extended to the farmers and others living in the rural districts.

This is a turning point in the history of this section of Mississippi, and especially of these four counties—Clay, Lowndes, Oktibbeha, and Noxubee. For them it is the beginning of a new era in our civilization. Today they are moving forward into the electric age, in which they are destined to enjoy blessings, comforts, and conveniences of which they had scarcely dreamed a few years ago.

Consumers in every one of the 10 counties in this district are now getting T. V. A. power at the T. V. A. yardstick rates. Every county in the district now has a rural electrification program that supplies electricity to the farmers' homes, bringing to them all the comforts and conveniences that city life affords, without the noise, municipal taxes, and other draw-backs and disadvantages of the large congested centers.

In a few days the facilities now owned by the private power company in these four counties will be purchased and the people served by them will have their rates reduced to the T. V. A. yardstick levels. This will be the first congressional district in the United States to have every human being that turns an electric switch securing power at the T. V. A. rates and having it delivered to the farmers in the rural districts at those rates. It is true that we have not reached every farm home yet, but we are on our way, and expect to reach everyone who wants it in the course of time.

When I first went to Congress I visited Muscle Shoals and made an investigation of the probable benefits to be derived from that great project. I found there a wealth of electric energy richer than the diamond mines of Golconda, more valuable than any oil field or any gold mine in the world. On investigation I found that every human being in the district I represented lived within transmission distance of that dam and was entitled to his pro rata share of the electric energy to be produced. I immediately joined Senator NORRIS in his struggle to create the Tennessee Valley Authority. He introduced in the Senate and I introduced in the House the bill that finally became a law, creating the T. V. A. and under which it now operates.

One of the hardest fights of my congressional career was to keep that measure from being sent to an unfriendly conference that would have wrecked it. I had it held back until we secured an agreement that the provisions of what has become known as the Norris-Rankin bill should be retained.

In this connection I want to pay my tribute to Senator NORRIS, my coworker in this cause, the great leader for the T. V. A. in the United States Senate. He is one of the best friends the toiling masses of this country ever had. In helping to create and develop the T. V. A. he has rendered a service to mankind that will forever endear him to the consumers of electric lights and power in every State in the Union.

In his devotion to this cause he has stood as—

"Constant as the northern star,
Of whose true fix'd and resting quality
There is no fellow in the firmament."

I also want to acknowledge our debt of gratitude to our great President, Franklin D. Roosevelt, without whose support and assistance, the blessings of cheap electricity which the T. V. A. provides would not have been secured for the people of this area, at least during this generation. When the history of these trying years is written, and the other great questions that now agitate the public mind shall have been forgotten, the T. V. A. will stand as a lasting monument to his administration, and will take his name down the centuries for his services to humanity in fostering this, one of the greatest developments of ancient or modern times.

As I have said before, electricity is the lifeblood of an advancing civilization. The cheaper the rates, the more freely it flows, and the more freely it flows the greater are its benefits to mankind.

It is the greatest servant the human race has ever known, and the only one men or women of ordinary means can afford, and they can afford it only when it is supplied to them at reasonable rates. For a small outlay, under the T. V. A. rates, one can light his home, his barn, his garage, and other outhouses, run his radio, operate the fan, the electric iron, the water pump, the refrigerator, and the electric range, and then, if necessary, heat the home and do a hundred other things all at the same time—work that would require the employment of dozens of human beings to perform.

Electricity, or at least the use of electricity, is something new in this world. It is one of the greatest gifts of God to man, and yet it took thousands of years to induce man to accept it. Throughout uncounted centuries Almighty God wrote His name in the lightning's flash across the face of the storm cloud as a challenge or an invitation to mankind to harness and use the greatest wealth of energy the world has ever known.

A little more than 50 years ago Thomas A. Edison, the greatest inventive genius of all time, inserted a loop of wire into a vacuum tube and generated into it an electric current, thereby creating the first electric light, the first incandescent lamp. By that one achievement he did more to change the course of civilization than has any other man who ever lived in all the tide of time. He not only gave us the light with which to illuminate our halls, our homes, our streets, and our parks, but he gave us the spark that fires the gas to drive the motor machine. He made possible the automobile, the radio, the X-ray, the airplane, the submarine, and all that other great wealth of electrical machinery and appliances with which we conduct the various enterprises of this modern age.

It is impossible to estimate the debt we owe him. Men of genius scale new heights and blaze the way for new and greater accomplishments. Among the great men of genius whose names adorn and enrich the pages of history, and who have contributed most to the advancement of the human race, none will shine brighter or live longer than that of Thomas A. Edison. Rising like a huge mountain above the undulating mass of humanity his immortal figure will stand in glorified silhouette against the horizon of time, sending its radiance down the centuries to come, to be a guide and inspiration to toiling men and women of future centuries who struggle to emulate his lofty example throughout the ages yet to come.

I am proud of the part I have played in the creation and promotion of the Tennessee Valley Authority. Measured in terms of its benefits to mankind, it is perhaps the greatest development of ancient or modern times.

The T. V. A., along with the other power policies of this administration, has already reduced light and power rates to the ultimate consumers of the Nation $625,000,000 a year. Mississippi's part of that annual saving is $3,730,000; and still the people of the State are overcharged $5,396,800 a year. Unless the present rate is reduced in other sections of the State, they will be overcharged next year more than $4,000,000; but I am happy to announce that not $1 of that overcharge will be paid by the people of the First Congressional District which I have the honor to represent.

We will all be getting our electricity at the T. V. A. rates, and if the people in the southern and western parts of the State want

their rates reduced to the T. V. A. levels, it can be done. The power companies can reduce their rates to the T. V. A. levels in every community in Mississippi and continue to make a reasonable return on their legitimate investments.

This, in my opinion, is the greatest economic blessing that has ever come to the people of this section. It is one that will be here for all time to come, or as long as the Tennessee River bears its tributes to the sea. Our present contracts last for 20 years, and by the time those 20 years shall have passed away, an aroused public opinion throughout the Nation will have forced light and power rates to the T. V. A. levels, or lower, in every nook and corner of the United States.

As I said, this is a new civilization—the electric age—into which we are now moving, and in which we are to witness an electrified America. It is indeed worth something to live in this age and to see the dawn of this new era. It is worth a great deal more to me, as a public servant, to have witnessed the dawning of this new day and to realize that I have played a humble part in bringing this condition about. But to see its first light break over the district I represent, and its first benefits come to the people who have honored me with their suffrage, and to whom I owe my first and highest duty, brings a degree of satisfaction that I dare say has come to few public men on this earth.

During the years in which I struggled, along with Senator NORRIS, for the creation of the T. V. A., and during the succeeding years that I have fought to have these power lines extended throughout this area I have been conscious of an abiding conviction that no service I could ever render to the people of this district would be worth so much to them as that of bringing this cheap electricity to every home and to every business establishment in these 10 counties.

I have been called the "father of rural electrification." Whether I am entitled to that designation or not, I don't think I am assuming too much when I say that I originated the present rural electrification program that is now spreading rural power lines to the farmers in every State.

Shortly after the T. V. A. was created, I called a meeting of the farmers of Lee County and organized a country-wide rural electrification association. I then proceeded to perfect similar organizations in each of the other nine counties in the district. We then went to the State legislature and got a law passed permitting these associations to incorporate as nonprofit enterprises, for the purpose of purchasing power at wholesale from the T. V. A. and distributing it to the farmers and other people living in the rural sections. Every county in the district has a separate association, with the exception of Lee and Itawamba which are combined into the Tombigbee Association, and this four-county association comprising the counties of Clay, Lowndes, Oktibbeha, and Noxubee.

This movement soon spread to the rest of the Nation and today constitutes the basis of the program of our national rural electrification program.

Two years ago I secured an amendment to a pending bill giving us the right to employ W. P. A. labor in order to cut down the expenses of the construction of rural power lines throughout the Nation. I also secured the adoption of an amendment providing $100,000,000 of loans for the construction of rural power lines in every State in the Union, and I have exerted every influence of which I was capable to see that you people received your pro rata share of those benefits. I have succeeded beyond my fondest expectations. My cup is running over. I am here today to rejoice with you and to celebrate this great event that, as I said, marks the greatest turning point in the history of this section of Mississippi.

Nor have I been selfish or played the part of the dog in the manger in my attempts to secure for all the American people the benefits of cheap electricity. Members of the House who agree with me on this subject elected me chairman of what we call the power bloc in the House, and in that position I have labored diligently to assist the people, and especially the farmers, in every section of the country to secure electricity at rates based upon the cost of generation, transmission, and distribution.

In doing so we are not interfering with private business, as many of our adversaries contend, for the simple reason that this is a public business and not a private enterprise. Electricity is a necessity of life, and the power business is necessarily a monopoly. It would be futile for a half dozen companies to serve electricity to the same community, for the simple reason that it would make the cost prohibitive. Therefore, electricity must be handled by a monopoly, and any monopoly of a necessity of life is necessarily a public and not a private business. Instead of the Government, or a municipality, or the cooperative power associations competing with private enterprises in a private business, private enterprises are engaging in a public business and have been demanding a monopoly in order that they might impose upon the helpless consumers of electricity the highest rates the traffic will bear.

In some sections of the country it is charged that we are able to use cheap electricity throughout this section only because of the Government's subsidizing the T. V. A. That charge is utterly false. If the T. V. A. can sell 60 percent of its power load at the present wholesale rates it can amortize and pay for the entire investment in 25 years, together with the interest and all the overhead expenses.

But they tell us that water power is so much cheaper than power produced with coal, gas, or oil, that it is driving the coal industry out of business. That statement is untrue. Electricity can be produced with coal in the coal-producing States at from 2 to 4 mills a kilowatt-hour, or at a lower rate than that at which the municipalities and cooperative associations are buying power wholesale from the T. V. A. It can be produced, and is being produced, by oil or natural gas, for less than 2 mills a kilowatt-hour in the oil and gas fields of Louisiana, Texas, Arkansas, and Oklahoma. That power, whether produced by oil, gas, or coal, could be distributed to the ultimate consumers in every State in this Union at the T. V. A. rates, with a reasonable profit and without loss to legitimate investors; and it will be so distributed whenever the people in every State rise up and demand it.

We have reduced rates in this district alone approximately $2,000,000 a year. If the people throughout the district during the coming year had to pay the rates they were paying 6 years ago, before the T. V. A. was created, and its yardstick rates published to the world, the consumers in these 10 counties alone would pay an annual overcharge amounting to more than $2,000,000. At 10 cents a pound, that would equal 40,000 bales of cotton, or an average of 4,000 bales to the county, that you people would be required to pay in tribute to the power interests each year if you used the same amount of electricity you are now using and paid the rates private interests were charging you 6 years ago, when the private power companies were buying this same power at Muscle Shoals for 2 mills a kilowatt-hour wholesale, or for less than one-half of the wholesale rate now charged by the T. V. A.

Six years ago 50 kilowatt-hours of electricity a month cost a residential consumer in this district $4.60; it now costs him $1.50. Six years ago 100 kilowatt-hours a month cost $8.60; it now costs $2.50. At that time 1,000 kilowatt-hours a month cost $66.10; it now costs $8.90. This will give you an idea of what these reductions in rates mean. The T. V. A. rates are not too low; if anything they are too high, and will be reduced as time goes on and the load increases. One cent a kilowatt-hour for the first 100 kilowatt-hours a month is added in the rural sections to amortize the lines. No taxes will be imposed for that purpose.

It is impossible to estimate the great benefits this will bring to the people of this area, and especially to the farmers, the people living in the rural districts. It will not only light their homes, their halls, their barns, and their outhouses, but it will enable them to use the radio that will bring into their homes the finest music and the best entertainment as well as the news of the world. It will enable them to use the electric iron and the washing machine, as well as the water pump, to lift from the shoulders of the farmer and his family those great burdens of drudgery under which they have struggled throughout the centuries. It will also bring to them the refrigerator to afford comforts and economies surpassing anything they have yet known. It will add to the conveniences and to the profits of every business enterprise, even in the remotest rural district. It will make farm life more profitable, more pleasant, more attractive, and will increase the value of every acre of farm land. It will stimulate our program of agricultural diversification and help to some day make this one of the greatest dairy and poultry districts in the world.

It has put this district out in front as the leader in this onward march of modern progress and will take it on down to future generations, as Henry Grady once said, holding high the torch, and making light the way up which all other sections of the world must come in God's appointed time.

The United States Government Housing Program Absolutely Necessary and Must Be Continued

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BUCKLEY. Mr. Speaker, since the House denied to us the opportunity to debate and vote upon the housing bill, I wish to state why I voted to adopt the rule and my views on this most important subject.

The Public Works Administration was the first agency that initiated the movement of slum clearance, substituting therefor model apartments for the use of the underprivileged. In 1937 Congress passed the United States Housing Act. The present bill was to extend that act in order to bring the benefits to a greater number of people.

We representatives who come from the cities know too well the seriousness of the housing problem. We know that for too long nothing was done to help the plight of the millions who live in slums; not until 1937 was a start in that direction made. When Congress passed the United States Housing Act new hope was given to the slum dweller and the low-income worker, and why we now wish to change our minds is beyond human understanding.

In the large cities of the United States, such as Chicago, New York, Philadelphia, Boston, Baltimore, Pittsburgh, New Orleans, and many others, a great proportion of the houses, the so-called tenements, had, because of their extreme age, become dilapidated and unfit for human occupancy. Due to the lack of better quarters these people with low incomes have necessarily remained in these buildings, which were not equipped with proper plumbing, lighting, toilets, or bathroom facilities. They swelter in the summer and freeze in the winter. The Housing Act changed these conditions and gave some of these people an opportunity to live in better buildings with proper light and air, landscaped with trees and plants, so that their outlook in life is a better and happier one.

Other countries have years before realized that such a problem must be remedied, and we note that England, Wales, Switzerland, Sweden, Denmark, Holland, and Norway embarked upon government housing, as a result of which many benefits were extended to their people.

We know that slums are in a great way responsible for crime; we know that slums are in a great way responsible for juvenile delinquency; we know that slums are in a great way responsible for disease; we know that slums are in a great way responsible for loss of life caused by fire hazards; we know that slums are in a great way responsible for impairment of civic morale. Yet why are some opposed to so meritorious a measure?

The $800,000,000 was to be lent to States, counties, and municipalities for the purpose of providing and constructing housing facilities for the poor people of this Nation. This would eliminate slum areas. The bill provided $200,000,000 for rural housing. However, the measure would have actually cost the Government little in comparison with the great benefits we would derive. The money was to be lent to the housing authorities, the security for such loans being the housing projects themselves. I am informed that the bonds now being issued for projects now under construction are in great demand by the banks. I am sure that the new bonds would have been taken up at favorable rates to the Government. The Government would have obtained the money needed for the loans at an average cost of 1⅜ percent and disbursed it at 3 percent, leaving a wide margin for maintenance and operation.

Not alone would the passage of this bill have provided decent homes for approximately 2,000,000 slum dwellers, but also of great importance it would have provided employment for nearly 500,000 workers. What a stimulus to business! I am a builder and know that there is nothing so effective in improving business conditions as an active construction and building industry. The railroads, the factories, the quarries, the mines, the mills, the professional workers, of course, all trades, including the bricklayers, the plasterers, the stone masons, the lathers, the carpenters, the plumbers, the steamfitters, the concrete workers, the painters, the electricians, and, of course, those in the haulage business, comprising chauffeurs, teamsters, and helpers and many others, would gain by such a plan. All labor organizations were solidly behind the enactment of the bill. Many commercial and farm organizations endorsed its worthiness.

Twenty-eight States have passed enabling legislation; 350 local agencies have been organized; a tremendous start has been made and is now being stopgapped.

I repeat, good public housing is beneficial, not alone to the slum dweller but to the taxpayers, for it reduces the cost of fire protection; it reduces the cost of police protection; it reduces the cost of hospitalization; it reduces the cost of maintaining the social service, courts, reformatories, and penal institutions; it reduces the cost of relief, for workers have opportunities to obtain jobs and use their skill.

Although the work of those in favor of housing has been temporarily impeded, I am sure that this legislation will and must come before this House at the opening of the next session of Congress, and that we will pass it. We must go forward to better housing for the finest Nation in the world.

Résumé of Laws Pertaining to Veterans' Benefits Enacted in the Seventy-Sixth Congress, First Session

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VAN ZANDT. Mr. Speaker, during this session of the Seventy-sixth Congress both Houses have been deeply concerned with the welfare of those who served their country in times of war.

For the information of my colleagues and my many veteran friends throughout the United States, I am inserting herewith a résumé of the laws pertaining to veterans' benefits enacted at this session as well as a list of bills affecting veterans which were vetoed by President Roosevelt.

Public, No. 18, Seventy-sixth Congress, April 3, 1939:

Section 5 of this act which provides for the national defense contains authority for the President to order Reserve officers for active duty with the Regular Army. The act contains certain conditions and limitations pertaining thereto and includes the following proviso:

Provided further, That all officers, warrant officers, and enlisted men of the Army of the United States, other than the officers and enlisted men of the Regular Army, if called or ordered into the active military service by the Federal Government for extended military service in excess of 30 days, and who suffer disability or death in line of duty from disease or injury while so employed shall be deemed to have been in the active military service during such period and shall be in all respects entitled to receive the same pensions, compensation, retirement pay, and hospital benefits as are now or may hereafter be provided by law or regulation for officers and enlisted men of corresponding grades and length of service of the Regular Army.

By Executive Order No. 8099, dated April 28, 1939, the President determined that the Veterans' Administration would award the retired cases upon certifications of eligibility secured from the War Department in each individual case.

Public, No. 62, Seventy-sixth Congress, May 3, 1939:

This act provides domiciliary care, medical and hospital treatment, and burial benefits, under section 6 of Public, No. 2, Seventy-third Congress, as amended, and section 17 of Public, No. 2, Seventy-third Congress, for veterans of the War with Spain, including the Boxer Rebellion, and Philippine Insurrection, who entered the active service after August 12, 1898, and who did not participate in the Philippine Insurrection or Boxer Rebellion, or leave the continental limits of the United States for service in Guam, Cuba, or Puerto Rico.

Prior to the enactment of this act, these veterans, although they had their service pensions restored to them under Public Law No. 269, Seventy-fourth Congress, August 13, 1935, were not entitled to hospitalization, domiciliary care, or burial benefits under Public, No. 2, Seventy-third Congress, March 20, 1933, and the Veterans' Regulations promulgated thereunder.

Public, No. 109, Seventy-sixth Congress, June 2, 1939:

This act provides for payment not to exceed $50 for the transfusion of blood by members and former members of the Military Establishment, and by employees of the United States Government.

Prior to the enactment of this act the Veterans' Administration was precluded from making payment to non-military employees who donated blood for transfusion for veterans hospitalized in Veterans' Administration facilities by reason of the limitation imposed by section 1765, Revised Statutes, which provides that—

No officer in any branch of the public service, or any other person whose salary, pay, or emoluments are fixed by law or regulations, shall receive any additional pay, extra allowance, or compensation, in any form whatever, for the disbursement of

public money, or for any other service or duty whatever, unless the same is authorized by law, and the appropriation therefor explicitly states that it is for such additional pay, extra allowance, or compensation.

The act of February 9, 1927, was enacted in order to remove the prohibition against the payment of extra compensation to any member or former member of the Military Establishment who furnishes blood for transfusion to a member or former member of the Military Establishment. Public, No. 109, extends the authority of the above act so as to include all Government employees, civilian as well as military.

Public, No. 129, Seventy-sixth Congress, June 13, 1939:

This act authorizes commissioning aviation cadets in the Naval and Marine Corps Reserves upon completion of training, and provides in section 7 as follows:

Government life insurance issued in accordance with section 5 of the act of April 15, 1935 (34 U. S. C. 846), shall continue when an aviation cadet is commissioned pursuant to this act; the premiums thereon shall be deducted from the pay of the officers concerned and paid by the Secretary of the Navy to the Administrator of Veterans' Affairs. When released from active duty or discharged they shall have the option of continuing such insurance at their own expense.

Section 5 of the act of April 15, 1935, provided for the issuance to aviation cadets during their period of active duty, Government life insurance in the amount of $10,000, the premiums to be paid out of current appropriations of the Navy Department. Following the commissioning of these cadets, such insurance shall continue under the provisions of Public Law No. 129, supra, but the premiums are to be deducted from the pay of the officers concerned.

Public, No. 146, Seventy-sixth Congress, June 21, 1939:

Entitled "An act to extend further time for naturalization to alien veterans of the World War under the act approved May 25, 1932 (47 Stat. 165), to extend the same privileges to certain veterans of countries allied with the United States during the World War, and for other purposes," amended the act of May 25, 1932, as amended, extending from May 25, 1938, to May 25, 1940, the privilege heretofore granted aliens who fought in the allied armies during the World War to become citizens of this country. The prior act also provided that he must prove good moral character for 2 years immediately preceding the date of his petition. Public, No. 146, changes the period to 5 years.

Public Resolution No. 24, Seventy-sixth Congress, June 30, 1939:

This resolution making appropriations for work relief and relief for the fiscal year ending June 30, 1940, provides in section 7 (a) that the funds appropriated therein, together with the balance of funds heretofore appropriated or allocated to the United States Employees' Compensation Commission under the Emergency Relief Appropriation Act of 1938, or prior emergency relief appropriation acts, shall be available for payment to Federal agencies for medical and hospital services supplied by Federal departments and establishments in accordance with the regulation of the Commission for injured persons entitled to benefits under the laws administered by the United States Employees' Compensation Commission as provided in section 24 of the Relief Act. Section 24 reads as follows:

The provisions of the act of February 15, 1934 (48 Stat. 351), as amended, relating to disability or death compensation and benefits shall apply to persons (except administrative employees qualifying as civil employees of the United States) receiving compensation from the appropriations in this joint resolution for services rendered as employees of the United States: *Provided*, That this section shall not apply in any case coming within the purview of the workmen's compensation law of any State, Territory, or possession, or in which the claimant has received or is entitled to receive similar benefits for injury or death.

Section 16 (a) provides that preference shall be determined as far as practicable on the basis of relative needs, and shall, where relative needs are found to be the same, be given first to veterans of the World War and Spanish-American War, and veterans of any campaign or expedition in which the United States has been engaged—as determined on the basis of the laws administered by the Veterans' Administration—who are in need and are American citizens.

Subparagraph (b) provides for the removal, under certain conditions, from employment of Work Projects Administration projects all relief workers, except veterans, who have been continuously employed on such projects for more than 18 months.

Section 23 gives preference to soldiers, sailors, and marines and the widows of such, or the wives of injured soldiers, sailors, and marines who themselves are not qualified but whose wives are qualified to hold a position in the Government service, for retention in the Federal service in the District of Columbia, where their ratings are "good" or better.

Public, No. 166, Seventy-sixth Congress, July 11, 1939:

This act amended paragraph I, of Veterans Regulation No. 9 (a), as amended, governing the furnishing of a flag for burial purposes and after burial to be given to the next of kin of the veteran. Prior to the enactment of this act, flags could be furnished only where an honorably discharged veteran of any war died after discharge. Under this act flags may also be furnished in the case of honorably discharged veterans of the Army, Navy, Marine Corps, or Coast Guard who die after discharge, provided they completed at least one enlistment or were discharged for disability incurred in line of duty.

Public, No. 179, Seventy-sixth Congress, July 15, 1939:

This act extends the benefits of the United States Employees' Compensation Act to members of the Officers' Reserve Corps and of the Enlisted Reserve Corps of the Army who are physically injured in line of duty while performing active duty or engaged in authorized training, or die as the result of such injury.

Public, No. 196, Seventy-sixth Congress, July 19, 1939:

This act restores certain benefits to World War veterans suffering with paralysis, paresis, or blindness, or who are helpless or bedridden.

With certain limitations, this act restored to the compensation rolls those World War veterans on the rolls March 19, 1933, under that part of section 200, World War Veterans' Act, 1924, as amended, which provides as follows:

No person suffering from paralysis, paresis, or blindness shall be denied compensation by reason of willful misconduct, nor shall any person who is helpless or bedridden as a result of any disability be denied compensation by reason of willful misconduct.

The act further provides death compensation for widows and children of such veterans who die or have died from disease or injury, service connection of which is or would have been established under the provisions of this act. These benefits are payable under Public Law No. 484, Seventy-third Congress, June 28, 1934, as amended, which act provides compensation at rates somewhat lower than war-service-connected death rates where the veteran at time of death was suffering from World War service-connected disability.

The service-connected blind cases on the rolls March 19, 1933, were restored to the rolls by section 26 of Public Law No. 141, March 28, 1934.

The limitations heretofore referred to are: (1) The act restores only those veterans who were on the rolls March 19, 1933, and who entered the service prior to November 12, 1918, or, as to Russian service, before April 2, 1920; (2) the presumptively service-connected cases do not have the full amount of compensation restored, but same must be reduced by 25 percent under the provisions of sections 27 and 28 of Public Law No. 141, Seventy-third Congress; (3) by making the restoration subject to sections 27 and 28 of Public Law No. 141, Seventy-third Congress; cases of fraud, misrepresentation of a material fact, or unmistakable error as to conclusions of fact or law are excluded and the act does not apply to persons as to whom clear and unmistakable evidence discloses that the disease, injury, or disability had inception before or after the period of active military or naval service, unless such injury, disease, or disability is shown to have been aggravated during such service; and in any review

of the case of any veteran to whom compensation was being paid on March 19, 1933, for such service-connected disability reasonable doubts shall be resolved in favor of the veteran, the burden of proof being on the Government.

Payments to veterans restored to the rolls under the provisions of the act are effective the date of enactment of the act and payments to widows and children are effective from the date of enactment or date of filing claim therefor, whichever is the later.

Public, No. 198, Seventy-sixth Congress, July 19, 1939:

This act provides certain benefits for World War veterans and their dependents.

Section 1 of this act amends section 1 of Public Law No. 484, Seventy-third Congress, June 28, 1934, and pertains to payment of compensation to dependents of deceased World War veterans where the veteran's death is not shown to have been due to service.

Section 1 liberalizes the existing laws in those cases where the veteran was honorably discharged after having served 90 days or more, or having served less than 90 days, was discharged for disability incurred in service in line of duty, so that compensation is payable if at the time of the veteran's death he had a disability directly or presumptively incurred in or aggravated by service in the World War for which compensation would be payable if the disability were 10 percent or more in degree. In other words, in those cases where the veteran had 90 days' honorable service or was discharged for disability incurred in service in line of duty it will not be necessary that we have a service-connected disability 10 percent or more disabling, but he must have a disability for which compensation would be payable if 10 percent or more in degree.

This section establishes a new income limitation providing that payment of compensation shall not be made to any widow without child or a child whose annual income exceeds $1,000, or to a widow with a child or children whose annual income exceeds $2,500 and exempts payments of war risk term insurance, United States Government life (converted) insurance and adjusted compensation from consideration as income. This income limitation is similar to that employed under existing law for nonservice-connected benefits under Veterans' Regulations No. 1 (a), as amended, part III. This new income limitation is substituted for the preexisting limitation of requirement for exemption from payment of a Federal income tax.

This section provides for payment of benefits of sections 1 to 3, inclusive, from the date of death where application is filed within 1 year thereafter and in other cases from the date of application, except that compensation authorized cannot be effective prior to the date of enactment.

Section 2 of the act provides for increased rates of death compensation to widows under Public Law No. 484, Seventy-third Congress, as amended. The prior rate to widow alone was $22 per month and the rate to widow with one child was $30. Section 2 provides a rate of $30 per month for a widow but no child, and $38 per month for a widow with one child. No change was made in the rates for children. The total compensation limitation was changed from $56 to $64 in view of the increase for widows.

Section 3 of the act made formal changes in section 4 of Public Law No. 484, Seventy-third Congress, so as to conform with the amendments made by the act.

Section 4 of the act provides hospitalization and domiciliary care in Veterans' Administration facilities for retired officers and enlisted men of the Army, Navy, Marine Corps, and Coast Guard who served honorably during a war period as recognized by the Veterans' Administration, on a parity with other war veterans.

Under Veterans' Regulation No. 6 (c), paragraph 1 (f), in effect prior to date of enactment of this act, hospital treatment of retired officers and enlisted men was granted providing that part of the retired person's service was in wartime. That treatment was provided only in facilities under direct and exclusive jurisdiction of the Veterans' Administration and with due regard to available beds. A per diem rate was charged to such patients for treatment of tuberculosis—officers, $1.50; enlisted men, $1; general medical and surgical disorders or psychoses—officers, $1; enlisted men, 65 cents.

Retired officers or enlisted men, except emergency officers of the World War, while being furnished hospital treatment were not formerly subject to reduction of retirement pay as provided by paragraph VI (A) of Veterans' Regulation No. 6 series, which provides in effect that where any disabled veteran who has neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, pension, compensation, or emergency officers' retirement pay shall not exceed $15 and the amount payable to such disabled veterans entitled to pension for disability, nonservice connected, shall not exceed $6. Section 4 of the act makes the retired pay subject to the reductions heretofore explained under Veterans' Regulation No. 6 (c), paragraph VI (A).

Section 5 of the act provides increases of death compensation to the widows of veterans whose death was due to World War service. The prior rate of $30 per month for a widow under 50 years of age was increased to $38 per month. The prior rate of $37.50 for widows, aged 50 to 65 years, was eliminated and those widows became entitled to $45 per month on a parity with widows, age 65 years or over. These increases are subject to the limitation contained in Public Law No. 304, Seventy-fifth Congress, that they cannot be paid in the event the monthly payment of compensation under Veterans' Regulation No. 1 (g), and the monthly payment of yearly renewable term insurance or automatic insurance aggregates or exceeds the amount of compensation authorized by the act. United States Government life (converted) insurance has been eliminated from the limitation. It is to be noted that there is no change made in the rates for children or dependent parents, although by the removal of the United States Government life (converted) insurance limitation it is possible that some will become entitled to increased rates who were formerly barred.

Section 6 of the act contains an amendment to Veterans' Regulation No. 1 (a), as amended, part I, paragraph II (k), which formerly provided that if a disabled person as the result of service-incurred disability had suffered the anatomical loss or the loss of the use of only one foot, or one hand, or one eye, the rate of pension would be increased by $25 per month. This section of the act increases the additional compensation from $25 to $35 per month. This provision applies to World War and Spanish-American War, including the Boxer Rebellion and Philippine Insurrection service-connected cases. It also includes those Regular Establishment cases where the disability resulted from an injury received in line of duty in actual combat in a military expedition or military occupation.

Section 7 of the act provides that on and after the date of enactment, the rate of interest charged on any loan secured by a lien on United States Government life—converted—insurance shall not exceed 5 percent per annum. Under section 301 of the World War Veterans' Act, 1924, as amended, loan privileges under United States Government life-insurance policies are provided for, but the law does not provide for any specific rate of interest to be charged on any loan secured by a lien on such insurance. The determination of this rate is, therefore, made by the Administrator of Veterans' Affairs. Up to the passage of section 7 of this act, the rate of interest on such loans was always 6 percent per annum.

Public, No. 213, Seventy-sixth Congress, July 25, 1939:

This act amends section 5 of the act of April 3, 1939 (Public, No. 18, 76th Cong.), as follows:

That section 5 of the act approved April 3, 1939 (Public, No. 18, 76th Cong.), is hereby amended by inserting after the comma in

line 5 of the final proviso of that section the expression "other than for service with the Civilian Conservation Corps."

This act excludes Reserve officers of the Army on duty with the C. C. C. from the provisions of section 5 of the act approved April 3, 1939, which grants to personnel of the Army of the United States—other than Regular personnel—on extended active duty under an order or call for periods in excess of 30 days and who suffer death or disability from sickness or injury in line of duty, the right to receive the same pensions, compensation, retirement pay, and hospitalization as is now or may hereafter be provided for personnel of the Regular Army of the same grade and length of service. This act carries out the recommendation of the President made in message of April 20, 1939, to the Congress.

Public, No. 250, Seventy-sixth Congress, August 1, 1939: This act increases the amount of Federal aid to State or Territorial homes for the support of disabled soldiers and sailors of the United States from $120 per annum, as contained in the act of August 27, 1888, as amended, to $240 per annum. It further includes hospitalized cases and provides for payment from date of determination of eligibility by the Veterans' Administration.

Public, No. 257, Seventy-sixth Congress, August 4, 1939: This act provides pensions to members of the Regular Army, Navy, Marine Corps, and Coast Guard, based upon such service after April 21, 1898, who become disabled by reason of their service therein, other than during a period of war, at rates equivalent to 75 percent of the compensation or pension payable to war veterans for similar service-connected disability under veterans' regulations promulgated by the President under Public, No. 2, Seventy-third Congress, March 20, 1933.

The rates under prior laws for this group ranged from $6 per month for 10-percent disability to $45 per month for total disability, with higher rates for certain specific disabilities up to $125 per month. This act increases the rates to from $7.50 per month for a 10-percent disability to $75 per month for total disability, with higher rates for certain specific disabilities up to $187.50 per month.

Public, No. 279, Seventy-sixth Congress, August 5, 1939: This act provides that awards of death pension shall be effective as of the date of death of a veteran of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, if claim is filed within 1 year after the death of such veteran.

This act establishes a uniform effective date for death pension awards for the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection, and the provisions thereof are similar to those contained in section 6 of Public, No. 304, Seventy-fifth Congress, August 16, 1937, pertaining to effective dates of awards of death compensation benefits to dependents of World War veterans.

Public, No. 326, Seventy-sixth Congress, August 7, 1939:

This act amended the act entitled "An act to establish a Civilian Conservation Corps, and for other purposes," approved June 28, 1937, as amended.

The first section of this act amended section 1 of the foregoing act so as to authorize continuance of its provisions to July 1, 1943, instead of July 1, 1940, as previously provided.

Section 2 of the act made provisions for an official seal to be designated by the Director for the corps, which shall be judicially noticed and which shall be preserved in the custoday of the Director.

Public, No. 359, Seventy-sixth Congress, August 9, 1939:

This act provides for insanity proceedings in the District of Columbia. Section 6 of the act provides for commitment by the District Court of the United States for the District of Columbia of the insane person to the custody of the Veterans' Administration for care and treatment in a Veterans' Administration facility, if there has been filed with the court or the commission on mental health, acting under the direction of the court, a certificate executed by the Administrator of Veterans' Affairs, or his duly authorized representative, showing said insane person to be entitled to such care and treatment, and that facilities therefor are available.

Section 7 of the same act, in providing for the proceedings of the commission on mental health, includes among the types of recommendation to the court which may be made by the commission—

That the person is of unsound mind—

And—

(3) Should be committed to the Administrator of Veterans' Affairs for care and treatment in a Veterans' Administration facility: *Provided*, That there shall be filed with the court or commission a certificate executed by said Administrator or his duly authorized representative, showing said person is entitled to such care and treatment and that facilities therefor are available.

LIST OF BILLS AFFECTING VETERANS VETOED BY THE PRESIDENT—SEVENTY-SIXTH CONGRESS, FIRST SESSION

Public bills

H. R. 985. A bill to authorize the Secretary of War to furnish certain markers for certain graves.

H. R. 5450. A bill to extend the time within which applications for benefits under the World War Adjusted Compensation Act, as amended, may be filed.

Private omnibus bills

H. R. 6898. A bill granting pensions and increase of pensions to certain helpless and dependent children of veterans of the Civil War.

H. R. 6899. A bill granting pensions to certain veterans of the Civil War.

Relief

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. CELLER. Mr. Speaker, I have given careful thought and study to the all-important question now confronting the Nation—that of providing material relief and cultural assistance to the millions of our fellow citizens who are in want—and in the outset, set forth the following principles as my program:

First. No one shall be permitted to be without food or care.

Second. No man or woman who is willing to work shall be without a job.

Third. On all projects, the expenses of which are defrayed in whole or in part by the Government, the prevailing rate of wages and not the security wage shall prevail.

Fourth. Not only every child but also each and every adult who is desirous of improving his cultural and educational status shall be given an opportunity to do so.

Fifth. Every adult who is desirous of learning a trade shall be given every available assistance to enable him to achieve his goal.

On Friday, June 16, 1939, the House passed the 1940 relief bill, by virtue of which it was hoped to alleviate the condition of the unemployed in our country. This bill, a product of the Appropriations Subcommittee, which had been giving inadequate study to the entire problem surrounding the question of the administering of relief, did not recognize the real needs of the Nation. It did not contain many of the provisions requested by President Roosevelt. It is estimated that this will be sufficient to carry some 2,000,000 persons through the next fiscal year. It took, however, 1,000,000 off the work relief rolls. Such curtailment is serious and augurs ill. It was provided that of the entire amount appropriated by the bill, $125,000,000 be allotted to the Public Works Administration, which was continued for another 2 years. All in all, the bill provided $1,755,600,000, which included, in addition to

the Works Progress Administration provision, $81,000,000 for the National Youth Administration, $123,000,000 for the Farm Security Administration, $7,000,000 for the Puerto Reconstruction Administration, and lesser amounts for other agencies connected with the administration of relief.

I was one of the few men who voted against this bill. My vote was an indication of protest. The bill did not go far enough. It was highly inadequate. It took, I repeat, 1,000,000 persons off work relief. Where are they to go? What are they to do? Such false economy means stark tragedy for most of those million unfortunates. The drastic changes effected in this measure, which is far different from the one suggested by the administration, was the result of an attempt on the part of some opponents of the administration to spread the idea that there is conflict between business interests and the President's program for Government spending. Nothing could be further from the truth; and the fact that such an attempt was made, is an example of the extremes to which these misguided, albeit well-intentioned, men will go in order to confuse the people and discredit President Roosevelt. True businessmen are behind the President. The anti-Roosevelt businessmen should remember that the work of this country must go on; that the improvements so badly needed everywhere must be constructed; and that the people of the country who are now idle must be given a chance to earn their living. These are not things to argue about; they are the basis of our whole civilization. Without them we will unquestionably revert to some primitive form of government such as have overtaken weak-kneed democracies in Europe. The way to save democracy is to make people happy. Taking the needy off work relief rolls will breed discontent and make the victims easy prey for agitators and Communist self-seekers and those who would strike at our democracy. Distress and suffering are no more popular with our people than they are with any other. They expect the Government to govern, and for the result to be prosperity. If it is anything else, we may be sure that the people are going to find some other kind of government.

Furthermore, the striking out from the bill of all aid to the Federal theater and the Federal arts project generally is a clear indication of the lack of thought given by some of my colleagues to matters of great importance. They apparently completely overlooked the fact that the Federal theater project gives enjoyment and cultural inspiration to more than 20,000,000 persons, most of whom had never before gone to a theater. Although all the actors on the project were taken from the relief rolls, most of them are now earning their way as Thespians in a wholly cooperative effort.

The Negro unit in Birmingham, Ala., produced a comedy of local life, Home in Glory. In Reading, Pa., the Federal theater project produced Feet on the Ground, concerning the life of the Dunkards, early Dutch settlers of that region. In Indianapolis it was a play of Hoosier life, The Campbells Are Coming; in Asheville, N. C., it was Smoky Joe, a portrait of the mountaineers. The Federal theater project revived and preserved folklore and sagas, and many old successes were reenacted. In excess of 12,500 theater people, divided into nearly 270 units, played to weekly audiences of some 500,000 persons, of whom about 100,000 paid admission fee. Thus the Federal theater project, which started as a partial succor for the unemployed, did that and much more; it awakened cultural and aesthetic values in the minds of countless of our citizens. Hence, I regard it as most unfortunate that the appropriation to make possible the continuation of this project was stricken from the bill.

Those responsible for this action have apparently forgotten that from the time of the founding of the Republic the importance of culture in the Nation's life has been appreciated. L'Enfant's plan for Washington is but the first indication of the upsurge of creative and aesthetic energies in American life. The importation of Italian sculptors to decorate the Capitol, the commissioning of John Trumbull to paint murals commemorating the American Revolution, the establishing by President Buchanan in 1859 of a Commission of Fine Arts, its reestablishment in 1910, are the steps which lead logically to the present-day renaissance of the arts in America. My colleagues who killed the Federal theater and the Federal arts projects, and who declared that the Government should not employ the thirty, or forty, or fifty thousand painters, sculptors, writers, musicians, actors, dancers, technicians who have been or potentially may be employed by these projects, run counter to the whole course of American culture, as well as to the practice of civilized countries throughout the world in all centuries.

Furthermore, I am definitely in favor of restoring the prevailing hourly wage, and with equal definiteness urge a revision of the 18-month clause which makes mandatory a starvation lay-off period.

Why should those on work relief—W. P. A.—be compulsorily laid off after 18 months? Private business and enterprise cannot yet employ them. Many are heads of families. Their plight is cruel and calamitous. A remedy is essential. My vote against the bill was a protest against such treatment of our needy unemployed.

Why should skilled workers on W. P. A. construction projects be paid less than their fellow workers employed on other Government jobs or by private contractors? Why should their right to strike be even questioned? Such discrimination is commonly justified by the argument that they are not regular Government employees but are the unemployed—jobless dependents who are permitted to work for their subsistence during an emergency. Government enterprises organized under the W. P. A. have been classified as "made work," designed to absorb labor rather than for their intrinsic value. How meaningless this classification has become is evident as one runs through the list of jobs included in the W. P. A. program. Every piece of public construction that could possibly be shunted over to the W. P. A. by local authorities has landed there—the construction and repair of public and many private buildings, the laying out of great highway systems and parks and playgrounds. The list could be stretched indefinitely.

Moreover, the majority of such projects would have been or should have been undertaken in the normal course of events. They are public enterprises that any local or national authority would launch if it could lay hands on sufficient funds. Many are nothing more than the necessary functions of upkeep and repair, as is evidenced by the W. P. A. fences one sees planted about almost every patch of new paving or road excavation. If they were not financed with Federal money in whole or in part, they would have to be included in local budgets—and the workers would have to be paid prevailing rates of wages. Instead of the prevailing wage rate, skilled carpenters, lathers, bricklayers, and so forth, will receive so-called "security wages"—a mere pittance for their skill. They are the backbone of our unions and the labor movement. Their morale will be shot to pieces. Their unions will break up. This is serious business. This wrong must be righted. I enlist in the movement to fight the evil. My vote against the bill was a protest against such treatment of our skilled laborers.

The above points to this fact—that at the present time immediate relief is imperative. Municipalities and State governments in some instances have advanced money for next year's budget, but even under these circumstances they cannot meet the demands that are being made upon them. Under these circumstances and the immediate requirements to meet the situation, they can only turn to the Federal Government that speaks for all of us, and that alone can muster all the resources of the Nation for the people's aid. There may be honest differences of opinion among our people as to the methods best suited for the purpose. We do know that the measures promulgated under President Roosevelt's direction brought about a decided upturn in the business and general conditions of the country when last used. We cannot now turn a deaf ear to the pleas of a helpless people and stand idly by relying mainly on natural forces and other measures to

bring about recovery. We should not hesitate to repeat those measures that were effective before.

One of the greatest vehicles for starting the ball rolling, as it were, is the W. P. A. This agency has done a remarkable piece of work. It has completed 43,000 miles of new roads and has improved 280,000 miles of roads. It has built 29,000 new bridges, 313,000 culverts, 153 new airports and landing fields, 17,562 new schools and other public buildings, 4,091 storage dams and 26,663 small dams. It has built 15,000 miles of water and sewer lines and 471 new swimming pools. W. P. A. workers have planted 24,000,000 trees and have improved millions of acres of land.

All these improvements, all this construction, has added greatly to our national wealth. All this has increased our national assets. Any private business which sets up improvements in its physical plant considers such improvements as assets, and rightly so. In this way, by creating all these W. P. A. jobs, we have increased vastly the purchasing power of the Nation; and at the same time, in establishing these new improvements, we have increased our national wealth.

Of course, there are those who do not consider this as adding wealth to the Nation. They simply consider the money that is being spent. They consider one side of the ledger—the "red" side. But this is a Nation of vast wealth—wealth in excess of $280,300,000,000—and consequently we can well afford to increase its funded indebtedness. Our total national debt, as of May 14, 1938, is $37,459,233,698.65. England, with a total national debt, as of March 31, 1938, of $40,000,000,000—greater than ours—has national wealth of $69,000,000,000—much less than ours. France's total national debt as of August 31, 1937, is $14,422,162,500, while its national wealth of $51,000,000,000 is far less than that of our country. These comparisons clearly indicate that we are able to withstand an indebtedness even greater than the above-stated figure. Our Federal bonds will continue to sell easily. In fact, considering our vast national resources, our national debt is trifling and insignificant. With the return of prosperity this debt can be paid off in comparatively few years. During our last period of prosperity we paid off over ten billions of our war debt.

Unfortunately there are a considerable number of our citizens who do not accept aid to the needy as a necessary and proper function of our Government, despite the realistic facts indicated by the relief rolls, the employment indices, and the grave growth of insecurity among our wage earners. It is also a matter of record that not so many years ago there was opposition to the abolition of the 12-hour day, to mothers' pension laws, to universal education, to workmen's compensation, and other social necessities. Those who opposed reduction of a 12-hour day warned that men would grow lazy and indifferent with a shorter working day. Opponents of the widows' pension legislation forecast murders of husbands by wives seeking widows' pension grants. Men would mutilate themselves to obtain industrial accident compensation, hostile critics predicted. The antagonists of universal education declared that if free education were extended, everybody would be educated and no one would work, except at the most pleasant tasks. Today, critics of unemployment relief contend that unless public aid is discontinued, millions of people now on relief will never get off, and America will become a nation of work-shy citizens. Such a charge is ridiculous.

Experience shows that the 8-hour day has not ruined American workers. There is no evidence that wives have done away with their husbands to collect widows' pensions. As yet we are not a mutilated race as a result of the operation of workmen's compensation. Instead of widespread educational opportunities making our young people avoid hard work, the college graduate starting at the bottom of the ladder has almost become an American tradition. Rather than preference for home relief, the great majority of recipients regard it as a necessary evil. Every year relief rolls show a considerable turn-over. This is evidenced by the closing out of an average of 65,584 cases to private industry and an average of 34,873 cases to W. P. A. annually.

Government aid to the needy is as old as government itself. As modern industrial society replaced the old agricultural society, governments throughout the world were forced to provide against the growing insecurity of vast groups who had shifted from independent occupations to jobs at wages under the industrial system. Today there are approximately 1,000,000,000 people covered by social insurance in over 50 countries throughout the civilized world.

The depression dramatically called the Nation's attention to the plight of the unemployed. Although several millions were jobless before 1930, they were considered to be the responsibility of private charitable groups. Those whom private philanthropy could not aid existed upon the bounty of friends or relatives, doubled up with other families, huddled in shanty towns, did scavenging, or migrated from city to city and State to State seeking work or aid. The depression ended additional millions of jobs, and those who had been supported by the employed were deprived of food and shelter along with their newly jobless benefactors.

The following figures and data give a bird's-eye picture of the splendid work being done by the relief agencies in New York City. Multiply this picture a thousandfold and you have a panoramic view of the great achievements which have been made from coast to coast, in every city, town, and hamlet of our country, in bringing assistance, support, and new hope to the many needy—to those amongst us who are the poor, the helpless, and the aged.

From January 1, 1934, through June 30, 1938, in New York City the Department of Welfare, the Emergency Relief Bureau, the Works Progress Administration, and their predecessors expended $1,233,587,000 of Federal, State, and city funds for home relief, work relief, free milk and school lunches, care of local homeless persons, transient care, and administration.

This huge sum of money served not only to prevent starvation, homelessness, and suffering for hundreds of thousands of families and individuals but, by providing mass purchasing power, directly contributed to the improvement of business, a benefit felt particularly by the small merchant.

These funds stimulated the sales of grocers, butchers, bakers, vegetable dealers, food markets, fish stores, pharmacists, dealers in optical and surgical instruments, coal and ice dealers, and a host of others. In addition, landlords and utility companies, who had been faced with the alternative of accepting financial losses or exercising policies that would have added to the hardships suffered by the unemployed and destitute, received payment for their services.

A brief statistical picture of our city's relief allotments from January 1, 1934, through June 30, 1938, reveals that: $212,926,000 was expended for food among the various local food dealers; $125,350,000 allocated for shelter helped thousands of landlords to retain their property, meet their taxes, maintenance costs, and to improve their holdings: $13,722,000 for clothing and shoes was distributed to clothing and department stores in the city; $7,797,000 went to local cellarmen for purchases of ice or coal; $16,993,000 was spent for gas, electricity, and carfares, benefiting utility companies; $4,993,000 was distributed for medical and nursing care to thousands of doctors, nurses, pharmacists, and manufacturers and retailers of optical and surgical instruments; $4,745,000 went to local storekeepers for houeshold supplies purchased by relief incipients; $8,955,000 was used for milk for nursing mothers and for lunches, milk, and clothing for school children; $69,881,000 was paid to administrative employees, almost half of whom would have been on relief if it were not for E. R. B. employment, and this money likewise was circulated in the usual channels of trade; $6,189,000 was spent for supplies, materials, equipment, maintenance, rentals, and other operating facilities, all of it finding its way to local tradesmen; $3,874,000

was used during the winters for the armory shelter program, most of it for food and coffee, purchased from local merchants, for the homeless in the city; $1,036,000 was distributed among retailers through expenditures to provide for the care of transients and nonsettled persons; $12,457,000 was spent by the department of public welfare for veterans' relief and $1,999,000 was spent for the upkeep of the municipal lodging house, and $945,000 for miscellaneous expenditures.

In addition, $741,685,000 was spent for work relief in the same period, $619,464,000 of which was for wages and their expenditures, also became purchasing power which helped to improve New York City's business.

Now is the time when we and all the democratic peoples of the world can rejoice that the United States has a strong man for a leader. We will not be deterred or sidetracked by the reactionaries, who did nothing when Hoover had the wheel and who do not want the present administration to do anything more. We will go on with Franklin Delano Roosevelt to an even grander and more prosperous American democracy.

I am a willing follower of President Roosevelt. We and the others who see eye to eye with him will not abandon the people in their hour of need. We shall marshal all the resources of the National Government to succor the weak and feed the needy by supplying jobs. We are trustees of the people. As such trustees there cannot be, and will not be, any want, poverty, starvation, or loss of self-respect due to a lack of jobs. There shall not be any national deterioration—economic, social, or spiritual.

We who champion the New Deal and have studiously supported the administration well realize that while the hoped-for utopia and goal of an economic millennium cannot be created by acts of Congress alone, it can be brought closer to realization by a Congress that will work in harmony and in unison with our President, whose leadership has been courageous, effective, humane, and wise. Under our President's guidance we have begun to eliminate the evils of financial centralization and to replace this with the blessings of economic freedom. Business is returning to normalcy. Real estate is again becoming a thing of value. Our banks are in a very sound condition. Agriculture is gradually finding its place in the sun. In a word, there are millions whose lives have been permanently blessed by the New Deal.

Thus shall we continue in our endeavors to build for a future in which we will have both material and social prosperity. And because this administration has taken such great steps and courageous measures to make prosperity possible—all the while keeping intact our fundamental heritage of liberty of action, equality of opportunity, freedom of speech, of public assembly, and of religious worship—the name and record of Franklin Delano Roosevelt will shine forth in everlasting greatness and as an ever-enduring inspiration.

Expenses of Government

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DISNEY. Mr. Speaker, I believe it serves a proper public purpose to have a summary of the expenses of the Government in the United States for the year 1938, which amounted to a grand total of $18,199,000,000. The Federal expenses were $7,691,000,000. When we compare that with total Federal expenses in 1916 of $1,034,000,000, we see how the cost of government has grown.

I include as a part of my personal remarks a chart prepared for that purpose by the Treasury Department, as follows:

Estimated flow of Federal, State, and local Government funds, fiscal year ending in 1938, showing sources of receipts and purposes of expenditures for general government

[Amounts in millions of dollars]

SOURCES OF RECEIPTS

	Federal	State	Local	Total
Customs	359			359
Estate and gift	417	145		562
Individual income	1,313	249		1,562
Pay rolls	743	707		1,450
Corporate income and privilege	1,449	313		1,762
Borrowings and balances	1,449	156	602	2,207
Liquor and tobacco	1,136	343	32	1,511
Motor fuel and vehicle	293	1,163	25	1,481
Other current revenue	245	338	524	1,107
Sales and other excises	287	717	302	1,306
Property		227	4,665	4,892
Total receipts	7,691	4,358	6,150	18,199

PURPOSES OF EXPENDITURES

National defense	1,610	12		1,622
Agriculture and national resources	1,000	73	3	1,076
Relief, welfare, and social security	2,182	637	266	3,085
Social Security reserves	489	516		1,005
Health and hospitals	36	270	265	571
Interest	926	121	592	1,639
Debt retirement	65	135	529	729
Highways and streets	260	900	510	1,670
Police and other protection	44	138	566	748
Education	177	818	1,418	2,413
All other	902	738	2,001	3,641
Total expenditures	7,691	4,358	6,150	18,199

It would appear from these figures that one of the prime necessities in our fiscal affairs is a reduction of expenditures and the raising of more taxes in order to balance the Budget.

Refinancing Farm Indebtedness

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VOORHIS of California. Mr. Speaker, one of the outstanding features of the present economic situation is the very low rate of interest at which it is possible for the Government to borrow money. Another is the burden of debt still hanging over our farm population.

The prices of agricultural commodities respond with tragic promptness to any excess of supply over effective demand. The cost of credit, on the other hand, remains generally at an artificially high level so far as the farmer is concerned no matter how great the amount of excess reserves or of potential loanable funds in the banks. Only by governmental action, thus far at least, has that interest rate been materially reduced. And generally speaking only the most fortunate and the least fortunate of our farmers have been able to take advantage of our agricultural credit machinery. For the group with ample security the Farm Credit Administration has been of assistance. For the most hard-pressed group of all at the bottom of the heap the Farm Security Administration has been unquestionably a godsend. Between these two groups are a very large number of farmers neither possessing enough security nor pressed hard enough by economic disaster to qualify. They are still in very great need of a scaling down of the rates of interest they are now paying, together, in many cases, with a scaling down of their debt itself.

I have signed the petition to bring H. R. 70 before the House. This bill (Frazier-Lemke) is the most far-reaching bill regarding farm indebtedness that has been introduced and I shall certainly support it at every opportunity.

In introducing a bill on this most vital matter I wish to make it very plain that I do not want to detract support from any other bills providing a sound method of refinancing and scaling down agricultural indebtedness. I shall be eager to support any such bills, and would certainly not insist upon my own particular formula.

My bill (H. R. 6580) has therefore been introduced in the hope that it will add strength to the movement to end the existing situation where the prices of agricultural commodities sold by the farmer frequently fall to ruinously low levels while the cost of money to the farmer remains suspended in mid air at an economically indefensible rate.

H. R. 6580 has been introduced to extend assistance through refinancing loans and otherwise to farm owners who personally occupy and operate their farms, who are unable to meet the payments due under existing mortgages or other liens against their farms and who are unable to secure assistance from any other Federal lending agency or Federally incorporated lending institution. Under the terms of the bill farmers could borrow "such amount as may be necessary to enable the borrower to satisfy all mortgages and other liens outstanding against the farm and for necessary repairs and improvements thereon." The rate of interest on such loans would be 3 percent per annum on the unpaid balance of the loan. The period of amortization would be 40 years. The bill also provides for variable payments so that in years of good returns to the farmer he would pay off more than an average annual amount of his debt and in years of poor returns he would pay less than that average. Finally there is provision whereby in cases where a loan is not feasible for one reason or another the Secretary of Agriculture can enter into a "lease and purchase agreement" with a farmer, whereby the Secretary will buy the farm outright and rent it back to the former owner for a period of 5 years at the end of which time the farmer can exercise an option to repurchase the farm "at a price to be determined by the Secretary on the basis of the income value of the farm."

The text of H. R. 6580 is as follows:

A bill to provide for the refinancing of farm debts through the Federal Farm Mortgage Corporation, and for other purposes

Be it enacted, etc., That this act may be cited as the "Farm Debt Refinancing Act of 1939."

SEC. 2. (a) The Secretary of Agriculture is authorized, on behalf of the Federal Farm Mortgage Corporation, hereinafter referred to as the Corporation, to extend assistance, through refinancing loans and otherwise, to farm owners who personally occupy and operate their own farms, who are unable to meet the payments due under existing mortgages or other liens against their farms, and who are unable to secure assistance from any other Federal lending agency or federally incorporated lending institution.

(b) In addition to any obligations heretofore authorized to be issued, the Corporation is authorized to issue and have outstanding, in accordance with and subject to the provisions of section 14 of the Federal Farm Mortgage Corporation Act of January 31, 1934 (48 Stat. 349; 12 U. S. C., 1020c), bonds in an aggregate amount not exceeding $2,000,000,000. The proceeds of such bonds shall be available for the purposes of this act until expended, and shall be available for allotment by the Secretary of Agriculture to the bureaus and offices of the Department of Agriculture and for transfer to other departments and agencies of the Government which the Secretary of Agriculture may call upon to assist or cooperate in carrying out such purposes, or for services rendered or to be rendered in connection therewith.

SEC. 3. (a) The Secretary shall appoint in each county in which activities are carried on under this act a county committee composed of three farmers residing in the county.

(b) Each member of the committee shall be allowed compensation at the rate of $3 per day while engaged in the performance of duties under this act, but such compensation shall not be allowed with respect to more than 5 days in a month. In addition, the members of the committee shall be allowed such amounts as the Secretary shall prescribe for necessary traveling and subsistence expenses.

(c) Two members of the committee shall constitute a quorum. The Secretary shall prescribe rules governing the procedure of the committees, furnish forms and equipment necessary for the performance of their duties, and authorize and provide for the compensation of such clerical assistance as he deems may be required by any committee.

(d) In any county in which the Secretary has appointed a county committee under the provisions of section 42 of the Bankhead-Jones Farm Tenant Act, such committee may, in the discretion of the Secretary, be employed for the purposes of this act.

SEC. 4. (a) The county committee shall—

(1) examine applications (filed with the county rural-rehabilitation supervisor in the county, or with such other person as the Secretary may designate) of persons desiring to refinance the indebtedness against farms in the county by means of a loan from the Corporation under this title;

(2) examine and appraise the farm with respect to which such application is made.

(b) If the committee finds that the applicant is eligible to receive the benefits of the title, that by reason of his character, ability, and experience he is likely successfully to carry out undertakings required of him under a loan which may be made under this title, and that the farm with respect to which the application is made is of such character that there is a reasonable likelihood that the making of a loan with respect thereto will carry out the purposes of this title, it shall so certify to the Secretary. The committee shall also certify to the Secretary the amount which the committee finds is the reasonable value of the farm.

(c) No certification under this section shall be made with respect to any farm or any indebtedness in which any member of the committee or any person related to such member within the third degree of consanguinity or affinity has any property interest, direct or indirect, or in which they or either of them have had such interest within 1 year prior to the date of certification. In the event that application for such certification is made, the Secretary shall designate an alternate member of the committee to serve in the place of the disqualified member with respect to the consideration and certification of such application.

SEC. 5. (a) Loans made under this title shall be in such amount (not in excess of the amount certified by the county committee to be the value of the farm) as may be necessary to enable the borrower to satisfy all mortgages and other liens outstanding against the farm, and for necessary repairs and improvements thereon, and shall be secured by a first mortgage or deed of trust on the farm.

(b) The instruments under which the loan is made and security given therefor shall—

(1) provide for the repayment of the loan within an agreed period of not more than 40 years from the making of the loan;

(2) provide for the payment of interest on the unpaid balance of the loan at the rate of 3 percent per annum;

(3) provide for the repayment of the unpaid balance of the loan, together with interest thereon, in installments in accordance with amortization schedules prescribed by the Secretary;

(4) be in such form and contain such covenants as the Secretary shall prescribe to secure the payment of the unpaid balance of the loan, together with interest thereon, to protect the security, and to assure that the farm will be maintained in repair, and waste and exhaustion of the farm prevented, and that such proper farming practices as the Secretary shall prescribe will be carried out;

(5) provide that the borrower shall pay taxes and assessments on the farm to the proper taxing authorities, and insure and pay for insurance on farm buildings; and

(6) provide that upon the borrower's assigning, selling, or otherwise transferring the farm, or any interest therein, without the consent of the Secretary, or upon default in the performance of, or upon any failure to comply with, any covenant or condition contained in such instruments, or upon involuntary transfer or sale, the Secretary may either declare the amount unpaid immediately due and payable, and exercise any and all remedies provided in the mortgage or deed of trust, or purchase the interest of the borrower in the mortgaged property for an amount equal to the principal payments made by the borrower, together with any increase in value resulting from improvements made by the borrower less any damage to the property occasioned by the borrower's fault.

SEC. 5. (a) If the Secretary shall find that an applicant, otherwise eligible for assistance under this act, does not have the ability and experience or is otherwise not qualified immediately to receive a loan, under the provisions of section 4, the Secretary shall be authorized, on behalf of the Corporation, to purchase the farm with respect to which the application is made, and to enter into a lease and purchase contract with the applicant, as provided in paragraph (b) of this section: *Provided, however*, That, if the Secretary finds that the farm with respect to which the application is made is not an economic family size farm unit, he shall be authorized, on behalf of the Corporation, to purchase such additional or other land as will provide an economic unit, and to include such land in the lease and purchase contract entered into pursuant to paragraph (b) of this section.

(b) The lease and purchase contract to be entered into with the approved applicant shall—

(1) be for a period of 5 years, at a rental agreed upon between the parties thereto, which shall, so far as practicable, be in accordance with the rental arrangements prevailing in the locality;

(2) contain such covenants as the Secretary shall prescribe to assure payment of the rental, and to assure proper maintenance of the farm, the prevention of waste and exhaustion of the farm, and the carrying out of proper farm-management practices, and such other covenants as the Secretary shall find necessary to effectuate the purposes of this act; and

(3) provide that, if the tenant shall comply with all the terms and conditions of his lease, and shall, at least 90 days prior to the expiration thereof, give notice of the exercise of the option to purchase therein contained, he shall be entitled to a conveyance of the property at a price to be determined by the Secretary on the basis of the income value of the farm.

(c) In determining the purchase price of any farm, pursuant to subsection (b) of this section, the purchaser shall be entitled to credit for rental payments made by him in excess of interest at 3 percent per annum on the agreed upon purchase price during the term of the lease. To secure the payment of such purchase price, the purchaser shall execute a mortgage or deed of trust in accordance with the provisions of section 5 of this act.

SEC. 7. When, in the judgment of the Secretary, conditions justify, the Corporation shall be authorized to reamortize, in whole or in part, the aggregate amount remaining unpaid under the terms of any mortgage or deed of trust, and to accept payment of such unpaid balance in accordance with amortization schedules prescribed by the Secretary within an agreed period of not more than 40 years from the date of the reamortization.

SEC. 8. The Secretary may provide for the payment of any obligation or indebtedness to the Corporation under this title under a system of variable payments under which a surplus above the required payment will be collected in periods of above-normal production or prices and employed to reduce payments below the required payment in periods of subnormal production or prices.

SEC. 9. No provision of section 75, as amended, or of chapters XI, XII, and XIII of the act entitled "An act to establish a uniform system of bankruptcy throughout the United States," approved July 1, 1898 (U. S. C., 1934 edition, title 11, sec. 203; Supp. VI, 1938, title 11, sec. 203, and chs. XI, XII, and XIII), shall in any way affect, apply to, or extend or impair obligations incurred pursuant to this title.

What Congress Did Not Do

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. LEMKE. Mr. Speaker, tired and dizzy with false war propaganda, faked neutrality, slum-clearance and housing projects, and W. P. A. troubles and strikes, the Members of Congress have gone home. Home to renew acquaintance with their own people. People who are as perplexed and as much at sea as Congress itself. People who are as far up in the air, with no place to land, as is the President himself. Nothing accomplished—nothing seriously attempted, except to hand out relief and doles to the hungry and unemployed.

Yet, we know that every time we give a dollar to the poor as relief, a dole, or in the form of a W. P. A. or a P. W. A. job the coupon clippers, the in-betweeners, and the hangers-on get $5. This at the expense of the producers—the taxpayers. I have voted to take care of the unemployed and to feed the hungry, but we have no business to have unemployed or hungry people in the United States.

Congress has not yet solved the unemployment problem. This administration has now been in power for about 7 years. As a result, two-thirds, not one-third, of our people have now been reduced to a "subsistence," below an American standard of living. A few have been getting richer, while the great bulk have been getting poorer—have been immersed deeper into debt. The Nation has been blanketed with mortgages. The unemployed are 7 years older, have been nowhere, and have no place to go.

This Congress appropriated about half a billion more for W. P. A. than any other Congress, yet there is discontent among the W. P. A., and rightly so. These men and women do not wish to live upon charity or doles. They are still real Americans. They want to become self-supporting. They know that there is plenty of work—plenty for all to live decently. They know that there is no overproduction, except an overproduction of ignorance. They know that our trouble is maldistribution and underconsumption.

Congress must solve this problem intelligently. The end of playing with human misery for political reason is near at hand. The Nation is over $40,000,000,000 in the red. The interest on this vast indebtedness amounts to over a billion dollars a year. There are now 27 varieties of hidden taxes. Every time you buy a dollar's worth of goods 25 cents of that dollar goes to pay these taxes. Even a schoolboy knows that we cannot achieve success by going deeper and deeper into debt.

In the name of the poor, in the name of slum clearance, in the name of farm tenants and home owners, but in reality for the in-betweeners, we have covered the Nation with mortgages. We have not only mortgaged our own future but the future of our children, our grandchildren, and our great-grandchildren. At the expense of future generations, at the expense of unborn millions, we have been riding high, wide, wild, and handsome.

There is a sort of headache—a sort of mania—for going into debt which has gripped this Nation as a whole. Every school district, every city, and every State wants some sort of alphabetical projects—or else has its hand out for some sort of a dole or subsidy. Self-help, self-reliance, self-respect, and modesty seem to have "gone with the wind." We have made and are making beggars out of a once proud people.

But may I warn you that if we continue this we will destroy ourselves. In our ignorance—if this system is not stopped—we will commit national suicide. The unemployment problem can and must be solved by Congress. There is no logical reason for unemployment as long as there are human wants. There is no reason for enforced idleness as long as there is sufficient raw material which can be turned into finished products with which to satisfy those wants.

Likewise, Congress has not solved the agricultural problem. The Nation is threatened with farm strikes and agricultural collapse. The farmer has again been double-crossed, criss-crossed, bisected, and quartered. He has been misled and deceived by his Government. He was made to believe that he was being subsidized when in reality he was being fleeced. He was told that the processing tax would be paid by the consumer when, as a matter of fact, he paid the processing tax in lower prices. The truth is that the Government has not kept faith with the men, women, and children who feed and clothe the Nation.

Yet, in spite of this, the Department of Agriculture is again attempting to sell the farmer another processing tax under the glorified name of "income certificates." The so-called parity prices were a fraud. The glorified income certificates are an insult to our intelligence. Fortunately, the Members of Congress now know that if the Department of Agriculture ever hits upon the right thing for the farmer it will be by the law of accident rather than by the law of average, because that Department's batting average is below par.

Eighteen Members of the Senate and 16 of the House, realizing that the Secretary of Agriculture's farm program has been a "flop," introduced a "nonpartisan cost of production farm bill." These Members know that during the last 6 years of farm regimentation—of the insane policy of destruction and curtailment of agricultural wealth—about one farmer out of every five lost his farm by mortgage foreclosure, tax, or judgment sale. The price of that erroneous policy comes too high.

This cost-of-production bill would have increased the farmers' yearly income $7,500,000,000. Since every dollar of farm cash income increases the national income by $7.55, therefore the national income would have been increased by $56,625,000,000. That would have meant prosperity by "plenty" and not starvation by "scarcity" by the curtailment and the destruction of agricultural wealth.

This bill would not cost the Federal Government one penny. When it becomes a law there will be no further need for subsidies to the farmer. There will be no further need of the 27 varieties of Federal agencies now riding on the farmers' backs. There will be no further need for an army of Federal employees to regulate the daily lives of the farmers. When this bill becomes a law the Government will no longer have to bail out the farmer—the farmer will bail out the Government.

Neither did Congress do anything to stop mortgage foreclosures—the eviction of innocent men, women, and children from their homes. We talk of making farm tenants farm owners. We first make the farm owner a farm tenant and

then pretend to make him a farm owner again. We evict the city people from their homes and then talk of slum clearance, housing programs, and of spending bills until the whole thing has become a hodgepodge, worse than a "crazy quilt."

The Frazier-Lemke refinance bills offer a solution. These bills provide that the United States Government shall refinance existing mortgages on farms and homes at 3 percent per annum, the interest rate to be 1½ percent and the balance of each payment to be applied on the principal on the amortization plan. The stability of government depends upon homes.

The nation that does not protect its protectors cannot long endure. No nation on earth is great enough to ignore the appeals for help of its citizens. There are times when a nation must protect its citizens from misfortunte in order to preserve its nationalism. Patriotism is the feeling that you are somebody. It is the feeling that you belong to a nation that is not only powerful but that is interested in your welfare.

Without this feeling of security and reciprocity, there can be no true patriotism on the part of the individual—there is no nationalism. The 12,000,000 unemployed and the 1 farmer out of every 5 who lost his farm are more dangerous to our democracy than the combined armies of Hitler, Mussolini, and Stalin.

Nor did Congress pass an intelligent old-age compensation bill. I cannot understand why some Members of Congress are so afraid that the people who have created the wealth of this Nation may get too much of it back. Old-age pension should be called old-age compensation, because any person who has worked at a useful occupation from the age of 20 to the age of 60 has produced enough wealth to take care of himself or herself for the rest of his or her life. If such a person finds himself or herself in financial distress and without the means of a comfortable livelihood, then it is because someone appropriated this wealth, or rather misappropriated it.

We have now arrived at a stage in our civilization where we realize that as a nation we can safely restore to the aged part of the wealth which they created, part of the wealth taken from them by overzealous individuals and corporations. This is not a pension; it is not charity; it is a compensation for useful labor performed or for wealth actually created or produced.

Owing to mechanical inventions and chemical discoveries, we suddenly find that we have an abundance for all. Our problem no longer is how to produce more nor fear the morrow may not bring plenty, but, rather, how to distribute the things that we have and that are essential to our well-being. In place of destroying this food and clothing and other essentials of life, why not distribute it to those who helped to create it and need it?

Again, Congress did not enact a neutrality law. It did refuse to pass the Pittman bill. The passage of this bill would inevitably lead to war. Just why the administration should insist upon permitting war profiteers to again sell instrumentalities of death and destruction to favored nations, with which to slaughter their own or other nations' people, is hard to understand.

Why should anyone make a profit out of the tears, the blood, and the agony of nations engaged in war? Why should we sell army or navy planes or munitions or armaments to nations with whom we may ourselves sometime become involved in war?

We cannot ease our conscience by a cash-and-carry policy. That policy means that we will help the more powerful to destroy the weaker. That policy means that we will become an accomplice both before and after the fact—a party to mass murder of other people's sons and, in the end, of our own sons.

Let us have real neutrality. Let us have a law that will make it a crime to sell arms, munitions, armaments, or war material at any time or at any place to any nation. In case of war let us have an automatic embargo against the warring nations except for food and clothing to be distributed through the Red Cross or similar organizations to the civilian population only. Let that be the American doctrine.

In conclusion, may I state that Congress represents a cross-section of the country. They reflect the opinion—the pulse of the Nation. Individually there is great intelligence in Congress. Collectively, just now, very little. That is to say that individually there is great intelligence in this Nation. Collectively, just now, very little.

In other words, there is no settled purpose among the people just now to get the Nation out of the mire. The great American engine is stalled. It is on dead center. It is up to the intelligent people to start the engine going. The Members of Congress are home with you now. They are your Congressmen. You elect them, not I. If you have any fixed purpose in your community inform them of that purpose.

One hundred and three Members of Congress have signed petitions Nos. 5 and 6 at the Speaker's desk. These petitions have for their aim and purpose the bringing up, for discussion and disposition on their merits, of the cost-of-production, introduced by 34 Members of Congress, and the Frazier-Lemke refinance bills.

May I suggest that you form "cost of production" and "refinance" clubs throughout this Nation. Inform your Congressman and Senator and your farm leaders that it is the cost-of-production and the Frazier-Lemke refinance bills, and no substitute, that you want.

You have a right to make your desires and necessities known. Remember that in the language of Chief Justice Hughes "the people can get anything they want if they want it bad enough." Let the Congressmen know that you want the Frazier-Lemke refinance and cost-of-production bills bad enough.

Presentation of a Portrait to the Honorable Edward T. Taylor, Chairman of the Appropriations Committee

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. LEWIS of Colorado. Mr. Speaker, it is an old saying that "A prophet is not without honor, save in his own land." That human characteristic is often sadly true as to Members of this House. Even several Presidents of the United States repeatedly have lost their home counties in Presidential elections.

But I am proud to say that there are some outstanding, splendidly commendable and patriotic exceptions to that old saying. I take pride in mentioning one of them that recently occurred in my own beloved Colorado.

As you all know, my distinguished colleague, Hon. EDWARD T TAYLOR, is now serving his thirty-first consecutive year in this House. He has loyally served Colorado with remarkable energy and efficiency for over half a century. He was a very successful district attorney in the trying times of all kinds of outlawry in our early days. He made a splendid record for 12 years in the Colorado State Senate, as is recorded in the 40 laws and 5 constitutional amendments he put on our statutes in his individual name. He was Congressman at Large for 6 years. Our State was then redistricted and he has ever since represented the Fourth Congressional District, comprising nearly the western half of Colorado. He has rendered literally thousands of beneficial services—lasting betterments and permanent developments in our State, and many of them have been for the benefit of the entire West.

It would require a volume to describe the over 100 Federal laws of which he is the author. Probably he will be remem-

bered most in history as the author of the Taylor Grazing Act.

While the people of western Colorado always have shown him their appreciation of his long, constant, and effective work in their behalf by an overwhelming majority at every election, I understand from others that sometime ago a large number of western Colorado constituents, regardless of politics, decided that they wanted to show him their appreciation and good will in some permanent way; something that he and his family and friends everywhere would be proud of and that would be a source of supreme pride to him during his remaining years, and to his children and friends as well. With that object in view, I am informed they consulted our National Commission of Fine Arts and obtained the names of several of the most distinguished portrait artists in our country. They selected Mr. John C. Johansen, of New York, and he has painted a life-sized portrait of our colleague. It is now hanging on the wall in the office of the chairman, along with the portraits of all the former chairmen of that great committee. It is on this floor of the Capitol Building and only a few feet from where we are sitting.

The gentleman from Colorado [Mr. TAYLOR] is the twenty-first chairman of that committee since it was originally created in the early days of Congress. From the expressions of all the Members I hear the oil painting meets with the enthusiastic approval and commendation of everyone who has seen it. It seems to be considered one of the most artistic, actually life-like and realistic portraits in the Capitol Building. It is very different from all the other paintings.

The official ceremonies attendant upon the unveiling of the painting and the presentation of this splendid tribute to the chairman were held a few days ago in the presence of some of the Members and officials and numerous friends.

Our senior Senator from Colorado, Hon. ALVA B. ADAMS, on behalf of the western Colorado donors, formally unveiled the painting. After paying a well-merited and beautiful tribute to Mrs. Taylor, who was present, as being the Congressman's constant guardian and helpmate, the Senator presented the painting to our colleague in an address of which I am sure every Member of this House and the people of Colorado and Mr. TAYLOR's friends everywhere will always be supremely proud, as follows:

Mr. TAYLOR, you occupy today one of the most influential and powerful positions in American public life.

You have earned by your diligent attention to public duties, by your knowledge of public questions, by your unfailing courtesy and consideration toward all with whom yo have come in contact, by your devoted and able services to the people of your district and State, and by a character ever animated by high principles and patriotic motives the admiration, esteem, and affection of all who have served with you. You are, sir, today recognized throughout the Nation as a statesman without fear and without reproach. Your record is written large in the annals of our country. There is no need that I attempt an enumeration of your many services to State and Nation which constitute and illuminate your record.

Colorado is perhaps the most variable State politically in the Union; but in one respect at least its citizens have been constant. In spite of all the political vicissitudes and the ebb and flow of public opinion, the people of Colorado have for 45 years continuously had the good judgment to retain you in their services in a legislative capacity, either in the State or National Legislatures.

Different from some, your rise into a great national figure has never lessened your interest in or care for the people of your district and State. In fact, they have in many ways benefited from the honors showered upon you.

It is my privilege today to present to you as a tribute of confidence, esteem, appreciation, and affection from your Colorado constituents this most excellent portrait of yourself. The donors are from all sections of your district and of all political faiths. They make this presentation most gladly. They wish you to regard it as a token of their high regard for you personally, and their gratitude for your long, faithful, and efficient service to them. They further wish to preserve your likeness in the places where you have served and which you have honored, so that should you be at any time called to higher service, they may come here to pay homage to your memory and recall your great services.

Proud as you should be of your record as a public servant, I believe you have more reason to be happy and proud of your record in the hearts of those among whom you have lived and who know you best, of which the portrait I now present to you on behalf of your friends and neighbors is a testimonial.

Admission of Refugee Children

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BUCKLEY of New York. Mr. Speaker, the House Committee on Immigration still has under consideration the bill to provide for the admittance into this country of 10,000 German children in excess of the present quota during each of the calendar years 1939 and 1940. Despite the urgent pleas of representatives of religious, social, educational, and nonpartisan organizations, there seems to be some difficulty in having the bill brought before the House for consideration. In the Senate, the Committee on Immigration, by its amendments, has practically destroyed the very intent of the bill. The bill would admit not more than 20,000 German children in excess of the present quota during 1939 and 1940. No child would be eligible for admission who is over 14 years of age, and they would not become public charges, as, prior to admission, satisfactory assurances must be given by responsible individuals or private organizations guaranteeing their education and support. That is all this bill really provides.

The argument that these children will compete for employment in the labor field is untenable when we know the ages of these children are 14 or less. To further prove this, this bill is endorsed by both the A. F. of L. and the C. I. O. It also has the support of clergymen of all denominations, as well as that of many public officials and social-service workers. Editorials in the press have also been favorable.

These poor children are treated as outcasts and undesirables. About one-half of them are Jewish and the others are Catholic or Protestant. Many of their parents are dead, in prison, or in concentration camps. They are victims of Nazi Germany's oppression and persecution. Need more be said?

I do not believe that many people are really honestly opposed to this bill. As an illustration, a friend of mine came to see me not long ago, and we were discussing various matters. There arose the question of this bill. He was strongly opposed to the enactment of this policy. I asked him whether, if there were a fire, and the lives of children were in danger, would he go to their rescue. He answered emphatically in the affirmative. I likewise asked him, if a boat were sinking and children were aboard, and he were in a position to give aid, would he risk his life to do so. And again he answered emphatically in the affirmative. I asked him that, if he were in the position to provide food and a home, for children who were being torn from the love and protection of their mothers and fathers, would he come to their rescue. He admitted he would. I then showed him, and I believe he agreed with me, that the question of admission of 20,000 refugee children was no different than the cases I cited.

Other nations have opened their doors to these children. England and Holland have given such sanctuary to a considerable number of these little waifs.

I have always maintained the belief that the strength and resources of this country are great enough to provide for all the peoples of this country. I go a step further and contend that they are large enough to share with this group of unfortunate children.

In every community we find a few bigoted and misguided individuals who protest any measure, regardless of its humaneness or the meritorious purpose it seeks to fulfill. Fortunately, I am sure, the great majority of the American people, whether they live in the city or in the country, and regardless of their wealth or station in life, favor principles and acts of kindness and charity. For regardless of what

religion one may belong to, one of all religions' cardinal principles is to lighten the burden of the oppressed and extend a warm and sympathetic shelter when needed.

In keeping with our country's tradition of tolerance, let us extend this act of generosity to these unfortunate children. They will become good citizens and will love the liberty and freedom that exist here, for they know what its loss means. They will repay us, as others have done in the past, with their fine contribution of loyalty and good citizenship.

Postalization of Transportation Rates

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. LEMKE. Mr. Speaker, what is the matter with our railroads? There is nothing the matter with them except that they are bankrupt. At the present time 39 class I railroads are in the hands of the courts—39 more are in the hands of receivers or trustees. That there is a railroad—a transportation—crisis no one can deny.

Rapid transportation of persons and goods is the very life of a modern nation. Our standard of living depends upon transportation—upon the exchange of the goods of one locality with those of another. If this transportation or exchange is prevented by prohibitive rates then there can be no real prosperity; then the people in unfavorable locations are hampered in the creation and distribution of new wealth.

No one will deny but that the well-being and future safety of our Nation depends upon cheap and rapid transportation of persons and goods. The intellectual and economic life—the national defense of our Nation—depends largely upon the transportation of persons and goods from one part of the Nation to another—from the Atlantic to the Pacific, from the Gulf of Mexico to the Canadian boundary. Therefore, cheap and rapid transportation of persons and goods within our borders is of greater importance than any other single issue now before this Nation.

It is true that in the past many of the railroads abused our patience. They were guilty of criminal acts along the highways and byways of the Nation. Some of them grabbed that which was not theirs. They destroyed and made cities and towns by unjust discrimination in rates. They made and destroyed individuals by giving rebates. They dodged just taxation, bought favors by issuing passes to lawmakers. They played shady politics and thus received subsidies from local government as well as from our National Government. But that age is gone. It is water under the bridge. This was during the frontier life—during the building of the Nation.

We are now concerned with the present railroad financial crisis. Transportation is of national concern. It will not do to simply condemn the railroads for their past wrongful omissions and commissions. Railroads are still the principal means of transportation. They are still the chief instruments for the distribution of food, fuel, and clothing. They cannot continue to operate at a loss, and yet, we cannot do without them.

What is the cause of this financial collapse? Some say it is a credit crisis. They say the railroads cannot get credit. The reverse is the truth. It is a debt crisis. The railroads, the same as the rest of us, got too much credit. They have exhausted it. They cannot borrow more because they already owe more than they are able to pay. In plain, unadulterated English they are bankrupt. What they need is less credit and more ability to pay.

The railroads, like the rest of us, make the mistake of trying to get more and more credit—to get deeper and deeper into debt, when their chief concern should be to get out of debt and stay out of debt—to go as they pay and pay as they go. The coupons clipped from the bonds should go as dividends to their owners in place of as interest to the bankers.

The real trouble with the railroads has been, and is, mismanagement. Too many of our present railroad executives represent coupon-clipping banks rather than owners of railroads. Today the railroads are controlled by bankers—by coupon clippers—who know very little about railroads, but who know how to clip coupons. Those bankers are not interested in an efficient transportation system. They profit by receivership and trusteeships—by the squeezing out process.

There was a time when railroads were run by men who built and owned them. Controlled by men who were vitally interested, not only in making money, but who had pride in making their road a success. Such men were James J. Hill and E. E. Harriman. These railroad executives, in fixing transportation rates, knew that it was more important to know when the point of "diminishing returns" was reached than to charge "all that the traffic would bear."

Due to our scientific and inventive genius, we have annihilated space and time. Within the last 30 years modern, de luxe, streamlined trains, automobiles, and airplanes, as well as telephones and radios, have all come into general use. All these instrumentalities are now at our fingertips for the purpose of rapid transportation or transmission of persons, goods, and ideas. In the twinkle of an eye thoughts and ideas can be transmitted to every corner of the earth, and with unbelievable rapidity goods and persons can be transferred from one corner of this Nation to another.

While our scientists and inventors have made all of these things possible, our political and economic physicians have failed in making full and complete use of these instrumentalities for the common good of mankind. They have not kept abreast with the times. They have failed to place at our disposal these facilities in our everyday life for universal use and enjoyment.

Due to mismanagement and unreasonable rates and charges, the life of our railroad system is at stake. Unless we discover some method by which these can again be made self-sustaining, the Government will have to take them over. Even then, under the present rate-fixing scheme they will become an unbearable burden upon the public.

In order to get away from this dilemma I reintroduced H. R. 5579, a bill providing for the postalization of transportation rates. This bill is based upon the plan presented to the Interstate Commerce Commission by John A. Hastings, of New York. I am satisfied that when this bill becomes a law it will solve the railroad problem once and for all, not only for the railroads but for all of us.

Under the provisions of this bill the Interstate Commerce Commission would establish 12 zones from each point within the continental United States where passenger or goods transportation now or hereafter may originate.

The first zone would have a radius of not less than 250 miles, and the radius of each of the following zones would be increased by 250 miles, so that the last or 12th zone would have a radius of not less than 3,000 miles.

The bill provides that the suburban, postalized, first-class, passenger coach fare shall not exceed 50 cents within any suburban zone, and that in densely populated centers, where a system of commutation exists, the fare shall not exceed 15 cents for a single trip or 25 cents for a return trip. It provides that the interurban, postalized passenger fare shall not exceed $1.25 within the first zone, and that it shall not exceed $2.50 between any two points within the first and second zone; that is, the rate is increased by $1.25 for each additional zone.

These rates would be flat rates, irrespective of distance, for each class of service rendered within the same zone. For example, the fare from New York would be $1.25 to Pittsburgh, $3.75 to Chicago, $5.00 to New Orleans, $6.25 to Oklahoma City, $7.50 to San Antonio, $10 to Denver, $11.25 to Spokane, and $12.50 to San Francisco. In other words, you could travel from the farthest point in Maine to the

farthest point in California for $15. These rates, of course, do not include meals or sleeping-car accommodations.

This is not a new idea. It was adopted long ago by our Government in transmitting mail. You can send a letter from Brooklyn, N. Y., to Chicago or to Nome, Alaska, for 3 cents. We use the same principle in suburban transportation. You can get on a streetcar, bus, or subway, and you pay the same whether you ride 1 block or 50 blocks. In New York City you can ride all day in a subway for a nickel.

Postalization of railroad transportation rates, while it seems new, is nothing more than the application of a well-established principle in a new field. For years rate making, regardless of distance traveled, has been in general and successful use in urban transportation. The civilized governments of the world carry mail at fixed rates, regardless of distance.

New ideas are generally looked upon with apprehension. When automobiles first made their appearance the average person shook his head and said, "It will never work as a means of transportation." When Sir Rowland Hill, of Great Britain, first suggested that letters be carried for 1 penny regardless of distance he was ridiculed. The idea was denounced as wild-eyed, extravagant, and impractical. Yet, within a few short years, Sir Rowland Hill became the head of the Post Office Department of Great Britain.

The penny letter grew in popularity year by year and carried on its back a variety of new and unremunerative services, notwithstanding which the postal service was able to contribute a steady growing revenue to the Government.

So it will be with postalization of railroad transportation rates. It will bring increased revenues to the railroads and new life into the Nation. It will render untold service to the future of America.

The success of this method of transportation is due to volume induced by reasonable rates. The rate is based upon service and cost, as a whole, and not upon the distance that the individual or the goods is carried. It is based upon the law of averages. It costs, within a few cents, just as much to haul an unoccupied seat across the continent as it does an occupied one. It costs, within a few dollars, just as much to haul an empty car across the continent as it does one filled with goods.

It is the number of persons or the volume of goods hauled, rather than the distance they are hauled, that produces revenue for the railroads. The longer that a freight or passenger car stands idle on a sidetrack, or the longer the distance that an empty car or an unoccupied seat is hauled, the less will be the revenue received and the greater the operating cost—the greater the deficit. Why not operate the trains at full capacity—at a profit in place of a loss?

The financial success of a railroad depends rather upon the volume of traffic than upon the rates charged. Sixty-one percent of our railroad operating costs are fixed or constant without relation to the number of trains operated, passengers or goods carried, or the distance such passengers or goods are transported. Only 39 percent of all operating costs are variable. Of these costs only fuel, wages, and water are affected by the distance traveled.

In 1937 the railroads hauled in round numbers 250,000,000 passengers with a gross income of $400,000,000. Trains were occupied only to about 22 percent of their capacity. The average passenger traveled only 80 miles. He paid only $1.80 for rail transportation. These roads could have carried from 300 to 400 percent more passengers without materially increasing their costs.

If the rates had been postalized the number of passengers would have been doubled, tripled, and quadrupled. It would have stimulated agriculture, industry, and commerce. This, in turn, would have increased rail traffic and income.

When passenger, freight, and express rates are postalized, then the burden of transportation will be placed more equally and justly upon the shoulders of our entire population and that burden will be made lighter for all.

It will be of immense benefit to the consumers as well as to the producers. It will give to the consumers commodities of which we have an abundance, but which at present are denied them because of distance and transportation charges.

When this bill becomes a law the farmers of North Dakota, Montana, Oregon, and other distant States will find at their door the markets of the East. Then there will not be millions of bushels of potatoes, apples, and other farm products allowed to waste because of prohibitive transportations rates. Mass production will be met by mass consumption. New fields of industry and new fields of consumption will be opened. Farm products and manufactured commodities—the wealth of this Nation—can then be exchanged without penalizing any section.

Then the North will meet the South and the East will meet the West, both in person and in the exchange of commodities. An unhampered exchange of our wealth will take place and the railroads will become prosperous because they will not be running empty coaches and empty cars across the continent. They will be loaded with passengers and with the goods that the energy of our people produce.

In conclusion, I will state that "postalization of transportation" will restore the railroads to their proper place in our economic life and will give to the people the social and economic equilibrium they are entitled to. It will abolish distance as a rate-making factor. It will equalize the transportation charges throughout the Nation. It will decentralize population. It will reduce the cost of living to the consumers and increase the price to the producers of our agricultural and manufactured products. I am confident that postalized transportation is near at hand.

Martin Reviews Session

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, the era of rash and reckless experimentation is ended. America again is seeking the paths of orderly progress under law.

In the 1938 campaign the Republican Party promised to check one-man government, stop rubber-stamp legislation, and restore constitutional processes in national administration. These pledges to fundamental Americanism have been substantially redeemed.

Fourteen specific accomplishments under the banner of honest liberalism testify to sincere Republican cooperation with the real Democrats in the fight to save America from the New Deal, as follows:

(1) Against the spendthrift leadership of the administration, Congress forced at least a beginning toward economy and common sense in Federal finances.

(2) Under Republican leadership, Congress turned back a New Deal proposal to raise the national debt limit above the existing statutory ceiling of $45,000,000,000 and later rejected emphatically the $3,800,000,000 spend-lend program, which sought to evade the limitation upon the national debt. As a part of this broad economy movement, Congress once more forbade additional expenditures on the crackpot Florida ship canal.

(3) Under aggressive Republican leadership, in both the Senate and House, Congress turned back the administration's attempts to pledge American involvement in European power politics. We supported adequate American national defense by land, sea, and air forces.

(4) In the face of determined administration resistance, Congress forced a measure of tax revision to relieve business of crippling punitive levies and established a special recess investigation to recommend general tax codification to the next session.

(5) After more than 2 years of study, Congress forced careful revision of the social-security program to eliminate the

fraudulent full-reserve plan in favor of a pay-as-you-go scheme as consistently demanded by Republicans. The new schedule of benefits eventually will stop diversion of the pay-roll tax receipts to general Government spending. By freezing the pay-roll taxes at the prevailing 1 percent level, hundreds of millions of dollars in future taxes have been saved to both labor and industry.

(6) Congress limited in some degree subsidized Government competition with private enterprise in electric utilities, and has instituted honest systems of audit and accounting to keep taxpayers informed of real costs in the future.

(7) We exposed and partially reformed the vicious political manipulation of W. P. A. work relief by the New Deal patronage racketeers.

(8) Against militant opposition, we aided materially in passing the Hatch bill, reinforcing the merit principle in civil service and prohibiting electioneering by all Federal pay rollers.

(9) We enacted legislation to curb the spread of hateful alien communism and fascism, strengthening the mandatory deportation laws and removing much discretionary power in this field from the coddling authority of the Labor Department.

(10) In the Government reorganization bill we sustained the time-tested constitutional principle of checks and balances, eliminating many proposals for dangerous powers of dictatorship.

(11) In the face of persistent evasion of administrative responsibility, the House insisted upon a thorough investigation of the National Labor Relations Board.

(12) House Republicans urged a formal congressional inquiry into the damage caused to American industry and agriculture by the so-called reciprocal trade treaty program. The Roosevelt-Hull policies of free trade, as now linked to the mutually exclusive policies of export subsidies, dumping, barter, and discriminatory import quotas, are contributing largely to the utter demoralization of international trade.

(13) Congress fought hard to reestablish the fundamental Republican principle of sound money by a return of all monetary powers to Congress where, under the Constitution, they properly belong.

(14) A special committee of House Republicans surveyed the so-called emergency powers of the President, and charted in detail the course forward to a resumption of balanced representative government.

In proportion as Congress reasserted its legislative independence, business confidence began to show some signs of revival. Today the administrative failures and confusions of the New Deal are the only obstacles in the path of solid and sustained business recovery.

Pump priming is a demonstrated illusion. Now in the seventh year of Federal squandering, we still have 10,000,000 unemployed; farm prices are at bankruptcy levels; our export market for farm products still is diminishing; and our rich home market is being flooded by an increasing tide of low-cost industrial and agricultural products from abroad. Under the New Deal's misguided policies of internationalism and free trade the vaunted American standard of living is being lowered steadily for all our people.

A Republican resolution to require a saving of 10 percent on all departmental appropriations for the current fiscal year was received by administration spokesmen with only a jeer. The seventh New Deal deficit on July 1 carried the national debt above $40,000,000,000, or double the 1933 total. New appropriations for the fiscal year 1940 aggregate almost $13,000,000,000, or approximately three times the annual Republican average of the previous decade.

Every congressional effort to amend existing trouble-making laws in the interest of order and stability in our labor relations have been blocked by the administration.

At the beginning of the session I pledged the Republican minority to work constructively and not be simply a party of criticism. We have kept that pledge. We have fought for economy and sanity in government, to keep the country out of involvements which would lead to war, for sound money, and to restore to Congress powers given to it under the Constitution. Yet we have not hesitated to support sound measures brought forward by Democrats.

Encouraged by growing popular support for our constructive policies, Republicans in Congress pledge a continuance of this fight for fundamental Americanism. In session and out we will battle New Deal socialism at every step of the road.

The people of the United States are tired of hit-or-miss government. The country wants to get out of the red and back to work. It wants to try honest bookkeeping, honest politics, and honest Americanism for a change.

The Will of America

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SPRINGER. Mr. Speaker, during this session of the Congress much has been said on the one great question which confronts the American people—the question of unemployment. That is the one vital matter which is now before the people which gives cause for great worry and much concern. Another question of like importance presents itself as we scan the governmental horizon, which is: "How long can the people of our Nation continue to advance their private capital, intended for use in some profitable enterprise which would be helpful to our recovery, in the payment of taxes and other burdens imposed by our Government and our country continue to survive?" The answer is entirely concealed and the proper response is a myth. However, we do know the record of the past, which reveals that the huge sums of money which have been so ruthlessly expended by our Government have aided our unemployment only temporarily, and when the "shot in the arm" ceased to be effective we were left in a much worse state than that in which we had been before the spending started.

We quite well remember the slogan which was broadcast some 7 years ago which had an express appeal to the people, "Out of the red with Roosevelt." That was one of the campaign promises upon which the President went before the people seeking their suffrage, and with that slogan, which was a covenant with the people, he was elected to the Presidency in 1932. Seven long years have passed since we heard that slogan—"Out of the red with Roosevelt." Let us analyze our Nation's stock since we heard that glittering gem of campaign vernacular; let us see where we are today.

Mr. Speaker, when the President assumed office in 1933 he had boldly stated throughout the length and breadth of our land that he would "cut the expenses of Government at least 25 percent"; and the people were assured, by the President, that "we would start out of the red with Roosevelt." But 7 years after we find that we did not even "start out of the red with Roosevelt" but we did "start in the red with Roosevelt," and we are still going "in the red with Roosevelt," and, with reluctance, we are constrained to say, we will continue to "go in the red as long as Roosevelt holds the reins of Government." Why are we forced to this sad conclusion? Because it has been conclusively proven that the President is a "spender" and that he has apparently forgotten his fellow countrymen, which includes every class of our people, and he pursues his self-inaugurated spending program, which is rapidly approaching the goal of eventual bankruptcy for our Nation, and which, when it occurs, will surely carry all of our people over the precipice to disaster. In other words, we have "gone in the red with Roosevelt" to the tune of more than twenty billions of dollars—that is, as you know, twenty thousand million dollars—a sum so stupendous we cannot contemplate it.

May I observe that our people have been impoverished by this wild ride we have been taking to keep "Out of the red

with Roosevelt." And, pray tell me, who will pay for this folly of the President? The answer is—the future generations.

What is the result of the President's promise to the people that he would cut expenses and reduce the cost and expense of government and in every department thereof? Today we have a national debt of staggering proportions—almost $45,000,000,000; we have approximately 13,000,000 people who are unemployed; we have the taxes which have been imposed upon the people of many and various classes—both hidden and direct—which are sapping the life from agriculture, business, and industry, which taxes are taking 25 cents out of every dollar; the governmental impositions of taxes, regimentation and control, which have been heavy indeed, have stifled initiative and progress which under a program of economy would be creating employment; 26,000,000 men and women are living at the cost and expense of our Government, which is about 1 out of every 5 of our people; every farm, factory, and business, regardless of its classification or magnitude, now feels the fumbling hand of our Government; and every citizen, regardless of his or her condition of servitude, now hears the repulsive voice of the tax collector or feels the clammy hand of the hidden tax extractor reaching into the pockets to remove more money with which to pay the stupendous cost of government. This is 7 years after he started—7 years after the slogan was heralded before the people, "Out of the red with Roosevelt."

Mr. Speaker, I shudder when I think of the future. Quite well do we realize that the children yet unborn, who have had no voice in creating this vast debt, will have the great burden of payment thrust upon them as a heritage; their parents have had no part in creating this unforeseen mortgage upon the flesh and blood of their kith and kin—yet all must pay. This vast debt which is so ruthlessly forced upon the people is the "President's folly"—a folly which is so serious we can contemplate the outcome.

May I suggest that when our own Government enters into the direct financing of activities which are private in character, and such a plan of financing is continued, the inevitable end will be that our Government will at least control those activities, if not in fact entirely own them. To put it in other words, when our Government undertakes to create wealth by using its own credit for such purpose, and at the rate of three or four billions of dollars each year, and if the work is perfectly done, then our Government will acquire productive enterprise at that same rate each year. What will be the ultimate result? Over a period of years our Government would come to own most of the productive business in our country. When our Government takes over production and entrenches itself beyond possible removal, then we will have the same conditions which exist in Russia, Italy, and Germany. Let us remember this: It is much easier to get into that condition than to get out of it. When the dependence of business and employment is upon our Government, then the Federal spending will become greater. While almost every business sells a part of its product to our Government or to concerns which produce for our Government—therefore the spending of Federal money becomes a whip over all business in our country.

I am convinced, Mr. Speaker, that the present spending plan is wrong. Instead of promoting Government spending and encouraging the monopoly and control which inevitably follows, we should encourage and protect private business and industry and the employment of private capital with which to finance the same; this will assure the employment of labor in that particular community, and the unemployment situation will realize relief to that extent. Another, and a most cogent reason, our Government must not engage in business or industry in competition with our own people—either financially, directly, or indirectly. Business and industry, which include agriculture, need protection, encouragement, and the cooperation by our Government—not the spending of Federal money, which is impoverishing our people.

May I further suggest that the making of secret treaties, with unknown trade relations as a part, should be discontinued by the President, and his assistants; all treaties should be open and notorious—the people should know them. All business and industry should be fully protected against the inrush of competitive products from abroad which, produced by cheap labor, flood the shelves of our stores and markets and are offered to the buying public at a proportionately small cost, all of which stifles local business and industry which is maintained by labor at a higher scale of wage.

We should become aroused as a people. We have a signal duty to perform in restoring our constitutional system of free enterprise and to preserve the personal liberty and freedom of every American citizen. We cannot spend our way into prosperity—we must earn it by the sweat of the brow. We cannot continue to "go into the red with Roosevelt"—that plan is destroying the opportunity of every American citizen. We must aid the unemployed in securing employment, not on a dole or inadequate wage from the Government, but by stimulating industry that the unemployed may secure substantial employment in private industry at a substantial wage. We must ever sustain the American way by maintaining liberty and freedom as we have known it—we must stop governmental regimentation and control. We must build the will of America to go forward to greater progress in the future.

Air Corps Procurement

EXTENSION OF REMARKS
OF
HON. DOW W. HARTER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. HARTER of Ohio. Mr. Speaker, it is most unfortunate Congress adjourned before the House of Representatives acted upon S. 2868, a bill to facilitate the procurement of aircraft.

This bill, S. 2868, passed by the unanimous vote of the Senate, is identical with H. R. 7267, a bill to facilitate the procurement of aircraft which has received the favorable consideration of the Committee on Military Affairs of the House.

The Chief of the Air Corps, General Arnold, and the War Department are very insistent that if they are to comply with the mandate of Congress and increase the number of planes to some 5,500 by June 30, 1941, they must have legislation that will permit them to make awards to several bidders upon the same competition if the overloading of certain plants is to be avoided.

Early in the consideration of legislation of this character that would accomplish the purposes of the Air Corps, a bill was introduced that would permit the negotiation of contracts for the purchase of aircraft for the ensuing 2 years.

Your committee being familiar with the progress that has been made in the acquisition of superior aircraft having far greater performance ability under the system of competitive bidding which has been rigidly adhered to since 1934, was extremely loath to permit the procurement of material for the Air Corps except under free and open competition. Therefore, the committee refused to recommend a bill that would permit the negotiation of contracts.

After considerable study the committee did draft and approve H. R. 7267, which is here in the form of S. 2868, which has, as I say, received favorable consideration by the Senate. Under the terms of this bill the same competitive methods would be used as has been the case in the past. Permission, however, would be given with respect to contracts awarded prior to July 1, 1941, to divide the contracts where, in the opinion of the Secretary of War or Secretary of the Navy, it would be in the interests of the national defense to make such multiple awards dividing the planes to be purchased among

the first and/or second and/or third lowest responsible bidders who can satisfactorily perform the work or service required to the best advantage of the Government. This will permit a division of certain contracts where, if the award was made to the lowest responsible bidder that can perform the work or service required to the best advantage of the Government, it would result in the overloading of a certain factory or factories, to the end that aircraft intended to be purchased may be delivered within the time, namely, July 1, 1941, specified for the carrying out and completion of our expanded Air Corps program.

You will note that under existing law the Air Corps Act of July 2, 1926, awards are not made necessarily to the lowest responsible bidder, but they are made to the lowest responsible bidder that can satisfactorily perform the work or service required to the best advantage of the Government. In other words, Congress appreciates that in aircraft the cheapest is not always the best, and procurement officials are controlled not by prices alone, but by quantity, performance, times, and rate of delivery; and, as we have stated before under this measure, split awards will prevent the overloading of a plant or plants. Most of the boards and commissions that have considered aviation and its development and have gone into the subject thoroughly have recommended either a form of negotiated contract, properly safeguarded, or the splitting or making of multiple awards as provided in this bill.

The Federal Aviation Commission, sometimes called the Howell board, which made a most comprehensive study of military and naval aeronautics, made this recommendation:

> When purchases are to be made as the result of competitive bidding, the Secretary of War or Secretary of the Navy should be authorized either to award a contract for the whole quantity sought to the bidder who can best perform the work or to divide the order among two or more bidders if that be in the best interests of the Government (Report of the Federal Aviation Commission, p. 186, January 1935).

I might say that when planes and accessories are purchased in considerable quantity, as will be the case in the carrying out of the present program of expansion, unit prices do not change materially when we purchase 75 to 100 planes or more of a certain type and kind. The bill specifically says "that no awards shall be made at prices in excess of those offered by the bidder," and as practically all of the bids are in for the additional planes there is no possibility of collusion among the bidders, and it is believed that where a division of awards is made procurement under this method will cost the Government little, if any, more and, of course, will result in far more prompt deliveries; moreover, it will make strong sources of supply available for the production of the most-needed type of military aircraft.

Through the exercise of sound discretion in utilizing the provisions of this act, the Army and Navy should have at all times three or more competing firms fully tooled up and adequately equipped to produce highly satisfactory planes in the several classifications of pursuit; attack; light, medium, and heavy bombers; and basic training and basic combat planes.

This bill was originally drafted to cover the needs of the Army Air Corps. Since its introduction it has received the favorable comment of the Navy, and at the request of the chairman of the Naval Affairs Committee of the House of Representatives, amendments to the bill were prepared which will make its terms apply to Navy procurement of aircraft as well. This legislation is necessary now. Its enactment should not be delayed. Twice already during this session has the Congress directed the procurement of the augmented Air Corps program within the next 2 years. Our Air Corps says it doubts its ability to complete that program unless in some instances it may make the multiple awards authorized by this bill. The responsibility will be that of the Congress if we fail to give the authority which the War Department deems necessary to carry out the program.

The bill provides that the Secretary of the Department concerned in each case in which multiple awards are made shall immediately upon the execution of such contracts make a report to Congress setting forth the articles purchased, the prices paid therefor, the name or names of each bidder, and of each contractor receiving a contract, and the particular reasons for awarding each of such contracts. It also provides that the act should be applicable to awards of contracts upon which competitive bidders have been heretofore requested or received, but as a result of which contracts have not been awarded. This will cover most of the purchases to be made.

We sincerely hope the failure to enact this bill will not retard our Air Corps expansion. If delays do ensue they are the responsibility of those who refused unanimous consent for the consideration of the bill.

Republicans Offer No Constructive Suggestions—Continue Their Policy of Destruction in an Effort To Destroy President Roosevelt

---

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. COCHRAN. Mr. Speaker, in what I am about to say I propose to recall events of the recent past as so many omens of the future. According to the press the opponents of Franklin D. Roosevelt, including the minority leader in the House, Mr. MARTIN of Massachusetts, are rejoicing at what they deem a victory for obstruction. I am of the opinion the vast number of Americans whom his legislative program would have served will have cause to regard this triumph of the Republicans as a calamitous defeat for the whole Nation.

On the Republican leaders in Congress and the responsible directors of their party rests the responsibility of denying to the people what the President sought to provide and what they needed and expected as guaranties against the loss of gains already achieved in behalf of economic recovery and social progress. The record places that responsibility upon them. This Republican opposition to the President's proposal was prompted, not by championship of their own program, for they have none, but was inspired by their subservience to the minority whom they have always obeyed and aided.

The Republican Members of this Congress, as I have said, were without any guidance or suggestion from their party, for neither their central organization nor any of its subdivisions has any program, plan, or procedure for meeting the national needs and demands.

As long ago as November 1937 the officials of the Republican national organization delegated to a committee of 132 the task of formulating a creed for their party. Apparently this task continues to be impossible of performance by the original group, because its number has been enlarged.

Dr. Glenn Frank, of Wisconsin, was chosen to head this band of explorers. All the while the Republican wreckers have been at work to hinder and halt the legislation which the President advocates, which the farmers, the wage workers, and the owners of industries and businesses await as a benefit to them all, there has been no proffer of a substitute from any Republican source.

Only recently Dr. Frank, whose statements, by the way, do not match his name, has given a partial but not informative expression of his committee's hopes. Its report, he announced, would be ready by July or August of this year. Sometime in September and December this report will be presented to the Republican National Committee, but not apparently to the public, including its Republican constituents. A whole section and what to innocent bystanders would appear to be the most significant of its contents will be held in confidence until 1940, says Dr. Frank.

I speak seriously when I describe this confidential section as important. Dr. Frank furnishes the reason for my seriousness. He tells me as one of his hearers that one part of his committee's report is to be an "audit," which I take to mean also an appraisement of the New Deal. That portion of the report, he indicates, may become known to the public, including Republicans in Congress, before June 1940. But the secret section, Dr. Frank reminds the public, will be in the nature of a confidential report for the resolutions committee at the next Republican National Convention. This suppressed report to the Republican convention may never become familiar to the world at large, for neither Dr. Frank nor any of his committee can assure its disclosure by the resolutions committee of his party's next national convention.

The resolutions committee of a political convention is, of course, the body which frames the platform—the declaration of principles and proposals which the voters are later solicited to ratify by their ballots. We must then wait a year to learn, if ever we be enlightened, just what the Republican Party will say by way of acceptance or rejection of the present administration's accomplishments and objectives, and for the same period we must remain in ignorance of Republican purposes and promises with respect to further legislation affording assistance to agriculture, labor, business, relief for the jobless, security for the aged, and protection of our international interests.

I emphasize these facts because of their relation not only to the future but also because of their illumination of recent events. I recount them, too, not only because they explain the conduct of Republicans in this Congress but, likewise, that the American people may be acquainted with the utterly irresponsible minority that has postponed and imperiled the President's additional program in behalf of a surer, safer, and happier future for millions of men and women.

Remember that during the whole life of this Congress and longer the Republican Party has, by its actions, confessed its inability to match or to improve the President's program. No Republican in Congress could truthfully assert that in opposing a single Presidential recommendation he was following the mandate of the Republican Party.

There was no such mandate, and according to Dr. Frank there will be none until June 1940, if ever. There was but one intent in the minds of the Republican wrecking crew in this Congress. That was to discredit the President by defeating the measures he desired enacted for the Nation's good. It was obviously their delusion that if they could make him seem more offensive than they have become, they might be restored to power by the next election. So it was that they have advanced no program; they have made no honest effort to equal or exceed the wisdom and worth of his recommendations. No; they have had resort only to tactics of destruction. The interests which dominate the Republican organization naturally would sanction nothing more progressive and beneficial than the President's proposals for the well-being of the majority, so there was but one recourse for the Republicans in Congress. That was to attempt to deprive him of the confidence and gratitude of millions he had served so well in the past and would benefit now. "Make Franklin D. Roosevelt hateful to the people and they will forget their older hate of us." That, in a sentence, appears to be the only clue to the Republican record in this Congress.

I have cited Dr. Frank's announcement that his committee for the cure of Republican confusion is to undertake an "audit of the New Deal." Presumably, that examination of the books of the New Deal will comprise an evaluation of what it claims as assets.

We ought to be allowed to take for granted that the auditors will determine which of these assets are valuable and which are worthless; which should be saved and which should be scrapped. That this task involves great difficulties for the committee is already made manifest by one of its members—namely, Mrs. Hannah Durham, of Allentown, Pa. Addressing a session of the Pennsylvania Council of Republican Women, only a few weeks ago, Mrs. Durham made a declaration of the obvious truth, repeatedly made plain by official Republicandom here in Congress and elsewhere.

The party is divided—

Proclaimed Mrs. Durham—

on four planks in the 1940 platform, as follows:

Shall control of W. P. A. be turned over to the States with the Federal Government still footing the bill?

Shall tariffs be raised so high as to amount to economic isolation?

What is neutrality, and what foreign policy is best calculated to keep us out of war?

Shall subsidies be continued to western farmers in the face of a general program calling for abandonment of subsidies?

This good Republican lady's utterances clearly show the situation in the Republican Party today. For example, we are left in doubt as to the Republican Party's attitude as regards agencies of relief recovery and permanent activities of the Government, besides W. P. A. If by any chance the Republican Party is placed in charge of the Federal household, will it retain or relegate such institutions as the Federal Deposit Insurance Corporation, the Home Owners' Loan Corporation, the Public Works Administration, and certain others to which I shall advert later?

This Republican woman was in no deeper doubt or ignorance than her Republican brethren in Congress show themselves to be. They have evidenced no conviction as to what they would do if they instead of President Roosevelt and the Democratic administration were in control of the Government. They have no information of their own and they can obtain none from the owners and managers of their party before next June—if even then. For the official recipe for the cure of Republican confusion will not be available sooner.

Meantime, I shall presume to inform the Republicans in Congress and those in possession of their party what is certain to confront them in 1940. That fact is that they will be repudiated once again. The reasons for that repudiation are supplied in the questions which I shall ask them now and which the many millions of voters—men and women—in every section of the country will put to them. The Republican Party will be condemned for its sins of commission and omission. It will be punished by defeat because, without desire or a way to legislate for the Nation's well-being, its representatives in Congress have arrayed themselves against every one of the President's undertakings in behalf of the farmers, the wage workers, the poor, and the hungry, of the children and the youth, and of industry, upon whose prosperity most of these depend for employment and livelihood.

Now, for a few inquiries to which either the Republicans in Congress or their party's committee on program may make reply.

First. Will the Republican Members of Congress and the officials of the Republican national organization say whether they condemn the various agencies created by the New Deal are inimical to the public interest? Whether, if they are returned to power, they will disband these? Will they dare to tell us now or before November 1940 that they will discontinue the Federal Housing Administration, the Home Owners' Loan Corporation, the Work Projects Administration, the Public Works Administration, the Security and Exchange Commission, the Communications Commission, and the wage and hour agency that is getting the unpaid an existing wage?

Will they end the existence of the Civilian Conservation Corps, whose direct beneficiaries are many thousands of our youths and whose indirect beneficiaries are the parents and dependents?

Will they withdraw the Federal help that has been given to farmers in every region—north, south, east, and west?

Will they, for instance, scrap the Farm Credit Administration?

Will they have the candor and courage to say whether they will no longer permit the Federal Government to hasten and assure recovery in the very act of saving millions from wretchedness?

Will they put an end to these expenditures which every county in the United States has been benefited by permanent public improvements?

Will they withhold from cities the outlays that are giving them new schools, new sewers, bridges, streets, and parks, and at the same time furnishing jobs for the unemployed and purchasing power that is a boon to the small merchant and to the farmers with goods and products to sell?

Will these Republican spokesmen say whether they will notify the municipalities of the United States that they will receive no further Federal help for the care of their indigent citizens?

Will they repeal the act providing for retirement for a million railroad employees?

Their obstruction of the President's program during the months of this Congress will be remembered by all the Americans it would have served. These men and women will know how to judge and punish the candidates of the party which tried to ruin them in its stupid but vicious war against Franklin D. Roosevelt. These millions have been made the victims of this Republican vengeance. The suffering of the millions will remind them of the cause. They will know how to choose between the man who gave them sympathy and assistance and those who penalized them to gratify dislike of him.

These voters will have no need to await the so-called audit of the New Deal and the proclamation of principles by Dr. Frank's committee. They are already well aware that the Republican Party is today what it was in the era of Hoover, when it lent a billion dollars to bankers, including a former Republican Vice President, and only $60,000,000 to the farmers and when it provided but $100,000,000 for the 14,000,000 unemployed and destitute.

The Republicans in the places of leadership but without ability to lead are still as unable as they were in 1930 to perceive that there can be no prosperity for banks or other corporations unless wage workers and farmers have incomes. The proof of that, if it needs corroboration, is that in spite of this Republican partiality and liberality to bankers, thousands of banks were ruined and the rest were saved by one of President Roosevelt's first acts after taking office.

Banks and general business need the legislation which Republican reaction killed in this session of Congress. They would have profited to the extent that wage workers and farmers gained by the measures which have been bludgeoned to death. Fortunately for us all, including the bankers and industrialists, the surviving aids and agencies which the present administration brought into being are operating to prevent a repetition of the catastrophe that threatened government itself in 1929.

The vast majority of the American people are conscious of their obligation to President Roosevelt. They are equally aware of the disregard shown them by Herbert Hoover and his colleagues. They will therefore be competent to put the proper construction on the "audit" and the principles issuing from Dr. Frank's committee and the Republican national organization if these should ever merge.

The Republican wreckers in this Congress then will have to answer for more than their hatred of the President and the hurt they have done to his program. They have injured many thousands of members of their own party. They have jeopardized the children and the aged. They have increased the difficulties of every class of Americans. Their acts of obstruction will be contrasted with the President's endeavors for reconstruction. They will be brought to judgment rather for the harm they have done to the people than for the hatred they have vented against the President.

Yes; there will be an audit of the New Deal by the people of the United States and there will be an appraisal of the Republican Party and its Senators and Representatives. The decision of these millions of auditors will be given in November 1940. It will be that the Republican Party is just as bankrupt as was the United States that day that Herbert Hoover was driven from office by a hurricane of ballots in November 1932.

Social Security

EXTENSION OF REMARKS

OF

HON. RICHARD M. DUNCAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DUNCAN. Mr. Speaker, probably more people are interested in the Social Security Act than in any other law in our land.

It directly affects the everyday life of millions of our citizens and provides security for them when they have reached the age of 65 years and have retired from gainful occupations.

It also provides for their widows and orphans and dependents should they die before reaching retirement age.

In view of that widespread interest, I thought it would be desirable to place in the RECORD, under leave to extend my remarks, a concise, simple statement of the benefits of the act as amended by this Congress.

QUESTIONS AND ANSWERS ON THE SOCIAL-SECURITY AMENDMENTS

Question 1. What changes do the Social Security Act amendments of 1939 make in the Social Security Act?

Answer. Generally speaking, the amendments extend and liberalize the scope of the act and increase Nation-wide buying power by liberalizing old-age insurance benefits, providing survivorship benefits, and allowing substantial tax savings under the old-age insurance and unemployment-compensation provisions.

Question 2. How do the amendments liberalize the provisions of the Social Security Act?

Answer. Under the old-age insurance provisions, monthly benefits will be paid earlier, more liberal benefits will be paid to those now nearing retirement age, supplementary benefits for wives' and survivors' benefits are added, coverage is extended, and pay-roll taxes kept at their present level; under the unemployment-compensation provisions tax savings are provided and coverage extended; under the public-assistance and health and welfare provisions of the act more liberal Federal grants to the States are made available to encourage expansion of these programs.

Old-age insurance

Question 3. What was the basis of the far-reaching changes made in the Federal old-age insurance program?

Answer. These changes are designed to provide greater security for the family unit and to make available more adequate benefits to those already close to retirement age.

Question 4. How do the old-age insurance amendments strengthen family security?

Answer. Since the family is the social unit, and security for the breadwinner must include those dependent upon him, the amendments establish a system of supplementary benefits for the wives and children of annuitants and survivors' benefits for the families of those who die.

Question 5. How do the amendments give older workers more liberal benefits?

Answer. By figuring benefits on the basis of a worker's average wages, rather than his accumulated total wages, by paying benefits earlier than originally scheduled, and by providing supplementary benefits for those dependent upon him.

Question 6. When will monthly benefits become payable under these amendments?

Answer. Beginning January 1, 1940, monthly benefits will be payable to qualified workers and to the survivors of those who die.

Monthly retirement benefits

Question 7. What kind of benefits will a qualified worker get under the amended old-age insurance program?

Answer. Monthly retirement payments will be paid to qualified persons plus supplementary monthly benefits to take care of his wife and minor children.

Question 8. What qualifications must an insured worker have to receive monthly retirement benefits?

Answer. To qualify for monthly benefits a worker must be (1) 65 or over, (2) have retired, and (3) be a "fully insured" worker.

Question 9. What is a "fully insured" worker?

Answer. In general, a "fully insured" worker is one who has worked in covered employment for a period of time equal to half the period elapsing between 1936 and age 65. The minimum period of covered employment required is 6 calendar quarters, and the maximum is 40 calendar quarters.

Question 10. How is a worker's benefit determined?

Answer. A worker's monthly benefit is determined on the basis of his average monthly wage in covered employment. The benefit is computed in the following way: 40 percent of the first $50 of average monthly wages, plus 10 percent of the remainder up to $250 per month.

Question 11. Does the number of years a worker has been in the old-age insurance system increase his benefit?

Answer. Yes. After the benefit due him on the basis of his average wage has been figured, 1 percent of his benefit is added for each year in covered employment during which he earned $200.

Question 12. Under what circumstances will an annuitant's wife get a benefit?

Answer. The wife of an annuitant, if she is over age 65, is entitled to receive monthly benefits under the new provisions.

Question 13. What does a wife's benefit amount to?

Answer. The wife's monthly benefit will be an amount equal to one-half of the monthly benefit paid to her husband.

Question 14. Under what circumstances do an annuitant's children get benefits?

Answer. The children of an annuitant, if they are under 16 or under 18 if regularly attending school and are supported by him, are entitled to receive monthly benefits.

Question 15. What does a child's benefit amount to?

Answer. A child's monthly benefit is equal to one-half of the monthly benefit paid to its parent.

Survivors' benefits

Question 16. Under what conditions are benefits paid to the survivors of a worker who dies?

Answer. Monthly benefits are paid to the surviving family of a deceased wage earner who was either fully insured or currently insured.

Question 17. How does a "currently insured" worker differ from a fully insured worker defined in the answer to question 9?

Answer. The status of having been "currently insured" applies only in the case of workers who have died and who may not meet the more stringent requirements for fully insured status. A "currently insured" individual is one who has worked at least half the time during the 3 years prior to his death.

Question 18. To whom will monthly survivors' benefits be paid?

Answer. Under the amendments, a widow 65 or over, younger widows with minor children, and aged dependent parents may be entitled to survivors' benefits.

Question 19. Under what circumstances does a widow get a benefit?

Answer. A widow, aged 65 or over, of a fully insured worker, gets monthly benefits; also widows, regardless of age, of fully or currently insured workers, who have minor children in their care, receive benefits until the youngest child reaches age 16, or 18 if regularly attending school.

Question 20. What does a widow's benefit amount to?

Answer. A widow will receive as a monthly benefit an amount equal to three-fourths of the monthly benefit that would have been due her husband on the basis of his wage record at the time of his death.

Question 21. In what cases do children receive survivors' benefits?

Answer. Children who were dependent for support upon the deceased wage earner may receive monthly benefits until they reach age 16, or up to 18 if regularly attending school.

Question 22. What does a child's survivorship benefit amount to?

Answer. A child will receive as a monthly benefit an amount equal to one-half of the monthly benefit that would have been payable to the wage earner at the time of his death.

Question 23. In what cases do parents get benefits?

Answer. Parents get benefits beginning at age 65 only under the following conditions:

a. The deceased worker was fully insured at the time of death.

b. No widow or minor children survive the deceased person.

c. They were wholly dependent upon the deceased worker at the time of his death.

Question 24. What does a parent's benefit amount to?

Answer. A parent will receive as a monthly benefit an amount equal to one-half of the monthly benefit that would have been due the wage earner at the time of his death.

Question 25. Under what circumstances does the amended program provide for lump-sum death payments?

Answer. If a wage earner, who was fully or currently insured, dies leaving no survivor entitled to a monthly benefit at the time he dies a lump-sum death payment will be made to the widow or widower, or children, or parents of the deceased, equal to six times the monthly benefit that would have been due. If no one of these is living, a payment covering the burial expenses will be made to the person who paid them.

Minimum monthly benefits

Question 26. What will be the minimum monthly payment under the new program?

Answer. Ten dollars is the minimum payment. If an individual's benefit amounts to less than $10 on the basis of his wage record, he will nevertheless receive $10.

Payment of benefits

Question 27. Does a man have to retire at 65 to get monthly benefits?

Answer. A man does not have to retire at 65 to get monthly benefits for which he is qualified, but his benefits will not begin until he does retire.

Question 28. How long do monthly benefits continue?

Answer. Monthly payments to a retired wage earner and his wife and to a widow over 65 continue for life. For minor children until age 16 or age 18, if regularly attending school, and for a young widow with children, until the youngest child becomes 16 or 18.

Question 29. Will monthly benefits be paid to a man who reenters covered employment after having received benefits for some time?

Answer. He will not receive monthly benefits for any month in which he earns $15 or more in covered employment, but when he stops work or earns less than $15 his benefits will begin again.

Question 30. If an individual expects to retire at a certain date, can he file application for benefits beforehand?

Answer. The act provides that 3 months before an individual expects to be entitled to benefits he can file his application.

Question 31. If a man has already received a lump-sum settlement, can he qualify for monthly benefits?

Answer. The fact that a man has already received a lump-sum settlement will not affect his right to monthly benefits if he qualifies for them. However, the amount of his settlement will be deducted from his monthly benefits.

Question 32. Can a man who became 65 before January 1, 1937, qualify for benefits?

Answer. If he works in covered employment after January 1, 1939, and is employed for at least six quarters, he can qualify for monthly benefits.

Question 33. What is the earliest date on which a man who was over 65 on January 1, 1937, and regularly employed can qualify for payments?

Answer. If this man worked for the six calendar quarters beginning January 1939 and received at least $50 or more in each calendar quarter he could qualify for monthly benefits in the spring of 1940.

Typical examples of benefits under the old-age and survivors-insurance program

Question 34. If John Jones, who has been making $100 a month in covered employment since 1936, reaches age 65 late in 1939 and retires, what will be the amount of his monthly benefit?

Answer. John Jones will be entitled to a monthly benefit, beginning January 1, 1940, of $25.75 a month. This benefit would be figured in the following way: Since his average monthly pay is $100, he receives 40 percent of the first $50 of his wage, or $20, plus 10 percent of the remaining $50 of his pay, or $5. This would make a total of $25. In addition, there would be added 1 percent of his benefit for each year in covered employment in which he earned at least $200. Since John Jones worked 3 years, he gets an additional 3 percent of $25, or 75 cents, making a total of $25.75 which is his monthly benefit.

Question 35. If John Jones is married, what benefit would his wife be entitled to get?

Answer. If and when Mrs. Jones reaches age 65, she would be entitled to a monthly benefit equal to half of her husband's primary benefit. If her husband's benefit was $25.75 a month, she would get $12.88 a month, or a total for both of $38.63 a month.

Question 36. If Mr. Jones dies after having received monthly benefits for some time, what benefits would his widow get?

Answer. His widow at age 65 or over would be entitled to receive a monthly benefit equal to three-fourths of her husband's primary benefits, or $19.31.

Question 37. If Mr. Jones were to die before he had received any benefits, what protection would be available to his widow?

Answer. If Mr. Jones died a fully insured worker, his widow, at age 65 or thereafter, would be entitled to receive a monthly benefit equal to three-fourths of her husband's benefit. In this case where Mr. Jones' monthly benefit is $25.75, she would receive $19.31 a month for the rest of her life.

Question 38. Suppose Bill Smith, age 35, who has been earning $100 a month in covered employment since 1936, dies in February 1940, leaving a widow and two young children; what benefits could they get?

Answer. Mr. Smith's widow and two young children would be entitled to receive monthly benefits until the younger child attending school became 18. His widow would receive a benefit equal to three-fourths of his monthly benefit; in this case $19.31. Each of the children would be entitled to a benefit equal to half of his monthly benefit, or $12.88, making a total of $45.07 for the three. When the younger child reached the age of 18 Mrs. Smith's benefit would stop, but it would be resumed at the age of 65, when she would receive a monthly benefit of $19.31, or a larger amount if she had earned a larger amount in her own right by that time.

Question 39. If Dick Smith, who has been making $100 a month in covered employment since 1936, dies in January 1940, leaving no survivors other than his aged mother whom he has been supporting; could she receive any benefits?

Answer. Dick Smith's mother, if she were 65 or over, would be entitled to receive a monthly benefit equal to half of that due her son on the basis of his wage record. In this case his monthly benefit would be $25.75 a month. She would, therefore, get $12.88 a month for the rest of her life.

Wages end employment

Question 40. Does the full amount of wages earned in a year by a man count toward benefits?

Answer. Beginning with 1940, wages over $3,000 a year are not counted.

Question 41. Does an employee who earns $3,000 a year from each of several employers pay taxes on his total salary?

Answer. He pays taxes on his full salary; but at the end of the year he may file a claim with the Treasury Department and receive a refund of taxes paid on his earnings over $3,000.

Question 42. Do wages earned after age 65 count toward benefits?

Answer. The amendments provide that beginning January 1, 1939, wages earned after age 65 count toward benefits.

Question 43. What is meant by covered employment under the old-age insurance system?

Answer. In general, employment in industrial and commercial pursuits in the United States (and on American vessels after January 1, 1940) is covered by the old-age insurance program.

Question 44. What additional employment is brought under the old-age insurance system by the amendments?

Answer. The amendments extend old-age insurance coverage to certain bank employees, seamen, and wage earners over 65.

Question 45. How many people have been brought under the old-age insurance program by this extension of coverage?

Answer. These changes, it is estimated, extend coverage to about 1,100,000 additional people.

Question 46. What other changes in coverage have been made by the old-age insurance amendments?

Answer. Certain exemptions of employment have been clarified and others added. With regard to agricultural labor the exemption has been defined and further extended; the domestic-service exception has been extended to apply to a college club or fraternity, the exemption of State employment is clarified, family employment is now exempted, other exclusions added include services performed for fraternal benefit societies and other nonprofit institutions exempt from income tax, services performed in fishing on vessels of less than 10 tons, services of newsboys under 18, and services for foreign governments and their instrumentalities.

Financing old-age and survivor's insurance

Question 47. Under the new system how many people will be getting monthly benefits by the end of 1940?

Answer. Monthly benefits to retired wage earners will be paid by the end of 1940 to some 485,000 people, according to Social Security Board estimates. In addition, wives of annuitants and survivors of insured workers will get benefits.

Question 48. How much will be paid out in benefits in 1940?

Answer. The Social Security Board estimates that over $114,000,000 in benefits will be paid out next year.

Question 49. Where is the money obtained to pay these benefits?

Answer. The pay-roll tax levied on both employers and employees is collected and deposited in a trust fund in the United States Treasury. The rate of tax has been 1 percent since 1937, and the amendments "freeze" the tax at that rate for the next 3 years.

Question 50. How much will employers and employees save by the provision "freezing" the old-age insurance tax at 1 percent for the next 3 years?

Answer. It has been estimated that employers and workers will save about $825,000,000 in the next 3 years.

Question 51. Under the changed system is old-age insurance now financed on a full reserve basis?

Answer. No. The old-age reserve account is replaced by an old-age and survivors' insurance trust fund.

Question 52. How is the old-age insurance fund managed?

Answer. Congress will make annual appropriations equal to tax collections to the old-age and survivors' insurance trust fund, which will be supervised by three trustees.

Question 53. Who are the trustees of the fund?

Answer. The Secretary of Labor, the Secretary of the Treasury, and the Chairman of the Social Security Board are trustees of the fund. The managing trustee is the Secretary of the Treasury.

Question 54. In what type of security can the trust fund be invested?

Answer. The trust fund can only be invested in Government obligations or those guaranteed by the Government as to principal and interest.

Unemployment compensation

Question 55. Will employers pay a tax on their full pay roll under the amended unemployment-compensation provisions?

Answer. No. Only the first $3,000 an employer pays an employee for a year will be taxed under the unemployment-compensation provisions, beginning January 1, 1940.

Question 56. How much will employers covered by the unemployment-compensation provisions save by this amendment?

Answer. It is estimated that employers will save about $65,000,000 a year because of this amendment.

Question 57. What changes in coverage of the unemployment compensation tax provisions were made by the amendments?

Answer. The amendments bring in about 200,000 employees of banks, such as national banks and State-bank members of the Federal Reserve System.

Question 58. In what respect are the tax provisions for old-age insurance and unemployment compensation now identical?

Answer. The tax in both programs now applies to "wages paid" instead of "wages payable;" only the first $3,000 a year paid to an employee is taxed; and the coverage exemptions have been made more nearly the same.

Public assistance

Question 59. What contribution will the Federal Government now make toward State plans for old-age assistance?

Answer. Beginning January 1, 1940, the Federal Government will match one-half of State old-age assistance payments up to $40 per month for an individual, instead of $30 as before.

Question 60. What part of the administrative expense of States with old-age assistance plans will be shared by the Federal Government?

Answer. The amendments do not change the original provision that a Federal grant for assistance payments be increased 5 percent, the additional amount to be used by the State for administrative expense, assistance payments, or both.

Question 61. What amount of State payments under plans for aid to the blind will now be matched by the Federal Government?

Answer. The Federal Government will now match one-half of State payments for aid to the blind up to $40 per month for an individual.

Question 62. What contribution will the Federal Government make toward administrative expense for States with plans for aid to the blind?

Answer. The Federal Government will pay one-half of the administrative expense of a State plan for aid to the blind.

Question 63. How much of the assistance payments made by States under plans for aid to dependent children will be matched by the Federal Government?

Answer. The Federal Government will now match one-half of State payments for assistance, up to $18 per month for the first dependent child in a family and $12 for every other child in the same family.

Question 64. What contribution will the Federal Government make toward the administrative expense of States with plans for aid to dependent children?

Answer. The Federal Government will pay one-half of the administrative expense of a State plan for aid to dependent children.

Question 65. What is the age limit for payments to dependent children under approved State plans which will be matched by the Federal Government?

Answer. The amendments provide that the Federal Government will now match State payments to children up to the age of 18 who are regularly attending school; otherwise, only payments up to the age of 16, as provided in the original law, will be matched.

Other programs

Question 66. What changes are made by the amendments in the provisions of the act relating to maternal- and child-welfare services, public-health services, and vocational rehabilitation?

Answer. The amendments provide authorization for increased annual appropriations for grants to States of $2,020,000 for maternal and child-health services, $1,020,000 for services to crippled children, $1,562,000 for vocational rehabilitation, and $3,000,000 for public-health services.

Question 67. What is the purpose of this increased authorization for grants for the service provisions of the act?

Answer. Increased grants to States were provided to enable them to develop and further expand their programs for health and welfare services.

Federal Government Should Reimburse State of Ohio for Advancing Old-Age Pension Payment

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. JENKINS of Ohio. Mr. Speaker, on August 4 the House of Representatives passed H. R. 5118. This is a bill to authorize and require the Secretary of the Treasury to pay to the State of Ohio the sum of $1,338,160. This represents the amount that the Federal Treasury should have paid Ohio for its half of the old-age pension money required to pay the pension for October 1938.

The action of the House was unanimous. There were no dissenting votes. The Judiciary Committee of the House, which is composed of 26 of the best lawyers in the House, after extensive hearings, reported it to the House with a unanimous recommendation that the House pass it. When this measure was first presented to the Judiciary Committee some of the members of this committee were skeptical with reference to it, but when public hearings were had the committee immediately recognized the equities of the case and reported the measure to the House with a unanimous recommendation. In its report to the House the committee said:

> Your committee finds the equities in this case with the State of Ohio and recommends that the House pass H. R. 5118 so as to reimburse the State of Ohio for the payment that would in due course have been paid by the Social Security Board at the end of October 1938. There is no claim by the Board of any fraud or defalcation and the amount involved is not in dispute.

This bill is now on its way in the Senate, and I confidently believe that the Senate will pass it, and that when it is passed the President will append his signature to it in order to complete its legislative course. The bill has had the approval of the Judiciary Committee of the Senate and is now on the Senate calendar.

This measure in a way is an unusual one. Its unusual features arise from the fact that it deals with technicalities of administration. These are, however, overwhelmingly swallowed up by the equities involved in the case. In other words, right and justice push aside the little petty technicalities, and they should be permitted to bring relief to those who are entitled to it. Ohio is entitled to this money and red-tape regulations of bureaucrats should not delay this bill.

The social-security law was passed by Congress in 1935. It is beyond any question one of the most comprehensive measures ever enacted by any Congress. It reaches out in many ways and includes immediately many millions of people within its purview. It reaches out to help the aged and the blind and the unfortunate. For this reason, and many other reasons, those who administer this law should administer it liberally and not technically. Bureaucracy, with its disposition to grasp everything to itself, thereby enabling itself to

become stronger and stronger, is prone to forget justice and equity in an effort to perpetuate itself and make itself invincible. The sentiment and practices that make a small bureau develop into a large one are inherently selfish. The successful administration of the social-security law calls for sympathy. It deals almost exclusively with unfortunate people and with people that need to have their social and economic positions made more secure.

When the social-security bill was first considered in the Ways and Means Committee some permanent bench marks were set up. One of these bench marks was that it should be a dual system, the Federal Government and the State government participating. In the administration of old-age pensions and other titles of the bill which provided for Federal grants one of the cardinal principles was that the Federal Government should raise up certain standards with which every State would be compelled to comply. Likewise, it recognized in an emphatic way the inherent rights of the States. The philosophy of the old-age pension contribution was that the Federal Government would contribute its portion to the States if the States would cooperate by the enactment of uniform plans. In other words, the Federal Government, in order to get uniformity and stabilization, would match with the States what they would pay and would grant to the States the right to administer the law and to determine who should be employed to carry on the administration within the States and who should be eligible for the pensions. In other words, it would be the responsibility of the Federal Government to stabilize but it would be the responsibility of the State government to carry the pension to the individual.

In 1938 the Federal administration and the State administration in Ohio clashed purely over matters of administration. The Federal administration, under the law, has a right to expect of the State full compliance with the principles laid down in the social-security law as they tend to bring uniformity and stabilization of the program. Any open and willful violation by the State itself of any of these necessary prerequisites would, of course, justify the Government in withholding its cooperation; but when trivial matters of administration are the bone of contention, the Federal Government should look only to whether justice was being done to the individual recipients and should not seek to punish the State by reason of any failure of some official of the State to comply with every little trivial detail in administration. If the administration by the State was being carried on so that the intended recipient got his pension, the Federal Government should not strain at a gnat but should proceed to do justice.

When the Social Security Board withheld from Ohio the October payment for the year 1938, it probably had some provocation by reason of the misunderstanding between itself and the Governor of Ohio; still it should not have lost sight of the fact that the payment was not intended for the Governor's benefit, but was intended for the benefit of 110,000 recipients of old-age pension in that State. The misunderstanding between the Governor and the Board might have been as the result of fault on both sides. The Social Security Board are only representatives of the Federal Government, and their personal feelings should not bind the Federal Government any more than the personal feelings of the Governor of Ohio should be taken as sufficient consideration for the punishment of the people of Ohio. That there was little difference between the Social Security Board and the Governor of Ohio can easily be established from the record of the hearings before the Judiciary Committee. Pride of opinion about small matters heated their tempers and chilled their judgments. I repeat that these differences were due to the common frailties of humanity and should not be sufficient to thwart the even course of equity and justice between the people of the United States and the people of the great State of Ohio. Even if there had been a few small matters over which there could have been an honest difference of opinion, a million and a third is too large an amount to stake on a personal argument.

There was no financial embezzlement or personal dishonesty anywhere in this controversy. The great State of Ohio acting through its legislature had done everything that was expected of it. The people of Ohio did nothing wrong. For one man—the head of a bureau in Washington—to levy what in effect is a fine against the 8,000,000 people in the State of Ohio of $1,338,000 is not consistent with good Americanism and never was intended under the Social Security Act.

Justice will not be done until the treasury of the State of Ohio is augmented by the amount withheld from it by reason of the action of the Social Security Board in Washington. Congress of the United States created the Social Security Board. The Congress can tell its Board what it must do. The Congress of the United States is the real representative of the people. The Congress is really the people. As I have already said, the House of Representatives has spoken unanimously, without a dissenting vote. They have recognized justice and have dared to maintain it. I hope, therefore, that the Senate of the United States will appreciate the situation as the House has done and that the President of the United States will do the same.

I maintain in this matter that:

First. The Social Security Board can only withhold payments; that it cannot forfeit a monthly installment.

Second. The failure on the part of the State agency must be truly "substantial." This failure must be an invasion of the rights of the intended beneficiary and cannot be merely a failure of some routine procedure.

Third. Failure of State authorities to carry out regulations of the State law must be construed liberally by the Board. The Board's purpose and function is to carry the Federal Government's contribution safely to the hands of the intended beneficiaries. It is not a guardian of the actions of the State authorities. The State authorities are created and set up by the State law and are amenable to the people of the State.

Fourth. The social-security law provides in the first paragraph of section 3 that the payments from the Federal Treasury shall be on a quarterly basis. This implies that the Board should not concern itself with individual payments when considering initial payments. Adjustment of small routine errors should be made between the Federal and State departments in a routine way.

Fifth. Assuming that the Governor in some matters of administration was at fault, the penalty of total forfeiture of $1,338,160 is entirely out of proportion with the gravamen of the offense. The Board paid the November installment and every subsequent installment. There were no material differences between the methods of administration in November than in October, and Ohio had the same Governor in November as in October.

Sixth. There is no provision in the law that the action of the Board is in itself final. The findings of the Board are in no sense "a final order." The Board cannot declare a judgment. The Board itself did not consider its findings as final, because in its letter of September 30 it leaves the door open for the State to comply with its findings before the end of October 1938. In its letter to the honorable chairman of the Judiciary Committee of the House of Representatives, the Chairman of the Board states:

> Subsequent to the Board's finding every possible attempt was made to persuade the State to take action in effecting the necessary improvements so that it would not be necessary to withhold the grant for the month of October.

Seventh. The action of the Board in attempting to withhold or to forfeit this large sum of money is without precedent. There is precedent for the payment of this money as asked for in this bill. I refer to the Oklahoma case. The dereliction of the authorities in that State are much worse than those of the Ohio Governor.

I repeat that the equities are with the State of Ohio. Every Congressman from Ohio, regardless of politics, and the two Senators have favored this legislation. It is the universal sentiment of the newspapers in Ohio and the people

generally that payment should be made in order that justice shall prevail and equity be done. I shall press the matter vigorously just as soon as Congress convenes again in January.

Who Benefits by "Suppressing" the Bondholders' Committee Report?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SABATH. Mr. Speaker, the conspicuous efforts of a few Members to prevent the official refiling of the final report of the Select Committee to Investigate Bondholders' Reorganization has aroused the interest of the press and the public throughout the Nation. I wish to assure all those interested in the work of the committee, of which I had the honor to be chairman, that only parliamentary technicalities raised by some gentlemen have delayed this final report from becoming a public document before this time. Personally, I have never seen so much activity on the part of a few gentlemen to keep a committee report suppressed than I have observed since I announced to the House that the report was printed and ready for distribution. I am amazed especially since there is certainly nothing in the report about the gentleman from Illinois [Mr. CHURCH] or the gentleman from Missouri [Mr. COCHRAN], either directly or indirectly. Their solicitousness for the feelings or desires of persons whom our committee was compelled to investigate in the course of its duties is therefore most surprising to me.

I believe, however, that these gentlemen whose parliamentary tactics have succeeded in temporarily suppressing the report should be fair with the country and the House. Who or what is mentioned in the report that they desire should not be made public? Which banker, lawyer, judge, bond broker, real-estate promoter, insurance company, bondholders' protective committee, or other interest is mentioned that they desire stricken from the pages of our final report? What activity or conduct of the many persons or concerns we questioned and exposed during the course of our investigation into the defaulted real-estate-bond racket do they desire deleted from this document before they will withdraw their objections and permit the public to read the committee's findings? And what recommendations made by our committee in this report for legislation to prevent future misconduct with other people's money do they desire to keep secret by preventing the publication of this important and revealing document compiled out of the nearly 3 years' work of our investigating committee?

Mr. Speaker, right here and now I wish to state to both the gentleman from Illinois [Mr. CHURCH] and the gentleman from Missouri [Mr. COCHRAN] that I have no personal reason for publishing this voluminous report. I have no personal feeling in connection with the persons mentioned in the report. It cannot be possible, I am certain, that the two gentlemen whose parliamentary activity has delayed the filing of the report, object to the disclosures it contains about the Chicago Title & Trust Co.? Or do they desire me to strike out all references to the operations of the Amoskeag Co., of Manchester, N. H.? Or the Philadelphia company for guaranteeing mortgages, where the findings of our committee resulted in 12 persons being indicted by a Federal grand jury? Or the Missouri State Life Insurance Co.? Or the American Bond & Mortgage Co., the S. W. Straus Co., the Harley-Stuart Co.? Or do they want all references to certain receivers, Federal judges, and others stricken from the report? In all fairness, Mr. Speaker, and in the interest of the public, particularly the hundreds of thousands of people who lost their entire life savings invested in real-estate bonds through the manipulations of "protective committee" racketeers, the gentlemen should take a copy of this final report and advise me what part they desire eliminated so the public will at least get those portions of the truth which the gentlemen will agree to in order to withdraw their objections to the filing of the report in the House. The country and the Congress, as well as our committee, is entitled to know what parts of this report these gentlemen are objecting to, or what part they desire to suppress.

The only real objection, Mr. Speaker, I have ever heard from the gentleman from Missouri [Mr. COCHRAN] during the committee's investigation and since the printing of the final report, was that some persons connected with the Missouri State Life Insurance Co. were supposedly "libeled" or "slandered" in the committee reports references to them. Personally, I never knew anything about the financial racketeering in the field of insurance companies until our committee started investigating insurance receiverships. I did not know the chief investigator of our committee in this phase of our work. He was recommended to me by my fellow member of the committee [Mr. DIRKSEN], of Illinois, and I hired him because he impressed me as knowing his business. He hired as his collaborator a Mr. Sullivan, now deceased, whose reports showed a vital need for a thorough investigation into the affairs of insurance companies, licensed and operating under the laws of the State of Missouri at that time. When the investigation required the subpenaing of Walter D. Head, David Milton, R. Emmett O'Malley, and others, I refused to call off the hearings and stop the investigation although asked to do so by the gentleman from Missouri [Mr. COCHRAN]. The best evidence that our committee was on the right track in exposing the insurance racketeering by certain persons and companies in Missouri is the recent result of the activities of the Department of Justice in that State. If any investigator of our committee knew what was wrong with the insurance companies, I am confident it was Mr. Crume and Mr. Sullivan. Although only a committee of Congress, we exposed conditions long before any Government department knew anything about them, or if they did, proceeded to act on their information. I want to emphasize here, especially for the benefit of the House that every one of our chief investigators outside of Chicago was appointed upon the recommendations of Members of Congress, which is the principal reason why we got so many fine men to work for the meager salaries we were able to pay and why the committee did such excellent work.

Perhaps the attention of the Attorney General of the United States should be called to St. Louis. He has done such an excellent job that perhaps he can also straighten out the insurance tangle in Missouri, exposing the frauds perpetrated on the policyholders. Yes; in the interests of millions of policyholders in many other States. As a starter he might go further into the income-tax situation of Walter W. Head, whom the Government recently claimed failed to report income of $144,000 in 1936, derived from manipulation of Southwestern Life funds and his shares in General American Life stock received from the Equity Corporation interests when General American Life stock control was "sold down the river" by a "downstream sale," as the utility and investment trust manipulators phrase it, to Southwestern Life, a subsidiary-controlled company of General American Life.

The Attorney General might also investigate the question of the use of the mails in the mulcting of the interests of the policyholders in the consummation of these deals and in the sending of false and misleading information and financial statements through the mails to induce policyholders to accept the "deal" and also buy new policies. These are just a few suggestions that our committee report indicates I should make to the Attorney General in view of the fine work he has already done in starting on the Missouri insurance scandals.

Our select committee was directed by Congress to investigate. It did just that without fear or favor to anyone. It was directed to recommend legislation to remedy the evils

our investigation disclosed and prevent them if possible in the future. The many important sections of both the Chandler bill amending the bankruptcy statutes and the Lea bill to regulate trust indentures are outstanding proof of the recommendations and suggestions of our committee. Other recommendations were made and are made in the final report which I am confident the Congress in its wisdom will eventually enact into law to protect American investors from the greed, dishonesty, and manipulations of certain types of financiers still at large in our country.

I may say, Mr. Speaker, to the two gentlemen whose objections have resulted in the suppression of this report for this session of Congress that only the evidence adduced at our hearings and conclusions based on that evidence is contained in the final report, which sums up the record of the hearings contained in 21 previous volumes. If the conclusions of the able lawyers and the committee from the evidence produced and the answers to questions are wrong, then the persons who were investigated either did not tell us the truth or they willfully withheld facts our committee should have received. For that type of conduct on the part of witnesses certainly the committee is not responsible.

The members of our committee had page proofs of the final report for more than a year and until the report was printed and ready for distribution I heard no objection except from one Member. His objection consisted mainly to the form, language, and general make-up and assembly of the report. I therefore edited and reedited the report, spending weeks on end to get it into final shape for printing.

The objections of the two gentlemen in the House are not new. They objected 2 years ago and even during the life of the committee the gentleman from Illinois objected to the continuance of our investigation and sought to block us from receiving further funds from the House to continue our work. Perhaps even then we were too hot, as some would term it. Thus his objections at this time are neither surprising nor unusual to me.

Through parliamentary maneuvers, Mr. Speaker, this report is temporarily suppressed. But I remind the gentlemen whose objections have kept the public from getting the facts, of the old adages that "truth hurts" and that "murder will out," even including financial murder. All the truth, all the facts that our committee brought to light will eventually reach the American people, for which I will be amply satisfied.

In conclusion, Mr. Speaker, let me reiterate what I said I would do when the gentleman from Texas [Mr. RAYBURN] presented his resolution to grant unanimous consent, with certain restrictions, to the Members to extend their remarks. I then stated that—

> I will not quote from the report but will, from time to time, quote from the 21 volumes of evidence, some of which pertains to various cities.

I feel that Members interested in the report will obtain real, valuable information from these volumes and might ascertain why the two gentlemen who raised parliamentary objections to the refiling of the report made such extraordinary efforts against having the report made public. The enclosed letter from Mr. John A. Carroll, gives some of the reactions of persons who have followed the committee's work as to reasons why attempts were made to obstruct the filing of the report:

SOUTH SIDE SAVINGS BANK & TRUST CO. (In Receivership)
Chicago, July 24, 1939.

ADOLPH J. SABATH, Esq.,
Congressman from Illinois,
United States Congress, Washington, D. C.

SIR: In my opinion, you do well to ignore the remarks of Congressman COCHRAN and the newspapers, who seem to take some technical objections to the filing of your report on the congressional committee's investigation of the bond and mortgage racket in the country. There must be a reason, and there is a good reason why special interests and their ever-present minions don't want the results of this searching investigation revealed, either in the Congress, which authorized the committee and appropriated the inadequate amount for the investigation, or the more or less controlled press, which, by and large, served the interests they seek to protect. But the results of these revelations are in the public records, and poor thanks, even criticism for the public servants who labored so long and, in my opinion, effectively in the face of terrific opposition, even a conspiracy of silence on the part of the exposed culprits and those who serve them, some Congressmen, and the newspapers.

It comes with particularly poor grace, it seems to me, for Milton and Head to release a double-column newspaper slam at convicts Prendergast and O'Malley, seeking to unload all the responsibility for the defaults of the Missouri Insurance Co., which was a public scandal, probably one of the worst cases of grave robbing in the country. Of course, under the able leadership of Attorney General Murphy, these public servants have been brought to justice, but, after all, as is well known, it takes two to do a job of this kind—those who furnish the money and those who accept it. And we find Mr. Milton retiring from the mess with almost a million dollars, much more than either Prendergast or O'Malley are alleged to have misappropriated. Other big shots who were very effectively exposed by the late Sullivan in his masterful presentation of the facts, also shared in the loot from the distressed and helpless policyholders, and thus far have gone scot free while public officials are sent to jail.

My opinion is that informed people here generally understand the great service you rendered, and that you may safely rest on the record. I am writing this for no other purpose except to give you the reaction of one who was present at all the hearings here and did his small part with full cooperation from you and the other members of the committee.

Yours truly,

JOHN A. CARROLL.

The Social Security Act Amendments of 1939

EXTENSION OF REMARKS
OF
HON. ROBERT L. DOUGHTON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. DOUGHTON. Mr. Speaker, in my opinion, the most far reaching and significant piece of legislation enacted at this session of the Congress was the bill containing the amendments to the Social Security Act. These amendments broaden and liberalize practically all parts of the act; they offer more generous insurance protection to the aged and to the survivors of deceased wage earners; they increase purchasing power and provide for substantial tax savings to workers and employers, thus providing greater security for the people of this country.

The Social Security Act Amendments of 1939 (H. R. 6635) were prepared by the Ways and Means Committee only after long and careful deliberation. The committee held extended public hearings, lasting from February 1 to April 7, during which period the committee sat 48 days and took 2,500 pages of testimony. All witnesses who requested to be heard were allowed to appear in public hearings. The committee gave serious and lengthy consideration to the recommendations of the Social Security Board which the President transmitted with a message on January 16, 1939. Detailed study was also given to the suggestions made by the Advisory Council on Social Security, which was composed of outstanding citizens representing employers, employees, and the public.

After the public hearings ended the Ways and Means Committee spent over 6 weeks in executive session in the preparation of the bill, during which time the committee was fortunate in having the benefit of the wide experience, knowledge, and counsel of Dr. Arthur J. Altmeyer, chairman of the Social Security Board.

The bill, as reported by the Ways and Means Committee, was passed in the House by the overwhelming vote of 361 to 2.

The bill subsequently passed the Senate with 182 amendments by the decisive vote of 57 to 8. Many of the 182 amendments put in the bill by the Senate were clerical changes. Nevertheless, there were several important amendments which necessitated lengthy discussion by the conference committee. After 3 weeks the conferees came to an

agreement and the conference report was passed in the House on August 4, and in the Senate on August 5.

Before I discuss the amendments in detail I want to briefly summarize the most important provisions of the bill.

TAXES

1. The old-age insurance tax has been frozen at 1 percent on the worker and 1 percent on the employer for the 3 years 1940, 1941, and 1942 as against the 1½ percent rates on each under the present act. This will save employers and workers about $275,000,000 in 1940, or a total of $825,000,000 in the 3 years.

2. Only the first $3,000 an employer pays an employee for a year is taxed under the unemployment compensation provisions. This is already the case in old-age insurance. This will save employers about $65,000,000 a year.

3. Provision is made for refunds and abatements to employers who paid their 1936, 1937, and 1938 unemployment compensation contributions late to the States. This will save employers about $15,000,000.

4. Thus the savings above-mentioned, through 1940, may aggregate some $355,000,000. In addition, such savings for the ensuing 2 years may amount to approximately $550,000,000. This represents total savings of approximately $905,000,000.

BENEFITS

5. The old-age insurance benefits have been liberalized, benefits provided for aged wives and for widows, children, and aged dependent parents, and the date for beginning monthly benefit payments has been advanced to January 1, 1940. About $2,093,000,000 in benefits is estimated to be disbursed during 1940–44, or about $1,538,000,000 above what it is estimated would be spent under existing law during these 5 years. The total cost of these benefits over the next 45 years will be about the same as the cost of the present benefits would be during that period of time. Of course, the cost in the early years will be more but the cost in the later years will be less.

COVERAGE

6. Certain services are exempted from old-age insurance and unemployment compensation in order to eliminate the nuisance cases of inconsequential tax payments.

7. The term "agricultural labor" is defined so as to clarify its meaning and to extend the exemption to certain types of service which, although not at present exempt, are an integral part of farming activities.

8. About 1,100,000 additional persons—seamen, bank employees, and employed persons aged 65 and over—are brought under the old-age insurance system and about 200,000 under unemployment insurance—chiefly bank employees.

FEDERAL GRANTS TO STATES

9. Federal matching for aid to dependent children is increased from one-third to one-half and the age limit raised from 16 to 18.

10. The maximum Federal matching per individual for old-age assistance and aid to the blind is increased from $30 per month to $40.

MATERNAL AND CHILD WELFARE, VOCATIONAL REHABILITATION, AND PUBLIC-HEALTH WORK

11. Provision is made for a $2,020,000 increase in the authorization for Federal grants to the States for maternal and child-health services. This will increase the present Federal authorization from $3,800,000 to $5,820,000.

12. Provision is made for a $1,020,000 increase in the authorization for Federal grants to the States for crippled children. This will increase the present Federal authorization from $2,850,000 to $3,870,000.

13. Provision is made for a $1,562,000 increase in the authorization for Federal grants to the States for vocational rehabilitation work. This will increase the present Federal authorization from $1,938,000 to $3,500,000.

14. Provision is made for a $3,000,000 increase in the authorization for Federal grants to the States for public-health work. This will increase the present Federal authorization from $8,000,000 to $11,000,000.

ADMINISTRATION

15. A Federal old-age and survivor insurance trust fund is created for safeguarding the insurance-benefit funds. The Secretary of the Treasury, the Secretary of Labor, and the Chairman of the Social Security Board are made trustees of this fund.

16. Provision is made to restrict the use of information concerning recipients of State old-age assistance—particularly their names and addresses—to purposes directly connected with the administration of old-age assistance. This is designed to prevent the use of such information for political and commercial purposes.

17. There has now been included among the conditions for the receipt of a Federal grant that a State shall establish and maintain a system of personnel standards on a merit basis.

18. Other amendments simplify and clarify administration of the law.

OLD-AGE AND SURVIVORS INSURANCE

Most of the changes were made in that part of the act which provides a system of old-age insurance covering wage earners in business and industry who, with their employers, pay taxes to support the system. We have liberalized the old-age benefit payments, we have extended them to over a million people who were not included before, and we have at the same time held down the old-age insurance tax rate, which under the old law would have increased during the next 3 years, for workers and employers alike, to 1½ percent of wages instead of the present 1 percent. This means a saving of $275,000,000 of taxes in 1940, or a total saving of $825,000,000 over the next 3 years.

We have liberalized the insurance benefits in three ways:

(1) The new law provides that monthly benefits will be paid beginning in 1940, instead of 1942. We have also made it possible for people who become 65 before 1940, and could have received only lump-sum payments before, to become eligible in 1940 or after for monthly payments as long as they live. Even though they have received a lump-sum payment they may now be able to qualify for a monthly benefit.

(2) Monthly payments will be calculated by a new method which provides for a percentage of the worker's average monthly pay, instead of his total accumulated earnings. This results in a much larger monthly payment for those retiring in the early years than they would have received under the old law.

(3) We have provided additional monthly benefits for the insured worker's wife if or when she is 65; for his minor children; for his widow and orphans; and if no widow or minor children survive, for his dependent father or mother.

In other words, we have increased benefits for the workers now old and for workers who have dependent families. For example: Tom Smith, who is now 65, may begin to receive monthly benefits in 1940 if he has earned as much as $50 in each of any six calendar quarters since 1936, on a job that is covered by the law. If he has been working all 3 years up to 1940 at an average of $100 a month, he can draw $25.75 a month for the rest of his life if he is single. If he is married, and if or when his wife is 65, the two of them can draw $38.63 a month. At the death of her husband the widow's benefit would be three-fourths of his monthly payment of $25.75, or $19.31 each month as long as she lives.

A younger man can build up a larger income for his old age; meanwhile his family is protected in case of his death. Suppose Paul Brown was 25 years old on January 1, 1937, when the law went into effect; and suppose he makes about $25 a week or $100 a month on an average. At that rate, by the time he is 65, if he is single, his old-age benefit payment will be $35 every month as long as he lives. If he is married, and if or when his wife is 65, they will have an additional $17.50, making a total of $52.50 for the couple as long as they both live.

Should the husband die before he is 65, leaving a widow and children, the widow would receive three-fourths and each child would receive one-half of the amount of the monthly benefit he had earned up to that time. In other words, with average pay of $100 a month, should he die only 3 years after he begins work on a job that is covered by the law, his monthly benefit rate would be $25.75, his widow would receive $19.31 a month, and each minor child $12.88 a month. Thus, a widow with two children would have $45.07 a month until the children reach 16, or 18 if attending school.

If there are no children, the widow would receive a lump sum equal to six times her husband's monthly benefit—in this case $154.50. In either case, after she is 65, if she has not married again, she would receive $19.31 a month for the rest of her life.

In the new law we provide that a worker qualifies for retirement benefits after age 65 if he has earned at least $50 a quarter in one-half the calendar quarters elapsing between December 31, 1936, and the date he became 65 years of age, with a minimum of at least 6 quarters of coverage. When he has 40 quarters of coverage—that is, any 40 quarters during which he has earned as much as $50 on a job that is covered by the law, he will be entitled to benefits at age 65 or after, regardless of the length of time elapsing since December 31, 1936.

In the act of 1935, as I have said, the benefits were calculated as a certain percent of the accumulated total wages of the worker. We have changed that provision so that benefits are now to be calculated on the basis of average monthly pay. The amount of the monthly benefit payment is 40 percent of the first $50 of his average monthly pay, plus 10 percent of the average above $50, up to an average of $250 a month. In addition, there is an increase of 1 percent in the benefit for each year of coverage—that is, each year in which he earned at least $200 on a job covered by the law.

Examples of benefit payments, after given years of coverage, with average monthly earnings of $50, $100, $150, and $250, respectively, are shown in table I below, in comparison with payments provided under the old law.

TABLE I.—*Illustrative monthly old-age insurance benefits under present plan and under revised plan* [1]

Years of coverage	Present plan	Revised plan		Present plan	Revised plan	
		Single	Married		Single	Married [2]
	Average monthly wage of $50			Average monthly wage of $100		
3	([3])	$20.60	$30.90	([3])	$25.75	$38.63
5	$15.00	21.00	31.50	$17.50	26.25	39.38
10	17.50	22.00	33.00	22.50	27.50	41.25
20	22.50	24.00	36.00	32.50	30.00	45.00
30	27.50	26.00	39.00	42.50	32.50	48.75
40	32.50	28.00	40.00	51.25	35.00	52.50
	Average monthly wage of $150			Average monthly wage of $250		
3	([3])	$30.90	$46.35	([3])	$41.20	$61.80
5	$20.00	31.50	47.25	$25.00	42.00	63.00
10	27.50	33.00	49.50	37.50	44.00	66.00
20	42.50	36.00	54.00	56.25	48.00	72.00
30	53.75	39.00	58.50	68.75	52.00	78.00
40	61.25	42.00	63.00	81.25	56.00	84.00

[1] It is assumed, with respect to the revised plan, that an individual earns at least $200 in each year of coverage in order to be eligible to receive the 1-percent increment. If this were not the case, the benefit would be somewhat lower.

[2] Benefits for a married couple without children where wife is eligible for a supplement.

[3] Benefits not paid until after 5 years of coverage.

One of the most important changes made in the insurance system is the addition of monthly survivors' benefits. In short, the original Federal old-age insurance system has now been converted into a system of old-age and survivors' insurance, providing lifetime family security instead of only individual security to aged workers in covered occupations. Table II shows illustrative monthly benefits paid to survivors.

TABLE II.—*Illustrative monthly survivor benefits* [1]

Years of coverage	1 child or parent, 65 or over	Widow, 65 or over	Widow and 1 child	1 child or parent, 65 or over	Widow, 65 or over	Widow and 1 child
	Average monthly wage of deceased, $50			Average monthly wage of deceased, $100		
3	$10.30	$15.45	$25.75	$12.88	$19.31	$32.19
5	10.50	15.75	26.25	13.13	19.69	32.81
10	11.00	16.50	27.50	13.75	20.63	34.38
20	12.00	18.00	30.00	15.00	22.50	37.50
30	13.00	19.50	32.50	16.25	24.38	40.63
40	14.00	21.00	35.00	17.50	26.25	43.75
	Average monthly wage of deceased, $150			Average monthly wage of deceased, $250		
3	$15.45	$23.18	$38.63	$20.60	$30.90	$51.50
5	15.75	23.63	39.38	21.00	31.50	52.50
10	16.50	24.75	41.25	22.00	33.00	55.00
20	18.00	27.00	45.00	24.00	36.00	60.00
30	19.50	29.25	48.75	26.00	39.00	65.00
40	21.00	31.50	52.50	28.00	42.00	70.00

[1] It is assumed that an individual earns at least $200 in each year of coverage. If this were not the case, the benefit would be somewhat lower.

The Social Security Board estimates that $114,000,000 will be paid out in old-age insurance benefits in 1940. As time goes on that amount will increase manyfold. It will go into the hands of people who will spend it and thus put it back in the channels of business. Old-age and survivor insurance benefits represent purchasing power for millions of our people who would otherwise be poor customers in our markets. Moreover, it means more adequate protection to the individual and to the family.

In the bill just passed we have extended these insurance benefits to some new classes of workers, including employees of national and many State banks and building and loan associations. By some redefinitions we have excluded a few other groups. Some other changes have been made to clarify the administrative provisions of this part of the Social Security Act.

PUBLIC-ASSISTANCE PROGRAMS

Next in importance to the changes we have made in the old-age insurance system are liberalizations of the public-assistance programs, particularly the new provision for aid to dependent children. These are children in families that have lost their breadwinner. To enable the widowed parent or other responsible relative to care for the child at home, the State pays a cash allowance monthly. Under the old law the Federal Government paid one-third of this allowance, up to $18 a month for the first child and $12 for each other child in the same family. We have now provided that the Federal contribution shall hereafter be one-half of the allowance.

We have also increased the possible allowances for aid to needy old people. This old-age-assistance program, which is an entirely different thing from old-age insurance for wage earners, is a State-administered plan for enabling needly old people to live at home. Through the local welfare agency they may receive monthly cash payments fixed according to their need. The Federal Government contributes to these monthly payments. Under the old law this contribution would match the State's contribution up to a total of $30 a month. We have provided that the Federal Government shall match the State's contribution up to a total of $40 a month; that is, $20 from the Federal Government if the State provides $20.

In the provisions for aid to the blind we authorized a similar increase in the Federal contribution to the monthly cash allowance.

UNEMPLOYMENT COMPENSATION

We have not materially changed the unemployment-insurance provisions of the Social Security Act, but we have provided that employers shall not be taxed upon any part of an

employee's wages or salarly over $3,000 a year. This will be a saving to employers of about $65,000,000 a year. We have also provided for refunds and adjustments of taxes of employers who were late in paying their 1936, 1937, and 1938 contributions to State unemployment funds. This will be a saving to employers of some $15,000,000.

Every State now has an unemployment-insurance law which is administered by the State, and all are paying benefits. So long as the State program conforms to the Social Security Act the Federal Government pays the cost of administration. Out-of-work benefits, however, are paid entirely from a State fund to which employers—and in a few States employees also—contribute.

As in the case of old-age and survivors' insurance, we have extended the benefits to some new classes of workers, including employees of national and many State banks and building and loan associations. By some redefinitions we have excluded a few other groups.

HEALTH AND WELFARE SERVICES

The other programs established in the original Social Security Act provide for public-health and welfare services. The States administer them, with Federal aid in the form of grants of money. We have increased the Federal funds available for such grants for the coming year, as follows:

	Authorization under 1935 act	Additional funds authorized	Total authorization under amended act
Maternal and child health	$3,800,000	$2,020,000	$5,820,000
Crippled children	2,850,000	1,020,000	3,870,000
Vocational rehabilitation	1,938,000	1,562,000	3,500,000
Public health	8,000,000	3,000,000	11,000,000

These added funds should mean that under the public-health and welfare programs we shall be able to reach more of the mothers and children who are in need of those services, more of the disabled workers, more of the people everywhere who need such aid.

It has been my responsibility and privilege, as chairman of the House Committee on Ways and Means, to initiate the bill which became the Social Security Act, and to initiate the amendments we have just adopted. I know we have not yet achieved a perfect law nor a final program. But I do believe that the Social Security Act with its amendments is the greatest piece of social legislation in our time, and I am proud to have had a part in its enactment.

We have, then, a new Social Security Act—built upon our first national program for social security, enacted in 1935. We have tried to build wisely upon that foundation, and in my judgment we have succeeded. We have provided larger benefits for more people and we have made a better distribution of costs. There can be no question that we now have a more adequate, yet safer and sounder program.

Dangerous Inequities of the New Deal

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. KINZER. Mr. Speaker, for more than 6 years this Nation has been ruled by an administration that has had but one solution to offer for the problems of a Nation-wide depression. The administration's solution has been to tax and tax, spend and spend, elect and elect. In other words, in defiance of the American way of government, the present administration has pursued a policy of regimentation, limitation, and concentration of control under the Federal Government at Washington. In defiance of the thrift, personal initiative, individual confidence, and independence which have made this Nation great, the policy of the administration has been to take from those who have to give to those who have not, without regard to justice, equity, wisdom, or economic common sense.

As a result of that policy, which is now being extended also into international affairs, we have the greatest Federal debt in all history. Since 1933 we have had deficit after deficit, and we face the future with a continually mounting Federal debt and continually mounting annual deficits.

That mounting Federal debt and those mounting deficits mean higher taxes, greater penalties on the thrift and industry of our citizens, and greater encouragement for those who are willing to give up all efforts of self-support and look to their Government and their fellow citizens for a living.

I want to be understood clearly, Mr. Speaker. I would not permit a single man, woman, or child in this country to suffer or starve. But I do believe that dangerous inequities are being fostered and encouraged, that those inequities are taking root in our whole governmental system, and that they penalize thrift and encourage extravagance.

My State of Pennsylvania has become one of the greatest States in the Union. Why? Because its people were courageous; because they were honest; because they were industrious; because they were ambitious; because they were thrifty; because they were not afraid to deny themselves luxuries in order that they might save for a rainy day, accumulate a competence for their old age, and leave their children enough to give them a start in life. Let no one tell you, Mr. Speaker, that getting ahead in Pennsylvania was any easier in those pioneer days, or is any easier today, than it was, or is, in Louisiana, or Texas, or Arkansas, or Arizona, or North or South Dakota. In Pennsylvania the secret of getting ahead in the world has been to toil, sweat, and save; and it has been by that formula that my constituents have become a prosperous agricultural people.

Now, what has happened in the last 6 years of the New Deal administration? Let me give you some figures to indicate what has happened—some figures, Mr. Speaker, which are illuminating to me, and I believe will be illuminating to you.

To begin with, based on the census of 1930, the amount of taxes paid and benefits received by States from March 4, 1933, through July 1, 1938, shows that Pennsylvania paid over that period $1,667,663,000 and received in benefits $1,229,639,000. In other words, the total of all benefits received from the Federal Government amounted to $121 per capita, while my State paid out in taxes to the Federal Government $164 per capita.

Let me note that the State of Alabama paid in that period $21 per capita taxes and received $124 per capita benefits. The State of Arkansas paid $12 per capita taxes and received $141 per capita benefits. The State of Florida paid $83 per capita taxes and received $133 per capita benefits. The State of Mississippi paid $9 per capita taxes and received $132 per capita benefits.

Up in the great Northwest, North Dakota paid $11 per capita taxes and received $309 per capita benefits, while South Dakota paid $12 per capita taxes and received $335 per capita benefits.

Turning to the Southwest, Arizona in that same period paid $32 per capita taxes and received $459 per capita benefits.

I could go on indefinitely showing how most of the other States in the Union have received more money, per capita, than they paid in Federal taxes, while my State of Pennsylvania received much less per capita benefits than it paid in taxes.

Now, we have heard the New Deal administration tell us what it has done for the farmers. I want to show here, Mr. Speaker, what the New Deal has not done for the farmers of my district.

Agricultural relief payments made for crop reductions, rental and benefit checks, payments for conservation of soil resources from 1933 to 1938, together with Farm Security Administration expenditures, show that in 1930, out of a total farm population of 856,694, Pennsylvania had 116,589 farm families, or 520,514 farm individuals, on relief.

Keeping this in mind, we find that up to June 30, 1938, the total payments for crop reductions, rentals, benefit checks, conservation payments, and Farm Security Administration expenditures amounted to $10,706,301.99.

Now we find that figures showing farm relief distributed by States for the period from May 1933 to June 30, 1938, disclose that Pennsylvania reduced her farm families on relief from 116,589 in 1933 to 255 in 1939. The proportional payments for that period, based on the 1933 figure, would fall at around $91.82, whereas Nebraska, for instance, increased her farm families on relief from 4,412 in 1933 to 7,640 in 1939, and the proportional payments per farm family over that period was $19,960, resulting in total payments of $88,063,490.40.

What I am trying to show here, Mr. Speaker, is that Pennsylvania, although up among the first rank of taxpaying States, was forty-seventh down the list in receipt of farm relief.

Viewing the situation from yet another angle—that of farm acreage—we find the following illuminating figures:

Pennsylvania, with 15,855,000 acres, had during the period under discussion an average of 67 cents per acre relief money, while Louisiana averaged $4.28 relief per acre, Iowa $4.11, Alabama $2.52, and Arkansas $3.30.

Pennsylvania, from the standpoint of acreage relief, was thirty-eighth down the list.

Now, Mr. Speaker, figures are susceptible of manipulation, and statisticians can do strange things with them. That is why I have given figures from the standpoint of per capita taxes paid and per capita relief received, per farm family benefits received, and the benefits received per acre—in order to show from these various viewpoints that the figures all disclose the same picture. In other words, all of these figures cannot be wrong, because they all show the same general trend.

Now, Mr. Speaker, not only has the New Deal policy of distributing money resulted in these gross inequities for the people of Pennsylvania and the people of my district. My people have for several years past been subjected to still another injustice, which is continuing to this day.

Under the internationalistic policy of the administration, we have entered into trade agreements with various countries of the world, with the result that the Pennsylvania farmers' market is being turned over to foreign producers with whom the Pennsylvania farmer cannot hope to compete.

It is not too much to say that the reciprocal-trade program of the Roosevelt administration is ruining American agriculture and Pennsylvania agriculture. Not only has the administration's reciprocal-trade program failed to stimulate foreign markets for our farm products, but it is working the other way to the detriment of the farmers of my district and my State and, indeed, to the farmers of America.

As my esteemed colleague, the Honorable DANIEL A. REED of New York, pointed out in this House on July 22, our agricultural exports for the 5 months ending May 1939 were valued at $237,998,000, compared with $362,936,000 for the same period in 1938—a decrease of $124,938,000, or 34.2 percent.

In that period unmanufactured tobacco exports decreased over $9,000,000 and corn exports decreased over $45,000,000. On the other hand, our imports of agricultural products increased during the 5 months cited. Imports of cattle, meat products, canned beef, ham, shoulders, and bacon, hides and skins, wool, flax and hemp, tobacco, and a great variety of other agricultural products increased tremendously.

Now, Mr. Speaker, the people of my district are willing to bear their fair share of the depression's difficulties and responsibilities. We are willing to be good neighbors. We are willing to help feed the hungry and clothe the ragged and shelter the homeless. But we do not believe that thrift ought to be penalized, that the people of Pennsylvania ought to be brought down to a common lower level of living. What we believe is that the people of other sections of the United States must be helped up to a higher level of living without impoverishing the people of Pennsylvania and other States who have the energy, the initiative, and the courage to go ahead in spite of handicaps and difficulties brought on by the depression.

There is no reason, Mr. Speaker, why my people should be thus penalized; there is no reason why these inequities should continue to exist; and there is no reason why this extravagant and wasteful and dangerous spending should continue to be paid for by the taxpayers over a long period of years, a continuing burden that will bear down upon the backs of our people long after the present occupant of the White House and his group of "brain trusters" have disappeared from the earthly scene.

Therefore, Mr. Speaker, we must strive for a constructive program of recovery. We must abandon this policy of taking from those who have to give to those who have not. We must make greater efforts to get those who have not back into private work where they can maintain themselves and their dependents in honor and self-respect.

Farmers Demand the Truth

EXTENSION OF REMARKS

OF

HON. BEVERLY M. VINCENT

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. VINCENT of Kentucky. Mr. Speaker, recently a variety of efforts have been made by a small group of political opportunists, in utter disregard for the truth, to provoke universal indignation among our farmers against the reciprocal trade agreements program. The way in which these political opportunists attempt to support their biased, inaccurate charges is an affront to ordinary intelligence. They assume—erroneously, to be sure—that our farmers can be easily deceived.

Calm rationalization, logic, and consistency have no part in their campaign of vilification. If in a particular case it serves their purpose to show one set of statistical comparisons, they hasten to do so. On the other hand, if in another case the same basis of comparison does not lend itself to a distortion of the picture, motivated solely with a consuming desire to discredit the accomplishments of the trade-agreements program, these self-styled "zealots" of the farmers' welfare quickly select a basis that can be manipulated to show an adverse picture. Such connivance justly merits public denunciation.

It is not my present intention to enter into a detailed discussion of the scope and purpose of the trade-agreements program. I simply desire to acquaint the American farmer with the nature of the attacks made upon it.

BEWARE THE WOLF IN SHEEP'S CLOTHING

Glib-tongued tariff lobbyists having special interests to serve persuaded the farmers that enactment of the Hawley-Smoot Tariff Act in 1930 would bring a greater measure of farm prosperity. Tariffs were raised to unprecedented heights. Foreign nations finding they could no longer sell their customary products in America, quickly retaliated with equally severe trade restrictions against our products. Instead of the promised prosperity our farmers were plunged

into the most severe economic disaster that this country has ever experienced.

Discredited by the total collapse of farm prices following enactment of the uneconomic trade barriers established under Hawley-Smootism, these embargo tariff devotees now strenuously strive to direct attention away from the sorry mess resulting from their ruinous commercial foreign policy. Their comparisons are always with farm prices prevailing today contrasted with farm prices prevailing in the 1920's. In fact, tables of this type are from time to time inserted in the CONGRESSIONAL RECORD; farm prices prevailing under Hawley-Smootism are completely ignored. Is it not a fair presumption that those who indulge in such manipulations seek rather to mislead the farmer than to inform him accurately?

In an article placed in the CONGRESSIONAL RECORD of August 10, Representative KARL E. MUNDT, of South Dakota, raises his voice in tender solicitude for the American farmers, charging that the reciprocal-trade agreements program has destroyed the American market for the American farmer. To support his charge he compares the average price of eggs for the 12 Republican years against the 6½ Democratic years, completely ignoring the total collapse of farm prices that followed enactment of the embargo tariffs of Hawley-Smootism. What reasonable person would disagree that in order to make a valid measurement of the effects of trade agreements comparisons should be made between those years in which trade agreements were in effect against the period in which the Hawley-Smoot embargo tariff rates were in effect?

The following table shows just such a comparison:

Prices received by farmers for eggs (cents per dozen)

HAWLEY-SMOOT PERIOD

1930	23.7
1931	17.6
1932	14.2
1933	13.8
Average	17.3

TRADE-AGREEMENT PERIOD

1935	23.4
1936	21.8
1937	21.3
1938	20.3
Average	21.7

The above table reveals that farmers received an average price of 4½ cents more per dozen for their eggs during the 4 years of more liberal commercial relations with foreign nations under trade agreements than during the 4 years of restricted trade under the Hawley-Smoot Tariff Act. Calculated on the basis of eggs sold, farmers of the United States received $428,973,750 less during the Hawley-Smoot tariff period than they would have if they had received the same average price during that period which prevailed during the trade-agreements period.

HAWLEY-SMOOTISM COST SOUTH DAKOTA FARMERS $8,287,500 IN EGGS ALONE

The following table shows that South Dakota farmers received an average price of 5 cents more per dozen for their eggs during the 4 years of Secretary Hull's reciprocal-trade agreements program than during the 4 years of uneconomic tariff duties under Hawley-Smootism. Calculations made on the basis of eggs sold indicate that South Dakota farmers lost $8,287,500 due to the lower average price prevailing under the Hawley-Smoot period than under trade agreements.

Some day, perhaps, these embargo tariff devotees will be willing to admit the abysmal failure of their commercial foreign policy.

Prices received by South Dakota farmers for eggs (cents per dozen)

HAWLEY-SMOOT PERIOD

1930	18.2
1931	13.0
1932	10.7
1933	10.0
Average	12.9

Prices received by South Dakota farmers for eggs (cents per dozen)—Continued

TRADE-AGREEMENT PERIOD

1935	20.5
1936	17.5
1937	17.6
1938	16.1
Average	17.9

The Muddling of the Meddlers

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. DITTER. Mr. Speaker, the failure of the Commodity Credit Corporation to fulfill its promised functions, and the national calamity predicted by Secretary Wallace unless it was a second time rejuvenated by new funds, challenge Nation-wide attention. From the agricultural districts and also from the industrial centers protests are heard against the continuation of a program which at its inception was held out as the way of salvation for the farmers, but which has turned out to be a road to ruin.

As we recall the promises that were made, each one more glowing, each one more vividly painted, each one holding out brighter prospects—all of them New Deal panaceas—as we recall the bountiful promises that were made by those who claimed that they could plan all things for all men, the results today are not only startling but shocking. Someone has aptly said, "These promises have gone the way of all flesh."

The planning specialists directed their attention particularly to three major crops—cotton, corn, and wheat. The results in all three are the same—dismal disappointment, flat failure. Measured in terms of real results it is doubtful if any governmental program has cost so much, done so little, and caused such widespread disastrous consequences as the administration's agricultural program has produced.

Cotton, of course, looms large on the horizon when we consider the agricultural problem. No one can question the responsibility of the Federal Government to the South, and therefore to cotton.

The administration approached the cotton question along two lines, one inconsistent with the other and both at variance with and antagonistic to the best interests of the cotton planter. On the one hand, a crop-restriction program was inaugurated and with this a Government loan policy. Cotton was placed in warehouses; loans were made to the planters; the American price was pegged above the world price, all of which resulted in the smallest export of cotton in half a century.

A decline in world consumption of cotton cannot be advanced as the cause for the decline in our exports. On the contrary, world consumption has increased rather than declined, but the facts are that the administration's agricultural program has taken the American cotton planter out of world competition, and the markets which we thereby abandoned have been seized by other countries. How the present program can ever meet world conditions, how storing millions of bales of cotton and lending millions of dollars on the crop, how a crop-restriction program such as the administration pursues can ever hope to bring any real results to the cotton planter is difficult to imagine.

Yes; we will store more bales and lend more money and peg the price higher and make every effort to persuade the farmer that cotton has a certain value, whereas in truth every sensible man knows that such fictitious factors will never fix real values.

According to all reports, we should have a bumper corn crop this year. It may be a bumper crop, but it certainly will not bring a bumper price. Corn is selling today at as low a level as it has since the New Deal first assumed the responsibility of bringing a more abundant life for the forgotten man, including all the forgotten farmers of America. There has been a strange silence recently both as to an "abundant life" and as to "forgotten men."

The corn plan was pretty much the same as the cotton plan—faked prices and fictitious prosperity. The lending program was made so appealing to the corn farmers that it encouraged them to build extra cribs to store the corn which it was urged they should keep off the market in order to keep the price up. Certainly it has come to a sorry pass when a Government program offers inducements of this kind. More than 250,000,000 bushels of corn were stored by the farmers in their own cribs, against which the Government loaned them money. Had the plan worked, or had there been any reasonable hope that such a plan could work, some excuse might be found for the insistence with which the administration played upon the corn farmer to hoard his crop.

Try as the planners would, however, their fantastic ideas have come to naught. Loans have a habit of maturing, even though they be loans from a Federal Government, and even though the loans be made on corn. Actual maturities and the fear of oncoming maturities have resulted in a drop in the market, and all the while a new corn crop is in the offing. We have heard much of Secretary Wallace's ever-normal granary. Are we to understand that an ever-normal granary contemplates the accumulation year by year of millions of bushels of corn stored in warehouses, against which loans have been made, and with no prospect of any real income by which the farmer can hope to repay such advances? Are we to understand that an ever-normal granary means the building of more and more corncribs and the involvement of the farmer in more and more debts and the granting by the Federal Government of bigger and bigger loans?

Would it be amiss for someone to call to the attention of the Secretary of Agriculture the fact that corn is not an isolated or distinctly separate crop but that it is related to and has a very definite part in our whole agricultural program? Have we any reason to believe that the professional planners will be any more successful with next year's crop than they have been with this year's or with those that have gone before? Were this the end of the first year of experimentation and failure, were there some extenuating circumstances by which the collapse in prices and the bursting corncribs could be explained, we might find some excuse for this planner's paradise. But this is the end of the sixth year of Mr. Wallace's wonders. And the sixth year is worse than the first year. Instead of stepping the farmer forward, the agricultural program of the administration has pulled him backward; instead of pushing him up, it has dragged him down.

What has been said of cotton and corn applies with equal force to wheat. The wheat farmer is no better off than the cotton planter or the corn planter. Wheat prices have tobogganed until they stand today at the lowest level that any of us can recall. The administration's program has been to curtail production, to attempt to maintain a world price, and then to try to hold an export market by subsidizing wheat.

The subsidy program alone has cost the taxpayers of the country approximately $25,000,000 during the past 12 months. And the end is not yet in sight. Small wonder that the Secretary of Agriculture is alarmed—small wonder for his recent threat of a national calamity. But a few very pertinent questions are in the minds of Americans today—questions that the farmers of America and the taxpayers of America have a right to have answered by the Secretary of Agriculture. Who has sponsored this marvelous planning? Who has engineered this program? Who has given assurances that it would be a pathway to prosperity? Who is it that seeks to satisfy the American farmer with city slickers' gold-bricks? Who has brought on this national calamity? Who is responsible?

These are questions the American farmer is asking as the Secretary gives out his solemn pronouncement of a national calamity.

W. P. A. Employment—Prevailing Rate of Pay Should Be Reestablished; Provision Relating to Compulsory Removal Should Be Repealed

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BUCKLEY of New York. Mr. Speaker, when the relief appropriation bill for the fiscal year 1939 was pending, I voted and fought against cuts in the prevailing rate of wages. I also supported the Casey bill, which this House saw fit to defeat. I had no alternative but to vote for the present act, because without it there would be no provision for continuing the W. P. A.

The act itself not only lengthened the hours that the employees were compelled to work on W. P. A., but it also cut most of the wages that had previously been paid and, moreover, reduced the employment of people by about one-third. In addition to this, last year Congress appropriated $965,000,000 for Public Works Administration loans and grants, whereas this year Congress failed to make any appropriation for the said Public Works Administration.

Although Congress thought it necessary to vote sufficient moneys for national defense, farm appropriations, flood control, all of which are very essential and necessary, it thought that the poor, unfortunate people who could not find employment in private industry could get along with less money and do the best they could. It is just as necessary for the city dweller to eat, clothe himself, and live with a roof over his head as it is for people who come from less-populated areas. I am wondering how the relief act is going to work out. I hope that business makes rapid strides as to make it unnecessary for Congress to make additional appropriations for W. P. A. But I have doubts in that direction.

A few days after the relief bill was passed, organized labor protested the rescission of the principle of the prevailing rate of pay. This principle was established about 8 years ago by the United States Government. Included in all governmental contracts are provisions to pay the prevailing rate of wages. It was included in all former relief appropriation measures passed by Congress. To have abrogated that principle that labor has fought for for many years is to lend encouragement to those who would gladly bring back the days of low wages and long hours. We all know that this country was always prosperous when we had a high standard of living rather than a low one based on exploitation of the great masses for the benefit of a few selfish individuals.

On July 12 I introduced H. R. 7164, a bill to amend the Emergency Relief Appropriation Act of 1939 to provide for the reestablishment of the prevailing rate of pay for persons employed upon work projects. The bill also contained a provision to repeal section 16 (b) of the Relief Act which relates to compulsory removal of persons who have been on the W. P. A. rolls for 18 months or longer. The bill was referred to the Committee on Appropriations, which did not see fit to take any action on it. Since the W. P. A. has commenced its policy of dismissing those persons who have been on the rolls for 18 months or longer, many communications have reached me with regard to the hardships that these people will now have to undergo. The law made no provision as to age, dependencies, or particular condition of the persons on the rolls, but states that these people will have to wait 30

days before they are eligible to be certified for W. P. A. employment. With the great amount of work that the relief agencies will now have and the routine to which these applicants are necessarily subject, it would be bold optimism to say that these persons will be reinstated to W. P. A. after 30 days off the rolls. Months will elapse, and in most cases I am afraid these people will never be restored to their former positions on W. P. A.

The hardship and suffering that the dismissal provision will cause is something that we should try to remedy. I think it was a mistake to enact such a provision in the first place, but Congress owes it as a duty to the many men, women, and children who now suffer as a result of this provision to remedy it and show the unfortunate and underprivileged that they are concerned with their welfare.

In fairness to labor we must also reestablish the prevailing rate of pay on W. P. A. projects.

The United States believes in a square deal for labor and for the poor and needy dependent upon relief and the W. P. A. This Congress will do its part to help them.

Majority Leader Sam Rayburn

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. COCHRAN. Mr. Speaker, the Washington journalist is hard put for news when Congress adjourns. During the closing days of a session he welcomes the fall of the gavel, having been on the job for 6 months or more, his hours of labor being based upon the happenings of the day. Within a fortnight, however, he wants action, and he knows, especially those assigned to politics and the Capital, that it will not come until Congress is back on the job and he looks forward to that day. News he must get, and when it is not in the making, he visions a lay-off, not with pay like the Government employee, but at his own expense. Good men, however, are never displaced.

Something of a minor character can develop during the slow-up period that through imagination could be stretched to a column, which would not be worth more than a paragraph when there is real news to be had.

To my mind it was more or less imagination that prompted the scribes to send forth in large headlines a possible split in the Democratic House organization due to the endorsement of his lifelong friend and political ally, Vice President GARNER, by House Majority Leader SAM RAYBURN. What could be more natural than such an utterance from Mr. RAYBURN? Has he not always been closely associated with Mr. GARNER since he came to Washington over a quarter of a century ago? Was he not one of Mr. GARNER's strongest supporters for the Speakership? Was he not Mr. GARNER's campaign manager when the present Vice President was favorably mentioned for a seat in the White House? Was he not Mr. GARNER's floor manager at the convention? Has anyone ever heard of any enmity between them? Are they not both residents of the Lone Star State? True, they undoubtedly have argued on the merits of legislation that has been proposed, but both had their respective duties to perform.

Anyone who is acquainted with my record since the inception of the Roosevelt administration knows my feelings toward the President and so-called New Deal legislation. You cannot find a Member of the House who has been more loyal to Roosevelt and to the leaders of the House than I have. Therefore, as a so-called new dealer, I say that there is not the remotest possibility that Mr. SAM RAYBURN will be deposed as Democratic leader in the next session of Congress. I cannot conceive of one Member on the Democratic side who would want to supplant Mr. RAYBURN because he has done, as I said before, the natural thing, and endorsed his friend and fellow Texan, Mr. GARNER, for the Presidency.

Since my long service in Congress there has never been a more beloved group in charge of the Democratic organization in the House than Speaker BANKHEAD, Leader RAYBURN, and Mr. PAT BOLAND, the Democratic whip.

Immediately following Mr. RAYBURN's endorsement of Mr. GARNER, the scribes, needing something to make a story, went into dreamland and saw visions of Mr. JOHN MCCORMACK, of Boston, Mr. CARL VINSON, of Georgia, Mr. PAT BOLAND, of Pennsylvania, or Mr. CLARENCE LEA, of California, being advanced to Mr. RAYBURN'S post.

It so happens that every man mentioned is a most sincere friend of Mr. RAYBURN and would fight to the bitter end any movement to replace him.

Who was it that saw in Mr. MCCORMACK when he first came to Washington the making of an outstanding Representative? It was Mr. RAYBURN, and he never missed his guess. Who was it that advanced Mr. MCCORMACK to the powerful Ways and Means Committee and, with the aid of the solid Texas delegation, elected him to that important assignment? Who was it that suggested Mr. MCCORMACK to head the Democratic caucus? Ask Mr. MCCORMACK. He will tell you it was his friend Mr. SAM RAYBURN. If any attempt was made to displace Mr. RAYBURN I can see Mr. JOHN MCCORMACK leaving the chair in the caucus and making one of the speeches for which he is famous in support of his friend Mr. SAM RAYBURN. The same applies to Mr. PAT BOLAND who Mr. SAM RAYBURN appointed as whip, and to his friends of over 25 years' standing, Mr. VINSON of Georgia, and Mr. LEA, of California, all outstanding men.

Mr. SAM RAYBURN has been my friend for over 25 years. It was a great pleasure for me to do what little I could to place him in his present post, and it will be equally a great pleasure for this supporter of the New Deal to keep him there.

Speaker BANKHEAD and Leader RAYBURN were elected by the Democratic caucus to head our organization, not for the first session of the Seventy-sixth Congress, but for the Congress.

I say to my friends in the press gallery now, the question of changing our Speaker and leader will not even be discussed when the Democrats meet in Congress next January. Mr. BANKHEAD will continue as Speaker, Mr. RAYBURN as leader, and Mr. BOLAND as whip, and no Democrat in our caucus will even suggest replacing them. When that caucus meets every Democrat will rise in his seat and applaud Mr. SAM RAYBURN, which will be their answer at the outset of the session of their loyalty to him.

The Poll Tax: Sapper of Democracy

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. GEYER of California. Mr. Speaker, at the request of the civil rights committee of the Southern Conference for Human Welfare, I have introduced the following bill, H. R. 7534, to amend an act to prevent pernicious political activities:

Be it enacted, etc., That the aforementioned act be, and is hereby, amended by the insertion, after section 1 and before section 2, of the following sections:

"SECTION 1A. The requirements in many places under the jurisdiction of the United States that a poll tax be paid as a prerequisite for voting at elections for the office of President, Vice President, Presidential elector, Member of the Senate, and Member of the House of Representatives has resulted in pernicious political activities, in that frequently such taxes are paid for voters by other

persons as an inducement for voting for certain candidates. Experience proves that existing legislation prohibiting the making of expenditures to any person to induce persons to vote for certain candidates has failed to prevent this practice. It is therefore necessary, in order to insure the honesty of such elections, that the Congress forbid the requirement that poll taxes be paid as a prerequisite for voting at such elections.

"SEC. 1B. It is unlawful for any person, whether or not acting under the authority of the laws of a State or subdivision thereof, to require the payment of a poll tax as a prerequisite for voting or registering to vote at any election for a President or Vice President or Presidential elector or Senator or Member of the House of Representatives of the United States.

Under leave to extend my remarks, I desire to give some of my reasons for the introduction of this bill; but before doing so, I wish to insert here a letter from the committee of the southern conference, which explains the interest of that organization in this measure:

P. O. Box 1016,
BIRMINGHAM, ALA., *August 5, 1939.*

Hon. LEE E. GEYER,
Member of the House of Representatives,
Washington, D. C.

DEAR SIR: At the Southern Conference for Human Welfare, which met in Birmingham, Ala., last November, resolutions were adopted urging State and Federal action to end the practice of requiring the payment of poll taxes as a prerequisite for voting. The enclosed bill, drafted by the civil-rights committee of the conference, is designed to carry out these resolutions as far as they apply to Federal elections.

During the last few weeks we have discussed the subject matter of this legislation with several representatives from the 13 States participating in the conference. As you will readily understand, this is a matter of great importance, since it deals with a problem of fundamental significance to democracy. The representatives most concerned naturally desire to make a thorough study of the proposed legislation, the text of which has been but recently available, as well as to learn the attitude of their constituents before committing themselves with regard to it, an attitude both admirable and proper in a representative form of government.

It appears to us necessary, nevertheless, that the text of the bill be made available for the study and consideration of all the Members of Congress; the 1,200 delegates to the conference; the hundreds of thousands of citizens, members of various organizations, represented through their delegates at that conference; the millions of persons in Southern States who cannot vote because of the requirement which this legislation deals with; and interested persons everywhere in the United States.

Knowing of your firm belief in the principles of democracy and free discussion, we take the liberty of asking that you use your good offices to introduce this bill at our request, so that its text may be made available and that it may be made the basis of further study of this problem during the interim before the next session of Congress.

Accept our heartiest wishes for a long and useful career in the interest of the Nation.

Respectfully yours,

CIVIL RIGHTS COMMITTEE OF THE
SOUTHERN CONFERENCE FOR HUMAN WELFARE.

Mr. Speaker, I think it is unnecessary for me to say that the evils that this bill seeks to rectify, or at least to ameliorate, are evils that concern every citizen of this country. In my home State of California I see with growing concern a daily, almost hourly, increase in unhappiness and unrest, a tide that rises just as rapidly as does the tide of economic distress that always follows when democracy becomes politically top-heavy. In my home State I see the great masses of farm laborers, who have long since lost hope of becoming farm owners, the throngs of migrants who were forced from their homes and turned in vain to a West that always before had welcomed newcomers. And I see that the citizen's loss of his dignity as a citizen is a result and a cause of economic distress that in some ways is more frightening than the distress itself. As a recent writer has said, "The American citizen must not become lost in the crowd." The vigor of our Nation depends upon the self-respect of its individual citizens.

OF NATIONAL CONCERN

Thus I say that whatever touches this matter touches me as an American, regardless of State or region. The poll tax is not a new evil. In the words of Mr. Barry Bingham, the publisher of the Louisville (Ky.) Courier-Journal, "Its history is a long and turbulent one." We need not go back to the days when Roman emperors levied the tax on conquered peoples and made it the badge of servility, nor to note with Mr. Bingham that the tax "was clapped on the American colonists by their English masters in the days before our own Revolution." Let us follow Mr. Bingham briefly on the more recent history of this iniquitous levy:

Despite its shady history the poll tax hangs on today in 34 of our American States, but it is slight in amount and very sketchily collected in most of those States. Only in 8 States, all in the South, is the payment of the poll tax made a requirement for voting, and there lies the core of viciousness that is capable of producing another Wat Tyler among the submerged classes of our region.

The laws requiring payment of a poll tax as a prerequisite to voting stem from the 1890's and the early 1900's. * * * The nineties * * * were marked by the rise of the Populist movement that once loomed rather large on our political horizon. In 1892, it will be remembered, the Populist candidate for President carried five States and gave the Democratic Party a run for its life in Georgia and Alabama. William Jennings Bryan also emerged in that era as a leader of the underprivileged classes. Isn't it possible that certain members of the entrenched ruling class of the South became apprehensive of the growth of a people's party in the South which might unite the interests of the poor whites and the Negroes? Wasn't it a fear of "radicalism" among the sharecroppers and lower-class whites that may at least be partly responsible for poll-tax legislation at the turn of the century, riding into Troy in the wooden horse of protection for white supremacy?

Let us look, too, with Mr. Bingham at some of the results of this disfranchisement that he has found:

It is estimated that as many as 64 percent of the white adult voters have been disfranchised in the poll-tax States, and in every one of those States more whites than Negroes are barred from the ballot box by the tax. Let me give you the figures for the percentage of adult citizens who voted in each of the poll-tax-suffrage States in 1936, the year of a Presidential election: Alabama, 20.4 percent; Arkansas, 18.5; Florida, 37.8; Georgia, 19.6; Mississippi, 16.2; South Carolina, 14.1; Tennessee, 33.5; Texas, 26.2; and Virginia, 25.7. That works out to an average of 24.1, the worst voting record shown anywhere in the world under even a pretense of a democratic system of suffrage. Even in Mexico twice as many people cast their ballots as the 24 percent who vote in our poll-tax-ridden group of States.

Discussing the same point, Mr. Virginius Dabney, the editor of the Richmond (Va.) Times-Dispatch, says—

This is partly to be accounted for, of course, by the fact that there is a comparative lack of competition from the Republicans of the South—

But that the poll tax—

bears a large share of the responsibility.

Evidence is obtainable—

He continues—

through a comparison of the number of voters in Virginia, which has a poll tax, with the number in North Carolina, which repealed its tax 18 years ago. In 1936 the number of Virginians who voted for the various Presidential candidates was 334,000, whereas no fewer than 839,000 North Carolinians participated in the same election. The population of the Old North State is not much larger than that of the Old Dominion, and conditions in the two Commonwealths are similar. But the number of voters is always vastly greater in the former State than in the latter.

The terrible consequences upon civic virtue, upon the dignity of the citizen, and upon our economy that flow from this tax are well known. There are few citizens who will deny them. Even in the pages of our popular magazines can be found testimonials of these evils. To illustrate: An article in a recent issue of Liberty magazine, entitled "Crime in Hot Springs," describes some of the specific evils that flow from the conditions I have just related:

POLL TAX AND PROTECTED CRIME

In the resort city of Hot Springs * * * men of evil found a new use for this discredited institution. They used the poll tax not to decrease the number of voters but to increase it—provided, of course, that the voters who had their poll taxes paid for them would vote the right way. * * *

This brazen state of things, set forth in shocking detail in the transcript of the proceedings of the legislative investigating committee which probed into Hot Springs affairs in February, 1937, exemplifies the almost insuperable difficulties which confronted J. Edgar Hoover and his men in their fight to make Hot Springs, Ark., a safe place for an honest man to live in and an unsafe place for a dishonest man to hide in.

The testimony disclosed the manner in which votes were cast through the purchase of poll-tax receipts by certain high public officials, and the pressure which Mayor Leo McLaughlin brought to bear on city employees to compel them to vote for the incumbent officials.

For example, a certain citizen of Hot Springs testified that he had been present at a political meeting attended by Hot Springs

police officers, firemen, and a selected group of citizens friendly to the machine, and that after Judge Ledgerwood of the municipal court opened the meeting Mayor McLaughlin stated that he expected 10 votes from every person present and advised them to get out and get poll taxes for 10 voters, but that if they could not do this themselves, then perhaps arrangements could be made to get the poll taxes.

This man also testified that one of the employees was asked if he had his poll taxes, and he answered, "No. I will get my own poll tax and vote for who I please." To this Mayor McLaughlin replied:

"Now there is a man who can vote for whom he pleases, but after this election we are going to know how he voted and there will be some man to take his place. Now that applies to the drug stores and other business. The man that don't cooperate with the administration and vote right—that is, don't vote right for his boss—he will be boycotted in business. Get those poll taxes—down at the office you will find a slip there authorizing poll taxes for you. And I want those filled out. * * * I want you to bring them up so I can turn to them at any time and see just what we need.

"They had those pink slips and were handing them out on every corner," concluded the witness.

Now, what is the justification for my belief that the particular bill I have introduced will help to break the grip of this tax upon the people of the South? In the first place, State action alone cannot be relied upon, although it is safe to say that the great majority of the people in every poll-tax State would be glad to rid themselves of that incubus. The reason, of course, that they are unable to throw it off themselves, is that those who profit from continuance of the tax will continue to deny these voteless citizens the ballot which alone could right their wrongs.

The poll-tax constitutions of many of these States were imposed upon an unwilling populace. The corrupt and fraudulent means used in adoption of these constitutions is notorious. In Mississippi and Virginia, the constitutions were adopted by proclamation and were never submitted to the voters for ratification. Is there reason to believe that the disfranchised now would be successful in nullifying what they were unable to prevent?

Vigorous battle for repeal of the poll-tax enactments by State action has gone on for many years. Recently, Florida and Louisiana have been able, through legislative action, to rid themselves of the yoke. An effort to amend the Arkansas constitution failed, and the Alabama Legislature refused to submit an amendment to the people of that State. There appears little hope for great additional progress through State action.

The obstacles in many States are virtually insuperable. Oligarchic rule, self-perpetuating because of the poll tax, will block change in most States. In Virginia and Tennessee amendment of the State constitutions requires passage of a submission resolution by two consecutive regular sessions of the State legislature and ratification by a majority of the qualified electors.

If it be granted then that Federal action in these premises is necessary, what is the reason for this special kind of action? A principal argument is that this bill has the wholehearted support of great masses of the southern people, many of whom would rebel at more drastic Federal intervention. The difficulty of enactment of such bills as the antilynching bill of last year illustrates the perennial obstacle to attempts to deal too generally with such problems.

Such a bill as this that I have offered constitutes a much less drastic approach because its operation is limited to Federal elections only. I feel sure that this will render the bill the most acceptable, the measure that offers the best prospect of early relief from this tax, that has yet been seriously proposed. It offers no real basis for attack from devotees of States' rights nor does it lay itself open to serious attack by partisans who seek to raise extraneous issues.

A BLOW FOR DEMOCRACY

Mr. Speaker, I have introduced this bill at this time in order that the fullest possible discussion of its objectives and form may be had prior to the convening of the next session of this Congress. This subject is too important to be passed upon without such discussion. Involved here is every man's conception of democracy and the nature of representative government. We have just witnessed the workings of half-representative government in the closing hours of this session of Congress. It is not a record of which we can be proud; it is a record that has been adequately summed up by a southerner, the Honorable CLAUDE PEPPER, Member of the United States Senate from Florida:

I am unwilling to let this session of the Congress end without lifting my voice to decry the unrighteous partnership of those who have been willing to scuttle the American Government and the American people and jeopardize the peace of the world because they hate Roosevelt and what Roosevelt stands for. * * *

I accuse that designing alliance of a deliberate attempt to sabotage the first real effort ever made in this Nation to secure for the workers of America industrial democracy and economic emancipation.

I accuse them of having prostituted their power to serve the United States Chamber of Commerce, the Manufacturers' Association, and the beneficiaries of special privilege, who hate in their hearts the man who has tried to lighten the burden of toil on the back of labor.

I accuse this premeditated alliance of crucifying the lending program. * * *

I accuse this pharisaical alliance of hypocritical lip service to the cause of constitutional government. * * *

I shall fight the spirit of that combination because I am a southerner, and because what they stand for hurts the South I love. I charge that they would rather turn the efforts of the Government to the aid of the organized money power of the Nation than to make it possible for the people of my State and the South, where I was born, to get an education, to be healthy, and to make a living like honorable men.

Mr. Speaker, if we are to block such alliances as this, if we are to escape in the future such disasters as those that have overtaken efforts of government to meet the people's needs as we witnessed in this session of Congress, then we must act at once. We must see to it that the seats of power in our Government are not the property of an oligarchy; we must see to it that the people rule, not in the spoutings of Fourth of July orators but in fact. I believe this bill forbidding the imposition of the poll tax in Federal elections is a long step toward that end.

Weekly News Comments on General Legislation, Seventy-sixth Congress, First Session

---

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. KEEFE. Mr. Speaker, each week during the recent session of Congress I expressed my views on current matters of legislation and mailed the same to each newspaper in my district for publication. Most of the newspapers published these weekly letters, and as a result a large proportion of the people whom I represent were apprised of my views. Because one section of my district was denied this opportunity I feel compelled to make this report in order that those people may know of the attitude of their Representative in Congress. Space will not permit a full and comprehensive statement, and for that reason I am restricting the same to a few subjects discussed in my weekly news letters. It will be kept in mind that these letters were written each week for 28 weeks.

AGRICULTURE

I am in receipt of many letters from farmers throughout the district asking for assistance and relief from the intolerable conditions that the Wisconsin dairy farmer is confronted with today. Numerous farmers representing organizations in Wisconsin have been in Washington for some time trying to work out a program in the interests of the dairy farmer. I am fearful that an attempt is being made to make political capital out of this question, when, as a matter of fact, it should be viewed as a highly nonpartisan question to be solved in the interests of all dairy farmers regardless of any party politics. A great deal of misinformation seems to be circulating in reference to this situation. Under the present A. A. A. cotton, wheat, corn, tobacco, and rice are specifically named as basic commodities; and under the provisions of the law those

farmers who agreed to conform to the restrictions, rules, and regulations of the Department of Agriculture are entitled to share in so-called parity payments to be paid directly out of the United States Treasury, and under an appropriation made last year some $212,000,000 will be paid this year to the farmers who came under the A. A. A. plan in the production of cotton, wheat, corn, tobacco, and rice. Milk is not named in the present law as a basic commodity, consequently there is not a single dollar of this $212,000,000 appropriated by the last Congress that will go for the benefit of any dairy farmer. Realizing the apparent injustice to the dairy farmer in this situation certain groups have been urging upon Congress that milk be included in the A. A. A. as a basic commodity and that the milk producers share in parity payments. Bills proposing this amendment to the A. A. A. will be presented to the Congress at this session, but whether the same will pass I am unable at this time to prophesy. At least I think it is safe to say that the Wisconsin dairy farmer can expect no relief as a result of parity payments in the present fiscal year due to the fact that any appropriations for this purpose which might be made will only be effective in the next fiscal year. A further proposal has been presented as an amendment to the agricultural appropriation bill in the Senate calling for an additional appropriation of $150,000,000 for the Surplus Commodities Corporation to use in the purchase of surplus agricultural commodities. This amount was reduced by action of the Senate yesterday to $103,000,000. Not more than 25 percent of this sum can be used for the purchase of surplus commodities of any one product, so that the dairy industry throughout the country could not expect to receive benefits through the purchase of surplus dairy products in excess of over $25,000,000. In view of the fact that Wisconsin produces about 10 percent of all the dairy products of the Nation, Wisconsin therefore could expect to see approximately two and one-half million dollars expended in the purchase of surplus dairy products from Wisconsin. It should be perfectly obvious to every farmer that this sum of money will not be sufficient to give any great substantial aid to the farmer, because he will be selling dairy products to the Surplus Commodities Corporation at a price less than cost of production.

The Senate bill, as passed yesterday, provides $225,000,000 for parity payments for next year, but unless the Congress amends the A. A. A. so as to designate milk as a basic commodity, the dairy farmer won't share in this distribution. It should be perfectly obvious to any thinking person that such a program does not permanently solve the agricultural problem of this country and, if continued along with all the other governmental subsidies, will constitute such a drain upon the Public Treasury that no nation can expect to survive it. All of the farmers that I have talked with agree that at best the present proposals are a mere temporary palliative and hold out nothing that even approaches a permanent solution of the farmers' problem. But they insist, and I believe quite properly so, that if the Government is to continue to subsidize the cotton, wheat, corn, tobacco, and rice farmers by making direct payments to them out of the Federal Treasury, that the Wisconsin dairy farmer is certainly entitled to receive his share. Like almost every other problem here at Washington, the agricultural problem appears to be further away from solution than when the present heads of the Department of Agriculture started to regiment the American farmer under the A. A. A. Over $2,000,000,000 have been spent to help the farmer through the guise of soil-conservation checks, subsidy and parity payments of one kind or another, with the apparent net result that the farmers generally are worse off today than they ever were. I am convinced that the farmer is entitled to cost of production for the products which he raises or he will ultimately go bankrupt and be compelled to exist as a result of doles in the form of subsidies or parity payments or soil-conservation checks out of the Public Treasury. It is perfectly obvious that the latter program cannot go on indefinitely. We are continuing our fight to try to get legislation through the Congress that will insure cost of production to the farmer for his products without the necessity of continual regimentation under the A. A. A. and without the necessity of doles out of the Public Treasury. The principal objection to the cost-of-production program which passed the Senate Agricultural Committee unanimously comes from the Department of State and the President, who feel that if such a program were to be enacted into law it would interfere with the reciprocal trade agreement program of the State Department, because under the cost-of-production plan foreign importations of competitive agricultural commodities would have to cease and the American market for competitive agricultural commodities would be given exclusively to the American farmer. This administration does not want this and has successfully blocked the cost-of-production bill in the House Agricultural Committee. I want the people of the Sixth Congressional District to know that every Member of the Wisconsin delegation in both Houses of Congress is working diligently to try to insure a program for agriculture that will restore prosperity to the farmer, but in the present Congress the so-called cotton bloc as represented by the Democratic South is still so powerful that it is able to block our efforts and yet continue to receive huge sums out of the Public Treasury for their relief to the exclusion of the dairy farmer.

One of the questions which is being asked more frequently than any other is, What is the Congress and the administration going to do to relieve the intolerable condition of the farmer? As I have repeatedly stated in this column and in public addresses devoted to the subject, I can see no relief in sight for the Wisconsin dairy farmers under the present New Deal agricultural program. As I have repeatedly stated also, the Democratic majority in Congress still is able to control and direct all legislation, and it seems committed to a continuation of the program inaugurated 6 years ago, under which the agricultural population of America have gradually seen their markets destroyed and prices reduced to a point where the purchasing power of the farmer is practically destroyed. Let us briefly analyze what has taken place. The present administration concluded that the low prices of 1932, when the country was at the very depth of the world depression, were occasioned by an overproduction, and so they began a program designed to take land out of production, plowing under cotton and killing off pigs, in the hope that by reducing production, commodity prices would rise. This was the program designated as "economic scarcity." Huge appropriations of money were made to pay the farmers for taking land out of production and at the same time various departments of the Department of Agriculture were attempting to aid the farmer in instructing him how to grow more and bigger crops of less acreage. Being unable to control the elements, Nature responded bountifully and, despite the efforts to reduce production, so-called surpluses continued to mount; and instead of getting better, conditions began to get worse. After taking thousands of thousands of acres of good land out of production, the Government spent hundreds of millions in developing irrigation projects to put arid land into production and to produce more. After curtailing the production of the American farmer, the reciprocal trade agreement program was inaugurated, which had the effect of throwing open the ports of America to the importation of agricultural products from abroad, thus further clogging an already glutted market with agricultural products. All this time one experiment after another was set in motion, all involving the appropriation of huge sums of money out of the Public Treasury, but none of the programs seemed to take cognizance of the fact that with 12,000,000 or more people out of work, and living on short pay checks, the real reason for the accumulation of the so-called surplus was because the consuming people of America hadn't any money to buy products of the farm. It seems, therefore, fair to appraise the results. The Federal Bureau of Agricultural Economics definitely reports that during the 6-year period from 1933 to 1938, inclusive, the average annual gross farm income was $8,278,000,000, exclusive of Government subsidies. The comparable figure for the previous 6-year period from 1927 to 1932 indicates that the average annual gross farm income was $10,223,000,000. These figures, released by the Department of Agriculture, clearly disclose that the farm population of America received $1,945,000,000 less each year in the years from 1933 to 1938, inclusive, than they did in the 6-year period from 1927 to 1932, inclusive.

Assuming that there are substantially 7,000,000 farm families in the United States this means that, on the average, each American farm family, even after receiving its proportionate share of $2,287,000,000 of farm subsidies, received approximately $223 less gross income each year, than they received in the years from 1927 to 1933, without farm subsidies. Viewing the situation as a whole, the statistics of the Department of Agriculture indicate that they received $9,384,000,000 less in gross farm income from 1933 to 1938, inclusive, than they did in the previous 6-year period. To me, the proof of the pudding is in the eating, and these simple, cold statistics tell the story. After all the experimentation, all the alleged planning, all the efforts at regimentation, after all the payment of subsidies, and all the honeyed promises, the record conclusively shows that the American farmer has suffered a tremendous loss of income that is gradually paralyzing the industry and still, not one single acknowledgment of mistake has come from the Department of Agriculture. The present agricultural bill again proposes to carry on the same program, and while it may afford some little relief temporary in character, the amount received by the American farmer through so-called soil-conservation checks, or so-called parity payments, will in no way counterbalance the loss of the farmers' gross annual income. I am asked: "What do you intend to do about it?" We Republicans and many Democrats, realizing the futility of continuing the present program, as a long-range attempt to help agriculture, have demanded the enactment of legislation that would insure at least cost of production to the farmer. We have demanded the curtailment of the iniquitous reciprocal-trade agreements that have subjected the American farmer to competition of cheap foreign-produced competitive agricultural products. We have insisted upon the stimulation of the farm chemurgic program which is designed to aid in the new uses of farm commodities in industrial pursuits. We have insisted upon giving to the American farmer the domestic market. We have insisted that milk be designated as a basic commodity, and that legislation be enacted to protect the price. We have demanded legislation to curtail the monopolistic influences that control the market for cheese and butter and milk products. Suitable legislation involving these plans are pending before the committees of Congress, but due to the control of the administration over the Congress and its committees, none of them have been reported out of the committees to the House for consideration. I confess to my constituents that the whole agricultural program is so involved that even the best thought in Congress seems to be unable to prophesy what the future of agriculture is going to be. One thing is certain, however, that there will never be any sustained prosperity until labor and agriculture are assured of an income that will enable them to purchase the goods and products produced by each other, and when the worker in the city is out of a

job, or working for small pay, farm prices drop, alleged surpluses accumulate, and our whole economy gets out of joint. I would be very happy to hear from my constituents with suggestions that would be helpful in the solution of this very vital and important question.

BUSINESS

The President in a recent communication to the Monopoly Investigating Committee of the Senate expresses his concern over the fact that idle capital still continues to pile up in the banks of the Nation, and he suggested to the committee that it undertake further investigation as to the cause of this apparent unwillingness of people to invest their funds. It would seem, in view of the almost unanimous opinion of businessmen in all parts of the country, repeatedly expressed in the press and in communications to the Congress, that the major answer to this question ought to be known without any very great, extended investigation. The answer lies in the fact that the great majority of the people of this country are afraid to make investments because they do not know from day to day what the next attack of the Government is going to be on business of all kinds. People who have money to invest in large or small amounts are hesitant about investing and seem to be satisfied to deposit their money in the banks for safekeeping rather than to loan it out or invest in new or even established enterprises. The constantly mounting tax burden that threatens to practically confiscate the earnings of business is an absolute deterrent to new investment. People who have funds to invest seem unwilling to gamble against the constant experiments of the Government and are content to put their investments into low-interest paying Government bonds or leave it in banks where it receives but a small interest return. The investing public in America apparently are unwilling to tie up their money in new factories, extensions of old factories, improvements and equipment when they have no definite knowledge from day to day but that any investment so made will either be lost in the operations of business or be swallowed up by the tax collector. The whole problem seems to involve a lack of confidence which cannot be restored by glib promises and smooth talk. The confidence of the people of America can only be returned when the Government demonstrates definitely and positively that it intends to give business a fair chance to survive and to make a just and reasonable return on invested capital. Hundreds of businessmen have written me, showing concrete evidences of the tremendous difficulties with which they are confronted in trying to carry on a legitimate business and meet an honest pay roll. In almost any business it takes the time of one or more skilled men to be able to keep up with the maze and mass of governmental reports, regulations, and orders that are being issued from day to day by various departments here at Washington, and because the conduct and operation of business is so precarious in this day and age new capital is loath to come out of hiding and take a chance in what appears to be an unequal and uneven battle. Take, for example, the canning industry in Wisconsin, which directly affects the welfare of the farmer.

Canning factories are located throughout the entire State, taking care of the products of the farm, and rules and regulations have been issued by the Government that have so adversely affected this business that many of the plants have closed up, and I am advised that many more are on the verge of going out of business entirely, due to their inability to operate without constantly mounting losses being incurred from year to year. Under present regulations as issued by the wage and hour administration, a canning factory located in a town of not more than 2,500 population is not subject to the Wage and Hour Act for a period, all told, of 14 weeks during the year, provided their products are derived from an area not exceeding 10 miles from the plant. An exactly similar canning factory located in a city of over 2,500 population is subject to the wages and hours law. It does not take a skilled economist under such circumstances to determine that the factory which is compelled to comply with the wages and hours law, cannot sell its product, due to the increased cost in competition with the factory that is not subject to the act. Efforts are being made to try to wipe out this and other very apparent injustices in the administration of the law, but the administration seems to find it exceedingly difficult to recognize such inequalities and to justify amendments that will clear up such injustices. Dozens of such very rank inequalities may be found in the administration of this law as they affect many businesses, and with it all, the net result is that the farmer who wants to sell his cash crop to the canning factory, will suffer along with the owners of the plant as a result of cessation of operations. Other situations might be pointed out to show the injustices that are rampant in the New Deal attitude toward all business. Take the fur farmer for an example: This business has grown to large proportions in the State of Wisconsin and millions of dollars have been invested in fur farms, principally in the production of fox fur. Before the enactment of the recent reciprocal-trade agreements the fur farmer enjoyed a reasonable protection from the unreasonable competition of cheaply produced furs imported from foreign countries. Under the recent Canadian reciprocal-trade agreement this protection was reduced with the net result that this industry is threatened with destruction due to their inability to pay American wages to their employees and to maintain American standards in the conduct of their business, and be able to sell their product at a price that will net any return to the owners. We have tried to impress upon the State Department the necessity for correcting this situation, but have been met with a very cool response and a refusal to do anything about it. To me, the situation sums itself up simply to this: The present New Deal administration is definitely and positively international minded, and under its "good neighbor" policy is thinking in terms of Nicaragua, Argentina, Brazil, and other foreign countries more than it is in terms of Wisconsin, Minnesota, Illinois, Michigan, and other States of these United States. I am unable to see how it can be expected that the millions unemployed can be put back to work, how agriculture can be restored to prosperity, and how American industry can be revived, when the administration constantly places a tremendous premium on thrift and industry, and constantly encourages the importation of foreign goods and competitive agricultural products, to take the place of those produced here at home.

OLD-AGE PENSIONS

For 5 years the Nation has been intensively discussing the problems of old age and the necessity for making adequate provisions for the payment of old-age pensions. Out of this welter of discussion there has crystallized an overwhelming sentiment throughout the Nation which clearly recognizes the existence of the problem and the necessity of legislation to aid in its solution. It is exceedingly difficult to find a person today who does not admit and concede that it is a fundamental duty of the Government to make provision for the care of the aged in such a manner as will tend to relieve them from the constant specter of want and despair in their declining years. Two schools of thought have developed. One school adheres to the so-called social-security plan, involving the matching of State funds by Federal grants and supported by a system of pay-roll taxes. The other school demands an outright Federal old-age pension plan, under which livable annuities will be paid to the aged direct from the Federal Government, the cost to be financed by the imposition of taxes on a pay-as-you-go basis. Many plans involving the latter consideration have been advocated, the most prominent among them being the so-called Townsend plan, which has crystallized in a bill submitted to the Congress by the Ways and Means Committee of the House. Nearly 5 months of hearings were held by this committee on this subject in response to the demands of the millions of thoughtful citizens of America, and while the Townsend plan has been heralded as pretending to pay annunities of $200 per month, the sober judgment of Members of Congress and the men and women of America dictates the utter impossibility of such a program ever being enacted into law. What the proponents of this plan really demand is an adequate, decent, old-age pension plan to be financed on a pay-as-you-go basis. and the hope of millions of citizens of America was and is that out of the hearings on the Townsend plan such a program would be evolved and be submitted in the form of legislation to the Congress. Instead of doing this, however, the Ways and Means Committee, apparently determined to make the issue a political football and instead of responding to the petitions of the citizens of America, who asked for the passage of a Federal old-age pension plan based on soundness and common sense, they saw fit to report to the House a bill without recommendation, sponsored by the Townsend groups, which bill is admittedly imperfect and which does not in all of its particulars, measure up to what the members of the Townsend organization themselves expect or want. The bill was brought to the House under a rule which prohibited any amendments or any change, with the one hope and expectation on the part of the committee that it would be voted down and be temporarily forgotten. Those of us in Congress who are desirous of seeing a Federal old-age pension plan written into law have demanded of this committee that it prepare and submit to Congress a bill embodying sound and sane provisions that will provide adequate annuities for the aged of America.

Because the Ways and Means Committee has refused to perform its function and its duty in this regard, in the preparation and presentation of an alternative bill, I have felt constrained to vote for the proposal submitted in the hope that when this bill reaches the Senate of the United States that further discussion and clarification and amendment could be had, so that out of all the discussion there would come a sane, sensible, decent, and livable old-age pension plan that would meet the demands and desires of the great mass of the people of America who have petitioned the Congress for relief on this subject. I, as one Member of Congress, refuse to permit the misery of the aged to become a political football to be used for partisan advantage; and because of the manner in which this bill was submitted to the House, and because of the refusal of the Ways and Means Committee to make any recommendation, and because of their refusal to even try to write a sound piece of legislation on this subject, I will vote for the present bill, with full knowledge that while it is imperfect, and is not the bill that I would like to see enacted into law, I know that before it leaves the Senate, if it is passed in the House, it will be reconstructed so as to meet the demands of sensible, thoughtful people throughout the land. There is no other plan that will be submitted to this Congress, and if the issue is to be kept alive and any opportunity afforded for an ultimate vote on a sound program, sound judgment dictates that the bill be passed in the House and messaged to the Senate, where an opportunity will be afforded to reconstruct the program and wipe out the imperfections which even the Townsend supporters admit are contained in the present bill. The Ways and Means Committee have

indicated that they propose to offer some amendments to the Social Security Act enlarging its scope and providing some slight additional benefits to the aged. It is my judgment that the old people of this country will receive no adequate relief under this proposed program, and that the burdens placed upon industry under it will continue as in the past, and instead of solving the problem and meeting it head-on in this Congress we will only be temporarily sidetracking the issue and intensifying the demand which will surely come in succeeding Congresses until the representatives of the people finally write a Federal old-age law that will be responsive to the needs of the aged people of this country. I have always advocated, and still maintain, that the aged people are entitled to relief now, and that the issue should not be stalled along, year after year, because it cannot be stifled by ridicule or silenced. The present Congress, dominated and controlled by New Deal spokesmen, committed to the continuation of the social-security pay-roll-tax plan, does not intend to write an adequate Federal old-age pension law, and I cast my vote in protest against this attitude, in the hope that sometime a Congress will come into being that has the courage to deal with and to solve this great national problem.

NEUTRALITY

One of the most important questions confronting the present Congress involves the attitude that this Government will maintain in the matter of neutrality. There appears to be a very definite propaganda agency at work which has for its purpose the involvement of the United States into foreign commitments and alliances that may ultimately lead us, as we were led in 1916 and 1917, into a world war. The tremendous amount of anti-Hitler propaganda that is being heaped upon the Members of Congress and citizens of this country generally has for its purpose the definite involvement of this Government in the purely domestic affairs of European countries. The sponsors of this propaganda are seeking to extend the discretionary powers of the President to involve us in foreign entanglements, and I am fearful, if this power is extended and our position of neutrality is broken down, that we will be called upon to defend that position just as we were in the World War, and the hysteria developed will definitely lead us to take sides and send munitions and troops abroad again under the plea that we must again "make the world safe for democracy." I want the people of my district to know that I am definitely opposed to granting any further discretionary powers to the President, and am definitely opposed to the abandonment of our position of strict neutrality. I believe that the safest and best position for this Nation to assume is one of strict isolation from the domestic affairs of the nations of Europe or the Orient. I am opposed to any secret or other entanglements or commitments that will force us to call our best young men to the colors again and to cause the immeasurable loss of life and property incident to our involvement in European wars. I believe that the Monroe Doctrine should continue to be the keystone of our international policy and that we should defend, with all of our power and might, the integrity of the Western Hemisphere and our own territorial possessions, but that we should keep our fingers out of the purely domestic affairs that are involving European nations.

I have voted already for huge appropriations for national defense, but in so doing I had no thought or expectation that either the military, naval, or aeronautical branches of the service should ever be used imperialistically in either Asiatic or European wars. I am further of the opinion that the greatest threat to our democracy lies in our failure to give relief to the farmer, to the unemployed, and to the aged; and I am further of the opinion that the present Congress has utterly failed, up to date, to take the necessary steps and enact the necessary legislation looking toward the solution of these problems. Not a single bill of substantive character has been permitted to come before the Congress, and all of the proposed legislation in aid of agriculture, old-age assistance, labor relations, etc., still lies locked up in the committees. The only thing that the present Congress has done to date is to appropriate huge sums of money to carry on the monumental departments of government and to continue the system of subsidies and doles that have brought our Nation to the brink of national bankruptcy and inflation. Congress is considering today the agricultural appropriation bill involving $1,155,000,000—an incomprehensible sum. In this bill there is not one single item that benefits the dairy farmer of Wisconsin, except the appropriation for soil-conservation projects. Two hundred and fifty million dollars in this bill are designed for the relief of cotton, corn, wheat, rice, and tobacco farmers through alleged parity payments; and the cotton bloc in Congress, representing the Southern States, who are very powerful, are proposing $500,000,000 for this purpose. The attitude seems to be to keep on spending money, with no program that will solve the cause of the plight that the farmer in America finds himself in; and, protest as we will, our position is voted down constantly by the so-called cotton bloc in this Congress. No one can foresee or prophesy where the money is to come from to pay these huge expenditures, as the Congress does not have courage to levy taxes sufficient to meet any small part of these appropriations, but the Government continues to borrow and borrow with a continuation of the increase in our already undreamed-of national debt. Despite all signs to the contrary, any thought of economy in Government has been cast to the winds. I will be very happy to hear from my constituents as to their attitude on these very important questions.

WORKS PROGRESS ADMINISTRATION

Petitions continue to come from W. P. A. workers demanding repeal or modification of the wage and hour provisions of the new W. P. A. law.

Immediately following the wave of protest, Congressman SABATH, of Illinois, Senator MURRAY, and some other Senators introduced bills responsive to the demands of the Workers Alliance. They introduced these bills under pressure and on the assumption that the wage and hour provisions of the W. P. A. Act were written by so-called "reactionary" Republicans and "reactionary" Democrats. It has been a great source of chagrin and embarrassment, however, for these ardent administration supporters to find that the President himself is standing squarely by the law, which, it is now conceded, was not written by "reactionary" Republicans and "reactionary" Democrats, but was in effect the wish of the President and his Administrator, Colonel Harrington. As a result the proponents of the proposed legislation have used a variety of excuses and reasons why they are not pressing for enactment of same at this session of the Congress.

As I have repeatedly stated, the Congress accepted the recommendation of the President and Colonel Harrington as to the amount of money necessary to carry on W. P. A. activities and to provide work relief, and the appropriation bill as passed gave to W. P. A. every dollar that was requested. The charge, therefore, that "reactionary" Republicans and "reactionary" Democrats are responsible for the protests of the Workers Alliance has been completely wiped out. The W. P. A. law, as written by Congress, is elastic enough in its provisions to permit the Administrator by regulations to provide for an adequate security wage, and I have maintained that to arbitrarily fix a wage applicable to all workers without regard to necessity or dependence is absolutely wrong. I have further contended that in the determination of the security wage the Administrator should take into consideration the circumstances and family conditions of the worker. This I believe to be a sound proposal, because the whole theory of W. P. A. is to provide relief, and it is assumed that it is temporary in character. It is hoped by all people, regardless of party affiliation, that encouragement can be given to private industry, that has been "hamstrung" for so long, so that jobs may be provided in private industry for a large portion of those now compelled to seek work relief on W. P. A.

I am advised that the Administrator and his advisors are attempting to work out a program that will give some consideration to need in fixing the new schedule of W. P. A. wages.

The Congress very definitely served notice upon the administration, through the overwhelming vote given the Hatch bill, that it will no longer tolerate politics in relief, and, despite the fact that administration forces in the House sought to defeat the purpose of the Hatch bill, the final vote was overwhelmingly in favor of this legislation, which has for its purpose making it a felony for any public officer except those exempt from its provisions to engage in political activities and to use his official capacity to threaten or coerce W. P. A. workers or others into voting against their honest convictions.

The House of Representatives, in the last 2 weeks, has evidenced a remarkable independence of thought and action, and there is a growing sentiment that the time is here for Congress to assert its constitutional rights and prerogatives and to legislate in accordance with its judgment, free from the lash and whip of the President. To me this is a hopeful sign, and it will result in much better legislation.

RECOVERY

It becomes increasingly clear as a result of many contacts with Members of the House and Senate that conditions throughout the country are showing very little, if any, improvement. Unemployment still continues, farm prices are going down, businessmen are shackled and worried, capital continues to be locked up, afraid of investment, and the "more abundant life" that we have been promised repeatedly still appears to be "just around the corner." It is indeed a peculiar situation in America that we appear to have surpluses of everything except a surplus of common sense in dealing with our domestic problems. It is no doubt a fact that we have surpluses of agricultural products and tremendous surpluses of labor available for productive work in the creation of new wealth. We have a tremendous surplus of capital awaiting investment and in a country peopled by ambitious and creative men and women we certainly have a tremendous reservoir of creative enterprise that has been locked up as a result of the constant interference of the Government under its various plans of regimentation and the continued uncertainties that exist in the minds of all classes of people as to what the next experiment of Government is to be. Nature has provided us with unlimited resources and we have a tremendous demand for the utilization and distribution of these resources into the hands of the people, and yet we are apparently so stupid that we appear to be unable to utilize the marvelous potentialities of wealth, labor, and money that we have in the interests of all the people. The longer I am here in Washington the more I am convinced that the powers that be are either purposely and stubbornly or ignorantly refusing to deal with the fundamental problems that have given rise to the terrific maladjustment of our economic system that has resulted in want and misery in the midst of plenty.

The mouthpieces of the New Deal administration continue to heckle the Republican minority by repeatedly stating that we have no program. The fact of the matter is that legislation has been written and presented to the Congress by the Republican minority that we believe would tend to solve the fundamental problems affecting our national economy, such measures being bills to provide cost of production for the farmer, repeal of certain reciprocal-trade agreements, repeal of undistributed-profits taxes, amendments to the Wage and Hour Act, provisions for old-age pensions, amendments to the National Labor Relations Act, and a host of other fundamental laws that we believe would reestablish confidence throughout the land and put idle men and idle capital back to work. We believe that the enactment of legislation proposed by the Republican minority would result in the destruction of the monopolistic influences that have grown up under the New Deal that have permitted monopoly to strangle distribution of wealth throughout the land. What has become of this proposed legislation? The answer is that these bills still lie locked up in the committees that are controlled by the New Deal organization and no legislation affecting the substantive law of the land has been permitted to come before the House from the New Deal controlled committees.

The administration, in complete control of the Congress, still continues to borrow and borrow, and spend, at a rate that indicates that the present Congress will be the greatest spending group that has ever convened, and all we Republican Members of Congress can do is to voice our protest and to offer constructive suggestions whenever possible in the hope and expectation that the people of the land will ultimately realize that we cannot continue the course adopted by the New Deal. The recent pronouncement of the President demanding that the Navy Department purchase Argentine beef instead of an American-produced product, because it is cheaper, and as he said "infinitely better" indicates the present international-mindedness of the New Deal, and we certainly can never expect to have prosperity for the workers and farmers in America when they are ruthlessly subjected to the competition of cheap foreign labor through the constant extension of the so-called "good neighbor" reciprocal-trade agreements. If we are to maintain wages and hours and living standards for Americans, such as we have been accustomed to, and want, we can only do it by buying and using and consuming the products of the American farm and the American factory, instead of constantly catering to foreigners. These are indeed times that call for the sober and collected thought of all of the American people and the welfare of the industrial and farm population of this country is very definitely at stake. I shall continue, as I have in the past, to support these measures that I honestly conceive to be in the interests of the people of America, and I shall oppose, as vigorously as possible, making this country the dumping ground of cheap foreign-produced competitive products, or breaking down the present immigration laws so as to permit the entrance into America of cheap labor from abroad. The attitude of the present New Deal Congress toward continuing to spend public money in the face of an ever-mounting deficit, was exemplified yesterday in the Congress when, without record vote, legislation was passed providing $1,500,000 per year additional clerk hire for Members of Congress. To me, this is another evidence of the complete and utter disregard of the present New Deal controlled Congress to reduce public expenditures, and in the face of millions out of work, agriculture paralyzed, and business in the country depressed, the present New Deal Congress, despite all opposition, and unmindful apparently that a day of reckoning is going to come, continues to add to the tax burden of an already over-burdened people. I intend to vote to stop this profligate spending as I know of no way that taxes can be reduced and the confidence of the public in their Government reestablished unless we, as the people's representatives, indicate a desire to cut taxes and translate that attitude into a reality by actually stopping wasteful, extravagant, and unnecessary appropriations of public money.

Recovery? Every year, for the 6 years the New Deal has been at the head of the Government, recovery has been the main topic. It has always been just around the corner. Despite "recovery" we have 11,000,000 unemployed, a record peak in relief expenditures. In 1933 the cost of Government was $3,000,000,000—now it is $9,000,000,000, yet taxes have jumped from $2,000,000,000 in 1933 to $5,000,000,000 in 1939. To top it all off we have a public debt of $40,000,000,000 and 20,000,000 people on relief. Maybe this is some people's ideas of recovery, but it is not mine.

LENDING AND SPENDING

The appropriating and spending record of the present Congress will put it down in history as the most reckless, profligate Congress in history. Despite all suggestion to the contrary, the only solution offered by the administration for the economic ills of the day is to continue to borrow and spend, with no apparent thought being given as to where the money will ever come from to retire our inconceivable public debt. Our expenditures last year exceeded receipts by $5,600,000,000, and the total increase in the direct debt of the Government plus that of Government corporations was $7,680,000,000. This constitutes the greatest spending spree of all time. However, the next fiscal year promises to be even worse.

In the face of all the huge spending programs already provided for, the Congress is now confronted with the President's new "lend and spend" program, which originally involved $3,800,000,000 more, but which has been reduced by Senate committees to $2,490,000,000. This huge sum is to be added to an already contemplated deficit in the next fiscal year of approximately $6,000,000,000, and will make next year's deficit the greatest of any in the history of the country.

The amount asked by the President in his new proposal is more than three times the entire annual expenditures of the Federal Government in the fiscal year 1916. It amounts to practically half of the entire Government revenues in the fiscal year just closed.

The public have been led to believe that the "lending-spending" program is to be self-liquidating, but I desire to call attention to the fact that while the bill contains language expressing the pious hope that loans to be made under this program shall be self-liquidating, there is absolutely nothing in the law that compels any such safeguard. The proposal, reduced to simple language, would write a blank check out of the Treasury of the United States for the President to spend at liberty and at will as he pleased. Despite all of the legal contraptions attached to the bill, by which the administration tries to make it appear that it does not add to the public debt, the fact remains that all of the bonds proposed to be sold through the Reconstruction Finance Corporation in order to raise this huge sum are guaranteed by the United States Government. In the old days such a proposal would have been designated as a "pork-barrel grab." Although the administration endeavors to justify this bill on the ground that it is a "lending" program, the testimony of Mr. Jesse H. Jones, Federal Loan Administrator, indicates that huge losses will be experienced in its administration. He very definitely conceded and admitted that the Reconstruction Finance Corporation has a tremendous volume of unsound loans and that the Government will experience a terrific loss in the liquidation of loans made under the present careful administration of the Reconstruction Finance Corporation. In his statement to the Senate committee he openly stated that he was ashamed to state how high the percentage of losses would be.

Senator BYRD, of Virginia, claims that if we are to believe the statements of the President that this new spending scheme will neither increase the Federal debt nor increase the Federal tax burden, we are just deluding ourselves. He definitely points out that when the Government borrows money and makes huge loans for untried and impractical projects that will not likely be repaid, the burden will eventually fall on the taxpayer. He and many other Democratic leaders have designated the President's scheme as a "spending orgy, miscalculated as a 'lending program,'" and further states that creating Government corporations to make loans outside the Budget does not evade the public debt, but is a vehicle set-up intended to conceal it.

I have given serious thought and consideration to this program and have concluded that it is just another "pump priming venture" that will afford some temporary stimulation of business activity, but when the money is spent, our debt burden will have been tremendously increased, taxes will be raised, and we will be worse off than we were before. The bill is meeting strenuous opposition both in the Senate and in the House, and I want the people of the Sixth Congressional District to know that I shall oppose this program. It has been repeatedly charged that the whole program, tied with other proposals, is another brazen attempt to buy the voters in the 1940 election.

Numerous small bills, apparently, have the same purpose in mind. I desire to call attention to the proposal adopted by the Senate to pay 8 cents per mile mileage to secretaries traveling on official business to and from Washington. To me this is just another of the administration's proposals to tap the Treasury of the United States and aid in furnishing campaign funds. I am vigorously and definitely opposed to such legislation. I have contended that there is only one way to reduce taxes and Government debt, and that is to stop appropriating and spending the taxpayers' money. I want the people of the Sixth Congressional District to know, however, that despite all the efforts that we may make looking toward economy in government, the administration control over the Congress is still such that the spending spree goes merrily on, and many Members of Congress, apparently, have given up any hope of being able to stop uncontrolled and unnecessary expenditures of public funds until there is a complete change in the personnel of the Congress. The attitude of the taxpayer on this question, I believe, was clearly manifested in a recent poll, conducted by an organization of experts, and where a larger number of interviews than usual were made. The opinion of the majority of those interviewed showed that the American public is more interested in ending Government spending than lowering taxes. Those behind the poll say that it might be assumed that more people would be for lower taxes than for decreased spending, for taxes affect more individuals personally and directly. But, as a matter of fact, the contrary is true, showing evidence that people realize that spending makes taxes and that you must cut spending before you can cut taxes. If the public had direct control, realistic Budget balancing would start right away. Fifty-eight percent said that Government spending should be decreased to increase prosperity, while only 6 percent said that Government spending should be increased. An analysis of the responses to this question revealed a trend showing that as the questioners went down the income scale the percentage wanting an increase in spending went up. Of the 6 percent wanting an increase in spending, the average increased to 9.6 percent among

wage earners and 17.1 percent among the unemployed. Yet, despite this increase, even among those in the lowest income levels, including those on relief, there was a 4-to-1 vote against increased spending; and in the case of the great lower middle class, with incomes between $1,200 and $5,500, the vote was 15 to 1 in opposition. Farmers voted heavily for less spending, with only 1.4 percent saying spend more.

The Record of Congress

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I made over the Columbia Broadcasting System on Monday evening, August 14, 1939:

I have been asked to review the record of the first session of the Seventy-sixth Congress, which has just ended, and to discuss the constructive contribution of the Republican Party to that record.

In perspective and from a broad viewpoint it seems to me that the outstanding and significant thing about this session is that it marked the reassertion by the Congress of its time-honored independence in the field of legislation and the reclamation of inherent constitutional rights which were being assumed by bureaucrats.

From this new spirit of independence important consequences flowed. An era of rash and reckless experimentation was definitely ended. A new order was instituted in which legislation no longer was rushed through Congress at the crack of the whip, but was completely considered and determined upon its merits. The Congress made a conscious effort to reflect what it believed was the will of the people and in so doing stiffened its resistance to what it regarded as arbitrary Executive attempts to infringe upon its constitutional rights. The result was the restoration of congressional government by the orderly processes of law.

That was the broad objective of the Republican Party in Congress. That aim has been achieved. Under our form of government, Republicans in Congress vigorously asserted their rights and lived up to their obligations as the minority party. Yet, if there is one thing unmistakably clear in the record, it is that the Republican Party, although the minority party, was never a mere obstructionist party.

In the 1938 campaign the Republican Party promised to check one-man government, stop rubber-stamp legislation, and restore constitutional processes in national administration. When the session got under way it presented a concrete plan for recovery and called upon all Members of the House and Senate, regardless of party, to join in a sincere and earnest effort to guide the country back to economic recovery and to restore our millions of unemployed to jobs in private industry at decent wages.

This constructive program was not formulated out of the thin air, but was rooted in bitter experience and an increasing flow of mail to Congress from all parts of the country complaining of conditions. Factory and shop workers wrote that they were weary and footsore seeking employment. Farmers told how desperate was their plight. Young men and women, unable to get jobs, begged for a chance to make a new start in life.

Such letters as these after 6½ years of costly experimentation by the New Deal served to deepen the conviction of the Republican Party that this Nation could not hope to get out of debt by going more deeply into debt.

The Republican Party also acted on the conviction that democracy could not be saved by giving all of its powers to a chief executive.

It acted on the conviction that we could not preserve our essential liberties by handing them over to a little self-appointed board of bureaucrats over whom as a people we have no control, because they never submit themselves to the verdict of a popular election.

We acted on the conviction that we could not help the poor by raising the price of everything they have to buy, nor protect the farmer by reducing his farm operations so drastically that food he should be supplying has to be imported in mounting quantity. And we knew that we could not help the small-business man by taxing him to death.

We knew, too, that we could not serve the American workingman by using the prestige of the Federal Government to split organized labor wide open and embroil it in civil war. We knew that we could not cultivate even elementary thrift in a people if government insisted upon parading before them as a prodigal spendthrift.

We realized, moreover, that we could never have that close cooperation between business and government which is so vital to the national welfare so long as government asked business to do something this week and then censured business next week for doing the very thing government had asked it to do. And we knew that no government could pat private enterprise on the back with one hand and stab it in the back with the other and expect any real degree of substantial recovery.

Such considerations as these were the foundation stones of the Republican recovery program, the basis of Republican action in the Seventy-sixth Congress. And since it was our sincere conviction that most all of the difficulties which beset the Nation were in large measure a projection of the basic problem of unemployment, the Republican measuring rod for every piece of legislation brought forward in this Congress was, Will it help put our unemployed back to work?

Such, briefly, were the Republican philosophy and the Republican objectives. Now, let me attempt to appraise the practical application of that philosophy in term of objectives attained. This appraisal results, I believe, in a list of 14 specific accomplishments under the banner of honest liberalism which testify to sincere Republican cooperation with real Democrats in the fight to save America from the New Deal; to help labor, agriculture, business, and industry; and to put our jobless back to work. I list these accomplishments, as follows:

(1) Against the spendthrift leadership of the administration, Congress forced at least a beginning toward economy and common sense in Federal finances.

(2) Under Republican leadership, Congress turned back a New Deal proposal to raise the national debt limit above the existing statutory ceiling of $45,000,000,000 and later rejected emphatically the $3,800,000,000 spend-lend program, which sought to evade the limitation upon the national debt. As a part of this broad economy movement, Congress once more forbade additional expenditures on the crackpot Florida ship canal.

(3) Under aggressive Republican leadership, in both the Senate and the House, Congress turned back the administration's attempts to pledge American involvement in European power politics. We supported adequate American national defense by land, sea, and air forces.

(4) In the face of determined administration opposition, Congress forced a measure of tax revision to relieve business of crippling, punitive levies, and established a special recess investigation to recommend general tax codification to the next session.

(5) After more than 2 years of study, Congress forced careful revision of the social-security program to eliminate the fraudulent full-reserve plan in favor of a pay-as-you-go scheme as consistently demanded by the Republicans. The new schedule of benefits eventually will stop diversion of the pay-roll tax receipts to general Government spending. By freezing the pay-roll taxes at the prevailing 1-percent level, hundreds of millions of dollars in future taxes have been saved to both labor and industry.

(6) Congress limited in some degree subsidized Government competition with private enterprise in electric utilities, and has instituted honest systems of audit and accounting to keep taxpayers informed of real costs in the future.

(7) We exposed and partially reformed the vicious political manipulation of W. P. A. work relief by the New Deal patronage racketeers.

(8) Against militant opposition, we aided materially in passing the Hatch bill, reinforcing the merit principle in civil service, and prohibiting electioneering by all Federal pay rollers.

(9) We enacted legislation to curb the spread of hateful alien communism and fascism, strengthening the mandatory deportation laws, and removing much discretionary power in this field from the coddling authority of the Labor Department.

(10) In the Government reorganization bill we sustained the time-tested constitutional principle of checks and balances, eliminating many proposals for dangerous powers of dictatorship.

(11) In the face of persistent evasion of administrative responsibility the House insisted upon a thorough investigation of the National Labor Relations Board.

(12) House Republicans urged a formal congressional inquiry into the damage caused to American industry and agriculture by the so-called reciprocal trade treaty program. The Roosevelt-Hull policies of free trade, as now linked to the mutually exclusive policies of export subsidies, dumping, barter, and discriminatory import quotas are contributing largely to the utter demoralization of international trade.

(13) Congress fought hard to reestablish the fundamental Republican principle of sound money by a return of all monetary powers to Congress, where under the Constitution they properly belong.

(14) A special committee of House Republicans surveyed the so-called emergency powers of the President and charted in detail the course forward to a resumption of balanced representative government.

Time does not permit the detailed discussion of each of these accomplishments which their importance warrants. So it becomes necessary to deal with them sketchily and in somewhat general terms. It is, however, a matter of great significance that in proportion as Congress reasserted its legislative independence along these broad lines business confidence began to show some signs of revival. Today the administrative failures and confusion of the New Deal are the only obstacles in the path of solid and sustained business recovery.

Pump priming is a demonstrated illusion. Consequently the defeat of the $3,800,000,000 spending bill and the housing bill with

its $2,700,000,000 subsidy has been received by the country as a hopeful sign. It means that the Congress is beginning seriously to consider the threat of national bankruptcy and financial collapse unless some order is brought in Government spending.

The seriousness of this situation is not to be minimized. Now, in the seventh year of Federal spending, we still have approximately 10,000,000 unemployed, farm prices are at bankruptcy levels, our export market for farm products is still diminishing, and our rich home market is being flooded by an increasing tide of low-cost industrial and agricultural products from abroad. Under the New Deal's misguided policies of internationalism and free trade the vaunted American standard of living is being lowered steadly for all our people.

Because of the dangers inherent in such conditions the Republican minority fought consistently to check expenditures which could be delayed without harm to anyone in the firm conviction that lavish spending means burdensome taxes and that burdensome taxes blight business and deprive workers of jobs. The blame for the spending and authorizing of expenses in excess of $13,000,000,000 rests solely upon the Democratic membership, which, for the most part, favored every appropriation which was presented.

A Republican resolution to require a saving of 10 percent on all departmental appropriations for the current fiscal year was received by administration spokesmen with only a jeer. The seventh New Deal deficit on July 1 carried the national debt above $40,000,000,000, or double the 1933 total. New appropriations for the fiscal year 1940 aggregate almost $13,000,000,000, or approximately three times the annual Republican average of the previous decade.

Every congressional effort to amend existing trouble-making laws in the interest of order and stability in our labor relations have been blocked by the administration. On the other hand, in the face of the most bitter opposition and the hardest kind of pressure, the Hatch bill to curb pernicious political activity was enacted. For this enactment, the Republican Party fought vigorously.

This is the bill which freed the W. P. A. workers and the Government workers from being obliged to jeopardize their jobs by interfering in political campaigns. It freed them from being held up for campaign donations and being obliged to contribute from their none-too-large pay. It freed the country from absolute domination by a bureaucracy. It was unquestionably the most progressive political reform in a decade and it was brought about chiefly because the Republicans in the House unanimously supported the bill.

At the beginning of the session, I pledged the Republican minority to work constructively and not be simply a party of criticism.

We have kept that pledge. We have fought for economy and sanity in Government; to keep the country out of involvements which would lead to war; for sound money and to restore to the Congress powers given to it under the Constitution. Yet we have not hesitated to support sound measures brought forward by Democrats. We had a definite and specific program. In our efforts to accomplish any part of it we subordinated partisanship to patriotism.

In order that you may better evaluate the degree of success attained in this Congress in carrying out this program as measured by the accomplishments which I have enumerated, it is perhaps well at this point to summarize briefly the program itself. It has 12 major objectives:

1. Keep the United States out of war.
2. Move immediately to curb unnecessary, wasteful, and reckless spending.
3. Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.
4. Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.
5. Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
6. Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present paralyzing discord.
7. Define specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.
8. Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.
9. Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.
10. Create a special committee of Congress to inquire into the effect of the reciprocal trade agreement policy on American industry and agriculture.
11. Clarify Federal rules and regulations so industry and business may know what to expect.
12. Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

The mere restatement of these highlights of the Republican program carries in itself conclusive and heartening evidence of how far along the road to accomplishment we were able to travel in the session just ended. Encouraged by growing popular support for these constructive policies, Republicans in Congress pledge a continuation of this fight for fundamental Americanism. We are convinced that real progress in restoring this country to a sound and permanent prosperity depends upon the carrying out of this program, and we are convinced that when it is adopted in its entirety by the Congress and accepted by the President our country will immediately take on new life and vigor and will begin again to enjoy economic stability and a higher standard of living.

To Republicans it appears almost axiomatic that recovery cannot begin until all Americans may again face the future with confidence in the security and stability of constitutional government and the safety of our bountiful American system of private enterprise.

The grave dangers to our constitutional form of government and to our American system of free enterprise were strikingly illustrated by the $3,800,000,000 spending-lending bill against which House Republicans stood as a unit and succeeded, with the aid of straight-thinking Democrats, in defeating.

The New Deal leadership carefully set the stage for the introduction of this bill through testimony presented at the hearings held by the Temporary National Economic Committee. The gist of the testimony of New Deal spokesmen before this committee was that we had reached a point where our old economic frontiers had vanished; that our traditional system of free economy no longer was capable of functioning under new conditions; and that government must step in and take over the functions of private industry which once so well performed.

One of the outstanding New Deal spokesmen after giving expression to this view frankly conceded that if government undertakes to create wealth by using its own credit at the rate of four billions or so a year the Government will be acquiring direct productive mechanisms at the rate of four billions' worth a year, or thereabouts. Over a period of years, he concluded, the Government would gradually come to own most of the productive plants in the United States.

Strange as it may seem to Americans, that was exactly what was proposed when the spending-lending program was first suggested to the Congress. The recommendation was made that this type of lending-spending be made a permanent policy of the Government. The first draft of the bill itself provided for a revolving fund to carry out this purpose. Thanks to determined congressional opposition it was eliminated before the measure was finally killed by the House. It is important, however, as showing the direction in which vast and reckless spending was taking us. The end of that road is state capitalism or socialism. From that danger the first session of the Seventy-sixth Congress saved the Nation. It was the greatest blow struck for the democratic ideal and for the preservation of our American heritage of political and economic freedom since the defeat of the subversive court-packing bill.

Defeat of the lending-spending program, which carried with it repudiation of the discredited philosophy of pump priming, also was a blow against the evils of cheap money which have resulted from the Government's ever-increasing borrowings.

Widows and children find themselves in sore straits as a result of the drastic reduction in interest and dividend rates made inevitable by huge Government deficit spending. Many business enterprises remain unable to get away from the edge of bankruptcy. Every savings-bank depositor has had his or her income frightfully cut down because normal interest rates can no longer be earned or paid. Gasping for financial breath are many endowed hospitals, colleges, museums, and worthy institutions. Indeed, the plight of the hospitals was one of the reasons advanced by the sponsors of the $3,800,000,000 spend-lend bill in supporting its enactment.

The plight of the hospitals obviously makes a strong appeal to the sympathies of all of us. But we would indeed be blinded by emotionalism if we did not recognize that the aid proposed was only another palliative, and that the real remedy was to move to end the cheap-money evil and to make secure a reasonable return on fixed investment. This consideration powerfully motivated the successful Republican opposition to the bill.

We realized that fixed incomes in most cases were not large but very small. We knew that there were 40,000,000 Americans who had accumulated a total of $23,000,000,000 in savings deposits which the banks had invested almost entirely in fixed-income securities.

We knew that there were 60,000,000 policyholders in life-insurance companies which had total assets of about $29,500,000,000, of which approximately 85 percent was invested in fixed-income securities.

We knew that before the New Deal adopted its reckless spending policy that savings banks generally paid 4 percent interest on deposits, and that this rate has progressively declined until now it is almost to the vanishing point.

We knew roughly what this had cost those 40,000,000 depositors in savings banks; what it had cost those 60,000,000 holders of life-insurance policies in reduced dividends and increased premiums.

That was one of the reasons why the Republicans determined to call a halt on the spending which had brought these distressing consequences without promoting a vestige of recovery. We recognized that cheap money can be as great a curse to a country as low wages and cheap labor. We recognized that for governments to spend unnecessarily is to increase taxes; that to increase taxes is to decrease business earnings; to reduce earnings is to curtail investment in and by industry; to limit investment is to destroy wealth and to swell the ranks of the unemployed. This is the vicious circle which Republicans in the Seventy-sixth Congress sought to break. The degree of success attained should be heartening to every American.

One of the advances along this line was the repeal of the last remnant of the punitive and deterrent undistributed-profits tax. Another was the tax-law amendment which permits corporations, partnerships, and individuals in business to carry over net operating losses for a period of 2 years. Thus a taxpayer who may suffer a loss in 1939 will be permitted to carry over the loss in reduction of his income for 1940. Should this loss exceed his 1940 income, he is permitted to carry over the excess in reduction of his income for 1941.

Another business handicap was removed when the old-age-security taxes were "frozen"—that is, fixed by law, at the old rate of 1 percent on employer and 1 percent on employee for the next 3 years. Had the law not been amended to make this change, the rate automatically would have been increased to 1½ percent at the beginning of 1940. In addition, unemployment-compensation taxes were limited to the first $3,000 of an employee's wages, in conformity with the old-age-insurance tax provisions. It is estimated that the annual savings will amount to approximately $65,000,000. Besides this, provision was made for refunds and abatements, which will result in an additional estimated savings to taxpayers of about $15,000,000.

Viewed solely from the social angle, liberalization of the old-age-insurance provisions was another noteworthy achievement. The date for the beginning of monthly benefit payments was brought forward to 1940 from 1942, benefit provisions for retired workers were liberalized, and eligibility requirements were made easier for those who retired in the early years.

Moreover, auxiliary benefits were provided for the retired worker with an aged wife or children under 18 years of age. And then there are the survivor's benefits, which will be payable to a young widow with children, to aged widows, and to dependent parents, should there be no widow or children, on the death of a covered worker.

Perhaps any discussion of Republican objectives and Republican accomplishments in this Congress would be incomplete without a word as to the procedure adopted by the Republicans to translate aims into achievements. That procedure may be summarized in a single word—cooperation.

Our policy was to appeal to reason and to avoid personalities and name calling. Confident in the soundness of our position and the reasonableness of our logic, our aim was to win support for our cause by dispassionate discussion and impartial analysis. If at times some warmth may have developed in the argument, this was merely heat engendered by flaming conviction and was not motivated by malice or vindictiveness. The number of Democrats who joined us in our stand and helped make possible the achievements for which this Congress will be remembered is full justification for the course that we pursued.

To us it seemed an obvious course to a worthy objective. And there was nothing vague or confusing in the objective itself. In last analysis what we were seeking was not Utopia but a sane revival of old-fashioned Americanism. We were seeking to rededicate ourselves to fundamentals; to cling to the virtues which made America the greatest country in the world; the land of hope and opportunity for all.

We tried at all times to act in a spirit of unselfishness, to put the welfare of the country above self and party and to shun the temptation and to resist the pressure which might result in benefits for the few at the expense of the many. For 6 years we had seen most of the recipes in the economic cookbook tried at least once except the homely, old-fashioned American recipe of which the ingredients are economy, thrift, and initiative. These three ingredients, we believed, if properly mixed, could be stirred into a rich sauce of recovery. So we set about the mixing.

The course ahead is now clear and straight. Encouraged by the growing popular support for our constructive policies, Republicans in Congress pledge a continuation of their fight for fundamental Americanism. In session and out, we will battle New Deal socialism at every step of the road.

We are convinced that the people of the United States are tired of hit-and-miss government. We are convinced that the country wants to get out of the red and back to work. And we are convinced that it wants above all else to try honest bookkeeping, honest politics, and honest Americanism for a change.

Allard Henry Gasque

MEMORIAL ADDRESS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD HENRY GASQUE, late a Representative from the State of South Carolina

Mr. RICHARDS. Mr. Speaker, it was my privilege to serve with our late colleague, ALLARD HENRY GASQUE, of South Carolina, during the last three Congresses. When I became a Member of the House in 1932, Mr. GASQUE demonstrated one of the great virtues of his life in offering to give me the value of his experience and observation in legislative work and in expediting the work incident to a new Congressman. I shall always remember this thoughtful interest at that time. He was unselfish and ready to render a service of any kind to his fellow man.

After graduating from the University of South Carolina he was elected superintendent of education for Florence County, which office he held until he was elected to Congress in 1924. He served in public office for nearly 40 years.

In 1931 he was made chairman of the Committee on Pensions, and served as chairman until his death on June 17, 1938. He rendered able and distinguished services in which he served and was beloved by the veterans of our wars, whose true and loyal friend he ever proved himself to be.

The most severe test which can be applied to a man in high position is whether the people in humble walks of life have access to his ear and heart and trust him with their deepest troubles. It was inevitable that Mr. GASQUE's counsel and service should be outstanding in every year of his active life to the people of every station. Whenever a cause, which seemed just and true to him, needed a champion, he never counted the cost and gave himself freely to what seemed to him to be the highest and best.

Of our departed friend it may truthfully be said he served his State and his district with ability and high purpose.

Mr. GASQUE loved his fellow men. His actions showed it all through life. For them he wanted greater happiness. To that he dedicated himself, and in that effort for their happiness he found his own—a happiness that he valued above riches or praise or material reward.

I shall miss ALLARD GASQUE personally; we shall miss him as a colleague; a host of those he befriended will miss him as a sympathetic and helpful counselor—a humble servant of man.

To his family I extend my deep-felt sympathy, for we who knew him are conscious of their great loss. I am sure that the memory of our late colleague will linger with us for many, many years.

New Deal Appropriations

EXTENSION OF REMARKS

OF

HON. CHESTER C. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. BOLTON. Mr. Speaker, I recall just a few years ago at the close of the first session of the Seventy-fourth Congress I inserted in the RECORD some rather extensive tables showing how appropriations had increased.

At the time, attacks were made upon my remarks by several members of Congress and some well-known columnists. The chief criticism was levied against my statement that there was danger of the national public debt running as high as $40,000,000,000. Some complained also because I included a table showing $9,400,000,000 of contingent liabilities guaranteed by the Government. I have not forgotten the circumstances because at the time there were some rather prolonged controversies, particularly dealing with the two items just mentioned.

Today we find that I was understating the facts. We have a national debt which is growing close to the statutory limit of $45,000,000,000 and we find the Treasury Department including in its daily official statement as contingent obligations the very items to which I referred a few years back. In other words, the criticisms referred to are answered by official action and records today.

Almost without exception appropriations have increased from year to year ever since the advent of the New Deal. The session just closing tops them all in the amount of appropriations. Table No. 1 which follows shows the appro-

priations since 1933, session by session, and it demonstrates the dangerousness of the spending spree through which we have been moving.

The present administration is like the little boy with his appetite for candy. The more he gets the more he wants; the more they spend the more they want to spend. Appropriations for the session have totaled about thirteen and one-half billion dollars. This is all the more appalling when we realize that Congress defeated the lend-to-spend measures which would have added another three and one-half billion.

No one can expect business, particularly what we call small business, to stand up under such a strain, not to mention the increase in employment which we all so much desire.

The contingent obligations of the Government have reached an estimated total of about $13,000,000,000. Strictly speaking these are a part of the national debt because they are guaranteed by the Government and a certain percentage is bound to represent eventual losses. We have the testimony of Chairman Jesse Jones of the Reconstruction Finance Corporation, who recently took over management of the Federal Loan Administration, that the R. F. C. is suffering substantial losses and it is one of the better managed loaning agencies. Suffice it to say that the taxpayers always foot the bill. From all accounts they are beginning to realize this.

Another significant fact is the tremendous increase in permanent and indefinite appropriations from less than one and one-half billion dollars for the year 1934 to more than three and one-half billion for 1940. These figures include such fixed charges as the interest on the national debt, amounting to over $1,000,000,000, and payments into trust funds for unemployment insurance, old-age pensions, and railroad-retirement pensions totaling more than one and one-half billions. We may look for these permanent appropriations, which are not included in the totals of the so-called regular appropriation acts, to increase materially so long as the present spending policies continue.

It is no longer necessary today to compare promises with performances. The comparisons in the following table show definitely that promises as to businesslike administration, balancing budgets, and stopping deficits have only been kept in the reverse by undreamed of expenditures. We find total appropriations for 7 years amounting to over $75,000,000-000—and we shuddered back in 1932 when appropriations amounted to five and one-half billion dollars.

	Appropriations (2d sess. 72d Cong., and 1st sess. 73d Cong.) for year 1934	Appropriations (2d sess. 73d Cong.) for year 1935	Appropriations (1st sess. 74th Cong.) for year 1936	Appropriations (2d sess. 74th Cong.) for year 1937	Appropriations (1st sess. 75th Cong.) for year 1938	Appropriations (2d sess. 75th Cong.) for year 1939	Appropriations (1st sess. 76th Cong.) for year 1940

Work relief and relief (1940) (Public Res. 24)							1,755,600,000
Total emergency	3,709,000,000	5,087,569,557	4,000,000,000	1,425,350,000	1,500,000,000	3,187,605,000	2,580,600,000
Grand total general and emergency	6,254,451,227	7,547,568,983	7,378,387,050	8,704,966,849	7,637,100,830	8,644,493,971	9,723,302,789
Reconstruction Finance Corporation (see following table)	1,105,075,000	1,910,000,000	625,000,000	447,000,000			
Permanent and indefinite, including trust funds	1,397,977,695	2,308,382,652	2,200,101,127	1,630,489,970	[8] 2,633,624,969	[8] 3,472,367,832	[8] 3,624,812,775
Total appropriations	8,757,503,992	11,765,951,635	10,203,488,177	10,782,456,819	10,270,725,799	12,116,861,803	13,348,115,564

[6] Plus $500,000,000 from Reconstruction Finance Corporation and $380,000,000 reappropriated.
[7] Plus added authority for R. F. C. to purchase $150,000,000 of P. W. A. securities; and increasing P. W. A. authority to use R. F. C. moneys for grants by $59,000,000.
[8] As shown in 1940 Budget message.

I would call your attention to the fact that the above table does not include moneys reappropriated nor does it take into account contractual authorizations. This session has probably set an all time high record for contractual obligations as it has authorized nearly $500,000,000 worth of contracts to be entered into which will be paid for out of appropriations to be made available in the future. Reappropriations during the session amounted to about $230,000,000.

The more one studies appropriations made during the past 7 years the more important becomes the defeat of the lend-to-spend bills. Designed for the purpose of getting around the $45,000,000,000 debt limitation, which Congress refused to increase, these proposals would have authorized the issuance of additional government guaranteed bonds for purposes which, regardless of claims of proponents, would not have been self-liquidating. The entire program was planned for the effect it would have on the 1940 elections and there was no denial of charges that this was the case. I predict that as time goes on the action of Congress in defeating these measures will be more and more appreciated. It was the first time since 1933 that the New Deal spending orgy has been effectively checked. This action is only exceeded in importance by the general attitude of Congress, indicating that the legislative branch of the Government again proposes to take care of its own responsibilities by refusing to delegate more and more powers to a Chief Executive already clothed with authority which takes him far toward dictatorship.

Bureaucracy has reached its zenith for all time. Whether business executives or ordinary citizens we cannot escape regulation and control from Washington.

But chief among the effects of the New Deal on the average citizen is the cost of government. Cost of government is just another phrase for taxes. Someone has figured that the average cost of a meal for each member of a family of five is 22 cents. In other words, on the basis of an average family and average food, meals cost 22 cents per head, not including cost of preparation. On a wage of 40 cents per hour indirect taxes on food, shelter, clothing, fuel, light, insurance, recreation, and other items which go to make up the budget of average working people amount to 5½ cents per hour. To put it another way, hidden taxes take enough every 4 hours to buy a meal for one person. If this is carried further we find that the cost of 10 meals per week per wage earner is given to the Government in the form of indirect taxes. This is another way of emphasizing that Mr. Average Man bears his full share of the tax burden.

In the following table I have summarized the regular, deficiency, and special appropriations by departments, showing public-works and work-relief appropriations in separate columns for each year.

In spite of all that has been said about reducing appropriations for the regular departments only increases are shown by available tabulations. A number of activities covered by appropriations for highways, public buildings, reclamation projects, and so forth, were taken out of the regular appropriation measure and put into the emergency items under the dual bookkeeping system. I want to call attention to the fact that whether these appropriations are left out entirely or included, the amounts carried for regular Government activities have not been reduced. On the contrary they have on the whole been constantly increasing.

It is difficult to get a true picture and one which is readily understood by the public because of the fact that there have been constant changes in the bookkeeping methods and many transfers of Government agencies. Whether this was done for the purpose of confusing those trying to make dependable comparisons or not, it accomplishes that purpose. Even those of us who serve on the Appropriations Committee find it difficult to fathom the intricacies of the ever-changing budget on which all appropriations are based.

I do feel, however, that the preceding table and the one which follows will give a fair picture from the standpoint of appropriation funds made available by Congress to be spent by the various agencies of the Federal Government.

Appropriations mean expenditures and Government expenditures mean taxes.

Summary of regular, deficiency, and special appropriations

	Fiscal year 1933 appropriations	Fiscal year 1934		Fiscal year 1935		Fiscal year 1936	
		Appropriations	Public Works allotments	Appropriations	Supplemental appropriations	Appropriations	Work-relief appropriations

Additional Benefits Under Social Security Law

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. COCHRAN. Mr. Speaker, while it would take columns to list the beneficial legislation enacted during the session of Congress just closed, in my opinion, the outstanding achievement to the credit of the administration and the Congress was the amendments to the Social Security Act.

Social-security legislation originated during the Roosevelt administration. Naturally, the original enactment of such a far-reaching law would not be perfect. As time passes, the Congress will amend this legislation, but the day will never arrive when it will be repealed, no matter what political party is in control.

Not only did the Congress at this session increase the benefits under the social-security law, but it reduced the cost to the employer and the employee as well. Under the provisions of the original law the contribution from both employer and employee would have increased January 1 next, but now the old-age benefit tax remains at 1 percent and will stay at that figure until January 1, 1943. The amendments likewise discontinue the old-age reserve and provide for a trust fund, which will be small in comparison with the reserve fund set up under the original act, but sufficient to carry out its provisions.

When President Roosevelt signed the bill amending the law, the employees and employers were assured of a savings of $335,000,000 in pay-roll taxes in 1940 and $905,000,000 during the next 3 years which means an increase in their purchasing power.

This social security legislation now directly affects the welfare of 45,000,000 workers in this country as well as advanced lifetime benefits for their families.

Under the provisions of this law, the worker is not a pensioner of the Government but due to his monthly participation, he is purchasing for himself and for his dependents, benefits that will accrue to them in future years. The Federal Government alone is responsible for payments under the insurance feature of the law. In other words, the State in no way participates and the worker, no matter in what section of the country he resides, receives the same benefits.

There is a vast difference between this insurance feature and voluntary assistance on the part of the Government and the State. Under the old-age assistance plan, the law now provides that the Government will contribute up to $20 a month for all those 65 years and over, provided the State contributes a like amount. In other words, if the State only contributes a portion of the $20 for old-age assistance, then the Government's contribution is only equal to that of the State. There are States in the Union today where the average contribution for old-age assistance amounts to a little over $3 and in such cases the Government's contribution is but a like amount. Under the provisions of the law as it stands today a State can pay to every citizen in need over 65 years of age $40 a month old-age assistance by advancing $20 of its own funds to which the Federal Government will add a like amount.

Matching dollar for dollar with the States likewise applies for aid to dependent widows and their children. Increases were provided under the amendments to the law to the extent of $110,000,000 for the aged, widows, and children, and this increase for the next 5 years amounts to $1,200,000,000 over and above that provided for in the original act.

Increased contributions on the part of the Government to the States not only include old-age assistance but also dependent children, the blind, and the crippled, as well as for maternal aid and vocational education. In cases of dependent children, nearly 1,000,000 of which are now receiving assistance from the Government, the new law provides that the Federal Government will contribute one-half of the cost rather than one-third, as in the past, the States assuming the responsibility to do its share by meeting the Federal contribution. Public-health service for the needy receive a very liberal increase, $11,000,000 being provided for next year in place of $3,000,000 for the current year.

Over 25,000,000 employees in the country at the present time are covered by the unemployment-insurance feature of the law, which provides for compensation for the worker when he loses his position through no fault of his own.

In no other country in the world can such a humanitarian law be found. It is true that this law does not cover all workers at the present time, but in years to come no doubt its provisions will be enlarged. Prior to the enactment of the amendments those employed as seamen and in banks were not recognized, but under the new law they will participate.

In this new group will be found over 1,000,000 citizens of our country.

If such a social-security law as we have today would have been in existence 25 years ago there would be no need for old-age assistance, except for those who during their younger days, due to some disability, were unemployable. In time direct old-age assistance will leave the picture and in its place will come this new form of social security, not an outright grant from a generous Government or State, but a legal claim the beneficiary will have due to his or her monthly participation.

It is the Roosevelt administration and its supporters that nearly 50,000,000 citizens can thank for making this possible.

House Resolution 258

EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MOSER. Mr. Speaker, it is my intention to vote for the pending resolution. This, I assure you, is not prompted by prejudice from any source. I have no doubt that any board, bureau, or commission created by act of Congress, based on a table of experiences, could stand investigation periodically, and any opposition to the contrary should be regarded with sufficient suspicion to establish that an investigation is due and should be undertaken. For many years it was my duty to conduct investigations, and experience has taught me that they are surely in order where good service is desired and essential. We all know that regardless of how we legislate and sincerely believe we have provided for a certain functioning of an agency or bureau and commission of government, the amazing entanglement of regulations such agency, bureau, or commission sets up really constitutes the law, since they rather than the law tell a citizen what he may or may not do and frequently what he must do, which has been held by no less authority than the Chief Justice, "that any regulation telling a citizen what he may or may not do, since it does exactly that, has the effect of law." After we, the constituted legislative authority, have enacted a law, it remains for a bureaucratic agency to tell the citizens how much further than their representatives ever intended the law should extend it actually does extend. I know that I need cite no instances. Each and all of you, my colleagues, have had both examples and experiences.

I hold it essential, therefore, that where Congress has not provided its own agency—the General Accounting Office—with authority and investigators to do the investigating, as provided for so many separate departments of the Federal Government, among which most prominently are identified the Post Office inspectors, Federal Bureau of Investigation, and United States Secret Service. Where Congress has thus neglected to provide an obstruction against the arrogated unnatural power, never intended to be conveyed under the legislation creating an agency of Government, it does become the obligation of Congress to conduct its own investigation as contemplated under the pending resolution.

I was not a Member of Congress when the National Labor Relations Act was passed but know that had I been I would have voted for it with my colleagues, many of whom charge the arrogation of unnatural powers, never intended to be conveyed, not provided for specifically in the act, yet assumed, set up, and imposed without being delegated; entirely under the regulations the Board was empowered to set up in order to make it operative. I was present more than 2 years ago when in the Committee of the Whole we undertook and effected a substantial increase in the appropriation provided for the Board. Notwithstanding the argument adduced by a distinguished member of the Committee on Appropriations, that Mr. Fahy pointed out in his seat in the gallery of the House, had appeared before the committee and frankly admitted that he did not know to what use he would put the requested appropriation which substantially exceeded the approval of the Budget. Later when I reminisced with Mr. Fahy on the incident he expressed his embarrassment at the public exposure but admitted the correctness and truth of the statement. There is not one among my colleagues who does not know that this method of appropriations of blank checks for no specified purpose is a most dangerous practice and nullifies the efficient functioning of our own agency, the General Accounting Office. The fact that the Board received the extra appropriation that Mr. Fahy did not know what he would use it for, is sufficient ground for this Congress to investigate that laxity of its predecessor.

In the Commonwealth of Pennsylvania there was no such thing as a poll tax during my lifetime of experience; there was, however, a requirement of having a tax receipt for having paid a county tax within 2 years. To citizens without realty and low assessment for their occupation the tax was nominal but effective. A Socialist member of the General Assembly of Pennsylvania sponsored and battled for the enactment of a law providing for 1-penny poll tax. He held his, and those whose favor he sought, in such low esteem as to citizenship that "1 penny" was, in his judgment, esteemed a sufficient premium on rightful citizenship of the Keystone State. Governor Pinchot, not to be outdemagoged by a Socialist, simply put the force of his influence behind the proposal and effected the enactment of a law removing any tax qualification for voting in the Commonwealth.

Since I have been a Member of Congress I have received only a nominal amount of appeals from constituents insisting that I vote for increasing appropriations for the National Labor Relations Board, but, coincidently, a check-up of those so contacting me has established a preponderant majority of possible citizens not registered and qualified to vote at all—a lesser number, of course, whose names are on the tax duplicates of their respective assessors. It has evolved itself into the situation that those loudest in advocacy of increased appropriations contribute nothing to the support of the Government they would thus unthinkingly despoil. It so happens that while I have received some hundreds of postal cards praying that the National Labor Relations Act shall not be amended, I have not received a single petition or request against its investigation. I am, therefore, unhampered in my determination to support the resolution to investigate, and who can tell, perhaps our colleagues will learn something that may interest even those who have expressed themselves against any amendments.

Mr. Speaker, I have been unimpressed by the argument advanced that the Committee on Labor has been proceeding along the line of investigation and should be let go unhampered to bring in legislative amendments. If I would be influenced by my constituency, I could not with freedom vote for amendments to the act, while I am unrestrained as to voting to investigate. Surely an investigation will not hurt anyone, except, perchance, someone who is guilty of some concealment in one cause or another, all of which will naturally tend to bureaucracy. In my experience of contacts with the Board—while these contacts have always been received with courtesy and consideration—there was constant delay in action. I have contacted the Board in the interest of labor on all occasions. No employer has at any time suggested or requested a contact. My labor constituents have been confronted with delay and disappointment regardless of the cause or the leanings of the cause in the case at issue.

Without having a single cause at issue before the Board where any action or decision has evoked controversy of a nature sufficiently at issue to enlist my active services, I am rather free to observe other issues where the Board's position has been unstable and uncertain, rather straddling and endeavoring to be on both sides of the fence. In fact, there have been evidences where the Board has been on both sides

of the fence, which is an extremely critical position for any board exercising quasi judicial power. The criticism it has brought on its own head has been of its own creation and not of Congress of any individual Member of this body. We have the example of the former head, due to be reappointed by the President and confirmed by the Senate, against whom and whose services there was that amount of protest his name was not risked for rejection at the hands of another body rather than approval and confirmation. This had the effect to cause the nomination and confirmation of a successor, who now, to all outward appearances, looks on the proposal of an investigation smilingly in the complacency of knowing any disclosure will not be of his responsibility and in the light of experience at the decision of the Supreme Court reversing the quasi-judicial finding and decision of the Board, arrogating power never intended and calculated by Congress enacting the law, as gleaned from our participating colleagues. This eminent successor has been enabled to proceed on a safer course than to follow the trail blazed by his predecessor.

Mr. Speaker, keeping aloof from personalities, it is my fortune to be able to deal with and treat on this issue solely in generalities coming under a wide scope of observation, always readily discernible to the eye of a trained investigator, establishing the opinion there is really something to investigate and likely to be discovered, which is far safer than a continued do-nothing course of hearings on proposed amendments to the act. There has been much agitation for amendments. The issue will be open to far more intelligent approach after an investigation, when amendments deemed necessary will have the well-considered benefit of deliberative investigation, rather than biased and prejudiced testimony so frequent in open hearings. Believing an investigation timely and more desirable than ill-considered, biased, and possibly prejudiced amendments to the National Labor Relations Act, I shall vote for the passage of House Resolution 258 this 20th day of July A. D. 1939.

Will Rogers

EXTENSION OF REMARKS
OF
HON. CLAUDE V. PARSONS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. PARSONS. Mr. Speaker, under leave to extend my remarks, I wish to include the following poem written by me on Oklahoma's illustrious son, Will Rogers:

WILL ROGERS

There's something that we miss so much
On radio and screen,
They just don't seem the same to us
Since you have left the scene.

Your plain homespun philosophy,
Your wit and kindly smile,
Magnetic in rendition and
Original in style.

Time marches on, new stars appear,
Amuse and entertain,
But somehow they don't fill the place
Your heights cannot attain.

We loved you, Bill, for you were filled
With love for all mankind;
You cheered us on, you made us glad,
With your bright supermind.

You're still remembered here below,
And though time gives us change,
A vacancy can ne'er be filled
You caused upon the range.

Your memory is near and dear
In every home and town;
We hope you still can carry on
Beneath your starry crown.

You made the world much better,
And though your lips are still,
We'll cherish your sweet memory;
We'll ne'er forget you, Bill.

Appropriations of the Seventy-sixth Congress

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, August 5, 1939

Mr. RICH. Mr. Speaker, my attention is called to the remarks of the gentleman from Colorado, Hon. EDWARD T. TAYLOR, chairman of the Appropriations Committee of the House of Representatives, as inserted in the Appendix of the RECORD, to which reference for my figures as given herewith can be substantiated as coming directly from the chairman of the committee. And my remarks are based entirely on his figures, knowing them to have been made out by the clerks of the Appropriations Committee, and are no doubt quite accurate.

In this connection I want to call the attention of the people of America to the exorbitant, unsound, and unethical appropriations of the committee of the House, of which the gentleman from Colorado is chairman—and, by the way, I want to say this, that I have known him for many years. He is an honest, honorable, conscientious citizen of this country. He has certainly represented the people of Colorado well, but, because of his health and his age, 80 years, he was not able to give the time and close attention to the Appropriations Committee that to me would seem necessary in the face of the trying conditions under which the last Congress labored. It requires a sound body and plenty of hard work to be able to do such a strenuous job.

The Appropriations Committee of the House of Representatives is a committee of 35 members chosen for the purpose of trying to appropriate the moneys necessary for the operation of the Federal Government, and they should give due consideration, it seems to me, to the amount of money that the Federal Government receives from every source of taxation that we have in order to determine what they have to appropriate. And then the Appropriations Committee for the past several years has been so lavish in its expenditures, I question very much if the members have given due consideration to our Federal income, because we went in the "red" during the year closing June 30 over $3,600,000,000—the greatest deficit this country has ever had in peacetime, and the annual deficits of this administration since March 1933 have been the greatest deficits that our Nation has ever known. It is appalling when they are recapitulated and we find that we have squandered the funds of the taxpayers of this country in the ruthless manner we have, showing that in that space of time we have gone in the "red" over $20,000,000,000. It was a sum undreamed of before 1933. It is a staggering sum today. It is a sum that, if it is not curbed, will break down our economic system and surely bring us to a bankrupt nation.

Now, I would not say that a lot of this money has not done much good but when we recall that we had 11,000,000 people out of work when this administration came into power and we have over 11,000,000 people today who are unemployed, and our agricultural program is not what any of us would have it be. After spending billions of dollars on a farm program in order to stimulate prices, we find that they are lower today than they have been—excepting in 1932, I guess, and probably in all the history of our Nation. Wheat 58 cents a bushel, corn 55 cents a bushel, lard 5¼ cents a pound, cotton 8½ cents per pound, and other commodities in proportion. There is something "rotten in Denmark" when an administration has had all this money to spend and we find ourselves in the position we are today.

The thing that causes me to write this article as a member of the Appropriations Committee is the fact that the chairman of the committee criticized the gentleman from New York [Mr. TABER], the minority Member, who is one of the hardest working Members of the House of Representa-

tives—a man who has tried to look after the finances of this country and a man who is interested in trying to make the outgo equal the income of the Federal Treasury and, if the gentleman from Colorado [Mr. TAYLOR] would only take a page out of the book of Mr. TABER in trying to do this, we would not have had the greatest spending spree that we have had during this session of Congress and that is the principal issue I want to make here.

The chairman of the committee, Mr. TAYLOR of Colorado, and the majority members of this committee have not sincerely worked to cut down Government expenditures or we could have held them down by hundreds of millions of dollars without any hindrance to the working of the various departments of the Government and to the best interest of the taxpayers and the country at large.

It is not my object to criticize but I believe that the Appropriations Committee, if it had functioned properly, would have rendered this country a greater service than it has. The old saying, "Any fool can spend money but it takes brains to make it," is just as true today as it ever was and it requires a lot of common sense, hard work, and brain power to make the outgo compare with the income of a federal government, of a business, of a home, or of an individual.

Now, I herewith give you a list of the expenditures as tabulated in the Appendix of the RECORD by the gentleman from Colorado [Mr. TAYLOR], chairman of the Appropriations Committee, on page 3991, showing that the regular annual appropriations amounted to $6,769,004,844.23, the deficiency and supplemental acts as appropriated amounted to $2,950,251,545.16, the miscellaneous acts to $5,046,400, and permanent appropriations $3,624,717,775, making a grand total of appropriations for the Seventy-sixth Congress, according to the figures submitted by the gentleman from Colorado [Mr. TAYLOR], of $13,349,020,564.39; and a reappropriation, according to Mr. TAYLOR's figures, of $131,195,436; making a grand total of appropriations for the Seventy-sixth Congress, first session, of $13,480,216,000.39.

These are the figures as submitted by the gentleman from Colorado [Mr. TAYLOR], chairman of the committee:

Regular acts:	
Agricultural and Farm Credit Administration	$1,194,498,633.00
District of Columbia	48,002,347.00
Independent offices	1,668,218,340.00
Interior	172,679,765.23
Labor	30,536,170.00
Legislative	21,851,779.00
Military:	
Regular	508,789,824.00
Supplemental	223,398,047.00
Navy	773,049,151.00
State	18,518,700.00
Justice	50,907,520.00
Commerce	52,751,000.00
Treasury and Post Office	1,700,615,054.00
War, civil	305,188,514.00
Total, regular acts	6,769,004,844.23
Deficiency and supplemental acts:	
First deficiency	23,765,041.89
Second deficiency	157,619,059.89
Third deficiency	185,168,066.38
Urgent deficiency	3,099,377.00
Additional appropriation for work relief and relief, 1939	725,000,000.00
Appropriation for work relief and relief, 1939	100,000,000.00
Appropriation for work relief and relief, 1940	1,755,600,000.00
Total, deficiency and supplemental acts	2,950,251,545.16
Miscellaneous acts:	
Sundry public acts and public resolutions	4,046,400.00
Miscellaneous private relief acts (estimated)	1,000,000.00
Grand total, exclusive of permanents	9,724,302,789.39
Permanent appropriations:	
Permanent annual appropriations	3,624,717,775.00
Grand total, including permanents	13,349,020,564.39

WHERE ARE YOU GOING TO GET THE MONEY?

Now, the estimated receipts for the year 1940, as was estimated by the Bureau of the Budget, the Treasurer of the United States, and the President of the United States in his message to the Congress in January 1939 was $5,669,000,000, so you can see that the estimated receipts less the above appropriations that were made by the Seventy-sixth Congress will be short $7,811,216,000.39.

In other words, if all the moneys are spent that were appropriated by the Treasury of the United States we will show up the greatest amount of red in 1 year that this Nation has ever known. It is deplorable. It is a pitiable condition, and whose responsibility is it?

If we followed the advice of the gentleman from New York [Mr. TABER] more and the gentleman from Colorado [Mr. TAYLOR] less we would be better off as a nation.

To me it seems the Appropriations Committee should have followed out the advice and counsel of Mr. TABER, of New York, the minority member, and I can assure you had that been the case the difference between our receipts and expenditures would have been very, very much smaller, and had the President of the United States tried to do the things that he promised he would do when he took office—cutting down Government expenditures—he could have been of wonderful service to the House of Representatives, the Appropriations Committee, and the country at large.

The Democratic platform of 1932 promised the people of this country that they would cut down Government expenditures by 25 percent and that they would consolidate bureaus and offices. This has not been done. In fact, they have increased the Government employees to the extent that today we have more Government employees working for Uncle Sam than we had during the great World War. We have established more bureaus and more departments of government than was ever known to be established in any five administrations previous to Mr. Roosevelt assuming office.

And let me quote you from Mr. Roosevelt about trying to have your income and outgo balance, and I quote you from his speech delivered at Pittsburgh on October 19, 1932:

> The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good. If, in some crises, it lives beyond its income for a year or two, it can usually borrow temporarily at reasonable rates. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy.

No truer words were ever spoken, and they are just as important today as they were when he uttered them. And when you think of the cost of government now being practically twice what it was at the time he made his speech, and growing with leaps and bounds, unless we have men of ability sent to Congress to try to straighten out this condition, I am afraid that America will lose its form of government, because of the fact that it will repudiate its debts, and that means not only its financial obligations but all other forms of obligations it has to its people.

Democracy is worth saving. Let us so work that it shall be done, and let the people of this Nation wake up to the conditions in which we find ourselves and try to get back to sound, fundamental principles of government and government operation. Let the people realize that we must support the Government and not the Government support the people. That it is the duty of the Government to give us all equal opportunities and to give us the liberty which we inherited when the country was founded by our forefathers; and let the principles of Washington, Jefferson, Jackson, and Lincoln and Coolidge be our motto today, for no truer words were ever spoken than were uttered to the American people by these great statesmen. We can and must maintain this form of government; and it can only be done by the voters of America asserting themselves to the legislators that we need to carry out the utterances that were made by these great men and not the theory that is being practiced by the new dealers, for it will break down our structure and our principles and create a dictatorship which the American people, I feel confident, do not want. For under a dictatorship we lose our form of government, our independence, and our liberty.

If the price the new dealers and theorists want you and your children and your children's children to pay to experiment any further with unsound, untried, and unbusinesslike methods of the New Deal, I say they are not and may realize what we as a Nation are doing and get back to the sound fundamentals of government practiced by our fathers. God save America. God bless our people.

Business Improvement Facts Refute False Propaganda

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SABATH. Mr. Speaker, ever since the New Deal came into power through overwhelming support of the voters of the Nation, the reactionary Republican-controlled newspapers of the country have developed a new type of journalism. This new departure in the practice of an old and honored profession consists in printing false and misleading propaganda as to business conditions on the front pages and editorial pages while printing the true facts about business conditions on the financial pages.

As evidence of this tricky journalistic innovation designed to fool the people but keep their financial readers properly informed, I find that this morning's edition of the Chicago Tribune, while castigating the administration and attempting to belittle its efforts on behalf of business, also carries stories which show Chrysler net earnings way over year ago; one-half year's profits over $25,000,000; Montgomery-Ward reports greatest business in history; Sears Roebuck volume of business and profits tremendously increasing; Westinghouse Electric's last 3 months' profits over three million five hundred thousand; Eastman Kodak reports profits of $8,000,000 in 24 weeks; steel makes great gains; many corporations declaring increased dividends and paying back dividends; car loadings increasing.

These fact stories of business improvement and prosperity, Mr. Speaker, give the lie to the fiction stories appearing in many of the reactionary newspapers to the effect that the New Deal has done nothing for business. Truth is stranger than fiction, and if you want the truth about how much the New Deal and President Roosevelt's policies have done for that same big business that persists in condemning him, you will find it not on the front pages or controlled editorial pages but on the financial pages, the pages that the "wise men" of big business read.

Collect the Foreign Debt—International Honesty Is the Best Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. LEMKE. Mr. Speaker, our Government entered the World War not to save democracy but to save the European financial structure—to save the international bankers. That is the ugly truth as it has come to light. In secret sessions and star-chamber proceedings America's sons were sold on foreign battlefields. The American people were handed a gold brick. Foreign diplomats were too clever for our diplomats. On every battle front our Ambassadors were outmaneuvered, out-witted, and out-generaled.

In place of representing the American people, our Ambassadors became the tools of European intrigue. In place of representing our ideals, they became embroiled in European racial and religious hatreds, in European politics. They suffered from an inferior foreign complex. Undoubtedly President Wilson would have kept us out of that conflict if he had not been misinformed.

Our Ambassador to Great Britain, Walter Hines Page, apparently forgot that he was an American citizen and from London urged President Wilson to declare war. This, he urged, was necessary in order to get our people to make large loans to Great Britain and the Allied Governments—loans with which Great Britain could pay its overdraft of $400,000,000 to J. P. Morgan & Co. After we entered the war this $400,000,000 was paid to J. P. Morgan & Co. out of the first Liberty Loan.

Apparently Ambassador Page was more interested in saving the financial structure of Great Britain—more interested in war profits for the war lords and international bankers—than he was in the lives of the sons of American fathers and mothers. He was more interested in the success of the patrioteers and racketeers, who made billions out of the mass slaughter of mankind, than in the future of our own Nation.

After we entered the war we loaned billions to Great Britain and France—to the allied governments. Not only did we loan them billions, but in their behalf we sent our sons onto foreign battlefields. We paid our own expenses in that war. In addition, hundreds of millions were spent by our Government and soldiers in Europe. Some of these soldiers told us that they were held up on every occasion by the very people whose battles they came to fight. This was the thanks we received for deserting our time-honored position of "no foreign entanglements."

Since the war these same nations have brazenly refused to pay back the money they borrowed. These nations have no legitimate excuse for not paying. They may not be able to pay it all at one time, but ordinary honesty would dictate that they start making some payments. This would come with better grace than using smiling kings and gracious queens as international pawns with which to lull us asleep—lure us into another European conflict.

Surely the nations who grabbed everything in sight after we won the war for them are able to pay their just obligations—the money they borrowed from us. They know that a large amount of this money was gotten from our farmers and laboring people, who are in need of it. These were compelled to buy the so-called "liberty" bonds that they could ill afford. They bought the bonds but to lose them at 80 cents on a dollar.

In order to correct the injustice done to the American people by defaulting governments whom we befriended in their hour of need, and in order to let these governments know that we insist upon international integrity, international honesty, I have introduced a bill to create a commission directed to collect or refund all debts or obligations now due the United States Government from foreign nations.

These nations owe us about $13,224,000,000. This $13,224,000,000 is no part of the money that we spent in winning the war for the Allied Governments. It is money that they borrowed and gave their solemn promise to pay back.

A large part of this money was borrowed after the World War was over, so that these nations could again build up their industrial life. Ordinary decency would suggest that they pay or refund these obligations. President Coolidge said, "They hired the money, didn't they?"

We expect our people to pay what they owe our Government. The Farm Credit Administration has taken over 60,000 farms from our farmers during the last 7 years because they could not pay their mortgages. These farmers were reduced to poverty because we went to war "to end wars" and because we loaned billions to aggressor nations who now refuse to pay.

The Home Owners' Loan Corporation has taken away hundreds and thousands of homes from men and women who could not pay because of the consequence of our entering into the World War to end all wars. We have shown these men and women no mercy. We have evicted innocent men, women, and children from their homes because they could not pay the Government.

However, we have shamefully neglected our duty to collect from these defaulting nations. The articles now appearing in the Saturday Evening Post, by Professor Moley, show some of the cunning schemes devised by these foreign nations to avoid payment.

Charity begins at home. If our Government is so hard up that it must collect, it should collect from foreigners first. If a preference is to be given, then it should be given to our own people. The men and women whose farms and homes we have taken away were less able to pay than the foreign nations that owe us.

I am confident that the people of Great Britain, on whose far-flung possessions the sun never sets, would feel insulted if they were told that their Government was unable to pay the sum of $240,000,000 a year. I am sure that the Government of Great Britain does not represent the will of its people on this subject. The British people have always taken a just pride in the prompt fulfillment of their financial obligations.

The excuse that these nations are unable to pay merely adds insult to injury. The facts are that they have made loans to other nations. They have spent millions and billions in the preparation for more war—in preparation for their own destruction and other nations' destruction. They have spent hundreds of millions in building up their own industries. They have been able to do everything except to pay us what they owe us.

Not only did our Army and Navy spend millions of dollars in Europe during the war, but, in addition, our people spend millions of dollars each year in traveling in the very countries that owe us billions but refuse to pay. If these defaulting nations would pay back to us this money it would not be so very long before the foreign debt would be completely paid. This without any hardship on any of them. Honesty is still the best policy—internationally as well as personally.

These nations are again talking of token payments. These payments should be promptly refused. The time has come when our officials should represent the people of this Nation and not foreign nations. The only reason they now wish to make token payments is because they want to borrow more.

The bill provides that if any foreign government deliberately refuses to pay or refund the money it borrowed from this Government, that then the Commission is directed and authorized to report to Congress methods by which such payments may be enforced. It provides that the Commission shall, among other things, report our trade relations and trade agreements with such nations, the amount of money or property that such nation has within this Nation, and its ability to pay.

We have been altogether too patient with these defaulting nations. We know that they are able to pay. The time for action has arrived. There are plenty of ways in which these debts can be collected. We now demand that they be paid voluntarily, and we do not mean maybe. If our demands are refused we shall consider it an unfriendly act and shall act accordingly.

I name the members of the Commission in the bill because I feel that that is the business of Congress. We have been unable to get any action at the executive end of the Government during this or the previous administration. Congress represents the people who furnished the money which was loaned to these nations.

A Republican Scheme That Will Not Work

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. SABATH. Mr. Speaker, reactionary Republican newspapers and Republican political leaders aided by a few tory Democrats who for personal reasons have been antagonistic toward the President and the New Deal are working overtime behind the scenes to try and mislead the Democrats of the Nation into nominating a reactionary candidate for President. They would like to unload upon us such a reactionary candidate as to insure the election of a Republican, but in any event assuring a 4-year reign of Wall Street in the White House whichever candidate was elected. Regardless of their ingenuity and practice at political conniving their scheme will not succeed because they will not fool the real Democrats in our party.

The Democrats, who are actually Democrats, and the rank and file of American people who support and vote the Democratic Party ticket will not be misled into repeating the mistakes of 1904, 1920, and 1924.

In 1904 the reactionaries secured control of the Democratic convention and after being assured of the support of the big interests they nominated Parker, unloading him upon our party, the result, of course, was that he did not receive enough votes to justify their being counted. In 1920 Mr. Cox, after his nomination, permitted himself to be influenced by the reactionaries and the same disastrous results were suffered by our party.

In 1924, at the celebrated New York convention, through manipulation again by the reactionary forces within the Democratic Party, John W. Davis was nominated. Although personally a very able gentleman, his services as an attorney for J. P. Morgan and other large interests definitely alined him with the reactionary forces in the minds of the American people. Misguided leaders within the Democratic Party honestly believe that because of the unsatisfactory conditions under the Republican administration big business would support Mr. Davis. However, the very reactionary forces who succeeded in manipulating Mr. Davis' nomination deserted him in the election, and he did not receive enough votes to wad a shotgun.

These three very sad experiences should be a warning to Democrats throughout the Nation that no reactionary, nominated by the Democratic Party, can ever be elected as a President.

The rank and file of Democratic voters and the voters at large will not support any reactionary Democratic nominee. The Democratic Party is the party of the people and not of the vested interests. Special privilege knows and fully realizes the satisfactory services they received from the Republican Party, which they have owned and controlled for years. They are likewise fully aware that no Democratic administration could serve them as well as the Republican Party. I am therefore satisfied that the Democratic convention will not be misled by any reactionary propaganda that this or that candidate is a liberal or progressive when the object of such propaganda is to force upon the Democratic Party a reactionary nominee temporarily disguised. I am confident Democrats will judge candidates for their support in the convention by the company they keep, knowing full well you cannot teach an old dog new tricks nor that a leopard can change its spots.

I concede that the Wall Street directors of hundreds of corporations, the Steel Trust magnates, the public-utility moguls, the railroad presidents, the Morgans, Rockefellers, du Ponts, Fords, Weirs, Goulds, Vanderbilts, Sloanes, Girdlers, or any or all of those whose incomes are over a hundred thousand dollars annually are opposed to the New Deal. They would be opposed to any party that has the interests of the American people at heart, that advocates improving the conditions of the wage earner, the farmer, and the small-business men of the country. They do not ever intend to support a Democrat for election to the Presidency even though they may give lip service to a reactionary Democratic nominee until the votes are counted.

As I stated, the Democratic Party should be and must continue to be a party of the people. It cannot and must not permit itself to be used, influenced, or bossed by the "60 families" who presently control a great portion of the Nation's wealth and their few hundred special agents, manipulators, lawyers, brokers, and kept politicians. The Democratic

Party must carry on the fight for the underprivileged Americans, for the rank and file of our citizens. These citizens, the backbone of our Nation, will demand and insist that President Franklin D. Roosevelt be nominated again by our party, so he may continue and perfect the splendid and constructive work he has started.

Neutrality

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

LETTER FROM D. F. MYERS

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter written by Mr. D. F. Myers, post-office box 302, Hong Kong, China, to Mrs. William Hiatt, rural route 1, box 459–A, Torrance, Calif. Mrs. Hiatt is a constituent of mine.

This letter describes the horrors of modern warfare in language that is vivid and to the point. There is no mistaking the accusation in the following letter that this Congress has failed its duty to its people and democracy by refusing to enact a neutrality law that would help end this mass slaughter of civilians in China.

The letter follows:

CHUNGKING, *May 14, 1939.*

* * * When I first came up to Chungking, which is a long distance up the Yangtze River from Shanghai, and equally as far from Hong Kong, there was a heavy blanket of clouds all over the city and the Japanese planes could not find the place. But with the coming of May the clouds began to clear and on the 3d of May we had our first air raid. Since then we have had three regular raids and a few air-raid alarms which did not result in bombing.

On the 3d of May we had several false alarms and we all stayed near our dugouts so that we could dive into them if the planes really came. And sure enough, just after noon, they came. For a time the air was filled with the roar of Chinese planes as they came from the air field to climb high above the city to meet the invaders. Then, out of the silence which followed, we heard the drone of the bombers as they came in from the south. There was a sharp crackle of the antiaircraft guns as we rushed to the dugout under the house where I am staying. There we could hear the thud of the exploding bombs as they were dropped closer and closer until one fell a few hundred yards away and exploded with such terrific force that we were almost knocked down by the concussion. Then they were gone. We ran to the open in time to see one of the planes fall in flames and the two aviators dropping down in their parachutes. We had not seen the bombs fall, but we could see the effects of their falling. Great clouds of dust were rising off to our left along the street above us. Smoke and flames were beginning to rise from the several fires which had been set. As soon as we could we left the house and went up to the street where we saw the wreckage of the buildings which were hit and later saw the fires which were set by the incendiary bombs. In this raid a lot of damage was done, both by the explosive bombs and by the incendiary bombs. In all some 20 bombs were dropped.

All the next day we were in a constant state of alarm. But, since no planes came, we were just beginning to draw our breath freely at about 6:30 p. m. when there came an urgent alarm. Again the Chinese planes came over and prepared to meet the bombers. Again came the dull roar of the heavy American-made bombers. Then, in the dusk to the northeast, we saw the long lane of planes. Twenty-seven of them in close formation of nine sets of threes. It was a terrible and a terrifying sight to see them as they came on as relentless as fate. They were well to the left of us this time and we stayed out of our dugout to watch them. The air was filled with the crackle of the antiaircraft guns and the little puffs of smoke made by the bursting of the antiaircraft shells wove a pattern about the planes, but none were hit. On and on they came. It was getting too dark to see the bombs fall and they moved over the rocky hill on which Chungking is located before dropping them. This time, however, we did not hear the bombs explode, and as the planes passed out of sight we marveled to each other that they had come all this way and had not bombed the place. But as we looked the sky to the northwest was filled with smoke and flames. The whole sky was soon lighted up and we hastened to make our way up the many steps which lead from the Canadian Mission Home, where I am staying, to the streets above. By this time it was dark and the electric lights of the city, which had been shut off with the approach of the raiders, did not come on again. As we proceeded, guided by the light of the flames and lighting our way by means of flashlights and by the moon, which was by this time arising, we reached the scene of the bombing. It was fully a mile from our place and over the rocky hill.

As we came near we met people, loaded with their few belongings, rushing to the river where they could get boats to the south bank. Weeping children and women, frightened men. All with but one object in mind—to get as far from the scene of death and destruction as was possible.

We reached the Canadian Hospital, and there saw our first sight of the horror which had been wrought. In the doorway stood the big, gentle Dr. Stuart Allen, directing the long lines of stretcher bearers as they came in with the loads of misery. Far up the street, in the light of the burning buildings, we could see them come. Already more than 200 had been brought in, and they were still coming. The little hospital, built to care for the ordinary sick, was being worked to the limit by a wartime disaster. As the wounded came in they were laid on the ground in rows (the first batch had filled the few rooms to overflowing), and the doctors and nurses moved quickly from stretcher to stretcher, doing what they could for the wounded. There was no time for more than first aid. The doctors and nurses worked from patient to patient, without time to wash the blood from their hands. Then the patients were rushed to the river, where they were transported to the larger hospital on the south bank. It was a sickening sight, but we were to see and hear worse.

From the hospital (which was one of five to which more than 1,000 of the wounded were taken), we went along the street another hundred yards and there saw where the bombs had fallen at the curb line and had demolished several buildings. A hole 30 feet in diameter and 15 feet deep had been made in the street, and the buildings on both sides of the street had been wrecked. Water was still running from the 4-inch main which had been uprooted and broken by the bomb. This was spouting water all over those who were undertaking the rescue work. But at this place little rescue was possible. Anyone within a hundred feet of this bomb was killed, and the dead were lying as they had fallen. We hurried on, attracted by the flames and screams of the trapped victims. The fire department was out in full force, trying to stop the flames. It was a hopeless task. The broken water mains had little pressure. Long lines of bucket carriers were bringing water from wells and hydrants too far for the hoses to reach, and were filling big tubs with water for the fire engines to suck up and throw on the flames. But it was not until late the next evening, after many buildings had been torn down in the path of the flames and a light rain had come to dampen them, that the fires were finally checked. Seven huge fires were started, which together burned over an area as large as the whole of Vicennes.

We hastened on to lend a hand to the Friends' Mission, which had been in the center of the bombing and which was threatened by another fire. Arriving there through a dark alley in which a dozen bombs had been dropped, we could hear the calls and the groans of those who were buried deep under the wreckage. But, without a steam shovel we could never have reached them (some of them are still there and may not be gotten out for some time yet).

At the Friends' Mission we found that everything had been destroyed except the home of the missionary who, with the help of a couple of his friends, was removing his goods from the house to the debris-strewn courtyard. They were alternating these labors with that of putting out the fires which constantly caught at the eaves of the house.

It seemed that the house was doomed and that it might go before the goods could be safely removed, but the two of us fell to and helped to remove the goods and to put out the fires. This last was an almost hopeless job for the flames were leaping high in the air on two sides of the place with only the courtyard wall between. Time after time the eaves of the house caught and time after time we put them out. We had but little water and the only equipment we had was the kitchen utensils, but it is amazing how much good a cup of cold water will do if placed by desperate hands on the right spot. We dared not use too much water for we had so little, and so, with tin cups and teakettles we held the fires away until the buildings over the wall should burn out. Hours later we stood, black and grimy, but triumphant, and looked at the building which we had saved, the only one left standing in all that area. Only red coals and bleak plaster walls stood about us as we finally felt free to stop and drink the water from the cold water in the ice box. There was a time when we even thought of using this water to quench the flames but had been spared this extremity. The bright moonlight filtered down upon us as we stood there, mighty tired, and compared notes. The one thing that stood out in our minds was the fact that the place was mighty lucky to have escaped. I still don't see how we did it.

In our work of removing the furniture from the house and of putting out the fire, we became conscious of being tripped by some object in the passageway on the second floor of the house. When it occurred to one of us to remove the obstacle, we thought it was a wet calfskin. Bringing a flashlight, we discovered that it was all that remained of a Chinese woman who had been blown into the passage from one of the bombed houses.

To say that it was all that remained of her body is not saying much. There was little left except the heavy coal-black hair and

less than half of the torso. Arms, legs, the front of the face and neck, and the whole of the front of the body had been blown away. She must have been standing almost on the spot the bomb hit.

As gently as possible we moved her aside to await the arrival of those who were to remove the dead, but our gentleness could not atone for the brutal mind which conceived the idea of bombing helpless civilians. Our eyes were dry and our hearts hardened as we worked on for the living, although not forgetting the dead. The next day the remains of two more bodies were discovered in the courtyard. One was only a head, blown cleanly from the body, and the other was just a part of the trunk of a man.

How the gods of war must have rejoiced at the ease with which these innocent humans were destroyed! How proud must be the "brave" Japanese who dropped the bombs!

And, I bow in shame as I say it, how proud must be the Americans who sold the scrap iron, the cotton, the gasoline, and the airplanes to the Japanese to use in making the bombs, the explosives, and the flight which resulted in such dreadful wholesale murder. For besides the more than 1,000 persons who were injured in the raid, more than 2,000 were killed, many of whom have not yet been dug out of the ruins.

The result of the raid on May 4 was that about one-tenth of the city was destroyed and burned. The burned section comprised a greater portion of the business area. Two hundred thousand people were rendered homeless and even more were forced to seek refuge outside the city. All the cars and trucks in the city were placed in the service of evacuating the people who wished to leave. The roads were crowded for 3 days following. On foot, in carrying chairs, in rickshas, and in motor vehicles, they left. Not in panic, however, but under orderly control. Every policeman stayed on the job long after he should have been relieved. Two days afterward some of them were still at work, ready to drop but carrying on. Then came the women to the rescue. Hundreds of trimly dressed women took their stand along the roads and did their share in directing the traffic and preventing panic. Even when on Saturday at noon, we again had an alarm, those brave women stood to their places and by their examples prevented what might have been a terror-stricken riot. I was passing along in a ricksha at this time and saw them quieting the crowds. Only when the last of the refugees had finally been safely placed in dugouts did these women join ranks and march to places of safety. But when I came back, an hour later, they were again on the job. Respect for such bravery caused me to remove my hat and ride along bareheaded as I passed them. I thought of all the "Mollie Pitchers" and others I had read of in American history. I thought of the "Spirit of '76" and all it meant to the discouraged Americans of the Revolutionary War. I had never before known just what it meant. But as I looked upon those brave women I knew at once what the "Spirit of '39" means to them. It means that China will go on fighting and fighting and that there can never be a peace which curtails the independence of China's progressive men and women.

Then, again, on Friday the 12th, the Japs came again. This time they had less success than before. With 27 planes they came, this time from the west. But, being a little later in the day than before, they did not hit the main part of the city. Again they dropped 100 bombs and set fire to 7 buildings, but the places they hit were not so large and the fires soon burned out. Many people were killed and injured, but not nearly so many as before.

Antiaircraft guns and the Chinese planes broke up their formation and brought down several of their planes. This time we were again in the dugout under our building and felt and heard the explosions, which, although farther away, were not deadened by the rocks. Aside from the burning of a large warehouse and a school, little real damage was done. The suffering of the people, of course, is just as bad, even though there is less of it. Many of the refugees from the bombings of May 3 and 4 were living in the section which was bombed on the 12th, but, because of the scattered nature of the buildings, few were killed or injured.

I know that you will want to know how long this war will go on. I wish I could tell you. I can only say that it will go on just so long as America, with her so-called neutrality, lets Japan sell her silk in America and use the proceeds to buy oil, cotton, scrap iron, and airplanes, for, without these, Japan cannot carry on. As we sat at the radio and heard the news announcer from San Francisco tell the world that America was going to await the departure of the British King and Queen from America before deciding about the future of the Neutrality Act, our hearts were heavy, for only the day before we had sent a cable message to Congress from here, we Americans, in which we had asked Congress in the name of God to consider the effects of a neutrality which permits an aggressor nation to purchase the raw materials of war and prevents the invaded nation from buying the arms needed for protection.

* * * * * * *

I must close now. It is Sunday and I have spent most of the morning writing this letter. I wanted you to know what an air raid was actually like. There is only one word for it—terrifying. Don't believe anyone when they say they were not afraid during an air raid. But it is not the fear one has of any other thing. It is a hopeless fear. The fear that comes of having an unseen but horrible thing after you and no place in which you can hide from it. But once the raid is over, the fear gives way to a kind of determined hatred. Determination to do all in one's power to remove such an evil thing, as the bombing of open cities, from the world. And you come out and set to work again. Not as though nothing had happened, but as though what had happened had made you all the more determined to carry on.

That is what the Japanese are facing with this policy of killing civilians. One and all, the Chinese are more determined today than they were when the war began. Determined that they will continue the war as long as there is a man or a woman to fight. How, then, can Japan hope to conquer China? How, then, can one look for a permanent peace here in the Orient (or in the world) until the more powerful democratic nations decide to boycott Japan and help China. The future peace of the world for 100 years to come depends upon the action of the American Congress during this session. If they continue the idiotic policy of selling to such aggressors as Japan because she has the ships in which to transport the goods and refuses to sell arms and ammunition to China, this war can go on until all the Chinese are exterminated. If America takes the lead in boycotting aggressors, the war can be ended permanently in 6 months.

But I must close and get this letter in the mail. It will come to you by air and should reach you within the next 10 days. If you care to let Mrs. Emison have the letter, she can do some good by publishing it to show America's part in this war against the Chinese and democracy. Perhaps, if enough good Americans will demand action, something may yet be done to stop the most horrible mass murder that the world has ever known.

* * * * * * *

Very sincerely,

DAN.

Puerto Rico Before Congress

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

Mr. IGLESIAS. Mr. Speaker, I believe it opportune to insert in the RECORD a summary of the valuable work performed in behalf of Puerto Rico and its people during the first session of the Seventy-sixth Congress.

The office of the Resident Commissioner of Puerto Rico has been treated with kindness and justice by many Representatives and Senators, and especially by the officers of the administration that have given great help and support for the success of many social and economic measures that will continue to uplift the people of the island. The Department of the Interior, directed by the Honorable Harold L. Ickes and the Division that has been created in said Department for the Territories, headed by Dr. Gruening, were inspired continually by the reports and personal activities of Governor Blanton Winship who, assisted by many other representatives and commissions from Puerto Rico, obtained many favorable actions and projects intended to benefit permanently the general situation of Puerto Rico.

President Roosevelt was continually demonstrating his sympathies and willingness to give help to the people of the island, and gave all the help he could. He is directly responsible for the success in the extension of the Social Security Act to the island for the first time. He recently gave approval to several economic plans and has also authorized Admiral Leahy, newly appointed Governor of Puerto Rico, to spend $10,000,000 for the relief of the people over there in a manner which he may deem most beneficial.

In order that the public be informed of the efforts and accomplishments in behalf of Puerto Rico, the following account of activities is appended herewith. All this has been worked out in different ways and in many ways by the office of the Resident Commissioner of Puerto Rico, who has given attention to the hundreds of requests from many sections of the island on matters of education, sanitation, and also all matters of veterans and candidates for various positions. I have also given my best assistance to all the representatives of the agriculture and the workers of Puerto Rico. Likewise, I have attended the various committees of the House and the Senate in behalf of these representatives and the bills pending and considered, always in the interest of the welfare of Puerto Rico and its people in general.

Loans, grants, and liquidated projects which will benefit the people of Puerto Rico—Seventy-sixth Congress

Federal social-security laws will grant eventually	$500,000
Federal agricultural extension laws will give	400,000
Federal roads and bridges appropriation acts will reach	1,000,000
New Deal program and reconstruction for the island	1,000,000
Federal relief (for the use of the P. R. R. A)	7,000,000
The Federal Housing National Administration has earmarked:	
For Puerto Rico	12,000,000
For San Juan, first installment, approved by the President	780,000
For Ponce, first installment, approved by the President	1,250,000
Federal educational extension	400,000
Probable expenses for harbors: San Juan, Fajardo, Mayaguez, Arecibo, Punta Santiago, Guayanes	2,500,000
For the Construction of the drydock of San Juan	1,300,000
War division in the island and expenses for construction of buildings, personnel, are calculated to reach	16,000,000
An air base, construction of building, accessories, fixed by law	9,300,000
To be used by Governor Leahy for relief purposes as authorized by President Roosevelt	10,000,000
The Department of Interior has set aside for the ultimate control of the electrification of all Puerto Rico about	3,000,000

Several other Federal laws have included Puerto Rico in various sections, stressing help and cooperation.

BILLS INTRODUCED BY THE RESIDENT COMMISSIONER OF PUERTO RICO, HON. SANTIAGO IGLESIAS, IN THE SEVENTY-SIXTH CONGRESS

H. R. 146, to amend the act of August 14, 1935, entitled "Social Security Act," to extend titles V and VI to Puerto Rico. January 3, 1939 (Committee on Insular Affairs). Extension of remarks (Mr. IGLESIAS), Extension to Puerto Rico of the Benefits of the Social Security and the Bankhead-Jones Acts, page 415 of the Appendix of the CONGRESSIONAL RECORD.

H. R. 147, to make Puerto Rico an incorporated Territory of the United States. January 3, 1939 (Committee on Insular Affairs). Extension of remarks, Puerto Rico Wants to Become an Integral Part of the United States, Appendix of the CONGRESSIONAL RECORD, page 684. Progress and Unemployment in Puerto Rico, Appendix of the CONGRESSIONAL RECORD, page 815. On January 6, 1939, letters were sent to leaders of the Legislature of Puerto Rico asking them to give their best consideration to the bill.

H. R. 148, to amend section 40 of the act of March 2, 1917, entitled "An act to provide a civil government for Porto Rico, and for other purposes." January 3, 1939 (Committee on Insular Affairs).

H. R. 149, to amend section 38 of the act of March 2, 1917, entitled "An act to provide a civil government for Porto Rico, and for other purposes." January 3, 1939 (Committee on Insular Affairs).

H. R. 150, to extend the provisions of the act entitled "An act to provide that the United States shall aid the States in wildlife-restoration projects, and for other purposes," approved September 2, 1937, to the District of Columbia or any Territory or possession of the United States. (Committee on Agriculture.)

H. R. 151, authorizing the Secretary of War to transfer to the Grand Lodge of Free and Accepted Masons of Puerto Rico certain real estate in the city of San Juan, P. R. (Committee on Military Affairs.)

H. R. 152, to authorize and direct the United States Commissioner of Fisheries to undertake fish-cultural and related activities in Puerto Rico, making appropriations therefor, and for other purposes. (Committee on Merchant Marine and Fisheries.)

H. R. 2925, for the relief of Julia Santiago. (Committee on Claims.)

H. R. 4068, for the relief of Mary Rose Williams, minor child of the deceased seaman Otis A. Williams. Compensation, $5,000. (Committee on Claims.)

H. R. 4082, to amend the act of August 14, 1935, entitled "Social Security Act," to extend titles I, V, VI, and X to Puerto Rico. (Committee on Ways and Means) February 14, 1939. Extension of remarks, page 415, Appendix of the CONGRESSIONAL RECORD. Not only the benefits of these titles have been extended to the island, but also Puerto Rico has been included in other measures, like the vocational rehabilitation for the blind, etc. CONGRESSIONAL RECORD, conference report, pages 11088, 11089, and 11090.

H. R. 4175, to authorize the Secretary of War to build an American Army monument in Mayaguez, P. R. February 13, 1939. (Committee on Military Affairs.)

H. R. 4176, for a survey and examination of Punta Santiago Harbor, Humacao, P. R. (Committee on Rivers and Harbors, Doc. No. 280.)

H. R. 4532, to make effective in the District Court of the United States for Puerto Rico rules promulgated by the Supreme Court of the United States governing pleading practice and procedure in the district courts of the United States February 27, 1939. (Committee on the Judiciary; referred to Subcommittee No. 11; passed House May 1, 1939.)

H. R. 5179, to extend the provisions of the act entitled "An act to provide that the United States shall aid the States in wildlife-restoration projects, and for other purposes," approved September 2, 1937. March 21, 1939. (Committee on Agriculture.)

H. R. 6067, to authorize a preliminary examination and survey of certain rivers and other tributaries on the island of Puerto Rico for flood control, for run-off and water-flow retardation, and for soil-erosion prevention. May 1, 1939. (Committee on Flood Control.)

H. R. 6117, to amend the Merchant Marine Act, 1936, as amended, to further promote the merchant-marine policy therein declared, and for other purposes. May 2, 1939. (Committee on Merchant Marine and Fisheries.) Extension of remarks, Proposed Amendment of the Merchant Marine Act Regarding Ship Construction. (Appendix of the CONGRESSIONAL RECORD, p. 1922.)

H. R. 6118, to amend the Merchant Marine Act, 1936, as amended, and to remove discrimination in such act against Puerto Rico in connection with ship subsidies, and for other purposes. May 2, 1939. (Committee on Merchant Marine and Fisheries.) Extension of remarks, Proposed Amendment of the Merchant Marine Act Regarding Ship Construction. (Appendix of the CONGRESSIONAL RECORD, p. 1922.)

H. R. 6133, to compensate certain Puerto Rican citizens of the United States in the World War. May 3, 1939. (Committee on War Claims.) Extension of remarks, Puerto Rican Industrial Soldiers. (Appendix of the CONGRESSIONAL RECORD, p. 1577.)

H. R. 6986, to enable the people of Puerto Rico to form a constitution and state government and be admitted into the Union on an equal footing with the States. June 26, 1939. (Committee on the Territories.) Extension of remarks. In the Caribbean Sea. (Appendix of the CONGRESSIONAL RECORD, p. 2704.) Progress in Puerto Rico. (Appendix of the CONGRESSIONAL RECORD, p. 3617.)

H. R. 7117, to amend an act entitled "An act to provide a civil government for Porto Rico, and for other purposes," approved March 2, 1917. July 10, 1939. (Committee on Insular Affairs.)

H. 7118, to amend the Organic Act of Puerto Rico, approved March 2, 1917. July 10, 1939. (Committee on Insular Affairs.)

H. R. 7502, to authorize a preliminary examination and survey of certain rivers and their tributaries on the island of Puerto Rico for flood control, for run-off and water-flow retardation, and for soil-erosion prevention. August 4, 1939 (Committee on Flood Control).

DEBATES IN THE HOUSE OF REPRESENTATIVES IN WHICH THE RESIDENT COMMISSIONER OF PUERTO RICO, HON. SANTIAGO IGLESIAS, PARTICIPATED

Deficiency bill, requesting $3,000,000 for Puerto Rico, March 22, 1939 (CONGRESSIONAL RECORD, p. 3123).

Additional Federal funds appropriated by Public Act No. 407 for the support of extension in agriculture and home economics in Puerto Rico, March 23, 1939 (CONGRESSIONAL RECORD, p. 3209).

Asking the Chairman of the House to amend H. R. 5375, a bill promoting nautical education, so that it will cover Puerto Rico, April 17, 1939 (CONGRESSIONAL RECORD, p. 4376).

Answer to MARCANTONIO's speech against Governor Winship, in which the wage and hour law was mentioned, May 15, 1939 (CONGRESSIONAL RECORD, p. 5528). (Both Mr. IGLESIAS and Mr. MARCANTONIO were allowed to extend their remarks in the RECORD.)

Amendments introduced to the Hatch bill (S. 1871) regarding political favors during election time.

ADDRESSES BY RADIO

Speech delivered at the New York World's Fair on Puerto Rico Day, July 25, 1939.

Speech commenting on Senator GIBSON's bill (S. 1193) creating an executive department to be known as Department of Territories and Insular Affairs.

Report on conditions of Puerto Rico.

EXTENSIONS OF REMARKS OF HON. SANTIAGO IGLESIAS DURING THE SEVENTY-SIXTH CONGRESS IN THE HOUSE OF REPRESENTATIVES

The Government of Puerto Rico and Trade Agreements (reciprocal-trade agreements, etc. (Appendix of the CONGRESSIONAL RECORD, p. 107).

Reciprocal-Trade Agreement With Cuba (sugar quota, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 234).

Puerto Rico's Activities (economic conditions, progress, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 298).

Extension to Puerto Rico of the Benefits of the Social Security and the Bankhead-Jones Acts (memorandums commissioner of health and agriculture in connection with said acts, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 415).

Five Years of Governor Blanton Winship in Puerto Rico (address by Hon. Bolizar Pagan) (Appendix of the CONGRESSIONAL RECORD, p. 540.)

Puerto Rico Wants to Become an Integral Part of the United States (covers economic conditions, bill H. R. 147, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 684).

Progress and Unemployment in Puerto Rico (Territorial form of government, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 815).

Unemployed, Low Wages, and Business in Puerto Rico (wage-hour law, conditions in the island, inclusion of reports from San Juan in the New York Times, and other reports of the government) (Appendix of the CONGRESSIONAL RECORD, p. 930).

Fair Labor Standards Act in Puerto Rico (relief, unemployment, P. W. A., Free Federation of Workingmen resolution, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 1129).

Rivers and Harbors Congress (address by Blanton Winship before the National Rivers and Harbors Congress) (Appendix of the CONGRESSIONAL RECORD, p. 1152).

A Report From Puerto Rico (address by Maj. Gen. Blanton Winship on the Columbia Broadcasting System Saturday, March 25, 1939, from the studios of WJSV, Columbia studios for the Nation's Capital, covers different aspects of the island) (Appendix of the CONGRESSIONAL RECORD, p. 1259).

Social and Economic Problems of Puerto Rico (Reurtel-Ellender Act (S. 69), cables on the matter, conditions as reported, social and economic problems, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 1326).

Status of Puerto Rico (address by Hon. Martinez Nadal in the Senate of Puerto Rico on March 24, 1939) (Appendix of the CONGRESSIONAL RECORD, p. 1376).

Puerto Rican Industrial Soldiers (resolution of the House of Representatives of Puerto Rico; letters, Secretary of Labor, Secretary of War, Dr. Gruening) (Appendix of the CONGRESSIONAL RECORD, p. 1577).

Paramount Problems of Puerto Rico (living conditions, how the Federal Government has been helpful, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 1685).

Proposed Amendment of the Merchant Marine Act Regarding Ship Construction (reports on bills H. R. 6118 and H. R. 6117) (Appendix of the CONGRESSIONAL RECORD, p. 1803).

Conditions of Labor in Puerto Rico (regarding wage and hour law, economic situation, insertion of report of the Governor of Puerto Rico at the public hearings before the Wages and Hours Division of the Department of Labor) (Appendix of the CONGRESSIONAL RECORD, p. 1922).

Federal Aid to Education in Puerto Rico (resolution of the San Juan Teacher's Union, Local No. 582, American Federation of Teachers, H. R. 3517) (Appendix of the CONGRESSIONAL RECORD, p. 2179).

Social Security Act (covering report before the Ways and Means Committee) (Appendix of the CONGRESSIONAL RECORD, p. 2345).

Puerto Rico (concurrent resolution, Puerto Rican Legislature), June 8, 1939 (Appendix of the CONGRESSIONAL RECORD, p. 2485).

Progress in Puerto Rico (the desire of Puerto Rico to become a State of the Union; mentioned bills, civil government for Puerto Rico, conditions in the island, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 3388).

In the Caribbean Sea (final political status for the island, liberalization of the organic act, memorandum of the joint committee of the Puerto Rican Senate, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 2704).

Puerto Rico's Day at the New York World's Fair, Friday, July 28, 1938 (Appendix of the CONGRESSIONAL RECORD, p. 3617).

Gov. Blanton Winship (resolutions, editorials, etc., attesting high esteem of Governor Winship by Puerto Ricans), Saturday, August 5, 1939 (Appendix of the CONGRESSIONAL RECORD, p. 4152).

Progress in Puerto Rico (statehood bill to enable the people of Puerto Rico to form a constitution, etc.) (Appendix of the CONGRESSIONAL RECORD, p. 3617).

PETITIONS, SEVENTY-SIXTH CONGRESS

No. 978. Petition of Maria Gonzalez and others, of Lares, P. R., asking consideration of their petition with reference to neutrality (Committee on Foreign Affairs). CONGRESSIONAL RECORD, February 7, 1939, page 1227.

No. 979. Petition of the Associated Puerto Rican Press, Puerto Rico, petitioning consideration of their resolution with reference to propaganda (Committee on Foreign Affairs). CONGRESSIONAL RECORD, February 7, 1939, page 1228.

No. 1003. Petition of Generosa Hernandez, Caguas, P. R., and others, urging consideration of their petitions with reference to neutrality (Committee on Foreign Affairs). CONGRESSIONAL RECORD, February 8, 1939, page 1267.

Many other petitions from hundreds of citizens of the island were received from Puerto Rico and the mainland. To all of them careful consideration was given by the Resident Commissioner and were referred to the proper authorities. Most of the petitions were sent officially by the Resident Commissioner to the Speaker of the House, Hon. WILLIAM B. BANKHEAD, and to the various departments and their corresponding officials in bureaus and divisions. The Secretary of State, Hon. Cordell Hull; the Secretary of the Interior, Hon. Harold L. Ickes; the Secretary of Agriculture, Henry A. Wallace; the Secretary of Commerce, Harry L. Hopkins; the Secretary of Labor, Mme. Frances Perkins; the late Secretary of the Navy, Hon. Claude A. Swanson; the Secretary of War, Hon. Harry H. Woodring; the Secretary of the Treasury, Henry Morgenthau, Jr.; Attorney General Frank Murphy; the Postmaster General, James A. Farley; Bureau of Immigration; Veterans' Bureau; and other officials of the aforesaid departments, have given to our requests and petitions the best and most sympathetic interest and cooperation, helping to solve many difficulties and situations.

BILLS INTRODUCED IN THE SENATE AFFECTING PUERTO RICANS OR THE ISLAND IN GENERAL, SEVENTY-SIXTH CONGRESS

S. 69. Senator ALLEN J. ELLENDER: Regulation of sugar production and stipulation of quotas. Mr. IGLESIAS' extension of remarks, Social and Economic Problems of Puerto Rico, Appendix of the CONGRESSIONAL RECORD, page 1326. Comparative table, Sugar Act of 1937 and S. 69, showing quota for each area and increase or decrease therein, Appendix of the CONGRESSIONAL RECORD, page 1440. Debate of Representative Lord, in regard to Cuban and Puerto Rican sugar quota, March 23, CONGRESSIONAL RECORD, page 3209. Extension of remarks by Representative REED of New York, in reference to the Cuban treaty, Appendix of the CONGRESSIONAL RECORD, page 122. Debate, Mr. CUMMINGS, January 13, 1939, CONGRESSIONAL RECORD, pages 446–449. Mr. REED's remarks, Cuban Reciprocity (?), Appendix of the CONGRESSIONAL RECORD, page 122. Senator KING debate, March 23, 1939, CONGRESSIONAL RECORD, pages 3173, 3174.

S. Res. 82. Senator ARTHUR CAPPER: Against regulation of contracts of indigenous workers, which would impose a lower standard of working conditions on many American workers, and in particular upon many American women workers. Senator CAPPER requests in his resolution that the United States delegation to the June conference of the International Labor Organization should be instructed in said respect. The Puerto Rican Legislature approved a resolution in favor of said bill.

S. 191. Senator HENRY F. ASHURST: To extend the privilege of retirement to the judges of the Territories and Puerto Rico.

S. 201. Senator WILLIAM H. KING: To provide for allocation of funds for relief and work relief applicable to the States, Territories, and Puerto Rico.

S. 282. Senator MATTHEW M. NEELY: To provide that State employees employed in connection with programs carried on with the assistance of the Federal Government be selected in accordance with a nonpolitical civil-service plan.

S. 518. Senator JOHN H. BANKHEAD: To provide for the further development of cooperative agricultural extension work.

S. 1193. Senator ERNEST W. GIBSON: To create an executive department of the Government to be known as the Department of Territories and Insular Affairs.

S. 1343. Senator W. WARREN BARBOUR: To increase the number of National Guard aviation units in State and Territory, including Puerto Rico.

S. 1305. Senators ELBERT D. THOMAS and PAT HARRISON: To promote the general welfare through the appropriation of funds to assist the States and Territories in providing more effective programs of public education. This bill includes Puerto Rico also. (This is similar to H. R. 1813.) If the bill is approved, $140,000,000 will be dedicated for the expansion of education for the years 1939–45.

S. 1395. Senator ARTHUR H. VANDENBERG: To give relief to the States and Territories. This measure includes Puerto Rico outside of other Territories.

S. 1871. Senator CARL A. HATCH: To prevent pernicious political activities. Puerto Rico is included in this bill, which was approved (Public, No. 252).

S. 2202. Senator JAMES F. BYRNES: Proposing the creation of a Department of Public Works, combining in it the Public Works Administration, Works Progress Administration, Civilian Conservation Corps, National Youth Administration, Bureau of Public Work, and the public-building branch at the Treasury Department. The new department would be expected to plan projects ahead and have them ready to take up the slack when the wheels of industry begin slowing down. Senator BYRNES stated "that the workers who are not eligible to job insurance, or other social-security benefits, would be given relief through appropriate jobs. If one thing is certain, it is that job insurance must be our first line of defense." This policy will be good for Puerto Rico if the bill becomes a law.

S. 2780. Senator EDWARD R. BURKE: Statehood for Puerto Rico. (Same as H. R. 6986.) (Committee on Territories.)

S. 2475 (same as H. R. 6197). Senator WILLIAM H. KING: Creating the Puerto Rico Water Resources Authority. After hearing the Resident Commissioner, the committee decided to let the bill go over until the House acts upon it.

BILLS INTRODUCED IN THE HOUSE OF REPRESENTATIVES AFFECTING PUERTO RICANS OR THE ISLAND IN GENERAL—SEVENTY-SIXTH CONGRESS

H. J. Res. 326. Representative CLIFTON A. WOODRUM: Appropriation for the relief of unemployment and for direct relief, authorizing grants to the State, Territories, and Puerto Rico, for the amount of $1,120,000,000, to be administered by the W. P. A. in the fiscal year 1939–40.

H. R. 1640. Representative WILLIAM B. BARRY: To liberalize the Home Owners' Loan Act by reducing the rate of interest on obligations of home owners.

H. R. 1674. Representative J. HARDIN PETERSON: To provide for the recognition of the services of the civilian officials and employees, citizens of the United States, engaged in and about the construction of the Panama Canal; January 4, 1939. (Committee on Merchant Marine and Fisheries.)

H. R. 1813. Representative PATRICK J. BOLAND: To provide education for all types of physically handicapped children, asking for an appropriation of $11,580,000, is also extended to the States, Territories, and Puerto Rico. (Extension of remarks, Mr. IGLESIAS, Federal Aid to Education in Puerto Rico, Appendix of the CONGRESSIONAL RECORD, p. 2179.)

H. R. 2371. Representative SAM C. MASSINGALE: To regulate interstate and foreign commerce in agricultural products; to prevent unfair competition; to provide for the orderly marketing of such products; to promote the general welfare by assuring an abundant and permanent supply of such products by securing to the producers a minimum price of not less than cost of production; and for other purposes; January 12, 1939. (Committee on Agriculture.) If this measure is favorably reported and finally approved by Congress, it would certainly settle forever the economic conflicts in which thousands of little farmers are involved all over the States, Territories, and prominently Puerto Rico.

H. R. 2372. Representative WILLIAM LEMKE: To regulate interstate and foreign commerce in agricultural products; to prevent unfair competition; to provide for the orderly marketing of such products; to promote the general welfare by assuring an abundant and permanent supply of such products by securing to the producers a minimum price of not less than cost of production; and for other purposes, January 12, 1939. (Committee on Agriculture.)

H. R. 2386. Representative ROBERT RAMSPECK: To amend the act entitled "An act to provide for the establishment of a national employment system and for cooperation with the States in the promotion of such system, and for other purposes," as amended, by

extending the scope of services thereunder, and for other purposes. (Committee on Labor.)

H. R. 2422. Representative MARVIN JONES: To provide for the further development of cooperative agricultural extension work; January 12, 1939. (Committee on Agriculture.)

H. R. 2990. Representative MARY T. NORTON: To amend the act entitled "An act to establish a Civilian Conservation Corps, and for other purposes," approved June 28, 1937, as amended; August 1, 1939, passed the Senate. In accordance with declarations of Mr. Fechner, Director of the C. C. C. camps, there will be employed over 300,000 workers. The House appropriated $295,000,000 for said purpose.

H. R. 3232. Representative HENRY B. STEAGALL: To amend the National Housing Act clarifying the right to insure any mortgage providing that the amount of the principal and obligations of all mortgages shall not exceed $6,000,000,000 at any one time. To conduct its business in any State, District of Columbia, Alaska, Hawaii, or Puerto Rico, with one or more offices, one of which shall be designated as the principal office (Committee on Banking and Currency).

H. R. 3517. Representative WILLIAM H. LARRABEE: To promote a general welfare through appropriation of funds to assist the States and Territories in providing more effective programs of public education (in which bill Puerto Rico is included). The work will start with an appropriation beginning with $40,000,000 until 1945, which will reach the sum of $140,000,000, to be distributed among the States. (The term "States" includes Alaska, Hawaii, and Puerto Rico.)

H. R. 3800. Representative MARVIN JONES: To amend section 8 (e) of the Soil Conservation and Domestic Allotment Act, as amended (Committee on Agriculture and Forestry).

H. R. 4278. Representative BEVERLY M. VINCENT: To authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes. (This bill passed in the Senate and was finally approved.) Maj. Gen. H. H. Arnold, Chief of the Air Corps, in his statement before the Committee on Military Affairs said that the construction of the new bases will require a new base in Puerto Rico, two new bases in the United States, and additional bases in Hawaii and Alaska. "With the completion of these bases we will have those air-force units so located that they can carry out their mission of the air defense of the continental limits of the United States and Panama." Maj. Gen. R. Beck, Jr., Assistant Chief of Staff, stated that, "Briefly expressed in terms of manpower, this plan provides for the expansion of our forces in the continental United States, including Alaska and Puerto Rico, into a force of approximately 1,000,000 enlisted men and the necessary complement of commissioned officers." For the construction of buildings, purchase of accessories, etc., Puerto Rico will receive $9,300,000.

H. R. 5219. Representative EDWARD T. TAYLOR: Second Deficiency Act for 1939. This bill was approved. Originally, the bill had a grant of $3,000,000 for Puerto Rico (debate, Mar. 22, 1939, CONGRESSIONAL RECORD, p. 3123), but only $1,000,000 was granted.

H. R. 6406. Representative MARY T. NORTON: Amendments to Fair Labor Standards Act of 1939 (Committee on Labor). Mr. IGLESIAS' remarks, Unemployed, Low Wages, and Business in Puerto Rico, Appendix of the CONGRESSIONAL RECORD, page 930. Fair Labor Standards Act in Puerto Rico, Appendix of the CONGRESSIONAL RECORD, page 1129. Conditions of Labor in Puerto Rico, Appendix of the CONGRESSIONAL RECORD, page 1922.

H. R. 6470. Representative JOSEPH E. CASEY: To provide a planned program for the relief of unemployment by affording opportunities for employment upon a public-works program to persons unable to secure private employment, May 23, 1939 (Committee on Appropriations).

H. R. 6635. Representative ROBERT L. DOUGHTON: On Social Security Act. Puerto Rico has been included in titles I, V, VI, and X and in other measures like the vocational rehabilitation for the blind. Conference report, CONGRESSIONAL RECORD, pages 11088, 11089, and 11090.

H. R. 7234. Representative FRANK CARLSON: To provide a civil government for Puerto Rico. (By request.) July 14, 1939. (Committee on Insular Affairs.)

H. J. Res. 326. Representative EDWARD T. TAYLOR: Relief and Work Relief and Public Appropriation Act, 1939. (Public, No. 24.) In this law there is a grant of $7,000,000 for the use of the Puerto Rico reconstruction administration.

H. R. 6197. Representative LEO KOCIALKOWSKI: Creating the Puerto Rico Water Resources Authority, and for other purposes. (Committee on Insular Affairs.) In the session of the committee where this bill was discussed it was decided to allow the measure to go over until the next session.

MISCELLANEOUS MENTION OF PUERTO RICO IN THE CONGRESSIONAL RECORD, SEVENTY-SIXTH CONGRESS

Nomination of the Resident Commissioner of Puerto Rico to the Committees on Insular Affairs, Labor, and Agriculture. CONGRESSIONAL RECORD, January 18, 1939, pages 440–441.

Extension of remarks by Representative REED of New York, Cuban Reciprocity (?) Appendix of the CONGRESSIONAL RECORD, page 122.

Senator KING's debate, in reference to sugar quota, March 23, 1939, CONGRESSIONAL RECORD, pages 3173 and 3174.

Debate of Representative Lord in regard to Cuban and Puerto Rican sugar quota, March 23, 1939, CONGRESSIONAL RECORD, page 3209.

Comparative table, Sugar Act of 1937 and S. 69, showing quota for each area and increase or decrease therein. Appendix of the CONGRESSIONAL RECORD, page 1440.

Debate of Mr. CUMMINGS in reference to sugar quota, January 18, 1939. CONGRESSIONAL RECORD, pages 446–449.

Conference report on Social Security Act, August 4, 1939. CONGRESSIONAL RECORD, August 4, 1939, pages 11088, 11089, and 11090.

And other reports and bills mentioning Puerto Rico to help the people of the island.

BILLS WHICH WERE INTRODUCED IN PAST CONGRESSES AND WERE REINTRODUCED IN THE SEVENTY-SIXTH CONGRESS

H. R. 1480, to amend sections 13 and 19 of the act of March 2, 1917, entitled "An act to provide a civil government for Puerto Rico, and for other purposes," January 5, 1937 (Committee on Insular Affairs).

H. R. 11003, to amend section 13 of the act of March 2, 1917, entitled "An act to provide a civil government for Puerto Rico, and for other purposes," February 7, 1936 (Committee on Insular Affairs).

H. R. 5899, to extend the Irrigation Act, approved June 17, 1902, to Puerto Rico, March 24, 1937 (Committee on Irrigation).

H. R. 10786, creating the Puerto Rico Water Resources Authority, and for other purposes, May 31, 1938 (Committee on Insular Affairs).

H. R. 6524, to amend the act of August 14, 1935, entitled "Social Security Act," to extend titles V and VI to Puerto Rico, April 20, 1937 (Ways and Means Committee).

The Commissioner was requested by many natives of the island to clarify the American citizenship law so that it may include all Puerto Ricans born on the island of alien parentage, in order that they may be considered as citizens of the United States.

Answer of Federal Home Loan Bank Board and Nugent Fallon, of Federal Savings and Loan Insurance Corporation, That Government Funds Were Used for Private Transportation

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. COCHRAN. Mr. Speaker, on June 19 the gentleman from Illinois [Mr. CHURCH] charged in a speech that Mr. Nugent Fallon, of the Federal Savings & Loan Insurance Corporation, used funds of the Government for week-end trips to his home. The following day, acting as chairman of the Committee on Expenditures, I called upon the Chairman of the Federal Home Loan Bank Board, Hon. John H. Fahey, for a statement concerning the charges of Mr. CHURCH.

Under the permission granted by the House I will include Mr. Fahey's reply as well as a memorandum to the Board signed by Mr. Fallon.

The communication was accompanied by a detailed statement of 44 trips referred to by the gentleman from Illinois [Mr. CHURCH] in his remarks, explaining the purpose of each trip. I do not feel justified, in view of the letter of Mr. Fahey and Mr. Fallon's memorandum, to burden the RECORD with the detailed statement referred to.

The letter of Mr. Fahey and the memorandum of Mr. Fallon follow:

FEDERAL HOME LOAN BANK BOARD,
Washington, July 20, 1939.

Hon. JOHN J. COCHRAN,
Chairman, Committee on Expenditures in the Executive Departments, House of Representatives.

MY DEAR MR. COCHRAN: In response to your recent request for information relative to charges made by Congressman CHURCH, of Illinois, that Nugent Fallon, general manager of the Federal Savings and Loan Insurance Corporation, used funds of the United States for week-end trips home, I beg to forward to you herewith a detailed report of the trips taken by Mr. Fallon to which Congressman CHURCH referred in the remarks printed on page 10510 of the CONGRESSIONAL RECORD of June 19, 1939.

Mr. Fallon has been general manager of the Federal Savings and Loan Insurance Corporation since 1935. For a long period he was the only executive official directing the work of this Corporation, and in that connection he was called upon to travel extensively in response to the demands of institutions wishing to be informed as to what the insurance by Federal Savings and Loan Insurance Corporation represented and what steps they should take to qualify.

It should also be explained that in many of the States legislation was necessary in connection with the granting of insurance for the protection of the Corporation and also to provide proper eligibility for institutions operating under State laws. Because of the demands upon his time in Washington, which necessitated his being here regularly a considerable part of each week, it was necessary in most cases for Mr. Fallon to make his trips to the field at week ends. In meeting the requests of the institutions interested in the insurance program it was necessary for members of the Board and others of the organization to assist Mr. Fallon from time to time, and this work also involved the presidents and other officials of the 12 regional banks of the Federal Home Loan Bank System. In developing the work of the Federal Home Loan Bank Board, night and Sunday meetings have been common with all those in the organization of the Federal Savings and Loan Insurance Corporation, as well as the Home Owners' Loan Corporation, the Federal Home Loan Bank System, and the Federal Savings and Loan Association.

In addition to the detailed memoranda with reference to trips made by Mr. Fallon, I also enclose a statement from him filed with the Board which refers to the suggestions made by Mr. CHURCH that these trips made by Mr. Fallon were really for the purpose of being at a home owned by him in New York in Forest Hills, Long Island, and one which he rented for his family during the summer at Swampscott, Mass.

The questions raised by Congressman CHURCH in his statement on the floor of the House were taken up with the Federal Home Loan Bank Board last year by the General Accounting Office. At that time they were looked into and a statement relative to them filed with the General Accounting Office. Following this, none of these travel expenditures were disallowed by the Acting Comptroller General of the United States, nor was any further inquiry made of the Federal Home Loan Bank Board concerning the matter.

I regret that this material is so voluminous, but you will, I am sure, appreciate that it covers a period of considerable length. If you desire anything more, or there are any points which you feel need further explanation, we will be glad to supply the additional information as promptly as possible.

Sincerely yours,

JOHN H. FAHEY, *Chairman.*

MEMORANDUM

FEDERAL SAVINGS & LOAN INSURANCE CORPORATION

July 19, 1939.

To the Members of the Board.
From Nugent Fallon.

Complying with your request, I herewith submit a detailed reply to the charges made against me, as general manager of the Federal Savings and Loan Insurance Corporation, by Representative CHURCH, of Illinois, June 19, 1939, as reported in the CONGRESSIONAL RECORD, No. 122, volume 84.

To substantiate his charges, Mr. CHURCH sets forth in the RECORD a list of 44 items of travel performed by me during the period from December 11, 1935, to September 6, 1938.

I am submitting a full explanation of each item so recorded, and at the same time wish to register a complete and emphatic denial to Mr. CHURCH's accusations that I at any time applied Government travel funds or devoted Government time to personal pleasure or convenience or to personal business.

Mr. CHURCH asserts that I have defrauded the Government and that an excessive amount of my official travel was made on week ends to New York and Boston. He alleges that I own homes in New York City and Swampscott, Mass., and concludes, without ever attempting to verify his conclusions or even attempting to consult me or my office, that these trips were for pleasure or private profit at Government expense.

Before proceeding to give the facts about each official trip taken by me since I became the general manager of our Insurance Corporation, let me, for your convenience, give a brief general summary.

I became general manager of the Federal Savings and Loan Insurance Corporation December 1, 1935.

At that time I maintained my residence at an apartment hotel here in Washington on a yearly rental. I also paid for the maintenance of a home for my family at 74 Greenway Terrace, Forest Hills, Long Island, N. Y.

Except for the winter period 1935-36 the Forest Hills house has either been closed or rented, and is now rented. Since October 1, 1936, my family, with me, has maintained permanent residence in Washington, D. C.

I have never owned a house in Swampscott, Mass., as alleged, but each year during the short summer season I have rented a house there.

Because of the volume of work in the northeastern area, I made many official trips both to New York and Boston. If at or near either place while on business, it was only natural that I should spend my nights there when these houses were open. But every hour spent at either place or devoted to private pleasure or personal business during a Government workday was on annual leave, for which appropriate leave slips were signed and recorded. Forty-three days of such leave is noted on records covering the period to which Mr. CHURCH refers.

Many of my trips were made on week ends because there was no other time I could spare from my duties at Washington. Rather than being guilty of defrauding the Government, I was sacrificing my own rest period and convenience in its behalf. Wherever a Sunday or holiday was involved and my own convenience alone was served, no per diem was claimed.

Mr. CHURCH did not explain that I made 73 trips in the period from 1935 to 1938, and that 29 of them were to other parts of the country than the Northeast. Many of these and some of those listed as Boston and New York trips were long and arduous journeys touching several States.

There is no mystery, however, as to why the majority of my trips were to the eight Northeastern States. Two of the twelve regional banks are located in New York and Boston. Twenty percent of the population of the country, with 30 percent of the Nation's savings and loan activities, carried on by institutions with assets of $1,696,000,000, rests in the eight States covered on my New York and Boston trips; 90 percent of the mutual savings bank assets, totaling more than $11,500,000,000, are in that territory; in Massachusetts it was necessary to convert cooperative banks to Federal savings and loan associations before they could be insured by the Federal Savings and Loan Insurance Corporation; the complex building and loan situation in New Jersey is too well known to need elaboration. The New York area and the New England States demanded all the personal attention which I, as general manager of the Insurance Corporation, could devote to them and still do.

Massachusetts maintains the only State insurance similar to ours, and New York has seriously considered a State plan of savings and loan insurance.

This was the region in which I had spent most of my business life, where I had the best contacts, and where I was of most value to the Corporation. I succeeded in pressing into service other officials of the Bank Board and its agencies to help solve problems in other sections, where they qualified better than I, while giving my special attention to the eight Northeastern States.

From the day I became General Manager of the Federal Savings and Loan Insurance Corporation to the present time, the Corporation has grown in capital and reserves from a figure of $100,350,000 to $118,054,000; our membership during that same period grew from approximately 1,050 insured institutions, with assets of approximately $610,000,000, to 2,165 insured institutions, with assets of $2,300,000,000, safeguarding the savings of 2,350,000 investors.

The business in the territory where Mr. CHURCH questions my travel grew during the same period from 63 insured institutions, with assets of $97,234,000, to 205 insured institutions, with assets of $348,020,000, and is still expanding.

My personal efforts certainly had something to do with this progress in an area where problems were more demanding than in any other section of the United States.

In fairness, we must remember that for 2 years of the period referred to by Mr. CHURCH I was the sole executive officer of the Corporation.

Following is a tabulation by years of the time spent in official travel on my part:

Number of months	Year	Trips	Days
1	1935	2	8
12	1936	32	102
12	1937	24	99
12	1938	19	69
6	1939	8	15

Now, fortunately, I have some assistance, and with the growing problem of liquidations, I am able, as the record shows, to steadily reduce my travel, although total travel on the Corporation's business continues to grow substantially. I list below the official trips made by my assistants since their appointments:

Oscar R. Kreutz, deputy general manager:

Number of months	Year	Trips	Days
12	1938	22	103
6	1939	10	67

Charles E. Tilton, assistant general manager:

Number of months	Year	Trips	Days
6	1938	6	39
6	1939	9	31

With no such assistance in the difficult days of early education, introduction, and expansion by and of the Insurance Corporation, it must be remembered that extensive travel represented a hardship, overtime, and expense for me. With only voluntary executive assistance for field work, it must be apparent both why I devoted most of my time and personal effort to nearby territory, close to my office and my superiors, and why I was forced to do much of my travel at night and over week ends.

A detailed record and explanation of each of my trips during the period dealt with by Mr. CHURCH and a summary is appended. May I respectfully direct special attention to the large number of trips on which I was accompanied.

NUGENT FALLON.

SUMMARY PREPARED BY MR. FALLON

Regarding the charges that I own a home at 74 Greenway Terrace, Forest Hills, New York City, and a summer home at 135 Beach Bluff Avenue, Swampscott, Mass., I wish to state that my family has made its home in Washington, D. C., since October 1936. The home in New York referred to has been rented or closed since the first of June 1936. I own no home in Swampscott, Mass., and never have. I rent for a short period each year the house referred to at 135 Beach Bluff Avenue, Swampscott, Mass., while I maintain my domicile in Washington.

My reference to the Champlain meeting and golf playing in the telegram mentioned in connection with voucher No. 525 is merely the evidence of my feeling that the meeting was not as serious in purpose as it might have been. I do not play golf.

I note from the CONGRESSIONAL RECORD there is listed a part of a telegram sent to me as follows: "* * * Mr. Kreutz hopes you can discuss field work and kid with Larogue." This telegram actually was sent reading, "Mr. Kreutz hopes you can discuss field work and Kidd with LaRoque." Mr. Kidd was a prospective field employee whom we were considering at that time. Mr. LaRoque is the president of the Federal Home Loan Bank of Winston-Salem.

Mr. CHURCH quotes a telegram sent by Mr. Kreutz to Mr. Hawkinson July 11, 1936, reserving a room at the Kansas City Club for me and infers that the trip was in connection with a meeting of representatives of various savings and loan associations. The meeting in question was ordered by the Board and was attended by Mr. B. H. Wooten, deputy governor, and me, with the management of one association and our own examiners on a matter of supervision. This trip was fully reported.

I note a search by the General Accounting Office of various hotel registers, based probably on the fact that I took a taxi to the hotel in question. It is my understanding that I am permitted, on arrival in a city, to take a taxi to a hotel or to a Federal home loan bank, or to an association with which I am doing business. I am entitled to a taxi to the railroad station. It is my practice to utilize this privilege whenever I have to go to a hotel to lodge or to meet people or for breakfast or for any other purpose and I do not always stop at the hotel to which I take a taxi. I seek reasonable lodgings, for which I pay, and which I reach by walking or by transportation other than at Government expense. At no time have I ever used Government money for my own pleasure, business, or convenience.

During the period under discussion 73 trips were made and where there was the slightest doubt of conflict of private convenience and Government business, leave was taken for the full period in question and to a total of 43 days. In addition, where a holiday or Sunday was involved and my own convenience alone was served, no per diem was claimed.

The purposes, generally for travel in connection with the work of the Corporation are:

1. To develop and look after the business of the Insurance Corporation.

2. To effect personal contact with State banking departments, building and loan league leaders, leaders of the building and loan industry and allied industries, and officers and directors of individual associations.

3. To supervise the conduct of insured associations and to scrutinize associations contemplating insurance and to attend meetings and discussions of insurance problems in various areas.

4. To deal with liquidations and the prevention of defaults which would lead to liquidations.

Tommy Corcoran

EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

ARTICLE FROM THE WASHINGTON STAR AND THE WASHINGTON HERALD

Mr. MOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following news item appearing in the Washington Herald, June 11, 1938, and the Washington Star, issue of Sunday, June 12, 1938, as written by William M. Pinkerton, Associated Press staff writer:

"TOMMY THE CORK" TRIES TO DO JOB OF 10 MEN, ENDS UP WITH 8—PRESIDENT'S AIDE KEEPS FIT, THOUGH, AND PLAYS AS HARD AS HE WORKS—NEW SKIING MANEUVER HIS GREATEST FEAT OF YEAR

(By William M. Pinkerton, Associated Press Staff Writer)

When Thomas G. Corcoran, "Tommy the Cork," pauses in his long days of labor for President Roosevelt, he muses on five jobs he'd like to have.

None of these jobs is political in the "running for office" sense. He disclaims political ambition. Instead, he expects some day to return to the Wall Street law firm from which he came.

The man who rose from an unnoticed legal job in Herbert Hoover's R. F. C. to White House handy man—speech writer, legal adviser, political strategist, and ear-to-the-ground informant—would like most, at 37, to become:

Forest warden on top Mount Carrigan in New Hampshire.

Head of the civil service, with authority to set up a career service of trained personnel like the British have.

Leader of the Boy Scouts of America.

Chief of Federal conservation work.

A coordinator to fit youth coming out of college into its first jobs; to gear educated manpower into the kind of work each individual is suited to do.

The one job he's really intent on is the last.

Already he has done much work in fitting young lawyers out of Harvard into their first jobs. In New York he ran the law school's placement bureau, bringing brilliant graduates and prosperous alumni together. In Washington he found Government work for many other promising legal minds.

He believes the average college graduate flounders for 5 years before he finds his place in the modern world.

His own example: Mr. Corcoran didn't "find himself" in the legal world until he was nearly 30. His grandfather was a sea captain at 19.

For years Mr. Corcoran served the administration in some of its hardest fights with the "passion for anonymity" which President Roosevelt has asked of his confidential assistants.

Lately he has become the center of a political argument. Senator WHEELER (Democrat), of Montana, named Mr. Corcoran among "a little group of men" whom he charged with marking antiadministration Democrats for "oblivion."

Mr. Corcoran's associates in the administration say his work is not different from that of the regular White House secretariat. One said the President used Mr. Corcoran as any corporation head would use a trusted aide.

Mr. Roosevelt himself laughed loudly at the furore, and said administration opponents were trying to set up Mr. Corcoran as a bogeyman.

Meanwhile this graying, youngish man, with twinkling eyes, tanned countenance, and a small mouth that breaks into a smile much like the President's own, works on at a pace that amazes Washington.

Assured of a job, when he wants one, in the New York law firm where he started, Mr. Corcoran plunges into battles which others might sidestep. He will stay, he has indicated, as long as he can be of service to the President.

Mr. Corcoran, the son of a Pawtucket, R. I., lawyer, gained his knowledge of the law and public life from close association with a succession of outstanding men. The names of the men under whom he served sum up his career:

Felix Frankfurter, the Harvard law professor.

The late Justice Oliver Wendell Holmes, of the Supreme Court.

Joseph Cotton, "the best strategist in New York."

George Franklin, a prominent corporation lawyer on Wall Street.

Eugene Meyer, chairman of the Reconstruction Finance Corporation under President Hoover.

Jesse Jones, present Chairman of the R. F. C.

Dean Acheson, a former Under Secretary of the Treasury.

Raymond Moley, New Deal adviser.

Franklin D. Roosevelt.

He gets into his office at 10:30 or 11 a. m. in the morning and goes immediately into a round of interviews, phone calls, appointments, and study that often ends far after midnight.

"He tries to do the work of 10 men," said an associate, "and does the work of 8."

Once he could work through one job at a time, centering his energies on the task at hand. Thus he collaborated with Benjamin Cohen in writing the Securities and Exchange Act, bucked opposition to the bill, both from Wall Street and from within the administration, helped win enough votes to put it through Congress, and then defended it from litigation.

Now he works on several fronts at once. When a fight is hot, friends say, Mr. Corcoran gets the signal.

He is the President's "outside" man, a roving trouble shooter, legal source book, and weather vane of political winds. He's in and out of the White House during the day, but has no office there.

His headquarters are in an office on the tenth floor of the R. F. C. Building. But he also has a resting place in the suite assigned to his legal partner, Mr. Cohen, at the Interior Department.

Friends say Mr. Corcoran declares he "practices law by ear" these days. Pressed by his many duties, he sometimes phones his friends

among Government lawyers for quick opinions on legal points. He knows what man is expert in each field of the law.

Much as he drives himself at his job, Mr. Corcoran keeps himself in trim physical condition.

"Look at this," he exclaimed to a friend recently. He tugged at his sagging, empty vest; then flapped his baggy pants back and forth with his hands.

"A year ago I weighed 220 pounds, now I'm down to 174. I just made up my mind I was putting on too much weight."

When the pressure of Government chores becomes too great, Mr. Corcoran hurries off to the mountains or to the woods. He once was a guide in the Canadian wilds and he scorns beach-lolling vacations.

He plays as hard as he works and counts this year's great achievement the mastery of a difficult skiing maneuver. This is his ski history:

The first year he broke his face so badly an insurance company paid him $600. The second year he broke his knee. The third year he broke his ankle, and this year he learned the Christiana.

Mr. Corcoran avoids the formal round of cocktail parties, dinners, and balls that Washington officialdom dotes on.

No hostess can pin him down for an evening. When he goes at all, he arrives when he can and leaves when he will. If he finds a serious discussion that interests him, he may stay late.

But he prefers occasional informal gatherings where he can bring his accordion and sing out sailor chanties and Irish folk songs. The President is one of his chanty fans.

He's a fine musician at the piano, too, but can't understand swing music.

He dresses in grays and browns, but doesn't bother much about clothes. He buys five or six suits at a time—all the same model—to avoid the bother of trips to the tailor.

Mr. Speaker, as a member of the House Committee on the Civil Service, certain articles on subjects concerning the civil service have been heretofore placed in the RECORD. These with my own remarks uttered from the floor of the House in debate on the reorganization bill when it was recommitted on April 8, 1938, prompt the inclusion of the foregoing news comment among those assembled for future use and reference.

We Spend for Defense

EXTENSION OF REMARKS

OF

HON. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, August 5, 1939

Mr. MONRONEY. Mr. Speaker, under leave to extend my own remarks in the RECORD, I would like to call attention to figures just compiled by the Appropriations Committee of the House. These figures indicate that this year's appropriations will exceed those of last year's regular appropriations by approximately $1,078,600,000.

In analyzing this year's appropriations and the increases made by the Seventy-sixth Congress, one significant fact looms largest. This is that this Congress has endeavored to put our national-defense machine in proper order for any upset in world affairs.

A close check of the appropriation increases reveals that more than that total amount was increased in the appropriations for agriculture and national defense. The appropriations for these two branches totaled $1,174,800,000, or almost $100,000,000 more alone than the total increase of all regular appropriations for the entire Government.

For simple figuring note these following increases:

[Millions of dollars]

Agriculture and farm security	448.7
Commodity Credit Corporation for crop loans	119.0
Army-Navy defense program	498.9
Army engineers for river-harbor and flood control	108.2
Total	1,174.8

There will be those who complain strongly of excessive expenditures, yet I feel that world conditions completely justify the above increases over last year's expenditures. If we are to have our house in proper order for a crisis, we cannot wait until war may engulf all of the Old World. if such a war should come, and in the light of present events it might begin any day, our safety would demand that we protect America with a real program of preparedness. I feel that it is good business now to prepare for any eventuality and put not only our military-defense machine in order but to protect also our farm economy.

Our preparation is made necessary because of uncertainty abroad and world trade conditions that are the most perilous of more than a half century. No one can deny that our farm economy is the basis of national security, both in times of peace and of war; and so Congress, this session, through parity payments and through restoring the capital stock of the Commodity Credit Corporation for crop loans, has protected this basic industry in a way and at a cost that in the era of free-flowing trade would not have been necessary.

The farm appropriations, totaling $1,194,500,000 for agriculture and parity payments, and the $119,000,000 appropriated for protection of farm prices through the Commodity Credit Corporation, should insure our farmers against disaster, even in the event of a European war that would further disturb world trade.

Neither can one criticize the large amount that this Congress appropriated for rearmament, which totaled $1,505,200,000. This, too, was made necessary by world conditions that force us to be ready for any eventuality. Much of this money so appropriated will not be spent in the coming 12 months, yet a carefully planned program executed over a period of years in peacetime will result in a much greater efficiency and economy than if entered upon if and when a European war should start.

Thus I doubt that even the most economically minded will question the $489,900,000 increase granted by this Congress for national defense.

The splendid work being done by the Corps of Army Engineers on our rivers and harbors and in flood-control work, too, is not open to question. True the appropriation of $305,200,000 for this work is an increase of $108,200,000 above last year's figures, yet the devastation wrought by floods over a short period of years destroys property worth far more than this amount.

While I would have desired many of the other appropriations in the regular departments to have been far lower than the final appropriation figure, I feel that this Congress was justified in its preparedness program and that the money appropriated for national defense—for the Army and Navy, the farms of America, and on our rivers and harbors—was wisely spent. And I feel that their expenditure will protect and insulate us against the ravages that a European war would cause.

Aviation's Thirtieth Anniversary—America's First Airplane Purchase 30 Years Ago

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 2, 1939

VARIOUS NEWSPAPER ARTICLES

Mr. LUNDEEN. Mr. President, the press today is filled with thousands of articles commemorating aviation's thirtieth anniversary. I am placing a few of these articles, with the Senate's permission, in the permanent RECORD:

AVIATION'S ANNIVERSARY

[From the Washington Star of August 1, 1939]

ARMY TO SHOW PUBLIC RADIO-CONTROLLED PLANE TOMORROW—DAYTON CELEBRATION OF AIR CORPS' THIRTIETH BIRTHDAY TO FEATURE "UNVEILING"

The first public demonstration of the Army Air Corps' new radio-controlled airplane, a revolutionary development in the training

of air and ground troops, will be a feature of the celebration at Wright Field, Dayton, Ohio, tomorrow of the thirtieth anniversary of the purchase of the first Army airplane and the birth of military aviation.

Development of the radio-controlled airplane, which can be taken off, put through various flight maneuvers, flown back to its home airdrome, and landed through operation from the ground of radio-actuated controls, without the presence of personnel in the plane, is a long step toward the solution of several vital problems of air defense and the training of air and ground personnel, particularly in defense against air attack.

The development of the radio-controlled airplane was begun several years ago by the United States Navy and has been carried to completion jointly by the Navy and the Army Air Corps Material Division at Wright Field. Parallel developments have been carried on in England and the British military and naval services recently began extensive target work with a small radio-controlled airplane which they call the Queen Bee.

The radio-controlled airplane is of particular value in the training of infantry, cavalry, field artillery, and coast artillery in the use of small arms against low-flying aircraft and in the training of pursuit pilots in aerial machine gun fire.

ONE-THIRD NORMAL SIZE

The radio-controlled airplane as developed for the Air Corps is about one-third the size of the normal Army pursuit airplane. It has a wing span of 12 feet, this small size increasing its value for target purposes. Many of the gasoline-powered model airplanes built and operated by American boys are of 7-foot span, a few running as large as 9-foot span.

For aerial target work, the Army hitherto has used a fabric cone or sleeve towed on a long line behind an airplane. This has proved unsatisfactory because it cannot be maneuvered, and for other reasons.

During the Wright Field demonstration Army Air Corps posts throughout the United States will hold open house, and squadrons of the general headquarters air force will make flights over cities and towns in many parts of the country, taking off simultaneously from nine air stations at 11 a m. on signal from President Roosevelt.

The National Capital will be visited by a formation of pursuit airplanes from the second wing, Langley Field, Va.

EXERCISES AT SMITHSONIAN

The local celebration also will include exercises at 10 a. m. beneath the wings of the first Army airplane in the aircraft collection of the Smithsonian Institution. Col. H. H. C. Richards, Army Air Corps, will describe the history of this famous airplane, formally purchased by the War Department August 2, 1909, from the Wright brothers. The original plane completed its acceptance trials with a 14-mile round-trip flight from Fort Myer, Va., to Alexandria, Va., at an average speed of 42 miles per hour, earning the Wrights a $5,000 bonus above the $25,000 contract price. On this flight the plane was flown by Orville Wright and carried Lt. Benjamin D. Foulois as a passenger on his first flight. Lieutenant Foulois, who later became chief of the Air Corps, with the rank of major general, now is retired and makes his home at Ventnor, N. J. He is to participate in the Wright Field ceremonies.

Following the exercises at the Museum, which will be under the auspices of the Early Birds, headed by Mrs. Alys McKey Bryant, early Wright airplane pilot, those attending the exercises will go to the parade ground at Fort Myer for a reenactment of the Fort Myer-Alexandria flight by a modern Army airplane from Bolling Field. The plane will dip a wing over the parade ground in salute before retracing the 14-mile course of the flight of 30 years ago.

The local exercises will close with a luncheon at the home of Mrs. Bryant, 2306 Massachusetts Avenue NW., to be attended by members of the Early Birds and Air Corps representatives.

Descriptions of the exercises at Wright Field, which will include performance trials of standard Army combat airplanes, flights by tactical squadrons, and a reunion of pioneer military and commercial pilots, will be broadcast by ground and air observers over the Columbia Broadcasting System from 3:30 to 4 o'clock.

Maj. Gen. Henry H. Arnold, Chief of Air Corps, will make an anniversary radio talk from Chicago at 6:45 o'clock today over the National Broadcasting Co. system.

[From the New York Times of August 1, 1939]

ARMY FLIERS READY FOR NATIONAL SHOW—CRAFT WILL SOAR FROM MITCHEL AND OTHER FIELDS TOMORROW FOR FORMATION TOURS—RADIO FLIGHT AT DAYTON—PACIFIC COAST WILL DEFEND AIR ATTACK, OBSERVING THIRTIETH YEAR OF MILITARY AVIATION

WASHINGTON, July 31.—On a signal from President Roosevelt at noon, daylight time, Wednesday, 15 bombers will take off from Mitchel Field, N. Y., on a route that will take them over twenty-odd New York, New Jersey, Pennsylvania, and New England cities and back, in observance of the thirtieth anniversary of the Army's first purchase of a military airplane, it was announced today by the War Department.

Points to be covered by the Army bombers include Albany, Schenectady, Utica, Syracuse, and Binghamton, as well as New York City; Bridgeport, New Haven, and Hartford, Conn.; and Camden, Trenton, and New Brunswick, N. J.

The Mitchel Field formation will be part of a national celebration which will include other formation flights and events in other parts of the country. A formation of 15 pursuit planes from Selfridge Field, Mich., will visit Wheeling, W. Va.; Washington, Pittsburgh, Franklin, and Oil City, Pa.; Jamestown, Buffalo and Dunkirk, N. Y.; Erie, Pa.; Youngstown, Akron, Cleveland, and Fremont, Ohio, and Detroit, Mich.

RADIO PLANE TO BE DEMONSTRATED

At Wright Field, Dayton, a thousand leaders and pioneers in the aviation industry will be gathered to witness the first public demonstration of the Army Air Corps' new radio-controlled airplane, as well as performance trials of standard combat equipment and flights by tactical squadrons.

In announcing the program for the day the War Department said Maj. Gen. Henry H. Arnold, Chief of the Army Air Corps, and himself a pioneer in military aviation, had issued invitations to all pilots who were flying prior to 1912 to join in the Wright Field reunion as guests of the Air Corps.

Descriptions of the exercises by observers on the ground and in the air will be broadcast from Dayton by the Columbia Broadcasting System over its Nation-wide network.

Development of the radio-controlled airplane, which can be taken off, put through various flight maneuvers, flown back to its home airdrome, and landed through the operation from the ground of radio-actuated controls without the presence of Army personnel in the plane is a long step toward the solution of several vital problems of air defense and the training of air and ground personnel. No program has yet been announced for employment of this radio-controlled airplane.

RECORDS MADE IN TRIALS

Combat aircraft performance trials conducted during the past 10 days, in accordance with requirements of the Fédération Aeronoutique Internationale, have resulted in the establishment of a number of new national aircraft records. Although results of the calibration by the National Bureau of Standards of barographs carried during the flights have not yet been announced by the National Aeronautic Association, the unofficial readings indicate graphically the tremendous strides which have been made in development of the military airplane since August 2, 1909.

During its acceptance trials the Army's first airplane exceeded all expectations by making a round-trip flight over a 7-mile course from Fort Myer to Alexandria, Va., at an average speed of 42 miles per hour, carrying one passenger but no other pay load. During the progress of the trials of the past few days a standard Boeing flying fortress bombardment airplane carried a pay load of 11,023 pounds over a 1,242.7-mile course at an average speed of 200.12 miles per hour. A similar load was carried to an indicated altitude of 23,800 feet.

GREAT SPEED ATTAINED TODAY

During a recent transcontinental flight an Air Corps experimental pursuit airplane at times attained a speed of more than 420 miles per hour—10 times that of the plane of 1909.

In the Wednesday celebration high ranking officers of the Army Air Corps and members of the General Staff will watch with great interest a series of maneuvers on the Pacific coast involving the solution of a war problem calling for the defense of 1,500 miles of seacoast and thousands of square miles of coastal frontier from an enemy attack by air.

The test will be both practical and novel, with the civilian population joining with pursuit, attack, and bombardment squadrons of the G. H. Q. air force stationed at March and Hamilton Fields, Calif., in working out the problem.

Civilians will participate through operation of an aircraft-warning net and so become the eyes of the defending air force. The net will consist of civilian observation stations 8 miles apart throughout the threatened area, from the Mexican to the Canadian border.

AIR LINES TODAY

[From the New York World-Telegram of July 31, 1939]

UNITED'S GIGANTIC PLANES COULD CROSS UNITED STATES IN TWO JUMPS—THERE'LL BE FLIGHT ENGINEER ABOARD, BESIDES PILOTS, STEWARDESS, STEWARD

(By Maj. Al Williams, Scripps-Howard aviation writer)

The big planes are coming into service, all right—4-engined, 42 passengers, weighing 66,000 pounds, and costing $500,000 each.

W. A. Patterson, president of United Air Lines, so notified the executives of Eastern Air Lines, American Airlines, Pan American, and T. W. A., all of whom are parties with United Air Lines to a contract with the Douglas Aircraft Co. for construction of an experimental plane of this type, on which tests have recently been completed.

The new transport giants are the DC–4's, and the decision to purchase six of them is based upon a careful analysis of the air-traffic market. United's coast-to-coast passenger business this year is 32 percent ahead of last year's figures.

FREQUENT LANDINGS COSTLY

There's operating economy in staying aloft for long flights if you can get a profitable pay load. Frequent landings for gas and oil, with through coast-to-coast passengers on board, is too expensive. Short hauls—short for air transportation, such as between New York and Chicago—will be covered by DC–3's, 14-passenger ships. Frequency of service is still at a premium.

The reported top speed of the DC–4's is 237 miles an hour; cruising speed about 190. At 190 miles, with 42 passengers plus 3,000

pounds of baggage and mail, the DC–4's will be good for 1,425 miles—about half the air distance across the country in one jump.

CABINS 7½ FEET HIGH

From floor to ceiling the cabins of the new joms will be 7½ feet. That reminds me of a question I asked the stewardess of a Luft-Hansa transport while flying through Germany last summer. Her linguistic ambitions far exceeded my sign language. I was a bit disturbed at the low cloud ceiling—bad weather—and asked her by signs. She brightly replied, "Zwei meter," pointing to the roof of the cabin.

I have no story to fit the width of the *DC–4* cabin, which is 10 feet. The crew will consist of a captain, a first officer (copilot), a flight engineer, a stewardess, and a steward. The addition of a flight engineer is significant in that his presence is necessitated by the big job of caring for four engines.

A FULL-TIME JOB

A pilot and a copilot can take care of two engines and attend to flight control. But watching fuel-flow gages, heat control to carburetors, cutting in and cutting out of any series of the eight gas tanks, regulation of temperature control, and supervising general engine operation, plus walking out in the wings to attend to his engine charges as required, is a full-time job for a smart engineering officer.

These air giants are mighty impressive. It's easy to understand why thin-winged airplanes fly, but there is always a catch in my mental breath when I realize that the same air-flow principle to develop lift applies to wings several feet thick.

And we are only scratching the surface of what is to come. With the new 2,000-horsepower engines, we'll have a lot of giant twin-motored airplanes. When we come to the end of that string someone will hang four 2,000-horsepower engines on a lot of aircraft structure, and then that hum high in the day sky and in the depths of night will mean the passage overhead of a hundred air travelers.

The most fertile imagination can't even outline the future of this air business, much less sketch its effect upon our lives.

[From the New York Times of August 1, 1939]

ARMY AIR CORPS SETS WORLD PAYLOAD MARK, TAKING 15½ TONS UP 8,200 FEET AT DAYTON

WASHINGTON, July 31.—The Army Air Corps yesterday regained the world record for payload carrying when Maj. Caleb V. Haynes and Capt. W. D. Old flew an Army Boeing superflying fortress to an altitude of 8,200 feet with a payload of 15½ tons at Wright Field in Dayton, Ohio, the War Department announced.

The new record, confirmed by the National Aeronautic Association, was made with a payload which was more than a ton heavier than that carried by a Russian plane to 6,561 feet at Tchelkova on November 20, 1936.

William Enyart, secretary of the association, and Dr. W. G. Brombacher, of the Bureau of Standards, official observers, went to Dayton several days ago to supervise the flight and place sealed baragraphs in the plane after the load itself had been weighed and sealed.

In spite of a cross wind, the Army bomber, weighing a total of 74,000 pounds, made the flight in 47 seconds. The airplane climbed until it reached 6,500.61 feet and continued to an altitude of 8,200 feet.

The record flight was made as a part of the celebration by the Air Corps of its thirtieth birthday, which will be on Wednesday. The actual payload of the big plane, made up of water and lead, totaled 31,205 pounds, as against 28,660 pounds carried by a Russian plane of the Maxim Gorky plant.

The Boeing *XB–15* has a wing spread of 150 feet and is 90 feet long. It is powered by four twin-row Pratt & Whitney Wasp radial engines. Air Corps officials stressed the fact that both airplane and motors were of the regular service type and had not been specially groomed for the record flight.

[From the Washington Daily News of May 2, 1939]

LINDBERGH WARNS UNITED STATES TRAILS EUROPE IN PLANE RESEARCH

LANGLEY FIELD, VA., May 2.—Col. Charles Lindbergh predicted today that unless the United States begins immediate expansion of aviation research facilities it will be unable to catch up in 5 years with the European powers.

He made this statement privately to a group of Government officials and aeronautical experts with whom he dined last night aboard a Potomac River steamer en route from Washington here. He was one of a party of 400 that witnessed a demonstration here of new discoveries and devices that will make possible aircraft speeds never before attained.

Colonel Lindbergh placed Germany at the top of the list in research, Great Britain second, with Italy and France tied for third. Soviet Russia, he indicated, is not an important factor in aeronautic research.

NEW SPEEDS POSSIBLE

Among the latest developments revealed for the first time at the Army's research station today were:

1. A new type wing that greatly minimizes wind "drag" and makes possible unprecedented, but unrevealed speeds.

2. New types of wind tunnels that will eliminate much of the guesswork in the creation of larger and speedier aircraft.

3. New type cowlings, windshields, and propellers that will make possible speeds in excess of 500 miles an hour without the occurrence of "shock waves" that tend to "brake" fast-flying aircraft.

4. A glass-bottomed seaplane hull that will permit observation of water-resisting factors and thus open the way for hull design that will obviate the necessity for reserve power for take-offs.

Recently Army contract awards were accompanied by semiofficial comment that new planes would be the best in the world. In seeking a new air research center at Sunnyvale, Calif., air officials cautioned that this country's planes would be "second best" to Germany's unless impetus was given to research work for greater speed and other essential qualities in fighting planes.

Colonel Lindbergh is reported to have told officials aboard the steamer that at least two or three additional research centers were needed immediately. He currently is engaged in a survey of research facilities, both Government and private.

[From the Philadelphia Evening Bulletin of March 27, 1939]

CLIPPER AT AZORES IN 17½-HOUR TRIP—IS UNDER ESTIMATED TIME IN HOP FROM BALTIMORE WITH A CREW OF 21

HORTA, AZORES, March 27.—(AP)—The 42-ton American flying boat *Yankee Clipper*, carrying the largest number of persons ever to fly the Atlantic in a heavier-than-air machine, glided smoothly to a landing here at 11:06 a. m. (8:06 a. m., eastern standard time) today, completing the first leg of a routine flight to inspect facilities, from Baltimore.

The 74-passenger flying liner, with 21 crewmen and technicians aboard covered about 2,800 miles on the first leg of its maiden ocean flight nearly half an hour ahead of schedule, making the trip in the official time of 17 hours and 32 minutes. Pan American expects to inaugurate regular passenger service to Europe this summer.

This was at an average speed of 165 miles an hour. The ship had left Baltimore at 2:34 p. m., eastern standard time, Sunday.

Capt. Harold E. Gray, in command of the ship, said, "It was the most comfortable kind of a journey." After a stay here at which Horta's facilities as a base for such large craft will be studied, the trip will be continued to Lisbon, Portugal; Marseilles, France; Southampton, England, and Foynes, Ireland.

"I don't expect to take off for the rest of the trip for a few days," Captain Gray said, "but the exact time depends on developments and weather reports.

"It was an easy landing today, with a calm sea and summer sunshine and a fair west wind. None of us was tired after the long but pleasant trip."

The Clipper alighted in the channel, taxied into the harbor as Horta authorities and the people cheered, then tied up for refueling.

OUR FUTURE PROGRESS

[From U. S. Air Services for September 1938]

LINKING ALASKA AND THE UNITED STATES BY AIR

Headlines in the newspapers this summer have been featuring the British, German, and American trans-Atlantic flights to such an extent that a highly important and significant flight—the inauguration on August 6 of aerial service between the United States and Alaska—was relegated to the inside pages.

This flight is the result of slow and careful development. Back in September 1932 Pan American Airways began the job of coordinating the existing charter air lines, converting sections of Alaskan tundra into moderate-sized airports, installing radio and meteorological services. A corps of radio technicians, meteorologists, and airway construction and operations engineers, many of whom had been transferred from the tropic country of South America, accomplished in 2 years what was generally considered the impossible.

Early in 1934 regular air-transport service into the interior of Alaska was begun. Dog teams disappeared. Passengers and mail were carried to their destination in 3- and 4-hour flights, whereas in the old days it required 3 to 4 weeks by dog team. At first operations were limited to small aircraft. After considerable expenditure by Pan American of money and manpower, a number of airports have been enlarged to accommodate the twin-engined, high-speed Lockheed electras, and they are now in service over the main routes from Fairbanks north, southwest, and west. In May of this same year air-mail service was started over a temporary route linking Juneau and Fairbanks, via the southwestern tip of Canada.

While this development was going on, the engineering department of Pan American Airways was busy with research toward the final stage—the establishment of a feasible operating route to link the domestic air lines of the United States with the network of Alaskan air lines. The undeclared war between China and Japan and the skirmishes between Russia and Japan have increased our Government's interest in developing Alaska commercially and aeronautically in conjunction with our plans for national defense.

Realizing the importance of establishing this air link at the earliest possible moment, Pan American did not wait for development of adequate landing facilities in the Territory and the provision of four-engined transports, but began an experimental service on August 6 from Seattle to Juneau, via Ketchikan. For the time being these flights are for the purpose of training operating crews and to test weather reporting and radio control facilities.

As in all its operations over the Atlantic and Pacific, Pan American proceeds carefully and cautiously, and when passenger service is begun everything will be in tiptop shape—down to the last piece of silverware, so to speak.

For this experimental service Pan American has equipped one of its "baby clippers"—a 10-ton Sikorsky S-43 amphibian, powered by twin Pratt and Whitney Hornets. An operating crew of five: Captain, first officer, navigation officer, flight mechanic, radio operator—all of them pilots—has been assigned to the initial operation under the immediate direction of Joe Crosson, operations manager of Pacific Alaska Airways.

Harold Gray, chief pilot of Pan American's Atlantic division, who commanded the Pan American Clipper on her six trans-Atlantic crossings last year, is serving as P. A. A.'s technical adviser for the marine-operations technique to be employed on the route, and other Pan American veterans from the engineering, operations, and communications departments are serving as a technical board to aid in establishment of operations.

During the initial stage the air line will operate from the naval air base on Seattle's Lake Washington. The course will lie over water to Ketchikan, a distance of 800 miles, where a water landing will be made. From Ketchikan, 225 miles on to Juneau, the route will lie over the Alaskan islands, to the land airport at the foot of Mendenhall Glacier, just beyond Juneau. At Juneau the schedules will connect with regular service of Pacific-Alaska Airways over to Flat and Bethel, and west to Nome on the Bering Sea.

In the future P. A. A. expects to operate an all-American route direct from Seattle to Juneau, thence over the coastal Alaskan Range, over United States territory, all the way to Fairbanks and Nome. When the difficult job of providing necessary airport and airway facilities has been completed to take care of the 4-engined, high-speed, high-altitude aircraft now being built, one will be able to breakfast in Nome, dine in Seattle, and in another 12 hours arrive in Washington, D. C., or New York City. Compare this with travel by steamer which requires 3 days for the passage between Seattle and Juneau, 7 days for the journey (ocean and rail) to Fairbanks, and 10 days to Nome.

[From the Baltimore American of July 16, 1939]

AIR "FLIVVERS" PREDICTED—GARAGE-SIZE HELICOPTERS—THAT CAN LAND ON ROOFS

(By Igor I. Sikorsky, pioneer airplane designer and engineering manager of the Vought-Sikorsky Aircraft Division of United Aircraft Corporation)

Twenty years ago skepticism greeted my prediction that trans-oceanic air travel, not merely as a stunt but as a means of regular scheduled transportation, lay not very far in the future.

Since events have borne me out, today I am less hesitant about making another prophecy—that 10 to 20 years from now will see an immense development in the small, privately owned aircraft for individual and family use.

Certainly the vast development of transport and military flying since the war has been in line with our most optimistic expectations; so much so indeed that today military aviation is a factor powerful enough to shift major political issues.

Only in this one branch, the simple privately owned air flivver, has progress lagged. In the United States there is only one privately owned airplane today for every 2,500 privately owned automobiles, and no other country even approaches this number.

SAFETY AND SERVICE ARE FIRST ESSENTIALS

What are our expectations in this field? How can we open the road to the great expansion in private flying that is sure to come? What is technically possible today?—and tomorrow? In my opinion these questions can best be answered by discussing improvements along the lines of safety and service.

Modern aircraft are, in general, sufficiently fast. My own belief is that greater speed is not needed for private ships. No further development is necessary along that line, at least for the present. And the cost of a small two- or three-seater plane is remarkably reasonable, taking into account the small number manufactured; undoubtedly, with a larger market, the price will be lower.

This great potential market, however, awaits development of a craft that can be used more conveniently by the average individual and that will offer greater safety in bad weather.

SLOW-SPEED LANDINGS IN SMALL SPACE VISIONED

Undoubtedly, the characteristic that will go furthest toward filling these needs will be the ability of a small plane to take off and land easily, at a slow speed and in as little space as possible. This will bring the flying machine closer to us; no longer will it be necessary for a person wishing to travel by air to make first a long trip by land to reach the airport.

We should keep in mind what Roger Babson once pointed out, that the automobile most surely would not have had the great development it did if it were necessary for the passenger to travel a long distance, usually several miles, to reach it.

With the scientific and engineering data available to us now, we could at this moment make great strides toward producing a small, inexpensive two- or four-seater amphibian with a cruising speed of about 100 miles an hour but capable of landing at only 25 miles an hour.

It could easily take off or land within 100 or 150 feet, as compared to the 500 to 800 feet required for the take-off of the average plane at present. Designed to have a steep climb, it would readily clear obstacles near the point of departure, and likewise would have a very steep angle of descent if needed. This means a machine with well-developed high lift features and also some form of air brakes.

I venture to state that if the money now devoted to developing any one new type of bomber, pursuit plane, or transport ship could be made available to give a competent engineering staff ample time to experiment, much could be done at this very moment toward achieving the kind of plane I have outlined.

SEES AMPHIBIANS MOST PRACTICABLE

I suggest an amphibian because, although it is slightly heavier and more expensive than a land plane of similar size, in many parts of the world and particularly in the eastern section of the United States there are more water landing spaces available than land airports. To permit operation from water as well as from land would, for the individual owner, have many obvious advantages.

As to the elimination of danger, any reasonably well built and maintained modern craft is fairly safe today except in the case of blind weather. Even this hazard is being overcome for the large transport ships by the use of radio navigation and blind-flying devices, as well as by an increasingly competent professional personnel.

This equipment and professional training are, however, usually beyond the means of the average man who may buy and run a plane as he now does a car. So we must base our efforts in this direction on a much simpler foundation, on making it possible for these air flivvers to come down safely almost anywhere, at so low a speed and with so short a run that a forced landing would have no element of danger for the occupants and very little for the ship itself.

SIMPLER OPERATION SYSTEM SUGGESTED

All of this I believe we could now do if our existing scientific and engineering information were made to serve this end instead of constantly seeking more and more speed.

There is much also that we could do toward simplifying the operation of small planes, probably on the basis of a two-control system.

Planes now employ a three-control method—pedals for direction, wheel for lateral, and push-pull for elevation. Tests with two-control operation, eliminating the pedals and combining directional and lateral control in the wheel, have shown it to be feasible. It eliminates the possibility of exceptional stunting, which is necessary for military ships but which may well be omitted for private flying.

While ships based on the airplane principle and approaching well enough the characteristics I have discussed can be built now, the best and most complete development of private flying will come, in my opinion, through perfection of the so-called direct-lift aircraft—helicopters. Machines of this type have been studied for as long as airplanes; I personally built two helicopters some 30 years ago.

TAKE-OFF FROM YARD OF ONE'S HOME LIKELY

Only recently, however, have there been practical results, the most successful in Germany, where a helicopter has been able to attain an altitude of 11,000 feet and a speed of 80 miles an hour. In experiments in an enclosed hall its operation was so steady that a person standing on the ground could shake hands with the pilot of a ship in flight.

This is only the beginning, only a hint of the possibilities that lie ahead for this type of machine. Able to take to the air with no run at all, it can start from a person's own back yard, and, with wings that fold, can be kept in an ordinary garage.

Its ability to hover in the air over one spot will enable it to wait its turn to come down on the flat roofs of the city office buildings of the future and, in bad weather, to ascertain the proper spot for coming to earth.

So, again, I venture to predict that within the next two decades helicopters will be in common use, giving our citizens an exhilarating new method of daily transportation and our country a great new industry, which, with its vast auxiliary services, will stimulate our entire economic structure.

Gov. Blanton Winship

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

Saturday, August 5, 1939

Mr. IGLESIAS. Mr. Speaker, while I do not wish to comment at this time upon the factual value of the statement made by the gentleman from New York, the Honorable VITO MARCANTONIO, in the CONGRESSIONAL RECORD, entitled "Five Years of Tyranny in Puerto Rico," I would like to include, under leave to extend my remarks, some correspondence, editorials, and resolutions which attest to the high regard, esteem, respect, admiration, love, and affection in which Gov. Blanton Winship is held not only by the President of the

United States but by all the law-abiding and loyal American citizens of Puerto Rico:

THE WHITE HOUSE, *Washington, June 5, 1939.*

Hon. BLANTON WINSHIP,
Governor, San Juan, P. R.

MY DEAR GOVERNOR WINSHIP: I have received your resignation of June 3, 1939, which I accept, knowing of your desire to be relieved as soon as convenient. As I have already indicated to you, Admiral Leahy will be able to assume the governorship on September 1 of this year, subject, of course, to his confirmation by the Senate. Therefore, the arrangement of your time as outlined in your letter will fit in satisfactorily.

I am sure that you already know of my high regard for you personally and officially, but I cannot refrain at this time from expressing my appreciation of your long and distinguished career in the service of your Government. This applies not only to your work in Puerto Rico but to other special and difficult assignments that you have had previously, and which so remarkably equipped you for the governorship of Puerto Rico. You took office there at a most difficult moment in the history of the island; you inherited problems of unique and unprecedented gravity. I am proud of the way in which you carried through this most arduous task in the interest of the people of Puerto Rico.

May I thank you for your loyal support during the years we have known each other and express my best wishes for the future.

Very sincerely,

FRANKLIN D. ROOSEVELT.

[From the New York Times, of June 27, 1939]

GOVERNOR WINSHIP

When Governor Winship flew from Puerto Rico the plaudits of the people, who were gathered at the airport to wave their farewell to him, followed him—an "unparalleled demonstration" in the 40 years since the American soldiers landed in the island. There are several reasons named for the fervor of their appreciation. He is credited with doing many things for the welfare of the islanders. Universal suffrage has been granted, and the foundation has been laid for "creating a Latin America cultural center with the University of Puerto Rico as its nucleus." Yet none of the achievements of his administration can explain the popularity of this proconsul facing in the years of his administration, as President Roosevelt said, "problems of unique and unprecedented gravity."

It is rather his personal qualities that account for the esteem in which he is held despite the violence of the opposition at times. Uppermost is his courage, which has commanded the admiration of the people at large, his cool-headedness in an emergency, his dignity, his calm firmness, and his kindliness withal. That the people of this island are more favorably disposed to continental America (to which they are brought closer by ship and plane) is due in good measure to the general respect for the character of Blanton Winship, and the instinctive appreciation of his intrepidity.

Senate Concurrent Resolution 2

To express the gratitude and appreciation that the people of Puerto Rico feel toward its executive, the Honorable Blanton Winship, and to declare him an adopted son of this island of Puerto Rico, and for other purposes

Whereas the Honorable Blanton Winship, a retired general of the United States Army, was appointed Governor of Puerto Rico by His Excellency Franklin D. Roosevelt in the year 1934;

Whereas during his incumbency as chief executive of the island Governor Winship has distinguished himself by his active interest in assisting the people of Puerto Rico in the search for suitable solutions of the many grave problems that affect its happiness and welfare, problems with which he identified himself to the extent of championing them earnestly and zealously during his frequent appearances before the authorities of the metropolis;

Whereas in his character as Governor he cooperated with this legislature in the solution of many of the problems already mentioned and, as a result of this cooperation, the following legislation was approved: An act establishing universal suffrage; an act establishing the 8-hour workday; an election law which guarantees free and conscientious suffrage; an act to intensify industrial rehabilitation; the Hospital Charities Act creating four district hospitals; the Workmen's Compensation Act; an act for the protection and development of the agricultural wealth; an act to stimulate sports in the island; the Housing Authority Act; an act establishing the insular lottery to combat tuberculosis; an act creating the Arecibo Harbor Authority; an act creating the Labor Relations Board; an act to promote the welfare of the aged; an act creating agricultural farms; laws on eugenics; an act to create the Emergency Measures Advisory Board; an act to establish a plan of municipal roads and insular roads and bridges; an act for the dredging of the bay of San Juan; an act for the establishment of a graving dock; an act for the elimination of grade crossings; an act for the construction, with combined insular and Federal funds, of roads, bridges, and public buildings; an act regulating home work; acts for the enforcement of constitutional provisions for the holding of lands; an act for the protection of new industries; and numerous transcendental labor, social, and economic laws of vital importance to the country;

Whereas Gen. Blanton Winship, a fervent admirer of the landscapes and the climate of Puerto Rico, of the irresistible lure of its shores, and of the strategic position of the island in the heart of the two continents was a persistent propagandist of the natural advantages of Puerto Rico as a winter resort, and brought to the attention of the War Department the advisability of locating one of their bases at San Juan, P. R., and did the same with the Navy Department, and as a consequence of his work the Federal Congress passed the appropriations to construct the naval and air bases at Isla Grande in the port of San Juan;

Whereas the Institute of Tourism, the exclusive creation of Governor Winship, has served to establish bonds between the island and the continental States through the ever-increasing number of visitors who are surprised by the charming beauty of our land;

Whereas Gov. Blanton Winship took advantage of his excellent connections in the official world of Washington so as to procure for Puerto Rico participation in like proportion as the other States and Territories in the benefits of the Federal New Deal legislation directed at solving the economic depression of these last years, and succeeded in having many of those laws made extensive to the island;

Whereas Gov. Blanton Winship has devoted the last 5 years entirely to the defense of the rights and of the best interests of the people of Puerto Rico, and in his love and loyalty for the island was one with those of us who have had the privilege of being born in it;

Whereas the Legislature of Puerto Rico has learned that Gov. Blanton Winship will soon leave the island after having rendered to it 5 years of brilliant service;

Whereas it is the duty of this legislature, in behalf of the people it represents, to state solemnly its appreciation of the fruitful work done by Gov. Blanton Winship during the time he has occupied the old palace of La Fortaleza: Now, therefore, be it

Resolved by the Senate of Puerto Rico (the house of representatives concurring)—

1. To acknowledge, as by this resolution is acknowledged, that His Excellency Gen. Blanton Winship, Governor of Puerto Rico, is entitled to the fervent gratitude of the Puerto Rican people for his faithful work and his earnest resolve to secure for our island the benefits of Federal New Deal legislation and to bring about that the island and its problems be better known in official circles of Washington.

2. To declare the Honorable Blanton Winship, as he is hereby declared, an adoptive son of the island of Puerto Rico.

3. That a certified copy of this resolution be transmitted to His Excellency Franklin D. Roosevelt, President of the United States of America; to the Honorable Harold Ickes, Secretary of the Interior; to the Honorable the Secretary of Agriculture and the heads of the bureaus of said Department; to the chairman and the members of the permanent committees of both Houses of Congress; to the press of the country; and to the chief newspapers of the United States.

4. That a certified copy of this resolution, when translated, be delivered to the Honorable Blanton Winship by a joint committee designated by the president of the senate and the speaker of the house of representatives.

We, Enrique González Mena and Antonio Arroyo, secretaries of the Senate and the House of Representatives of Puerto Rico, respectively, do hereby certify:

That the foregoing Senate Concurrent Resolution No. 2 was approved by the Senate and the House of Representatives of Puerto Rico on May 17 and 18, respectively, 1939.

In witness whereof we have hereunto set our hands and caused to be affixed the seals of the Senate and the House of Representatives of Puerto Rico on this the 20th day of May, A. D. 1939.

(Sgd.) ENRIQUE GONZÁLEZ MENA,
Secretary, Senate of Puerto Rico.
(Sgd.) ANTONIO ARROYO,
Secretary, House of Representatives of Puerto Rico.

IN THE EXECUTIVE COUNCIL OF PUERTO RICO

A RESOLUTION

Whereas the Honorable Blanton Winship, who was appointed Governor of Puerto Rico on February 5, 1934, has tendered his resignation of this high office; and

Whereas at the time he took office Puerto Rico was suffering from an economic crisis as a result of the depression, further aggravated by recent hurricanes which had swept the island, there being much unemployment and general unrest; and

Whereas by his unremitting efforts he has sponsored and contributed toward securing the passage of legislation of great benefit to the people of Puerto Rico and through his personal efforts has secured large appropriations of Federal funds for Puerto Rico, thus alleviating unemployment and suffering; and

Whereas in his dealings with all classes of people he has shown the greatest tact and courtesy and has won the love and gratitude of the people of this island for his zeal and devotion to their welfare and his splendid achievements in the face of distressing economic conditions: Now, therefore, be it

Resolved by the Executive Council of Puerto Rico, To express to the Honorable Blanton Winship the gratitude and appreciation of the members of the executive council for the distinguished services rendered by him to the said body and through it to the people of Puerto Rico; to express the deep affection and high esteem in which we hold him; to convey to him our regret for the

severance of his official relations with this council, and to wish him long life and happiness in his future career; and be it further

Resolved, That this resolution be spread at length upon the minutes of the Executive Council of Puerto Rico, and that an engrossed copy hereof, signed by all the members of the council, be delivered to the Honorable Blanton Winship.

Done in open session of the Executive Council of Puerto Rico at San Juan, P. R., this 27th day of June 1939.

Attest:

Geo. W. Roberts, secretary of the Executive Council of Puerto Rico; B. Fernandez Garcia, attorney general; J. A. Lopez, acting auditor of Puerto Rico; H. A. Martin, acting commissioner of education; Roberto Castellon, acting commissioner of agriculture and commerce; J. E. Colom, acting president of the Executive Council of Puerto Rico; R. Sancho Bonet, treasurer of Puerto Rico; R. Gonzalez Requena, acting commissioner of the interior; E. Garrido Morales, commissioner of health; P. Rivera Martinez, commissioner of labor.

Resolution No. 385, to declare Hon. Blanton Winship, Governor of Puerto Rico, adoptive and predilect son of the city of San Juan, capital of Puerto Rico; and for other purposes

Whereas the Hon. Blanton Winship, Governor of Puerto Rico, during the last 5 years has distinguished himself as a benefactor of this island, tending with his ability, intelligence, and brilliant administrative capacity to develop and foment the agricultural, industrial, and commercial pursuits of Puerto Rico;

Whereas in order to remedy the present and future economical conditions of Puerto Rico, he has taken energetic steps to foment the tourist trade, seeking to convert the island, particularly its capital city and port into a modern Rhodes, endeavoring to embellish the city of San Juan, capital of this island, preserving all of the existing historical monuments, so as to attract the tourist trade, diffusing orally and in writing the beauty of the island, its civilization, culture, and well-known hospitality;

Whereas it is fitting and proper that this board, in response to a communication addressed to it by the Honorable Fernando J. Geigel, city manager, renders a tribute of admiration to the refined gentleman and exacting chief executive of Puerto Rico for the last 5 years: Therefore, be it

Resolved by the Board of Commissioners of San Juan, That Hon. Blanton Winship, Governor of Puerto Rico, be and is hereby declared adoptive and predilect son of the city of San Juan.

SEC. 2. That this resolution be delivered to Hon. Blanton Winship at a public and solemn session of the Board of Commissioners of San Juan, on the 7th day of June 1939, which is the last day of the regular session of the board for the month of June, and that the people of San Juan be publicly invited to this ceremony.

SEC. 3. That this resolution be duly signed by the president and secretary of the board of commissioners, and that the official seal of the capital of Puerto Rico be affixed thereto.

SEC. 4. This resolution, being of an urgent nature, shall become effective immediately after its approval.

San Juan, Puerto Rico, May 18, 1939.

[s] RAFAEL LANDRON Y LANDRON, *President.*

[s] LUIS CASTRO, *Secretary.*

Resolution adopted by members of the Puerto Rican press and presented to Gov. Blanton Winship at a reception in his honor at La Mallorquina, San Juan, P. R., May 19, 1939

Whereas throughout his 5½ years as Governor of Puerto Rico the Honorable Blanton Winship has impressed us with his courtesy, fairness, and devotion to the best interests of our island; and

Whereas we, the members of the Puerto Rican press, assigned to report the daily events of the Governor's office, have met always with uniform consideration and cooperation at his hands; and

Whereas the pending termination of the Governor's service as chief magistrate of Puerto Rico is deeply regretted by the public in general and by us who have been associated with him in particular:

Therefore, we the undersigned members of the press, hereby declare our respect and admiration for Governor Winship and express our best wishes to him for many more years of health and happiness.

(Signed) E. Ramírez Brau, El Día; Juan Maldonado, El País; Rafael Gil de Lamadrid, La Correspondencia; Harwood Hull, Associated Press; Basil Gallagher, Puerto Rico News Bureau; E. Combas Guerra, El Mundo; Nathaniel Soltero, El Mundo; C. Leigh Stevenson, El País; William O'Reilly, United Press; Luis de Casenave, photographer of El Mundo.

MUNICIPALITY OF RIO PIEDRAS,
OFFICE OF THE SECRETARY.

Resolution 115

Resolution of the Municipal Assembly of Rio Piedras, P. R., expressing the gratitude of the city of Rio Piedras to Hon. Blanton Winship, Governor of Puerto Rico, for his meritorious work in behalf of the people of Puerto Rico during his governorship of the island

Whereas Governor Winship will shortly leave the island, having resigned his post;

The efforts made by him in behalf of Puerto Rico during his governorship of the island make him deserving of acknowledgment and gratitude;

His activities for the promotion of tourist trade have contributed to make Puerto Rico better known to United States;

He has convinced the Federal Government of the strategic position of Puerto Rico in the Caribbean for national defense, securing a large appropriation of funds for the establishment of an air base in San Juan and airports in different points of the island, and in this way he has caused the United States to recognize the value of Puerto Rico and the duty of the National Government to care for the welfare of the people of Puerto Rico;

He has done everything in his power to reduce unemployment;

During his term of office he has proposed and approved laws beneficial to the forgotten working classes;

He has contributed to embellish our roads, having trees and flowers planted by their sides;

He has contributed to the promotion of fish culture, increasing the supply of fish in the rivers and lagoons of Puerto Rico; and

The interest that the national authorities are showing at present for Puerto Rico is owed to a large extent to the efforts made by Governor Winship near them: Therefore be it

Resolved by the Municipal Assembly of Rio Piedras, P. R., To express to the Honorable Blanton Winship, Governor of Puerto Rico, the acknowledgment and gratitude that the city of Rio Piedras owes him for his arduous work in behalf of all the island of Puerto Rico during his governorship; be it

Resolved further, That copies of this resolution shall be sent to the Honorable Blanton Winship; to the Honorable Franklin D. Roosevelt, President of the United States of America; to the Honorable Harold L. Ickes; and to the Honorable Ernest Gruening.

Adopted May 23, 1939. Approved by the mayor June 20, 1939.

Certified to by Margarita Peroza, municipal secretary-auditor, June 21, 1939.

Resolution adopted by the Rotary Club of Mayaguez, P. R.

Whereas His Excellency Gen. Blanton Winship, Governor of Puerto Rico, has worked arduously and effectively in Washington as a representative of the Puerto Rican people; and

Whereas Governor Winship, with the prestige of his personality, has developed many friends in the continental United States for our people in Puerto Rico; and

Whereas Governor Winship has conceived many new possibilities for developing new industries in our island; and

Whereas Governor Winship has shown the possibilities of a great income from tourist visitors to our island and has interested steamship companies and other social and industrial leaders to aid in the development of this industry; and

Whereas Governor Winship, more than any man in this generation, has accomplished much for our island and our people; and

Whereas the Governor has always been interested in Mayaguez and visited us frequently:

Therefore, we, the members of the Mayaguez Rotary Club, unanimously and by standing vote wish to welcome Governor Winship home again to Puerto Rico.

And we wish to place on record our deep appreciation for the great services which he has rendered to Puerto Rico and our people.

And we wish that he will remain with us as Governor for many years to come, making his home with us.

And we wish to state our humble but sincere and most profound thanks for all which he has done for us.

And we desire that copies of this resolution, with translation into English, be sent to His Excellency the President of the United States and the honorable the Secretary of the Interior in Washington.

Certified to be correct copy of a resolution passed by the Mayaguez Rotary Club at its regular meeting Tuesday evening, January 10, 1939.

CARLOS SUÁREZ, *Secretary.*

MAYAGUEZ, P. R., *January 13, 1939.*

ADDRESS BY MR. R. RIVERA SANTIAGO OF THE PUERTO RICO STATEHOOD ASSOCIATION

Mr. Chairman, Governor Winship, fellow members of the Puerto Rico Statehood Association, ladies, and gentlemen, when we start talking about Governor Winship's 5½ years as our chief

executive, it is hard to avoid following the Puerto Rican fashion in public address: Unleashing all the adjectives in the language. The Governor has been a man of few words, and in making brief reference to some of the highlights of his excellent record as a Governor, I want to follow the American style and shoot direct at the target.

I could say, "Winship is the best Governor the island ever had," and sit down. But I do want to take just a minute or two to say why I feel—as everyone else here tonight feels—that he has been outstanding as the island's chief executive.

Five years ago, when he first landed here, we were a disillusioned people. We were fighting among ourselves over political issues. Island economy was badly scrambled. Neither the government nor the individual had money enough with which to pay running expenses.

It was a tough job for anyone to tackle and it was especially tough because of a strident opposition that was intent upon proving to our fellow citizens on the American Continent that no one could long survive the ordeal of being Governor of Puerto Rico.

There was no harmony. Today Puerto Rico enjoys greater internal harmony than in many, many years. The strident opponents of statehood and Americanism have been silenced. But conquering that noisy segment of the population is not, however, the factor in the personality of Governor Winship that impresses us most strongly.

I wish to acknowledge the quality in Governor Winship that has enabled him to win the admiration and cooperation of the several groups of political thought standing to the right of the extremists. He is the first Governor we have ever had who excites the same terms of admiration from the leaders of the minority political party as from the majority party, and that, my fellow Puerto Ricans, is an achievement. Even we ourselves are not always able to get along so well with one another.

It was no glad-handing campaign that has brought to Winship the approval of virtually all Puerto Ricans—Puerto Ricans in politics, in business, and in the schools; and let me pause for just a minute to remind you that the children of Puerto Rico are as one in acclaiming Governor Winship. He is venerated, admired, and respected by our children and they overlook no opportunity of expressing their loyalty to him.

Business people have found that his efforts here in Puerto Rico and in Washington have been a potent factor in staving off disaster during the depression and holding promise for the future when his plans for Puerto Rico bear full fruit. He has been an outstanding advocate of statehood, and that spells prosperity for business and jobs for workers that could be achieved by no other approach to a destiny for Puerto Rico that is brighter and more encouraging because of the work and leadership of Blanton Winship.

He has worked for and with Puerto Ricans; and if there is a reward for a service well performed, we have it in our hands to offer that reward. We are gathered here this evening to extend the reward that it is within our power as individuals to extend. We are here to acknowledge that Winship is the best Governor Puerto Rico has ever had. We are here to pledge him our undying gratitude for doing a hard job well. We are here to tell him that he is "muy simpatico," and, I hope, to assure him that his successor is going to have the same cooperation and support that has been ungrudgingly extended to him.

We can say this evening, "Blanton Winship, you are the best Governor Puerto Rico ever had." And we can add the hope—a hope I am sure he will approve—we can express the hope that he will not always stand as the best Governor the island ever had. I believe that he would have altered my manuscript, had it been submitted to him, to make me say, "We expect Admiral Leahy to break the Winship record." Nothing, I feel, would please Governor Winship more than to read a few years hence that there had been a duplication of this evening's event to emphasize then that "Leahy is the best Governor Puerto Rico ever had."

Admiral Leahy has an unexcelled opportunity to achieve that distinction. His foundations have been well and firmly built by the man we honor this evening. He installed those foundations for another to build upon. Winship has established his record and it is up to every one of us do our level best to help his successor in the office of Governor to equal and then surpass Winship in attaining new highs for civic consciousness, executive leadership, and island-wide popularity. It is a difficult goal that has been set, and the man who keeps insisting that Leahy will make the grade is our true and tried friend, Gov. Blanton Winship.

R. RIVERA SANTIAGO.

GOVERNMENT OF PUERTO RICO,
DEPARTMENT OF LABOR,
MEDIATION AND CONCILIATION COMMISSION.

The Mediation and Conciliation Commission of the government of Puerto Rico in its session held today, June 23, 1939, adopted the following resolution:

Whereas Gov. Blanton Winship has worked strenuously for 5½ years for the social and economic interests of this island, obtaining fruitful results in an unprecedented way in the career of any Governor we have had;

Whereas Governor Winship by personal articles and speeches, by numerous trips to the continent, and by his indefatigable administrative activity has made Puerto Rico known to the Nation, establishing a link of affection between the island and the continent;

Whereas Governor Winship has been a noble and great friend of this Commission, cooperating with it in every occasion in the most effective way;

Whereas Governor Winship will cease as Governor soon and will leave the island the 25th of this month with the deepest regret of the whole population of the island, who feel grateful for his strenuous, magnificent, and fruitful efforts to serve it:

Therefore the Mediation and Conciliation Commission of the government of Puerto Rico resolves to express to Gov. Blanton Winship its respect and admiration for his high personality and its gratitude and its heartfelt regret at his departure, and assures him that he will always be remembered by the members of this Commission and the people of this island.

SAN JUAN, P R., *June 23, 1939.*

LUIS VILLARONGA,
Chairman, Mediation and Conciliation Commission.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. FRANCIS H. CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. CASE of South Dakota. Mr. Speaker, I was a freshman Congressman during the only term I served with ROBERT LOW BACON, yet he was so constructive in his attitude toward all questions that it made a deep impression upon me.

He took time to show a personal interest in those of us who were just beginning, and he took a position on many public questions which would seem to some people to be against his own personal interests. He had, however, that farseeing statesmanship which recognized that the good to the greatest number is the good to each member of society. He had the patriotism and courage to do that which he thought was for the good of the greatest number, regardless of how it might affect him personally. No country has too many men of that quality. We all miss him.
